The *French* Language abounds in *Monoſyllables* more than any other. This renders it the more perplexing to Foreigners, and yet the Beauty of the Language ſeems to conſiſt in it. One of the beſt and ſmootheſt Lines in *Malherbe* conſiſts of twelve *Monoſyllables*; ſpeaking of *Caliſta*, he ſays,

Et moi je ne voy rien quand je ne la vois pas.

In this the Genius of the *Engliſh* Tongue differs much from the *French*, an uninterrupted Series of *Monoſyllables* having always an ill Effect. This Mr. *Pope* both intimates and exemplifies in the ſame Verſe.

And ten low Words oft creep in one dull Line.

Paſquier cites an Elegy of forty two Verſes, conſiſting wholly of *Monoſyllables*.

MONOTHELITES, an antient Sect, who ſprung out of the *Eutychians*; thus call'd, as only allowing of one Will in Jeſus Chriſt; as the Word *Monothelite* in the *Greek* imports.

The Opinion of the *Monothelites* had its Riſe in 630, and had the Emperor *Heraclius* for an Adherent. It was the ſame with that of the *Severian Acephali*.

They allow'd of two Wills in Chriſt, conſider'd with regard to the two Natures; but reduc'd them to one, by reaſon of the Union of the two Natures: Thinking it abſurd there ſhould be two free Wills in one and the ſame Perſon.

They were condemn'd by the ſixth General Council, as being ſuppoſed to deſtroy the Perfection of the Humanity of Jeſus Chriſt, in depriving it of Will and Operation. That Council declared their Belief of two Wills, and two Operations, without Diviſion, or without changing the one for the other, without either diſtinguiſhing or confounding them: the Human Will being ſubject to the Divine.

MONOTONIA, Monotony, a Want of Variation, or Inflection of the Voice, or a Fault in Pronunciation, where a long Series of Words are deliver'd with one unvaried Tone. See Pronunciation.

This is one of the principal Faults of our *Engliſh* Orators. *Monotonia* is oppoſed to Chanting or Singing.

MONSEIGNEUR, in the Plural Messeigneurs, a Title of Honour and Reſpect uſed by the *French* in writing to Perſons of ſuperior Rank or Quality. See Seigneur.

The Word is a Compound of *mon*, *my*, and *Seigneur*, *Lord*.

Dukes, Peers, Archbiſhops, Biſhops, and Preſidents *a la Mortier*, are complimented with the Title of *Monſeigneur*. In the Requeſts preſented to the Sovereign Courts, they uſe the Term *Noſſeigneurs*.

Monseigneur, abſolutely uſed, is a Quality now given to the Dauphin of *France*.

This Cuſtom was unknown till the time of *Louis* XIV. Till then, the Dauphin was ſtiled *Monſieur le Dauphin*.

MONSIEUR, in the Plural Messieurs, a Term, or Title of Civility, uſed by the *French*, in ſpeaking to their Equals, or thoſe a little below them; anſwering to Mr. or Sir, among the *Engliſh*. See Sir.

The Superſcriptions of all Letters begin, *A Monſieur*, *Monſieur* ſuch a one.

The Word is a Compound of *mon*, and *Sieur*, Sir. See Sieur.

Borel derives the Word from the *Greek* χυριος, *Lord*, or *Sire*, q. d. *moncyeur*. *Paſquier* derives *Sieur*, and *Monſieur*, from the *Latin Senior*, Elder. The *Italians* ſay *Signor*, and the *Spaniards Senor*, in the ſame Senſe, and from the ſame Origin.

The uſe of the Word was formerly more extenſive. They apply'd it to the People of many Ages before them: Thus, *Monſieur* St. *Auguſtine*, *Monſieur* St. *Ambroſe*; and the Vulgar ſtill ſay *Monſieur* St. *Paul*, *Monſieur* St. *James*, &c.

The *Romans*, during the flouriſhing times of their Liberty, were unacquainted with that term of Parade and Flattery, which they afterwards made uſe of under the Name of *Dominus*. In ſpeaking, or writing to each other, they only gave them their proper Names; which Practice laſted even after *Cæſar* had brought the Republic under his Command. But after the *Roman* Emperors were once well ſeated in the Throne, the Courtiers, and Minions who

who by Flattery ſought to procure Favours from them, ſtudied new Honours. *Suetonius* obſerves, that a Comedian on the Theatre having call'd *Auguſtus*, *Dominus*, Lord; the Spectators all ſtared at him. So that the Emperor forbad, for the future, that Quality to be attributed to him. *Caligula* was the firſt who expreſly commanded himſelf to be call'd *Dominus*. *Martial*, entirely devoted to Tyranny, calls *Domitian*, *Dominum deumque noſtrum*. In time, the Title was alſo apply'd to the People; and of *Dominus*, at length was form'd *Dom*. See DOM.

MONSIEUR, abſolutely uſed, is a Title or Quality affected to the ſecond Son of *France*, or the King's Brother.

In a Letter of *Philip de Valois*, that Prince ſpeaking of his Predeceſſor, calls him *Monſieur le Roy*, *Monſieur* the King. At preſent, no body calls the King *Monſieur*, but the Children of *France*.

MONSOON, a regular, or periodical Wind, in the *Eaſt-Indies*, blowing conſtantly the ſame way, during ſix Months of the Year, and the contrary way the remaining ſix. See WIND.

In the *Indian* Ocean, the Winds are partly *general*, and blow all the Year round the ſame way, as in the *Æthiopic* Ocean; and partly *periodical*, *i. e.* half the Year blow one way, and the other half near on the oppoſite Points. And thoſe Points and Times of ſhifting differ in different Parts of this Ocean. *Halley*.

Theſe latter, or periodical Winds, are what we call *Monſoons*.

Monſoons then are a Species of what we otherwiſe call *Trade-Winds*. See TRADE-*Wind*.

They take the Denomination *Monſoon* from an antient Pilate, that firſt croſs'd the *Indian* Sea by means hereof. Others derive the Name from a *Portugueſe* Word ſignifying *Motion*, or Change of Wind, and Sea.

Lucretius and *Apollonius* make mention of annual Winds which ariſe every Year, *Etheſia Flabra*, which ſeem to be the ſame with what in the *Eaſt-Indies* we now call *Monſoons*.

MONSTER, a natural Birth, or Production of a living thing, degenerating from the proper and uſual Diſpoſition of Parts, in the Species it belongs to. As when there are too many Members, or too few; or ſome of 'em are extravagantly out of Proportion.

Ariſtotle defines a *Monſter* to be a Defect of Nature, when acting towards ſome end, it cannot attain to it, by reaſon ſome of its Principles are corrupted.

Monſters do not propagate their kind; for which reaſon ſome rank Mules among the Number of *Monſters*; as alſo Hermaphrodites. See MULE and HERMAPHRODITE.

The Word comes from the *Latin Monſtrum*, of *Monſtrando*, ſhewing.

Du Cange mentions an Inventory of the Church *d'Evreux* with this Article, *Item unum Monſtrum cum Oſſibus Sancti Petri in Beril, & Crucifixo in ſummitate.*

Females, which bring forth Twins, are moſt liable to produce *Monſters*. The reaſon, probably, is owing to this; that tho the Twins are cover'd with one common Chorion, yet they have each their ſeparate Amnios, which, by their contiguity may chance to grow together, and ſo occaſion a confuſion, or blending of the Parts. Hence ſo many double Creatures. See DOUBLE.

F. *Malbranche* accounts for the Production of *Monſters* in the Animal World, thus:

The Creator has eſtabliſhed ſuch a Communication between the ſeveral parts of his Creation, that we are not only naturally led to imitate one another, *i. e.* have a diſpoſition to do the ſame things, and aſſume the ſame manners with thoſe with whom we converſe; but alſo have certain natural Diſpoſitions which incline us to Compaſſion, as well as Imitation. Theſe things moſt Men feel, and are ſenſible of; and, therefore, need not be proved. The Animal Spirits then are not only naturally carried into the reſpective parts of the Body to perform the ſame Actions, and the ſame Motions which we ſee others do, but alſo to receive in ſome manner their Wounds, and take part in their Sufferings.

Experience tells us, that when we look attentively on any Perſon ſeverely beaten, or that has a large Wound, Ulcer, or the like; the Spirits immediately flow into thoſe parts of our Body which anſwer to thoſe we ſee ſuffer in the other; unleſs their Courſe be ſtopp'd from ſome other Principle. This Flux of Spirits is very ſenſible in Perſons of a delicate Conſtitution, who frequently ſhudder, and find a kind of trembling in the Body on theſe Occaſions; and this Compaſſion in Bodies, produces Compaſſion in the Mind.

Now it muſt be here obſerved, that the view of a Wound, *&c.* produces a Wound in the Perſon who views it, by ſo much the greater and more ſenſible, as the Perſon is more weak and delicate; the Spirits making a ſtronger Impreſſion on the Fibres of a delicate Body, than in thoſe of a robuſt one. Thus ſtrong, vigorous Men, *&c.* ſee an Execution without much concern, while Women, *&c.* are ſtruck with Pity and Horror. As to Children ſtill in their Mother's Womb, the Fibres of their Fleſh being incomparably finer than thoſe in Women, the Courſe of the Animal Spirits muſt neceſſarily produce much greater Alterations.

This thing being laid down, *Monſters* are eaſily accounted for. Suppoſe, *v. g.* a Child born a Fool, and with all its Legs and Arms broke in the ſame manner as thoſe of Criminals in ſome Countries are; which caſe we chuſe to inſtance in, becauſe we are told from *Paris* that ſuch a *Monſter* was actually born there, and liv'd in one of their Hoſpitals twenty Years: The Cauſe of this Accident, according to the Principles laid down, was, that the Mother ſeeing a Criminal executed, every Stroke given to the poor Man, ſtrook forcibly the Imagination of the Mother; and by a kind of Counter-ſtroke, the tender and delicate Brain of the Child. Now, tho the Fibres of the Woman's Brain were ſtrangely ſhaken by the violent flux of the Animal Spirits on this occaſion, yet they had ſtrength and conſiſtence enough to prevent an entire diſorder and overturning; whereas the Fibres of the Child's Brain being unable to bear the ſhock of thoſe Spirits, were intirely diſſipated; and that Ravage was great enough to deprive him of Reaſon all his Life time.

Again, the view of the Execution frighting the Woman, the violent Courſe of the Animal Spirits was directed forcibly from the Brain to all thoſe Parts of the Body correſponding to the ſuffering parts of the Criminal; and the ſame thing muſt happen in the Child. But in regard the Bones of the Mother were ſtrong enough to reſiſt the Impulſe of thoſe Spirits, they were not damaged. And yet the rapid Courſe of theſe Spirits could eaſily overpower, and break the tender and delicate Fibres of the Bones of the Child; the Bones being the laſt parts of the Body that are form'd, and having a very ſlender conſiſtence while the Child is yet in the Womb.

To which it may be here added, that had the Mother determined the Courſe of theſe Spirits towards ſome other part of her Body, by tickling or ſcratching herſelf vehemently, the Child would not, in all probability, have had its Bones broken; but the part anſwering that, to which the Motion of the Spirits was determined, would have been the Sufferer.

Hence appears the reaſon, why Women in the time of Geſtation, ſeeing Perſons, *&c.* mark'd in ſuch a manner in the Face, impreſs the ſame Mark on the ſame parts of the Child: And why, upon rubbing ſome hidden part of the Body, when ſtartled at the Sight of any thing, or agitated with any extraordinary Paſſion, the Mark or Impreſſion is fix'd on that hidden part rather than on the Face of the Child. From the Principles here laid down, may moſt, if not all, the Phænomena of *Monſters* be eaſily accounted for.

There are alſo *Monſters* in the Vegetable World: Such, *e. g.* are what ſome Botaniſts call *Mules*. See MULE, GENERATION, *&c.*

Floriſts give the Denomination *Monſters* to what we otherwiſe call *Double Flowers*.

MONSTRANS *de Droit*, a Writ iſſuing out of Chancery to be reſtored to Lands or Tenements that are mine in Right, tho on ſome occaſion found in Poſſeſſion of one lately dead.

MONSTRAVERUNT, a Writ which lies for a Tenant who holds freely by Charter in antient Demeſn, upon his being diſtrained for the payment of any Toll or Impoſition contrary to the Liberty he does, or ought to enjoy.

MONSTRUM was antiently uſed for the Box wherein Relicks were kept. See MONSTER.

MONS *Veneris*, ſee VENERIS *Mons*.

MONTANISTS, antient Heretics, ſo call'd from their Leader *Montanus*, who acted the Prophet, and had his Propheteſſes.

They were alſo called *Phrygians*, *Cataphrygians*, and *Quintilians*. See PHRYGIAN, CATAPHRYGIAN, and QUINTILIAN.

MONTH, MENSIS, the twelfth part of a Year. See YEAR.

Time, we have obſerv'd, is Duration mark'd out for certain uſes; and meaſured by the Motions of the Heavenly Bodies. See TIME and DURATION.

Hence reſult divers kinds of Years, and *Months*, according to the particular Luminary by whoſe Revolutions they are determined, and the particular purpoſes they are deſtined for; as *Solar Months*, *Lunar Months*, *Civil Months*, *Aſtronomical Months*, &c.

Solar MONTH is the Space of Time wherein the Sun moves thro one entire Sign of the Ecliptic. See SUN.

Hence, if regard be had to the Sun's true Motion, the *Solar Months* will be unequal; ſince the Sun is longer in paſſing thro' the Winter Signs, than thoſe of the Summer.

But as he conſtantly travels thro' all the Twelve in 365 Days, 5 Hours, and 49 Minutes, the Quantity of a mean *Month* will be had by dividing that Number by 12. On

this Principle, the Quantity of a *Solar Month* will be found 30 Days, 10 Hours, 29 Minutes, 5 Seconds.

Lunar MONTHS are either *Synodical*, *Periodical*, or *Illuminative*.

Lunar Synodical MONTH, call'd alſo, abſolutely, *Lunar* MONTH, and *Lunation*, is the Space of Time between two Conjunctions of the Moon with the Sun; or between two New Moons. See SYNODICAL *Month* and LUNATION.

The Quantity of the *Synodical Month* is 29 days, 12 h. 44′, 3″, 2‴. See MOON.

Lunar Periodical MONTH is the Space of time wherein the Moon makes her round thro' the Zodiac; or wherein ſhe returns to the ſame Point. See PERIODICAL.

The Quantity of this *Month* is 27 days, 7 h. 43′. 8′.

The antient *Romans* made uſe of Lunar *Months*, and made 'em alternately of 29 and 30 Days. They mark'd the Days of each *Month* by three Terms, *viz. Calends*, *Nones*, and *Ides*. See CALENDS, NONES, *&c.*

Lunar Illuminative MONTH, is the Space from the firſt time of her Appearance after New Moon, to her firſt Appearance after the New Moon following.

Hence, as the Moon appears ſometimes ſooner after the New Moon, and ſometimes later; the Quantity of the *Illuminative Month* is not always the ſame.

By this *Month* the *Turks* and *Arabs* go.

Aſtronomical, or *Natural* MONTH, is that meaſured by ſome exact Interval correſponding to the Motion of the Sun, or Moon.

Such are the Lunar and Solar *Months* above-mentioned. Where note, That theſe *Months* can be of no uſe in Civil Life; where it is requir'd that the *Months* begin and end on ſome certain day. For this reaſon recourſe is had to another form of *Months*.

Civil, or *Common* MONTH, is an interval of a certain number of whole Days, approaching nearly to the Quantity of ſome Aſtronomical, either Lunar, or Solar *Month*. See DAY.

Theſe *Civil Months* are various, according to the Aſtronomical *Month* they are accommodated to.

Civil Lunar MONTHS are to conſiſt alternately of 29 and 30 Days. Thus will two *Civil Months* be equal to two Aſtronomical ones, abating for the odd Minutes. And, conſequently the New Moon will be hereby kept to the firſt Day of each ſuch *Civil Month* for a long time together.

However, to make 'em keep conſtant Pace with the *Civil Months*, at the end of each 48 *Months*, a *Month* of 29 days muſt be added; or elſe every 33d *Month* muſt conſiſt of 30 days.

This was the *Month* in Civil, or Common Uſe among the *Jews*, *Greeks*, and *Romans*, till the time of *Julius Cæſar*

Civil Solar MONTHS are to conſiſt alternately of 30 and 31 Days; excepting for one *Month* of the twelve, which for every fourth Year ſhould conſiſt of 30 Days, and the other Years of 29.

This Form of *Civil Months* was introduced by *Julius Cæſar*.

Under *Auguſtus*, the ſixth *Month*, till then from its place call'd *Sextilis*, was denominated *Auguſtus*, in honour of that Prince, and to make the Compliment yet greater, a Day was added to it. So that it now conſiſted of 31 Days, tho till then it had only contain'd 30. To make up for which, a Day was taken from *February*; ſo that henceforward it only conſiſted of 28 Days, and every third Year of 29; tho before it had ordinarily conſiſted of 29 Days, *&c.*

And ſuch are the *Civil* or *Calendar Months* which now obtain thro' *Europe*. See CALENDAR.

Philoſophical MONTH, among Chymiſts, is the ſpace of 40 Days and Nights. See MENSTRUUM.

MONTHLY *Courſes*, ſee MENSES.

MONT-PAGNEL, in Military Matters, an Eminence choſe without the reach of the Cannon of a Place beſieged, where curious Perſons poſt themſelves to ſee an Attack, and the manner of the Siege, without being expoſed to danger.

The Word literally denotes the Poſt of the Invulnerable.

MONUMENT in Architecture, a Building deſtin'd to preſerve the Memory, *&c.* of the Perſon who rais'd it, or for whom it was rais'd.

Such is a Triumphal Arch, a Mauſoleum, a Pyramid, *&c.* See MAUSOLEUM, *&c.*

The Word comes from the *Latin Monere*, to adviſe, and advertize.

The firſt *Monuments* which the Antients erected, were the Stones which they laid over their Tombs, whereon they wrote the Names and Actions of the deceas'd. See TOMB.

Theſe Stones were diſtinguiſh'd by various Names according as their Figures were different. The *Greeks* gave the Name *Steles* to ſuch as were Square in their Baſe, and preſerv'd the ſame Depth throughout their whole Length; whence were deriv'd our Square Pilaſters, or Attic Columns. See PILASTER.

They call'd thoſe *Styles*, which being round in their Baſe, ended in a Point at top, which gave occaſion to the Invention of diminiſh'd Columns.

The Name *Pyramids* they gave to thoſe which were ſquare at the Foot, and terminated in a point at top, in manner of a Funeral Pile. See PYRAMID.

And the Name *Obeliſc*, to thoſe whoſe Baſes were more in Length than in Breadth, and which roſe, ſtill leſſening, to a very great Height, reſembling the Figure of the Spits or Inſtruments uſed by the Antients in roaſting the Fleſh of their Sacrifices, which they call'd *Obeles*. See OBELISK.

The MONUMENT, abſolutely ſo call'd among us, denotes a Magnificent Pillar erected by Order of Parliament, in Memory of the Burning of the City, *Anno* 1666, in the very place where the Fire began.

It is of the Tuſcan Order, 202 Foot high from the Ground, and 15 Foot in Diameter, all of ſolid *Portland* Stone, with a Stair-Caſe in the Middle of black Marble. The Pedeſtal is 21 Foot ſquare, and 40 high; the Front being enrich'd with curious Baſſo Relievo's.

MONY. See MONEY.

MOOD, or MODE, in Logic, call'd alſo *Syllogiſtic* MOOD, is a proper Diſpoſition of the ſeveral Propoſitions of a Syllogiſm, in reſpect of Quantity and Quality. See SYLLOGISM.

By proper Diſpoſition, we mean ſuch wherein the Antecedent being true, the Conſequent, in virtue of the Form, cannot be falſe. So that all thoſe *Moods* or Manners of Syllogiſms are at once excluded, where no Concluſion formally follows; or where the Antecedent being true, a falſe Concluſion may be drawn from it. See CONCLUSION, *&c.*

There are two kinds of *Moods*; the one direct, the other indirect: *Direct Mood* is that wherein the Concluſion is drawn from the Premiſſes directly and immediately; as, Every Animal is a living Thing; every Man is an Animal; therefore every Man is a living Thing.

An *Indirect Mood*, is that wherein the Concluſion is not inferr'd immediately from the Premiſſes, but follows from 'em by means of a Converſion. As every Animal is a living Thing, every Man is an Animal; therefore ſome living Thing is a Man.

There are fourteen direct *Moods*; whereof four belong to the firſt Figure; five to the fourth; 4 to the 2d; and 6 to the 3d. See FIGURE.

They are denoted by ſo many artificial Words framed for that purpoſe, *viz.* 1. *Barbara*, *Celarent*, *Darii*, *Ferioq*; 4. *Baralip*, *Celantes*, *Dabitis*, *Fapeſmo*, *Friſeſom*. 2. *Ceſare*, *Cameſtres*, *Feſtino*, *Baroco*. 3. *Darapti*, *Felapton*, *Diſamis*, *Datiſi*, *Bocardo*, *Feriſon*.

The Uſe and Effect of which Words lie wholly in the Syllables, and the Letters whereof the Syllables conſiſt. Each Word, *e. g.* conſiſts of three Syllables, denoting the three Propoſitions of a Syllable, *viz.* Major, Minor, and Concluſion. Add, that the Letters of each Syllable are either Vowels or Conſonants. The Vowels are *A*, which denotes an univerſal affirmative Propoſition; *E*, an univerſal Negative; *I*, a particular Affirmative; and *O*, a particular Negative.

Thus *Barbara* is a Syllogiſm of the 1ſt Figure, conſiſting of three univerſal affirmative Propoſitions: *Baralip* of the 4th Figure, conſiſting of univerſal affirmative Premiſſes, *&c.* particular affirmative Concluſions, *&c.* See BARBARA, CELARENT, DARII, *&c.*

The Conſonants are chiefly of uſe in the Reduction of Syllogiſms. See REDUCTION.

MOOD or *Mode*, in Grammar, is uſed to ſignify the different Manners of conjugating Verbs, agreeably to the different Actions or Affections to be expreſſed, *e. g.* ſhewing, commanding, wiſhing, *&c.* See VERB.

Hence ariſe 5 *Modes*, *viz.* the *Indicative*, *Imperative*, *Optative*, *Subjunctive*, and *Infinitive*. See INDICATIVE, IMPERATIVE, OPTATIVE, *&c.*

Some Grammarians reckon but four *Modes*, confounding the Optative with the Subjunctive; and ſome make ſix, dividing the Optative into Potential and Optative.

The *Greeks* have five *Modes* of Verbs differing in Termination; but the *Latins* have but four.

In *Engliſh* the Terminations are the ſame in all the *Modes*.

For the Origin of *Modes*, it may be obſerved, that Verbs are of that kind of Words which ſignify the Manner and Form of our Thoughts; whereof the Principal is Affirmation. Verbs are alſo form'd to receive different Inflections, as the Affirmation regards different Perſons and different Times, whence ariſe the Tenſes and Perſons of Verbs.

But beſides theſe, Men have thought fit to invent other Inflections, to explain what paſs'd in their Mind ſtill more diſtinctly: For, in the firſt place, they conſider'd, that beſide the ſimple Affirmations, as *he loves*, *he loved*, there were others modified and conditional, as, *if he loved*, *tho' he ſhould love*. And the better to diſtinguiſh theſe Affirmations from the others, they doubled the Inflections of thoſe

thoſe Tenſes, or Times, making ſome ſerve for ſimple Affirmations, as *love*, *loved*; and reſerving the reſt for Affirmations that were modified; as, *if he ſhould love*, *might he have loved*: yet they kept not ſteadily to their Rules, but ſometimes made uſe of ſimple Inflections to expreſs Affirmations that were modified; as *etſi vereor*, for *etſi verear*. And it is from this laſt kind of Inflection, that Grammarians have formed the *Mood* they call *Subjunctive*. See SUBJUNCTIVE.

But further, beſides the Affirmation, the Action of our Will may be taken for a *Mode*, or Manner of our Thought; and Men have found themſelves under a Neceſſity of expreſſing what they *will*, as well as what they *think*. Now we may will a thing in ſeveral manners; whereof there are three which may be conſider'd as the Principal. *Firſt*, then, We ſometimes will things which don't depend on ourſelves, and in that caſe we only will them by a bare wiſh, which the *Latins* expreſs by the Particle *Utinam*; and we by, *Pleaſe God*. Some Languages, as for inſtance, the *Greek*, have invented particular Inflections for this end; whence the Grammarians have taken occaſion to call it the Optative *Mode*: And there ſeems ſomething like both in the *French*, *Italian*, and *Spaniſh* Tongues, in regard theſe have a kind of triple Tenſes; but in *Latin*, *Engliſh*, &c. the ſame Inflections ſerve for the Subjunctive, and for the Optative. For this reaſon, one may very well retrench this *Mode* from the *Latin* Conjugations; it being the different Inflections that make *Modes*, not the different Manner of ſignifying, which may be varied to infinity. See OPTATIVE.

We ſometimes will in another manner; as when we are content it ſhould paſs, tho' we don't abſolutely deſire it; as when *Terence* ſays, *Profudat*, *perdat*, *pereat*, let him ſpend, ſink, periſh. Men might have invented a particular Inflection, to expreſs this Movement, as in *Greek* they have done to expreſs a ſimple Deſire. But they han't done it; and in lieu thereof, make uſe of the Subjunctive. In *Engliſh* we add the Particle, Let him ſpend, &c. Some Authors call this the *Potential* or Conceſſive *Mode*.

The third manner of willing, is when what we deſire, depending on another Perſon, of whom we can obtain it, we ſignify our Will that he do it. And this is the Motion we uſe, when we command or pray; and to expreſs this Motion, was invented the *Mode* we call *Imperative*; which has no firſt Perſon in the Singular, becauſe a Man, properly ſpeaking, cannot command himſelf: In ſome Languages it has no third Perſon, becauſe, in ſtrictneſs, a Man cannot command any Perſon, but him to whom he ſpeaks and addreſſes himſelf. And in regard the Command or Prayer always relates to what is to come, it happens that the Imperative *Mode*, and the Future Tenſe, are frequently uſed for each other, eſpecially in the *Hebrew*; as, *non occides*, *thou ſhalt not kill*, for *do not kill*. Hence ſome Grammarians place the Imperative among the Number of Futures. See IMPERATIVE.

Of all the *Modes* we have mention'd, the Oriental Languages have none but the laſt, which is the Imperative; and on the contrary, the modern Languages have none of them any particular Inflection for the Imperative. The Method we take for it in *Engliſh*, is either to omit the Pronoun, or tranſpoſe it; thus, *I love*, is a ſimple Affirmation; *Love*, an Imperative: *We love*, an Affirmation; *Love we*, an Imperative.

MOOD, in Philoſophy, } See MODE.
MOOD, in Muſic, }

MOON, *Luna*, ☽, in Aſtronomy, one of the heavenly Bodies, uſually rank'd among the Planets; but with more propriety accounted a *Satellite*, or ſecundary Planet. See PLANET and SATELLITE.

The *Moon* is an Attendant of our Earth, whom ſhe reſpects as a Centre, and in whoſe Neighbourhood ſhe is conſtantly found; inſomuch as if view'd from the Sun, ſhe would never appear to depart from us by an Angle greater than ten Minutes. See EARTH.

As all the other Planets move primarily round the Sun, ſo does the *Moon* round the Earth: her Orbit is an Ellipſis, in which ſhe is retain'd by the Force of Gravity; performing her Revolution round us in 27 Days, 7 Hours, 43 Minutes; which is alſo the preciſe time of her Rotation round her Axis. See ORBIT, and REVOLUTION.

The mean Diſtance of the *Moon* from the Earth, is 60½ Semi-diameters of the Earth; which is equivalent to 240,000 Miles. See DISTANCE.

The mean Excentricity of its Orbit, is $\frac{55}{1000}$ of its mean Diſtance, which makes a conſiderable Variation in that mean Diſtance. See ECCENTRICITY.

The *Moon's* Diameter is to that of the Earth, as 11 to 40.2; or 2175 Miles: Its mean apparent Diameter is 31 Minutes 16$\frac{1}{2}$, and that of the Sun 32 Minutes 12 Seconds. See DIAMETER and SEMI-DIAMETER.

The *Moon's* Surface contains 14,000,000 ſquare Miles; and its Solidity 5,000,000,000 cubical ones: The Denſity of the *Moon's* Body is to that of the Earth, as 48911 to 39214, to that of the Sun as 48911 to 10000: Its Quantity of Matter to that of the Earth, nearly as 1 to 39.15: and the Force of Gravity on its Surface, is to that on the Surface of the Earth, as 139.2 to 407.8. See SOLIDITY, DENSITY, GRAVITY, &c.

Phænomena of the MOON.

The Phænomena or different Appearances, of the *Moon*, are very numerous: Sometimes ſhe is *increaſing*, then *waneing*; ſometimes *horned*, then *ſemi-circular*; ſometimes *gibbous*, then *full* and *globular*. See PHASES.

Sometimes, again, ſhe illumines us the whole Night; ſometimes only a part of it; ſometimes ſhe is found in the Southern Hemiſphere; ſometimes in the Northern: All which Variations having been firſt obſerv'd by *Endymion*, an antient *Grecian*, who firſt watch'd her Motions, he was fabled to have fallen in love with her.

The Source of moſt of theſe Appearances, is, that the *Moon* is a dark, opake, and ſpherical Body; and only ſhines with the Light ſhe receives from the Sun: whence only that Half turn'd towards him is illumin'd; the oppoſite one remaining in its native Darkneſs. The Face of the *Moon* viſible on our Earth, is that part of her Body turn'd towards the Earth; whence, according to the various Poſitions of the *Moon* with regard to the Sun, and Earth, we obſerve different Degrees of Illumination; ſometimes a large, and ſometimes a leſs Portion of the enlighten'd Surface being viſible.

The Phaſes of the MOON.

To conceive the Lunar Phaſes: Let S (Plate ASTRONOMY, fig. 13.) repreſent the Sun, T the Earth, R T S a Portion of the Earth's Orbit, and A B C D E F G the Orbit of the *Moon*, wherein ſhe revolves round the Earth, in the ſpace of a Month, advancing from Weſt to Eaſt: Connect the Centres of the Sun and *Moon* by the right Line S L, and thro the Centre of the *Moon* imagine a Plane M L N, to paſs perpendicular to the Line S L: the Section of that Plane with the Surface of the *Moon*, will give the *Line that bounds Light and Darkneſs*, and ſeparates the illumin'd Face from the dark one. See ILLUMINATION.

Connect the Centres of the Earth and *Moon* by T L, perpendicular to a Plane P L O, paſſing thro the Centre of the *Moon*; that Plane will give on the Surface of the *Moon*, the Circle that diſtinguiſhes the viſible Hemiſphere, or that towards us, from the inviſible one, and therefore call'd the *Circle of Viſion*. See *Circle of* VISION.

Whence it appears, that whenever the *Moon* is in A, the Circle bounding Light and Darkneſs, and the Circle of Viſion, coincide: So that all the illumin'd Face of the *Moon* will be turn'd towards the Earth; in which Caſe, the *Moon* is with reſpect to us *full*, and ſhines the whole Night; with reſpect to the Sun, ſhe is in *Oppoſition*; in regard the Sun and *Moon* are then ſeen in oppoſite Parts of the Heavens, the one riſing when the other ſets. See FULL *Moon* and OPPOSITION.

When the *Moon* arrives at B, the whole illumin'd Disk M P N is not turn'd towards the Earth; ſo that the viſible Illumination will be ſhort of a Circle, and the *Moon* will appear *gibbous*, as in B. See GIBBOUS.

When ſhe reaches C, where the Angle C T S is nearly right, there only one half of the illumin'd Disk is turn'd towards the Earth, and then we obſerve a *Half Moon*, as in C; and ſhe is ſaid to be *dichotomized* or *biſſected*. See HALF *Moon* and DICHOTOMY.

In this Situation the Sun and *Moon* are a fourth part of a Circle remov'd from each other; and the *Moon* is ſaid to be in a *quadrate Aſpect*, or to be in her *Quadrature*. See QUADRATURES.

The *Moon* arriving at D, a ſmall part of the illumin'd Face M P N, is only turn'd towards the Earth: for which reaſon, the ſmall part that ſhines upon us, will be ſeen *falcated*, or bent into narrow Angles or *Horns*, as in D. See FALCATED.

At laſt, the *Moon* arriving at E, ſhews no part of her illumin'd Face to the Earth, as in D; this Poſition we call the *New Moon*, and ſhe is then ſaid to be in *Conjunction* with the Sun; the Sun and *Moon* being in the ſame Point of the Ecliptic. See NEW *Moon*, and CONJUNCTION.

As the *Moon* advances towards E, ſhe reſumes her Horns; and as before the *New Moon*, the Horns were turn'd Weſtward; ſo now they *change* their Poſition, and look Eaſtward: when ſhe comes at G, ſhe is again in *quadrate Aſpect* with the Sun; in H *gibbous*, and in A again *full*.

Here, the Arch E L, or the Angle S T L, contain'd under Lines drawn from the Centres of the Sun and *Moon* to that of the Earth, is call'd the *Elongation* of the *Moon* from the Sun: and the Arch M O, which is the Portion of the illumin'd Circle M O N, that is turn'd towards us, and which is the Meaſure of the Angle that the Circle bounding Light and Darkneſs, and the Circle of Viſion, make with each other, is every where nearly ſimilar to the Arch

of

of Elongation E L; or which is the same thing, the Angle S T E is nearly equal to the Angle M L O: as is demonstrated by Geometers. See ELONGATION.

To delineate the Moon's Phases for any time. Let the Circle C O B P (fig. 14.) represent the *Moon's* Disk turn'd towards the Earth, and let O P be the Lines in which the Semi-circle O M P is projected, which suppose cut at right Angles by the Diameter B C; then making L P the Radius, take L F equal to the Co-sine of the Elongation of the *Moon*; and upon B C, as the greater Axis, and L I, the less, describe the Semi-Ellipsis B F C; this Ellipsis will cut off from the *Moon's* Disk the Portion B E C P of the illumin'd Face visible on the Earth.

As the *Moon* illumines the Earth by a Light reflected from the Sun, so is she reciprocally illumin'd by the Earth, which reflects the Sun's Rays to the Surface of the *Moon*, and that more abundantly than she receives them from the *Moon*. For the Surface of the Earth is above 15 times greater than that of the *Moon*; and therefore supposing the Texture of each Body alike, as to the Power of Reflecting; the Earth must return 15 times more Light to the *Moon*, than she receives from it. In *New Moons*, the illumined Side of the Earth is turn'd fully towards the *Moon*, and will therefore at that time illumine the dark Side of the *Moon*; and then the *Lunar* Inhabitants (if such there be) will have a *full Earth*, as we, in a similar Position, have a *full Moon:* And hence arises that dim Light observ'd in the Old and New *Moons*; whereby, besides the bright Horns, we perceive somewhat more of her Body behind them, tho very obscurely. When the *Moon* comes to be in opposition to the Sun, the Earth seen from the *Moon* will appear in *Conjunction* with him, and its dark Side will be turn'd towards the *Moon*; in which Position the Earth will disappear to the *Moon*, as that does to us at the time of the *New Moon*, or in her Conjunction with the Sun. After this, the *Lunar* Inhabitants will see the Earth in a *horned Figure*. In fine, the Earth will present all the same *Phases* to the *Moon*, as the *Moon* does to the Earth.

Dr. *Hook*, accounting for the Reason why the *Moon's* Light affords no visible Heat, observes, that the Quantity of Light which falls on the Hemisphere of the full *Moon*, is rarify'd into a Sphere 288 times greater in Diameter than the *Moon*, e'er it arrive at us; and consequently that the *Moon's* Light is 104368 weaker than that of the Sun. It would therefore require 104368 *full Moons* to give a Light and Heat equal to that of the Sun at Noon. See SUN, HEAT, &c.

Motion of the MOON.

Tho' the *Moon* finishes its Course in 27 Days, 7 Hours, which Interval we call a *Periodical Month*, she is longer in passing from one Conjunction to another; which Space we call a *Synodical Month*, or a *Lunation*. See MONTH and LUNATION.

The reason is, that while the *Moon* is performing its Course round the Earth in its own Orbit, the Earth with its Attendant is making its Progress round the Sun, and both are advanced almost a whole Sign towards the East; so that the Point of the Orbit, which in the former Position was in a right Line passing the Centres of the Earth and Sun, is now more westerly than the Sun: and therefore when the *Moon* is arrived again at that Point, it will not be yet seen in Conjunction with the Sun; nor will the Lunation be compleated in less than 29 Days and a half. See PERIODICAL, SYNODICAL, &c.

Were the Plane of the *Moon's* Orbit coincident with the Plane of the Ecliptic, *i. e.* were the Earth and *Moon* both moved in the same Plane, the *Moon's* Way in the Heavens, view'd from the Earth, would appear just the same with that of the Sun; with this only difference, that the Sun would be found to describe his Circle in the space of a *Year*, and the *Moon* hers in a *Month:* but this is not the Case; for the two Planes cut each other in a right Line, passing thro the Centre of the Earth, and are inclin'd to each other in an Angle of about five Degrees. See INCLINATION.

Suppose, *e. g.* A B (fig. 15.) a Portion of the Earth's Orbit; T the Earth; and C E D F the *Moon's* Orbit, wherein is the Centre of the Earth: from the same Centre T, in the Plane of the Ecliptic, describe another C D G D H, whose Semi-diameter is equal to that of the *Moon's* Orbit: Now, these two Circles being in several Planes, and having the same Centre T, will intersect each other in a Line D C, passing thro the Centre of the Earth. Consequently, C E D, one half of the Orbit of the *Moon*, will be raised above the Plane of the Circle C G H, towards the North; and D F C, the other half, will be sunk below it towards the South. The right Line D C, wherein the two Circles intersect each other, is call'd the *Line of the Nodes*, and the Points of the Angles C and D *the Nodes:* whereof, that where the *Moon* ascends above the Plane of the Ecliptic, Northwards, is call'd the *Ascending Node*, and the *Head of the Dragon*; and the other D, the *Descending Node*, and the *Dragon's Tail*. See NODE. And the Interval of Time between the *Moon's* going from the ascending Node, and returning to it, a Dracontic Month. See DRAGON'S *Head*, &c. DRACONTIC *Month*, &c.

If the Line of the Nodes were immoveable, that is, if it had no other Motion, but that whereby it is carry'd round the Sun, it would still look towards the same Point of the Ecliptic, *i. e.* would always keep parallel to itself; but it is found by Observation, that the Line of the Nodes constantly changes place, and shifts its Situation from East to West, contrary to the Order of the Signs, and by a Retrograde Motion, finishes its Circuit in about 19 Years; in which time each of the Nodes returns to that Point of the Ecliptic, whence it before receded. See CYCLE.

Hence it follows, that the *Moon* is never precisely in the Ecliptic, but twice, each Period, *viz.* when she is in the Nodes: throughout the rest of her Course she deviates from it, being nearer or further from the Ecliptic, as she is nearer or further from the Nodes. In the Points F and E, she is at her greatest Distance from the Nodes; which Points are call'd her *Limits*. See LIMITS.

The *Moon's* Distance from the Nodes, or rather from the Ecliptic, is call'd her *Latitude*, which is measur'd by an Arch of a Circle drawn thro the *Moon* perpendicular to the Ecliptic, and intercepted between the *Moon* and the Ecliptic. The *Moon's* Latitude, when at the greatest, as in E or F, never exceeds 5 Degrees, and about 18 Minutes; which Latitude is the Measure of the Angles at the Nodes. See LATITUDE.

It appears by Observation, that the *Moon's* Distance from the Earth is continually changing; and that she is always either drawing nearer, or going further from us. The reason is this, that the *Moon* does not move in a circular Orbit, which has the Earth for its Centre; but in an Elliptic Orbit (such as is represented in Fig. 16.) one of whose Foci, is the Center of the Earth: A P represents the greater *Axis* of the Ellipsis, and the Line of the *Apsides*; and T C, the *Eccentricity:* the Point A, which is the highest Apsis, is call'd the *Apogee* of the *Moon*; and P, the lowest Apsis, is the *Moon's Perigee*, or the Point wherein she comes nearest the Earth. See APOGEE and PERIGEE.

The Space of Time wherein the *Moon*, going from the Apogee, returns to it again, is call'd the *Anomalistic* Month. See ANOMALISTIC.

If the *Moon's* Orbit had no other Motion, but that wherewith it is carry'd round the Sun, it would still retain a Position parallel to itself, and always point the same way, and be observ'd in the same Point of the Ecliptic; but the Line of the Apsides is likewise observ'd to be moveable, and to have an angular Motion round the Earth from West to East, according to the Order of the Signs, returning to the same Situation in the space of about nine Years. See ANGULAR *Motion* and APSIDES.

Irregularities in the MOON'S *Motion.*

The Irregularities of the *Moon's* Motion, and that of her Orbit, are very considerable: For, 1. When the Earth is in her Aphelion, the *Moon* is in her Aphelion likewise; in which case she quickens her Pace, and performs her Circuit in a shorter time: On the contrary, when the Earth is in its Perihelion, the *Moon* is so too, and then she slackens her Motion; and thus revolves round the Earth in a shorter space, when the Earth is in her Aphelion, than when in her Perihelion: So that the Periodical Months are not all equal. See PERIODICAL *Month*.

2. Again, when the *Moon* is in her *Syzygies*, *i. e.* in the Line that joins the Centers of the Earth and Sun, which is either in her Conjunction or Opposition; she moves swifter, *cæteris paribus*, than when in the Quadratures. See SYZYGIES.

Further, 3. According to the different Distance of the *Moon* from the Syzygies, *i. e.* from Opposition or Conjunction, she changes her Motion: In the first Quarter, that is, from the Conjunction to her first Quadrature, she abates somewhat of her Velocity; which, in the second Quarter, she recovers: In the third Quarter, she again loses; and in the last, again recovers. This Inequality was first discover'd by *Tycho Brahe*, who call'd it the *Moon's Variation*. See VARIATION.

4. Add to this, that the *Moon* moves in an Ellipsis, one of whose Foci is in the Centre of the Earth, round which she describes Areas proportionable to the Times, as the primary Planets do round the Sun; whence her Motion in the Perigee must be quickest, and slowest in the Apogee.

5. The very Orbit of the *Moon* is changeable, and does not always persevere in the same Figure; its Eccentricity being sometimes increas'd, and sometimes diminish'd; greatest, when the Line of Apsides coincides with that of the Syzygies; and least, when the Line of Apsides cuts the other at right Angles. See ORBIT.

6. Nor

6. Nor is the Apogee of the *Moon* without an Irregularity; being found to move forwards, when it coincides with the Line of Syzygies, and backwards, when it cuts the Line at right Angles. See APOGEE: Nor is this Progreſs and Regreſs in any meaſure equal: in the Conjunction, or Oppoſition, it goes briskly forwards; and in the Quadratures, moves either ſlowly forwards, ſtands ſtill, or goes backward. See SYZYGIES.

7. The Motion of the Nodes is not uniform; but when the Line of the Nodes coincides with that of the Syzygies, they ſtand ſtill; when the Nodes are in the Quadratures, *i. e.* when their Line cuts that of the Syzygies at right Angles, they go backwards, from Eaſt to Weſt; and this, Sir *I. Newton* ſhews, with the Velocity of $16''$, $19'''$, $24''''$, in an Hour. See NODE.

The only equable Motion the *Moon* has, is that wherewith ſhe turns round her Axis exactly in the ſame ſpace of Time, in which ſhe revolves round us in her Orbit; whence it happens, that ſhe always turns the ſame Face towards us.

For, as the *Moon's* Motion round its Axis is equal, and yet its Motion or Velocity in its Orbit is unequal; it follows, that when the *Moon* is in its Perigee, where it moves ſwifteſt in its Orbit, that part of its Surface, which, on account of its Motion in the Orbit, would be turn'd from the Earth, is not ſo, entirely; by reaſon of its Motion round its Axis: Thus, ſome Parts in the Limb, or Margin of the *Moon*, ſometimes recede from the Center of the Disk, and ſometimes approach towards it, and ſome Parts, that were before inviſible, become conſpicuous: which is call'd the *Moon's* Libration.

Yet this Equability of Rotation occaſions an apparent Irregularity; for the Axis of the *Moon*, not being perpendicular to the Plane of its Orbit, but a little inclined to it: and this Axis maintaining its Parallelism, in its Motion round the Earth; it muſt neceſſarily change its Situation, in reſpect of an Obſerver on the Earth; to whom, ſometimes the one, and ſometimes the other Pole of the *Moon*, becomes viſible. Whence it appears to have a kind of Libration. See LIBRATION and AXIS.

Phyſical Laws of the MOON's *Motion.*

Thus much for the *Lunar Phænomena:* It remains that we aſſign the *Phyſical Cauſe* thereof. The *Moon*, we have obſerved, moves round the Earth, by the ſame Laws, and in the ſame Manner, as the Earth round the Sun and other Planets. The Solution therefore of the Lunar Motion, in general, comes under thoſe of the Earth, and other Planets. See PLANET and EARTH.

As for the particular Irregularities in the *Moon's* Motion, to which the Earth, and other Planets, are not ſubject, they ariſe from the Sun, which acts on, and diſturbs her in her ordinary Progreſs thro her Orbit; and are all mechanically deducible from the ſame great Law, whereby her general Motion is directed, *viz.* the Law of *Gravitation* or *Attraction*. See GRAVITATION.

Other ſecondary Planets, *v. g.* the Satellites of *Jupiter* and *Saturn*, are doubtleſs ſubject to the like Irregularities with the Moon; as being expoſed to the ſame perturbating or diſturbing Force of the Sun; but their Diſtance ſecures them from our Obſervation. See SATELLITE *and* DISTURBING *Force.*

The Laws of the ſeveral Irregularities in the *Syzygies*, *Quadratures*, *&c.* ſee under SYZYGIES, QUADRATURES, *&c.*

The Aſtronomy of the MOON.

1. To determine the Period of the *Moon's* Revolution round the Earth, or the *Periodical Month*; and the Time between one Oppoſition and another, or the *Synodical Month:* ſince, in the middle of a Lunar Eclipſe, the *Moon* is oppoſite to the Sun: (See ECLIPSE.) Compute the time between two Eclipſes, or Oppoſitions; and divide this, by the number of Lunations, that have paſſed in the mean time: the Quotient will be the Quantity of the Synodical Month.——Compute the Sun's mean Motion during the time of the Synodical Month, and add this to the entire Circle deſcribed by the *Moon:* Then, as the Sum is to 360°, ſo is the Quantity of the Synodical Month to the Periodical.

Thus, *Copernicus* in the Year 1500, *November 6.* at 12 at Night, obſerved an Eclipſe of the *Moon* at *Rome*; and *Auguſt* 1, 1523, at 4 h. 25′, another at *Cracow:* hence, the Quantity of the Synodical Month is thus determined:

Obſ. 11 A.	1523 d.	237 h. 4.25′
Obſ. 1 A.	1500 d.	310 h. 2.20′
Interval of Time A	22 d.	292 h. 2.5.
And the Days		5
Exact Interval A.	22 d.	297 h. 2.5′
or		11991005″

Which divided by 282 Months elapſed, in the mean time, gives the Quantity of the Synodical Month $42521', 9'', 9'''$; that is, 29 days, 12 hours, 41 minutes.

From two other Obſervations of Eclipſes, the one at *Cracow*, the other at *Babylon*, the ſame Author determines more accurately the Quantity of the Synodical Month to be $42524'. 3''. 10'''. 9''''$.

That is 29 d. 11 h.

The Sun's Motion in the time	29.	6. 24.18
The *Moon's* Motion	389.	6. 24.18

Quantity of the Periodical Month 27 d. 7 h. $43'. 5''$.

Hence, 1. The Quantity of the Periodical Month being given; by the Rule of Three we may find the *Moon's* diurnal and hourly Motion, *&c.* And thus may Tables of the mean Motion of the *Moon* be conſtructed. See TABLES; ſee alſo DIURNAL and HORARY.

2. If the Sun's mean diurnal Motion be ſubſtracted from the *Moon's* mean diurnal Motion; the Remainder will give the *Moon's* diurnal Motion from the Sun: and thus may a Table of Latitudes be conſtructed, ſuch as thoſe of *Bullialdus.* See LATITUDES.

3. Since in the middle of a total Eclipſe, the *Moon* is in the Node; if the Sun's Place be found for that time, and to this be added ſix Signs, the Sum will give the *Place of the Node.* See NODE.

4. From comparing the antient Obſervations with the modern, it appears that the Nodes have a Motion, and that they proceed *in Antecedentia*, *i. e.* from *Taurus* to *Aries*, from *Aries* to *Piſces*, *&c.* If then to the *Moon's* mean diurnal Motion, be added the diurnal Motion of the Nodes, the ſame will be the Motion of the Latitude; and thence, by the Rule of Three, may be found in what time the *Moon* goes 360° from the Dragon's Head, or in what time ſhe goes from, and returns to it: That is the Quantity of the *Dracontic Month.*

5. If the Motion of the diurnal Apogee be ſubſtracted from the mean Motion of the *Moon*, the Remainder will be the *Moon's* mean Motion from the Apogee: and thence, by the Rule of Three, is determin'd the Quantity of the *Anomaliſtic Month.*

According to the Obſervations of *Kepler*, the mean Synodical Month is 29 d. 12 h. $44'. 3''. 2'''$. Her Periodical Month 27 d. 7 h. $43'. 8''$. The Place of the Apogee for the Year 1700, *January* 1. Old Style, was 11 S. 8°. 57′. 1″. The Plane of the Nodes 4 S. 27°. 39′. 17″. Mean diurnal Motion of the *Moon* 13°. 10′. 35″. Diurnal Motion of the Apogee 6′. 41″. Diurnal Motion of the Nodes 3′. 11″. Laſtly, the Eccentricity 4362 Parts, ſuch, whereof the Diameter of the Eccentrice is 10000: and therefore the diurnal Motion of the Latitude is 13°. 13′. 46″; and the diurnal Motion from the Apogee 13°. 3′. 54″.

Theory of the LUNAR *Motions and Irregularities.*

The Tables of Equation, which ſerve to ſolve the Irregularities of the Sun, do likewiſe ſerve for thoſe of the *Moon.* See EQUATION.

But then theſe Equations muſt be corrected for the *Moon*; otherwiſe they will not exhibit the true Motions in the Syzygies. The Method is thus: Suppoſe the *Moon's* Place in the Zodiac, required in Longitude, for any given time; here, we firſt find, in the Tables, the place where it would be, ſuppoſing its Motion uniform, which we call *mean*, and which is ſometimes faſter, and ſometimes ſlower than the true Motion: then, to find where the *true* Motion will place her, which is alſo the *apparent*, we are to find in another Table at what Diſtance it is from its Apogee; for, according to this Diſtance, the Difference between her true and mean Motion, and the two Places which correſpond thereto, is the greater. The true Place thus found, is not yet the *true* Place; but varies from it, as the *Moon* is more, or leſs remote both from the Sun, and the Sun's Apogee: which Variation reſpecting, at the ſame time, thoſe two different Diſtances, they are to be both conſidered and combined together, as in a Table apart. Which Table gives the Correction to be made of the true Places firſt found: That Place thus corrected, is not yet the *true* Place, unleſs the *Moon* be either in Conjunction, or Oppoſition: If ſhe be out of theſe, there muſt be another Correction, which depends on two things taken together, and compared, *viz.* the Diſtance of the *Moon's* corrected Place from the Sun; and of that at which ſhe is with regard to her own Apogee; this laſt Diſtance having been changed by the firſt Correction.

By all theſe Operations and Corrections, we at length arrive at the *Moon's true Place* for that inſtant. In this it muſt be owned, occur prodigious difficulties: The Lunar Inequalities are ſo many, that it was in vain the Aſtronomers laboured to bring 'em under any Rule, before the Great Sir *Iſ. Newton*; to whom we are indebted both for the mechanical Cauſes of theſe Inequalities, and for the Method of computing and aſcertaining them: So that he

has a World, in great measure, of his own discovering, or rather subduing.

From the Theory of Gravity he shews, that the larger Planets revolving round the Sun, may carry along with 'em smaller Planets revolving round themselves; and shews, *à priori*, that these smaller must move in Ellipses having their Umbilici in the Centres of the larger; and have their Motion in their Orbit variously disturbed by the Motion of the Sun; and, in a word, must be affected with those Inequalities which we actually observe in the *Moon*. And from this Theory, argues analogous Irregularities in the Satellites of Saturn.

From this same Theory he examines the force which the Sun has to disturb the *Moon*'s Motion, determines the horary Increase of the Area which the *Moon* would describe in a circular Orbit by Radii drawn to the Earth —— her Distance from the Earth —— the Horary Motion in a circular and elliptic Orbit——the mean Motion of the Nodes——the true Motion of the Nodes——the horary Variation of the Inclination of the *Moon*'s Orbit to the Plane of the Ecliptic.

Lastly, From the same Theory he has found the annual Equation of the *Moon*'s mean Motion to arise from the various dilaration of her Orbit; and that Variation to arise from the Sun's force, which being greater in the Perigee, distends the Orbit; and being less in the Apogee, suffers it to be again contracted. In the dilated Orbit, she moves more slowly; in the contracted, more swiftly: and the annual Equation, whereby this Inequality is compensated, in the Apogee, and Perigee is nothing at all; at a moderate distance from the Sun, amounts to 11′, 50″; and in other places is proportional to the Equation of the Sun's Centre, and is added to the mean Motion of the *Moon*, when the Earth proceeds from its Aphelion to its Perihelion; and subtracted when in its opposite part. Supposing the Radius of the *Orbis magnus* 1000, and the Earth's Eccentricity 16 $\frac{7}{8}$; this Equation, when greatest, according to the Theory of Gravity, comes out 11′, 49″, 8‴. He adds, that in the Earth's Perihelion the Nodes move swifter than in the Aphelion, and that in a triplicate Ratio of the Earth's distance from the Sun, inversely. Whence arise annual Equations of their Motions, proportionable to that of the Centre of the Sun. Now the Sun's Motion is in a duplicate Ratio of the Earth's Distance from the Sun inversely, and the greatest Equation of the Centre which this Inequality occasions, is 1°, 56′, 26″, agreeable to the Sun's Eccentricity 16 $\frac{15}{16}$. If the Sun's Motion were in a triplicate Ratio of its Distance inversely, this Inequality could generate the greatest Equation 2°, 66′, 9″; and therefore the greatest Equations which the Inequalities of the Motions of the *Moon*'s Apogee and Nodes occasion, are to 2°, 56′, 9″, as the mean diurnal Motion of the *Moon*'s Apogee, and the mean diurnal Motion of her Nodes are to the mean diurnal Motion of the Sun. Whence the greatest Equation of the mean Motion of the Apogee comes out 19″, 52″; and the greatest Equation of the mean Motion of the Nodes 9′ 27″. The former Equation is added, and the latter subtracted, when the Earth proceeds from its Perihelion to its Aphelion; and the contrary in the opposite part of its Orbit.

From the same Theory of Gravity it also appears, that the Sun's Action on the *Moon* must be somewhat greater when the transverse Diameter of the Lunar Orbit passes through the Sun, than when it is at right Angles with the Line that joins the Earth and Sun: And, therefore, that the Lunar Orbit is somewhat greater in the first case, than in the second. Hence arises another Equation of the mean Lunar Motion, depending on the Situation of the *Moon*'s Apogee with regard to the Sun, which is greatest when the *Moon*'s Apogee is in an Octant with the Sun; and none, when that arrives at the Quadrature, or Syzygies; and is added to the mean Motion, in the Passage of the *Moon*'s Apogee from the Quadrature to the Syzygies, and subtracted in the Passage of the Apogee from the Syzygies to the Quadrature. This Equation, which he calls *Semestris*, when greatest, *viz.* in the Octants of the Apogee, arises to 3′, 34″, at a mean distance of the Earth from the Sun; but it increases and diminishes in a triplicate Ratio of the Sun's distance inversely; and therefore in the Sun's greatest distance, is 3′, 34″; in the smallest, 3′, 56″, nearly. But when the Apogee of the *Moon* is without the Octants, it becomes less, and is to the greatest Equation, as the Sine of double the distance of the *Moon*'s Apogee, from the next Syzygy or Quadrature, to the Radius.

From the same Theory of Gravity it follows, that the Sun's Action on the *Moon* is somewhat greater when a Line right drawn through the *Moon*'s Nodes passes through the Sun, than when that Line is at right Angles with another joining the Sun and Earth: And hence arises another Equation of the *Moon*'s mean Motion, which he calls *Secunda Semestris*, and which is greatest when the Nodes are in the Sun's Octants, and vanishes when they are in the Syzygies, or Quadratures; and in other Situations of the Nodes is proportionable to the Sine of double the distance of either Node from the next Syzygy, or Quadrature: it is added to the *Moon*'s mean Motion while the Nodes are in their Passage from the Sun's Quadratures to the next Syzygy, and subtracted in their Passage from the Syzygies to the Quadratures in the Octants. When it is greatest, it amounts to 47″, at a mean distance of the Earth from the Sun; as appears from the Theory of Gravity: At other distances of the Sun, this Equation in the Octants of the Nodes is reciprocally as the Cube of the Sun's distance from the Earth; and therefore in the Sun's Perigee is 45″; in his Apogee nearly 49″.

By the same Theory of Gravity, the *Moon*'s Apogee proceeds the fastest when either in Conjunction with the Sun, or in Opposition to it; and returns when it makes a Quadrature with the Sun. In the former Case, the Excentricity is greatest, and in the latter smallest. These Inequalities are very considerable, and generate the principal Equation of the Apogee, which he calls *Semestris*, or *Semimenstrual*. The greatest *Semi-menstrual* Equation is about 12°, 18′.

Horrox first observ'd the *Moon* to revolve in an Ellipsis round the Earth placed in the lower Umbilicus: And *Halley* placed the Centre of the Ellipsis in an Epicycle whose Centre revolves uniformly about the Earth: And from the Motion in the Epicycle arise the Inequalities now observed in the Progress and Regress of the Apogee, and the Quantity of the Eccentricity.

Suppose the mean distance of the *Moon* from the Earth divided into 100000, and let T (Plate ASTRONOMY, *Fig.* 17.) represent the Earth, and T C the mean Eccentricity of the *Moon* 5505 parts; produce T C to B, that C B may be the Sine of the greatest Semi-menstrual Equation 12°, 18′ to the Radius T C; the Circle B D A, described on the Centre C, with the Interval C B, will be the Epicycle wherein the Centre of the Lunar Orb is placed, and wherein it revolves according to the Order of the Letters B D A. Take the Angle B C D equal to double the annual Argument, or double the distance of the true Place of the Sun from the *Moon*'s Apogee once equated, and C T D will be the Semi-menstrual Equation of the *Moon*'s Apogee, and T D the Eccentricity of its Orbit tending to the Apogee equated a second time. Now the *Moon*'s mean Motion, Apogee, and Eccentricity, as also the greater Axis of its Orbit 200000; the *Moon*'s true place, as also her distance from the Earth are found, and that by the commonest Methods.

In the Earth's Perihelion, by reason of the greater force of the Sun, the Centre of the *Moon*'s Orbit will move more swiftly about the Centre C, than in the Aphelion, and that in a triplicate Ratio of the Earth's distance from the Sun inversely. By reason of the Equation of the Centre of the Sun, comprehended in the annual Argument, the Centre of the *Moon*'s Orbit will move more swiftly in the Epicycle B D A, in a duplicate Ratio of the distance of the Earth from the Sun inversely. That the same may still move more swiftly in a simple Ratio of the distance inversely from the Centre of the Orbit D, draw D E towards the *Moon*'s Apogee, or parallel to T C; and take the Angle E D G equal to the Excess of the annual Argument, above the Distance of the *Moon*'s Apogee from the Sun's Perigee in Consequentia; or which is the same, take the Angle C D F equal to the Complement of the true Anomaly of the Sun to 360°; and let D F be to D C as double the Eccentricity of the *Orbis magnus* to the mean distance of the Sun from the Earth, and the mean diurnal Motion of the Sun from the *Moon*'s Apogee, to the mean diurnal Motion of the Sun from its own Apogee, conjunctly, *i. e.* as 33 $\frac{7}{8}$ is to 1000, and 52′,27″, 16‴ to 59′ 8″ 10‴ conjunctly; or as 3 to 100. Conceive the Centre of the *Moon*'s Orbit placed in the Point E, and to revolve in an Epicycle whose Centre is D, and Radius D F, while D proceeds in the Circumference of the Circle D A B D: Thus the Velocity wherewith the Centre of the *Moon*'s Orbit moves in a certain Curve, described about the Centre C, will be reciprocally as the Cube of the Sun's distance from the Earth. The Computation of this Motion is difficult, but will be made easy by the following Approximation. If the *Moon*'s mean distance from the Earth be 100000 parts, and its Eccentricity T C 5505 of those parts, the right Line C B or C D will be found 1172 $\frac{1}{4}$, and the right Line D F 35 $\frac{1}{2}$. This right Line at the distance T C, subtends an Angle to the Earth, which the transferring of the Centre of the Orbit from the place D to F generates in the Motion of this Centre; and the same right Line doubled, in a parallel Situation, at the distance of the upper Umbilicus of the *Moon*'s Orbit from the Earth, subtends the same Angle, generated by that translation in the Motion of the Umbilicus; and at the distance of the *Moon* from the Earth subtends an Angle which the same translation generates in the Motion of the *Moon*; and which may therefore be call'd the *Second Equation of the Centre.*

Centre. This Equation at a mean diſtance of the *Moon* from the Earth, is as the Sine of the Angle contain'd between the right Line D F, and a right Line drawn from the Point F to the *Moon*, nearly; and when greateſt, amounts to 2′, 25″. Now the Angle comprehended between the right Line D F and a Line from the Point D, is found either by ſubſtracting the Angle E D E from the mean Anomaly of the *Moon*, or by adding the *Moon*'s diſtance from the Sun to the diſtance of the *Moon*'s Apogee from the Apogee of the Sun. And as Radius is to the Sine of the Angle thus found, ſo is 2′, 25″ to the ſecond Equation of the Centre, which is to be added, if that Sine be leſs than a Semi-circle, and ſubſtracted if greater: Thus we have its Longitude in the very Syzygies of the Luminaries.

If a very accurate Computation be required, the *Moon*'s Place thus found muſt be corrected by a ſecond Variation. The firſt and principal Variation we have already conſider'd, and have obſerv'd it to be greateſt in the Octants. The ſecond is greateſt in the Quadrants, and ariſes from the different Action of the Sun on the *Moon*'s Orbit, according to the different Poſition of the *Moon*'s Apogee to the Sun, and is thus computed: As Radius is to the verſed Sine of the diſtance of the *Moon*'s Apogee from the Sun's Perigee, in conſequentia ſo is a certain Angle P to a fourth Proportional. And as Radius is to the Sine of the *Moon*'s diſtance from the Sun, ſo is the Sine of this fourth Proportional and another Angle Q to the ſecond Variation, which is to be ſubſtracted, if the *Moon*'s Light be increaſing; and added, if diminiſhing.

Thus we have the *Moon*'s true Place in her Orbit; and by reduction of this Place to the Ecliptic, the *Moon*'s Longitude. The Angles P and Q are to be determined by obſervation: in the mean time, if for P be aſſumed 2′, and for Q 1′, we ſhall be near the truth.

Nature of the MOON.

1. From the various Phaſes of the *Moon*: From her only ſhewing a little part illumined, when following the Sun ready to ſet: From that Part's increaſing as ſhe recedes from the Sun, till at the diſtance of 80° ſhe ſhines with a full Face; and again wains as ſhe re-approaches that Luminary, and loſes all her Light when ſhe meets him: From the lucid Part's being conſtantly turn'd towards the Weſt, while the *Moon* increaſes; and towards the Eaſt when ſhe decreaſes; it is evident, that only that part ſhines on which the Sun's Rays fall: And from the Phænomena of Eclipſes, happening when the *Moon* ſhould ſhine with a full face, *viz.* when ſhe is 180° diſtant from the Sun; and the darkned Parts appearing the ſame in all Places, it is evident ſhe has no Light of her own, but borrows whatever Light ſhe has from the Sun. See PHASES, ECLIPSE, and SUN.

2. The *Moon* ſometimes diſappears in the clear Heaven, ſo as not to be diſcoverable by the beſt Glaſſes; little Stars of the fifth and ſixth Magnitude all the time remaining viſible. This Phænomenon *Kepler* obſerved twice *Anno* 1580, and 1583; and *Hevelius* in 1620. *Riccioli*, and other Jeſuits at *Bononia*, and many People throughout *Holland* obſerved the like *April* 14, 1642. yet at *Venice* and *Vienna* ſhe was all the time conſpicuous. *December* 23, 1703, there was another total Obſcuration: At *Arles* ſhe firſt appear'd of a yellowiſh brown; at *Avignon* ruddy and tranſparent, as if the Sun had ſhone through: at *Marſeilles*, one part was reddiſh, the other very dusky; and, at length, tho' in a clear Sky, wholly diſappear'd. Here it is evident, that the Colours appearing different at the ſame time, do not belong to the *Moon*; that they are occaſion'd by an Atmoſphere around her variouſly diſpoſed in this and that Place, for refracting of theſe or thoſe coloured Rays.

3. The Eye, either naked, or arm'd with a Teleſcope, ſees ſome parts in the *Moon*'s Face darker than others, which are call'd Maculæ, or *Spots*. Through the Teleſcope, while the Moon is either increaſing or decreaſing, the illumined parts in the Maculæ appear evenly terminated; but in the bright Parts, the Bound of the Light appears jagged and uneven, compoſed of diſſimilar Arches, convex and concave. (ſee Tab. ASTRONOMY, *Fig.* 18.) There are alſo obſerved lucid Parts diſperſed among the darker; and illumined Parts ſeen beyond the limits of Illumination; other intermediate ones remaining ſtill in darkneſs; and near the Maculæ, and even in 'em, are frequently ſeen ſuch lucid Specks. Beſide the Maculæ obſerved by the Antients, there are other variable ones inviſible by the naked Eye, call'd New Maculæ, always oppoſite to the Sun; and which are hence found among thoſe parts which are the ſooneſt illumined in the increaſing *Moon*, and in the decreaſing *Moon* loſe their Light later than the intermediate ones; running round, and appearing ſometimes larger, ſometimes ſmaller.

Hence, (1.) As all parts are equally illumined by the Sun, in as much as they are equally diſtant from him: If ſome appear brighter, and others darker; ſome reflect the Sun's Rays more copiouſly than others; and therefore they are heterogeneous. And, (2.) Since the Boundary of the illumined Part is very ſmooth and equable in the Maculæ, their Surface muſt be ſo too. (3.) The parts illumined by the Sun ſooner, and deſerted later than others that are nearer, are higher than the reſt, *i. e.* ſtand up above the other Surface of the *Moon*. (4.) The New Maculæ anſwer perfectly to the Shadows of terreſtrial Bodies.

4. *Hevelius* writes, that he has ſeveral times found, in Skies perfectly clear, when even Stars of the 6th and 7th Magnitude were conſpicuous, at the ſame Altitude of the *Moon*, and the ſame Elongation from the Earth, and with one and the ſame excellent Teleſcope; that the *Moon* and its *Maculæ* do not appear equally lucid, clear, and perſpicuous, at all times; but are much brighter, purer, and more diſtinct at one time than another. From the Circumſtances of the Obſervation, 'tis evident, the reaſon of the Phænomenon is not either in our Air, in the Tube, in the *Moon*, nor in the Spectator's Eye; but muſt be look'd for in ſomething exiſting about the *Moon*.

5. *Caſſini* frequently obſerv'd *Saturn*, *Jupiter*, and the fix'd Stars, when hid by the *Moon*, near her Limb, whether the illumined or dark one, to have their circular Figure changed into an oval one; and in other Occultations found no alteration of Figure at all. In like manner, the Sun and *Moon* riſing and ſetting in a vaporous Horizon, do not appear Circular, but Elliptic.

Hence, as we know, by ſure Experience, that the Circular Figure of the Sun and *Moon* is only changed into an Elliptic one by means of the Refraction in the vapoury Atmoſphere; 'tis pretty apparent, that at the time when the circular Figure of the Stars is thus changed by the *Moon*, there is a denſe Matter incompaſſing the *Moon*, wherein the Rays emitted from the Stars are refracted; and that at other times, when there was no change of Figure, this Matter was wanting.

This Phænomenon is well illuſtrated by the following Experiment: To the inner bottom of any Veſſel, either Plane, Convex, or Concave, with Wax faſten a Circle of Paper; then pouring in Water, that the Rays reflected from the Circle into the Air may be refracted before they reach the Eye; viewing the Circle obliquely, the circular Figure will appear changed into an Ellipſis.

6. *The Moon is a denſe opake body, beſet with Mountains, Valleys, and Seas.* That the *Moon* is denſe, and impervious to the Light, has been ſhewn: but ſome parts ſink below, and others riſe above the Surface; and that conſiderably, in as much as they are viſible at ſo great a diſtance of the Earth from the Sun: In the *Moon* therefore are huge *Mountains*, and very deep *Valleys*. *Ricciolus* meaſured the height of one of the Mountains, call'd St. *Catherine*, and found it nine Miles high. Again, in the *Moon* are ſpacious Tracts, having ſmooth even Surfaces, and thoſe reflecting leſs Light than the reſt: Hence, as the Surface of fluid Bodies is naturally even, and as when tranſparent, they tranſmit a great part of the Rays of Light, and reflect very little; the Lunar Spots are fluid, tranſparent Bodies: and as they continue conſtantly the ſame, are *Seas*. In the *Moon*, therefore, are Mountains, Valleys, and Seas.—— Hence again, the lucid parts of the Spots are *Iſlands* and *Peninſula's*.

And ſince in the Maculæ, and near their Limbs, are ſeen ſome parts higher than others, in the Lunar Seas are *Rocks* and Promontories.

And ſince the new Spots are contiguous to the Mountains, and in all reſpects like the Shadows of Bodies on our Earth; no doubt they are the Shadows of the Lunar Mountains: Whence alſo appears the Matter of the *Moon* is opake.

Note, This Reaſoning will be put paſt doubt by viewing the ſenſible Horizon from ſome Eminence: Where it paſſes over a Plain, the Line will appear ſmooth and even; where a-croſs Mountains and Valleys, irregular and winding; ſmooth, but dark, &c.

7. *The Moon is incompaſs'd with an heavy and elaſtic Atmoſphere, wherein Vapours and other Exhalations ariſe, and whence they return in form of Dew and Rain.*

In a total Eclipſe of the Sun, we find the *Moon* incircled with a lucid Ring parallel to her Periphery.

Of this, we have too many Obſervations to doubt: In the great Eclipſe of 1713, the Ring was very conſpicuous at *London*, and elſewhere. *Kepler* obſerves the ſame of an Eclipſe in 1605, at *Naples* and *Antwerp*; and *Wolfius* of another in 1606 at *Leipſic*, deſcribed at large in the *Acta Eruditorum*, with this notable Circumſtance, that the part next the *Moon* was viſibly brighter, than that furtheſt from it; which is confirmed by the Obſervations of the *French* Aſtronomers in the *Memoires de l'Academie*, &c. 1706.

Hence about the *Moon* is ſome Fluid, which correſponds to her Figure, and which both reflects and refracts the Sun's Rays. And hence alſo, this Fluid is denſer below, near

near the *Moon*'s Body; and rarer above. Now as the Air which incompaſſes our Earth is ſuch a Fluid, it is manifeſt there is *Air* about the *Moon*; and ſince the different Denſity of the Air depends on its different Gravity and Elaſticity, no doubt the different Denſity of the Lunar Air has the ſame Cauſes. Again, we have obſerv'd the Lunar Air is not always equally clear and tranſparent: ſometimes it changes the ſpherical Figures of the Stars into Ovals; and in the ſeveral total Eclipſes juſt mentioned, there was obſerved a trembling in the *Moon*'s Limb, immediately before immerſion, with an Appearance of thin, light Smoak flying over it during immerſion, very apparent in *England*. And hence, as theſe ſame Phenomena are obſerved in our Air when full of Vapours, it is pretty plain, at the time when theſe Phænomena are obſerved in that of the *Moon*, it is full of *Vapours* and *Exhalations*. And, laſtly, ſince at other times the Lunar Air is clear and tranſparent, producing none of theſe Phænomena, the Vapours muſt have been precipitated on the *Moon*; and therefore either *Dew*, or *Rain*, or *Snow* have fallen.

7. *The* Moon *is a Body in all reſpects like our Earth, and fitted for the ſame purpoſes.* For we have ſhewn that it is *Denſe*——*Opake*——has *Mountains* and *Valleys*——*Seas*, with *Iſlands*, *Peninſulæ*, *Rocks*, and *Promontories*——a changeable *Atmoſphere*, wherein *Vapours* and *Exhalations* riſe and fall ——*Day* and *Night*; a *Sun* to illumine the one, and a *Moon* the other,——*Summer* and *Winter*, &c.

From theſe, by Analogy, may infinite other Properties and Appendages of the *Moon* be deduced: From the Changes in the Atmoſphere will follow *Winds*, and other *Meteors*; and according to the different Seaſons of the Year, *Rain*, *Miſts*, *Froſt*, *Snow*, &c. From the Inequalities upon the *Moon*'s Surface will ariſe *Lakes*, *Rivers*, *Springs*, &c.

Now Nature, we know, produces nothing in vain: Rains and Dews fall on our Earth to make *Plants vegetate*; and Plants take Root, grow, produce Seeds and Fruits for *Animals* to feed on. But Nature is ſtill uniform and conſiſtent with herſelf, and like things ſerve for like Ends: Why then may not there be *Plants* and *Animals* in the *Moon*? To what other purpoſe ſo nice a Proviſion for them?

Theſe Arguments will receive new force when we come to ſhew that our Earth itſelf is a Planet; and that when viewed from the other Planets, it appears, in ſome, like the *Moon*; in others, like *Venus*; in others, *Jupiter*, &c. A Similitude between the Planets, both Optical and Phyſical, being a ſtrong Preſumption their Furniture is alike. See Earth and Planet.

To meaſure the Height of the Mountains of the Moon.

Suppoſe E D (*Fig. 19.*) the *Moon*'s Diameter, E C D the Boundary of Light and Darkneſs; and A the Top of the Hill in the dark part beginning to be illumined: With a Teleſcope obſerve the Proportion of A E, or the diſtance of A from the Line where the Light commences, to the Diameter of E D: Here we have two ſides of a rectangled Triangle A E, C A; the Squares of which added together give the Square of the third; whence the Semi-diameter C D being ſubſtracted, leaves A B, the *Height of the Mountain*.

Ricciolus, *v. g.* found the Top of the Hill *St. Catherine* illumined at the diſtance of $\frac{1}{16}$ of the *Moon*'s Diameter from the Confines of Light. Suppoſing, therefore, C E, 8; and A E, 1; the Squares of the two will be 65, whoſe Root is 8.062 the length of A C; ſubſtracting therefore B C = 8, the Remainder is A B = 0.62. The *Moon*'s Semi-diameter, therefore, is to the Mountain's height as 8 is to 0.62; *i.e.* as 800 to 62. Suppoſing, therefore, the Diameter of the *Moon* 1182 *Engliſh* Miles, by the *Rule of Three* we find the height of the Mountain 9 Miles.

The Heights, &c. of the Lunar Mountains being meaſurable, Aſtronomers have taken occaſion to give each its Name. *Ricciolus*, whom moſt others now follow, diſtinguiſhed them by the Names of the *Celebrated Aſtronomers*; and by theſe Names they are ſtill expreſſed in Obſervations of the Lunar Eclipſe, &c. See the Figure, (Tab. Astronomy, *Fig.* 20.)

The apparent Magnitude of the Moon.

The Magnitude of the *Moon*, at riſing and ſetting, is a Phænomenon that has extremely embarraſſed the modern Philoſophers. According to the ordinary Laws of Viſion, it ſhould appear the leaſt when neareſt the Horizon, as being then neareſt to the Eye; and yet we find the contrary true in fact. *Des Cartes*, and from him Dr. *Wallis*, and moſt other Authors, account for this from the long Series of Objects interpoſed between the Eye and the Extremity of the ſenſible Horizon, which make us imagine it more remote than when in the Meridian, where the Eye ſees nothing in the way between the Object and itſelf. This Idea of a great diſtance, makes us imagine the *Moon* the bigger: For any Object being ſeen under any certain Angle, and believed, at the ſame time, very remote, we naturally judge it muſt be very large, to appear under ſuch an Angle at ſuch a diſtance. And thus a pure Judgment of the Soul makes us ſee the *Moon* bigger in the Horizon, than in the Meridian; notwithſtanding its Image painted on the Retina is leſs in the former Situation than the latter.

This Hypotheſis, F. *Gouye* deſtroys, by obſerving that the narrower and more confined the ſenſible Horizon is, the greater does the *Moon* appear; the contrary of which ſhould happen on the Principle laid down.

Gaſſendi is of opinion, that the Pupil of the Eye, which is always more open as the Place is more dark; being more ſo in the Morning and Evening than at other times, by reaſon the Earth is covered with groſs Vapours; and beſides, being obliged to paſs through a longer Column or Series of 'em, to reach the Horizon, the Image of the *Moon* enters the Eye at a greater Angle, and is really painted there greater.

In anſwer to which, it muſt be ſaid, that notwithſtanding this dilatation of the Pupil, occaſion'd by the Obſcurity; if the *Moon* be viewed through a little pin-hole made in a Paper, ſhe appears leſs when in the Horizon.

F. *Gouye* finding both the Conjectures falſe, advances a third: He is of opinion then, when the *Moon* is in the Horizon; the neighbourhood of the Earth, and the groſs Vapours wherewith the *Moon* then appears inveloped, have the ſame Effect, with regard to us, as a Wall, or other denſe Body placed behind a Column; which in that Caſe appears bigger than when inſulate, and incompaſſed on all ſides with an illumined Air. Further, it is obſerved that a Column when fluted, appears bigger than before, when it was plain; the Flutes being ſo many particular Objects, which by their Multitude occaſion the Mind to imagine the whole Object whereof they are compoſed of a larger extent. The ſame thing may be ſaid of the ſeveral Objects ſeen towards the Horizon, to which the *Moon* correſponds at her Riſing and Setting. And hence it is that ſhe appears greater ſtill, when ſhe riſes or ſets between Trees; the narrow, yet diſtinct Intervals whereof have the ſame Effect with regard to the apparent Diameter of the *Moon*, as a greater number of Flutes with regard to the Shaft of a Column.

For the Eclipſes of the Moon, ſee Eclipses.

For the Moon's *Parallax*, ſee Parallax.

To find the Moon's *Age.* To the Day of the Month add the Epact of the Year, and the Months from *March* inclusive. The Sum, if under 30; if over, the Exceſs is the *Moon*'s Age. If the Month have but 30 Days, the Exceſs above 29 is the *Moon*'s Age.

To find the *Time of the* Moon's *being in the Meridian*, or *Southing*: Multiply her Age, if under 15 Days, by 4; and divide the Product by 5; the Quotient gives the Hour, and the Remainder multiplied by 12, the Minute. If her Age exceed 15, ſubſtract 15, and proceed with the Remainder as before.

To find the *Time of the* Moon's *beginning to ſhine.* Multiply her Age, if under 15, by 48; and divide the Product by 60: the Quotient gives the Hours; and the Remainder the Minutes. If her Age be above 15 Days, ſubſtract the time thus found, from 24; the Remainder gives the time of ſhining in the Morning.

MOOR, Mora, a *Heath*, or barren Tract of Ground. See Heath.

It is ſometimes alſo uſed for a *Moraſs*, *Moſs*, or *Fen*. See Morass.

Mora Muſſa, in antient Writings, particularly denotes a Moſs, or Peat-Moſs.

MOORING, at Sea, is the laying out of Anchors, in a proper place, for the ſecure Riding of a Ship. See Anchor.

To *Moor a-croſs*, is to lay out one of the Anchors on one ſide, or a-thwart a River, and the other right againſt it.

To *Moor alongſt*, is to have an Anchor in a River, and a Hawſer on Shore.

To *Moor Quarter-ſhot*, is to moor Quartering, between the two firſt ways.

Mooring *for Eaſt*, *Weſt*, &c. is when they obſerve which way, and on what Point of the Compaſs the Wind or Sea is moſt likely to endanger the Ship, and there lay out an Anchor.

MOORS-HEAD, in Chymiſtry, a Copper-Cap made in form of a Head, to be ſet over the Chimney of a Reverberating Furnace. See Reverberatory.

Moors-Head is alſo the Head of a Copper or Glaſs-Still or Alembic, which is luted on to the Body or Cucurbit, and hath a Beak or Pipe to let the Spirit run down into the Receiver.

MOOT, a difficult Caſe, or Queſtion argued by the Students of Inns of Court, by way of Exerciſe. See Mooting.

The Word is formed either from the *Saxon*, *Mooting*, Aſſembly; or the *French*, *Mot*, Word.

MOOTING,

MOOTING, the chief Exercise of the Students in the Inns of Court; being the arguing of Cases, which young Utter Barristers, &c. perform at appointed Times, the better to enable them for Practice, and the Defence of their Clients Causes. See INNS *of Court*.

Such, as from their Learning and Standing are call'd by the Benchers to argue *Moot Cases*, are call'd *Utter Barristers*; the rest, who for want of Experience, &c. are not admitted, are call'd *Inner Barristers*. See BARRISTER.

The Place where Moot Cases were argued, was antiently call'd a *Moot-Hall*.

In the Inns of Court there is a *Bailiff*, or *Surveyor of the Moots*, yearly chosen by the Bench to appoint the *Moot-Men* for the Inns of *Chancery*, and to keep Account of Performance of Exercises, both there and in the House.

MOOT-MEN are those who argue *Moot-Cases*. See MOOT.

Out of these *Moot-Men* are chose Readers for the Inns of *Chancery*; where, in Term-time and in Vacations, they argue Cases in the presence of Attorneys and Clerks.

MORAL, any thing relating to the *Manners*, or the Conduct of Life. See MANNERS.

Thus, besides the Theological Virtues, as *Faith*, *Hope*, *Charity*, &c. we say there are also *Moral* Virtues, as *Justice*, *Temperance*, &c. See VIRTUE.

MORAL *of a Fable*, is the Instruction drawn from it. See FABLE.

Thus when *Phædrus* at the end of a Fable adds, *Hoc illis dictum qui*, &c. that makes what we call the *Moral*. This, the *Greeks* call'd ἐπιμύθιον when at the end of the Fable, and προμύθιον at the beginning. The *Latins* call it *Affabulatio*.

MORAL *Sense*, the Faculty whereby we discern, or perceive what is Good, Virtuous, Beautiful, &c. in Actions, Manners, Characters, &c.

A late Author has endeavoured to prove, that it is a peculiar Sense whereby we get the Ideas of these Things; and denominate it a *Moral* Sense. See *Moral* SENSE.

MORAL *Theology* is that which treats of Cases of Conscience; call'd also *Casuistry*. See CASUISTRY.

MORAL *Certainty*, or Assurance, is used to signify a very strong Probability; in contra-distinction to a Mathematical Demonstration. See CERTAINTY.

MORAL *Impossibility*, is what we otherwise call a very great, and almost insuperable Difficulty; in opposition to a Physical, or Natural Impossibility. See IMPOSSIBILITY.

MORAL *Philosophy*, a Science whose Object is to direct, and form our Manners; to explain the Reason, and Nature of Actions; and to teach and instruct us how to acquire that Felicity or Happiness which is agreeable to human Nature. See PHILOSOPHY.

Moral Philosophy is the same with what we otherwise call *Ethics*. See ETHICS.

MORAL *Actions*, or Acts, are such as render the Rational or Free Agent *Good* or *Evil*; and, consequently, Rewardable and Punishable because he doth them. See GOOD, &c.

MORALITY is a Conformity to those unalterable Obligations which result from the nature of our Existence, and the necessary Relations of Life; whether to God as our Creator, or Mankind as our Fellow-Creature.

MORASSE, a *Marsh*, *Fen*, or low moist Grounds, which drain the Waters from above, without having any descent to carry them off again.

Somner derives the Word from the *Saxon Mersc*: *Salmasius* from *Mare*, a Collection of Waters; others from the *German Marast*, a muddy Place; and others from *Maresc*, of *Maricetum*, *à Marisc*is, *i. e.* Rushes.

In *Scotland*, *Ireland*, and the North of *England*, they have a peculiar kind of *Morasses*, call'd *Mosses*, or *Peat-Mosses*, whence the Country-People dig their Peat or Turf. See TURF.

The Earl of *Cromartie* gives a particular Account of these Mosses in the *Philosoph. Transact.* They are cover'd with a heathy Scurf, under which is a black, moist, spongy Earth, in some Places shallower, in others deeper, ordinarily from three or four to seven or eight Feet depth, tho' in some few Places twice or thrice as much.

This black, spungy Earth they cut into oblong Squares with Iron Spades fitted to that end, eight or nine Inches long, and four or five broad; as the Men cut 'em up, they are carried and spread on a dry Ground, to be dried in the Wind and Sun. Some of these become harder, some softer, according to the nature of the Mold or Earth: The more black and solid, the better Fire; and they are the least esteemed which are greyest, the lightest, and most spungy.

When they have cut off one Surface of four or five Inches deep, they proceed downwards to another, and so to a third and a fourth, till they come to the hard Channel, unless they be stop'd with Water, which they also ordinarily remove by making a Channel, if they can; but where they cannot, there the Water stagnates. In such wasted Pits, or Peat-Dikes, as they call 'em, where Water hinders the cutting the spungy Earth to the Bottom, the Pits will be fill'd up again in some Years with new spungy Earth; which in process of Time comes to the consistence of Peat-Moss as at first, and a scurfy Heath-Turf grows over the Top of it. When the Dikes are dug down to the hard Channel, the Mosses don't renew, as in the other Case; tho' it has been observ'd, that if they be cut down to the Channel, provided the Heathy-Turf cut off from the Top be but laid on the Channel, in course of Time the Moss grows again.

These Mosses always stand on Plains; tho' they are frequently found on Hills, and near the Top of 'em too. Yet, as that curious Nobleman observes, the Mosses have always a descent to 'em, and generally from 'em; insomuch that he never knew any, where the Water might stagnate. 'Tis the Water draining from above that seems to be the Parent of Peat. In many of these Mosses are found Quantities of Fir and Oak Wood, usually in whole Trees; for the smaller Branches are seldom found unconsum'd. This Wood is as good for use as any old Wood is; only that having imbibed a deal of Moisture, it takes some time to dry, in order to fit it for use.

There are many Places, where Wood will not grow, where yet the Mosses are well stock'd with these Underground Timber; but yet it appears there must have been Woods formerly: Else how come they in the Mosses? To prove this, that Noble Lord gives us the History and Origin of a Moss, in great measure from his own Experience. In the Parish of *Lochbrun*, in the Year 1651, he saw, near the Top of a very high Hill, a Plain about a Mile over, then cover'd with a firm standing Wood, but which was so very old, that not only the Trees had no Leaves or Bark on, but the outside for the space of an Inch inward was dead, white Timber, tho' within they were firm. Coming by the same Place 15 Years after, he could not discover the least Appearance of a Tree, but instead thereof a plain green Ground cover'd with a Moss; the Trees being all fallen, and having lain so thick over one another, the Green had over-run the whole Timber, by means of the Moisture draining from the Hill above it, and stagnating on the Plain. He adds, that none could pass over it; the Scurf not being firm enough to support 'em. In thirty Years more he found the whole Piece of Ground turn'd into a common *Peat-Moss*, and the Country-People digging Turf and Peats.

This accounts for the Generation of Mosses, and whence it is that many of them are furnish'd with Timber.

MORATUR, or DEMORATUR, in Law, signifies as much as *he Demurs*; by reason the Party here goes not forward, but rests, or abides upon the Judgment of the Court, who take time to deliberate, argue, and advise thereon. See DEMURRER.

When the Council of the Party are of opinion, that the Count or Plea of the adverse Party is insufficient in Law; then he *Demurs*, or abides in Law, and refers the same to the Judgment of the Court.

MORBID, MORBIDUS, in Medicine, is apply'd to signify those Parts, Humours, &c. wherein a *Disease* lies. See DISEASE.

MORBID, in Painting, is particularly apply'd to fat Flesh very strongly expressed.

MORBILLI, in Medicine, a Disease popularly call'd the *Measles*. See MEASLES.

MORBUS, a Term purely *Latin*, signifying *Disease*. See DISEASE.

MORBUS *Comitialis*, is the *Epilepsy*; thus call'd by the *Romans*, because when in any of their public Assemblies Persons fell down with this Distemper, they immediately broke up, and dissolved the *Comitia*, which was the common Appellation for such Courts. See EPILEPSY.

Morbus Regius, *Morbus Virgineus*, *Morbus Gallicus*, } See { JAUNDICE. CHLOROSIS. VENEREAL *Disease*.

MORISCO, or MORISK, a kind of Painting, Carving, &c. done after the Manner of the *Moors*; consisting of several Grotesque Pieces and Compartiments promiscuously intermingled, not containing any perfect Figure of a Man, or other Animal, but a wild Resemblance of Birds, Beasts, Trees, &c. See GROTESK.

These are also call'd *Arabesques*, and are particularly used in Embroideries, Damask-Work, &c. See ARABESK.

Moresque Dances, vulgarly call'd *Morrice-Dances*, are those altogether in imitation of the *Moors*, as *Sarabands*, *Chacons*, &c. which are usually performed with Castagnets, Tabours, &c. See CASTAGNETTAS.

MORNING, the beginning of the Day; or the Time of the Sun-rising. See DAY and RISING.

The Astronomers reckon *Morning*, *Mane*, from the time of Mid-night, to that of Mid-day. Thus an Eclipse is said to begin at 11 a-clock in the *Morning*, &c.

MORNING-*Star* is the Planet *Venus*, when a little to the Eastward of the Sun; that is, when she rises a little before

him. In this Situation ſhe is call'd by the *Greeks Phoſphorus*; by the *Latins Lucifer*, &c. See PHOSPHORUS.

MORNING *Twilight*, ſee CREPUSCULUM.

MORPHEW, is that Freckle or Scurf which breaks out ſometimes upon the Skin, particularly about the Forehead. See FRECKLES.

MORSELLI, and MORSULI, antient Names for thoſe Forms of Medicines which were to be chew'd in the Mouth, as a *Lozenge*; the Word ſignifying a little Mouthful. See LOZENGE.

MORSUS *Diaboli*, Devil's Bit; a Plant which ſeems to have a fringe around its Leaves, is thus call'd.

From a likeneſs hereto, has the Edge or Selvidge of the *Tubæ Fallopianæ*, obtain'd the ſame Appellation. See FALLOPIAN.

MORSUS *Canis rabidi*, } See { HYDROPHOBIA.
MORSUS *Viperæ*, } See { VIPER.

MORT *d'Anceſtre*, in Law, ſee ASSIZE *of Mort d'Anceſtre*.

MORTALITY, a Term frequently uſed to ſignify a contagious Diſeaſe, which deſtroys great Numbers either of Men, or Beaſts.

Bills of MORTALITY, are Weekly Liſts compiled by the Pariſh-Clerks in and about *London*, containing the Numbers of ſuch as die of each Diſeaſe, as well as of thoſe that are born every Week.

The Bills are of ſome ſtanding in *England*, in imitation whereof they are now eſtabliſhed at *Paris*. They are very uſeful on ſeveral accounts, particularly in judging of the *Mortality* of any Diſeaſe, and whether an Epidemic or Infectious Diſtemper increaſes or abates.

Mr. *Graunt*, who examin'd thoſe of *London* very accurately, has wrote an expreſs Treatiſe of 'em. Among other things, he calculates from 'em, that of 100 Perſons who are born in the ſame Week, there are but 64 left at the end of ſix Years; but 40 at the end of ſixteen Years; at the end of twenty ſix Years, but 25; and the end of thirty ſix Years, but 16; at the end of forty ſix Years, but 10; at the end of fifty ſix, no more than ſix; at the end of ſixty ſix Years, but 3; at the end of ſeventy ſix, but 1; and at the end of eighty Years, they are reduced to none.

He likewiſe makes it appear, that in *England* in general, more are born than die; but in *London*, more die than are born: The Proportion of Births to Burials, in the former, being as 1 $\frac{1}{12}$ to one; in the latter as $\frac{1}{10}$ to one. Thus alſo Cities and Market-Towns are found to bury 1. $\frac{7}{100}$ to 1 Birth. But in *Paris* they outdo *London*; their deaths being 1 $\frac{3}{4}$ to 1 Birth. In the Villages of *England*, fewer die than are born; there being but one death to 1. $\frac{17}{100}$ Births. See MARRIAGE.

MORTAR, or MORTER, in Architecture, is a Prepation of Lime, Sand, &c. mixed up with Water; ſerving, as a Cement, to bind the Stones, &c. of a Building. See BUILDING, CEMENT, &c.

The Antients had a kind of *Mortar* ſo very hard and binding, that, after ſo long a Duration, 'tis next to impoſſible to ſeparate the Parts of ſome of their Buildings; tho' there are ſome who aſcribe that exceſſive Strength to Time, and the Influences of certain Properties in the Air, which is found to harden ſome Bodies very ſurprizingly.

De Lorme obſerves, that the beſt *Mortar* is that made of *Puzzuoli*; adding, that it penetrates black Flints, and turns 'em white.

The Lime uſed in the antient *Mortar* is ſaid to be burnt from the hardeſt Stones, and even Fragments of Marble. See LIME.

Mr. *Worledge* obſerves, that fine Duſt makes weak *Mortar*; and the rounder the Sand, the ſtronger the *Mortar*. He therefore adviſes the Sand to be waſhed e'er mixed; and adds, that dirty Water weakens the *Mortar* conſiderably. See SAND.

The Proportion of Lime and Sand in our common *Mortar* is extremely variable. *Vitruvius* preſcribes three parts of Pit-Sand and two of River-Sand to one of Lime; but the Sand here ſeems to be over-doſed. About *London*, the Proportion of Sand to quick Lime is as 36 to 25. In ſome Parts they uſe equal Quantities of each.

Wolfius obſerves, that the Sand ſhould be dry and ſharp, ſo as to prick the Hands when rubbed; yet not earthy, ſo as to foul the Water it is waſh'd in.

Vitruvius obſerves, that Foſſil-Sands dry ſooner than thoſe taken out of Rivers. Whence, he adds, the latter is fitteſt for the Inſides, the former for the Outſides of a Building. He ſubjoins, that Foſſil-Sand lying long in the Air, becomes earthy. *Palladio* takes notice, that of all Sands white ones are the worſt; the reaſon is owing to their want of Aſperity.

Mixing and blending of MORTAR;

M. *Felibien* obſerves that the Antient Maſons were ſo very ſcrupulous herein, that the *Greeks* kept ten Men conſtantly employ'd for a long ſpace of time, to each Baſon, which render'd it of ſuch prodigious Hardneſs, that *Vitruvius* tells us the Pieces of Plaiſter falling off from old Walls ſerved to make Tables. *Felibien* adds, it is a Maxim among old Maſons to their Labourers, that they ſhould dilute with the Sweat of their Brow, *i. e.* labour it a long time, inſtead of drowning it with Water, to have done the ſooner.

Beſides the common *Mortar* uſed in laying of Stones, Bricks, &c. there are ſeveral other kinds. As,

White MORTAR, uſed in Plaiſtering the Walls and Ceilings; made of Ox-Hair mixed with Lime and Water, without any Sand. See PLAISTER.

The MORTAR uſed in making of Water-Courſes, Ciſterns, &c. is very hard and durable, made of Lime and Hog's-Greaſe, ſometimes mix'd with the Juice of Figs, and ſometimes with liquid Pitch: after Application it is waſhed over with Linſeed-Oil. See CISTERN.

MORTAR *for Furnaces*, &c. is made with red Clay wrought in Water, wherein Horſe-Dung and Chimney-Soot has been ſteep'd. See FURNACE.

MORTAR *for Sun-Dials* on Walls may be made of Lime and Sand temper'd with Linſeed Oil; or, for want of that, with ſcumm'd Milk. This will grow to the Hardneſs of a Stone.

In Buildings, one part of waſh'd Soap-Aſhes mixed with another of Lime and Sand, make a very durable *Mortar*.

MORTAR, or MORTIER, a Badge, or Enſign of Dignity bore by the Chancellors, and Great Preſidents of the Parliaments of *France*.

It conſiſts of a Piece of Velvet edged with a Gold-Lace. They formerly bore it on their Head, but now in their Hands.

Hence they are call'd *Preſidents a Mortier*.

MORTAR-PIECE, a ſhort Piece of Ordnance, very thick and wide, proper for the Carriage of Bombs, Carcaſſes, Shells, Stones, &c. See ORDNANCE, BOMB, CARCASS, &c.

There are two kinds of *Mortars*; the one hung, or mounted on a Carriage with low Wheels, after the manner of Guns, call'd *Pendent* or *Hanging Mortars*: The other fixed on an immoveable Baſe, call'd *Standing Mortars*.

At the head of the Bore, or Chaſe of the *Mortar*, is the *Chamber*, for the Charge of Powder. This is uſually made Cylindrical, all but the Baſe, which they make Hemiſpherical: Tho' ſome of the later Engineers prefer Spherical Chambers; as the Surface of thoſe being leſs, under equal Capacities, make leſs Reſiſtance to the Gun-Powder. See CHAMBER.

The Thickneſs of the *Mortar* about the Chamber is to be much greater than about the Chaſe; by reaſon the Gun-Powder makes a much greater Effort about the Chamber than elſewhere. The Diameter of the Chamber to be much leſs than that of the Bore; by reaſon Bombs, Shells, &c. are much lighter than Bullets of equal Diameters; and, conſequently, leſs Powder ſuffices. See BULLET.

To *charge*, or *load a Mortar*, the proper Quantity of Gun-Powder is put into the Chamber; and if there be any vacant ſpace, they fill it up with Hay; ſome chuſe a wooden Plug. Over this they lay a Turf; ſome a wooden Tampian fitted to the Bore of the Piece; and laſtly the Bomb, taking care that the Fuſee be in the Axis thereof, and the Orifice be turn'd from the Muzzle of the Piece. What remains, is to be fill'd up with Hay, Straw, Turf, &c. ſo as the Load may not be exploded without the utmoſt Violence. See CHARGE.

The Quantity of Gun-Powder to be uſed, is found by dividing the Weight of the Bomb by 30. Tho' this Rule is not always to be ſtrictly obſerved. See GUN-POWDER.

To *elevate* the *Mortar*, ſo as its Axis may make any given Angle with the Horizon; they apply the Artillery-Level, or Gunner's Quadrant; the uſe whereof ſee under the Articles LEVEL and QUADRANT.

An Elevation of 70 or 80 Degrees is what is commonly choſe for rendring *Mortars* moſt ſerviceable in caſting Shells into Towns, Forts, &c, tho' the greateſt Range be at 45°. See RANGE.

If all *Mortar-Pieces* were, as they ought to be, exactly Similar, and their Requiſites of Powder as the Cubes of the Diameters of their ſeveral Bores; and if their Shells, Bombs, Carcaſſes, &c. were alſo Similar, then, comparing like with like, their Ranges on the Plane of the Horizon, under the ſame Degree of Elevation, would be equal; and, conſequently, one Piece being well proved, *i. e.* the Range of the Granado, Bomb, Carcaſs, &c. being found to any Degree of Elevation, the whole Work of the *Mortar-Piece* would become very eaſy, and exact.

But ſince *Mortars* are not thus Similar, 'tis required that the Range of the Piece at ſome known Degree of Elevation be accurately found by meaſuring; and from hence all the other Ranges may be determined.

Thus, to find the Range of the Piece at any other Elevation required; ſay, as the Sine of double the Angle under which

which the Experiment was made, is to the Sine of double the Angle propoſed, ſo is the Range known to the Range required.

Suppoſe, for inſtance, 'tis found that the Range of a Piece elevated to 30 Degrees is 2000 Yards; to find the Range of the ſame Piece with the ſame Charge when elevated to 45 Degrees: Take the Sine of 60°, the double of 30°, and make it the firſt Term of the *Rule of Three*; the ſecond Term muſt be the Sine of 90°, the double of 45°; and the third the given Range 2000: The fourth Term will be 2310, the Range of the Piece at 45°. If the Elevation be greater than 45°, inſtead of doubling it, take the Sine of double its Complement to 90°. As ſuppoſe the Elevation of a Piece be 50°. take the Sine of 80°, the double of 40°.

Again, if a determinate Diſtance to which a Shot is to be caſt, be given, and the Angle of Elevation to produce that Effect be required; the Range known muſt be the firſt Term in the *Rule of Three*, which ſuppoſe 2000 Yards; The Range propoſed, which we ſuppoſe 1600 Yards, the ſecond Term; and the Sine of 60 double of the Elevation for the Range of 2000 Yards, the third Term. The fourth Term will be found the Sine of 43°, 52′, whoſe half 21°, 56′, is the Angle of Elevation the Piece muſt have, to produce the deſired Effect. And if 21°, 56′ be taken from 90°, you will have 68°, 4′ for the other Elevation of the Piece, with which the ſame Effect will likewiſe be produced.

For the greater Eaſe, and to avoid the trouble of finding Sines of double the Angles of propoſed Elevations, *Galilæo* and *Torricelli* give us the following Table, wherein the Sines of the Angles ſought are had by inſpection.

A TABLE of Sines for the Ranges of MORTARS.

Degrees.	Degrees.	Ranges.	Degrees.	Degrees.	Ranges.
90	0	0	0	0	0
89	1	349	66	24	7431
88	2	698	65	25	7660
87	3	1045	64	26	7880
86	4	1392	63	27	8090
85	5	1736	62	28	8290
84	6	2709	61	29	8480
83	7	2419	60	30	8660
82	8	2556	59	31	8829
81	9	3090	58	32	8988
80	10	3420	57	33	9135
79	11	3746	56	34	9272
78	12	4067	55	35	9397
77	13	4384	54	36	9511
76	14	4695	53	37	9613
75	15	5000	52	38	9703
74	16	5299	51	39	9781
73	17	5592	50	40	9841
72	18	5870	49	41	9903
71	19	6157	48	42	9945
70	20	6428	47	43	9976
69	21	6691	46	44	9994
68	22	6947	45	45	10000
67	23	7193			

The Uſe of this Table is obvious. Suppoſe, for Inſtance, it be known by Experiment that a *Mortar* elevated 15°, charged with three Pounds of Powder, throw a Bomb to the Diſtance of 350 Fathom; and it be required, with the ſame Charge, to throw a Bomb 100 Fathom farther: Seek in the Table the Number anſwering to 15 Degrees, and you will find it 5000. Then as 350 is to 450, ſo is 5000 to a fourth Number, which is 6428. Find this Number, or that neareſt it, in the Table, and againſt it you will find 20°, or 70°; the Angles of Elevation.

For the Weight, Dimenſions, &c. of the Bombs, &c. to be caſt out of *Mortars*, and the Lines of the Projection; ſee BOMB, PROJECTILE, &c.

MORTGAGE, in our Law, is the ſame with *Hypotheca* in the Civil Law, *viz.* an Obligation, whereby Land or Tenement of the Debtor, are pawned or bound over to the Creditor for Money or other Effects borrow'd; peremptorily to be the Creditor's for ever, if the Money be not paid at the Day agreed on.

The Creditor holding ſuch Land, on ſuch Agreement, is in the mean time call'd *Tenant in Mortgage*.

Glanvile defines *Mortgage*, *Mortuum Vadium*, to be that *cujus fructus vel reditus interim percepti in nullo ſe acquietant.* Thus 'tis call'd *Mortgage*, i. e. *dead Gage*, of *Mort*, Death, and *Gage*, Pledge; becauſe whatever Profit it yields, yet it redeems not itſelf by yielding ſuch Profit, except the whole Sum borrow'd be likewiſe paid at the Day; the *Mortgager* being by Covenant to receive the Profits till default of Payment. Others hold it call'd *Mortgage*, becauſe if the Money be not paid at the Day, the Land *moritur*, dies, to the Debtor, and is forfeited to the Creditor.

He who lays this Pawn or Gage, is call'd the *Mortgager*, and he that takes it the *Mortgagee*.

This, if it contain exceſſive Uſury, is prohibited by a Statute 37 *Henry* VIII.

The *French* ſometimes uſe the Word in the ſame ſenſe in their Language, where it ſtands in Contradiſtinction to a ſimple Contract, which does not carry with it the mean Profits, and which they call *Vif-gage*, Live-pledge.

As a *Mortgage* is an Engagement for the Security of the Creditor, all means have been taken to aſſure him of the Effect; that of the Pawn or Pledge, ſeems to have been the moſt antient, being in reality the ſame thing, all the difference conſiſts in this, that in a *Mortgage* the Pawn was put into the hands of the Creditor; whereas in a ſimple Engagement, the Thing remained in the hands of the Debtor. But it was afterwards found much more commodious to engage an Inheritance by a ſimple Convention, than by an actual Delivery.

Accordingly, this was practiſed by the *Greeks*, and from them borrow'd by the *Romans*; who, the better to prevent Deceits, fixed up viſible Marks to inform the Public, that the Eſtate was engaged by the Proprietor: Tho theſe Marks were found ſo injurious to the Debtors, that the Uſe of 'em was at length prohibited.

The *Romans* had four Kinds of *Mortgages*, or *Hypothecæ*. The *Conventional*, which proceeds from the Will and Conſent of the Contracters; the *Legal*, which is introduced by the Law, and which is therefore call'd *Tacit*. The *Mortgage of the Prætor*, when by the Flight or Refuſal of the Debtor, the Creditor was put in poſſeſſion of his Effects. And the *Judiciary Mortgage*, when the Creditor was put in poſſeſſion, in conſequence of a Decree or Sentence. The Civil Lawyers diſtinguiſh twenty-ſix different Kinds of *Tacit Mortgages*.

MORTIFICATION, in Medicine, &c. a Diſeaſe, wherein, the natural Juices of any part quite loſe their proper Motions; and by that means fall into a fermentative one, and corrupt and deſtroy the Texture of the Part.

There are two Species, or rather Degrees of *Mortification*: The one call'd a *Gangrene*, which is a *Mortification* in its firſt, or beginning State: The other a *Sphacelus*, which is a perfect, or finiſh'd *Mortification*. See GANGRENE and SPHACELUS.

MORTMAIN, a Term in Law, ſignifying an Alienation of Lands and Tenements to any Guild, Corporation, or Fraternity, and their Succeſſors; as Biſhops, Parſons, Vicars, &c. See ALIENATION.

Such Alienation may not be done without the King's Licence, and that of the Lord of the Mannor; or of the King alone, if it be immediately holden of him.

The Preſidents and Governours of the Hoſpitals may, without Licence in *Mortmain*, purchaſe Land, &c. not exceeding the yearly Value of 3000 *l.* Stat. 14. *Car.* 2.

The Word literally denotes *Dead-Hand*, being a Compound of *Mort*, dead, and *Main*, Hand.

Thus *Hottoman de Verb. Feudal.* ſays, *Manus mortua locutio eſt quæ uſurpatur de iis quorum poſſeſſio, ut ita dicam Immortalis eſt, quia nunquam hæredem habere deſinent. Qua de cauſa res nunquam ad priorem Dominum revertitur. Nam* Manus *pro poſſeſſione dicitur,* Mortua *per Antiphraſin pro Immortali,* &c.

The Reaſon of the Name proceeds from this, that the Services and other Profits due for ſuch Lands, ſhould not, without ſuch Licence, come into a dead Hand, (*Mainmort*,) *i. e.* into a Hand as it were dead, that is, ſo dedicated to God, or pious Uſes, as to be different from other Lands, Tenements, or Hereditaments, and never to revert to the Donor, or any temporal or common Uſe. *Hottoman* defines *Mort-main* to be the Poſſeſſion of thoſe who are, as it were, immortal, becauſe they never ceaſed to have Heirs; ſo that the Eſtate never reverts to its firſt Lord. *Main*, Hand, being uſed for Poſſeſſion; and *Mort*, Deed, by Antiphraſis, for immortal.

MORTOISE, or MORTISE, in Carpentry, &c. a kind of Joint, wherein a Hole or Inciſion, of a certain Depth, is made in the Thickneſs of a Piece of Wood, which is to receive another Piece, call'd a *Tenon*. See TENON.

The Word is originally *French*. *Borel* derives it from *mordere*, to bite.

MORTUARY, is a Gift left by a Man at his Death to his Pariſh-Church, for a Recompence of his Perſonal Tithes and Offerings, not duly paid in his Life-time. It is not properly and originally due to an Incumbent from any but thoſe of his own Pariſh: But, by Cuſtom, in ſome Places of the Kingdom, it is paid to the Parſons of other Pariſhes, as the Corps paſſes thro them.

MOSAIC, MOSAIC *Work*, or, as ſome chuſe to call it, MUSAIC, from the *Latin Opus Muſivum*; an Aſſemblage of little Pieces of Glaſs, Marble, precious Stones, &c. of various Colours, cut ſquare and cemented on a Ground of Stuc, &c. imitating the natural Colours and Degradations of Painting. See PAINTING.

In

In this ſenſe *Moſaic Work* includes *Marquetry*, or *Inlaid Work*, *Vaneering*, &c. But in the reſtrain'd ſenſe of the Word, is only takes in Works of Stone, Metals and Glaſs; thoſe of Wood being diſtinguiſh'd by the Name of *Marquetry* or *Inlaying*.

Others diſtinguiſh otherwiſe between *Moſaic*, and *Marquetry*. In that properly call'd *Moſaic*, the ſeveral Stones are all of the ſame Colour; and the Changes, and Diminutions of Colours, and Shades, are made by applying different Stones one on another, but all of the ſame Colour. *Marquetry*, on the contrary, conſiſts of Stones of different Colours; and by theſe the ſeveral Colours, Shades, Degradations, &c. are expreſs'd.

The Critics are divided as to the Origin and Reaſon of the Name *Moſaic*. Some derive it from *Moſaicum*, a Corruption of *Muſaicum*, as that is of *Muſivum*, as it was call'd among the *Romans*. *Scaliger* derives it from the *Greek* μῶσαν, and imagines the Name was given to this ſort of Works, as being very fine, and ingenious. *Nebriſſenſis* is of opinion they were ſo call'd, becauſe *ex illis Picturis ornabantur Muſea*.

Moſaic ſeems to have taken its Origin from *Paving*: The fine Effect and Uſe of Pavements, compoſed of Pieces of Marble of different Colours ſo well join'd together, as that when dry'd they might be poliſh'd, and the whole make a very beautiful and ſolid Body, which continually trodden upon, and waſhed with Water, was not at all damaged; gave the Painter the hint; who ſoon carry'd the Art to a much greater Perfection: ſo as to repreſent Foliages, Maſques, and other Groteſque Pieces of various Colours, on a Ground of black or white Marble. In fine, obſerving the good Effect which this kind of Work had in Pavements, and finding that it reſiſted Water, they proceeded to line Walls therewith, and to make various Figures for the Ornament of their Temples and public Buildings.

But Nature not producing Variety of Colours enough for 'em in Marbles, to paint all kinds of Objects, they bethought of counterfeiting 'em with Glaſs and Metal Colours; which ſucceeded ſo well with 'em, that having given all manner of Teints to an infinite number of little Pieces of theſe two Matters, to counterfeit Stones of various Colours, in order to get more Colours; the Workmen arranged 'em with ſo much Art, that their *Moſaic* ſeem'd almoſt to diſpute with Paintings. This way of repreſenting Objects having this advantage, that it reſiſts the Injuries of the Air as well as Marble itſelf; and even grows more beautiful with Time, which effaces all other kind of Painting.

But the Moderns are gone further, and ſetting aſide Glaſs and Metals, as too mean Materials, have introduced, along with the fineſt Marbles, the richeſt of precious Stones, as Lapis, Agat, Cornelians, Emeralds, Turquoiſes, &c.

Of theſe three Kinds of *Moſaic*-Work, that of colour'd Glaſs and Metals is now little in uſe, tho of a ſurprizing Luſtre and Durableneſs: of the other two, that of Marbles alone is in common Uſe; the *Moſaic* of precious Stone being ſo very dear, that the few Workmen who apply themſelves to it, make little elſe but petty Works, as Ornaments for Altar-Pieces, Tables for rich Cabinets, &c. Tho out of theſe muſt be excepted that ſumptuous Chapel of the Dukes of *Tuſcany*, which has been ſo long in hand, and which, if ever it be finiſh'd, will be a noble Monument of the Magnificence and Piety of thoſe Princes, as well as of the Patience and Addreſs of the Workmen employ'd therein.

We ſhall however enter into ſome Detail of the Manner of working in thoſe three Kinds of *Moſaic*; to which we ſhall add a fourth much newer, yet equally ingenious with any of the reſt, made with a kind of *Gypſum* or Talc, found in Stone-Quarries about *Paris*.

Mosaic *Work of Glaſs.*

This Kind of *Moſaic* they begin with little Pieces of Glaſs, which they provide of as many different Colours as poſſible. To this end, the Glaſſmen's Furnaces being diſpoſed, and their Pots or Crucibles full of the Matter of which Glaſs is made, or rather of Glaſs already made, they put what Colour or Dye they think fit in each Crucible, always beginning with the weakeſt, and augmenting the Strength of the Colours from Crucible to Crucible, till they come to the deepeſt Die, as in mixing of Colours on a Palette to paint in Oil. When the Glaſs is well boil'd, and all the Colours in their perfection, they take out the Glaſs hot, as it is, and lay it on a ſmooth Marble, flatting it down with another like Marble, and then cutting it into Slices of equal bigneſs, and about the thickneſs of an Inch and half. They then with an Inſtrument, which the *Italians* call *Bocca di Cane*, make other Pieces ſquare, and others of different Figures and Sizes, as occaſion requires; theſe they diſpoſe orderly in Caſes; as in Painting *in Freſco*; 'tis uſual to range all the different Teints in Shells, and according to their Colour.

If 'tis deſir'd to have Gold, either in the Ground of the Painting, or in the Ornaments, or the Draperies, they take ſome of the Pieces of Glaſs, form'd and cut in the manner juſt mention'd. Theſe they moiſten on one ſide with Gum-Water, and afterwards lay 'em over with Gold-Leaf. They then put this Piece, or ſeveral Pieces at a time, on a Fire-ſhovel, which they place in the mouth of the Furnace, after having firſt cover'd them with another hollow Piece of Glaſs. Here they continue till ſuch time as they become red-hot; after which the Shovel is drawn out, all at once, and the Gold becomes ſo firmly attach'd to the Glaſs, that it will never afterwards leave it.

Now, to apply theſe ſeveral Pieces, and out of 'em to form a Picture, they firſt make a Cartoon, or Deſign; this they transfer on the Ground or Plaiſter, by calquing, as in Painting in Freſco. See Fresco.

As this Plaiſter is to be laid thick on the Wall, it will continue freſh and ſoft a conſiderable time, ſo that there may be enough prepar'd at once to ſerve three or four days. It is compos'd of Lime made of hard Stone, with Brick-duſt very fine, Gum-Tragacanth, and Whites of Eggs; when it is thus prepar'd, and laid on the Wall, and made the Deſign of what is to be repreſented, with Plyers they take out the little Pieces of Glaſs, ranging 'em one after another, and ſtill keeping ſtrictly to the light Shadow, different Teints and Colours repreſented in the Deſign before; preſſing or flatting 'em down with a Ruler, which ſerves both to ſink 'em within the Ground, and to render the Surface even.

Thus, in a long time, and with an infinite deal of trouble, they finiſh the Work, which is ſtill the more beautiful, as the Pieces of Glaſs are more uniform, and rang'd at more equal heights. Some of theſe are executed with ſo much Juſtneſs, that they appear as ſmooth as a Table of Marble, and as finiſh'd and maſterly as a Painting in Freſco; with this advantage, that they have a fine Luſtre, and will hold almoſt for ever.

The fineſt Works of this kind, that have deſcended to us, and thoſe whereon the Moderns have retriev'd the Art, almoſt loſt, are thoſe of the Church of St. *Agnes*, formerly the Temple of *Bacchus* at *Rome*; at *Piſa*, *Florence*, and other Cities of *Italy*. The moſt eſteem'd among the Works of the Moderns, are thoſe of *Joſeph Pine*, and the Chevalier *Lanfranc*, in the Church of St. *Peter* at *Rome*. There are very good ones likewiſe at *Venice*.

Mosaic *Work of Marble, and precious Stones.*

Theſe two Kinds of *Moſaics* bear ſo near a relation to each other, as to the Manner of Working, that to avoid Repetition, we ſhall give 'em both under one; obſerving, by the way, wherein the one differs from the other, either in the ſawing or the ranging of the Stones.

Moſaic of Marble is uſed in large Works, as in Pavements of Churches, Baſilics, and Palaces; and in the Incruſtation and Vaneering of the Walls of the ſame Edifices. As to that of Stones, eſpecially *precious Stones*, 'tis only uſed in ſmall Works, as before obſerv'd.

The Ground of *Moſaic* Works wholly Marble, is ordinarily a maſſive Marble, either white or black. On this Ground the Deſign is cut with a Chiſſel, having been firſt calqued. When 'tis dug of a ſufficient Depth, *i. e.* an Inch or more, 'tis fill'd up with Marble of a proper Colour, firſt contourn'd, or faſhion'd to the Deſign, and reduc'd to the Thickneſs of the Indentures, with various Inſtruments. To make the Pieces, thus inſerted into the Indentures, hold, whoſe ſeveral Colours are to imitate thoſe of the Deſign, they uſe a Stuc, compos'd of Lime and Marble Duſt; or a Maſtic, which each Workman prepares differently: after which, the Work is half poliſh'd with a ſoft kind of Stone.

The Figures thus mark'd out, the Painter, or Sculptor himſelf draws, with a Pencil, the Colours of the Figures not determin'd by the Ground, and in the ſame manner makes Strokes or Hatchings, in the Places where Shadows are to be; and when he has engrav'd with the Chiſſel all the Strokes thus drawn, he fills them up with a black Maſtic, compos'd partly of *Burgundy*-Pitch, pour'd on hot; taking off, afterwards, what is ſuperfluous, with a piece of ſoft Stone or Brick, which with Water and beaten Cement, takes away the Maſtic, poliſhes the Marble, and renders the whole ſo even, one would imagine it only conſiſted of one Piece: 'Tis this kind of *Moſaic* we ſee in the pompous Church of the Invalids at *Paris*, and the fine Chapel at *Verſailles*; and wherewith ſome entire Apartments of that Palace are incruſtated.

For Moſaic Work of precious Stones; there are required other and more delicate Inſtruments than thoſe uſed in Marble; as Wheels, Drills, Tin-Plates, &c. uſed by Lapidaries, and Engravers on Stone.

As

As none but the richeſt Marbles and Stones enter this Work, to make 'em go the further, they are ſawn into the thinneſt Leaves imaginable, ſcarce exceeding half a Line in Thickneſs; the Block to be ſaw'd, is faſten'd firmly with Cords, on the Bench, only rais'd a little on a piece of Wood, one or two Inches high. Two Iron Pins, which are on one ſide the Block, and which ſerve to faſten it, ſerve alſo to direct the Saw, which with Pieces thus ſaw'd, are put into a Vice contrived for the purpoſe; and with a kind of Saw or Bow made of fine Braſs Wire, bent on a Piece of ſpringy Wood, together with Emery ſteep'd in Water, the Leaf is gradually faſhion'd, by following the Strokes of the Deſign made on Paper, and glued on the Piece. See MARQUETRY.

When there are Pieces enough faſten'd to form an entire Flower, or ſome other Part of the Deſign, they are apply'd. The Ground that ſupports this *Moſaic*, is uſually of Free Stone. The Matter wherewith the Stones are join'd together, is a Maſtic, or kind of Stuc, laid very thin on the Leaves as they are faſhion'd; and the Leaves in this State, apply'd with Plyers. If any Contour, or Side of a Leaf, be not either rounded enough, or ſquared enough, to fit the Place where it is to be uſed, when 'tis too large, 'tis brought down with a Braſs File or Raſp, and when too ſmall, is managed with a Drill, and other Lapidary-Inſtruments.

Manner of making MOSAIC *Work of Gypſum.*

The Gypſum is a kind of coarſe Talc, or a ſhining tranſparent Stone, found in the Quarries of *Montmartre* near *Paris*, among the Stones thence dug to make the Plaiſter of *Paris*: 'tis different from the Plaiſter, but retains the Name the *Romans* gave the Plaiſter, *viz. Gypſum*. Of this Stone, calcined in a Kiln, and beaten in a Mortar, and paſs'd thro a Sieve, they make a kind of artificial Marbles, imitating precious Stones, and of theſe compoſe a kind of *Moſaic* Work, which comes little ſhort either of the Durableneſs or Vivacity of the natural Stones; and which has this advantage, that it admits of continu'd Pieces, or Paintings of entire Compartiments, without any Joining viſible.

Some make the Ground of Plaiſter of *Paris*, others of Free-Stone: if the former, 'tis ſpread in a wooden Frame, of the length and breadth of the intended Work, and about an Inch and half thick. This Frame is ſo contriv'd, as, the Tenons being only join'd to the Mortoiſes by ſingle Pins, they may be taken aſunder, and the Frame be diſmounted when the Plaiſter is dry. This Frame they cover on one ſide with a ſtrong Linnen Cloth, nail'd all around, which being plac'd horizontally, with the Linnen at bottom, is fill'd with Plaiſter, paſs'd thro a wide Sieve. The Plaiſter being half dry, the Frame is ſet perpendicular, and left till it be quite dry; then taken out, by diſmounting the Frame. In this *Moſaic*, the Ground is the moſt important Part.

Now to prepare the ſifted Gypſum to be apply'd on this Ground, they diſſolve and boil it in the beſt *Engliſh* Glue, and after mixing with it the Colour it is to bear, the whole is work'd up together into the ordinary Conſiſtence of Plaiſter; and then taken and ſpread on the Ground, five or ſix Inches thick. It muſt be obſerv'd, that if the Work be ſuch, as that Mouldings are requir'd, they are form'd with Gouges and other Inſtruments.

'Tis on this Plaiſter, thus colour'd like Marble or precious Stone, and which is to ſerve as a Ground to a Work either of Lapis, Agat, Alabaſter, or the like, that the Deſign to be repreſented is drawn; having been firſt pounced or calqued. To hollow or impreſs the Deſign, they uſe the ſame Inſtruments with the Sculptors; the Ground whereon they are to work, not being much leſs hard than Marble itſelf. The Cavities thus made in the Ground, are fill'd up with the ſame Gypſum boil'd in Glue, only differently colour'd; and thus are the ſeveral Colours of the Original repreſented. To have the neceſſary Colours and Teints at hand, they temper Quantities of the Gypſum with the ſeveral Colours, in little Pots. When the Deſign is thus fill'd, and render'd viſible, by half poliſhing it with Brick or ſoft Stone; they go over it again, cutting ſuch Places as are either to be weaker, or more ſhadow'd, and filling 'em with Gypſum; which is repeated till all the Colours, added one after another, repreſent the Original to the Life. The Work being finiſh'd, is ſcower'd with ſoft Stone, Sand and Water; then with Pumice-ſtone, and laſtly, poliſh'd with a wooden Mullet and Emery. Laſtly, the Luſtre is given it, by ſmeering it over with Oil, and rubbing it a long time with the Palm of the Hand; which gives it a Luſtre nothing inferior to that of natural Marble.

If 'tis only requir'd to make a variegated Table, or other Work of ſeveral Colours; without *Moſaic* Figures, the Proceſs is ſomewhat different. To this end, they only prepare ſeparately, in large Bowls, as many different Colours as Nature ſhews in the Marble to be imitated, and after incorporating 'em with the Gypſum and Glue-Water, they take a Truel-full of each, and diſpoſe 'em in a Trough, without any order; then without mingling 'em, and only by cutting or croſſing the Gypſum of each Truel once or twice with each of the reſt, they give 'em that beautiful Confuſion, which makes the Value of natural Marbles: Of theſe they then make their Tables, or lay 'em in a Mold, according to the Work to be done.

As to *Marquetry or Inlaid-Work*, the Antients were well acquainted with it, and uſed it for the adorning of their Beds, Tables, and other Moveables; uſing for this purpoſe Ivory, and the richeſt Woods. But Friar *John* of *Verona* ſeems to have contributed the moſt to its Perfection, by diſcovering the Secret of dying Woods of all Colours and Degrees; by which means he was enabled to imitate Painting, and even to repreſent Architecture in Perſpective.

They begin with ſawing their Woods into Leaves, of the Thickneſs of one or two Tenths of an Inch; then take Pieces of the Deſign they are to follow, and faſten 'em to thoſe Leaves, and with a little Steel ſaw the Contour of the Deſign. All that is neceſſary being taken off with the Saw, they give the Shadow to thoſe Places that require it, by placing the Piece in a hot Sand, or otherwiſe, with the Direction neceſſary to ſhadow it more or leſs. This done, they lay each Piece in its place, on a Ground of another Wood, as dry Oak, and there faſten them with ſtrong Glue.

There are two other Branches of *Moſaic* Work; the one call'd *Damaskeening*, or *Damask-Work*, conſiſting in an Aſſemblage of Gold or Silver Threads, of which are ſometimes form'd flat Works, and ſometimes Baſſo-Relievos. See DAMASKEENING.

The other is call'd *Shell-Work*, conſiſting of Shells, artificial Congelations, Petrifications, &c. uſed in Grottos. See SHELL-*Work*.

MOSQUE, among the *Mahometans*, is a Temple ſet apart for the Exerciſes of Religion. See TEMPLE.

There are Royal *Moſques* founded by the Emperors, as *Solimania* and *Velidea* at *Conſtantinople*; and Private *Moſques* founded by Mufties, Viziers, Baſſa's, &c. they are built like large Halls, with Iſles, Galleries, and Domes; and are adorned on the inſide with Compartiments, and Pieces of *Arabeſque* Work. On one ſide is always found a Pool with ſeveral Cocks.

The *Turks* have converted moſt of the Chriſtian Churches into *Moſques*. At the top is always placed a Creſcent.

The Word comes from the *Turkiſh Meſchit*, which properly ſignifies a Temple built of Wood, ſuch as the *Turks* firſt uſed. Hence the *Spaniards* derive their *Meſcheta*, and the *Italians Moſcheta*, and the *French* and *Engliſh Moſque*. *Borel* derives the Word from the *Greek* μόσχος *Calf*, becauſe of the frequent mention of a Cow in the *Alcoran*. Others, and with the greateſt Appearance of Reaſon, derive it from the *Arabic Maſchiad*, a Place of Worſhip.

MOSSE, *Uſnea* in Natural Hiſtory, a little Plant of the Paraſite kind, growing on the Barks, &c. of ſeveral Trees, as Oak, Poplar, Aſh, Cedar, &c. See PARASITE.

The moſt eſteemed, and odoriferous is that of the Cedar; it is of ſome medicinal Uſe, being Aſtringent, and proper to ſtop Hemorrhagies and Dyſſenteries.

The Antients took the *Moſs* of Trees to be the Effect of a Diſorder or Diſcompoſure of the Texture of the Bark; or at moſt a kind of little Filaments ariſing from the Bark. But the Moderns find by ſeveral Obſervations, that Moſſes are all real, diſtinct Plants, whoſe Seed, being extremely ſmall, is incloſed in little Capſulæ, which burſting of themſelves, the Seed is carried off by the Winds, till falling on the Inequalities of the Bark of Trees, it is there ſtop'd, takes Root, and feeds at the expence of the Tree, as Mouldineſs does on Bread, &c. See MOULDINESS.

The different kinds of *Moſſes* are very numerous; Monſ. *Vaillant* reckons 137 ſeveral Species in the ſingle Neighbourhood of *Paris*.

There is alſo a kind of greeniſh *Moſs* growing on human Sculls that have been long expoſed to the Air, call'd *Uſnea*, or *Muſcus calvarius*. The Antients made a deal of Uſe of it as an Aſtringent, &c. See USNEA.

Moſſes make an Article of Commerce; there being ſeveral kinds uſed in Medicine, in Perfuming, &c. Among others, the *Sea-Moſs*, call'd *Coralline*, (ſee CORALLINE) and the *Moſs* of Cedar and Firr, which enter the Compoſition of Cypreſs Powder.

The *Moſs* of common Trees, as Oak, Aſh, Poplar, &c. is uſed for Caulking of Veſſels. 'Tis alſo uſed by Bird-Merchants, to prepare Cages for certain kinds of Birds to hatch in.

The Gardeners, &c. reckon *Moſs* among the Diſeaſes, or Infirmities of Plants. See DISEASE.

Mr. *Mortimer*, &c. directs it to be rubb'd, and ſcraped off with ſome proper Inſtrument that will not hurt the Bark of the Tree, or with a piece of Hair-Cloth after a ſoaking Rain; tho' the ſureſt Cure is by removing the Cauſe; which is effected by draining the Land well of

all ſuperfluous Moiſture. Or, it may be prevented, in the firſt planting of Trees, by not ſetting them too deep.

MOTE, Mota, of the *Saxon*, *Gemote*; a Term frequently occurring in our antient Cuſtoms, literally denoting a Meeting, Court, or Plea.

Of Motes, or *Gemotes*, conſider'd in the Senſe of Aſſemblies, or Courts, there were divers kinds, as *Withenagemote*, *Folkegemote*, *Schiregemote*, *Hundredgemote*, *Burgemote*, *Wardegemote*, *Haligemote*, *Swainegemote*, &c. See each under its proper Article, Withenagemote, Folkegemote, &c.

Mote, *Mota*, was alſo uſed for a Fortreſs, or Caſtle; or the Scite or Place where ſuch Caſtle ſtood: As *Mota de Windſor*, &c.

Mote was alſo a ſtanding Water to keep Fiſh; or a large Ditch incompaſſing a Caſtle, or Dwelling-Houſe. See Moat.

MOTHER, *Mater*, a Female who ſtands in the Relation of Parent to another. See Parent, &c.

Thus *Eve* is call'd our common *Mother*. *Cybele* among the Antients was the *Mother* of the Gods.

The *Queen Mother* is the ſame with what we otherwiſe call *Queen Dowager*, See Dowager.

We meet with Empreſſes on Medals and Inſcriptions with the Titles of *Mother of the Camp*; *Mother* of the Senate, *Mother* of the Country: *Mater Senatus*, *Mater Patriæ*, &c. See Father.

Mother *Tongue*, is properly an original Language, from which others are apparently form'd. See Language.

Of *Mother Tongues*, *Scaliger* reckons ten in *Europe*, *viz.* the *Greek*, *Latin*, *Teutonic* or *German*, *Sclavonic*, *Epirotic*, *Scythian* or *European Tartar*, *Hungarian*, *Cantabrian*, *Iriſh*, and *Britiſh*. See Greek, Latin, Teutonic, &c.

Mother *Churches* are thoſe which have founded or erected others. See Church.

In Beneficiary Matters we ſay it is not lawful for a Man to enjoy at the ſame time both the *Mother* and the Daughter: Meaning that the Canon Law does not allow an Abby, and the Benefices depending thereon, to be held by the ſame Perſon.

Mother *of Pearl*, ſee Pearl.

Fits of the Mother, ſee Hysteric *Affection*.

MOTION, primarily ſo call'd, or *Local* Motion, is a continued, and ſucceſſive Change of Place; or that State of a Body whereby it correſponds ſucceſſively to ſeveral different Places, or is preſent ſucceſſively in ſeveral Parts of Space. See Place.

In this ſenſe, the Doctrine and Laws of *Motion* make the Subject of *Mechanics*, or *Statics*. See Mechanics, &c.

The antient Philoſophers conſider'd *Motion* in a more general and extenſive Senſe. They defined it by a Paſſage out of one State into another; and thus made ſix Kinds, viz. *Creation*, *Generation*, *Corruption*, *Augmentation*, *Diminution*, and *Lation*, or *Local Motion*. See Creation, Generation, &c.

Some of the later Schoolmen reduce theſe ſix Kinds of *Motion* to four: The firſt is general, including any Paſſage from one State to another; under which ſenſe of *Motion* come *Creation*, *Production*, and *Mutation*. The ſecond is a Paſſage of ſomething already exiſting from one State to another; and thus *Generation* is a *Motion*. The third, a ſucceſſive Paſſage of ſomething already exiſting from one Term to another; and thus *Alteration* and *Accretion* are Species of *Motion*. The laſt, is *Lation*, or *Local Motion*; and thus Walking is *Motion*.

But the lateſt Philoſophers unanimouſly deny any other *Motion* beſide *Local Motion*; and reduce all the Species above-mentioned to this one: So that we have here only to do with *Local Motion*; whereof the reſt are only ſo many different Determinations, or Effects. See Accretion, Alteration, Generation, &c.

Phyſical Writers, both Antient and Modern, have ever been perplexed about the Nature and Definition of *Local Motion*.

The *Peripatetics* define it by *Actus Entis in potentia*, *prout in potentia*, Ariſt. 3. Phyſ. c. 2. But the Notion is too Abſtract and Metaphyſical for our Days; and is of no uſe in explaining the Properties of *Motion*.

The *Epicureans* call it the Migration of a Body, or a part of a Body, from one Place to another. On which Definition, the later *Epicureans* refine, and call it the Migration or Paſſage of a Body from Space to Space: Thus ſubſtituting the word *Space* for that of *Place*.

The *Carteſians* define *Motion* a Paſſage, or Removal of one Part of Matter out of the Neighbourhood of theſe Parts immediately contiguous thereto, into the Neighbourhood of others.

Which Definition agrees, in effect, with that of the *Epicureans*; all the Difference between 'em conſiſting in this, that what the one calls Body and Place; the other calls *Matter*, and *contiguous Parts*.

Borelli, and other late Writers after him, define *Motion* more accurately and fully, the ſucceſſive Paſſage of a Body from one Place to another, in a determinate time, by being ſucceſſively contiguous to all the Parts of the intermediate Space.

Motion, then, they agree to be the tranſlation of a Body from Place to Place: But they differ infinitely when they come to explain wherein this *Tranſlation* conſiſts. And hence their Diviſions of *Motion* become exceedingly precarious.

Ariſtotle, and the *Peripatetics*, divide all *Motion* into *Natural* and *Violent*.

Natural Motion is that which has its Principle, or moving Force, within the moving Body. Such is that of a Stone falling towards the Centre of the Earth.

Violent Motion is that whoſe Principle is without, and againſt which the moving Body makes a Reſiſtance: Such is that of a Stone thrown upwards.

The Moderns generally divide *Motion* into *Abſolute* and *Relative*.

Abſolute Motion is the Change of Place, in any moving Body; whoſe Celerity, therefore, will be meaſured by the Quantity of the abſolute Space which the moveable Body runs thro'.

Relative Motion is a Mutation of the Relative, or vulgar Place of the moving Body; and has its Celerity accounted by the Quantity of relative Space run thro'.

Others divide *Motion* into *Proper*, and *Improper* or *Foreign*.

Proper Motion is a removal out of one proper Place into another, which hereby becomes proper, as being poſſeſſed by this Body alone; in excluſion of all others: Such is the *Motion* of a Wheel in a Clock.

Improper, or *Extraneous*, or *Foreign*, or *Common* Motion, is the Paſſage of a Body out of one common Place into another common Place: Such is that of a Clock when moved in a Ship, &c.

The Reaſon of all this Diverſity ſeems to ariſe from the not attending to the different Meanings of the Words; but comprizing all in one Definition and Diſtinction; which they ſhould rather have diſtinguiſh'd into ſeveral parts.

Some, *e. g.* in their Definitions of *Motions*, conſider the moving Body, not as it regards the adjacent Bodies, but as it regards immoveable and infinite Space. Others, again, conſider the moving Body, not as it regards infinite Space, but as it regards other Bodies vaſtly remote. And others, laſtly, conſider the moving Body, not as it regards remote Bodies, but that Surface only to which it is contiguous

But theſe various Meanings once ſettled, the Diſpute clears up; for as every thing that moves may be conſider'd in theſe three ſeveral Manners; there hence ariſe three ſeveral kinds of *Motions*; whereof that which regards the Parts of infinite immoveable Space, without conſideration of the circumambient Bodies, may be call'd *abſolutely and truly proper Motion*. That which regards circumambient Bodies vaſtly remote, which may themſelves poſſibly be moved, we call *relatively common Motion*. The laſt, which regards the Surfaces of the next contiguous Bodies, in as much as it may want all both abſolute and common *Motion*, we call *relatively proper Motion*.

1. An *abſolutely and truly proper* Motion then, is the Application of a Body to different Parts of infinite and immoveable Space. This alone is proper and abſolute *Motion*, being always generated and changed by Forces impreſs'd on the moving Body itſelf, and by thoſe only; and being that to which the real Forces of all Bodies to put others in *Motion* by impulſe, are owing; and to which thoſe *Motions* are proportioned. But this *Motion* we cannot inveſtigate or determine accurately; nor can we diſtinguiſh, when two Bodies are impell'd on each other, in which of the two, *v. g.* that which appears to move the more ſwiftly, or the other which appears to move more ſlowly, and perhaps even to be at reſt, the real *Motion*, and, conſequently, the real Force whence the Impulſe aroſe, is placed; not being able to determine whether the Centre of Gravity, or of the whole Syſtem (which is but a Point in infinite Space) is itſelf at reſt or in *Motion*.

2. *Relatively common* Motion is a Change of the Situation of a Body with reſpect to other remote circumambient Bodies; and this is the *Motion* we ſpeak of, when we ſay that Men, Cities, and the Earth itſelf moves round the Sun. This is alſo the *Motion* we mean, when we eſtimate the Quantity of *Motion*, and the Force any Body has to impel another: For inſtance, if a wooden Sphere, fill'd with Lead to make it the heavier, be caſt from the Hand we uſe to eſtimate the Quantity of *Motion*, and the Force which the Sphere has to impel another, from the Celerity of the Sphere and the Weight of the included Lead; and that truly with regard to the Force itſelf, and the Effect thereof as it falls under our Senſes: But whether the real Power or *Motion* be in the Sphere which appears to ſtrike, or in the Earth which appears to be ſtruck, that, as has been obſerved above, we cannot determine.

Laſtly,

Laſtly, *Relatively proper* MOTION is the ſucceſſive Application of a Body to the different parts of the contiguous Bodies. And this is the *Motion* uſually underſtood in Phyſical Diſputes about the Natures of particular things; as when we ſay, that Heat, Sound, Fluidity, &c. conſiſt in *Motion*. This muſt be added however, that by ſucceſſive Application of a Body, its whole Surface, taken together, muſt be conceiv'd ſucceſſively apply'd to different parts of contiguous Bodies.

From theſe ſeveral Definitions of *Motion* ariſe as many Definitions of *Place*: For when we ſpeak of *Motion* (or Reſt) truly and abſolutely proper, then Place is that part of infinite and immoveable Space which the Body fills. When of *Motion relatively common*, then Place is a part of any Space or moveable Dimenſion. When of *Motion relatively proper*, (which is really very improper) Place is then the Surface of the next adjacent Bodies, or ſenſible Spaces. See PLACE.

The Definition of Reſt is pretty well agreed on; but whether *Reſt* be a mere Privation of *Motion*, or any thing poſitive, is hotly diſputed. *Malebranch*, and others, maintain the former ſide of the Queſtion. *Cartes*, and others, the latter: Theſe laſt contend, that a Body at reſt, has no power to perſevere in that reſt, nor to reſiſt any Bodies that would deſtroy it; and that *Motion* may as well be call'd a Ceſſation of Reſt, as Reſt of *Motion*. See REST.

The main Argument urg'd by the former is this: Suppoſe a Globe at reſt, and ſuppoſe God ceaſe to will its reſt; What will be the Conſequence? it will reſt ſtill. Let it be in *Motion*, and let God ceaſe to will its Motion; What will be the Conſequence? it will ceaſe to move; that is, be at reſt; becauſe the Power whereby a Body in *Motion* perſeveres in that ſtate, is the poſitive Will of God; that whereby the quieſcent Body perſeveres, only his privative Will.

But this is a manifeſt *Petitio principii*; for the Force or Conatus whereby Bodies, whether moving or quieſcent, perſevere in thoſe ſtates, is the mere Inactivity of Matter; and therefore were it poſſible for God not to will any thing, a Body already in *Motion*, would move for ever; as a Body at Reſt, would reſt for ever. To this Inactivity of Matter, it is owing that all Bodies reſiſt according to their Quantities of Matter, and that any Body ſtriking another with any given Velocity, will move it in the ſame Proportion which its Denſity, or Quantity of Matter has, to the Denſity or Quantity of Matter of the other.

Motion has ever been eſteem'd a Species of Quantity; and its *Quantum*, or Greatneſs, which we otherwiſe call its *Momentum*, is eſtimated partly from the length of the Line which the moving Body deſcribes; as if a Body paſs over a Line of 100 Feet, the Quantity of its *Motion* is greater than if it paſſed over 10 Feet: and partly from the Quantity of the Matter moved together, or at the ſame time, *i. e.* not from the Bulk or Extenſion of the Body, but from its Maſs or Weight; the Air, and other ſubtile Matters wherewith the Pores are filled, not entring into the account: As if a Body of two cubic Feet run over a Line of 100 Feet, the Quantity of its *Motion* is greater than that of a Body of one cubic Foot deſcribing the ſame Line: For whatever *Motion* one Whole has, that is had in one Half of the other; and the *Motion* of the Whole is the Sum of the *Motion* of all its Parts.

Hence it follows, that for two unequal Bodies to have equal *Motions*, or Momentums, the Lines which they paſs over muſt be in a reciprocal Proportion of their Maſſes or Weights, *i. e.* if one Body have three times the Quantity of Matter that another has, the Line it runs over muſt be ⅓ of the Line run over by the other. If two Bodies then faſtened to the two Extremities of a Balance or Lever, have their Maſſes in a reciprocal Ratio of their Diſtances from the fixed Point, when theſe are moved they muſt deſcribe Lines in a reciprocal Ratio of theſe Maſſes.

For inſtance, if the Body A (Tab. MECHANICS, *Fig.* 30.) have three times the Maſs or Weight of B, and each be faſten'd to the Extremities of the Lever A B, whoſe Fulcrum or fixed Point is C, in ſuch manner as that the Diſtance B C is thrice the Diſtance C A; the Lever can't incline either way, but the Space which the leſs Body moves will be thrice the Space A D, which the greater moves: So that their *Motions* will be equal; nor is there any reaſon why the Body A tending downwards, *v. g.* with four Degrees of *Motion*, ſhould raiſe the Body B, rather than B tending downwards likewiſe with the ſame four Degrees of *Motion*, ſhould raiſe the Body A: They will therefore be in Equilibrio. On which Foundation depends the whole Doctrine of Mechanics.

Hence that great Problem of *Archimedes*, Δος που στω και την γην κινησω; with any given Power, how ſmall ſoever, to raiſe any Weight given, how great ſoever; for by increaſing the Diſtance C B infinitely, the Power of the Body A will be increaſed infinitely. See MECHANICS and EQUILIBRIUM.

As it is allow'd on all hands, that *Motion* is no eſſential Attribute of Matter; hence ariſes a diſpute about its *Production*, and to what Cauſe it owes its *Continuation*.

The *Carteſians* maintain, that the Creator at the Beginning impreſs'd a certain Quantity of *Motion* on Bodies; and that under ſuch Laws, as that no part of it ſhould be loſt, but the ſame Portion of *Motion* be conſtantly preſerv'd in Matter. And hence conclude, that if any moving Body ſtrike on any other Body, the former loſes no more of its *Motion* than it communicates to the latter. See CARTESIAN.

This Principle Sir *Iſ. Newton* overturns in the following Words: —— 'From the various Compoſitions of two 'Motions, it is manifeſt there is not always the ſame Quan'tity of *Motion* in the World; for if two Balls join'd to'gether by a ſlender Wire, revolve with an uniform *Motion* 'about their common Centre of Gravity, and at the ſame 'time that Centre be carried uniformly in a right Line drawn 'in the Plane of their circular *Motion*; the Sum of the *Mo*'tion of the two Balls, as often as they are in a right Line 'drawn from their common Center of Gravity, will be 'greater than the Sum of their *Motions* when they are in a 'Line perpendicular to that other. Whence it appears, 'that *Motion* may both be generated and loſt. But by rea'ſon of the tenacity of fluid Bodies, and the friction of 'their Parts, with the Weakneſs of the elaſtic Power in ſolid 'Bodies, Nature ſeems to incline much rather to the De'ſtruction than the Production of *Motion*; and in reality '*Motion* becomes continually leſs and leſs. For Bodies 'which are either ſo perfectly hard, or ſo ſoft, as to have 'no elaſtic Power, will not rebound from each other: 'Their Impenetrability will only ſtop their *Motion*. And 'if two ſuch Bodies, equal to each other, be carried with 'equal but oppoſite *Motions*, ſo as to meet in a void Space, 'by the Laws of *Motion* they muſt ſtop in the very Place 'of Concourſe, loſe all their *Motion*, and be at reſt for 'ever, unleſs they have an elaſtic Power to give 'em a 'new *Motion*. If they have Elaſticity enough to enable 'em to rebound with ¼, or ½, or ¾ of the Force where'with they meet, they will loſe ¾, or ½, or ¼ of their *Mo*'tion. And this is confirmed by Experiments: For if 'two equal Pendulums be let fall from equal heights, ſo 'as to ſtrike full on each other; if thoſe Pendulums be of 'Lead, or ſoft Clay, they will loſe all, or almoſt all their '*Motion*; and if they be of any Elaſtic Matter, they will 'only retain ſo much *Motion* as they receive from their 'elaſtic Power.' If it be asked, how it happens that *Motion* being thus continually loſt, ſhould be continually renewed: The ſame Author adds, that it is renewed from ſome active Principles, 'Such as the *Cauſe of Gravity*, 'whereby the Planets and Comets preſerve their *Motions* in 'their Orbits, and all Bodies acquire a great degree of '*Motion* in falling; and the Cauſe of Fermentation, where'by the Heart and Blood of Animals preſerve a perpetual 'Warmth and *Motion*; the inner parts of the Earth are 'kept continually warm'd; many Bodies burn and ſhine; 'and the Sun himſelf burns and ſhines, and with his Light 'warms and chears all things,' *(as alſo from the Cauſe of Elaſticity, by which Bodies reſtore themſelves into their former Figures;)* 'For we find but little *Motion* in the World, 'except what plainly flows, either from the active Prin'ciples, or from the Command of the Willer.' See GRAVITY, FERMENTATION, ELASTICITY, &c.

As to the *Continuation of Motion*, or the Cauſe why a Body once in *Motion* comes to perſevere in it; this has been extremely controverted among Phyſical Writers, and yet follows very evidently from one of the grand Laws of Nature, *viz.* That all Bodies perſevere in their preſent State, whether of Reſt or *Motion*, unleſs diſturbed by ſome foreign Powers. *Motion* therefore once begun, would be continued *in infinitum*, were it to meet with no interruption from external Cauſes; as the Power of Gravity, the Reſiſtance of the Medium, &c. So that *Ariſtotle*'s Principle, Whatever is moving affects Reſt, is groundleſs. See NATURE.

Nor has the *Communication of Motion*, or the manner how a moving Body comes to affect another at Reſt; or how much of its *Motion* is communicated by the firſt to the laſt, been leſs diſputed. See the Laws thereof under the Word PERCUSSION.

MOTION, we have obſerv'd, is the Subject of Mechanics; and Mechanics is the Baſis of all Natural Philoſophy; which is hence denominated *Mechanical*. See MECHANICAL.

In effect, all the Phænomena of Nature; all the Changes that happen in the Syſtem of Bodies, are owing to *Motion*; and are directed according to the Laws thereof.

Hence, the modern Philoſophers have apply'd themſelves particularly to cultivate the Doctrine of *Motion*; to inveſtigate the Properties, Laws, &c. thereof; by Obſervation, Experiment, and the Uſe of Geometry. And to this we owe the great Advantages of the modern Philoſophy above that of the Antients; who were extremely diſregardful

regardful of *Motion*; notwithſtanding that they ſeem'd ſo ſenſible of its Importance, that they defined *Nature* by the firſt Principle of *Motion* and Reſt of the Subſtance wherein it is. See NATURE.

Among all the Antients, there is nothing extant of *Motion*, excepting ſome things in *Archimedes*'s Books *de Æquiponderantibus*. To *Gallileo*, a great part of the Doctrine of *Motion* is owing. He firſt diſcover'd the general Laws of *Motion*, and particularly of the *Deſcent* of heavy Bodies, both at large, and on *inclined* Planes; the Laws of the *Motion* of *Projectiles*; the Vibrations of *Pendulums*, and ſtretched *Chords*; with the Theory of *Reſiſtances*, &c. which were things the Antients had no Notion of. See DESCENT, PENDULUM, PROJECTILE, RESISTANCE, &c.

His Diſciple, *Torricelli*, poliſh'd, and improv'd on the Diſcoveries of his Maſter; and added to them divers Experiments concerning the Force of Percuſſion, and the Equilibrium of Fluids. See FLUID. M. *Huygens* improved very conſiderably on the Doctrine of the Pendulum; and both he and *Borelli* on the Force of Percuſſion. Laſtly, *Newton*, *Leibnitz*, *Varignon*, *Mariotte*, &c. have brought the Doctrine of *Motion* ſtill nearer to Perfection.

The general *Laws of Motion* were firſt brought into a Syſtem, and Analytically demonſtrated together, by Dr. *Wallis*, Sir *Chriſtopher Wren*, and M. *Huygens* all much about the ſame time; the firſt in Bodies not Elaſtic, and the two laſt in Elaſtic Bodies. Laſtly, the whole Doctrine of *Motion*, including all the Diſcoveries both of the Antients and Moderns on that head, was given by Dr. *Wallis* in his *Mechanica*, or *de Motu*, publiſhed in 1669.

MOTION may be conſider'd either as *Equable*, and *Uniform*; or as *Accelerated*, and *Retarded*. *Equable Motions* again may be conſider'd either as *Simple*, or as *Compound*. *Compound Motion* may again be conſider'd either as *Rectilinear*, or *Curvilinear*.

And all theſe again may be conſider'd either with regard to themſelves, or with regard to the manner of their Production, and Communication, by Percuſſion, &c.

Equable MOTION, is that wherein the moving Body proceeds with the ſame unvary'd Velocity.

The Laws of *Equable Motion* are as follow; the Reader being only to obſerve, by the way, that by *Maſs* we mean Quantity of Matter or Weight, expreſs'd by M; by *Momentum*, the Quantity of Motion or Impetus, expreſs'd by I; by *Time*, the Duration of *Motion*, expreſs'd by T; by *Velocity*, its Swiftneſs, noted by V; and by *Space*, the Line it deſcribes, noted S. See MOMENT, MASS, VELOCITY.

Thus if the Space be $= f$, and the Time $= t$; the Velocity will be alſo expreſs'd $f : t$: And if the Velocity $= v$, and the Maſs $= m$; the Momentum will likewiſe be $= v\,m$.

Laws of Uniform or Equable MOTION.

Theor. I. The Velocities V and v of two Bodies moving equably, are in a Ratio compounded of the direct Ratio of the Spaces S and f, and the reciprocal Ratio of the Times T and t.

Demonſt. For $V = \frac{S}{T} : \frac{f}{t}$ and $v :: f : t$.
therefore $V : v :: \frac{S}{T} : f$

$V : v :: S t : f T$
Q. E. D.

Schol. This and the following Theorems may be illuſtrated in Numbers; thus ſuppoſe that a Body A, whoſe Maſs is as 7, that is, 7 Pound, in the time of 3 Seconds paſſes over a Space of 12 Feet; and another Body B, whoſe Maſs is as 5, in the time of 8 Seconds paſſes over a Space of 16 Feet. We ſhall then have $M = 7$, $T = 3$, $S = 12$; $m = 5$, $t = 8$, $f = 16$. And therefore $V = 4$, $v = 2$. The Caſe then will ſtand thus:

$V : v :: S t : f T$.
$4 : 2 :: 12.8 : 16.3 :: 4 : 2$.

Corol. If $V = v$, then will $S t = f T$; therefore $S : f :: T : t$. That is, If two Bodies move equably, and with the ſame Velocities, their Spaces are as the Times.

Schol. The Corollaries may be illuſtrated by Numbers, in like manner as the Theorems. Thus ſuppoſe $S = 12$, $T = 6$, $f = 8$, $t = 4$. Then will the $V = 12 : 6 = 2$, and $v = 8 : 4 = 2$.

Conſequently by reaſon $V = v$
$S : f = T : t$
$12 : 8 = 6 : 4$.

Corol. 2. If $V = v$, and alſo $t = T$; then will $S = f$, and ſo the Bodies moving equably, will deſcribe equal Spaces in equal Times.

Theor. II. The Spaces S and f, over which two Bodies paſs, are in a Ratio compos'd of the Ratio of the Times T and t, and of the Velocities V, &c.

Dem. For $V : v :: S t : f T$

Therefore $V f T = v S t$
And $S : f :: V T : v t$
In Numbers $12 : 16 :: 4.3 : 2 : 8 :: 12 : 16$

Corol. If $S = f$, $V T = v t$, ſo that $V : v :: t T$. that is, if two Bodies moving equably, deſcribe equal Spaces; their Velocities will be in a reciprocal Ratio of their Times.

In Numbers, if we ſuppoſe $S = 12$, and $f = 12$. Becauſe $S = V T$ and $f = v t$; if $V = 2$ and $v = 3$, $T = 6$ and $t = 4$.

So that we have $V : v = t : T$
$2 : 3 = 4 : 6$.

Cor. 2. Further, if $t = T$, then will $V = v$; and therefore Bodies which move equably, deſcribe equal Spaces in equal Times, and have their Velocities equal.

Theor. III. The Momenta, or Quantities of *Motion*, of two Bodies moving equably, I and i, are in a Ratio compounded of the Velocities V and v, and the Maſſes or Quantities of Matter M and m.

Dem. For $I = V M$, and $i = v m$; therefore $I : i :: V M : v m$; that is, the Ratio of I to i is compounded of the Ratio of V to v, and of M to m. Q. E. D.

Cor. 1. If $I = i$, then will $V M = v m$; and therefore $V : v = M$. That is, if the Momenta of two Bodies moving equably, be equal; their Velocities will be in a reciprocal Ratio of their Maſſes.

Cor. 2. And therefore if $M = m$, $V = v$; that is, if the Momenta and Maſſes of two moving Bodies be equal, their Velocities are alſo equal.

Theor. IV. The Velocities V and v of two Bodies moving equably, are in a Ratio compounded of the direct Ratio of their Momenta I and i, and the reciprocal one of their Maſſes M and m.

Dem. Since $I : i :: V M : v m$

$I v m = i V M$

$V : v = I m : i M$
Q. E. D.

In Numbers $4 : 2 :: 28.5 : 10.7 = 4.1 = 2.1 = 4.2$.

Cor. 1. If $V = v$, then $I m = i M$; and therefore $I : i = M : m$; that is, if two Bodies move equably, and with the ſame Velocity, their Momenta will be in the ſame Ratio with their Maſſes.

Cor. 2. If $M = m$, $I = i$; and therefore if two Bodies, that have the ſame Maſſes, move equably, and with equal Velocity, their Momenta are equal.

Theor. V. In an equable *Motion*, the Maſſes of the Bodies M and m are in a Ratio compos'd of the direct Ratio of their Momenta, and the reciprocal Ratio of their Velocities V and v.

Dem. Since $I : i :: V M : v m$

Therefore $I v m = i V M$

$M : m = I v : i V$.

In Numbers $7 : 5 :: 28.2 : 10.4 :: 7.1 : 5 : 1 :: 7 : 5$.

Cor. If $M = m$, then will $I v = i V$; and therefore $I : i = V : v$. That is, if two Bodies moving equably, have their Maſſes equal, their Momenta will be as their Velocities.

In Numbers, ſuppoſe $I = 12$, $i = 8$, $M = 4$, $m = 4$; then will $V = 12 : 4 = 3$, and $v = 8 : 4 = 2$.

Therefore $I : i = V : v$
$12 : 8 = 3 : 2$.

Theor. VI. In an equable *Motion*, the Momenta I and i are in a Ratio compounded of the direct Ratio's of the Maſſes M and m, and the Spaces S and f, and the reciprocal Ratio of the Times T and t.

Dem. Becauſe $V : v :: S t : f T$
And $I : i :: V M : v m$

Therefore $V I : v i :: V M S t : v m f T$

$I : i = M S t : m f T$
Q. E. D.

Cor. 1. If $I = i$, then will $M S t = m f T$; and therefore $M : m = f T : S t$, $S : f = m T : M t$ and $T : t = M S : m f$; that is, if two Bodies moving equably, have their Momenta equal, 1. Their Maſſes are in a Ratio compounded of the direct Ratio of their Times, and the reciprocal one of their Spaces. 2. Their Spaces are in a Ratio compounded of the direct Ratio of the Times, and the reciprocal one of their Maſſes. 3. Their Times are in a Ratio, compounded of their Maſſes and their Spaces.

Cor. 2. Further, if $M = m$; then will $f T = S t$; and therefore $S : f = T : t$; that is, if two Bodies moving equably, have their Momenta, and their Maſſes equal, their Spaces are as their Times.

Cor. 3. Again, if $T = t$, then will $S = f$. Two moving Bodies therefore, whoſe Maſſes and Momenta are equal, deſcribe equal Spaces in equal Times.

Cor. 4. If beſides $I = i$, $S = f$; then will $mT = Mt$; and therefore $M : m :: T : t$; that is, if two moving Bodies, whoſe Momenta are equal, paſs over equal Spaces, their Maſſes are proportionable to their Times.

Cor. 5. Further, if $T = t$, then will $M = m$; and therefore Bodies, whoſe Momenta are equal, and which moving equably, deſcribe equal Spaces in equal Times, have their Maſſes equal.

Cor. 6. If beſides $I = i$, $T = t$; then will $MS = mf$; and therefore $S : f :: m : M$; that is, the Spaces paſs'd over in the ſame time, by two moving Bodies, whoſe Momenta are equal, are in a reciprocal Ratio of their Maſſes.

Theor. VII. In an equable *Motion*, the Spaces S and f are in a Ratio compounded of the direct Ratio's of the Momenta I and i, and the Times T and t; and the reciprocal one of the Maſſes M and m.

Dem. Becauſe $I : i :: MSt : mfT$,

$$I\,mfT :: i\,MSt$$

Wherefore $S : f :: ITm : itM$.

Q. E. D.

In Numb. $12 : 16 :: 3.28 : 5.8.10.7 :: 3.4.1 : 8.2.1 :: 12 : 16$.

Cor. 1. If $S = f$, $ITm = itM$; and therefore $I : i :: tM : Tm$, $M : m :: IT : it$, $T : t :: iM : Im$. If two Bodies therefore move equably over equal Spaces, 1. Their Momenta will be in a Ratio compounded of the direct Ratio of the Maſſes, and the reciprocal one of the Times. 2. Their Maſſes will be in a Ratio compounded of the Momenta and the Times. 3. The Times will be in a Ratio compounded of the direct Ratio of the Maſſes, and the reciprocal one of the Momenta.

Cor. 2. If beſide $S = f$, $M = m$; then will $IT = it$; and therefore $I : i :: t : T$. That is, Bodies whoſe Maſſes are equal, have their Momenta reciprocally proportionable to the Times in which they move over equal Spaces.

Cor. 3. If beſide $S = f$, $T = t$; then will $iM = Im$; and therefore two Bodies moving equably, and thro equal Spaces in equal Times, have their Momenta proportionable to their Maſſes.

Theor. VIII. Two Bodies moving equably, have their Maſſes M and m, in a Ratio compounded of the direct Ratio's of the Momenta I and i, and the Times T and t, and the reciprocal one of the Spaces f and S.

Dem. Becauſe $I : i :: MSt : mfT$, $Imf T = iMSt$.

Wherefore $M : m :: ITf : itS$.

Q. E. D.

In Numbers $7 : 5 :: 3.28.16 : 8.10.12 :: 3.7.2 : 1.10.3 :: 7 : 5$.

Again $I : i :: MSt : mfT$.

In Numbers $28 : 10 :: 7.12.8. : 5.16.3 :: 7.4.1 : 5.2.1 :: 28 : 10$.

Corol. 1. If $M = m$, then will $ITf = itS$; and therefore $I : i :: tS : Tf$, $S : f :: IT : it$, and $I : t :: iS : If$. That is, in two moving Bodies, whoſe Maſſes are equal; 1. The Momenta are in a Ratio compounded of the direct Ratio of the Spaces, and the reciprocal one of the Times. 2. The Spaces are in a Ratio compounded of the Momenta and the Times. 3. The Times are in a Ratio compounded of the direct Ratio of the Spaces, and the reciprocal one of the Momenta.

Cor. 2. If beſide $M = m$, $T = t$, then will $iS = If$; and therefore $I : i :: S : f$. That is, the Momenta of two Bodies, whoſe Maſſes are equal, are proportional to the Spaces paſs'd over in equal Times.

Theor. IX. In equable *Motions*, the Times T and t are in a Ratio compounded of the direct Ratio's of the Maſſes M and m, and the Spaces S and f, and the reciprocal one of the Momenta I and i.

Dem. Becauſe $I : i :: MSt : mfT$, $Imf T = iMSt$.

Wherefore $T : t :: iMS : Imf$.

Q. E. D.

Cor. If $T = t$, $iMS = Imf$; and therefore $I : i :: MS : mf$, $M : m :: IS : iS$; and $S : f :: Im : iM$. That is, if two Bodies, moving equably, deſcribe equal Spaces in equal Times; 1. Their Momenta will be in a Ratio compounded of the Maſſes and the Spaces. 2. Their Maſſes will be in a Ratio compounded of the direct Ratio of the Momenta, and the reciprocal one of the Spaces. 3. The Spaces will be in a Ratio compounded of the direct Ratio of the Momenta, and the reciprocal one of the Maſſes.

The Laws of MOTIONS *uniformly accelerated and retarded.*

Def. By an *accelerated Motion*, we mean ſuch a one as continually receives freſh Acceſſions of Velocity; and it is ſaid to be uniformly accelerated, when in equal Times its Acceſſions of Velocity are equal. See ACCELERATION.

By a *retarded Motion*, is underſtood ſuch a one, whoſe Velocity continually decreaſes; and it is ſaid to be uniformly retarded, when its Decreaſe is continually proportional to the Time. See RETARDATION.

Axiom. A Body once at reſt, will never move, unleſs ſome other Body put it in *Motion*; and when once in *Motion*, it will continue for ever to move, with the ſame Velocity, and in the ſame Direction, unleſs it be forced from its State by ſome other Cauſe: This is evident from that fundamental Axiom in Philoſophy, That there is nothing without a ſufficient Cauſe.

Cor. 1. A Body therefore moved by one only Impulſe, muſt proceed in a right Line.

Cor. 2. If then it be carry'd in a Curve, it muſt be acted on by a double Power; one, whereby it would proceed in a right Line; another, whereby it is continually drawn out of it.

Axiom 1. If the Action and Re-action of two (*unelaſtic*) Bodies be equal, there will no *Motion* enſue; but the Bodies after Colliſion, will remain at reſt by each other.

Axiom 2. If a moving Body be impell'd in the Direction of its *Motion*, it will be accelerated; if by a reſiſting Force, it will be retarded. Heavy Bodies deſcend with an accelerated *Motion*.

Theor. X. If a Body move with an uniform Velocity; the Spaces will be in a duplicate Ratio of the Times.

Dem. For let the Velocity acquir'd in the Time t be $= v$, then will the Velocity acquir'd in the Time $2t = 2v$, in the Time $3t = 3v$, &c. and the Spaces correſponding to thoſe Times, t, $2t$, $3t$, &c. will be as tv, $4vt$, $9vt$, &c. (by *Theor.* 2.) The Spaces therefore are as 1. 4. 9. &c. And the Times as 1. 2. 3. &c. that is, the Spaces are in a duplicate Ratio of the Times. Q. E. D.

Cor In a *Motion* uniformly accelerated, the Times are in a ſub-duplicate Ratio of the Spaces.

Theor. XI. The Spaces paſs'd over by a Body uniformly accelerated, increaſe, in equal Times, according to the unequal Numbers 1. 3. 5. 7, &c.

Dem. If the Times, wherein a moving Body equably accelerated, proceeds, be as 1. 2. 3. 4. 5, &c. the Space paſs'd over in one Moment, will be as 1, in 2 Moments as 4, in 3 as 9, in 4 as 16, in 5 as 25, &c. (*Theor.* 10.) If therefore you ſubſtract the Space paſs'd over in one Moment, *viz.* 1. from that paſs'd over in two Moments, 4. there will remain the Space correſponding to the ſecond Minute, *viz.* 3. In the ſame manner may be found the Space paſs'd over in the third Minute, $9 - 4 = 5$. The Space correſponding to the fourth Minute, $16 - 9 = 7$; and ſo of the reſt. The Space of the firſt Minute therefore is as 1, that of the ſecond as 3, that of the third as 5, of the fourth as 7, of the fifth as 9, &c. Therefore the Spaces paſs'd over by a Body, moving with an uniformly accelerated *Motion*, in equal Times increaſe according to the unequal Numbers, 1. 3. 5. 7. 9, &c. Q. E. D.

Theor. XII. The Spaces paſſed over by a Body equably accelerated, are in a duplicate Ratio of the Velocities.

Dem. For ſuppoſing the Velocities to be V and v, the Times T and t, the Spaces S and s; then will $V : v :: T : t$. Wherefore, ſince $S : s :: T^2 : t^2$, (*Theor.* 10.) $S : s :: V^2 : v^2$.

Corol. Wherefore in a *Motion* uniformly accelerated, the Velocities are in a ſubduplicate Ratio of the Spaces.

Theor. XIII. Heavy Bodies deſcend with an uniformly accelerated *Motion*, in a Medium void of Reſiſtance; if the Spaces be not very great.

Dem. Since heavy Bodies deſcend with one accelerated Velocity, the Power of Gravity muſt continually impel them. But the Power of Gravity is found the ſame at all Diſtances from the Earth where the Experiment can be made. Therefore heavy Bodies muſt be driven downwards in the ſame manner in equal times. If then, in the firſt Moment of Time, they be impell'd with the Velocity v, they will be impell'd with the ſame Velocity v in the ſecond Moment, and with the ſame in the 3d, 4th, &c. Moments. Now the Medium being ſuppoſed void of all Reſiſtance, (by *Hypoth.*) they will ſtill retain the Velocity they acquire; and by reaſon of their equal freſh Acquiſitions every Minute, they will deſcend with a *Motion* uniformly accelerated. Q. E. D. See GRAVITY.

Cor. 1. The Spaces of Deſcent therefore, are in a duplicate Ratio of their Times, and alſo of their Velocities, (*Theor.* 10, 12.) and increaſe according to the uneven Numbers 1, 3, 5, 7, 9, &c. (*Theor.* 11.)

Cor. 2. The Times, and likewiſe the Velocities, are in a ſubduplicate Ratio of the Spaces, (*Theor.* 10, 13.)

Schol. In ſuppoſing heavy Bodies to move thro' a Medium void of Reſiſtance, we exclude, at once, all manner of Impediments, under what Name ſoever they be call'd, or from whatſoever Cauſe they proceed; and among the reſt, that *Motion*, wherewith the Earth revolving on its Axis, carries with it heavy Bodies during the time of their fall; tho' this is not ſenſible at any moderate diſtance.

Schol. It was *Galilæus* who firſt diſcover'd the Law of the Deſcent of heavy Bodies; and that too by Reaſoning;

tho' he afterwards confirm'd it by Experiments. These he repeated again and again, and still found the Spaces pass'd over as the Squares of the Times: But it must be observed, that the Spaces are not to be taken in the Length, but the Height of the Plane, as will be shewn hereafter. See DESCENT.

The same Experiments were try'd, tho' in a different manner, by *Ricciolus* and *Grimaldus*, who let fall several stony Balls of the same Bulk and Weight, 8 Ounces each, from various Altitudes; measuring the Times of Descent by the Vibrations of a Pendulum. The Result of their Experiments is seen in the following Table.

Vibrations.	Time.	Space at the End of the Time.	Space pass'd over in each Time.
	″	*Rom. Feet.*	*Rom. Feet.*
5	0 50	10	10
10	1 40	40	30
15	2 30	90	50
20	3 20	160	70
25	4 10	250	90
6	1 0	15	15
12	2 0	60	45
18	3 0	135	75
24	4 0	240	105

Theor. XIV. If a heavy Body fall thro' a Medium void of Resistance, and from a Height not very great; the Space it passes over is subduple of that which it would pass over in the same time, with the Velocity it has acquir'd at the end of its fall.

Dem. Let the right Line A B (Tab. MECHANICS, Fig. 31.) represent the whole Time of a heavy Body's Descent; and let this be divided into any Number of equal Parts; to the Abscisses A P, A Q, A S, A B, draw the right Lines P M, Q I, S H, B C, which may be as the Velocities acquired, in those Times, in the Descent. Since then A P : A Q :: P M : Q I, A P : A S :: P M : S H, &c. (*Eucl.* VI. 2.) if then the Altitude of the Triangle A B C be conceiv'd to be divided into equal Parts infinitely small; the *Motion* being uniform in a Moment of Time infinitely small; the little Area P *p* M *m* = P *p*. P M as the Space pass'd over in the little Moment of Time P *p*. (*Theor.* 2.) Therefore the Space pass'd over in the Time A B, will be as the Sum of all the little Areas, *i. e.* as the Triangle A B C. But the Space that would be described in the same Time A B with the uniform Velocity B C, being as the Rectangle A B C D, (*Theor.* 2.) it will be to the other Space as 1 to 2. (*Eucl.* I. 41.)

Cor. The Space therefore pass'd over in half the Time A B, with the Velocity B C, is equal to the Space which the heavy Body passes over from a State of Rest in the whole Time A B.

Problem 1. The Time wherein a heavy Body falls from any given Altitude being given; to determine the Spaces it passes over in each part of that Time.

Resol. Let the given Altitude be = *a*, the Time = *t*, the Space pass'd over in any part of that Time *x*. Then by *Cor.* of *Theor.* 13.

$$1 : x = t^2 : a$$

$$t^2\, x = a$$

$$x = a : t^2.$$

The Space therefore pass'd over in the first part of Time is $a : t^2$, and therefore that pass'd over in the second part of Time $= 3a : t^2$; that pass'd over in the third part $= 5a : t$, &c. (*Ibid.*)

E. gr. In the above-mentioned Experiments of *Ricciolus*, the Ball descended 240 Feet in four Seconds. The Space therefore pass'd in the first Second = 240 : 16 = 15; that in the next Second = 15.3 = 45: that in the third = 15.5 = 75, &c.

Prob. 2. The Time of a heavy Body's Descent in a Medium void of Resistance thro' any given Space, being given, to determine the Time wherein it will pass over another given Space, in the same Medium.

Resol. and Dem. Since the Spaces are as the Squares of the Times, (*Theor.* 13.) to the Space the heavy Body moves in the given Time, the Space required in the Question, and the Square of the given Time, seek a fourth Proportional; this will be the Square of the Time required: Its square Root therefore being extracted, will yield the Time required. *E. gr.* In *Ricciolus*'s Experiments the Ball fell 240 Feet in 4 Minutes; 'tis demanded then how much Time it will take up in falling 135 Feet? This Time will be found = $\sqrt{}$ (135 : 16 :: 240) = $\sqrt{}$ (135 : 15) $\sqrt{}$ 9 = 3.

Prob. 3. The Space a Body falls in any given Time in a Medium void of Resistance being given, to determine the Space it will fall, in any other given Interval of Time.

Resol. and Dem. Since the Spaces are as the Squares of the Times, (*Theor.* 13.) find a fourth Proportional to the Square of the Time wherein the Body falls thro' the given Space, the Square of the Time wherein it is to fall thro' the Space required, and the Space required; this fourth Proportional will be the Space required.

E. g. Suppose a Ball to fall 290 Feet in four Minutes time; and 'tis inquir'd what time it will spend in falling 135 Feet? The Answer will be found = $\sqrt{}$ (135.16 : 240) = (135 : 15 = $\sqrt{}$ 3.

Theor. XV. If a Body proceed with a *Motion* uniformly retarded, it will pass over half the Space which it would describe in the same time by an equable *Motion*.

Dem. Suppose the given Time divided into any Number of equal Parts; and draw the right Lines B C, S H, Q I, P M thereto, which are to be as the Velocities corresponding to the Parts of Time o, B S, B Q, B P, B A; so as letting fall the Perpendiculars H E, I F, M G, the right Lines C E, E F, C G, C B may be as the Velocities lost in the Times H E, F I, G M, A B; that is, B S, B Q, B F, B A. Since C E : C F :: E H : F I, C G : C B :: G M : B A, (*Theor.* 13.) A B C will be a Triangle, (*Eucl.* III. 17.) If B *b*, therefore, be a Moment of Time infinitely small, its *Motion* will be uniform; and, therefore, the Space described by the moving Body will be as the little Area B *b c* C (*Theor.* 2.) The Space therefore described in the Time is as the Triangle A B C, *viz.* as the Sum of all the little Areas B *b c* C. Now the Space described by the Body moving uniformly with the Velocity B C in the Time A B, is as the Rectangle A B C D, (*Theor.* 3.) therefore the former is half of this. (*Eucl.* I. 41.) *Q. E. D.*

Theor. XVI. The Spaces described by a *Motion* uniformly retarded, in equal Times, decrease according to the uneqal Numbers 7, 5, 3, 1.

Dem. Suppose the moving Body in the first Instant of Time to pass over seven Feet; I say, that in the second if it be equally retarded, it will pass over 5; in the third 3; and in the fourth 1. For let the equal Parts of the Axis of the Triangle B S, S Q, Q P, P A (same *Fig.*) be as the Times; the Semi-ordinates B C, S H, Q I, P M as the Velocities at the beginning of any Time; the Trapezia B S H C, S Q I H, Q P M I, and the Triangle P A M as the Spaces described in those times, as it appears they will be from *Theor.* 16. Let then B C = 4 and B S = S Q = Q P. = P A = 1. Then will S H = 3, Q I = 2, P M = 1, (*Theor.* 13.) B S H C = (4 + 3) 1 : 2 = $\frac{7}{2}$. S Q I H = (3 + 2) 1 : 2 = $\frac{5}{2}$. Q P M I = (2 + 1) 1 : 2 = $\frac{3}{2}$ P A M = $\frac{1}{2}$. Consequently the Spaces described in equal Times are as $\frac{7}{2}$, $\frac{5}{2}$, $\frac{3}{2}$, $\frac{1}{2}$, that is as 7, 5, 3, 1. *Q. E. D.*

For the Cause, &c. *of the Acceleration of* MOTION, see GRAVITY and ACCELERATION.

For the Cause, &c. *of Retardation*, see RESISTANCE and RETARDATION.

Laws of the Communication of MOTION.

The Laws wherein *Motion* is communicated by the Collision and Percussion of Bodies are very different, as the Bodies are either *Elastic* or *Unelastic*, and as the Direction of the Stroak is *oblique* or *direct*.

What relates to the Collision of Bodies *not Elastic*, when the Stroak or Shock is direct, will come under the following Laws.

Theor. XVII. A moving Body striking against a Body at rest, will communicate *Motion* thereto, and both will proceed in the direction of the first; and the Momentum, or Quantity of *Motion* in the two, will be the same after the Stroak, as in the single one before it.

Dem. For 'tis the Action of the first that gives the latter all the *Motion* it has; and 'tis the Re-action of the latter that takes off any part of the *Motion* of the first. Now, as Action and Re-action are always equal, the Momentum acquir'd by the one must be just equal to that lost by the other; so that there is neither loss nor gain from the Stroak.

Corol. The Velocity after the Stroak is found by multiplying the Mass of the first Body by its Velocity before the Stroak, and dividing the Product by the Mass of the second Body.

Corol. Hence if a Body in *Motion* strike on another moving in the same direction, but more slowly, both will continue their *Motion* in their first Direction; and the Momenta, or Sum of *Motion* will be the same after as before the Stroak.

Corol. If two equal Bodies move against each other with equal Velocities, after the Stroak they will both remain at Rest.

Simple MOTION is that produced from some one Power.

Compound MOTION is that produced by several conspiring Powers: Powers being said *to conspire*, when the Direction of the one is not opposite to that of the other; as when the Radius of a Circle is imagined to whirl round

on

on its Centre, and a Point in the ſame Radius is at the ſame time ſuppoſed impell'd ſtrait along it.

Coroll. All *Curvilinear Motion*, therefore, is Compound. (*Cor.* 1. of *Axiom* 1.)

Theor. XVIII. If a moving Body A (*Fig.* 32.) be acted on by a double Power; the one according to the Direction A B, the other according to A C; with the *Motion* compounded thereof, it will deſcribe the Diagonal of a Parallelogram N D; whoſe Sides A B and A C it would have deſcribed in the ſame time with each of the reſpective Powers apart.

Dem. If the Body A were only acted on by the Force impreſs'd along A B; in the firſt inſtant of Time it would be in ſome Point of the right Line A B as in H, and ſo in the Line H L parallel to A C; if it were only acted on by the Power A impreſs'd in the Direction A C, it would in the ſame Inſtant of time be in ſome Point of the Line A C as in I, and ſo in the Line I L parallel to A B. But ſince the Directions of the Powers are not oppoſite to each other, neither of 'em can impede the other; and therefore the Body in the ſame inſtant of Time will arrive both at the Point H L and at I L; and will conſequently be in the Point L, where the two meet. In the ſame manner it appears that if K M and M G be drawn parallel to A B and A C, the Body in the ſecond Inſtant of Time will be in M, and at length in D. *Q. E. D.*

Cor. 1. Since about every right Line as AD, a Parallelogram as A B D C, may be conſtructed by making two equal Triangles A C D and A B D, on one common Baſe A D; every *rectilinear Motion*, when it may be of ſervice for the Demonſtration, may be reſolved into a *compound* one.

Cor. 2. But as the Proportion of the Sides A C and C D may be various, ſo alſo may the right Line A D be deſcribed by a *Motion* compounded various ways; and therefore the ſame rectilinear *Motion* may be reſolved into various compound *Motions*.

Cor. 3. Hence if a moveable Body be drawn by three ſeveral Powers according to the Directions B A, A D, and A C, (*Fig.* 33.) two of which taken together are equivalent to the third; they will be to each other as the right Lines B D, D A, D C, parallel to their Directions; that is, reciprocally as the Sines of the Angles included between the Lines of their Directions, and the Line of Direction of the third: D B being to A D as the Sine of the Angle B A D to the Sine of the Angle A B D.

Theor. XIX. In an equable compound *Motion*, the Velocity produced by the conſpiring Powers, is to the Velocity of each of the two apart, as the Diagonal A D (*Fig. penult.*) of the Parallelogram A B D C, in the Direction of whoſe Sides they act, to either of thoſe Sides A B or A C.

Dem. For in the ſame time that one of the Powers would carry it over the Side of the Parallelogram A B, and the other over A C ſeparately, join'd together they carry it over the Diagonal A D. The Diagonal A D therefore is the Space deſcribed by the conſpiring Powers in the ſame Time: but in an equable *Motion* the Velocities in the ſame Time are as the Spaces; the Velocities therefore ariſing from the conſpiring Forces are to the Velocity ariſing from either Force, as A D to A B or A C. *Q. E. D.*

Cor. 1. The conſpiring Forces therefore being given; *i. e.* the Ratio of the Velocities being given, by the Lines A B and A C given in magnitude, and the Direction thro' thoſe Lines being given in Poſition, or by the Angle of Direction; the Celerity and Direction of the oblique *Motion* is given; becauſe the Diagonal is given both in Magnitude and Poſition.

Cor. 2. The oblique *Motion* however being given, the ſimple ones are not, *vice verſa*, given; becauſe the ſame oblique *Motion* may be compounded of various ſimple ones.

Theor. XX. In a compound *Motion* produced by the ſame Forces, the Velocity is greater if the Angle of Direction be leſs; and leſs, if this be greater.

Dem. Let the greater Angle of Direction be BAC, (*Fig.* 34.) the leſs FAC; ſince the Powers are ſuppoſed the ſame, AC will be common to each Parallelogram AF C E and BAC D and beſides A B = A E. Now 'tis evident that on the footing of the greater Angle, the Diagonal A D is deſcribed; and on the footing of the leſs Angle, A E; and both in the ſame time, by reaſon A B = A E. The Velocities therefore are as A D to A E: Wherefore ſince A D is leſs than A E, the Velocity on the foot of the greater Angle is leſs than on that of the leſs Angle. *Q. E. D.*

Cor. Since the Legs A C and C E, with the included Angle, being given, the Angle C E A, and thence, alſo, A E is found; the Velocity of the conſpiring Powers, and the Angle of Direction, in any particular Caſe, being given; the Velocity of the compound *Motion*, and conſequently the Ratio of the Velocities produced by the ſame Powers under different Angles of Directions, may be determined.

For the particular Laws of MOTION *ariſing from the Colliſion of Bodies both* Elaſtic *and* Unelaſtic, *and that where the Directions are both* perpendicular *and* oblique, ſee PERCUSSION.

For Circular MOTION, *and the Laws of* Projectiles, ſee CENTRAL *Forces*, and PROJECTILE.

For the MOTION *of Pendulums, and the Laws of* Oſcillation, ſee PENDULUM and OSCILLATION.

Perpetual MOTION. See PERPETUAL *Motion*.

The celebrated Problem of a *perpetual Motion*, conſiſts in the inventing of a Machine; which has the Principle of its *Motion* within itſelf. M. *de la Hire* has demonſtrated the Impoſſibility of any ſuch Machine, and finds that it amounts to this, *viz.* to find a Body which is both heavier, and lighter at the ſame time; or a Body which is heavier than itſelf. See MACHINE.

Animal MOTION, is that whereby the Situation, Figure, Magnitude, &c. of the Parts, Members, &c. of Animals are changed.

Under theſe *Motions* come all the Animal Functions, as *Reſpiration*, *Circulation* of the Blood, *Excretion*, *Walking*, &c. See FUNCTION.

Animal Motions are uſually divided into two Species, *viz.* *Spontaneous*, and *Natural*.

Spontaneous, or *Muſcular* MOTION, is that perform'd by means of the Muſcles, at the Command of the Will; hence alſo call'd *Voluntary Motion*. See *Muſcular* MOTION.

Natural, or *Involuntary* MOTION, is that effected without ſuch Command of the Will; by the mere Mechaniſm of the Parts.

Such is the *Motion* of the Heart, and Pulſe; the Periſtaltic *Motion* of the Inteſtines, &c. See HEART, &c.

Inteſtine MOTION, an Agitation of the Particles, whereof a Body conſiſts. See INTESTINE; ſee alſo FERMENTATION, EFFERVESCENCE, &c.

Some Philoſophers will have every Body, and every Particle of a Body, in continual *Motion*. For Fluids, 'tis the Definition they give of ſuch Bodies, *viz.* that their Parts are in continual *Motion*. See FLUIDITY.

And as to Solids, they infer the like *Motion* from the Effluvia continually emitted thro their Pores. See EFFLUVIA.

Hence they deſcribe *Inteſtine Motion*, to be a *Motion* of the internal, and ſmaller Parts of Matter, continually excited by ſome external, latent Agent, which of itſelf is inſenſible, and only diſcovers itſelf by its Effects; appointed by Nature for the great Inſtrument of the Changes in Bodies.

MOTION, in Aſtronomy, is peculiarly apply'd to the orderly Courſes of the heavenly Bodies. See SUN, PLANET, COMET, &c.

The *Motion* of the Earth, from Weſt to Eaſt, is now generally granted among Aſtronomers: See it proved under the Article EARTH.

The *Motions* of the Celeſtial Luminaries are of two Kinds, *Diurnal* or *Common*; and *Secundary* or *Proper*.

Diurnal or *Primary* MOTION, is that wherewith all the heavenly Bodies, and the whole mundane Sphere, appears to revolve every day round the Earth, from Eaſt to Weſt. See DIURNAL.

This is alſo call'd the *Motion of the Primum Mobile*, and the *Common Motion*; to diſtinguiſh it from that proper to each Planet, &c. 'Tis about the various Phænomena reſulting from this *Motion*, that Aſtronomy is chiefly employ'd. See ASTRONOMY.

Secundary or *Proper* MOTION, is that wherewith a Star, Planet, or the like, advances a certain Space every day from Weſt towards Eaſt. See MOBILE.

See the ſeveral Motions of each Luminary, with the Irregularities, &c. *thereof, under its proper Article*; EARTH, MOON, STAR, &c.

MOTION *of Trepidation*. See TREPIDATION and LIBRATION.

MOTION, in Muſic, is the manner of beating the Meaſure, to haſten or ſlacken the Time of the Pronunciation of the Words, or Notes. Sea MEASURE and TIME.

The *Motion*, in Songs compos'd in double Time, differs from thoſe in triple Time. 'Tis the *Motion* that diſtinguiſhes Courants and Sarabands, from Gavots, Borees, Chacones, &c.

MOTION is alſo uſed among Mechanics, for the Inſide of a Watch, &c. more commonly call'd *Movement*. See MOVEMENT.

MOTIONS, in War, are the Marches, Counter-marches, &c. an Army makes in the changing of its Poſt.

The great Skill of a General conſiſts in diſcovering the Enemies *Motions*, and concealing his own. Nothing is more dangerous, than to make great *Motions* before a powerful Enemy, ready to come to Blows.

MOTION, or *Emotion*, in Rhetoric, &c. See PASSION.

MOTORII, MOTORY *Nerves*, the third Pair of Nerves, ſerving for the Motion of the Eye. See NERVE.

This Pair is united into one near their Inſertion into the Brain; by which means, when one Eye is moved towards any Object, the other is directed towards the ſame. See EYE.

MOTOS, a Piece of *Lint*, or Linnen Cloth, teaz'd like Wool, to be put into Ulcers, to ſtop the Flux of Blood, *&c.*

MOTRIX, ſomething that has the Power or Faculty of *Moving*. See VIS *Motrix*, FACULTY, *&c.*

MOTTO, an *Italian* Term, literally ſignifying *Word* or *Saying*; uſed in Arms, Devices, *&c.* See ARMS and DEVICE.

The *Motto of an Armoury*, is a ſhort Sentence, or Diction carry'd in a Scroll generally over, ſometimes under the Arms; ſometimes alluding to the Name of the Bearer, ſometimes to the Bearing, and ſometimes to neither.

The *Motto*, or Word, ſays *Guillim*, is an external Ornament annex'd to Coat-Armour; being the Invention or Conceit of the Bearer, ſuccinctly and ſignificantly expreſs'd uſually in three, or four Words, which are ſet in ſome Scroll or Compartiment, plac'd at the foot of the Eſcutcheon.

As the *Motto* holds the loweſt Place in Arms; ſo it is the laſt in Blazoning. In ſtrictneſs, it ſhould expreſs ſomething intended in the Atchievement; but Cuſtom has now receiv'd whatſoever Fancy of the Deviſer. See BLAZON.

The Uſe of *Motto's* is very antient; Hiſtory, both ſacred and profane, furniſhing Inſtances thereof. Our Anceſtors made choice of *Motto's* to expreſs their predominant Paſſions, as of Piety, Love, War, *&c.* or ſome extraordinary Adventure befallen them: Moſt of which, from ſome ſuch Original, have become hereditary in divers Families.

The *Motto's* of the Royal Family of *England*, are, *Dieu & mon Droit*, God and my Right; of the Royal Family of *Bourbon*, *Eſperance*, Hope; of the Order of the Garter, *Honi ſoit qui mal y penſe*, Shame be to him that Evil thinks; of the Duke of *Norfolk*, *Sola Virtus invicta*; of the Duke of *Bedford*, *Che ſara ſara*; of the Duke of *Devonſhire*, *Cavendo tutus*, alluding to the Family's Name *Cavendiſh*; of the Duke of *Kingſton*, *Pie repone te*, alluding to the Name *Pierepoint*; of the Earl of *Radnor*, *Quæ ſupra*, alluding to the three Stars in his Arms; of the Earl of *Abingdon*, *Virtus ariete fortior*, alluding to the three battering Rams bore in the Arms; of *Forteſcue* Lord *Clinton*, *Forte ſcutum ſalus Ducum*.

The *Motto of a Device*, is alſo call'd the *Soul of the Device*. See DEVICE.

MOVEABLE, ſomething ſuſceptible of Motion; or that is diſpos'd to be mov'd. See MOTION.

Thus a Sphere is ſaid to be the moſt *moveable* of all Bodies, *i. e.* the eaſieſt to move. A Door is *moveable* on its Hinges: The Magnetical Needle, on a Pin, or Pivot, *&c.*

Moveable is frequently uſed in Contradiſtinction to *Fixed*. See FIXED.

MOVEABLE *Feaſts*, are ſuch as are not always held on the ſame Day of the Year, or Month; tho they be, on the ſame Day of the Week. See FEAST.

Thus, *Eaſter* is a *moveable* Feaſt; being always held on the firſt Sunday after the full Moon following the 21ſt of *March*; which is *moveable* between the 1ſt of *March*, and the 18th of *April*. See EASTER.

All the other *moveable* Feaſts follow *Eaſter*, *i. e.* keep their Diſtance from it; ſo that they are fix'd with reſpect thereto.

Such are *Septuageſima*, *Sexageſima*, *Aſh-Wedneſday*, *Aſcenſion-Day*, *Pentecoſt*, *Trinity-Sunday*, *&c.* Which ſee under their proper Articles.

MOVEABLES, or MOVEABLE *Goods*, by the Civilians call'd *Bona* MOBILIA, are ſuch as are capable of being remov'd from one Place to another; or which may be conceal'd or perverted; as not being fix'd to the Ground, *&c.*

In *England*, we have two Kinds of Effects, *Moveable* and *Immoveable*; the *Moveable* are Ready Money, Merchandizes, Bonds, Book-Debts, Cattel, Houſhold Inſtruments, *&c.* that are not faſten'd either with Iron or Nail, nor ſeal'd in the Plaiſter, but may be tranſported without either Fraction or Deterioration.

In the Cuſtomary Laws, we ſay *Moveables* follow the Perſon, and his proper Habitation; *Moveables* follow the Body, *&c.* which Words have different Meanings in different Countries.

Sometimes they ſignify, that *Moveables* go according to the Cuſtom of the Place where is the Habitation of the Deceas'd, tho he die in another Place; ſometimes they ſignify, that *Moveables* follow the Cuſtom of the Place where the Defunct died.

MOVEMENT, *Motion*, a Term frequently uſed in the ſame Senſe with *Automaton*.

The moſt uſual *Movements* are *Watches* and *Clocks*: The firſt are ſuch as ſhew the Parts of Time; the ſecond ſuch as publiſh it See WATCH and CLOCK.

In its popular Uſe, among us, *Movement* ſignifies all the curious Parts of a Watch, Clock, or other curious Engine, which *move*, and, by that Motion, carry on the Deſign of the Inſtrument.

The *Movement* of a Clock, or Watch, is the Inſide; or that Part which meaſures the Time, ſtrikes, *&c.* excluſive of the Frame, Caſe, Dial-Plate, *&c.*

The Parts common to both of theſe *Movements* are,

The *Main-Spring*, with its Appurtenances; lying in the Spring-Box, and in the middle thereof lapping about the Spring-Arbor, to which one end of it is faſten'd. At top of the Spring-Arbor is the *Endleſs Screw*, and its Wheel; but in Spring-Clocks, this is a Ratchet-Wheel with its Click, that ſtops it. That which the main Spring draws, and round which the Chain or String is wrapped, is the *Fuſy*: This is ordinarily taper; in large Works going with Weights, it is cylindrical, and call'd the *Barrel*. The ſmall Teeth at the bottom of the Fuſy or Barrel, which ſtop it in winding up, is call'd the *Ratchet*; and that which ſtops it when wound up, and is for that end driven up by the Spring, the *Garde-gut*. The *Wheels* are various; the Parts of a Wheel, are the *Hoop* or *Rim*; the *Teeth*, the *Croſs*, and the *Collet* or Piece of Braſs ſolder'd on the Arbor or Spindle, whereon the Wheel is rivetted. The little Wheels playing in the Teeth of the larger, are call'd *Pinions*; and their Teeth, which are 4, 5, 6, 8, *&c.* are call'd *Leves*; the Ends of the Spindle are call'd *Pivots*; and the gutter'd Wheel, with Iron Spikes at bottom, wherein the Line of ordinary Clocks runs, the *Pully*. We need not ſay any thing of the *Hand*, *Screws*, *Wedges*, *Stops*, *&c.* See WHEEL, PIVOT, *&c.*

Theory of Calculating the Numbers for MOVEMENTS.

1. It is to be obſerv'd, that a Wheel divided by its Pinion, ſhews how many Turns the Pinion has to one Turn of the Wheel.

2. That from the Fuſy to the Balance, the Wheels drive the Pinions; conſequently the Pinions run faſter, or make more Revolutions than the Wheels: but 'tis the contrary from the great Wheel to the Dial-Wheel.

3. That the Wheels and Pinions we write down either as Vulgar Fractions, or in the way of Diviſion in the common Arithmetic; *v. g.* a Wheel of 60 moving a Pinion of 5, is wrote either $\frac{60}{5}$, or better 5)60. And the number of Turns the Pinion has in one Turn of the Wheel, as a Quotient, thus, 5)60(12. A whole *Movement* may be wrote, as in the adjoining Scheme; where the uppermoſt Number expreſſes the Pinion of Report 4, the Dial-Wheel 36, and the Turns of the Pin 9; the ſecond, the Pinion, and Great-Wheel; the third, the ſecond Wheel, *&c.* the fourth, the Contrat Wheel; and the laſt, 17, the Crown-Wheel.

4)36(9	
5)55(11	
5)45(9	
5)40(8	
	17

Hence, 4. From the Number of Turns any Pinion makes in one Turn of the Wheel it works in, may be determin'd the Number of Turns a Wheel or Pinion has at any greater Diſtance, *viz* by multiplying together the Quotients; the Produce whereof is the Number of Turns. Thus,

Suppoſe the Wheels and Pinions as in the Caſe adjoining; 11 multiply'd by 9, gives 99, the Number of Turns of the ſecond Pinion 5, in one Turn of the Wheel 55, which runs concentrical, or on the ſame Spindle with the Pinion 5. Again, 99 multiply'd by 8, gives 792, the Number of Turns the laſt Pinion has in one Turn of the firſt Wheel 5.

5)55(11	
5)45(9	
5)40(8	

Hence we proceed to find, not only the Turns, but the Number of Beats of the Balance in the Time of thoſe Turns. For having found the Number of Turns the Crown-Wheel has in one Turn of the Wheel ſought, thoſe Turns multiply'd by its Notches, give half the Number of Beats, in that one Turn of the Wheel. Suppoſe, *v. g.* as in the laſt Caſe, the Crown-Wheel to have 720 Turns, to 1 of the firſt Wheel; this Number multiply'd by 15, the Notches in the Crown-Wheel, produces 10800; half the Number of Strokes of the Balance in one Turn of the firſt Wheel.

The general Diviſion of a *Movement*, is into the Clock and Watch-Parts. See CLOCK-*Work* and WATCH-*Work*.

MOVER, or *firſt* MOVER. See MOBILE.

Perpetual MOVER. See PERPETUAL *Motion*.

MOULD, in the Mechanic Arts, *&c.* a Cavity artfully cut, with deſign to give its Form, or Impreſſion to ſome ſofter Matter apply'd therein.

Moulds are Inſtruments of great Uſe in Sculpture, Foundery, *&c.* See SCULPTURE, FOUNDERY, *&c.*

The Workmen employ'd in melting the Mineral or Metallic Glebe dug out of Mines, have each their ſeveral *Mould*, to receive the melted Metal as it comes out of the Furnace; but different according to the diverſity of Metals and Works. In Gold-Mines, they have *Moulds* for Ingots. In Silver-Mines for Bars. In Copper and Lead-Mines for Pigs or Salmons: In Tin-Mines for Pigs and Ingots: And in Iron-Mines for Sows, Chimney-Backs, Anvils, Caldrons, Pots, and other large Utenſils and Merchandiſes of Iron, which are here caſt, as it were, at firſt hand. See GOLD, SILVER, LEAD, TIN, IRON, *&c.*

The

The *Founders of large Works*, as Statues, Bells, Guns, and other brazen Works, have *Moulds* of Wax, ſupported within ſide by what they call a *Core*, and cover'd without ſide with a Cap or Caſe. 'Tis in the Space which the Wax took up, which is now melted to leave it free, that the liquid Metal runs, and the Work is form'd; being carried thither thro' a great Number of little Canals which cover the whole *Mould*. See FOUNDERY.

The MOULDS *of Coiners* are Frames full of Sand, wherein the Plates of Metal are caſt that are to ſerve for the ſtriking of Species of Gold or Silver. See COINAGE.

MOULDS *of Founders of ſmall Works* are like the Frames of Coiners. 'Tis in theſe Frames, which are likewiſe fill'd with Sand, that their ſeveral Works are faſhion'd; into which, when the two Frames whereof the *Mould* is compoſed, are rejoin'd, the melted Braſs is run. See FOUNDERY.

MOULDS *of Letter-Founders* are partly of Steel, and partly Wood: The Wood, properly ſpeaking, ſerves only to cover the real *Mould* which is within, and to prevent the Workman who holds it in his Hand, from being incommoded by the impreſſion of the Heat of the melted Metal. Only one Letter or Type can be form'd at once in each *Mould*. See *Letter* FOUNDERY.

MOULDS *in the Manufacture of Paper*, are little Tables compoſed of ſeveral Braſs or Iron Wires tied to each other by another Wire ſtill finer. Each *Mould* is of the bigneſs of the Sheet of Paper to be made, and has a Rim or Ledge of Wood to which the Wires are faſten'd. Theſe *Moulds* are more uſually call'd Forms. See PAPER.

The Furnaliſts, Furnace, and Crucible Makers alſo make uſe of *Moulds* for a part of their Works, eſpecially Crucibles. They are made of Wood, of the ſame form with the Crucibles; that is in Form of a truncated Cone. They have Handles of Wood to hold, and turn 'em with, when being cover'd with the Earth, the Workman has a mind to round or flatten his Veſſel. See FURNALISTS.

MOULDS for Leaden Bullets, are little Iron Pinchers, each of whoſe Branches terminates in a Hemiſpherical Concave, which when ſhut, form an entire Sphere. In the Lips or Sides where the Branches meet, is a little Jet or Hole, thro' which the melted Lead is convey'd.

The Glaſiers have two kinds of *Moulds*, both ſerving to caſt their Lead. In the one they caſt the Lead into long Rods or Canes fit to be drawn thro' the Vice, and the Grooves formed therein. This they ſometimes call *Ingot-Mould*.

In the other they *Mould* thoſe little Pieces of Lead a Line thick, and two Lines broad, faſten'd to the Iron-Bars. Theſe may be alſo caſt in the Vice; which ſee, ſee alſo GLASIERY.

The Goldſmiths uſe the Bones of the Cuttle-Fiſh to make *Moulds* for their ſmall Works; which they do by preſſing the Pattern between two Bones, and leaving a Jet or Hole to convey their Silver thro' after the Pattern has been taken out.

MOULD, among Maſons, a Piece of hard Wood or Iron, hollowed within ſide, anſwerable to the Contours of the Mouldings or Corniſhes, *&c.* to be form'd. This is otherwiſe call'd Calliber.

MOULDS among Plumbers, the Tables whereon they caſt their Sheets of Lead. Theſe they ſometimes call ſimply *Tables*. Beſides theſe, they have other real *Moulds* wherewith they caſt Pipes without Soldering. See both the one and the other under PLUMBERY.

MOULDS among Glaſs-Grinders, are Wooden-Frames whereon they make the Tubes wherewith they fit their Perſpectives, Teleſcopes, and other Optic Machines. Theſe *Moulds* are Cylinders, of a Length and Diameter according to the Uſe they are to be apply'd to, but always thicker at one end than the other, to facilitate the ſliding. The Tubes made on theſe *Moulds* are of two kinds; the one ſimply Paſte-Board and Paper; the other of thin Leaves of Wood join'd to the Paſte-Board. To make of theſe Tubes to draw out, only the laſt or innermoſt is form'd on the *Mould*; each Tube made afterwards ſerving as a *Mould* to that which is to go over it; but without taking out the *Mould* from the firſt. See TUBE.

MOULDS uſed in Basket-Making are very ſimple, conſiſting ordinarily of a Willow or Oſier turn'd or bent into an Oval, Circle, Square, or other Figure, according to the Baskets, Panniers, Hampers, Hots, and other Utenſils intended. On theſe *Moulds* they make, or more properly meaſure all their work; and accordingly have 'em of all Sizes, Shapes, *&c.*

MOULDS among Tallow-Chandlers are of two kinds: The firſt for the common dipp'd Candles, being the Veſſel wherein the melted Tallow is diſpoſed, and the Wick dipp'd. This is of Wood of a triangular Form, and ſupported on one of its Angles, ſo that it has an opening of near a Foot a-top. The other uſed in the Fabric of *Mould* Candles, is of Braſs, Pewter, or Tin: Here each Candle has its ſeveral *Mould*. See each under CANDLE.

MOULD among Gold-Beaters, a certain Number of Leaves of Velom, or pieces of Guts, cut ſquare, of a certain ſize, and laid over one another, between which they put the Leaves of Gold and Silver which they beat on the Marble with the Hammer. They have four kinds of *Moulds*; two whereof are of Velom, and two of Gut. The ſmalleſt of thoſe of Velom conſiſts of forty or fifty Leaves, the largeſt contains an hundred. For the others, each contains five hundred Leaves.

The *Moulds* have all their ſeveral Caſes, conſiſting of two pieces of Parchment, ſerving to keep the Leaves of the *Mould* in their Place, and prevent their being diſorder'd with beating. See GOLD-*Beating*.

MOULD *Candles*, ſee *Mould*-CANDLE.

MOULD, in Agriculture, *&c.* a kind of Soil; call'd alſo *Loam* and natural Earth. See SOIL and LOAM.

The beſt *Mould* for the Gardeners Purpoſes, according to Mr. *Evelyn*, is that of a blackiſh grey Colour; according to Mr. *Switzer*, that of a lively Cheſnut, or Hazle Colour, which cuts like Butter, and does not ſtick obſtinately, but is ſhort, tolerably light, breaking into ſmall Clods, may be temper'd without cruſting or chapping in dry Weather, or turning to Mortar in wet.

Next to Cheſnut, are the dark Greys, and Ruſſet. The light and dark Aſh-Colours are naught, being thoſe commonly found on heathy Ground. The yelloviſh red is worſt of all.

MOULDINESS, a Term apply'd to ſolid Things that corrupt in the Air, from ſome hidden Principle of Humidity therein; and whoſe Corruption ſhews itſelf by a certain white Down, or Beard on their Surface.

This *Mouldineſs*, when view'd with a Microſcope, affords a curious Spectacle; being a kind of Meadow out of which ariſe Herbs and Flowers, ſome only in the bud, others full blown, and others decay'd; each having its little Root, Stalk, and other Parts: The Figure whereof may be ſeen in *Hook*'s *Micrographia*. The ſame thing may be obſerv'd of the *Mouldineſs* that gathers on the Surface of liquid Bodies.

Mr. *Bradley* obſerv'd this *Mouldineſs* in a Melon very accurately; and found the Vegetation of theſe little Plants exceedingly quick. Each Plant had its Seeds in great Abundance, which did not ſeem to be three Hours e'er they began to ſhoot up, and in ſix Hours more the Plant was compleat and mature, and the Seed ready to fall. When the Fruit had been cover'd with a *Mould* for ſix Days, its vegetative Quality began to abate, and was intirely gone in two Days more; then came on a Putrefaction, and the fleſhy Parts of the Melon yielded nothing elſe but a ſtinking Water, which began to have a gentle Motion in its Surface, and in two days time Maggots appear'd, which in ſix more laid themſelves up in their Bags, where they continu'd four days; and then came out Flies.

MOULDING, any thing caſt in a Mould, or that ſeems to have been ſo; tho' in reality it were cut with the Chiſſel, or the Ax.

MOULDINGS, or *Ornaments*, in Architecture, are Projectures beyond the Naked of a Wall, Column, Wainſcot, *&c.* the Aſſemblage whereof forms *Corniſhes*, *Door-Caſes*, and other Pieces of Architecture. See ORNAMENT.

Some *Mouldings* are crowned with a Fillet; others are without, as the Doucine, Talon, Ovolo, Torus, Scotia, Aſtragal, Gula, Corona, *&c.* See each under its proper Article.

Again, ſome are adorned with Sculpture, either hollow'd, or in Relievo.

Mouldings are in Architecture what Letters are in Writing. By the various Diſpoſitions and Combinations of *Mouldings*, may be made an infinite Number of different Profiles for all ſorts of Orders and Compoſitions, Regular and Irregular; and yet all the kinds of *Mouldings* may be reduced to three, *viz. Square*; *Round*; and *Mixed*, *i. e.* compoſed of the other two.

For this Reaſon, thoſe who invented the *Gothic* Architecture, reſolving to recede from theſe perfect Figures, and affecting to uſe others leſs perfect, to diſtinguiſh their Architecture from the Antique, introduced a new Set of whimſical *Mouldings* and Ornaments. See GOTHIC, GROTESQUE, *&c.*

Regular *Mouldings* are either large, as *Doucines*, *Ovolos*, *Gulas*, *Talons*, *Torus's*, *Scotias*, &c. or ſmall, as *Fillets*, *Aſtragals*, *Conges*, &c. which ſee in their places, DOUCINE, OVOLO, ASTRAGAL, FILLETS, *&c.*

MOULINET is a *French* Term properly ſignifying a little Mill; being a diminutive of *Moulin*, Mill.

It is uſed in Mechanics to ſignify a Roller, which being croſſed with two Levers, is uſually apply'd to Cranes, Capſtans, and other ſorts of Engines of the like nature, to draw Cords, and heave up Stones, Timber, *&c.* See CAPSTAN, *&c.*

MOULINET is alſo a kind of Turn-Stile, or Wooden-Croſs, which turns horizontally upon a Stake fixed in the Ground; uſually placed in the Paſſages to keep out

Horſes, and to oblige Paſſengers to go and come one by one.

Theſe *Moulinets* are often ſet near the Out-works of Fortified Places at the ſide of the Barriers, thro' which People paſs on foot.

MOULTING, in Natural Hiſtory, ſee MOLTING.

MOUND, a Term uſed for a Bank, Rampart, or other Fence, particularly of Earth.

MOUND, in Heraldry, is a Ball or Globe with a Croſs upon it, ſuch as our Kings are uſually drawn with, holding it in their left Hand, as they do the Scepter in the Right. See GLOBE.

MOUNT, MONS, an Elevation of Earth, call'd alſo *Mountain*. See MOUNTAIN.

The Words *Mount* and Mountain are Synonymous; but the former is ſcarce ever uſed in Proſe, unleſs when accompanied with ſome proper Name, as *Mount Ætna*, *Mount Gibel*, *Mount Libanon*, *Mount Sinai*, *Mount Atlas*, *Mount Parnaſſus*, &c.

In Gardening, *Mount* is ſometimes alſo uſed for a Walk raiſed on the ſide of the Garden above the Level of the reſt of the Plot.

MOUNTS *of Piety*, are certain Funds or Eſtabliſhments in *Italy*, where Money is lent out on ſome ſmall Security. We had alſo *Mounts of Piety* in *England*, raiſed by Contribution for the Benefit of People ruin'd by the Extortions of the *Jews*.

MOUNTAIN, MONS, MOUNT, a Part of the Earth riſing to a conſiderable Height above the Level of the Surface thereof. See EARTH.

The Origin of *Mountains* is variouſly aſſigned by Philoſophers: Some will have 'em co-eval with the World, and created along with it.

Others, among whom Dr. *Burnet*, will have 'em to take their Riſe from the Deluge; urging, that the extreme Irregularity and Diſorder viſible in 'em, plainly ſhews they don't come immediately out of the hand of God, but are the Wrecks of the Old World broken into the Abyſs.

Others again, alledge from Hiſtory, that the Roots of many Hills being eaten away, the Hills themſelves have ſubſided, and ſunk into Plains: Whence they conclude, that where the Corruption is natural, the Generation is ſo too.

This, indeed, appears pretty evident, that ſome *Mountains* muſt have been generated gradually, and have grown up in Proceſs of Time, from the Sea-Shells, &c. found in many of 'em; which may be accounted for from a violent Wind blowing the Sand, &c. into huge Heaps, which are afterwards made into a Maſs by the Rain, &c. Some among the Divines tell us, that the Earth was created perfectly even; and that when God ſeparated the Water from the Land, he dug Channels in the Earth; and the Earth ſcoop'd out, he threw up in *Mountains*: but whether the *Mountains* be ſufficient to fill all the Channels of the Ocean, let them look to it.

The Uſes of *Mountains* are almoſt infinite; we ſhall only mention two or three. 1. They ſerve as Skreens to keep off the Cold and nipping Blaſts of the Northern and Eaſtern Winds. 2. They ſerve for the Production of a great Number of Vegetables and Minerals, which are not found in any other Soil. 3. The long Ridges and Chains of lofty and topping *Mountains* being generally found to run from Eaſt to Weſt, ſerve to ſtop the Evagation of the Vapours towards the Poles, without which they would all run from the Hot Countreys, and leave 'em deſtitute of Rain.

Mr. *Ray* adds, that they condenſe thoſe Vapours, like Alembic-Heads, into Clouds, and ſo by a kind of external Diſtillation, give Original to Springs and Rivers; and by amaſſing, cooling, and conſtipating them, turn them into Rain, and by that means render the fervid Regions of the torrid Zone habitable, See SPRINGS, &c.

In Hiſtory we have Inſtances of *Mountains* travelling a conſiderable Diſtance, particularly *Husket-Marvel-Hill*, if I miſ-remember not, in *Herefordſhire*, which is ſaid to have made a conſiderable Journey.

To meaſure the Height of a *Mountain*, ſee ALTITUDE, &c.

Tho there is another way uſed by Dr. *Halley* in the Meaſure of *Snowdon-Hill* in *Wales*, by means of a Barometer, the different Heights of whoſe Mercury at the Top and Bottom of the *Mountain*, give its perpendicular Altitude, accounting 82 Feet perpendicular Aſcent, for every Inch varied in the Height of the Mercury. See LEVELLING.

MOUNTAINS *in the Moon*, ſee MOON.

MOUNTING *the Guard*, *Trenches*, *Breach*, &c. denotes the going upon Duty; being upon Guard, in the Trenches; running to the Breach, &c. See GUARD, TRENCH, &c.

MOUNTING *a Cannon*, *Mortar*, &c. is the ſetting it on its Carriage; or the raiſing its Mouth. See CANNON, MORTAR, CARRIAGE, &c.

MOUNTING in Manufactures, ſomething ſerving to raiſe or ſet off a Work.

Thus the Frame or Border and its Dependencies, makes the *Mounting* of a Looking-Glaſs.

The Fuſt, or But, the *Mounting* of a Muſquet, Carabine, &c.

The Hilt, &c. the *Mounting* of a Sword.

MOUNTING *of a Fan*, the Sticks which ſerve to open and ſhut it, whether they be of Wood, Ivory, Tortoiſe-ſhell, Whale-Bone, Indian-Cane, &c. See FAN.

MOURNING, a particular Dreſs, or Habit wore, to ſignify Grief, on ſome melancholy Occaſion.

The Modes of *Mourning* are various in various Countries; as are alſo the Colours that obtain for that End.

In *Europe*, the ordinary Colour for *Mourning* is *Black*; in *China*, *White*; in *Turky*, *Blue*, or Violet; in *Egypt*, *Yellow*; in *Ethiopia*, *Brown*.

The antient *Spartan* and *Roman* Ladies mourn'd in White; and the ſame Colour obtain'd formerly in *Caſtile* on the Death of their Princes. *Herrera* obſerves, that the laſt time it was uſed, was in 1498, at the Death of Prince *John*. Kings and Cardinals mourn in *Purple*.

Each People have their Reaſons for the particular Colour of their *Mourning*: White is ſuppos'd to denote Purity; Yellow, that Death is the End of human Hopes, in regard Leaves when they fall, and Flowers when they fade, become Yellow. Brown denotes the Earth, whither the Dead return. Black, the Privation of Life, as being the Privation of Light. Blue expreſſes the Happineſs which 'tis hoped the Deceaſed does enjoy; and Purple, or Violet, Sorrow on the one ſide, and Hope on the other; as being a Mixture of Black and Blue.

MOUTH, in Anatomy, a part of the human Face, conſiſting of the *Lips*, the *Gums*, the Inſide of the *Cheeks*, and the *Palate*. See FACE, LIPS, GUMS, &c.

All theſe Parts are lined with a glandulous Coat, which is continu'd over the whole inner Surface of the *Mouth*, and all its Parts, the Teeth excepted.

From the Glands of this Coat, thro innumerable little excretory Ducts, is ſeparated a kind of Salival Juice, which ſerves to keep the *Mouth*, and all its Parts, moiſt, ſmooth, and ſlippery. See SALIVA.

On the hind part of the Palate, perpendicularly over the Rima of the Larynx, hangs a round, ſoft, ſmooth Body, like the End of a Child's Finger, form'd by the Duplicature of the Membrane of the Palate, and call'd the *Uvula*, which is moved by two Muſcles, call'd *Sphenoſtaphilinus* and *Pterygoſtaphilinus*; and ſuſpended by as many Ligaments. See UVULA.

Under the Membrane of the Palate, are a great number of Glands pretty conſpicuous in the fore-part, like Grains of Millet; whoſe excretory Ducts piercing the Membrane, open into the *Mouth*: but towards the hind-part they lie much thicker, and about the Root of the Uvula are gather'd ſo cloſe to one another, that they ſeem to form one large conglomerate Gland; which is therefore, by *Verheyen*, call'd *Glandula conglomerata Palatina*. See PALATE.

The Gums are, as it were, the Ligaments of the Teeth; which ſee under GENCIVA.

Beſides the proper Parts of the *Mouth*, there are in and about it others, highly ſerviceable and neceſſary thereto.

Among which are the Glands; the moſt conſiderable whereof are the *Parotides*, the *Glandulæ Maxillares*, the *Sublinguales*, and the *Tonſils* or *Amygdalæ*; which ſee in their reſpective Places. See PAROTIDES, &c.

Theſe are the Salival Organs, whence ſprings all that Liquor we call the *Spittle*, which flows into the *Mouth* by the reſpective Ducts, after its Separation from the Blood in the Bodies of the Glands: As the Demand of Spittle is greater in Actions of the lower Jaw, *i. e.* in Maſtication, Deglutition, much Talking, &c. ſo does the Diſpoſition of theſe Salival Ducts favour that Diſcharge on thoſe Occaſions.

Mr. *Derham* obſerves the *Mouth*, in the ſeveral Species, to be nicely adapted to the Uſes of ſuch a Part; well ſized and ſhaped for the catching of Prey, for the gathering and receiving Food, the Formation of Speech, &c.

In ſome Creatures it is wide and large, in ſome little and narrow; in ſome with a deep Inciſure up into the Head, for the better catching and holding of Prey, and more eaſy Comminution of hard, large, and troubleſome Food; in others with a ſhorter Inciſure, for the gathering and holding of herbaceous Food.

In Inſects it is very notable: in ſome forcipated to catch, hold and tear the Prey; in ſome aculeated, to pierce and wound Animals, and ſuck their Blood; in others ſtrongly ridg'd with Jaws and Teeth, to gnaw and ſcrape out their Food, carry Burdens, perforate the Earth, nay, the hardeſt Wood, and even Stones themſelves, for Houſes and Neſts for their Young.

Nor is it leſs remarkable in Birds, being neatly ſhaped for piercing the Air, hard and horny, to ſupply the want of Teeth; hooked in the rapacious Kind, to catch and hold

their

their Prey; long and ſlender, in thoſe who have their Food to grope for in mooriſh Places; and broad and long, in thoſe that ſearch it in muddy Places. See BILL.

MOUTH is uſed in the Courts of Princes, for what relates to their Eating and Drinking.

Hence *Officers of the Mouth*, *Yeomen of the Mouth*, &c.

Daviler defines *Mouth*, an Apartment compos'd of ſeveral Rooms, as Offices, Kitchins, &c. where the Meat intended for the firſt Tables, is dreſs'd by itſelf. At Court this is call'd the *King's Mouth*.

MOUTH, in the Manage, is uſed for the Senſibility a Horſe has in that part, where the Bits are apply'd.

Opening, or *Shutting the* MOUTH, of a Cardinal, is a Ceremony uſed in the Conſiſtory at *Rome*; wherein the Pope ſhuts a new-elected Cardinal's *Mouth*, ſo as he may not ſpeak at all, even tho the Pope ſhould ſpeak to him; and remains in the mean time depriv'd of all Voice, both active and paſſive, till the polling of another Conſiſtory, when the Pope *opens the Mouth* again, making a little Harangue, to teach him how to ſpeak, and comport himſelf in the Conſiſtory. See CARDINAL.

MOXA, a ſort of Cotton, or downy Subſtance, brought from *China*, and by ſome ſaid to grow on the lower part of the Mugwort-Leaf.

It is not known for any medicinal Efficacy, but what common Report mentions of its curing the Gout, by burning it upon the Part; yet People have not Faith enough to try it this way: and if they had, in all likelihood, any other Cauſtic would do as well, and for the ſame reaſon.

MOYENAU, in Fortification, is a ſmall flat Baſtion, commonly plac'd in the middle of an over-long Curtain; where the Baſtions at the Extremities are not well defended from the ſmall Shot, by reaſon of their Diſtance: This Work is proper for lodging a Body of Muſqueteers, to fire upon the Enemy from all ſides.

MUCILAGE, in Pharmacy, &c. a thick, viſcous Juice; ſo call'd, as reſembling Snot, or the *Mucus* of the Noſe. See MUCUS.

It is prepar'd from Roots, and Seeds pounded in a Mortar, and infuſed in hot Water, and ſtrained thro' a Cloth.

The Seeds chiefly uſed for this purpoſe, are thoſe of Althæa, Mallows, Symphytum, &c.

Mucilages enter the Compoſition of ſeveral Plaiſters; they ſometimes are alſo made of Gums and Fruits, as Figs, Quinces, Izing-Glaſs, &c.

MUCILAGE is alſo a thick, pituitous Matter, evacuated with the Urine in the Gravel, and Dyſuria.

MUCILAGINOUS *Glands*, a very numerous Set of Glands in the Joints, firſt taken notice of, to any purpoſe, by Dr. *Havers*, in his *Oſteology*.

He obſerves, that there are two ſorts; ſome ſmall, next a-kin to milliary Glands, being Glandules plac'd all upon the Surface of the Membranes, which lie over the Articulations.

The other ſort are conglomerated, or many Glandules collected, and planted one upon another, ſo as to make a Bulk, and appear conſpicuouſly. In ſome of the Joints, there are ſeveral of them; in others, there is a ſingle one.

As to the Structure of theſe large Glands; they conſiſt of ſmall Veſicles, which are not gather'd together into ſeveral Lobes, or Bags of Glandules, but are diſpos'd upon ſeveral Membranes lying over one another, of which Membranes there are ſeveral in every one of theſe Glands, which appear evidently in thoſe who are hydropical. They have their Blood-Veſſels, as other Glands, but their Veins have a particular Texture, in their Courſe, for retarding the Return of the Blood from the Glands, that the *mucilaginous* Liquor, which is not ſeparated with the greateſt Expedition, may have time to be ſeparated; which is the Contrivance, wherever a thick Fluid is to be ſecern'd. See ANIMAL *Secretion*.

The large *mucilaginous Glands* are variouſly ſituated; ſome in a Sinus form'd in the Joint, others ſtand near, or over-againſt the Interſtice, between the articulated Bones: but in general, they are ſo plac'd, as to be ſqueez'd gently, and lightly preſs'd in the Inflection or Extenſion of the Joint, in order to yield a Quantity of Mucilage, proportionate to the Motion of the Part, and the preſent Occaſion, without any Injury.

The Deſign of all thoſe Glands is to ſeparate a *mucilaginous* kind of Liquor, that ſerves principally to lubricate the Joints, or to make them ſlippery. It ſerves likewiſe to preſerve the Ends of the articulated Bones from Attrition and Heating: But all this it doth, in conjunction with the medullary Oil; with which, together, is made a Compoſition admirably well fitted for thoſe Ends: for the Mucilage adds to the Lubricity of the Oil, and the Oil preſerves the Mucilage from growing too thick and viſcous.

The Doctor obſerves the ſame Glands to lie between the Muſcles and Tendons; and ſuppoſes that there is the ſame Mixture of an oily and *mucilaginous* Subſtance; the one being that Fat, which is found between the Muſcles, and is ſupply'd by the *Glandulæ Adipoſæ*; and the other ſeparated by the *mucilaginous* Glandules, of which the common Membrane of the Muſcles is every where full. This Mixture in the Interſtices of the Muſcles, lubricates them and their Tendons, and preſerves them from ſhrinking, and growing rigid and dry.

MUCRO *Cordis*, or *Apex*, in Anatomy, the lower pointed End of the Heart; thus call'd from *Mucro* the Point of a Spear, &c. See HEART.

Hence *mucronated* is apply'd to whatever tends to, or terminates in a Point, like that of a Spear; as *Mucronatum Os*, &c. See ENSIFORMIS *Cartilago*.

MUCOUS *Glands*, are three Glands which empty themſelves into the Urethra; ſo call'd by the firſt Diſcoverer, Mr. *Cowper*, from the Tenacity of the Liquor which they ſeparate.

The two firſt diſcover'd of theſe, are about the bigneſs a *French* Bean, of a depreſs'd oval Figure, and a yellowiſh Colour, like the *Proſtates*, being on each ſide the Bulb of the cavernous Body of the Urethra, a little above it. Their excretory Ducts, ſpring from this internal Surface, next the inner Membrane of the Urethra; into which they open a little lower by two diſtinct Orifices, juſt below its bending under the *Oſſa Pubis in Perinæo*, where they diſcharge a tranſparent viſcous Liquor. The third *mucous* Gland, is a ſmall, conglobate, yellowiſh Gland, like the former, but ſomewhat leſs, ſituate above the Angle of Flexure of the Urethra, under the *Oſſa Pubis*, in the *Perinæum*, near the *Anus*. It has two excretory Ducts, which enter the Urethra obliquely, a quarter of an Inch below the two former; and diſcharge a Liquor like the former, both in Colour and Conſiſtence. See URETHRA.

MUCUS *of the Joints*, is a mucilaginous Liquor, ſeparated by its proper Glands, conveniently plac'd in the Interſtices of the Bones, where thoſe Glands are gently preſs'd by the Motion of the Parts: it ſerves to make the Extremities of the Bones or Joints ſlip more eaſily. See BONE.

MUCUS *of the Urethra*, a viſcous tranſparent Liquor, ſerving to line and lubricate the Parts, that the Seed may ſlip more freely, without adhering. It comes from Glands lately diſcover'd by Mr. *Cowper*, about the Penis, and is that, which in Women is commonly miſtaken for the Semen. See PENIS, SEED, &c.

MUCUS *of the Noſtrils*, is ſeparated by its proper Glands, plac'd in the internal Membrane of thoſe Parts. It ſerves to moiſten, lubricate, and defend the Olfactory Nerves; which being extremely ſoft and naked, would, without ſuch Proviſion, be ſoon ſpoil'd. See NOSE, &c.

MUFTY, ſee MUPHTI.

MUGGLETONIANS, a Religious Sect, which aroſe in *England*, about the Year 1657; denominated from their Leader *Lodowick Muggleton*, a Journey-man Taylor.

Muggleton, with his Aſſociate *Reeves*, ſet up for great Prophets; and pretended to an abſolute Power of ſaving and damning whom they pleas'd: Giving out, that they were the two laſt Witneſſes of God, that ſhould appear before the End of the World.

MUID, a large Meaſure, in uſe among the *French*, for dry Commodities; as Corn, Pulſe, Salt, Lime, Coals, &c. See MEASURE.

The *Muid* is no real Veſſel uſed as a Meaſure; but an Eſtimation of ſeveral other Meaſures, as the Septier, Mine, Minot, Buſhel, &c.

At *Paris*, the *Muid* of Wheat, Pulſe, and the like, is compoſed of twelve Septiers, each Septier making two Mines, the Mine two Minots, the Minot three Buſhels, the Buſhel four Quarts, or ſixteen Litrons, each Litron 36 cubic Inches, exceeding our Pint by 1 $\frac{1}{12}$ cubic Inch.

The *Muid* of Oats is double that of Wheat, tho' compoſed, like that, of 12 Septiers; but each Septier contains 24 Buſhels.

The *Muid* of Charcoal contains 20 Mines, Sacks, or Loads, each Mine two Minots, each Minot eight Buſhels, each Buſhel four Quarts, &c.

MUID is alſo one of the nine Casks, or regular Veſſels uſed in *France*, to put Wine and other Liquors in.

The *Muid* of Wine divided into two *Demi-Muids*, four *Quarter-Muids*, and eight *Half Quarter-Muids*, contains 36 Septiers, each Septier 8 Pints, *Paris* Meaſure; ſo that the *Muid* contains 288 Pints. See MEASURE.

MULCT, a Penalty, or Fine of Money. See FINE, AMERCIAMENT, &c.

MULATTO, or MULAT, a Name given, in the *Indies*, to thoſe who are begotten by a Negro Man on an *Indian* Woman; or an *Indian* Man on a Negro Woman.

Thoſe begotten of a *Spaniſh* Woman and an *Indian* Man, are call'd *Metis*; and thoſe begotten of a Savage by a *Metis*, are call'd *Jambos*.

Theſe are all very different in Colour, and in their Hair.

The Word comes from *Mulat*, or *Mula*, Mule; begotten of two different Species.

MULE,

MULE, in Natural Hiſtory, a Beaſt generated between an Aſs and a Mare; or between a Horſe and a She-Aſs.

Mules are a ſort of Monſters; and, therefore, don't propagate their kind. See MONSTER.

And yet the Antients mention a ſort of *Mules* that were prolific, in *Phrygia*, *Syria*, *Cappadocia*, and *Africa*. Witneſs *Ariſtotle*, *Hiſt. Animal.* L. VI. c. 36. *Varro de Re Ruſtica*, Lib. II. c. 1. *Columella*, L. VII. c. 36. *Theophraſtus*, and, after him, *Pliny*, L. VIII. c. 44. *Steno*, examining the Teſticles of a *Mule*, found Eggs therein, with a ſort of Placenta about 'em; which perſuaded him that *Mules* might engender without any Miracle.

The *Roman* Ladies had Equipages drawn by *Mules*; as appears from the Medals of *Julia* and *Agrippina*. And at this day, in *Spain* the Coaches of the Nobility, and even Princes, are uſually drawn by no other than *Mules*. We are aſſured that M. *Thuanus*, firſt Preſident of Parliament, had the fourth Coach in *France*, in 1585; till which time every body rid to Court, Parliament, &c. on *Mules*. See COACH.

MULES, among Gardeners, a ſort of vegetable Monſters produced by putting the *Farina fœcundans* of one Species of Plant into the *Piſtil* or *Utricle* of another. See GENERATION *of Plants*.

The Carnation and Sweet-William being ſomewhat alike in their Parts, particularly their Flowers; the *Farina* of the one will impregnate the other; and the Seed ſo enliven'd will produce a Plant differing from either. An Inſtance of this we have in Mr. *Fairchild*'s Garden at *Hoxton*; where a Plant is ſeen neither Sweet-William, nor Carnation, but reſembling both equally; which was raiſed from the Seed of a Carnation that had been impregnated by the *Farina* of the Sweet-William. Theſe Couplings being not unlike thoſe of the Mare with the Aſs, which produce the *Mule*; the ſame Name is given 'em; and they are like the others, unable to multiply their Species.

This gives us a hint for altering the Property and Taſte of any Fruit, by impregnating one Tree with the *Farina* of another of the ſame Claſs; *e. gr.* a Codling with a Pearmain, which will occaſion the Codling ſo impregnated to laſt a longer time than uſual, and be of a ſharper Taſte. Or if the Winter-Fruits be fecundated with the Duſt of the Summer-Seeds, they will decay before their uſual time. And from this accidental Coupling of the *Farina* of one with the other, it is that in an Orchard where there is variety of Apples, even the Fruit gather'd from the ſame Tree differ in their Flavour, and in the Seaſon of Maturity. 'Tis from the ſame accidental Coupling that proceeds the numberleſs Varieties of Fruits and Flowers rais'd every Day from Seed. See FARINA and SEED.

MULIEBRIA, a Term ſometimes uſed to ſignify the Privities of Women; or ſo much as is otherwiſe call'd, *Cunnus*. See PUDENDUM, CUNNUS, &c.

MULIER, a Term in Law, ſeeming to be a corruption of the *Latin Melior*, or the *French Meilleur*, better; and ſignifying the lawful Iſſue born in Wedlock.

Tho, according to *Glanvile*, the lawful Iſſue is rather call'd *Mulier* than *Melior*, becauſe begotten on *Mulieres*, and not of *Concubinæ*: For he calls ſuch Iſſue *filios Mulieratos*; oppoſing them to Baſtards.

Agreeable to which, *Breton* has *frere Mulier*, *i. e.* the Brother begotten of the Wife; in oppoſition to *frere* Baſtard.

The like ſeems to obtain in *Scotland*. For *Skene* ſays, that *Mulieratus filius* is a lawful Son begot of a lawful Wife. If a Man have a Son by a Woman before Marriage, which is a Baſtard and Illegitimate; and he after marries the Mother of the Baſtard, and they have another Son; this ſecond Son is call'd *Mulier*, and is lawful, and ſhall be Heir to his Father. We ſometimes alſo find 'em with theſe Additions, *Baſtard eigne*, and *Mulier puiſne*.

MULIER was alſo antiently uſed as an Addition, ſome ſay for a Wife; others for a Woman born in lawful Wedlock. The former ſenſe is confirmed by Sir *Edward Coke*, who ſays, that antiently *Mulier* was taken for a Wife, and ſometimes for a Widow. *Inſt. Fol.* 434.

MULLET, in Heraldry, a Star of five Points; as in the Figure adjoining.

The *Mullet* is uſually the difference, or diſtinguiſhing Mark for the fourth Son, or third Brother, or Houſe. See DIFFERENCE.

Tho it is often alſo borne as Coat-Armour: As here;

Ruby on a Chief Pearl, two *Mullets* Diamond; being the Coat of the famous Lord *Verulam*, firſt Sir *Francis Bacon*.

The Heralds hold that the *Mullet* repreſents a falling Star; others, with more probability, take it for the Rowel of a Spur, call'd by the *French Molette*. Whence ſome Authors will have it pierced.

When it has ſix Points, it is not call'd a *Mullet*, but a *Star*. See STAR.

MULLET, or MOLETTE, a Stone flat and even at bottom, but round a-top; uſed for Grinding of Matters on a Marble. The Apothecaries uſe *Mullers* to prepare many of their Ingredients; Painters for their Colours, either dry or in Oil. *Mullet* is alſo an Inſtrument uſed by the Glaſs-Grinders; being a Piece of Wood, to one end whereof is cemented the Glaſs to be ground, whether Convex in a Baſon, or Concave in a Sphere or Bowl. The *Mullet* is ordinarily about ſix Inches long, turn'd round; the Cement they uſe is compoſed of Aſhes and Pitch.

MULSUM, or MULSE, is a Liquor made with Honey and Water. See HYDROMEL.

MULTA, or MULTURA *Epiſcopi*, a Fine, or final Satisfaction antiently given the King by the Biſhops, that they might have Power to make their laſt Wills; and that they might have the Probate of other Mens, and the granting of Adminiſtrations.

MULTANGULAR, any Figure, or Body which hath many Angles, or pointed Corners. See ANGLE.

MULTILATERAL, in Geometry, is apply'd to thoſe Figures that have more than four Sides or Angles.

MULTINOMIAL *Roots* in Mathematics, are ſuch as are compoſed of many Names, Parts, or Members, as $a + b + c + d$, &c. See ROOT.

For the Method of raiſing an infinite *Multinomial* to any given Power, or of extracting any given Root out of ſuch a Power; ſee a Method of M. *de Moivre* in *Philoſ. Tranſact.*

MULTIPLE, MULTIPLEX, in Arithmetic, a Number which comprehends ſome other Number ſeveral times. See NUMBER.

Thus 6 is a *Multiple* of 2; or, which is the ſame, 2 is a quota part of 6; 2 being contained in 6 three times. And thus 12 is a *Multiple* of 6, 4, 3; and comprehends the 1ſt twice, the 2d thrice, the 3d four times, &c.

MULTIPLE *Ratio*, or Proportion, is that which is between ſuch Numbers.

If the leſſer Term of a Ratio be an Aliquot Part of the greater; the Ratio of the greater to the leſs is call'd *Multiple*: And that of the leſs to the greater *Sub-multiple*. See RATIO.

A *Sub-multiple* Number is that contained in the *Multiple*. Thus the Number 1, 2, and 3 are *Sub-multiples* of 6 and 9.

Duple, Triple, &c. Ratios; as alſo Sub-duples, Sub-triples, &c are ſo many Species of *Multiple* and *Sub-multiple* Ratios. See DUPLE, TRIPLE, &c.

MULTIPLICAND, in Arithmetic, is one of the Factors in the Rule of Multiplication; being that Number given to be multiplied by another call'd the Multiplicator, or Multiplier. See MULTIPLICATOR.

MULTIPLICATOR, in Arithmetic, a Number multiplied by another call'd the Multiplicand. See MULTIPLICAND.

The largeſt Number is ordinarily made the Multiplicand, and placed above the ſmaller, or *Multiplicator*; but the reſult is the ſame which ſoever of the Numbers be made Multiplicand or *Multiplicator*; 4 times 5, and 5 times 4 making the ſame Sum. See MULTIPLICATION.

MULTIPLICATION, the Act of *Multiplying* or Increaſing the Number of any thing. See MULTIPLYING.

Thus we ſay the *Multiplication* of the Loaves in the Wilderneſs.

The *Romaniſts* hold a real *Multiplication* of the Body of Jeſus Chriſt in the Euchariſt; ſo that every Communicant has a whole Body, &c.

It is ordained and eſtabliſhed, that none from henceforth ſhall uſe to *multiply* Gold or Silver, nor uſe the Craft of *Multiplication*; and if any the ſame do, he ſhall incur the Pain of Felony. *Stat.* 5 *Hen.* 4.

This Statute was made on Preſumption that ſome Perſons skilful in Chymiſtry, could *multiply* or augment thoſe Metals by Elixirs, or other Ingredients; and change other Metals into very Gold and Silver. Under *Henry* VI. Letters Patent were granted to certain Perſons (who undertook to perform the ſame, and to find the Philoſopher's Stone) to free them from the Penalty in the ſaid Statute.

MULTIPLICATION, in Arithmetic, the Act or Art of *multiplying* one Number by another, to find the Product. See PRODUCT.

Multiplication, the third Rule in Arithmetic, conſiſts in the finding of ſome third Number, out of two others given; wherein, one of the given Numbers is contained as often as Unity is in the other.

Or *Multiplication* is the finding what will be the Sum of any Number added to itſelf, or repeated as often as there are Units in another: So that *Multiplication* of Numbers is a compendious kind of Addition. See ADDITION.

Thus

Thus the *Multiplication* of 4 by 5 makes 20, *i. e.* four times five amount to twenty; which Algebraiſts expreſs thus, $4 \times 5 = 20$. See CHARACTER.

In *Multiplication*, the firſt Factor, *i. e.* the Number to be multiplied, or *Multiplicand*, is placed over that whereby it is to be multiplied; (ſee MULTIPLICAND) and the Factum or *Product*, under both. An Example or two will make the Proceſs of *Multiplication* eaſy. —— Suppoſe I would know the Sum of 269 multiplied by 8, or 8 times 269.

Operation.

Multiplicand —— —— ——	269
Multiplier —— —— ——	8
Factum, or Product —— ——	2152

Explication.

The Factors being diſpoſed, and a Line drawn underneath, (as in the *Example*) I begin with the Multiplicator thus; 8 times 9 make 72, ſet down 2, and carry 7 tens, as in Addition; then 8 times 6 make 48, and 7 I carried, 55; ſet down 5, and carry 5; laſtly, 8 times 2 make 16, and with 5 I carried 21, which I put down: ſo as coming to number the ſeveral Figures placed in order, 2, 1, 5, 2, I find the Product to be two thouſand one hundred fifty two. See NUMERATION.

Now ſuppoſing the Factors to expreſs things of different Species, *viz.* the Multiplicand Men, or Yards, and the Multiplier Pounds; the Product will be of the ſame Species with the Multiplicator.

Thus the Product of 269 Men or Yards multiplied by 8 Pounds or Pence, is 2157 Pounds or Pence; ſo many of theſe going to the 269 at the Rate of 8 apiece. Hence the vaſt Uſe of *Multiplication* in Commerce, *&c.*

If the Multiplicator conſiſts of more than one Figure, the whole Multiplicand is to be added to itſelf, firſt, as often as the right-hand Figure of the Multiplicator ſhews, then as often as the next Figure of the Multiplicator ſhews, and ſo on. Thus 421×23 is equal to 421×3 and alſo 421×20. The Product ariſing from each Figure of the Multiplicator, multiplied into the whole Multiplicand, is to be placed by itſelf in ſuch a manner, that the firſt or right-hand Figure thereof may ſtand under that Figure of the Multiplicator from which the ſaid Product ariſes. For Inſtance;

Multiplicand —— —— ——	421
Multiplicator —— —— ——	23
Particular Product of 421×3 ——	1263
Particular Product of 421×20 ——	842
The Total Product —— ——	9683

This Diſpoſition of the right-hand Figure of each Product, follows from the firſt general Rule; the right-hand Figure of each Product being always of the ſame Denomination with that Figure of the Multiplicator from which it ariſes.

Thus in the Example, the Figure 2 in the Product 842, is of the Denomination of tens, as well as the Figure 2 in the Multiplicator. For 1×20 (that is the 2 of 23) $= 20$, or 2 put in the Place of tens, or ſecond Place. Hence, if either of the Factors have one or more Cyphers on the right-hand, the *Multiplication* may be performed without regarding the Cyphers, till the Product of the other Figures be found: To which they are to be then affix'd on the right. And if the Multiplicator have Cyphers intermixed, they need not to be regarded at all. Inſtances of each follow.

12 | 10	358 | 6000	100 | 100	2400 | 30	8013 / 5006
120	2148000	100	72000	48078 / 40065
				40113078

Thus much for an Idea of *Multiplication*, where the Multiplicator conſiſts wholly of Integers; in the Praxis whereof 'tis ſuppoſed the Learner is apprized of the Product of any of the nine Digits multiplied by one another, eaſily learnt from the common Table, (ſee TABLE) or otherwiſe.

Note, This *Multiplication* is render'd ſtill eaſier, and more expeditious by the uſe of certain Rods, whereon are mark'd the ſeveral Progreſſions of Digits in the Table, and which give the ſeveral Multiples of any Sum by inſpection, call'd *Nepair's Bones*; *the Deſcription and Uſe whereof ſee under the head* NEPAIR'S *Bones.*

Where the Multiplicator is not compoſed wholly of Integers; as it frequently happens in Buſineſs, where Pounds are accompanied with Shillings and Pence; Yards with Feet and Inches; the Methods of Proceedure are as follow:

Firſt Method, Suppoſe I have bought 37 Ells of Cloth at 13 *l.* 16 *s.* 6 *d. per* Ell, and would know the Amount of the whole, —— I firſt multiply 37 Ells by 13 *l.* in the common Method of *Multiplication* by Integers, leaving the two Products without adding 'em up; then multiply the ſame 37 Ells by 16 *s.* leaving, in like manner, the two Products without adding 'em. Laſtly, I multiply the ſame 37 by the 6 *d.* the Product whereof is 222 *d.* which divided by 12, (ſee DIVISION) gives 16 *s.* 6 *d.* and this added to the Products of the 16 *s.* the Sum will be 610 *s.* 6 *d.* the Amount of 37 Ells at 16 *s.* 6 *d.* the Ell. Laſtly, the 610 *s.* 6 *d.* are reduced into Pounds by dividing 'em by 20: (ſee REDUCTION) upon adding the whole, the Amount of 37 Ells at 13 *l.* 16 *s.* 6 *d.* will be found as in the following

Operation.

37 Ells At 13 Pounds.	37 Ells At 16 Shillings.	37 Ells At 6 Pence.
111	222	222
37	37	
50 10 6	18 6	
Product 511 10 6	610 6	

Second Method. Suppoſe the ſame Queſtion; reduce the 13 *l.* 16 *s.* into Shillings, the Amount will be 276 *s.* reduce 276 *s.* into Pence, adding 6, the Amount will be 3318 *d.* Multiply the 37 Ells by 3318, the Amount will be 122766 *d.* which divided by 12; and the Quotient 10230 *s.* 6 *d.* reduced into Pounds by cutting off the laſt Figure on the right, and taking half of thoſe on the left, yields 511 *l.* 10 *s.* 6 *d.* the Price of the 37 Ells, as before.

Tho by theſe two Methods any *Multiplications* of this kind may be effected, yet the Operations being long, we ſhall add a third much ſhorter, by *Aliquot* and *Aliquant* Parts: Obſerving by the way, that Aliquot Parts of any thing are thoſe contained ſeveral times therein, and which divide 'em without any remainder; and that Aliquant Parts are other Parts of the ſame thing compoſed of ſeveral Aliquot Parts: Both as in the following Table.

Aliquot Parts of a Pound of 20 *s.*	*Aliquant Parts of a Pound of* 20 *s.*
10 *s. make* half *of* 20 *s.*	3 *s.* an Aliquant Part compos'd of a 10th and a 20th.
5 *s.* a fourth.	6 *s.* of a 5th and a 10th.
4 *s.* a fifth.	7 *s.* of a 4th and a 10th.
2 *s.* a tenth.	8 *s.* of two 5ths.
1 *s.* a twentieth.	9 *s.* of a 4th and a 5th.
6 *s.* 8 *d.* a third.	11 *s.* of a half and a 20th.
3 *s.* 4 *d.* a ſixth.	12 *s.* of a half and a 10th.
2 *s.* 6 *d.* an Eighth.	13 *s.* of a half, a 10th and 20th.
1 *s.* 8 *d.* a twelfth.	14 *s.* of a half and a 5th.
1 *s.* 4 *d.* a fifteenth.	15 *s.* of a half and a 4th.
1 *s.* 3 *d.* a ſixteenth.	16 *s.* of a half, a 5th, and 10th.
10 *d.* a twenty-fourth.	17 *s.* of a half, a 4th, and 10th.
5 *d.* a forty-eighth.	18 *s.* of a half and two 5ths.
	19 *s.* of a half, a 4th, and 5th.

To Multiply by Aliquot Parts is nothing elſe in effect but to divide a Number by 3, 4, 5, *&c.* which is effected by taking a 3d, 4th, or 5th, *&c.* from the Number to be multiplied. *Example.*

To Multiply, v. g. by 6 *s.* 8 *d.* Suppoſe I have 347 Ells of Ribbon at 6 *s.* 8 *d. per* Ell.

Operation.

Multiplicand —— ——	347 Ells.
Multiplicator —— ——	6 *s.* 8 *d.*
Product	115 *l.* 13 *s.* 4 *d.*

The Queſtion being Stated; take the Multiplicator, which according to the Table of Aliquot Parts is the third; and ſay, the third of 3 is 1, ſet down 1; the third of 4 is 1, ſet down 1, remains 1, that is, one ten, which added to 7, makes 17; then the third of 17 is 5; remains 2 Units, *i. e.* two thirds, or 13 *s.* 4 *d.* which place after the Pounds. Upon numbering the Figures 1, 1, and 5, Integers, and 13 *s.* 4 *d.* the Aliquot Part remaining, I find the Sum 115 *l.* 13 *s.* 4 *d.*

For Multiplication by Aliquant Parts: Suppoſe I would multiply by the Aliquant Part 19 *s.* I firſt take for 10 *s.* half the Multiplicand; then for 5, which is the 4th; and,

laſtly, for 4, which is the 5th. The Products of the three Aliquot Parts that compoſe the Aliquant Part, being added together, the Sum will be the total Product of the *Multiplication*, as in the following Example; which may ſerve as a Model for *Multiplication* by any Aliquant Part that may occur.

Operation.

Multiplicand	——	356 Ells.
Multiplier	——	19 *s.*
		178 *l.* for ten Shillings.
		89 *l.* for five Shillings.
		71 *l.* for four Shillings.
Product	— —	338 *l.* 4 *s.*

The Proof of Multiplication, is, by dividing the Product, or Factum, by the firſt Factor, or Multiplicand; if the Quotient be equal to the ſecond Factor, or Multiplicator, the Operation is juſt.

Croſs MULTIPLICATION, otherwiſe call'd Duodecimal Arithmetic, is a very expeditious Method of Multiplying things of ſeveral Species, or Denominations, by others likewiſe of different Species, &c. *E. gr.* Shillings and Pence by Shillings and Pence; Feet and Inches by Feet and Inches, much uſed in Meaſuring, &c. The Method is thus.

Suppoſe 5 Feet 3 Inches to be multiplied by 2 Feet 4 Inches; ſay, 2 times 5 Feet is 10 Feet, and 2 times 3 is 6 Inches: Again, 4 times 5 is 20 Inches, or 1 Foot 8 Inches, and 4 times 3 is 12 Parts, or one Inch; the whole Sum makes 12 Feet 3 Inches.

In the ſame manner may you manage Shillings and Pence, &c.

F.	I.
5	3
2	4
10	6
1	8
	1
12	3

MULTIPLICATION, in Geometry, or *in Lines*, is effected by ſuppoſing a Line *a b* (Tab. GEOMET. *Fig.* 9.) called the *Deſcribent*, moving perpendicularly along another *b c*.

For by this means the Deſcribent forms the Rectangle *a d c b*; and if it be divided together with the *Dirigent* into any Number of equal Parts, will by its Motion deſcribe as many little Rectangles as the Units in the Deſcribent and Dirigent will produce when multiply'd into one another; *viz.* 21. See DESCRIBENT, &c.

For when the Line *a b* hath moved over one part of *a d*, it will by its three parts have deſcribed the three little Rectangles in the firſt Column; when it comes to 2, it will have deſcribed three more. And this is the Reaſon why *Multiplication* in the *Latin* Tongue is uſually expreſſed by the Word *ducta*, drawn: (and from hence alſo comes *Product*) as if *a b* were multiply'd by *b c*, they ſay *a b ducta in b c*, becauſe the Deſcribent is led, as it were, or carried along in an erect Poſture upon the Dirigent, and by that means deſcribes the Rectangle; ſo that the *Rectangle* and *Product* are all one in Geometry.

Now as in all *Multiplication* Unity is to one Factor as the other is to the Product, *Multiplication* in Lines may be performed thus:

Let *a b* (*Fig.* 10.) be to be multiply'd by *a d*: make any Angle at pleaſure; on one of the Legs ſet off *a u* = to Unity; and on the ſame Leg ſet off *u d*, the Multiplicator (3); then ſet the Multiplicand *a b* (2) from *a* on the other Leg of the Angle; draw *u b*, and parallel to it through *d*, draw *d c*, (6). I ſay, *d c* or 6, is the Product: for *a u* : *a d* : : *a b* : *b c*.

MULTIPLICATION *of Plants*, ſee FOECUNDITY *of Plants*.

MULTIPLYING, the producing of one's like. See PRODUCTION.

Mankind *multiply'd* at a prodigious Rate before the Flood, (ſee PEOPLING.) Rabbits, Fiſh, and moſt Inſects multiply incredibly. The ſingle Milt of a Cod, examin'd with M. *Leewenhoeck*'s Microſcope, was found to contain more Ova than there are Animals on the Face of the Earth. See INSECT, &c.

M. *Dodart* has ſeveral Diſcourſes on the Multiplication of Plants in the *Memoirs of the Royal Academy of Sciences*. He has examin'd the Beech-Tree particularly with this view, and found it to ſurpaſs all Imagination. See FOECUNDITY.

MULTIPLYING, in Arithmetic, is the finding a Number which contains the *Multiplicand* as often as there are Units in the *Multiplier*. See MULTIPLICAND, &c.

The Rule of Three conſiſts in *Multiplying* the third Term by the ſecond, and dividing the Product by the firſt. See RULE *of Three*.

MULTIPLYING *Glaſs*, a Lens, or Glaſs in which Objects appear increaſed in Number. See LENS.

A *Multiplying-Glaſs*, call'd alſo *Polyhedron*, is a Glaſs form'd or ground into ſeveral Planes, or Faces, making Angles with one another; through which the Rays of Light iſſuing from the ſame Point undergo different Refractions, ſo as to enter the Eye from every Surface in a different Direction; as if they came from ſeveral Points.

And thus the ſame Point is ſeen in ſeveral imaginary Foci; and therefore appears *Multiply'd*. See REFRACTION.

For the Phænomena and Laws of MULTIPLYING-*Glaſſes*, ſee POLYHEDRON.

MULTISILIQUOUS *Plants*, are the ſame with *Corniculate Plants*, *viz.* thoſe which, after each Flower, have divers diſtinct, ſlender, and frequently crooked *Siliquæ*, or Pods, wherein their Seed is contain'd; and which when they ripen, open of themſelves, and let the Seeds drop. See CORNICULATE and SEMINATION.

To this Claſs belong the Bears-Foot, Columbines, Houſe-Leek, Marigolds, &c.

MULTITUDE, MULTITUDO, an Aſſemblage, or Collection of a great Number of Things, or Perſons; or, more ſtrictly, *Multitude* is the Abſtract whereby things are ſaid to be *many*.

In which Senſe *Multitude* may be conſider'd as *Number*. See NUMBER.

Multitude is oppoſed to Unity. See UNITY.

In Law, ſome will have *Multitude* to imply at leaſt ten Perſons; but Sir *Edw. Coke* ſays, he could never find it reſtrain'd by the common Law to any certain Number, but always left to the Diſcretion of the Judges.

A MULTO *Fortiori*, or *à minore ad majus*, is an Argument often uſed by *Littleton*. The force of it is thus: If it be ſo in a Feoffment paſſing a new Right; much more is it for the Reſtitution of an antient Right. *Coke* on *Littleton*, fol. 253.

MULTUM, in Arithmetic, If A be one, B one, C one, D one, &c. And B, C, and D be not the ſame with A; A, B, C, and D are *Multa*, or *Plura*, many. *Wolfius*.

MUM, a very wholeſome Drink, the Receipt of which, as recorded in the Town-Houſe of *Brunſwick*, the Place of moſt Note for this Liquor, is as follows:

Take 63 Gallons of Water that has been boiled to the Conſumption of a third part; brew it with ſeven Buſhels of Wheaten-Malt, one Buſhel of Oat-Malt, and one Buſhel of ground Beans; when it is tunn'd, let not the Hogſhead be too full at firſt, and as ſoon as it begins to work, put into it of the inner Rind of Firr 3 Pounds, Tops of Firr and Birch 1 Pound, Carduus Benedictus 3 Handfuls, Flower of Roſa Solis, one Handful or two, Burnet, Betony, Marjoram, Avens, Penny-Royal, wild Thyme, of each a Handful and a half; of Elder-Flowers, two Handfuls or more; Seeds of Cardamum bruiſed 30 Ounces, Barberries bruiſed one Ounce; put the Herbs and Seeds into the Veſſel when the Liquor has wrought a while, and after they are added, let the Liquor work over the Veſſels as little as may be, then fill it up: at laſt, when it is ſtopt, put into the Hogſhead ten new-laid Eggs unbroken or crack'd, ſtop it up cloſe, and drink it at two Years end.

Our *Engliſh* Brewers uſe Cardamum, Ginger, and Saſſafras inſtead of the inner Rind of Firr; and add Walnut-Rinds, Madder, Red Sanders, and Alecampane.

MUMMY, MUMIA, a Carcaſs, or Body embalmed or dried in the manner of the antient *Egyptians*. See EMBALMING.

The Preparation of *Mummy* is of ſo old a ſtanding, that it was in uſe in *Egypt* before the time of *Moſes*. The Coffin in which the *Mummy* is contain'd is of Sycamore-Wood, which is found to keep ſound for the Space of 3000 Years; but it is very different from our Sycamore.

Mummy is ſaid to have been firſt brought into uſe in Medicine by the Malice of a *Jewiſh* Phyſician, who wrote that Fleſh thus Embalmed was good for the Cure of divers Diſeaſes, and particularly Bruiſes, to prevent the Blood's gathering and coagulating. The *Turks* prevent the Export of *Mummy* into *Europe* as much as poſſible.

Properly ſpeaking, *Mummy* is not the Fleſh of the Deceaſed, but the Compoſition wherewith it is embalmed; but in common uſe *Mummy* is alſo uſed for the Body.

There are two kinds of Bodies call'd by the Term *Mummy*.

The firſt are only Carcaſſes, dried by the Heat of the Sun, and by that means kept from Putrefaction; frequently found in the dry Sands of *Lybia*. Some ſay, they are the Bodies of deceaſed People buried there on purpoſe to keep 'em entire without Embalming; others that they are the Carcaſſes of Travellers, &c. over-whelm'd with Clouds of Sand rais'd by the Hurricanes frequent in thoſe Deſarts. Be that as it will, theſe *Mummies* are of no uſe in Medicine, and are only preſerv'd as Curioſities.

The ſecond kind of *Mummies* are Bodies taken out of the Pits, or Catacombs near *Cairo*, wherein the *Egyptians* depoſited their Dead after Embalming.

'Tis this makes the *Mummy* ſo much valued, and to which ſuch extraordinary Virtues are aſcribed.

'Tis

'Tis ſaid, that all the *Mummy* ſold in the Shops, whether brought from *Venice* or *Lyons*, or even directly from the *Levant* by *Alexandria*, is factitious, and the Work of certain *Jews*, who knowing the Value the *Europeans* ſet on the *Egyptian Mummy*, counterfeit it by drying Carcaſſes in Ovens, after having prepared 'em with Duſt of Myrrh, Caballin Aloes, *Jewiſh* Pitch, black Pitch, and other coarſe or unwholeſome Drugs.

The *French Charletans*, it ſeems, have likewiſe got the Art of preparing *Mummies*. Their Method is ſimple enough: Out of the Carcaſs of a Perſon hang'd, they take the Brain and Entrails, dry the reſt in an Oven, ſteeping it in Pitch, and other Drugs. And this they ſell for right *Egyptian Mummy*.

Paræus has a very curious Treatiſe of *Mummies*, wherein he ſhews the Abuſes therof; and makes it appear that they can never be of any real medicinal uſe.

Matthiolus is of the ſame Opinion, after *Serapion*. Both theſe Authors take even the *Egyptian Mummies* to be no more than Bodies embalmed with Piſſaſphaltum.

MUMMY, *Mumia*, is particularly uſed for the Liquor, or Juice oozing from human Bodies Aromatized and Embalmed; gather'd in the Sepulchres. This is the *Mummy* chiefly ſpoke of among the antient Writers.

MUMMY is alſo a Medicinal Drug, or a viſcous Compoſition partaking of Bitumen and Pitch found in the Mountains and Foreſts of *Arabia*, and other hot Countreys of the *Eaſt*.

Dioſcorides ſpeaks of a *Mummy* found on the Sea-Coaſts near *Epidaurus*, brought thither by the Torrents from the *Ceraunian* Mountains, and there dried by the Sun into huge heaps.

It ſmells like Bitumen mixt with Pitch. The People thereabouts call it *mineral Wax*. In *Latin*, or rather *Greek*, it is call'd *Piſſaſphaltus*. See PISSASPHALTUS.

Menage, after *Bochart*, derives the Word *Mummy* from the *Arabic Mumia*; of *Mum*, Wax. *Salmaſius* from *Amomo*, a kind of Perfume. See AMOMUM.

Tho others hold, that in the *Arabic* Tongue, the Word *Mumia* ſignifies a Body Embalmed, or Aromatized.

MUMMY is alſo uſed by ſome Phyſicians for I know not what implanted Spirit, found chiefly in Carcaſſes, when the infuſed Spirit is fled.

The infuſed Spirit is ſometimes alſo call'd *Mummy* in living Subjects; and both the one and the other are ſuppoſed to ſerve in Tranſplantation.

A Plant, for inſtance, bringing this *Mumia* from one Subject to another, the Mumia joins and unites itſelf immediately, and cloſes with the Mumia or Spirit of the new Subject; and from this Union ariſes a natural and common Inclination between the two Subjects.

And on this Principle they account for Sympathetic or Magnetic Cures. See SYMPATHETIC, MAGNETIC, &c.

MUMMY is alſo uſed among Gardeners for a ſort of *Wax* uſed in the Planting and Graffing of Trees. See GRAFFING *Wax*.

Agricola directs the Preparation thereof as follows: Take one Pound of common black Pitch, and a quarter of a Pound of common Turpentine; put 'em together in an Earthen-Pot, and ſet 'em on the fire in the open Air, having ſomething in your Hand to cover and quench it in time; the Matter to be thus alternately lighted and quench'd till all the nitrous and volatile Parts be evaporated. To this a little common Wax to be added; and the Compoſition to be ſet by for uſe.

To apply it in the dreſſing of the Roots of Trees, melt it, and dip in the two ends of the Pieces of Root one after another; then put 'em in Water, and plant 'em in the Earth, the ſmall end downward, ſo that the larger may appear a little way out of the Earth, and ſo have the benefit of the Air; then preſs the Earth hard down upon 'em that they may not receive too much wet. See PLANTING.

MUNDICK, a Marchaſite, or Mineral Glebe, found in the Tin Mines, ſometimes white, ſometimes yellow, and at other times green. See MARCHASITE.

It is frequently call'd *Maxy*; and appears to be nothing elſe but a kind of Sulphur; Fire alone being found to ſeparate it from the Tin, in which caſe it evaporates into Smoke. See TIN.

The *Mundick* Ore is eaſily diſtinguiſh'd by its brown, ſad-colour'd Glittering, and by its diſcolouring the Fingers. Some ſay it feeds the Tin, and yet allow that where there is much *Mundick*, there is little or no Tin.

MUNDIFICATIVES, in Medicine, *Cleanſers*; Medicines, or Unguents, that deterge, and dry, and thus cleanſe Ulcers of two kinds of Matter, *viz. Pus* and *Sanies*. See ULCER.

The chief Ingredients in theſe Unguents, are Gentian, Ariſtolochia, Enula Campana, and Vulnerary Herbs. See DETERGENT.

MUNDUS, *World*. See WORLD.

MUNICIPAL, a Term in the *Roman* Law, ſignifying the having the Rights and Privileges of *Roman* Citizens.

This Title the *Romans* frequently beſtow'd on foreign Cities and People; and in effect, it was little more than a Title.

MUNICIPAL *Cities*, MUNICIPIA, according to *Mariana*, came ſomewhat ſhort of the Privileges of the Colonies. See COLONIES.

They had no Suffrages or Votes at *Rome*. They were left to be govern'd by their own Laws and Magiſtrates.

'Tis true, ſome few *Municipal* Cities, by particular Merit, &c. obtain'd the Liberty of Votes; which occaſion'd that receiv'd Diſtinction of *Municipium ſine Suffragio*, & *Municipium cum Suffragio*.

They were ſo call'd, becauſe *Muneris hujus honorarii participes*; but by *Munus honorarium*, was meant no more than the bare Appellation of a *Roman*, whereby they were privileged to fight in a Legion, as Denizens; and not in auxiliary Bands, as Aſſociates. See CITIZEN.

The firſt who had the Honour, were the *Cerites*.

MUNICIPAL, among us, is now underſtood of the Cuſtomary Laws that obtain in any particular City, or Province; and which have no Authority in the neighbouring Places. See CUSTOM.

MUNICIPAL *Officers*, are thoſe elected to defend the Intereſts of Cities, their Rights and Privileges, and to maintain Order and Policy; as Mayors, Sheriffs, Conſuls, Bailiffs, &c. See OFFICE.

In *Spain*, the *Municipal* Offices are bought. In *England*, they come by Election.

MUNIMENTS, or MINIMENTS, the Evidences or Writings, whereby a Man is enabled to defend the Title of his Eſtate. See MUNIMENT-*Houſe*.

Wangford ſays, the word *Muniment* includes all manner of Evidence.

MUNIMENT-*Houſe*, a little, ſtrong Apartment in Cathedral and Collegiate Churches, Caſtles, Colleges, or the like, deſtined for keeping the Seal, Evidences, Charters, &c. of ſuch Church, College, &c. call'd *Muniments*, or *Miniments*.

The Word is form'd of the *Latin Munio*, I defend.

MUNIMINA, the Grants, or Charters of Kings and Princes to Churches; ſo call'd, becauſe *cum eis muniantur* againſt all thoſe who would deprive them of thoſe Privileges.

MUNIONS, in Architecture, are the ſhort upright Poſts or Bars that divide the ſeveral Lights in a Window-Frame. See WINDOW.

MUNITION, or AMMUNITION, the Proviſions wherewith any Place is furniſhed in order for defence; or wherewith a Veſſel is ſtock'd for a Voyage; or that follow a Camp for its Subſiſtence. See AMMUNITION.

MUNITION-*Bread* is the proportion of Bread diſtributed every day to the Soldiers of a Garriſon or Army. Each Officer is allow'd ſo many Rations of *Munition-Bread*. See RATION.

MUPHTI, or MUFTI, the Chief, or Patriarch of the *Mahometan* Religion, reſiding at *Conſtantinople*. See MAHOMETANS.

The *Muphti* is the ſovereign Interpreter of the Alcoran, and decides all Queſtions of the Law. See ALCORAN, &c.

He takes place of the Baſhaws; and his Authority is often terrible to the Grand Signior himſelf. 'Tis he girds on the Sword to the Grand Signior's ſide; which Ceremony anſwers to the Coronation of our Kings.

MURAGE, MURAGIUM, in our Cuſtoms, a reaſonable Toll to be taken of every Cart or Horſe coming laden into a City or Town for the Building or Repairing the Walls thereof.

MURAL, ſomething belonging to a *Wall*; which the *Latins* call *Murus*. See WALL.

MURAL *Crown*, among the antient *Romans*, was a kind of Crown indented a-top, like the Battlements of a Wall. See CROWN.

The *Mural-Crown* was the Reward of thoſe who firſt mounted the Walls of the Enemy; whence it was alſo call'd *Corona obſidionalis*.

MURAL *Arch* is a Wall, or walled Arch placed exactly in the Plane of the Meridian, *i. e.* upon the Meridian-Line; for the fixing of a large Quadrant, Sextant, or other Inſtrument, to obſerve the Meridian Altitudes, &c. of the heavenly Bodies. See MERIDIAN-*Line* and MERIDIAN-*Altitude*.

Tycho de Brahe was the firſt who uſed a *Mural-Arch* in his Obſervations; after him Mr. *Flamſtead*, *de la Hire*, &c. uſed the ſame means. See OBSERVATIONS.

MURENGERS, two Officers of great Antiquity in the City of *Cheſter*, being two of the Principal Aldermen choſe yearly to ſee the Walls kept in good Repair, and to receive certain Toll and Cuſtom for the Maintenance thereof.

MURING, the Walling, or raiſing the Walls of a Building. See WALL and WALLING.

MURRAIN, *Gargle*, a Mortality, or contagious Diſeaſe among Beaſts. See MORTALITY.

Murrains are occaſion'd various ways, but principally by a hot, dry Seaſon; or rather by a general Putrefaction of

the Air, which begets an Inflammation in the Blood, and a Swelling in the Throat, which ſoon proves Mortal, and is communicated from one to another.

The Symptoms are generally a hanging down and ſwelling of the Head, rattling in the Throat, ſhort Breath, Palpitation of the Heart, Staggering, abundance of Gum in the Eyes, &c. Breath hot, and Tongue ſhining.

The moſt remarkable *Murrain* we hear of, is that mentioned in the *Philoſ. Tranſ.* which ſpread itſelf through *Switzerland*, *Germany*, into *Poland*, &c.

The Contagion ſeem'd to propagate itſelf in form of a blue Miſt, which fell on the Graſs where the Cattel grazed, inſomuch that whole Herds return'd home ſick, and being very dull, and forbearing their Food, moſt of 'em died away in twenty four Hours time. On diſſection were found large corrupted Spleens, ſphacelous and corroded Tongues, &c. Thoſe People who manag'd them without a due regard to their own Health, were infected by 'em, and died like the Beaſts.

Some imagine it had its Riſe from noxious Vapours thrown out of the Earth in three diſtinct Earthquakes perceiv'd in the Neighbourhood of the Place where it began: Tho Dr. *Slare* rather thinks it owing to Swarms of volatile Inſects. The Antidote for the Sound, and the Medicine for the Sick were the ſame, *viz.* Equal Parts of Soot, Gun-Powder, Brimſtone, and Salt, with as much Water as would waſh it down, a Spoonful in a Doſe.

MURREY, in Heraldry, a purple Colour, call'd alſo *Sanguin*. See SANGUIN.

MURTHER, *Homicide*, the Act of killing another with Violence, Injuſtice, and Effuſion of Blood. See HOMICIDE.

Among the number of popular Errors, is the Notion which has obtain'd, that the dead Body would bleed in the Preſence, or upon the Touch of the Murtherer.

The Crime of *Murther* is puniſh'd with Death in almoſt all Nations. See PUNISHMENT.

In our Law, *Murther* has a peculiar import, ſo as to denote a wilful and felonious killing another upon prepenſed Malice, whether ſecretly or openly; and whether *Engliſh* Man or Foreigner, living under the King's Protection.

This prepenſed Malice, which makes the Eſſence of *Murther*, is twofold; 1. *Expreſs*, where it may be evidently proved that there was ill-will. 2. When one killeth another ſuddenly, he having nothing to defend himſelf, as going over a Stile, or the like. For in ſuch a Caſe, or when a Man killeth a mere Stranger, the Law preſumeth he had Malice againſt him, or elſe that he would not do it without any manner of Provocation.

The Word is form'd from the *Saxon Morth*, which ſome will have to ſignify a violent Death; whence the barbarous *Latin Murdrum* and *Mordrum*. Sometimes the *Saxons* expreſs'd it by a Word which imply'd a deadly Work. In the *French* 'tis call'd *Meurtre*, in *Spaniſh Meuretre*, and in *Engliſh Murder*.

The Word was uſed long before the Reign of K. *Canutus*; tho it does not appear that the *Saxon Morth* ſignifies a violent Death, but Death in general.

Formerly, indeed, *Murther* was reſtrained to a clandeſtine killing. Thus, *Murdritus homo antiquitus dicebatur, cujus Interfector neſciebatur ubicumque vel quomodocumque eſſet Inventus. Nunc adjunctum eſt, licet ſciatur quis* Murdrum *fecerit, homicidium per proditionem.* Leges Hen. I.

Arthurum Nepotem propriis manibus per proditionem Interfecit, peſſimo Mortis genere quod Angli Murdrum *appellant.* Matth. Paris, An. 1216.

Self-MURTHER, is otherwiſe call'd *Suicide*. See SUICIDE.

MURTHERERS, or MURTHERING-*Pieces*, are ſmall Pieces of Ordnance, either of Braſs or Iron, having Chambers, (that is, *Charges* made of Braſs or Iron) put in at their Breeches. See ORDNANCE.

They are moſtly uſed at Sea at the Bulk-Heads of the Fore-Caſtle, Half-Deck, &c. in order to clear the Decks when an Enemy boards the Ship.

MUSCADINE, a rich white Wine, of the Growth of *Provence*, *Languedoc*, *Cividad*, &c. See WINE.

The way of making *Muſcadine* at *Frontignac* is as follows: They let the *Muſcadine* Grapes grow half dry on the Vine; as ſoon as they are gathered, they tread and preſs them immediately, and tunn up the Liquor, without letting it ſtand, and work in the Fat; the Lee occaſioning its goodneſs.

The Word, as well as the Liquor, is *French*. Some fetch its Original from *Muſk*, the Wine being ſuppoſed to have a little of the ſmell of that Perfume; others from *Muſcus*, a Fly, becauſe the Flies are extremely fond of its Grapes; as the *Latins* had their *Vinum Apianum*, ſo call'd *ab Apibus*, from the Bees which fed on it.

MUSCLE, MUSCULUS, in Anatomy, a fleſhy, fibrous Part of the Body of an Animal, deſtined to be the Organ of Motion. See MOTION.

The *Muſcle* is a bundle of thin, parallel Plates; and is divided into a great number of Faſciculi, or little *Muſcles*, each incloſed in its proper Membrane, from the internal Surface whereof, paſs an infinite number of tranſverſe Filaments, which interſect the *Muſcle* into ſeveral diſtinct Areas, fill'd with their reſpective Faſciculi of Fibres. See FIBRE.

A *Muſcle* is uſually divided into three Parts, the *Head*, the *Tail*, and the *Belly*.

The *Head* and *Tail*, which are alſo call'd *Tendons*, are the two extremes of the *Muſcle*; whereof the firſt is fix'd to the ſtable part, and the latter to the part intended to be moved. See TENDON.

The *Venter* or *Belly* is the body of the *Muſcle*, being a thick, fleſhy part, into which are inſerted Arteries and Nerves, and out of which iſſue Veins and Lymphaducts.

All theſe parts of a *Muſcle*, the Belly and the Tendons, are compoſed of the ſame Fibres: Their only difference conſiſts in this, that the Fibres of the Tendons are more cloſely and firmly bound together than thoſe of the Belly, which are more looſe. Hence in the Belly there is room for a ſufficient Quantity of Blood to give 'em an Appearance of Redneſs; and the Whiteneſs of the Tendons only proceeds from the Blood's being in ſome meaſure excluded by the tightneſs of their Contexture. The difference then between the Belly and the Tendons ſeems to be the ſame that is between a Skein of Thread, and a Cord made of the ſame Thread.

All the *Muſcles* act by having their Bellies inflated or ſwell'd; for by that means they are ſhorten'd, ſo as to draw, or preſs the ſolid Bodies to which they are faſten'd, according to the direction of their Fibres. All the difficulty then in *Muſcular* Motion, is, to aſſign their Fabric, and the Cauſe of their ſwelling.

Every ſimple *Muſcle*, then, conſiſts of one fleſhy Belly, and two Tendons; but may be again divided into others Similar, tho leſs; and thoſe again into others ſtill leſs, yet ſtill Similar to the great one: Which diviſion may be carried on to a degree of Subtility that exceeds all Imagination; tho 'tis reaſonable to think it muſt have an end. That laſt, therefore, being Similar to the firſt, muſt, in like manner, have its *Belly* and *Tendons*; and this is what we ordinarily call a *Muſcular Fibre*, in an Aſſemblage or Union of ſeveral whereof, a *Muſcle*, properly ſo call'd, conſiſts.

Some take the *Muſcular Fibres* to be Productions of the Arteries and Veins, or the Capillaries of thoſe Veſſels inoſculated with, and continued to each other; by the intumeſcence of whoſe Contents, the Extremities are drawn nearer each other, and by conſequence, the Bone to which the moveable part is fixed, approximated to the other. But that they are, in truth, neither Venous, nor Arterious, nor Lymphatic Veſſels, is evident from the laſt Obſervation. Whether they are Veſicular; or whether they only conſiſt of ſingle Threads, may be ſtill a Queſtion.

Dr. *Boerhave*, from a conſideration that the Nerves enter every *Muſcle* along with its Veins and Arteries, and that there laying aſide their outer Integument, they are ſo diſtributed thro the whole Body of the *Muſcle*, as that no one Point can be aſſigned wherein a part of 'em is not found; that thoſe Nerves terminate here; and that in other parts of the Body the Extremities of the Nerves are expanded, as it were, into Membranes; concludes, that the *Muſcular Fibres* are nothing elſe but extremely ſlender Expanſions of the Nerves ſtript of their Integument, hollow within, and of the Figure of a *Muſcle*, and full of a Spirit communicated by the Nerve from its Origin in the Brain or *Cerebellum*, by the continual Action of the Heart. See NERVE.

Of theſe Fibres united, are form'd Faſciculi or Bundles; which, again, have each their ſeveral Membrane, wherein they are involved, and kept diſtinct from others. This Membrane is extremely ſlender and porous within, full of Oil, which is accumulated in time of Reſt and ſpent in Motion, furniſhed by the Arteries; and this Oil, in conjunction with a ſmooth mucous Juice ſecreted by ſmall mucilaginous Glands, interſperſed among theſe Faſciculi, ſerves to lubricate the parts, and preſerve the Faſciculi from fretting on each other.

Now, beſides the Nerves, there are Arteries alſo carried into the *Muſcles*, and thoſe in ſuch abundance, and of ſuch contexture, that a Man might be inclined to think the whole Body of the *Muſcle* compoſed of 'em. Theſe are principally diſtributed among the Faſciculi, and the Membranes that ſeparate 'em, and perhaps alſo in the external Surface of each *Fibrilla*, where they terminate in reticular Plexus's, or Folds, in little oily Secretories, ſmall Lymphatics, and perhaps in hollow *Fibrillæ* like Nerves; which *Fibrillæ* may again either terminate in the Cavity of the Nervous Muſcular Fibres, or make others like 'em. This, at leaſt, is clear, that every Branch of an Artery in the *Muſcles* has its correſponding little Vein, which united to the other, increaſes its Bulk; whence the Blood-Veſſels of the *Muſcles* are alſo Lymphatics.

Of two ſuch *Muſcles* as have been deſcribed, faſten'd in oppoſite Situations to each other, moſt of the *Muſcles*, we know of, conſiſt.

It has been already obſerved, that the Tendon of a *Muſcle* conſiſts of the ſame Number of Fibres with the *Muſcle* itſelf; with this difference, that the Cavity of the muſcular Fibres diminiſhing, and loſing of their former Diameter, form one compact, hard, tough, dry, narrow Body, which is but little Vaſcular: From what has been ſaid then, it appears, that the Redneſs of a *Muſcle* is owing to the Blood; and its Bulk to the Fulneſs of the Arteries, Veins, oily Cells, and Lymphatics. Hence we ſee, why in old Age, Leanneſs, Conſumptions, Atrophies, conſtant Heat, and hard Labour, their Redneſs as well as Bulk are ſo diminiſhed; and yet in old Age, Leanneſs, *&c.* the Motion remains. This may be effected, when the *Muſcles* have no Redneſs left; as appears in Inſects, whoſe Fleſh is not perceivable.

The Fibres, Faſciculi, Arteries, and Nerves may be ſeparated from each other in a live or a dead Body, without breaking. They are always in a degree of Tenſion, and endued with a contractive Force; ſo that when cut aſunder, the Ends fly back from each other; and then they become ſhorter, their Bulk is leſſen'd, and they contract themſelves into a wavy undulating kind of Surface, and throw off their proper Juices. Hence it appears they are always in a ſtate of Violence, are ever oppoſing their Elongation, ever endeavouring to ſhorten themſelves, but more in a live Body than a dead one; and therefore require Antagoniſts. 2. If the Cerebrum be ſtrongly compreſs'd, or have any violent Contuſion; if it be ſuppurated, obſtructed, or torn, the voluntary Action of all the *Muſcles* immediately ceaſes, as well as all Senſe and Memory; however the ſpontaneous Action of the *Muſcles* in the Heart, Lungs, the *Viſcera*, and Vital Parts, remains. 3. Theſe ſame Alterations being made in the Cerebellum, the Action of the Heart, Lungs, and Life itſelf, ceaſes; when yet the Vermicular Motion continues a long time after in the Ventricle and Inteſtines. 4. The Nerve of any *Muſcle* being compreſs'd, tied up, corrupted, or cut, all the Motion of that *Muſcle*, both Vital and Voluntary, immediately ceaſes; and if a nervous Trunk ſending Branches to ſeveral *Muſcles*, be thus bound up, cut, *&c.* they are all affected in the ſame manner. 5. The ſame things being done in any part of the ſpinal Marrow, the Action of all the *Muſcles* whoſe Nerves ariſe from the part affected, is deſtroy'd: And, 6. The ſame things being done to the Artery which carries Blood to one or more *Muſcles*, the Effect is the ſame. 7. The Tendon of a *Muſcle* in Action does not undergo any ſenſible Alteration, but the Belly ſhortens, becomes hard, pale, ſwoln, protuberant; the Tendons are approached nearer, and the more moveable part faſten'd to the Tendon, is drawn towards the other leſs moveable; which Action of a *Muſcle* is call'd its *Contraction*, which is much greater and ſtronger than that inherent Contraction obſerved under the firſt Phænomenon; and therefore is not natural, but ſuperadded. 8. The Tendon of a *Muſcle* not in Action, is ſtill the ſame; but the Belly ſofter, redder, laxer, longer, and flatter; and this ſtate of a *Muſcle* is call'd its *Reſtitution*, tho it is uſually owing to the contrary Action of its Antagoniſt; for that being fruſtrated, the Contraction of the other continues, as not being balanced by the Action of an Antagoniſt. 9. If one Antagoniſt remain at Reſt while the other is in Action, the Member in that caſe will be bent; if both act at the ſame time, it will be fix'd and immoveable; if neither act, it will be indifferent, and ready to be moved whither the leaſt exceſs ſhall carry it. 10. All theſe Changes mentioned in the 7th, 8th, and 9th Articles, are performed in the ſmalleſt Moment of Time, and in the whole *Muſcle* at once; ſo that they can paſs and repaſs reciprocally without leaving any Trace in the Body behind them. 11. By injecting warm Water into the Artery of a quieſcent *Muſcle*, even that of a dead Carcaſs; its Contraction is reſtored; and that long after Death. 12. The Bulk of a *Muſcle* is increaſed rather than diminiſhed by every Experiment of its Contraction. 13. A Limb being bent, by ſome external force, againſt the Will, the Flexor *Muſcle* of that Member aſſumes a ſtate of Contraction, as if it acted by its proper Motion; tho not altogether ſo ſtrenuouſly. 14. The Will remaining indifferent, all the voluntary *Muſcles*, and all their Veſſels are equally full, and moved by the Blood and Spirits equably convey'd to 'em, and that throughout the whole Body at once.

For the Application of this Structure of the MUSCLES, *in accounting for the great Phænomenon of Muſcular Motion*, ſee MUSCULAR *Motion.*

As the *Muſcular Fibres*, or, which comes to the ſame, the Faſciculi of Muſcular Fibres, have not always the ſame Situation with regard to each other, nor run in the ſame direction, but ſometimes run parallel to themſelves and their Tendons; and are ſometimes diſpoſed obliquely both to their Tendons and to each other: hence there ariſes two different kinds of *Muſcles*.

The one Direct and Parallel, which ſome call *Simple Muſcles.*

The other Inclined, or Oblique; call'd *Compound Muſcles.*

Under the firſt of theſe kinds are included ſeveral other Species; for, firſt, Either the fleſhy Fibres run ſtrait from one Extreme to the other, as in the *Sartorius*, *&c.* or are turn'd into a Circle, as in the *Sphincters* of the Bladder, and Anus; or twiſted into a Spiral, as in the *Oeſophagus*: And hence they come to be call'd *Recti*, *Orbiculares*, and *Spirales*. See RECTI, ORBICULARES, *&c.*

The ſecond kind alſo includes various Species, according to the various Angles which the oblique Fibres make with the Tendons; ſome inclining equally to each Tendon, ſo as to form a Rhombus, or acute angled Parallelogram with 'em, the Muſcles are hence call'd *Rhomboidales*; others riſing from two parallel Tendons, are inſerted obliquely into one common Tendon, as in the *Biceps* of the Hand; others, laſtly, ariſing from the Periphery of the Circle, concur in a Centre, and form *Muſcles* call'd *Radiæos*. See RHOMBOIDES, RADIÆUS, *&c.*

There are divers Species, and Diviſions of *Muſcles*.

Some Authors diſtinguiſh them into *Muſcles of Voluntary*, and of *Involuntary* or *Natural* or *Neceſſary Motion*.

The *Muſcles of Involuntary*, or *Neceſſary Motion*, have their contracting and extending Powers within themſelves, and have no Antagoniſt; ſuch are the *Heart* and *Lungs* ſuppoſed to be. See HEART and LUNGS.

The *Muſcles of Voluntary Motion*, which we more peculiarly denominate *Muſcles*, and which are thoſe we have here chiefly regard to, have each of 'em their Antagoniſt *Muſcles*, which act alternately in a contrary Direction; the one being ſtretched and extended, while the other is contracted at the Motion of the Will. See MOTION.

The *Muſcles* have alſo different Names from their different Actions, Situations, Forms, *&c.* Thoſe which ſerve to move the ſame Members contrary ways, are call'd *Antagoniſts*; and thoſe that concur to the ſame Action, *Fellows*, or *Pairs*. See ANTAGONIST, *&c.*

Digaſtries are thoſe which have two Bellies; *Trigaſtries* thoſe with three. See DIGASTRIC.

Sphincters are thoſe deſtined to ſhut ſeveral Apertures and Paſſages in the Body; as the *Muſcle* at the Neck of the Bladder, and that of the *Anus*, which have the ſame Effect with the String of a Purſe to cloſe thoſe Parts. See SPHINCTER.

Some *Muſcles* have two or three Heads, call'd *Biceps* and *Triceps*. See BICEPS, TRICEPS, *&c.*

We call *Elevators* thoſe which lift up or raiſe the Parts; *Depreſſors* thoſe which move 'em downwards. See ELEVATOR, *&c.*

Flexors thoſe who bend 'em; *Extenſors* thoſe which ſtretch 'em out; *Adductors* thoſe which move the Parts inwards; *Abductors* thoſe which move 'em outwards; *Rotators* thoſe which move 'em round. See FLEXOR, EXTENSOR, ABDUCTOR, ADDUCTOR, ROTATOR, *&c.*

The *Muſcles* have alſo different Names from their different Figure; ſome reſembling a Bat; ſome a Lizard; and ſome a Turbet: Some are Triangular, others Square, others Scalenous, others Pentagonal, others Pyramidal, Round, *&c.* Whence come the Names of *Deltoides*, *Rhomboides*, *Scalenous*, *Trapezius*, *&c.* See DELTOIDES, SCALENUS, TRAPEZIUS, *&c.*

Anatomiſts are not agreed on the Number of *Muſcles* in the human Body; ſome reckon 529; ſome 446; and others only 435. The Calculus, according to theſe laſt, is as follows:

Two of the Forehead; two of the Occiput; ſix of the Eye-Lids; twelve of the Eyes; ſeven of the Noſe; eight of the external Ear; four of the internal Ear; thirteen of the Lips; eight of the Tongue; four of the Palate; fourteen of the Larynx; ſeven of the Pharynx; ten of the *Os Hyoides*; twelve of the Under-Jaw; fourteen of the Head; eight of the Neck; eight of the *Omoplates*; eighteen of the Arms; twelve of the Elbows; eight of the *Radii*; twelve of the *Carpi*; forty eight of the Fingers; fifty ſeven of uſe in Reſpiration; ſix of the Loins; ten of the *Abdomen*; two of the Teſticles; one of the Bladder; four of the *Penis*; four of the *Anus*; thirty of the Thighs; twenty two of the Legs; eighteen of the Feet; forty four of the Toes. The following Table of the Names and Offices of the ſeveral *Muſcles* in the Body, is extracted from Dr. *Keil.*

A TABLE of the MUSCLES *from Dr.* Keil.

Frontales, they pull the Skin of the Forehead upwards.
Occipitales, pull the Skin of the Hind-head upwards.
Attollens } *Auricularum.*
Deprimens }
Internus Malleoli, diſtends the *Tympanum*.
Externus Malleoli, relaxes the *Tympanum*.
Obliquus Malleoli.
Muſculus Stapidis, moves the Stirrup.
Corrugator Supercilii.
Lectus Palpebræ ſuperioris, lifts up the upper Eye-Lid.
Orbicularis Palpebrarum, ſhuts both Eye-Lids.

Attollens
Deprimens
Abductor
Adductor } *Oculorum.*

Obliquus major, pulls the Eye forwards, and obliquely downwards.

Obliquus minor, pulls the Eye forwards, and obliquely upwards.

Attollens
Dilatans } *Nares.*
Deprimens

Inciſivus, pulls the upper Lip upwards.

Triangularis, pulls it downwards.

Caninus
Elevator Labii inferioris } pull the lower Lip upwards.

Quadratus, pulleth it downwards.

Zygomaticus, draws both Lips obliquely to either ſide.

Orbicularis, draws both Lips together.

Buccinator, thruſts the Meat between our Teeth.

Temporalis
Maſſeter } pull the Jaw upwards.

Pterigoidæus internus, draws the Jaw to either ſide.

Pterigoidæus externus, draws the Jaw forwards.

Quadratus, pulleth the Jaw and the Cheeks downwards.

Digaſtricus, pulleth the Jaw downwards.

Periſtaphilinus Internus, pulls the Uvula forwards.

Periſtaphilinus Externus, pulls the Uvula backwards.

Styloglaſſus, draws the Tongue upwards.

Geniogloſſus, pulls it out of the Mouth.

Ceratogloſſus, pulls it into the Mouth.

Geniohyoidæus, pulls the *Os Hyoides* and Tongue upwards and forwards

Sternohyoidæus, pulls the *Os Hyoides* downwards.

Milohyoidæus, pulls it obliquely upwards.

Coracohyoidæus, pulls it obliquely downwards.

Stylohyoidæus, pulls it to either ſide, and ſomewhat upwards.

Stylopharingæus, pulleth up, and dilateth the *Pharynx*.

OEſophagæus, ſtreightens the *Pharynx*.

Sternothyroidæus, pulls the *Thyroides* downwards.

Hyothyroidæus, pulls the *Thyroides* upwards.

Cricothyroidæus.

Cricoarytænoidæus Poſticus.

Cricoarytænoidæus Lateralis.

Thyroarytænoidæus, dilates the *Glottis.*

Arytænoidæus, contracts the *Glottis.*

Splenius
Complexus } move the Head backwards.

Rectus major
Rectus minor } nod the Head backwards.

Obliquus inferior
Obliquus ſuperior
Maſtoidæus } perform the Semi-circular Motion of the Head.

Rectus internus major
Rectus internus minor } nod the Head forwards.

Rectus Lateralis, nods the Head to one ſide.

Intercoſtales interni & externi
Subclavius
Serratus Anticus major
Serratus Poſticus ſuperior
Triangularis } pull the Ribs upwards in Inſpiration.

Serratus Poſticus inferior
Sacrolumbaris } make the Motion of the Ribs downward in Expiration the ſwifter.

Diaphragma, uſed in Inſpiration and Expiration.

Obliquus externus
Obliquus internus
Tranſverſalis
Rectus
Pyramidalis } compreſs the Parts contained in the lower Belly; aſſiſt the Motion of the Ribs downwards in Expiration; and help to bend the Vertebræ of the Loins forwards.

Longiſſimus Dorſi, keeps the Body erect.

Tranſverſalis Dorſi, moves the Body obliquely backwards.

Interſpinalis, draws the acute Proceſſes near one another.

Quadratus Lumborum, draws the Vertebræ of the Loins to one ſide.

Longus
Scalenus } bend the Vertebræ of the Neck.

Pſoas parvus, helps to bend the Vertebræ of the Loins.

Cremaſter, draws up the Teſticles in the Act of Generation.

Erectores Penis.

Tranſverſalis Penis.

Acceleratores Urinæ.

Erectores Clitoridis.

Sphincter Veſicæ, contracts the Neck of the Bladder, that the Urine may not run continually.

Levatores Ani, draw up the Anus.

Sphincter Ani, ſhuts the Anus.

Serratus Anticus minor, draws the Shoulder-Blade forwards.

Trapezius, moves it upwards, backwards, and downwards.

Rhomboides, pulls it backwards.

Levator Scapulæ, pulls the Shoulder-Blade upwards.

Deltoides
Supra-Spinatus
Coracobrachialis } lift the Arm upwards.

Teres major
Latiſſimus Dorſi } pull the Arm downwards.

Pectoralis, moves the Arm forwards.

Infra Spinatus
Tranſverſalis
Subſcapularis } draw the Arm backwards.

Biceps
Brachiæus internus } bend the Fore-Arm.

Longus
Brevis
Brachiæus externus
Anchonæus } extend the Fore-Arm.

Rotundus
Quadratus } perform the Motion of Pronation, or turn the Palm of the Hand downwards.

Longus
Brevis } perform the Motion of Supination, or turn the Palm of the Hand upwards.

Cubitæus internus
Radiæus internus } bend the Wriſt.

Cubitæus externus
Radiæus externus } extend the Wriſt.

Palmaris, helps the Hand to graſp any thing cloſely.

Palmaris Brevis, makes the Palm of the Hand concave.

Sublimis
Profundus } bend the Fingers.

Extenſor Digitorum Communis.

Lumbricales, aſſiſt in bending the firſt Joint of the Fingers.

Interoſſei interni, draw the Fingers to the Thumb.

Interoſſei externi, draw the Fingers from the Thumb.

Flexor Pollicis longus.

Flexor Pollicis brevis.

Extenſor primi.

——— *Secundi.*

——— *Tertii Internodii Pollicis.*

Tenar, draws the Thumb from the Fingers.

Antitenar, draws the Thumb to the Fingers.

Abductor Indicis.

Extenſor Indicis.

Hypotenar, draws the little Finger from the reſt.

Extenſor Auricularis.

Pſoas
Iliacus
Pectinæus } bend the Thigh.

Glutæus major
Glutæus medius
Glutæus minor } extend the Thigh.

Triceps, pulls the Thigh inwards.

Pyriformis
Gemini
Quadratus } they move the Thigh outwards.

Obturator internus
Obturator externus } help to move the Thigh obliquely, and circularly.

Seminervoſus
Semimembranoſus
Biceps
Gracilis } bend the Leg.

Rectus
Vaſtus externus
Vaſtus internus
Crureus } extend the Leg.

Sartorius, makes the Legs croſs one another.

Poplitæus, turns the Leg ſomewhat inwards.

Membranoſus, turns it a little outwards.

Tibialis Anticus
Peronæus Anticus } bend the Foot.

Graſtocnemii
Solæus
Plantaris } extend the Foot.

Tibialis Poſticus, moves the Foot inwards.

Peronæus Poſticus, moves the Foot outwards.

Profundus
Sublimis
Lumbricalis } bend the four leſſer Toes.

Longus
Brevis } extend the four leſſer Toes.

Flexor Pollicis.

Extenſor Pollicis.

Tenar, draws the great Toe from the reſt.

Antitenar, draws it to the reſt.

Flexor Pollicis Longus.

——— *Brevis.*

Abductor Minimi Digiti
Interoſſei interni } draw the Toes toward the great Toe.

Interoſſei externi, draw them from the great Toe.

Tranſverſalis, brings all the Toes cloſe to one another.

The word *Muſcle* is derived from the *Greek* μῦς, or the *Latin Mus*, a Mouſe; on account of the Reſemblance it is ſuppoſed to bear to a skin'd Mouſe. The *Latins* alſo call it *Lacertus*. *Steno*, and other later Authors, reckon the Heart among the number of *Muſcles*, in regard its Compoſition

and

and Action don't differ in any thing from thoſe of other *Muſcles*.

MUSCULAR, or MUSCULOUS, ſomething that relates to the Muſcles; or that partakes of the nature thereof. See MUSCLE.

In this ſenſe we ſay, *Muſcular Fibre*, *Muſcular Coat*, *Muſcular Fleſh*, *Muſcular Veins*, *Muſcular Arteries*, &c.

MUSCULAR *Fibres* are the fine Threads, or Fibres, already deſcribed, whereof the Body of Muſcles is compoſed. See MUSCLE.

Anatomiſts are exceedingly divided as to the nature of theſe Fibres. Some will have 'em Blood-Veſſels, *viz.* Veins, and Arteries; others Nerves, &c. See ARTERY, NERVE, &c.

Some reſtrain *Muſcular* Fibres to the longitudinal red, call'd alſo *Fleſhy* Fibres: The tranſverſe, and ſpiral Ramifications wherewith the former are bound about, they call *Nervous Fibres*. See FIBRE.

Dr. *Morgan* endeavours to prove, that all the Fibres that enter the Structure and Compoſition of a Muſcle, are endued with an intrinſic Elaſticity, Spring, or Power of contracting and reſtoring themſelves, as a given Weight or Force, by which they may be ſtretch'd; and that this Elaſticity, or contractive reſtitutive Power being a natural inherent Property of the Fibres themſelves, does not depend on the Mixture, Rarefaction, or Effervescence of any Fluids or Humours whatſoever. See MUSCULAR *Motion*.

MUSCULAR *Membrane*, or *Membrana* MUSCULOSA, a Membrane ſuppoſed to inveſt the whole Body, immediately under the Adipoſe Membrane; call'd alſo *Panniculus Carnoſus*, and *Membrana Muſculorum Communis*. See PANNICULUS *Carnoſus*.

MUSCULAR *Arteries*, are two *Arteries* proceeding from the Subclavians, and diſtributed among the *Hind-Muſcles* of the Neck; as alſo to the Arteries of the Loins. See ARTERY. They are divided into *Upper* and *Under*.

The *Upper-Muſculars* proceed from the large Artery, and loſe 'emſelves in the Fleſh.

The *Under-Muſculars* are Branches of the inner Iliac Arteries.

The Name is alſo given to two Arteries of the Thigh, the one call'd the *Internal-Muſcular*, as being diſtributed among the inner *Muſcles* of the Thigh; the other the *External-Muſcular*, becauſe it proceeds to the outer Part.

MUSCULAR-*Veins*, is alſo a Name given to ſeveral Veins; two whereof come from the Skin and the *Hind-Muſcles* of the Thigh, and terminate in the Subclavians. See VEIN.

There are three others alſo call'd *Muſculars*, and diſtinguiſh'd into *Upper*, *Middle*, and *Under*; the firſt terminates in the Trunk of the *Vena Cava*, the two others open into the external Iliac Vein.

MUSCULAR *Fleſh*. See *Muſcular* FLESH.

MUSCULAR *Motion*, is the ſame with voluntary or ſpontaneous Motion; thus call'd, becauſe effected by means of the Contraction and Dilatation of the *Muſcles*. See MOTION, MUSCLE, &c.

The Mechaniſm of a *Muſcle* we have deliver'd at large; but how this Mechaniſm is employ'd to produce Motion in Animals, is matter of endleſs doubt.

The generality of Writers ſuppoſe the Belly of the *Muſcle* to be ſwell'd, and thus its Extremes brought nearer; and conſequently the Parts it is fixed to, moved.

The Structure of a *Muſcle* we have ſhewn to be ſuch as renders it capable of being ſwell'd and contracted, and by that means of having its Extremities brought nearer each other, which is its proper Action: But how the Contraction is effected, is the Point in diſpute.

The generality of Authors account for it from the Influx of ſome Fluid into the Muſcular Fibres: Others ſolve it from the natural Elaſticity of thoſe Fibres.

The Retainers to a Fluid, again, are divided as to the particular Fluid employ'd for this purpoſe.

From the Structure and Phenomena of the *Muſcles* above laid down, we may gather the Properties of the hidden Cauſe that moves the *Muſcles*; *viz.* 1*ſt*, That it may either be preſent or abſent in a *Muſcle*; and therefore, 2*dly*, May enter into it, and go out again: *i. e.* 3*dly*, It is derived to it from ſome other Place, and paſſes from it elſewhere. And, 4*thly*, All this, by an inſtantaneous Direction of the Will. 5*thly*, And in the ſame Moment of Time, wherein the *Muſcle* is contracted, muſt paſs from within outwards to every Point of the Surface of the *Muſcle*; that is, 6*thly*, it muſt be at once equally diſtributed throughout the whole Belly of the *Muſcle*: And therefore, 7*thly*, fill and dilate the Membranes of the Fibres, change 'em out of an oblong into a more ſpherical Figure, lengthen their leſs Diameter, and diminiſh their longer, and ſo draw the Tendons nearer each other. *Laſtly*, that it muſt have its Riſe from the *Cerebrum* and *Cerebellum*, the Origin of the Nerves and be ſtrong enough to overcome thoſe Obſtacles which here ſtrongly reſiſt it. To conclude then, it muſt be a moſt fluid, ſubtile, active Body, and be apply'd with ſome Energy within the *Muſcle*.

Now all the Fluids in the Body that have any Pretenſions to theſe Properties, that are any way qualified to produce the Phænomena above, or that have been alledged as the Cauſe of *Muſcular Motion*, are the *Animal Spirits*, (or, as our later Writers call it, the *Nervous Juice*) and the *Blood*: but as each of theſe ſingly ſcarce appears adequate to the Effect, hence Authors have ſuppoſed 'em to mix in the *Muſcles*, and each to contribute to the Action of the other. But the Animal Spirits ſeem to have the greateſt number of Advocates, tho' their Exiſtence was never yet fully prov'd; beſides that the manner of their Action, as aſſign'd by Authors, ſeems to be arbitrary and precarious.

Some, with the great Dr. *Willis*, make the Tendons a Receptacle for the Spirits, which are rais'd at the Inſtigation of the Will, and ſent thence into the Belly of the *Muſcle*, where meeting with the active Particles of the Blood, they ferment, and cauſe an Intumeſcence, and ſo contract the *Muſcle*.

Others, amongſt whom *Des Cartes* and his Followers, allow no Receptacle for 'em but the Brain, ſend 'em thence thro' the Nerves like Lightning at every Summons of the Will; becauſe they can't allow the Tendons to be a proper Lodgment, on account of the Cloſeneſs of their Contexture, nor can believe that the Animal Spirits ſhould remain there unactive.

Others, among whom M. *du Verney*, imagine this Intumeſcence may be without Fermentation by the Animal Spirit, and a Juice from the Arteries running into the Tendons and Fleſhy Fibres, and extending them, as Ropes, &c. ſwell in moiſt Weather.

Dr. *Chirac*, and others, maintain, that every Muſcular Fibre, beſides its Vein, Artery, and Nerve, has alſo from Space to Space, ſeveral little Cavities, or Pores of an oblong Figure, when the *Muſcle* is ſlack or flaccid; but the Blood circulating thro' the *Muſcle*, is continually depoſiting into thoſe Pores a ſulphurous Recrement, abounding with Alkaline Salts, which meeting with the Spirits that flow by the Nerves into thoſe ſame oval Pores, their Nitro-Aerial Particles ferment, with the ſaline ones of the Sulphurous Recrement, and, by a kind of Exploſion, ſo diſtend the Pores, as to change the long oval Figure into a round one; and thus the *Muſcle* is contracted.

Borelli takes the Fibres of a *Muſcle* to conſiſt of a Chain of divers Rhombus's or Lozenges, whoſe Areas are enlarged or contracted as the Nervous Juice, with the Lympha and Blood, are let into, or forced out of 'em, at the Inſtance of the Soul.

Dr. *Croon* ſuppoſes every Fleſhy Fibre to conſiſt of a Chain of little Bladders, or Globules, communicating with each other; into which the nutritious Juice, and one or two more Liquors entering, do, by means of the natural Heat, make an Effervescence; by which the Body of the *Muſcle* is extended, &c.

Dr. *Cheyne* takes the ſmall *Fibrillæ* of the *Muſcles* to be ſo many ſlender elaſtic Canals, bound about by ſmall tranſverſe parallel Threads, which divide the hollow *Fibrillæ* into ſo many elaſtic *Cyſtes* or *Veſiculæ*, which are orbicular, being formed of two concave Segments of a Sphere; into every one of which *Veſiculæ*, an Artery, Vein, and Nerve enter; the two firſt to carry and bring back the Blood, the laſt to carry thither the *Liquidum Nervoſum*, or Nervous Juice, which mingling in the *Veſiculæ* with the Blood, does, by its acid pointed Particles, prick and break the Globules of the Blood, ſo as to let out the impriſoned elaſtic Air (contained in the Globules) into thoſe little *Veſiculæ*; whereby the elaſtic Cells of the Fibres will be blown up, and thereby their Longitudinal Diameters from Cell to Cell ſtrained: and this muſt contract the Length of the whole Fibre, and ſo move that Organ to which one of the Tendons is fix'd.

Dr. *Keil*, not contented with this Theory, ſets up another, wherein the ſame Structure of the *Muſcle* is ſuppoſed, and the ſame Fluids; *viz.* the Blood and Nervous Juice, the Agents or Inſtruments of Contraction: but inſtead of the pungent Particles of the Nervous Juice piercing the Globules of Blood, and ſetting at liberty the impriſon'd elaſtic *Aura*, he accounts for the Whole from the Doctrine of Attraction.

He endeavours to ſhew, that the Diſtenſion of the Veſicles of the Fibres is not owing to their being fill'd with a greater Quantity of Blood and Animal Spirits than before their Contraction; but to a Rarefaction ariſing from the Mixture of thoſe two Fluids, by means whereof they come to poſſeſs a greater Space.

To account for this Rarefaction of the Blood and Spirits in the Veſicles of the Muſcular Fibres, he ſuppoſes a ſmall Globule of Air between the Particles of a Fluid, which Particles have a ſtrong attractive Force, whereby they endeavour to come together: By preſſing every way equally

on

on the Globule of Air, they will hinder its eſcape from between them. But the Force whereby they endeavour to come together being vaſtly greater than that of Gravity, the Globule of Air muſt be conſiderably condenſed; but the Force of Elaſticity being proportional to that of its Condenſation, the Force wherewith the airy Globule endeavours to expand itſelf, will likewiſe be vaſtly great; ſo that if the *Niſus* of the Particles of the Fluid to come together ſhould be taken off, the Air between 'em would expand itſelf with a conſiderable Force. Now, if upon the mixing of another Fluid, the Particles of the firſt Fluid ſhould be more ſtrongly attracted to the Particles of this other Fluid, than they were before to one another, their *Niſus* to one another would then ceaſe, and give the incloſed Globule of Air liberty to expand itſelf; ſo that the whole Fluid will take up a greater Space than it did before: But when the Particles of the two Globules come to be united together, they will again incloſe the Globule of Air that lies between them, and, by their mutual Attraction, ſoon bring it to its former State of Condenſation.

Now, that the Blood contains a great number of Globules of Air, is evident from the great Quantity it yields in the Air-Pump; and that the Particles of the Blood have a ſtrong attractive Force, cannot well be deny'd. Upon the meeting, then, of theſe two Fluids in the Veſicles of the Fibres, the Nervous Juice, conſiſting of ſmaller Particles than the Blood, muſt, from what Sir *I. Newton* has proved of the Rays of Light, attract the Particles whereof they are compoſed more ſtrongly than thoſe do one another; and conſequently the *Niſus* of thoſe Particles to one another ceaſing, the condenſed Globule of Air will expand itſelf with a conſiderable Force; whereby each Veſicle of the Fibre will be diſtended, and conſequently, therefore, ſhorten'd; *i. e.* the whole *Muſcle* will be contracted: but when the Particles of the Globule of Blood are well mixed with the Nervous Fluid, they will both together incloſe the Globule of Air again, and compreſs it into as ſmall a Space as it was before: And thus the Contraction of the *Muſcle* muſt immediately ceaſe, till freſh Blood and Spirits, ſtill ſucceeding one another, continue the Inflation of the Veſicles. But when a *Muſcle* has been ſtrongly attracted for ſome time, the Quantity of Spirits ſpent being more than can be prepared in the Space of Time by the Glands which ſupply its Nerves, the Inflation of the Veſicles muſt fall, and the *Muſcle* grow feeble and weak. And thus that ingenious Author conceives the Veſicles to be diſtended without any Ebullition or Effervescence; and their Diſtenſion to ceaſe without any Precipitation, or flying-off of the Aerial Globules thro' the Pores of the *Muſcles*.

He proceeds to ſhew how artfully the Mechaniſm of the Fibres is contrived for Contraction. 'Tis a known Experiment, that a Bladder blown up and diſtended as to its Capacity, but contracted as to Length, will raiſe a Weight to ſome determined Height. Two Bladders, therefore, thus blown up, and communicating with each other, he argues, will raiſe the Weight double the Height, and three Bladders thrice the Height, *&c.* So that if there were a String of Bladders join'd together, of equal Bulk, and like Figures, the Space thro' which the Weight would riſe, would be proportionable to the Number of Bladders, *i. e.* to the Length of the String. Now each Fibre of a *Muſcle* conſiſting of an infinite Number of ſmall Veſicles, reſembles a String of Bladders; ſo that the Contraction of the *Muſcle* is always proportionable to the Length of its Fibres.

Farther, the Veſicles whereof the Fibres conſiſt being very ſmall, tho' one large Bladder might raiſe a Weight as high as ſeveral ſmall ones, yet the Quantity of elaſtic Fluid uſed in the Inflation will in that caſe be much greater than where the Weight is rais'd by a String of ſmall ones.

For, ſuppoſing two Bladders of ſimilar Figures, but the Diameter of the one triple that of the other; then will the one require twenty-ſeven times the Quantity of elaſtic Fluid to expand it that the other does, and will alſo expand to twenty-ſeven times the Space; and yet three of the leſs Bladders join'd together, (he goes on) will raiſe the Weight to the ſame Height that the bigger one does; but with nine times leſs Expence of elaſtic Fluid, and take up but a ninth part of the Space. By diminiſhing, therefore, the Bigneſs of the Veſicles, and increaſing their Number, the Force required to diſtend them, and the Diſtenſion itſelf, may be diminiſhed in any given proportion, and come at laſt to be inſenſible. Suppoſe a Bladder, *v. g.* of a determinate Bigneſs, can raiſe a Weight a Foot; a hundred Bladders, whoſe Diameters are each a hundredth Part of the former, being blown up, will raiſe the Weight to the ſame Height; but the Force required to inflate them, and the Swelling of all put together, will be ten thouſand times leſs than the large one.

Again, if a Weight of a determined Bigneſs can be rais'd to a certain Height by a Bladder, or one String of Bladders, to which the Weight is tied; twice that Weight may be rais'd by two ſuch Bladders, or Strings; thrice by three, *&c.* and, conſequently, the Weight a *Muſcle* can raiſe, will be always as the Number of its Fibres, *i. e.* as its Thickneſs, ſuppoſing the Diſtenſion of the Veſicles equal, and the abſolute Strength of one *Muſcle* to that of another, as their Bulks.

Dr. *Boerhaave* finding all the Requiſites before laid down, for the Action of the Muſcles in the nervous Juice, or animal Spirits, and in no other Fluid in the Body, thinks it needleſs to have recourſe to a Mixture of ſeveral Liquors where one will do; and therefore makes no ſcruple to attribute the whole Buſineſs to it alone. The manner of Action he conceives thus.

Suppoſe the Spirit, from any Cauſe, to be moved more ſwiftly from the Origin of ſome one Nerve, than thro the reſt; the influx will here be greater into the *Muſcular* Fibre open to this Nerve than into another: This will therefore be more dilated; and the other Phenomena, mentioned above, will ſucceed. The ſame Cauſe continuing, the Effect will be increaſed, ſo that in a Moment of Time, the whole will be ſwell'd up; and while the ſame Determination laſts, will remain contracted: And this obtaining in an infinite number of *Fibrillæ* at once, the whole Muſcle will be inflated. Hence it neceſſarily follows, that as the Celerity is increaſed in one Nerve, the Motion will be leſs in another; this therefore being relax'd, the Effort in contraction will be the ſtronger. For which Reaſon, all the turgid Fibres of a Muſcle will compreſs the intermediate Spaces and Blood with a great Force; whence the Veins will be emptied, and the Arteries being compreſſed, will repel the groſſer, that is, the red parts of the Blood, but will drive the more ſubtile parts by the Force of the Heart and their own, into the moſt minute Canals; and thus the Cruor being expell'd, the whole Body of the Muſcle will be found to act by a ſubtile Humour concurring from the Nerves and Arteries.

Thus are all the Phænomena accounted for; without any other Aſſumption than an accelerating Force in the Origin of the Nerves; which is common to all Hypotheſes, and which can't be traced any further.

All other Hypotheſes, therefore, *Boerhaave* abſolutely rejects; nor makes the leaſt account of *Galen's* incorporeal Power inflating the Muſcles; the nitrous Spirit of the Nerves mixing with the Oil of the Blood, and ſo rarifying it; the acid Parts of the nervous Juice mixing with the alcalious ones of the Blood; the Ebullition of the Air, and the arterious Juice; and the increaſe or diminution of attractive Force of the minute Corpuſcles of the Humours, as repugnant to Senſe, Experience, the Laws of Matter, and of Mixture, and to the Phænomena of the Muſcles.

Dr. *Aſtruc* has gone a good way towards proving the nervous Juice alone concern'd in *Muſcular Motion*; and that the Blood has no ſhare in it; by the following Experiment, which he tried ſeveral times with the ſame ſucceſs.

Cutting open the *Abdomen* of a live Dog, and removing the Inteſtines out of the way, he bound up the *Aorta* where it divaricates into the *Iliac* Arteries, with a Thread, ſo as to conſtringe each *Iliac* and the *Hypogaſtric* Artery very cloſely; then ſewing up the *Epigaſtric* Muſcles, he found the Senſation and Motion ſtill as brisk and vivid in the Dog's *Poſteriors*, as before. So that when once ſet at liberty, he ſtood on all four, and walk'd with his uſual Eaſe and Firmneſs; tho it is certain there could not be one drop of Blood convey'd to thoſe hind parts.

Aſtruc, however, differs from *Boerhaave* in the manner wherein this nervous Juice acts; nor will allow that Celerity, wherewith the Muſcles act at the Command of the Will, to be owing to the Velocity of the Juice ſent thro the Nerve, but to an Impreſſion given to one extremity of the Thread, and communicated thro all the intermediate Parts to the other Extremity; ſuppoſing the Nerves in their natural State to be turgid, and full of Spirits: ſo that if the Extremity in the Senſory be ever ſo little preſs'd by the Acceſſion of any new Spirit, as much will be inſtantly expell'd at the other Extreme, and *vice verſa*; a ſmall Impreſſion given to the outer Extremity of the Nerve will immediately move the other Extreme open to the Senſory, ſo that part of it will drop out: Which accounts for Senſation, as well as *Muſcular Motion*.

Laſtly, Dr. *Lower* and Mr. *Cowper*, and after them, Dr. *Morgan*, the lateſt Writer on the Subject, ſetting aſide all adventitious Fluids, account for *Muſcular Motion* from the intrinſic Elaſticity of the nervous *Fibrillæ* contracting and reſtoring themſelves againſt the ſtretching Force of the Circulating Blood.

This Syſtem, *Morgan* endeavours to evince from the following Conſiderations:

1. All

1. All the Veſſels in an Animal, conſiſting of flexible, diſtractile Fibres, are in a ſtate of Tenſion; *i. e.* are both ſtretch'd tranſverſly and longitudinally by their contained Fluids: Thus, *e. gr.* let a Vein, or Artery be cut, and the oppoſite Sides of the Veſſel will contract, and come nearly to a contact about the Axis; while the two ends receding both ways, leave a Chaſm, which ſhews that the Veſſel, while in its natural State, was diſtended both ways; and, conſequently, that Contraction in all their Dimenſions, is the natural intrinſic Action of the Veſſels or Fibres.

And the ſame might be deduced, *à priori*, from the Growth of Animals; for by the increaſed Quantity of the accumulated Blood, the Veſſels muſt neceſſarily be enlarged every way. Now, againſt this diſtending Power of the Fluids, the ſolid Muſcular *Fibrillæ* continually exert a contractive, or reſtitutive Force, by which they are kept in their proper State of Tenſion.

2. That this contractive Power of the Muſcular Fibres is a natural intrinſic Property of the Fibres themſelves, and does not depend on any Mixture, or mutual Action of Fluids, is evident from hence, that theſe Fibres retain the ſame Property, after they are taken out of the Body and dried; as we ſee in Thongs, Cat-gut, and other ſuch like Cords or Strings cut out of the Muſcular Coats and Skins of Animals, which may be ſtretched out to a conſiderable length beyond their natural State; and when the ſtretching Force or Weight is taken off, they will immediately contract again by their native Spring.

3. While a Muſcle contracts, the Blood is ſqueezed out, and during its ſtate of Contraction, it is more hard and ſolid than before; that is, it contains leſs Blood when contracted, than when ſtretch'd; which ſhews, that the Contraction cannot be by the addition of another Fluid from the Nerves mixing with the Blood in the Muſcles.

4. No ſuch Fluid in the Nerves could ever be found, as being mixed with the Blood, would occaſion ſuch Fermentation or Expanſion. But ſuppoſing the *Muſcular* Cells thus inflated, no ſuch effect could follow as ſhortning the Muſcle in length, and ſwelling it in thickneſs: But the Conſequence muſt be, that the Muſcle would be lengthned as well as thickned; that is, it muſt increaſe its Dimenſions proportionably every way, which is the proper Action of the Fluids on the Solids.

If then it be ſaid, that theſe Bladders, when the Muſcle is ſtretched, are drawn into oblong Spheroids: and when inflated by the mixture of the nervous Fluid, reduced to a ſpherical Figure; by which means their Axes are ſhortned, and their conjugate Diameters enlarged: 'Tis anſwer'd, that thoſe ſmall Veſicles are ſoft, flexible, diſtractile, and equally yielding every way; and ſince an included expanſive Fluid muſt preſs its containing Veſſels equally yielding every way, and equally expanſive; a Veſſel, notwithſtanding ſuch Diſtenſion, muſt retain its natural Figure, and be equally ſtretch'd in all Directions.

Again, ſince the Blood circulates freely thro theſe *Muſcular* Cells, it is plain, that as ſoon as they begin to inflate, it muſt be immediately puſh'd forward with an increaſed Velocity in the Courſe of its Circulation, which muſt prevent any ſuch Inflation in the Muſcles. Before theſe Veſicles, therefore, can be diſtended in the manner ſuppos'd, the Exit of the Fluid muſt be hindred; that is, the Circulation muſt be ſtopt. If any one doubt of this, let him try whether he can blow up a Bladder, or other Veſſel, that is open at both ends, and where the expanſive Fluid has as free an Egreſs as Ingreſs.

Thus much premiſed, the natural Action of a Muſcle will be eaſily explain'd. From its Structure, it follows, that on the Contraction of its tranſverſe and ſpiral Fibres, which are the Ramifications of the Nerves, the longitudinal, red, and fleſhy Fibres, or Blood-Veſſels, which conſtitute the Body of the Muſcle, muſt be ſqueezed and drawn together, as being compell'd to follow the Motion of theſe elaſtic Cords; by which means the Blood-Veſſels being compreſs'd, muſt be forced, with ſome Impetuoſity, thro the Muſcle, and propell'd forward in the Courſe of its Circulation.

Now if the Blood ſhould hereupon ſtop, and return no more to the Muſcle, 'tis plain the Muſcle muſt for ever remain in this contracted State, as its proper and natural State of Quieſcence to which it tends, and where it would reſt: But the Blood having receiv'd a freſh Impetus by the Contraction, and returning upon the Muſcle in the Courſe of its Circulation, again ruſhes into the Blood-Veſſels, which being inlarged in all their Dimenſions by the Force of the returning Blood, the tranſverſe and ſpiral nervous Fibres muſt be hereby ſtretch'd, and the Muſcle extended; by this means the Blood-Veſſels being brought to their natural extent, and conſequently the diſtending Force of the Blood ceaſing, the contractive Power of the Nerves will in that ſtate begin to act again, and reſtore themſelves with the ſame Force by which they were extended, till the returning Blood re-enters the Muſcle, and ſtretches it again.

MUSÆUM, was originally uſed to ſignify a Place in the Palace of *Alexandria*, which took up at leaſt a fourth part of the City; ſo call'd as being deſtin'd and ſet apart to the *Muſes*, and the Sciences. See MUSE.

Here were lodged and entertained a great number of learned Men, who were divided into Companies or Colleges, according to the Sciences or Sects whereof they were Profeſſors.

To each Houſe or College, was allotted a handſome Revenue.

This Eſtabliſhment is attributed to *Ptolemy Philadelphus*, who here fixed his Library. See LIBRARY.

Hence the word *Muſæum* has paſs'd into a general Denomination, and is now apply'd to any Place ſet apart as a Repoſitory of Things that have ſome immediate Relation to the Arts or the *Muſes*, whence the Word firſt took its Riſe. See REPOSITORY, &c.

The MUSÆUM at *Oxford*, call'd the *Aſhmolean* MUSÆUM, is a noble Pile erected at the Expence of the Univerſity, for the promoting and carrying on ſeveral Parts of curious and uſeful Learning. It was begun in 1679, and finiſhed in 1683; at which time, a valuable Collection of Curioſities was preſented to the Univerſity by *Elias Aſhmole* Eſq; and the ſame day there repoſited, and afterwards digeſted and put in a juſt order by Dr. *Plott*, who was conſtituted firſt Keeper of the *Muſæum*.

Divers conſiderable Acceſſions have been ſince made to the *Muſæum*; as of Hieroglyphics, and other *Egyptian* Antiquities by Dr. *Huntingdon*; of an entire Mummy by Mr. *Goodyear*; of a Cabinet of natural Rarities by Dr. *Liſter*; as alſo of divers *Roman* Antiquities, Altars, Medals, Lamps, &c.

Over the Entrance of the *Muſæum* is this Inſcription;

MUSÆUM ASHMOLEANUM, SCHOLA NATURALIS HISTORIÆ, OFFICINA CHYMICA.

MUSES, Fabulous Divinities of the antient Heathens, who were ſuppoſed to preſide over the Arts, and Sciences.

The Antients admitted nine *Muſes*, and made them the Daugthers of *Jupiter* and *Mnemoſyne*, or Memory.

At firſt, indeed, their Number was but three, viz. *Melete*, *Mneme*, and *Aœde*; *Greek* Words ſignifying Memory, Singing, and Meditation. But a certain Sculptor of *Sicyon* having Orders to make three Statues of the three *Muſes* for the Temple of *Apollo*, and miſtaking his Inſtructions, made three ſeveral Statues of each *Muſe*; theſe however were found ſo beautiful, that they were all ſet up in the Temple, and from that time they began to reckon nine *Muſes*: To whom *Heſiod* afterwards gave Names; viz. *Calliope*, *Clio*, *Erato*, *Thalia*, *Melpomene*, *Terpſichore*, *Euterpe*, *Polhymnia*, and *Urania*.

Each of theſe were ſuppoſed to preſide over their reſpective Art; *Calliope* over Heroic Poetry; *Clio* over Hiſtory; *Melpomene* over Tragedy; *Thalia* over Comedy; *Euterpe* over Wind-Muſic; *Urania* over Aſtronomy; *Terpſichore* over the Harp; *Erato* the Lute; *Polhymnia* Rhetoric.

They are painted Young, Handſome, and Modeſt, agreeably dreſs'd and crown'd with Flowers. Their uſual Abodes were about Mount *Helicon* in *Bœotia*, and Mount *Parnaſſus* in the *Phocide*. Their Buſineſs was to celebrate the Victories of the Gods, and to inſpire and aſſiſt the Poets; and hence the Cuſtom of Invoking their Aid at the beginning of a Poem. See INVOCATION.

It muſt not, however, be imagined, that the Deities thus invoked, are conſider'd even by the antient Poets themſelves as Divine Perſons, from whom they expect any real Help. Under the Name of *Muſe* they wiſh for the Genius of Poetry, and all the Conditions and Circumſtances neceſſary for a happy Execution of their Undertaking.

They are mere Allegories and Manners of expreſſing themſelves poetically; as when they make Gods of Sleep, of Fame, of Revenge, and other natural and moral things. See GOD.

Accordingly, the *Muſes* are of all Ages, Countries, and even of all Religions. There are Chriſtian as well as Heathen *Muſes*, *Latin*, *Greek*, *Engliſh*, *French*, &c. There are alſo *new Muſes*, which appear every day in favour of thoſe who, diſdaining things too trite and common, chuſe to ſtrike out of the Road.

When *Virgil* wrote his Eclogues, he invoked the *Sicilian Muſes*, becauſe he imitated *Theocritus*; and the *Sicilian* Poet having ſucceeded; the *Roman* begg'd for a Genius as happy as that of this Iſlander.

The *Muſes* of the Poet *Lucretius* had never inſpired any Perſon before him. 'Tis plain, from the Doctrine of his Book, what kind of Divinity it was he invoked. He addreſſes himſelf to *Venus*, but at the ſame time tells us, that none of the Gods trouble themſelves with human Affairs. His *Muſes* therefore muſt of neceſſity be mere Allegories.

The Word *Muſe*, according to *Phornutus*, is derived from the *Greek* μῶσαι, which ſignifies the ſame with ζήτησις, to ſearch. Others derive it from ὁμοίουσα, ſimilar, or alike; all the Sciences being bound and united together. *Euſebius* derives it from μυέω, to initiate, to inſtruct. *Plato* and *Scaliger* from μαίεσθαι, *obſtetricare*, becauſe to them are attributed the Invention of the Arts; and 'tis they who produced them. Laſtly, *Heinſius* and *Voſſius* derive it from the *Hebrew* מוסר Muſar, Science, *Diſciplina*.

The *Muſes* are call'd by various Names; *Camænæ*, *Heliconiades*, *Parnaſſides*, *Aonides*, *Pierides*, *Pegaſides*, *Agannipides*, *Theſpiades*, *Libethrides*, and *Caſtalides*.

MUSHROOM, or MUSHROON, in Natural Hiſtory, a Plant, of a Form and Structure very different from that of all other Plants; having neither Seeds, nor Flowers, that have ever yet been diſcover'd. See PLANT, SEED, *&c.*

There are various kinds of *Muſhrooms*; and the Vulgar call by this Name all that come under the general Head of Fungus's. See FUNGUS.

They are all uſed with ſome ſuſpicion, tho' ſome are more harmleſs, as well as more delicious than others. Thoſe uſed among us, are *Muſhroom of the Wood*, call'd *Morils*, and *of the Meadows*, call'd *Champignions*, which are gathered in Autumn, and eſteemed for their Whiteneſs above, their Vermilion underneath, and the Sweetneſs of their Smell.

Mr. *Bradley* mentions a hundred kinds of *Muſhrooms*, which he has ſeen in *England*; beſides thoſe very numerous ſmall ones, which conſtitute the Mouldineſs of Liquors, Fruits, *&c.* which laſt are ſuch quick Growers, that they arrive at perfection in leſs than 12 Hours. See MOULDINESS.

The Fungoides only differs from a *Muſhroom* in its external Form; the Coralloides are of the ſame Species, tho of a different Name, as being branch'd like Coral; and *Truffles* come under the ſame kind. See CORALLOIDES, TRUFFLES, *&c.*

Matthiolus mentions *Muſhrooms* which weigh'd 30 Pounds each, and were as yellow as Gold. *Fer. Imperatus* tells us he ſaw ſome which weigh'd above a hundred Pounds; and, to add no more, the *Journal des Scavans* furniſhes us with an account of ſome growing on the Frontiers of *Hungary* which were a full Chariot Load.

The Origin and Production of this Plant has extremely puzzled the Botaniſts. How a Plant ſhould be produced without a Seed, is a Myſtery; and yet the beſt Microſcopes are not able to diſcover any appearance of a Seed; and the manner of cultivating this Plant, ſeems to make it ſtill more probable that it has not any.

M. *Tournefort* gives a very curious Account of their Culture, in the *Memoirs of the French Academy*, the Subſtance of which we ſhall here preſent the Reader withal.

All the Secret of bringing up *Muſhrooms* ſpeedily and in abundance, conſiſts in ranging Balls of Horſe-Dung about the bigneſs of the Fiſt, in Lines, at the diſtance of about three Feet from each other, and at the depth of one Foot under Ground, and covering theſe over with Mould, and that again with Horſe-Dung.

If this be done in *April*; in the beginning of *Auguſt* the pieces of Dung will begin to whiten, and grow mouldy, being ſtrew'd all over with little Hairs, or fine white Threads, branch'd, and woven about the Straws whereof the Dung is compoſed. The Dung now loſes its former excrementitious Smell, and ſpreads an admirable Odour of *Muſhrooms*.

According to all Appearance theſe white Threads are no other than the open'd Seeds or Buds of *Muſhrooms*, which Seeds were before incloſed in the Dung, but in ſo ſmall a compaſs, that they could not be perceiv'd till after they had ſhot themſelves into little Hairs. By degrees the Extremity of theſe Hairs grows round into a kind of Button, which ſwelling by little and little, at length opens itſelf into a *Muſhroom*, whereof the lower part is a kind of Pedicle bearded in the place where it enters the Ground, and at the other end loaden with a kind of roundiſh Capital or Head, in manner of a Calotte, which expands itſelf without producing either Grains or Flowers that are ſenſible; the bottom is ſpread with *Laminæ*, which proceeding from the Centre to the Circumference, may be call'd the *Leaves of the Muſhroom*.

At the foot of each *Muſhroom* are found an infinite number of little ones not bigger than the Head of a Pin, when the others are at their growth. The Buds of the *Muſhrooms*, or the white Hairs of the Dung, preſerve themſelves a long time without rotting, if kept dry; and if laid again on the Ground, will produce.

Muſhrooms, then, are nothing elſe but the Produce of what we call the Mouldineſs of Horſe-Dung: But what Analogy is there between theſe two things? Or how ſhould ſo artful and delicate a Structure as this of a Plant reſult from the mere fortuitous Concourſe of a few Juices, differently agitated?

It ſeems paſt doubt then, that *Muſhrooms*, like all other Plants, have their Origin in Seeds: Now we know that the Seeds of Plants cannot vegetate every where; there are firſt required certain Juices proper to penetrate their Coats, to excite a Fermentation, and to join themſelves to the little parts thereof, and increaſe them. Hence ariſes that infinite Diverſity of Places, wherein different Species of this Plant are produced. There are ſome which will only grow on ſome other particular Plants, whoſe Trunk, Bark, or Roots, alone have the Juices proper for them.

What M. *Tournefort* mentions from Meſſ. *Lemery* and *Mery*, is ſtill more ſurprizing: There is a Species of *Muſhrooms* which grow on the Fillets and Bandages apply'd to the Fractures, *&c.* of the Patients in the *Hotel-Dieu*. After which, it will not be at all ſurprizing that Horſe-Dung prepared in the manner M. *Tournefort* mentions, ſhould be a Soil or Matrix capable of making common *Muſhrooms* grow.

Hence it ſeems to follow, that the Seeds of *Muſhrooms* ſhould be ſpread in an infinite number of Places where they do not vegetate, and in a word throughout the whole Earth; and the ſame may be ſaid of a great number of other Plants.

It muſt be own'd, the Imagination is ſhock'd at ſuch a prodigious Multitude of different Seeds, thrown every where at random, and in many Places to no purpoſe; but a little Reaſoning will put the Matter of Fact paſt doubt.

Dioſcorides tells us, he was aſſured that Pieces of the Bark of the Poplar-Tree being laid in the Ground over Horſe-Dung, there would grow out of them very good *Muſhrooms*. *Ruel* ſays, that by boring the Trunk of a white Poplar-Tree near the Root, and waſhing it with Leven ſteep'd in Water, *Muſhrooms* ſpring out of it, as it were, inſtantly. He adds, that the Hillocks produce ſeveral kinds of *Muſhrooms*, if the Stubble be burnt on 'em in the rainy Seaſon.

M. *Tournefort* tells us, on his own Knowledge, that where the Stubble is burnt in *Provence*, *Languedoc*, and the Iſlands of the *Archipelago*, there ariſe great Quantities of black Poppies in the firſt Autumnal Rains, which diſappear the Year following; ſo that they are never found but on burnt Lands. And we know that after the Burning of *London*, the Ground as far as the Fire reach'd, ſhot up with vaſt Quantities of *Eryſimum Latifolium Majus Glabrum*. One of the chief Reaſons, if not the only one, why Mountains produce Plants different from the Plains or Valleys; Places become fenny, from the ſame Places when they were dry; is the difference in the nutricious Juices found in thoſe Places. Without this, how ſhall we account for the Origin of Miſſletoe or Hypocyſtus, which are never known to grow in the Earth, at leaſt without adhering to ſome other Plant; the one growing on Trees, the other to the Root of the Cyſtus? Why do the Ivy and Vine of *Canada*, the Pellitory, Polypody, the Species of Capillaries, grow only on the Trunks of Trees, on Walls, and in the Clefts of Rocks, unleſs it be that the Juices of thoſe Places are the beſt adapted to them?

Theſe and other inconteſtable Facts prove plainly both the vaſt Multitude of Seeds diſperſed every where, and the Neceſſity of certain Circumſtances to make 'em vegetate.

If to this Speculation on the inviſible Seeds of Plants, we join that of the inviſible Eggs of Inſects, which muſt be allow'd equal thereto, the Earth will be found full of an inconceivable Infinity of Animals and Vegetables, perfectly form'd, and deſigned, as it were, in Miniature, and only waiting for certain favourable Circumſtances to enable them to make their Appearance in large. How rich then muſt the Hand be, that has ſown with ſo much Profuſion?

We have been the more particular on this Head, on account of the Oddneſs of the Phænomena; and becauſe what is here ſaid of *Muſhrooms* will give light into the Generation of all other Vegetables, *&c.* whoſe Seeds are yet undiſcovered.

Dr. *Liſter*, indeed, thinks he has found out the Seeds of *Muſhrooms*. He inſtances particularly in the *Fungus Poroſus*, *Craſſus magnus I. B.* the Texture of whoſe Gills is like a Paper prick'd full of Pin-holes. Theſe Gills, he makes no doubt, are the very Flower and Seed of this Plant; when it is ripe, the Gills are eaſily ſeparable from the reſt of the Head, each Seed being diſtinct from other, and having its Impreſſion in the Head of the *Muſhroom*, juſt as the Seed of an Artichoke hath in the bottom of it; the bigger end of the Seed is full and round, and they are diſpoſed in a ſpiral Order like thoſe of the Artichoke: And the ſame he thinks of all other *Muſhrooms*, however differently figured. If it happens that theſe, when ſown, prove ſteril, and don't produce their Kind, it is no wonder; there being whole Genus's of Plants that come up, and flower, and ſeed, yet their Seed was never known to produce Plants of their Kind, being no more than a barren volatile Duſt, as all the Orchides, or Bee-Flowers.

MUSIC, the Science of Sound, conſider'd as capable of producing Melody, or Harmony: or, the Art of diſpoſing and conducting Sounds, conſider'd as grave and acute; and of proportioning them among themſelves, and ſeparating them by juſt Intervals, pleaſing to the Senſe. See SOUND.

Mr. *Malcolm* better defines *Muſic*, a Science that teaches how Sounds under certain Meaſures of Tune, and Time, may be produc'd, and ſo order'd or diſpos'd, as either in Conſonance (*i. e.* joint Sounding) or Succeſſion, or both, as they may raiſe agreeable Senſations.

From this Definition, the Science naturally divides itſelf into two general Parts, *Speculative* and *Practical*.

The *firſt*, the Knowledge of the *Materia Muſica*, or how to produce Sounds in ſuch Relations of Tune, and Time, as ſhall be agreeable in Conſonance, or Succeſſion, or both: By which, we don't mean the actual Production of theſe Sounds by an Inſtrument or Voice, which is meerly the mechanical or effective Part; but the Knowledge of the various Relations of Tune and Time, which are the Principles, out of which the Pleaſure ſought derives. See TUNE.

The *2d*, How theſe Principles are to be apply'd; or how Sounds, in the Relations they bear to *Muſic* (as thoſe are determin'd in the firſt part) may be order'd, and variouſly put together in Succeſſion and Conſonance, ſo as to anſwer the End: And this we call the Art of *Compoſition*, which is properly the practical Part of *Muſic*. See COMPOSITION.

Some add a third Branch, *viz.* the Knowledge of *Inſtruments*; but as this depends altogether on the firſt, and is only an Application or Expreſſion of it, it cannot come regularly under the Definition, and conſequently is no part of the Diviſion of the Science.

The firſt Branch, which is the contemplative Part, divides itſelf into theſe two, *viz.* the Knowledge of the Relations and Meaſures of Time, and the Doctrine of Time itſelf.

The former is properly what the Antients call'd *Harmonica*, or the Doctrine of Harmony in Sounds, as containing an Explication of the Grounds, with the various Meaſures and Degrees of the Agreement of Sounds, in reſpect of their Tune. See HARMONICA.

The latter is what they call'd *Rythmica*, becauſe it treats of the Numbers of Sounds or Notes with reſpect to Time; containing an Explication of the Meaſures of long and ſhort, or ſwift and ſlow, in the Succeſſion of Sounds. See RYTHMICA.

The ſecond Branch, which is the practical part, as naturally divides into two parts, anſwering to the parts of the firſt.

That which anſwers to the *Harmonica*, the Antients called *Melopœia*, becauſe it contains the Rules of making Songs, with reſpect to Tune, and Harmony of Sounds; tho we have no reaſon to think the Antients had any thing like Compoſition in Parts. See MELOPOEIA.

That which anſwers to the *Rythmica*, they call'd *Rythmopœia*, containing Rules for the Application of the Numbers and Time. See RYTHMOPOEIA.

We find a ſtrange Diverſity in the antient Writers, as to the Nature, Office, Extent, Diviſion, &c. of *Muſic*.

The Name is ſuppos'd originally form'd from *Muſa*, Muſe; the Muſes being ſuppos'd to be the Inventors thereof. *Kircher*, however, will have it take its Name from an *Egyptian* Word, as ſuppoſing its Reſtoration after the Flood to have begun there, by reaſon of the Reeds, &c. on the Banks of the *Nyle*. *Heſychius* tells us, the *Athenians* gave the Name *Muſic* to every Art.

Hermes Triſmegiſtus defines *Muſic* to be the Knowledge of the Order of all things; which is alſo the Doctrine of the *Pythagorean* School, and of the *Platoniſts*, who teach, that every thing in the Univerſe is *Muſic*.

Agreeable to which wide Senſe, ſome divide *Muſic* into *Divine* and *Mundane*.

The firſt reſpecting the Order and Harmony that obtains among the Celeſtial Minds; the other, the Relations and Order of every thing elſe in the Univerſe. *Plato*, however, by the *Divine Muſic*, underſtands that which exiſts in the Divine Mind, *viz.* thoſe Archetypal Ideas of Order and Symmetry, according to which God formed all things: And as this Order exiſts in the Mundane Creatures, he calls it *Mundane Muſic*.

Which laſt Species they again ſubdivided into four, *viz.* 1. *Elementary Muſic*, or the Harmony of the Elements of Things.

2. *Celeſtial Muſic*, or the *Muſic* of the Spheres; comprehending the Order and Proportions in the Magnitudes, Diſtances and Motions of the heavenly Bodies, and the Harmony of the Sounds reſulting from thoſe Motions.

3. *Human Muſic*, which conſiſts chiefly in the Harmony of the Faculties of the human Soul, and its various Paſſions; and is alſo conſider'd in the Proportion, Temperament and mutual Dependance of the Parts of the Body.

4. What, in the proper and limited ſenſe of the Word, is call'd *Muſic*; which has for its Object, Motion, conſider'd as under certain regular Meaſures and Proportions, by which it affects the Senſes in an agreeable manner.

Now as Motion belongs to Bodies, and as Sound is the Effect of Motion, and cannot be without it, but all Motion does not produce Sound; hence this laſt Branch of *Muſic* became ſubdivided.

Where the Motion is without Sound, or as 'tis only the Object of Sight, it was either call'd *Muſica Orcheſtria* or *Saltatoria*, which contains the Rules for the regular Motions of Dancing; or *Muſica Hypocritica*, which reſpects the Motion and Geſtures of the Pantomimes.

When the Motion is perceiv'd only by the Ear, *i. e.* when Sound is the Object of *Muſic*, there were three Species; *viz. Harmonica*, which conſiders the Differences and Proportions with reſpect to Grave and Acute; *Rythmica*, which reſpects the Proportion of the Sounds as to Time, or the Swiftneſs and Slowneſs of their Succeſſions; and *Metrica*, which belongs properly to the Poets, and reſpects the Art of making Verſes.

Ariſtides Quintilianus, *Bacchius*, and other antient Writers, define *Muſic* the Knowledge of Singing, and of the Things belonging thereto; which he calls the Motions of the Voice and Body: as if the Singing itſelf conſiſted only in the different Tones of the Voice.

The ſame Author, conſidering *Muſic* in the largeſt ſenſe of the Word, divides it into *Contemplative* and *Active*. The firſt, he ſays, is either *Natural* or *Artificial*. The *Natural* is either *Arithmetical*, becauſe it conſiders the Proportion of Numbers; or *Phyſical*, which examines the Order of the Things of Nature.

The artificial he divides, as above, into *Harmonica*, *Rythmica*, *Metrica*.

The active, which is the Application of the artificial, is either *Enuntiative* (as in Oratory;) *Organical* (or Inſtrumental Performance;) *Odical* (for Voice and ſinging of Pſalms;) *Hypocritical*, in the Motions of the Pantomimes. To which ſome add *Hydraulical*, tho' in reality no more than a Species of the Organical; in which, Water is uſed, for the producing or modifying of Sound.

Porphyry makes another Diviſion of *Muſic*, taking it in the limited Senſe, as having Motion both dumb and ſonorous for its Object; and without diſtinguiſhing the Speculative and Practical, he makes its Parts theſe ſix, *viz. Rythmica*, for the Motions of Dancing; *Metrica*, for the Cadence and Recitation; *Organica*, for the Practice of Inſtruments; *Poetica*, for the Numbers and Feet of Verſes; *Hypocritica*, for the Geſtures of the *Pantomimes*; and *Harmonica*, for Singing.

The *Muſical Faculties*, as they call them, are *Melopœia*, which gives Rules for the Tones of the Voice or Inſtrument; *Rythmopœia*, for Motions; and *Poeſis*, for making Verſes.

Muſic appears to have been one of the moſt antient of Arts. And of all others, *Vocal Muſic* muſt undoubtedly have been the firſt Kind. For Man had not only the various Tones of his own Voice to make his Obſervations on, before any other Art or Inſtrument was found out, but had the various natural Strains of Birds, to give him occaſion to improve his own Voice, and the Modulations of Sounds it was capable of.

Of many antient Authors who agree in this Conjecture, we ſhall only mention *Lucretius*, who ſays,

> *At Liquidas Avium Voces imitarier Ore,*
> *Ante fuit multo quam levia Carmina Cantu,*
> *Concelebrare Homines poſſent, Aureiſque juvare.*

The firſt Invention of ſtring'd Inſtruments he aſcribes to the Obſervation of the Winds whiſtling in the hollow Reeds.

As for other kind of Inſtruments, there were ſo many Occaſions for *Chords* or Strings, that Men could not be long in obſerving their various Sounds, which might give Riſe to ſtring'd *Inſtruments*. See CHORD.

And for the pulſatile Inſtruments, as *Drums* and *Cymbals*, they might ariſe from the Obſervation of the hollow Noiſe of concave Bodies.

Plutarch, in one place, aſcribes the firſt Invention of *Muſic* to the God *Apollo*, and in another to *Amphion*, the Son of *Jupiter* and *Antiope*. This laſt, however, is pretty generally allow'd to have been the firſt who brought *Muſic* into *Greece*, and to have been the Inventor of the *Lyre*. The Time he lived in, is not agreed upon. See LYRA.

To him ſucceeded *Chiron*, the Demi-God; *Demodocus*; *Hermes Triſmegiſtus*; *Olympus*; *Orpheus*, whom ſome make the firſt Introducer of *Muſic* into *Greece*, and the Inventor of the *Lyre*; *Phemius*; *Terpander*, who was Contemporary with *Lycurgus*, and ſet his Laws to *Muſic*. To him ſome attribute the firſt Inſtitution of *Muſical* Modes, and the Invention of the *Lyre*; *Thales*; and *Thamyris*, who is ſaid to have been the firſt Inventor of Inſtrumental *Muſic* without Singing.

Theſe

These were the eminent Muſicians before *Homer*'s Time. Others of a later Date, were *Laſus Hermionenſis*, *Melnippides*, *Philoxenus*, *Timotheus*, *Phrynnis*, *Epigonius*, *Lyſander*, *Simmicus*, and *Diodorus*; who were all conſiderable Improvers of *Muſic*. *Laſus* is ſaid to have been the firſt Author who wrote on *Muſic* in the Time of *Darius Hyſtaſpes*; *Epigonius* invented an Inſtrument of forty Strings, call'd the *Epigonium*. *Simmicus* alſo invented an Inſtrument, call'd *Simmicium*, of thirty-five Strings. *Diodorus* improv'd the *Tibia*, by adding new Holes; and *Timotheus* the *Lyre*, by adding a new String; for which he was fined by the *Lacedemonians*.

As the Accounts we have of the Inventors of *Muſical* Inſtruments among the Antients, are very obſcure; ſo are alſo the Accounts what thoſe Inſtruments were; we ſcarce knowing any thing of them beſides the bare Name.

The general Diviſion of Inſtruments, is into *Stringed Inſtruments*, *Wind Inſtruments*, and the *Pulſatile Kind*. Of *Stringed Inſtruments*, we hear of the *Lyra* or *Cythara*, the *Pſalterium*, *Trigon*, *Sambuca*, *Pectis*, *Magadis*, *Barbiton*, *Teſtudo*, *Epigonium*, *Simmicium*, and *Pandura*, which were all ſtruck with the Hand, or a *Plectrum*; and which ſee in their Places.

Of *Wind Inſtruments*, we hear of the *Tibia*, *Fiſtula*, *Hydraulic Organs*, *Tubæ*, *Cornua*, and *Lituus*.

The *Pulſatile Inſtruments*, were the *Tympanum*, *Cymbalum*, *Crepitaculum*, *Tintinnabulum*, *Crotalum*, and *Siſtrum*; which ſee.

Music has even been in the higheſt Eſteem in all Ages, and among all People. Nor could Authors expreſs their Opinion of it ſtrongly enough, but by inculcating, that it was uſed in Heaven, and was one of the principal Entertainments of the Gods, and the Souls of the Bleſſed.

The Effects aſcribed to it by the Antients, are almoſt miraculous; by means hereof, Diſeaſes are ſaid to have been cured, Unchaſtity corrected, Seditions quell'd, Paſſions rais'd and calm'd, and even Madneſs occaſion'd. *Athenæus* aſſures us, that antiently all Laws Divine and Civil, Exhortations to Virtue, the Knowledge of Divine and Human Things, Lives and Actions of illuſtrious Men, were written in Verſe, and publickly ſung by a Chorus to the Sound of Inſtruments; which was found the moſt effectual means to impreſs Morality, and a right Senſe of Duty on the Mind.

Muſic made a great part of the Diſcipline of the antient *Pythagoreans*, and was uſed by them to draw over the Mind to laudable Actions, and ſettle in it a paſſionate Love of Virtue. It being their Doctrine, that the Soul itſelf conſiſts of Harmony; and therefore by *Muſic*, they pretended to revive the primitive Harmony of its Faculties. By this primitive Harmony, they meant that which, according to their *Dogma*, was in the Soul, in its pre-exiſtent State in Heaven. See Pythagorean.

Dr. *Wallis* has endeavour'd to account for the ſurpriſing Effects aſcribed to the antient *Muſic*; and charges them principally on the Novelty of the Art, and the Hyperbola's of the antient Writers: Nor does he doubt but the modern *Muſic*, *cæteris paribus*, would produce Effects at leaſt as conſiderable as the antient. The truth is, we can match moſt of the antient Stories of this kind in the modern Hiſtories. If *Timotheus* could excite *Alexander*'s Fury with the *Phrygian* Sound, and ſooth him into Indolence with the *Lydian*; a more modern Muſician is ſaid to have driven *Eric* King of *Denmark* into ſuch a Rage, as to kill his beſt Servants. Dr. *Niewentiit* tells us of an *Italian*, who by varying his *Muſic* from brisk to ſolemn, and ſo *vice verſa*, could move the Soul, ſo as to cauſe Diſtraction and Madneſs. And Dr. *South* has founded his Poem, call'd *Muſica Incantans*, on an Inſtance he knew of the ſame thing.

Muſic, however, is not only found to exert its Force on the Affections, but on the Parts of the Body alſo; witneſs the *Gaſcon* Knight, mention'd by Mr. *Boyle*, who could not contain his Water at the playing of a Bag-pipe; the Woman, mention'd by the ſame Author, who would burſt out in Tears at the hearing of a certain Tune, with which other People were but little affected: To ſay nothing of the trite Story of the *Tarantula*. We have an Inſtance in the Hiſtory of the *French* Academy, of a Muſician's being cured of a violent Fever, by a little Concert occaſionally play'd in his Room.

Nor are our Minds and Bodies alone affected with Sounds, but even inanimate Bodies. *Kircher* tells us of a large Stone, that would tremble at the Sound of one particular Organ-pipe; and *Morhoff* mentions one *Petter*, a *Dutch-man*, who could break Rummer-Glaſſes with the Tone of his Voice. *Merſenne* alſo tells us of a particular Part of a Pavement, that would ſhake and tremble, as if the Earth would open, when the Organs play'd. Mr. *Boyle* adds, that Seats will tremble at the Sound of Organs; that he has felt his Hat do ſo under his Hand, at certain Notes both of Organs and Diſcourſe; and that he was well inform'd, every well-built Vault would anſwer ſome determinate Note.

There is a great Diſpute among the Learned, whether the Antients or Moderns beſt underſtood and practiſed *Muſic*: Some maintaining that the antient Art of *Muſic*, by which ſuch wonderful Effects were perform'd, is quite loſt; and others, that the true Science of Harmony is now arrived to much greater Perfection, than was known or practiſed among the Antients.

This Point is no other way to be determined, but by comparing the Principles and Practice of the one with thoſe of the other

As to the Theory or Principles of Harmonics, 'tis certain we underſtand it better than they; becauſe we know all that they knew, and have improved conſiderably on their Foundations. The great Diſpute then lies on the Practice.

With regard to this, it may be obſerv'd, that among the Antients, *Muſic*, in the moſt limited Senſe of the Word, included *Harmony*, *Rythmus*, and *Verſe*; and conſiſted of Verſes ſung by one or more Voices alternately; or in Choirs, ſometimes with the Sound of Inſtruments, and ſometimes by Voices only.

Their Muſical Faculties, we have already obſerved, were *Melopœia*, *Rythmopœia*, and *Poeſis*. The firſt whereof may be conſider'd under two Heads, *viz.* *Melody* and *Symphony*. As to the latter, it contains nothing but what relates to the Conduct of a ſingle Voice, or making what we call *Melody*. Nor do they appear to have ever thought of the Concert, or Harmony of Parts. This then was no part of the antient Practice, but entirely a modern Invention, to which we are beholden to *Guido Aretinus*, a *Benedictine* Friar. We would not, however, be underſtood to mean, that the Antients never join'd more Voices or Inſtruments than one together in the ſame Symphony; but that they never join'd ſeveral Voices, ſo as that each had a diſtinct and proper Melody, which made among them a Succeſſion of various Concords, and were not in every Note Uniſons, or at the ſame Diſtance from each other as Octaves. This laſt indeed agrees to the general Definition of the Word *Symphonia*; yet 'tis plain that in ſuch Caſes, there is but one Song, and all the Voices perform the ſame individual Melody. But when the Parts differ, not by the Tenſion of the whole, but by the different Relations of the ſucceſſive Notes, this is the modern Art, which requires ſo peculiar a Genius, and on which account the modern *Muſic* has much the advantage of the antient. For further ſatisfaction on the Subject, ſee *Kircher*, *Perrault*, Dr. *Wallis*, Mr. *Malcolm*, and others; who unanimouſly agree, that after all the pains they have taken to know the true State of the antient *Muſic*, they could not find the leaſt reaſon to think there was any ſuch thing in their Days as *Muſic* in Parts. See Symphony, Synaulia, &c.

The antient *Muſical* Notes are very myſterious and perplexed: *Boetius* and *Gregory the Great* firſt put 'em into a more eaſy and obvious Method. It was in the Year 1204, that *Guido Aretine*, a Benedictine of *Aretium* in *Tuſcany*, firſt introduced the Uſe of a Staff with five Lines, on which, with the Spaces, he marked his Notes by ſetting a Point up and down upon 'em, to denote the Riſe and Fall of the Voice; tho *Kircher* mentions this Artifice to have been in uſe before *Guido*'s Time. See Note, Staff, &c.

Another Contrivance of *Guido*'s was to apply the ſix Muſical Syllables *ut*, *re*, *mi*, *fa*, *ſol*, *la*, which he took out of the *Latin* Hymn,

UT *queant Laxis* RE*ſonare fibris*
MI*ra Geſtorum* FA*muli tuorum*
SOL*ve polluti* LA*bii reatum*.
O Pater Alme.

Beſide his Notes of *Muſic*, by which, according to *Kircher*, he diſtinguiſhed the Tones, or Modes, and the Seats of the Semi-tones, he alſo invented the Scale, and ſeveral Muſical Inſtruments, call'd *Polyplectra*, as Spinets and Harpſicords. See Note, Gamut, &c.

The next conſiderable Improvement was in 1330, when *Joannes de Muris*, Doctor at *Paris*, invented the different Figures of Notes, which expreſs the Times, or Length of every Note, at leaſt their true relative Proportions to one another, now call'd *Longs*, *Breves*, *Semi-breves*, *Crochets*, *Quavers*, &c.

The moſt antient Writer of *Muſic*, we have already obſerved, was *Laſus Hermionenſis*; but his Work, as well as thoſe of many others both *Greek* and *Roman*, are loſt. *Ariſtoxenus*, Diſciple of *Ariſtotle*, is the eldeſt Author extant on the Subject; after him came *Euclid*, Author of the Elements: *Ariſtides Quintilianus* wrote after *Cicero*'s time. *Alypius* ſtands next; after him *Gaudentius* the Philoſopher, and *Nicomacus* the *Pythagorean*, and *Bacchius*. Of which ſeven *Greek* Authors, we have a fair Copy, with a Tranſlation and Notes, by *Meibomius*. *Ptolemy*, the celebrated Mathematician, wrote in *Greek* of the Principles of Harmonics, about the time of the Emperor *Antoninus Pius*. This Author keeps a Medium between the *Pythagoreans* and *Ariſtoxenians*.

nians. He was ſucceeded at a good diſtance by *Manuel Bryennius.*

Of the *Latins* we have *Boethius*, who wrote in the time of *Theodoric* the *Goth*, and one *Caſſiodorus*; about the ſame time *Martianus*, and St. *Auguſtin* not far remote. Of the Moderns are *Zarlin*, *Salinas*, *Vincenzo Galileo*, *Doni*, *Kircher*, *Merſenne*, *Paran*, *de Caux*, *Perrault*, *Wallis*, *Des Cartes*, *Holdiſworth*, *Malcolm*, &c.

MUSICAL *Sound*, MUSICAL *String*, MUSICAL *Faculties*, MUSICAL *Notes*, } See { SOUND. CHORD. MUSIC. NOTE.

MUSK, a kind of Perfume, of a very ſtrong Scent; only agreeable when moderated by the Mixture of ſome other Perfume. See PERFUME.

It is found in a kind of Bag, or Tumour growing about the bigneſs of a Hen's Egg under the Belly towards the genital Parts of a wild Beaſt of the ſame Name; and appears to be nothing elſe but a kind of bilious Blood there congealed, and almoſt corrupted.

The Animal is pretty common in the Kingdoms of *Boutan*, *Tonquin*, and ſome other, as *Cochin China*, &c. But the moſt eſteemed are thoſe in the Kingdom of *Tibet*.

They inhabit the Woods and Foreſts, where the Natives hunt 'em down: when the Beaſt is kill'd, they cut out the Bladder under the Belly, ſeparate the coagulated Blood, and dry it in the Sun, where it is reduced into a light friable Subſtance almoſt of the nature of a Powder, of a dusky reddiſh Colour; and acquires a very ſtrong and diſagreeable Smell. It is then tied up again in Veſſels, and exported to other Countreys; and this is the *Musk* which we uſe.

What the Antients have wrote of it, is fabulous, *viz.* that it comes from the Teſticles of a Caſtor, which, to ſtop the purſuit of the Hunter, caſtrates itſelf. The occaſion of their Error may be owing to this, that among the *Indians* the *Musk* Animal goes by the name of *Caſtor*.

Musk is in conſiderable uſe among the Perfumers and Confectioners; tho much leſs now than formerly. It is ſuppoſed to fortify the Heart and Brain; and is good againſt Deafneſs; but is little uſed in Medicine, as being apt to occaſion the Vapours.

The Word comes from the *Arabic Moſcha*, Musk: whence was form'd the common *Greek* μοσχος.

MUSKET, or MUSQUET, a Fire-Arm bore on the Shoulder, and uſed in War; to be fired by the Application of a lighted Match. See FIRE-*Arm*.

The length of the *Musket* is fixed to three Feet eight Inches from the Muzzle to the Touch-Pan, and its Bore is to be ſuch as may receive a Ball of 22 to 24 in a Pound.

Muskets were antiently bore in the Field by the Infantry; at preſent they are little uſed ſave in the Defence of Places.

MUSKETOON, a *little Muſquet*, ſhorter, tho thicker than the ordinary Muſquet.

It is fired by the colliſion of a Steel and Flint in the Lock; whereas the Muſquet is fired by a Match. Its Bore is a 38th part of its Length; and carries five Ounces of Iron, or ſeven and a half of Lead, with an equal Quantity of Powder.

MUSSLIN, MUSLIN, or MOUSSELIN, a fine Cloth, wholly of Cotton; ſo call'd as not being even, but having a downy Nap on its Surface reſembling Moſs, which the *French* call'd *Mouſſe*.

There are various kinds of *Muſlins* brought from the *Eaſt-Indies*, chiefly *Bengall*; *Betelles*, *Tarnatans*, *Mallemolles*, *Tanjebs*, *Terindames*, *Doreas*, &c.

MUST, ſweet Wine, newly preſſed from the Grape; or the new Liquor preſs'd from the Fruits before it has work'd or fermented. See WINE.

MUSTARD, a Preparation of a Grain of that Name, ground or beaten up with Vinegar, or the *Muſt* of Wine; whence its Name.

MUSTARD-SEED, in *Latin Sinapi*, gives the Denomination to a Species of Topical Medicines call'd *Sinapiſms*. See SINAPISM.

Muſtard-Seed is alſo uſed in preparing Chagrine. See CHAGRINE.

MUSTER, a Review of Military Forces, in order to take account of their Numbers, Condition, Accoutrements, Arms, &c.

The Word is form'd of the *French Mouſtre*, Specimen. See REVIEW.

MUSTER *of Record* (*Stat.* 18 *Hen.* 6.) is to be enrolled in the Number of the King's Soldiers. See ROLL.

MUSTER-*Maſter General*, or *Maſter of the King's* MUSTERS, is an Officer in an Army, who takes account of every Regiment, their Number, Horſes, Arms, &c.

MUSTER-*Rolls*, are Liſts of the Soldiers in every Troop, Company, Regiment, &c.

MUSULMAN, a Title by which the *Mahometans* diſtinguiſh themſelves; ſignifying, in their Language, *True Believer*, or *Orthodox*. In *Arabic* they call it *Moſlem*, *Moſleman*, and *Moſolmam*. See MAHOMETAN.

The Name was firſt given the *Sarazens*; as is obſerved by *Leunclavius*. There are two kinds of *Muſſulmen*, very averſe to each other; the one call'd *Sonni*, and the other *Chay*. The *Sonni* follow the Interpretation of the Alcoran given by *Omer*; and the *Chay* are Followers of *Haly*. The Subjects of the King of *Perſia* are *Chay*; and thoſe of the Grand Signor, *Sonni*.

Some Authors will have it, that *Muſſulman* ſignifies *Saved*, that is, Predeſtinated; and that the *Mahometans* give themſelves the Appellation, as believing themſelves all Predeſtinate.

Martinius is more particular as to the Origin of the Name, he derives it from the *Arabic* מסלם *Muſalam*, Saved, taken out of Danger; and obſerves, that the *Mahometans* eſtabliſhing their Religion by Fire and Sword, maſſacred all thoſe who would not embrace it, and granted Life to all that did, calling them *Muſſulmans*; *i. e. Erepti è periculo*, whence the Word, in courſe of Time, became the diſtinguiſhing Title of all thoſe of that Sect, who have affixed to it the ſignification of *True believer*.

MUSULMANISM, ſee MAHOMETANISM.

MUTATION, the Act of Changing: or, ſometimes the Change itſelf. See CHANGE and PERMUTATION.

'Tis one of the Laws of Nature, that the *Mutation* of Motion is ever proportional to the moving Force impreſs'd. See NATURE.

MUTATION, in the antient Muſic, ſignifies the Changes, or Alterations that happen in the Order of the Sounds which compoſe the Melody.

Ariſtoxenus ſays it is, as it were, a kind of Paſſion in the Order of the Melody. See MELODY.

The Changes are, firſt, in the *Genera*; when the Song begins in one, as the *Chromatic*, and paſſes into another, as the *Diatonic*. Secondly, In the Syſtem; as when the Song paſſes out of one *Tetrachord*, as *Meſon*, into another, as *Diazeugmenon*; or more generally, when it paſſes from a high place of the Scale to a lower, or contrarily, *i. e.* part of it is ſung high, and part low. Thirdly, In the Mode or Tone, as when the Song begins in one, as the *Doric*; and paſſes into another, as the *Lydian*. Fourthly, In the *Melopœia*, that is, when the Song changes the very Air, ſo as from Gay and Sprightly, to become Soft and Languiſhing; or from a Manner that expreſſes one Paſſion or Subject, to the Expreſſion of ſome other.

MUTE, in Grammar, a Letter which is not ſounded, or heard in the Pronunciation; or a Letter which yields no Sound of itſelf and without a Vowel. See LETTER.

The Conſonants are ordinarily diſtinguiſhed into *Mutes* and *Liquids*, or half Vowels. See CONSONANT.

The *Mutes* in the *Engliſh* Alphabet are Eleven, *viz.* B, C, D, G, H, K, P, Q, T. They are call'd *Mutes* becauſe a Liquid can't be ſounded in the ſame Syllable before them, as *rpo*; but a *Mute* may be pronounced in the ſame Syllable before a Liquid, as *pro*, See LIQUID.

MUTE, *Dumb*, a Perſon that cannot ſpeak, or has not the uſe of Speech. See DUMBNESS.

Mutes and *Dwarfs* make their Fortune in the Grand Signor's Seraglio. The *Mutes* ſerve as Executioners to take off Perſons of the firſt Rank.

MUTE, in Law, he that ſtands Dumb, or Speechleſs.

A Priſoner may ſtand *Mute* two manner of ways; 1. When he ſpeaks not at all: In which Caſe it is enquired, whether he ſtand *Mute* of Malice, or by the Act of God: If by the latter, then the Judge, *ex Officio*, ought to enquire whether he be the ſame Perſon; and of all other Pleas, which he might have pleaded if he had not ſtood *Mute*. 2. He is ſaid to be *Mute* when he pleads not Guilty, or does not directly anſwer, or will not put himſelf upon the Enqueſt to be tried.

MUTILATION, the retrenching, or cutting away of any Member of the Body.

The uſe of the Word is alſo extended to Statues and Buildings, where any part is wanting, or the Projecture of any Member is broke off.

MUTILATION is ſometimes underſtood in a more immediate manner for *Caſtration*. See CASTRATION.

MUTUAL, a relative Term, denoting ſomething that is reciprocal between two or more Perſons. See RECIPROCAL.

Thus we ſay *Mutual Aſſiſtance*, *Mutual Averſion*, &c.

There are *Mutual*, or reciprocal Duties, Offices, &c, between Superiors, and Inferiors; the King and his Subjects; the Maſter and his Servants, &c.

Vaugelas makes a Diſtinction between *Mutual* and Reciprocal. *Mutual*, according to him, is underſtood of what is between two only; and Reciprocal of what is between more than two. But this Deciſion is little regarded in common uſe.

A MUTUAL *Teſtament* is that made by two Perſons leaving their Effects reciprocally to the Survivor.

MUTULE, MUTULUS, in Architecture, an Ornament, otherwiſe call'd *Modillion*. See MODILLION.

The only difference between *Mutule* and Modillion conſiſts in this, that the former is uſed in ſpeaking of the *Doric* Order, and the latter in the *Corinthian*. See DORIC, &c.

The *Mutules* in the *Doric* anſwer to the *Triglyphs*; whence ſome make *Guttæ*, or Drops to hang. See GUTTÆ.

MUTUUM, in the Civil Law, is a Loan ſimply ſo call'd; or a Contract introduced by the Law of Nations, whereby a thing conſiſting in Weight, as ſuppoſe Bullion; in Number, as Money; or in Meaſure, as Corn, Timber, Wine, &c. is given to another, upon Condition that he ſhall return another thing of the ſame Quantity, Nature, and Value on demand.

This, therefore is a Contract without Reward: So that where Uſe or Intereſt ariſe, there muſt be ſome particular Article in the Contract whereon it is founded.

MUZZLE of a Gun, is ſtrictly the Moulding or Circle which incompaſſes, and ſtrengthens the Mouth of it.

MYLOGLOSSUM, in Anatomy, a Pair of Muſcles thus call'd, becauſe ariſing about the backſide of the *Molares*, or Grinding-Teeth, and inſerted into the Ligament of the Tongue; helping to pull it upwards. See TONGUE.

Theſe are the ſame with what Mr. *Cowper* calls *Stylogloſſum*. See STYLOGLOSSUM.

MYLOHYOYDEUM, in Anatomy, a broad, but ſhort Muſcle lying immediately under the *Biventer* Muſcle of the Jaw, and which ſpringing from the lower Margin on each ſide the under Jaw, is inſerted into the Baſis of the *Os Hyoides*. See HYOIDES.

Beſides the common Uſe aſcribed to this Muſcle, which is to move the *Hyoides*, the Tongue, and the Larynx both upwards, inwards, and ſide-ways; its Series of tranſverſe Fibres have a further uſe when it is at reſt; and that is to compreſs the Glands under the Tongue, and by that means promote the diſcharge of Saliva into the Mouth from the lower ſalival Ducts. Whence it is we uſe this Muſcle when we want Saliva in the Mouth.

MYOCEPHALE, in Anatomy, a little part of the *Tunica Uvea*; ſo call'd, as reſembling the Head of a Fly. See UVEA.

The Word is form'd of the *Greek* μυῖα Fly, and κεφαλὴ, Head.

MYOLOGY, in Anatomy, a Deſcription of the Muſcles; or the Knowledge of what relates to the Muſcles. See MUSCLE.

Anatomy is divided into *Oſteology*, *Myology*, &c. See ANATOMY.

The Word is form'd of μῦς, μῦ, a Muſcle, and λόγος, Diſcourſe.

MYOMANCY, a kind of Divination, or Method of foretelling Events by means of Mice. See DIVINATION.

Some Authors hold *Myomancy* one of the moſt antient Kinds of Divination; and think it is on this account that *Iſaiah*, lxvi. 17. reckons Mice among the abominable things of the Idolaters. But beſide that it is not certain that the *Hebrew* Word עבר uſed by the Prophet, ſignifies a *Mouſe*; 'tis evident it is not Divination by that Animal, be it what it will, is here ſpoke of; but the eating it.

MYOPES, Perſons who are ſhort-ſighted; or, as we popularly call it, *Purblind*. See SIGHT.

Myopes are properly ſuch as ſee remote Objects confuſedly, and near ones diſtinctly. See MYOPIA.

The defect of *Myopes* is not in the Optic Nerve, the Pupil, or the like; but in the Form of the Cryſtalline, or the diſtance of the Retina from the ſame. The Cryſtalline being rounder, or more convex than ordinary, the Rays will be render'd more Convergent than ordinary in paſſing thro the ſame (ſee REFRACTION); by this means they will be brought to meet, or concur at the leſs diſtance from the Cryſtalline; ſo that if the Retina be at its uſual diſtance, they will concur e'er they reach it. 'Tis the too great nearneſs, then, of the Retina to the Cryſtalline, that conſtitutes the *Myopia*.

Myopes have their Sight very durable; and rarely come to need Spectacles. See SPECTACLES.

Thoſe who labour under the oppoſite Defect, are call'd *Presbytæ*. See PRESBYTA.

The Word is form'd of μυῖα, Fly; by reaſon remote Objects appear to them like Flies; or, perhaps, by reaſon the ſame Conformation of the Eye is obſerved in Flies.

MYOPIA, *Short-ſightedneſs*, a Confuſion or Obſcurity of Sight, when directed to remote Objects. See VISION, SIGHT, &c.

The *Myopia* is owing to the too great Convexity of the Ball of the Eye, and particularly of the Cryſtalline; whence it happens that the viſual Rays concur before they reach the Retina. See MYOPES.

For this Reaſon, to ſee an Object diſtinctly, they muſt either apply it cloſe to the Eye; or uſe a concave Glaſs. See CONCAVE.

The *Myopia* wears off by time, the Eye growing flatter and flatter as Perſons draw towards old Age. See EYE.

MYOTOMIA, from μῦς *Muſculus*, a Muſcle, and τέμνω *ſeco*, to cut; is a Diſſection of the Muſcles.

MYRIAD, the Number of Ten Thouſand.

Whence *Myriarcha*, a Captain, or Commander of Ten Thouſand Men.

MYRMECIA, in Medicine, a kind of Wart growing on the Palm of the Hand, and Soal of the Foot; hard, and leſs than thoſe call'd *Thymi*: they have alſo deeper Roots, and are more painful. They are uſually broad at bottom, and narrow at top.

MYRMIDONS, MYRMIDONES, in Antiquity, a People of *Theſſaly*, fabled to have aroſe from Ants, or Piſmires, upon a Prayer put up to that purpoſe by King *Iacus* to *Jupiter*, after his Kingdom had been diſpeopled by a ſevere Peſtilence.

In *Homer*, and *Virgil*, the *Myrmidons* are *Achilles*'s Soldiers.

MYRMILLO, a kind of Gladiator in antient *Rome*; call'd alſo *Murmulio*. See GLADIATOR.

Turnebus derives the Name from the *Myrmidons*.

MYRABOLANS, a kind of Medicinal Fruit, brought from the *Indies*; much more uſed in the *Arabic* than the *Greek* Pharmacy; and more among the Antients than the Moderns; and ſtill more abroad than in *England*.

There are five kinds of *Myrabolans*: The firſt call'd *Citrine*, of a yellowiſh red, hard, oblong, and the ſize of an Olive. The ſecond call'd *black*, or *Indian Myrabolans*, the bigneſs of an Acorn wrinkled, without Stone. The third, *Chebule Myrabolans*, the ſize of a Date, of a yellowiſh brown, pointed at the end. The fourth *Emblics*, round, rough, the ſize of a Gall, of a dark brown. The laſt call'd *Bellerics*, hard, yellow, round, the ſize of an ordinary Prune, leſs angular than the reſt.

Myrabolans of each kind are ſlightly Purgative, and Aſtringent.

The Word comes from the *Greek* μύρον *Unguent*, and βάλανος Acorn; as being in form of Acorns, and uſed in Medicine.

MYRRH, a kind of Gum, or Reſin iſſuing, by Inciſion, and ſometimes ſpontaneouſly, from the Trunk, and larger Branches of a Tree growing in *Arabia*, *Egypt*, and eſpecially *Abyſſinia*. See GUM.

Authors are not agreed about the Tree which produces this Gum: 'Tis true, they all make it ſmall, and thorny; but diſagree about the Form of its Leaves.

The Inciſions are made twice a Year, and the *Myrrh* oozing out is received onRuſh-Mats, diſpoſed underneath.

The Druggiſts ſell two kinds of *Myrrh*, viz. *Myrrh in Tears*, which they call *Stacte*; the other *Ungulata*, or *Nail'd*.

Of the firſt kind, the beſt is in bright yellow, tranſparent Drops, friable, light, of a ſtrong diſagreeable ſmell: But this is very rare; and moſt of that in uſe is the *Naild Myrrh*, ſo call'd from little white Spots obſerved thereon, much like thoſe on the Nails of the Fingers. The beſt is in little Maſſes, or Tears, red, and tranſparent; which, when broke, contain a kind of unctuous Liquor, the moſt precious part of the *Myrrh*, and the real *Stacte* of the Antients. See STACTE.

This Gum enters a great number of Medicinal Compoſitions. Its Bitterneſs renders it good for the Stomach, and againſt Worms; 'tis chew'd to prevent Infection from contagious Diſeaſes. Dr. *Quincy* ſays it is excellent to cleanſe and ſtrengthen the Womb, and againſt tickling Rheums; a good Detergent; and as ſuch much added externally in Unguents for the Healing of Wounds; and makes the principal Ingredient uſed in Embalming. The Chymiſts draw from it Oils, Spirits, Tinctures, &c. to which they attribute extraordinary Virtues.

The Word comes from μύρω, I run, or trickle.

The Antients had Veſſels of a kind of *Myrrh*, call'd *Vaſa Murrhina*, *Myrrhina Pocula*, &c. Some ſay they were made of what we now call *Agat*, others of *Onyx*, others of *Coralline*, and others of a Gum congealed and condenſed.

MYRTIFORMES *Carunculæ*, in Anatomy, little Caruncles, or fleſhy Knots adjoining to, or rather in the Place of the *Hymen* in Women. See CARUNCLE.

They are about the bigneſs of Myrtle-Berries, whence they take their Name; and are ſuppoſed by ſome to be largeſt in Maids, and by degrees to grow leſs thro the uſe of Venery.

Others, and with more probability, derive them from the broken Membrane of the *Hymen*, whoſe Fragments ſhrunk up, they take them to be. See HYMEN.

MYRTLE, MYRTLES, the Berries, or Fruit of a Shrub well known under the Name of *Myrtle*, growing common in *Spain*, eſpecially in the Mountains of *Laſierra Morena*, &c.

There are two kinds of *Myrtle*, Male and Female; the latter whereof produces the beſt Berries, and in the greateſt Quantity.

The Fruit is at firſt green, but becomes black inſenſibly within; it is a white Seed in form of a Creſcent, ſolid, hard, and of an aſtringent Taſte; while the Fruit continues on the Trees, 'tis ſucculent and ſmooth, and only becomes acid and wrinkled, becauſe dried in the Sun for the convenience of Carriage.

They are much uſed in Medicine, eſpecially in *France*, where they prepare Oils, Syrups, &c. from 'em.

The Perfumers likewiſe uſe 'em in their Perfumes, and draw an Eſſence from 'em. The *German* Dyers make a blue Colour from 'em. In *England* the Leaves and Branches are uſed for Tanning of Leather.

MYSTERY, MYSTERIUM, ſomething ſecret, or hidden; impoſſible, or difficult to be comprehended.

The Word is primarily uſed in ſpeaking of certain Truths revealed in Scripture, into the underſtanding whereof human Reaſon cannot penetrate: Such are the Doctrine of the *Trinity*, the *Incarnation*, &c. See TRINITY, &c.

The Word comes from the *Greek* μυστηριον; and that, according to ſome Etymologiſts, from μύω *Claudo*, *taceo*, I ſhut, I am ſilent, and στομα, Mouth; but then whence comes the *r*? Muſt the *m* of στομα be converted into an *r*? The Word, then, is derived with more Propriety from the *Hebrew* סתר *Sator*, to hide, whence is form'd מסתר *Miſtar*, a hidden thing.

We have an Epitome of the *Myſteries of Faith*, or the *Myſteries of Chriſtianity*, in the Symbols, or Creeds, compiled by the Apoſtles, the Council of *Nice*, and St. *Athanaſius*. See CREED.

In all theſe, mention is made of the *Myſtery* of the Trinity; the *Myſteries* of the *Incarnation* of the Son of God, his *Death* and *Paſſion*, and his *Deſcent* into *Hell* for the Redemption of Mankind. Of his *Reſurrection* the third Day, his *Aſcenſion* to Heaven, his *ſitting at the right Hand of God*, and his *coming again to judge the World*. Of the *Divinity*, and Co-equality of the Holy Ghoſt with the Father and the Son: Of the Unity of the Church: Of the Community of Saints; the participation of the Sacraments; and the general Reſurrection.

Theſe are the principal *Myſteries* of Faith; which the Church declares neceſſary to be known and believ'd, in order to Salvation.

From the earlieſt Ages there have been particular Feſtivals inſtituted by the Church in honour of theſe *Myſteries*; to return Thanks to God for having revealed them, and to oblige the Miniſters and Paſtors to inſtruct the People therein. See FEASTS.

Such are the Feaſt of the *Myſtery of the Incarnation*, call'd alſo *Chriſtmas*; thoſe of the *Circumciſion*, *Paſſion*, *Reſurrection*, &c. See INCARNATION, CIRCUMCISION, EASTER, EPIPHANY, &c.

The Heathens too had their *Myſteries*: The *Egyptian* Prieſts concealed the *Myſteries* of their Religion and Philoſophy under *Hieroglyphics*. See HIEROGLYPHIC.

Thoſe who revealed the *Myſteries* of the *Bona Dea* were ſeverely puniſhed; and none were truſted with them but thoſe formerly initiated, and ſworn to ſecrecy.

But theſe were not call'd *Myſteries*, as being incomprehenſible, or raiſed above the ken of Reaſon; but becauſe they were covered, and diſguiſed under Types, and Figures, to raiſe the greater Veneration in the People.

The *Myſteries* of Paganiſm were celebrated in Grotto's, fitter to conceal Crimes than to hold religious *Myſteries* in.

In Scripture-Language, the Term *Myſtery* is uſed with ſome Latitude. He that reveals Secrets, (or *Myſteries*) makes known to thee what ſhall come to paſs; *Dan.* ii. 29. There is a God in Heaven that reveals *Myſteries*, *ib.* v. 28.

In which Places, *Myſtery* is any thing not to be known without Divine Revelation.

We ſpeak the Wiſdom of God in a *Myſtery*, which God had reſolved before all Ages to reveal for our Glory, 1 *Cor.* ii. 7. We are to be accounted (ſays St. *Paul*) as Miniſters of Jeſus Chriſt, and Diſpenſers of the *Myſteries* of God, 1 *Cor.* iv. 1. Tho' I underſtand all *Myſteries*, and have the Knowledge of all Things, if I have not Charity, I am nothing, 1 *Cor.* xiii. 2. Behold I ſhew you a *Myſtery*, 1 *Cor.* xv. 51. By reading my Epiſtle, you may underſtand my Knowledge in the *Myſtery* of Chriſt; *ad Epheſ.* iii. 4. And in the following Verſes he adds, that this *Myſtery* is, that the *Jews* are Fellow-Heirs, and make but one Body with the *Jews*, being Sharers with them in the Promiſes of God in the Goſpel. Holding the *Myſtery* of the Faith in a pure Conſcience, 1 *Tim.* iii. 9. When the ſeventh Angel begins to ſound his Trumpet, the *Myſtery* of God ſhall be finiſh'd, as he has declared to his Servants the Prophets, *Revel.* x. 7.

In all which Paſſages, the Word *Myſtery* is taken for the ſecret hidden Things, which God has diſcover'd by his Miniſters the Prophets, Jeſus Chriſt, and the Apoſtles.

MYSTICAL, MYSTIC, ſomething Allegorical, or *Myſterious*. See MYSTERY, ALLEGORY, &c.

The Commentators on the Scriptures, beſides a literal, find alſo a *myſtical* and a moral Meaning.

The Bible, they contend, is a Book written both within ſide, and without ſide. Within ſide, with regard to the *myſtical*, internal, ſublime, and hidden Senſe; and without ſide with regard to the literal and grammatical Senſe, immediately expreſs'd by the words.

In effect ſeveral of the antient Fathers, and Doctors of the Church, underſtand the Books mentioned in *Ezech.* ii. 9. and in the *Apocalypſe*. v. 1. *which were wrote both within ſide and without*, of the Scriptures.

The literal and *myſtical* Senſe they think are here fairly intimated.

The Senſe of Scripture, ſay they, is either that immediately ſignified by the Words and Expreſſions in the common uſe of Language: or it is mediate, ſublime, typical, and *myſtical*; wherein the things themſelves ſignified, are made to ſignify ſtill other and further things, according to the particular Deſign, and Intention of God, and the Prophets and Apoſtles inſpired by him. See TYPICAL.

The literal Senſe they again divide into literal *Proper*, which is contained in the Words taken ſimply and properly:

And literal *Metaphorical*, where the Words are to be underſtood in a figurative and metaphorical Senſe; as *where the Right-Eye is commanded to be pluck'd out*, &c. Wherever the proper literal Senſe contains any thing abſurd or indecent, there recourſe muſt be had to the literal Metaphorical.

All Scripture has a true literal Senſe, but not always a *Myſtical* one. We muſt always underſtand it in the literal Senſe, when it ſpeaks immediately of any of the Laws of Nature, of Charity, of doing Good, when it gives us Inſtructions for the Conduct of Life, for the Regulating our Manners, when it relates any Matter of Fact, or any Point of Hiſtory.

The ſame Paſſage of Scripture has ſometimes ſeveral literal Senſes, expreſs'd and ſignified immediately by the Words taken in their proper and their figurative Senſe, and which appear to have been all intended by the inſpir'd Perſon who ſpoke them, as having been ſo underſtood by others of them. As thoſe Words in *Pſalm* ii. *Thou art my Son, this day have I begotten thee*; which St. *Paul* underſtands according to the ſtrict Letter in *Heb.* i. of the Generation of Jeſus Chriſt in time: And in *Acts* xiii. 33. he takes them in a metaphorical Senſe, and applies them to our Saviour's Reſurrection. Thus in *Hoſea* xi. 1. the Words of the Prophecy, *I have called my Son out of* Egypt, are underſtood literally of the Children of *Iſrael* whom God brought out of *Egypt* under the Conduct of *Moſes*; and yet in *Matth.* ii. 15. they are underſtood metaphorically of Jeſus Chriſt. See PROPHECY.

The *Myſtical Senſe* of Scripture is that which the things expreſs'd by the Words ſignify further; or it is a ſecond Signification, and Expreſſion ſignified by the firſt; this ſecond being expreſs'd immediately by the firſt, and mediately by the Words themſelves. Writers allow of three kinds of *Myſtical* Senſe in the Word of God: The firſt correſponding to Faith, and call'd *Allegorical*; the ſecond to Hope, call'd *Anagogical*; and the third to Charity, call'd the *Tropological Senſe*.

The four Senſes, and their Applications are included in the *Latin* Diſtich,

Litera geſta docet, quid credas Allegoria,
Moralis quid agas, quo tendas Anagogia.

Sometimes the ſame Word in Scripture is taken in all the four Senſes. Thus the word *Jeruſalem* literally ſignifies the Capital of *Judea*; Allegorically, the Church Militant; Tropologically and Morally, a Believer; and Anagogically, Heaven.

So, that Paſſage in *Geneſis*, *Let there be Light, and there was Light*; ſignifies, according to the Letter, Corporeal Light; by Allegory, the Meſſiah; in the Tropological Senſe, Grace; and Anagogically, the Light of Glory.

MYSTICS, MYSTICI, a kind of Religious Sect, diſtinguiſhed by their profeſſing pure, ſublime, and perfect Devotion, with an intire diſintereſted Love of God, free of

all

all ſelfiſh Conſiderations. See PIETISTS, MOLINOSISTS, &c.

The *Myſtics*, to excuſe their fanatic Extaſies, and amorous Extravagancies, alledge that Paſſage of St. *Paul*; *The Spirit prays in us by Sighs and Groans that are unutterable.* Now, if the Spirit, ſay they, pray in us; we muſt reſign ourſelves to its Motions, and be ſway'd, and guided by its Impulſe, by remaining in a State of mere Inaction. See QUIETISM.

Paſſive Contemplation is that State of Perfection to which the *Myſtics* all aſpire. See CONTEMPLATION.

MYSTIC *Theology*, is a refined and ſublime kind of Divinity, profeſs'd by the *Myſtics*. It conſiſts in a Knowledge of God, and Divine things, not acquir'd in the common way, but infuſed immediately by God, and which has the Effect to move the Soul in an eaſy, calm, devout, affective manner; to unite it intimately to God; to illumine the Underſtanding, and warm and enliven the Will in an extraordinary manner.

Among the Writings attributed to *Dionyſius* the *Areopagite*, is a Diſcourſe of *Myſtic Theology*. Several others have wrote on the ſame Subject, both Antients and Moderns.

MYTHOLOGY, the Hiſtory of the fabulous Gods, and Heroes of Antiquity; and the Explanation of their Myſteries, of their Religion, their Fables, and Metamorphoſes. See GODS, FABLES, METAMORPHOSES, &c.

Natalis Comes has wrote a *Mythology*.

The Word is *Greek*, and ſignifies a Diſcourſe or Deſcription of Fables; from μύθος *Fabula*, and λογος *Sermo*, Diſcourſe.

MYURUS, in Medicine, a Pulſe which is continually weakening by inſenſible Degrees; ſo that the ſecond Beat is fainter than the firſt; the third than the ſecond, &c. See PULSE.

The Word is formed of the *Greek* μυρος, like a *Mouſe's Tail*; which is compounded of μῦς, Mouſe, and οὐρὰ, Tail; the Diminution of the Pulſe being ſuppoſed like that of the thickneſs of the Tail of that Animal, which grows leſs from the Root to the Tip.

N.

N, A Liquid Conſonant, and the 13th Letter of the *Greek*, *Latin*, *Engliſh*, &c. Alphabets. See LETTER and ALPHABET.

The *N* is a *d*, paſs'd thro' the Noſe; ſo that when the Noſe is ſtopped by a Cold, or the like, 'tis uſual to pronounce *d* for *n*. M. *l'Abbe de Dangeau* obſerves, that in the *French*, the *n* is frequently a meer Naſal Vowel, without any thing of the Sound of a Conſonant in it. He calls it the *Sclavonic* Vowel.

The *Hebrews* call their *N Nun*, which ſignifies *Son*, as being ſuppoſed the Offspring of *M*; partly on account of the reſemblance of Sound, and partly on that of the Figure. Thus from the *M*, by omitting the laſt Column, is form'd *N*: and thus from the Capital *N*, by omitting the firſt Column, is form'd the *Greek Minuſcule ν*. Hence for *Biennius*, &c. the *Latins* frequently uſe *Bimus*, &c. And the *Greek ν* at the end of a Word, they convert into an *m*; as φαρμαχον, *Pharmacum*, &c.

N before *p*, *b*, and *m*, they change into *m*, and frequently into *l* and *r*, as *in-ludo*, *illudo*; *in-rigo*, *irrigo*, &c. In which they agree with the *Hebrews*, who, in lieu of *Nun*, frequently double the following Conſonant; and the *Greeks*, who do the ſame, as when for *Manlius*, they write μαλλιος, &c.

The *Greeks* alſo, before *κ*, *γ*, *χ*, *τ*, changed the *ν* into *γ*: in which they were followed by the antient *Romans*, who for *Angulus* wrote *Aggulus*; for *anceps*, *agceps*, &c.

The *Latins* retrench the *n* from *Greek* Nouns ending in ων; as λεων, *Leo*; δρακων, *Draco*. On the contrary, the *Greeks* add it to the *Latin* ones ending in *o*; as κάτων.

N, among the Antients, was a Numeral Letter, ſignifying 900; according to the Verſe in *Baronius*,

N, quoque Nongintos numero deſignat habendos.

And when a Line was ſtruck over it, $\bar{N}$, Nine Thouſand.

Among the antient Lawyers, *N. L.* ſtood for *Non Liquet*, *i. e.* the Cauſe is not clear enough to paſs Sentence upon.

N°, in Commerce, &c. is uſed as an Abbreviation of *Numero*, Number. Thus alſo in Medicine, *Caryophyllorum*, N° vi. ſignifies ſix Cloves.

NABONASSAR, in Chronology. The *Æra of* NABONASSAR is famous. We know but little of the Hiſtory of the Man; only that he was King of *Babylon*, and was alſo call'd *Beleſus*; tho' ſome will have him the *Baladan* mention'd in *Iſaiah* xxxix. 1. and 2 *Kings* xx. 12. Some even conjecture that he was a *Mede*; and that he was ſet on the Throne by the *Babylonians*, upon their riſing and ſhaking off the Subjection of the *Medes*.

The Beginning of this Prince's Reign is of great Importance in Chronology; by reaſon *Ptolemy* aſſures us, there were Aſtronomical Obſervations made by the *Chaldeans* from *Nabonaſſar* to his Time: and *Ptolemy*, and the other Aſtronomers, account their Years from that Epocha.

From the Obſervations quoted by *Ptolemy*, it follows, that the firſt Year of this Æra is the 747th Year before Jeſus Chriſt; and the 3967th of the *Julian* Period. See EPOCHA.

The Years of this Epocha are *Egyptian* Years, of 365 Days each; commencing on the 26th of *February*, and reckon'd, according to the Computation of Aſtronomers, from Noon. See YEAR.

NADIR, in Aſtronomy, the Point oppoſite to the Zenith; *i. e.* that Point directly under our feet; or a Point in a right Line drawn from our Feet thro' the Center of the Earth, and terminating in the Under-Hemiſphere. See ZENITH.

The Zenith and *Nadir* are the two Poles of the Horizon, each 90° diſtant from it, conſequently each in the Meridian. See HORIZON.

The Word *Nadir* is pure *Arabic*.

The *Sun's Nadir*, is the Axis of the Cone projected by the Shadow of the Earth; thus call'd, in regard that Axis being prolonged, gives a Point in the Ecliptic diametrically oppoſite to the Sun.

NÆVI, in the Animal Oeconomy, Marks made on the *Fœtus* by the Imagination of the Mother, in longing for any thing.

See theſe accounted for under the Article MONSTER. See alſo FOETUS and IMAGINATION.

NAIANT, or NATANT, that is, *Swimming*; a Term in Heraldry, uſed in the blazoning of Fiſhes, when drawn in an Horizontal Poſture, Feſs-wiſe, or tranſverſely, a-croſs the Eſcutcheon; that being their *Swimming* Poſture. See FISHES.

NAIDS, or NAIDES, a ſort of Heathen Divinities, ſuppoſed to preſide over Fountains and Rivers. See GOD. *Strabo* ſays, the *Naids* were Prieſteſſes of *Bacchus*.

The Word comes from the *Greek* νάειν, *to glide*, or ναίειν, *to abide*, *inhabit*.

NAILING *of Cannon*, the driving of a *Nail*, or Iron Spike, by force, into the Touch-hole of a Piece of Artillery; ſo as to render it uſeleſs to the Enemy. See CANNON.

NAILS, in the Animal Body, a kind of horny Excreſcences, growing over the Ends of the Fingers and Toes of Men, and ſeveral other Animals; much of the ſame nature with the Hoofs of others. Hoofs being nothing elſe but a Number of ſmall Husks, anſwering to ſo many *Papillæ* of the Skin; it may be concluded, that *Nails* are no more but the Covers, or Sheaths of the *Papillæ Pyramidales* of the Skin, on the Extremities of the Fingers and Toes, which dry, harden, and lie upon one another See PAPILLÆ.

Their Uſe is to defend the Ends of the Fingers in handling any hard and rugged Bodies; that Part being exceedingly ſenſible, by reaſon of the great Number of Nerves which terminate here for the Senſation of Feeling. See FEELING.

The *Nails* are form'd, and grow after the ſame manner as the reſt of the Body; their Nouriſhment they receive from their Roots, as is eaſily obſervable from the white Specks ſometimes ſeen on them, and which conſtantly recede from the Root.

The *Romans* were very curious in the Cutting of their *Nails*, and had it done by Artiſts, who made an Employment of it.

The *Chineſe* Doctors and *Litterati* pique themſelves on the exceſſive Length of their *Nails*. F. *le Compte* ſays, ſome of them wear *Nails* near as long as their Fingers. See CIRCUMCISION.

NAILS *in Building*, &c. are little Metalline Members, ſerving to bind or faſten the Parts together, &c.

The ſeveral Kinds of *Nails* are very numerous. As *Back* and *Bottom Nails*; made with flat Shanks to hold faſt, and not open the Wood: *Clamp Nails*, thoſe proper to faſten the Clamps in Buildings, &c. *Claſp Nails*, whoſe Heads claſping and ſticking into the Wood, render the Work ſmooth, ſo as to admit a Plane over it: They are of two Kinds, *viz. long*, proper for fine Buildings of Fir, &c. and *ſtrong*, fit for Oak, and other hard Wood. *Clench Nails*, thoſe uſed by Boat, Barge, &c. Builders; proper for boarded Buildings, that are to be taken down, becauſe they will drive without ſplitting, and draw without breaking. *Clout Nails*, thoſe ordinarily uſed for nailing on of Clouts to Axle-Trees. *Deck Nails*, thoſe proper for faſtning of Decks in Ships, doubling of Shipping, and Floors laid with Planks. *Dog Nails*, proper for faſtening of Hinges to Doors, &c. *Flat Points* are of two kinds, *viz. Longs*, much uſed in Shipping, and proper where there is occaſion to draw, and hold faſt, yet no neceſſity of Clenching. *Jobent Nails*, thoſe commonly uſed to nail thin Plates of Iron to Wood. *Lead Nails*, uſed to nail Lead, Leather and Canvas to hard Wood. *Port Nails*, commonly uſed to nail Hinges to the Ports of Ships. *Pound Nails*, are four-ſquare in the Shank; much uſed in *Norfolk*, *Suffolk* and *Eſſex*, tho' ſcarce elſewhere, except for paling. *Ribbing Nails*, uſed to faſten the Ribbing, to keep the Ribs of Ships in their place in Building. *Roſe Nails*, are drawn four-ſquare in the Shank, and commonly in a round Tool. *Rother Nails*, chiefly uſed to faſten Rother-Irons to Ships. *Round-head Nails*, proper to faſten in Hinges, or other Uſes, where a neat Head is required. *Scupper Nails*, much uſed to faſten Leather and Canvas to Wood. *Sharp Nails*, much uſed, eſpecially in the *Weſt-Indies*, made with ſharp Points, and flat Shanks. *Sheething Nails*, uſed to faſten Sheething-Boards to Ships: the Rule for their Length, is to have them full three times as long as the Board is thick. *Square Nails*, of the ſame Shape as ſharp *Nails*, chiefly uſed for hard Woods. *Tacks*, the *ſmalleſt* of *Nails*, are to faſten Paper to Wood; *Middling*, for Wool-Cards and Oars; *Larger*, for Upholſterers, and Pumps.

In Lathing, 500 *Nails* are ordinarily allowed to a Bundle of five-foot Laths. In Flooring, 200, *i. e.* 240 are allowed for a Square of Flooring.

Nails are ſaid to be toughened, when too brittle, by heating them in a Fire-Shovel, and putting ſome Tallow or Greaſe among them.

NAIL is alſo a ſort of Long Meaſure, chiefly uſed in the Commerce of Cloths; containing the 16th Part of a Yard. See YARD and MEASURE.

NAIRANGIA, a kind of Divination, in uſe among the *Arabs*, drawn from ſeveral *Phænomena* of the Sun and Moon. See DIVINATION.

The Word is form'd from the *Arabic Nairan*, the Plural of *Nair*, Light.

NAISSANT, in Heraldry, is applied to a Lion, or other Animal, ſhewing only the Head, Shoulders, Fore-feet, and Legs, with the Tip of the Tail; the reſt of the Body lying hid under the Shield, or ſome Charge, or Ordinary thereon; from which it appears to be iſſuing or *ariſing*.

Naiſſant differs from *Iſſuant*, in that the Animal in the former Caſe iſſues out at the middle, and in the latter, at the bottom, of the Shield or Charge. See ISSUANT.

F. *Meneſtrier* ſays, *Naiſſant* is only uſed for Animals, which ſhew the bare Head as ariſing out of the Extremity of the Chief, or from above the Feſſe.

NAKED, in Architecture. The NAKED *of a Wall*, &c. is the Surface, or Plain, from whence the Projectures ariſe; or which ſerves as a Ground to the Projectures. See PROJECTURE.

Thus, we ſay, a Pilaſter ought to exceed the *Naked* of the Wall by ſo many Inches; and that the Foliages of a Capital ought to anſwer to the *Naked* of the Column. See COLUMN, &c.

NAKED *Fire*, is a Term uſed by the Chymiſts for an *Open Fire*; or one where the containing Veſſel is immediately expoſed to the Fire. See FIRE and HEAT.

NAKED *Seeds*, in Botany, are ſuch Seeds of Plants as are not incloſed in any Pod, or Caſe. See PLANT and SEED.

NAM, or NAAM, in Law, the taking, or diſtraining another Man's moveable Goods. This is either lawful, or unlawful.

Lawful Naam, is a reaſonable Diſtreſs, proportionable to the Value of the Thing diſtrained for; and was antiently call'd either *Vif* or *Mort*, as it was made of quick or dead Chattel.

Lawful Naam, is ſo either by the Common Law, as when a Man takes another's Beaſts doing damage in his Ground; or by a Man's particular Fact, as by reaſon of ſome Contract, &c. And hence *Namation*, the Act of diſtraining, or taking a Diſtreſs. See DISTRESS.

In *Scotland*, the Word is particularly uſed for *Impounding*.

NAME, a Word, whereby Men have agreed to expreſs ſome Idea; or which ſerves to deſign, or expreſs a Thing, or Subject ſpoken of. See WORD.

This the Grammarians uſually call a *Noun*, tho' their *Noun* is not of quite ſo much Extent as our *Name*. See NOUN.

Seneca, Lib. II. *de Beneficiis*, obſerves that there are a great Number of Things which have no *Name*; and which, therefore, we are forced to call by other borrowed *Names*. *Ingens eſt*, ſays he, *Rerum Copia ſine Nomine quas cum propriis Appellationibus ſignare non poſſumus, alienis Accommodatis utimur*: Which ſhews why in the Courſe of this Dictionary, we frequently give very different Senſes to the ſame Word.

It was *Adam* that firſt gave Things their *Names*, *Gen.* ii. 19. *Formatis, igitur, Dominus Deus, de humo cunctis Animantibus Terræ, & Univerſis Volatilibus Cœli, & omnibus Beſtiis Terræ, adduxit ea ad Adam, ut videret quid doceret Ea; omne enim quod vocavit Adam Animæ Viventis ipſum eſt Nomen ejus.* Ver. 20. *Appellavitq; Adam Nominibus ſuis cuncta Animantia, & univerſa Volatilia Cœli, & omnes Beſtias Terræ.*

Names are diſtinguiſhed into Proper and Appellative.

Proper Names, are thoſe which repreſent ſome individual Thing, or Perſon, ſo as to diſtinguiſh it from all other Things of the ſame Species: as *Socrates*, which repreſents a certain Philoſopher.

Appellative, or *General Names*, are thoſe which ſignify common Ideas; or which are common to ſeveral Individuals of the ſame Species, as Horſe, Animal, Man, Oak, &c.

Proper Names are either call'd *Chriſtian*, as being given at Baptiſm, or *Sirnames*: the firſt, impoſed for diſtinction of Perſons; anſwering to the *Roman Prænomen*. See PRÆNOMEN.

The ſecond for the Diſtinction of Families, anſwering to the *Nomen* of the *Romans*, and the *Patronimicum* of the *Greeks*. See SIRNAME.

Originally every Perſon had but one *Name*; as among the *Jews*, *Adam*, &c. among the *Egyptians*, *Buſiris*; among the *Chaldees*, *Ninus*; the *Medes*, *Aſtiages*; the *Greeks*, *Diomedes*; the *Romans*, *Romulus*; the *Gauls*, *Divitiacus*; the *Germans*, *Arioviſtus*; the *Britains*, *Caſſibelan*; the *Engliſh*, *Hengiſt*, &c. And thus of other Nations, except the Savages of Mount *Atlas*, whom *Pliny* and *Marcellinus* repreſent as *Anonimi, nameleſs*.

The *Jews* gave the *Name* at the Circumciſion, *viz.* eight Days after the Birth: The *Romans* to Females the ſame Day, to Males the ninth; at which time they held a Feaſt, call'd *Nominalia*.

Since Chriſtianity has obtained, moſt Nations have followed the *Jews*, Baptizing, and giving the *Name* the eighth Day after the Birth; except our *Engliſh* Anceſtors, who, till of late, baptized, and gave the *Name* on the Birth-Day.

The firſt Impoſition of *Names* was founded on different Views, among different People; the moſt common was to mark the good Wiſhes of the Parents, or to intitle the Children to the good Fortune a happy *Name* ſeem'd to promiſe: Hence *Victor*, *Caſtor*, *Fauſtus*, *Statorius*, *Probus*, &c.

Accordingly we find ſuch *Names*, by *Cicero* call'd *Bona Nomina*, and by *Tacitus*, *Fauſta Nomina*, were ſtill firſt enrolled, and ranged in the *Roman* Muſters; firſt called to ſerve at the firſt Sacrifices in the Foundation of Colonies, &c. And, on the contrary, *Livy* calls *Atrius Umber*, *abominandi ominis Nomen*: And *Plautus*, on occaſion of a Perſon named *Lyco*, i. e. *Greedy Wolf*, ſays;

Voſmet nunc facite conjecturam cæterum
Quid id ſit hominis, cui Lyco *nomen ſiet.*

Hence, *Plato* recommends it to Men to be careful in giving happy *Names*; and the *Pythagoreans* taught expreſly, that the Minds, Actions, and Succeſſes of Men were according to their *Names*, Genius, and Fate. Thus, *Panormitan, ex bono Nomine oritur bona Præſumptio*; and the common Proverb, *Bonum Nomen bonum Omen*: And hence the Foundation of the *Onomantia*. See ONOMANTIA.

Hence *Camden* takes it for granted, that the *Names*, in all Nations and Languages, are ſignificative, and not ſimple Sounds, for meer diſtinction ſake. This holds not only among the *Jews*, *Greeks*, *Latins*, &c. but even the *Turks*; among whom, *Abdalla* ſignifies *God's Servant*; *Soliman*, *Peaceable*; *Mahomet*, *Glorified*, &c. And the Savages of *Hiſpaniola*, and throughout *America*, who, in their Languages, *name* their Children *Gliſtering Light*, *Sun-Bright*, *Fine Gold*, &c. And they of *Congo* by the *Names* of Precious Stones, Flowers, &c.

To ſuppoſe *Names* given without any Meaning, however, by the Alteration of Languages, their Signification may be loſt, that learned Author thinks, is to reproach our Anceſtors; and that contrary to the ſenſe of all antient Writers. Thus *Porphyry* notes, that the *Barbarous Names*, as he calls them, were very emphatical, and very conciſe: And accordingly, it was eſteemed a Duty to be Φερώνυμοι, or *ſui Nominis Homines*: as *Severus*, *Proteus*, and *Aurelius*, are called *ſui Nominis Imperatores*.

And it was the uſual way of giving *Names*, to wiſh the Children might diſcharge their *Names*: Thus when *Gunthraur*, King of *France*, named *Clotharius* at the Font, he ſaid, *Creſcat Puer, & hujus ſit Nominis Executor*.

The antient *Britains*, the ſame Author adds, generally took their *Names* from Colours, becauſe they painted themſelves; which are now loſt, or remain hid among the *Welch*: When they were ſubdued by the *Romans*, they took *Roman Names*; ſome of which ſtill remain, corrupted; tho' the greateſt part are become extinct, upon the Admiſſion of the *Engliſh-Saxons*, who introduced the *German Names*, as *Cudda*, *Penda*, *Oſwald*, *Edward*, &c. The *Danes*, too, brought with them their *Names*; as *Suayne*, *Harrold*, *Knute*, &c. And the *Normans*, at the Conqueſt, brought in other *German Names*, as originally uſing the *German* Tongue; ſuch as *Robert*, *William*, *Richard*, *Henry*, *Hugh*, &c. after the ſame manner as the *Greek Names*, *Aſpaſius*, *Boethius*, *Symmachus*, &c. were introduced into *Italy*, upon the Diviſion of the Empire. After the Conqueſt, our Nation, which had ever been averſe to foreign *Names*, as deeming them unlucky, began to take *Hebrew Names*; as *Matthew*, *David*, *Sampſon*, &c.

The various *Names* antiently, or at preſent obtaining among us, from what Language or People ſoever borrowed, are explained by *Camden* in his *Remains*.

As to the Period when *Names* began to be multiplied, and *Sirnames* introduced, &c. See SIRNAME.

Of late Years, it has obtained among us, to give *Sirnames* for *Chriſtian Names*; which ſome diſlike, on account of the Confuſion it may introduce. *Camden* relates it as an Opinion, that the Practice firſt began in the Time of *Edward* VI. by ſuch as would be Godfathers, when they were more than half Fathers. Upon which, ſome were perſuaded to change their *Names* at Confirmation; which, it ſeems, is uſual in other Countries. Thus, two Sons of *Henry* II. of *France*, chriſten'd *Alexander* and *Hercules*, changed them at Confirmation into *Henry* and *Francis*.

In Monaſteries, the Religious aſſume ſuch *Names* at their Admittance; to ſhew they are about to lead a new Life, and have renounced the World, their Family, and even their *Name*: v. g. *Siſter* Mary *of the Incarnation*, *Brother* Henry *of the Holy Sacrament*, &c.

The Popes alſo change their *Name* at their Exaltation to the Pontificate; a Cuſtom firſt introduced by Pope *Sergius*, whoſe *Name*, till then, as *Platin* informs us, was *Swines-ſnout*. But *Baronius* refers it to Pope *Sergius* I. and *Onuphrius* to *John* XII. or XIII. who, at the ſame time, adds a different reaſon for it from that of *Platin*, *viz.* that

'twas

'twas done in Imitation of St. *Peter* and St. *Paul*, who were firſt called *Simon* and *Saul*. Indeed Pope *Marcellus*, of late, refuſed to change his *Name*.

In *Italy*, 'tis frequent to join the *Name* of ſome Saint, in a kind of Devotion, to the Chriſtian *Name*; as *Joannes Baptiſta Spinoſa*, &c.

Among the Antients, thoſe deified by the Heathen Conſecrations, had new *Names* given them; as *Romulus* was called *Quirinus*; *Melicertus*, *Portunus*, &c. See CONSECRATION.

New *Names* were alſo given in Adoptions, and ſometimes by Teſtament; thus *L. Æmilius*, adopted by *Scipio*, took the *Name* of *Scipio Africanus*; and thus *Auguſtus*, who was firſt called *Thureon*, took the *Name Octavian* by Teſtament. See ADOPTION.

Names were alſo changed at Enfranchiſements into new Cities. Thus *Lucumo*, at his firſt being made free of *Rome*, took the *Name*, *Lucius Tarquinius Priſcus*, &c. and Slaves, when made free, uſually aſſumed their Maſters *Names*. See FREEDOM, SLAVE, &c.

Thoſe called to the Equeſtrian Order, if they had baſe *Names*, were always new named, *Nomine Ingenuorum veterumq; Romanorum*. And among the Primitive Chriſtians, it was the Practice to change the *Names* of the Catechumens: thus the Renegado *Lucianus*, till his Baptiſm, was called *Lucius*.

Of the NAME, a Phraſe, or Diction frequent among Hiſtorians and Genealogiſts, to denote Perſons of the ſame Quality, and *Name*. 'Tis near nine hundred Years ſince the Emperors of the *Weſt* firſt began to diſtinguiſh themſelves in this manner by their Number; and in the *Italia Sacra* of *Ughellus*, we meet with a Charter of the Emperor *Louis le Debonnaire*, *Anno* 818. wherein he ſtiles himſelf the *Firſt of the Name*. *Le Blanc* mentions a Charter of the Year 1084. wherein the Emperor *Henry* III. ſtiles himſelf King of *Italy*, the *Fourth of the Name*; and Emperor, the *Third of the Name*.

Some *French* Writers obſerve, that in a Manuſcript preſerved in the King's Library, their *Louis* XI. is only ſtiled the *Ninth of the Name*; *Louis the Debonnaire*, and *Louis the Stammerer*, not being then reckon'd in the Number, by reaſon they were Emperors, as well as Kings of *France*: On which Footing, the preſent King, inſtead of the *Fifteenth*, ſhould only be the *Thirteenth of the Name*.

NAMIUM *Vetitum*, in our Law-Books, an unjuſt taking of the Cattle of another, and driving them to an unlawful Place, pretending Damages done by them. In ſuch Caſe, the Owner of the Cattle may demand Satisfaction for the Injury, which is call'd *Placitum de Namio Vetito*.

NAPE, is uſed for the hind-part of the Neck; by reaſon of the ſoft ſhort Hair growing thereon, like the Nap of a Cloth. See NECK.

NAPHTA, or NAPTHA, a kind of liquid Sulphur or Bitumen, very ſoft, and inflammable, exuding out of the Earth in ſeveral Places in *Chaldea*; particularly the Place where ſtood the antient *Babylon*; and ſtill found in ſeveral Provinces of *Italy* and *France*, particularly in *Auvergne*, and near *Raguſa*. See SULPHUR and BITUMEN.

That of *France* is ſoft and black, like liquid Pitch, and of a fœtid Smell; that of *Italy* is a kind of *Petrol*, or a clear Oil, of various Colours, oozing out of a Rock, ſituate on a Mountain in the Dutchy of *Modena*. See PETROL.

Naphta is eſteemed penetrating, reſolutive, and vulnerary; but its Vertues are little known in Medicine: its chief Uſe is in Lamps, &c. on account of its Inflammability.

The *Turks* call the *Naptha*, *Carab Sakiz*, black Maſtic, to diſtinguiſh it from Pitch. *Voſſius* has an expreſs Treatiſe on *Naptha*, *Antient and Modern*: He ſays, 'tis a Flower of Bitumen, of more force than any other Bitumen.

The Word, in the original *Chaldee*, ſignifies *ſtillare*, to ooze, or drop; *Naptha*, according to *Pliny*, running like a kind of Bitumen.

NAPIERS, or NEPERS *Bones*. See NEPERS *Bones*.

NARCOTICS, in Medicine, Opiates, or Medicines, that excite Drowſineſs and Sleep. See OPIATES.

Narcotics act, by calming and diminiſhing the Motion of the Blood and Spirits.

Authors are of various Opinions, as to the Manner wherein *Narcotics* operate. The Antients tell us, 'tis by their being cold in nature. *Etmuller*, after *Willis*, takes the Animal Spirits to be compoſed of a fluid volatile Salt; and thinks they are diſſolved by the Mixtures of Sulphurs and Oils, wherewith *Narcotics* abound. M. *Andry*'s Opinion is, that the Salt of *Narcotics*, diſſolves in any Liquor whatever, and that their ramous Branches becoming thus diſengaged from the Salts, are embaraſſed among one another, and thus ſtop the Courſe of the Blood and Spirits. Laſtly, others think, that *Narcotics* cloſe the Orifices of the Nerves and thus block up the Paſſage of the Spirits.

Linder, in his Treatiſe *de Venenis*, thinks, that the Operation of *Narcotics* is not the ſame in all; Drowſineſs being producible from a great Variety of different Cauſes. See SLEEP.

The Word comes from the *Greek* ναρκωτικὸς, of ναρκοσις, *Drowſineſs*.

NARRATION, in Oratory and Hiſtory, a Recital, or Rehearſal of a Fact as it happen'd, or as it is ſuppoſed to have happen'd.

This is of two kinds, either *Simple* and *Hiſtorical*; as where the Auditor or Reader is ſuppoſed to hear or read of a Tranſaction at ſecond hand: or *Artificial* and *Fabulous*, as where their Imaginations are raiſed, and the Action, as it were, re-acted before them.

The *Narration*, according to the Writers of Rhetoric, makes the ſecond part of a juſt Speech, or Harangue; *viz.* that immediately following the *Exordium*. See ORATION. It makes the whole of a Hiſtory; abating for the occaſional Reflections, Epiſodes, and Digreſſions. See HISTORY.

Cicero requires four Vertues in a *Narration*, *viz.* Perſpicuity, Probability, Brevity, and Sweetneſs.

The *Narration* is rendred *perſpicuous*, by obſerving the Order of Time, by uſing none but proper and known Terms, and by reciting the Action uninterruptedly.

It is rendred *probable*, by the Credibility of the Narrator; by the Simplicity and Openneſs of the *Narration*, by avoiding nothing far remote from the common Senſe and Opinion of Mankind, and by a preciſe Detail of Circumſtances.

It is rendred *brief*, by taking it up no higher than is juſt neceſſary; nor fetching it back, as that impertinent Author in *Horace*, *Qui Gemino Bellum Trojanum orditur ab ovo*: And by avoiding trivial Circumſtances.

Laſtly, it is rendred *ſweet*, by uſing ſmooth, numerous, and well-ſounding Words; by arranging them, ſo as to avoid any *Hiatus*, or Claſhing. By the Greatneſs, Novelty, and Unexpectedneſs of the Things related; and by enriching it with Tropes and Figures; as frequent Admirations, Exclamations, Interrogations, Expectations, Suſpences, ſurprizing Events; by Grief, Joy, Fear, &c. See TROPE.

NARRATION, in Poetry, is uſed particularly for the Action, or Event, that makes the Subject of an Epic Poem. See ACTION.

F. *Boſſu* obſerves, that the Actions in Poetry are equally ſuſceptible of the two kinds of Oratorial *Narration*; and that each conſtitutes a particular Species of Poetry.

Thoſe under the Artificial, or Active Form, are now call'd *Dramatic*. See DRAMA.

And thoſe only related by the Poet, who here perſonates an Hiſtorian, are call'd *Epic*. See EPOPEA.

In the Drama, the *Narration* is the whole of the Piece; in the *Epopea*, 'tis only a Part, tho' in effect it is the principal Part, and the Body of the Poem. 'Tis preceded by the *Propoſition* and *Invocation*, which *Boſſu* calls the *Præludes*; and is frequently interrupted by the Poet's ſpeaking in Perſon, demanding Pardon, Favour, &c. See INVOCATION, &c.

The *Narration* includes the whole Action, Epiſodied, with all its Circumſtances and its Ornaments. See EPISODE.

'Tis in this Part that the Action is to be begun, carried on, and ended. 'Tis this, is to ſhew the Cauſes of all that is related: in this the Difficulties are to be propoſed and reſolved, and the Perſons, both human and divine, are here to ſhew their Intereſts, their Manners, and their Qualities, by their Actions and their Diſcourſe: and all this is to be deſcribed with the Beauty, the Majeſty, and Force of Verſe, Stile, Sentiments, Compariſon, and other Ornaments proper to the Subject in general, and to each thing in particular.

The Qualities of the Epic *Narration* are, that it be agreeable, probable, moving, ſurprizing, and active.

Horace ſpeaks of the *Utile* and *Dulce* as on the ſame Footing. *Boſſu* looks on the *Utile* as an eſſential Property; and the *Dulce* as no more than an additional Quality.

NASAL, ſomething belonging to the Noſe, *Naſus*. As the Noſe-Piece of a Helmet, &c.

NASAL, in Grammar, &c. a Term applied to thoſe Sounds, or Letters, in whoſe Formation, the Noſe is the principal Organ; and particularly where the Sound form'd is paſſed thro the Noſe. See LETTER.

In moſt *Engliſh* Words, the Sounds expreſſed by the Characters *an*, *en*, *in*, *on*, *un*, are ſimple Sounds; and proper *Naſal* Vowels.

NASALIA, in Medicine, a ſort of Remedies to be taken by the Noſe; call'd alſo *Errhines*. See ERRHINES.

NASI *Os*, in Anatomy, a thin Bone, making the upper Part of the Noſe. See NOSE.

NATALIS, NATALIS *Dies*, or NATALITIUM, properly ſignify a Man's Birth-Day.

The Word was firſt uſed among the Heathens, to ſignify the Feaſt held on the Anniverſary of the Birth of an Emperor; whence it came, in time, to ſignify any ſort of Feaſt. And accordingly, in the *Faſti*, we meet with *Natalis Solis*,

Natalis

Natalis Invicti, &c. The Primitive Chriſtians, finding it thus eſtabliſhed, uſed it in the ſame manner; and hence we meet in the antient Martyrologiſts with *Natalis Calycis*, for the Feaſt of the Supper, or *Maunday-Thurſday*. *Natalis Cathedræ*, for the Pontificate of St. *Peter*: The *Natalis*, or *Natalitium* of ſuch a Church, for the Feaſt of the Dedication.

The Word *Genethlion* is uſed by the *Greeks* in the ſame ſenſe as *Natalis*, or *Natalitium*, among the *Latins*.

The *Ludi Natalitii*, Natal Games, were Games introduced on the Anniverſaries of the Birth-Days of their great Men.

The Natal Ring, *Annulus Natalitius*, was a Ring only wore on the Birth-Day.

NATES, in Anatomy, a Term expreſſing thoſe two fleſhy Parts of the Body, popularly called the *Hips*, or *Buttocks*.

NATES *Cerebri*, are two Circular Protuberances of the Brain, ſituate on the back-ſide of the *Medulla Oblongata*, near the *Cerebellum*. See BRAIN.

NATION, a Collective Term, uſed for a conſiderable People, inhabiting a certain Extent of Ground, encloſed within certain Limits, and under the ſame Government.

Each *Nation* has its particular Character: 'Tis proverbially ſaid, Light as a *Frenchman*, Waggiſh and Silly as an *Italian*, Grave as a *Spaniard*, Wicked and Unlucky as an *Engliſhman*, Fierce as a *Scotchman*, Drunken as a *German*, Idle as an *Iriſhman*, Deceitful as a *Greek*, &c.

NATION is alſo uſed in ſome Univerſities, for a certain Diſtinction of the Scholars, or Profeſſors of Colleges: Thus the Faculty of *Paris* conſiſts of four *Nations*; *viz.* that of *France*, that of *Normandy*, that of *Picardy*, and that of *Germany*; which are again, excepting that of *Normandy*, diſtinguiſhed into *Tribes*; each Tribe has its Deacon.

The *German Nation* comprehends all foreign *Nations*, *Engliſh*, *Italian*, &c. When the Procureur of the *French Nation* ſpeaks in publick, his Stile is, *Honoranda Gallorum Natio*. He of *Picardy* ſays, *Fideliſſima Picardorum Natio*. He of *Normandy*, *Veneranda Normannorum Natio*. He of the *Nation* of *Germany*, *Conſtantiſſima Germanorum Natio*.

NATIONAL *Synod*. See SYNOD.

NATIVE, is applied to a Perſon conſider'd as born in a certain Place; or deriving his Origin therefrom.

The more accurate Writers diſtinguiſh between a *Native* of a Place, and being *born* therein. *Born* ſignifies no more than the having been there produced, or brought into the World, whether that were the proper Country, or Habitation of the Parents, or whether they were there only by accident, as Strangers, &c. Whereas *Native* refers to the proper Manſion, or Reſidence of the Parents and the Family; and where the Perſon has his Education. And hence a Perſon may be a *Native* of one Place, and *born* at another. Thus Jeſus Chriſt is call'd a *Nazarite*, and *Galilean*, as a *Native*; tho' he were born at *Bethlehem* in *Juda*.

NATIVE, NATIVUS, in our antient Law-Books, ſignified a Perſon who was born a Slave; by which he differ'd from one who had ſold himſelf, or became a Slave by his own Deed.——*Servos enim alios* Bondos *dicimus alios* Nativos, *alios* Villanos. *Bondi ſunt qui pactionis Vinculo ſe adſtrinxerunt. De* Nativis, *infra. Villani ſunt qui Glebæ aſcripti Villam colunt Dominicam, nec exire licet ſine Domini Licentia*. Spelm.

NATIVÆ *Tenentes*, in our old Law-Books, are Tenants who hold *Native* Land; *i. e.* Land ſubject to the Services of *Natives*. *Spelman*.

NATIVI *de Stipite*, were Villains or Bond-men by Birth or Family.——There were alſo *Nativi Conventionarii*, who were Villains by Contract or Covenant. *Servi enim alii natura, alii facti, alii emptione, alii redemptione, alii ſua vel alterius datione*. LL. *Hen*. I. *cap*. 76. In *Cornwall* it was a Cuſtom, that if a Freeman married *Nativam*, and brought her *ad Liberum Tenementum & Liberum Thorum*, and had two Daughters, one of them was free, and the other a Villain. *Bracton Lib*. 4.

NATIVITY, *Natal-Day*, or the Day of one's Birth.

The Term is chiefly uſed in ſpeaking of Saints, &c. The *Nativity* of St. *John Baptiſt*, &c. When we ſay abſolutely the *Nativity*, it is underſtood of that of Jeſus Chriſt, or the Feaſt of *Chriſtmas*. See FEAST.

'Tis commonly held, that Pope *Teleſphorus* was the firſt who decreed the Feaſt of the *Nativity* to be held on the 25th of *December*. *John*, Archbiſhop of *Nice*, in an Epiſtle upon the *Nativity* of Jeſus Chriſt, relates, that at the inſtance of St. *Cyril* of *Jeruſalem*, Pope *Julius* procured a ſtrict Inquiry to be made into the Day of our Saviour's *Nativity*; which being found to be on the 25th of *December*, they began thenceforth to celebrate the Feaſt on that Day. See CHRISTMAS.

In antient Law-Books, *Nativity*, *Nativitas*, ſignifies Bondage, or Servitude.

NATIVITY, in Aſtrology, the ſame with *Horoſcope*. See HOROSCOPE.

Caſting the Nativity, or by Calculation ſeeing to know how long the Queen ſhould live, &c. was made Felony. *An*. 23 *Eliz*. *c*. 2.

NATRON, or ANATRON, in Natural Hiſtory, a kind of black, greyiſh Salt, taken out of a Lake of ſtagnant Water, in the Territory of *Terrana* in *Egypt*. See SALT.

'Tis much of the nature of Nitre, whence it is called *Egyptian Nitre*, and is even ſuppoſed to be the proper Nitre of the Antients. See NITRE.

'Tis a popular Error, that all Bones or Stones thrown into this Lake, are by degrees converted into *Natron*. It makes a great Ebullition, when mixed with Acids; whence it is ranked as of the Alkali Kind.

'Tis uſed in the Whitening of Linnen; but burns them, if not corrected by a Mixture of Aſhes. See WHITENING.

The *Natron* of *Egypt*, as deſcribed by *Pliny*, *Matthiolus*, and *Agricola*, is an Alkali Salt perforated in manner of a Sponge, and of a Lixivial Taſte.

Its Principles, Dr. *Leigh* takes to be chiefly two; *viz.* a Sea-Salt, and an Urinous Salt. The firſt, he takes it for granted, it receives from the Earth; the ſecond, from the Air.

Dr. *Huntington*, who was on the ſpot, ſays the *Natron* is thought to riſe from the bottom of the Lake; where, by the Heat of the Sun, it is condenſed, and hardened into the Form we ſee it in: But his Opinion is, that 'tis rather ſeparated by the Sun from the Water.

M. *de la Chambre* adds, that three or four Days before the *Nile* begins to overflow, there falls a certain Dew, of a fermentative Vertue, inſomuch as to leaven a Paſte expoſed to it, and that at the ſame time the *Natron* riſes.

Hippocrates, *Galen*, *Matthiolus*, *Dioſcorides*, &c. mention it as of uſe in Phyſic; and M. *de Clos* is even of opinion, that all the Mineral Waters of *France* are impregnated with this kind of *Nitre*; and that 'tis hence they derive their Medicinal Vertues.

It is of ſingular Efficacy in fertilizing of Ground; which Dr. *Leigh* accounts for, by ſuppoſing its volatile Particles heated by ſome ſubterraneous Fire, or by the Warmth of the Sun; and thus readily made to aſcend up the minute Tubes of Plants, and carry with them the Juices of the Earth.

Pliny derives the Invention of Glaſs from ſome of this *Natron* accidentally melted down into the Sand, where it run into Streams of Glaſs. See GLASS.

This *Nitre* is diſtinguiſhed from Salt Petre, by its fermenting with Acids, which Salt Peter will not do; by its volatile Spirit, its lixivial Smell, by the clammy inſipid Subſtance it yields, &c. It agrees with Salt Petre, in that, by dropping Spirit of Sulphur upon it, it ſhoots into pyramidal Cryſtals. Dr. *Leigh* thinks it comes nearer a Sal Armoniac than Salt Petre. See SALT PETRE.

Dr. *Liſter* conjectures, that moſt of the Salt Water of the Lakes of *Egypt*, having paſs'd thro' the Bodies of thoſe vaſt Animals wherewith they are ſtocked, as *Crocodiles*, *Hippopotami*, &c. muſt of conſequence be rendred Urinous, or Salino-Urinous; which is a Compoſition of Sal Armoniac. See SAL ARMONIAC.

NATTA, or NATA, or NASA, or NAPTA, in Medicine, a Tumor ariſing in ſeveral Parts of the Body.

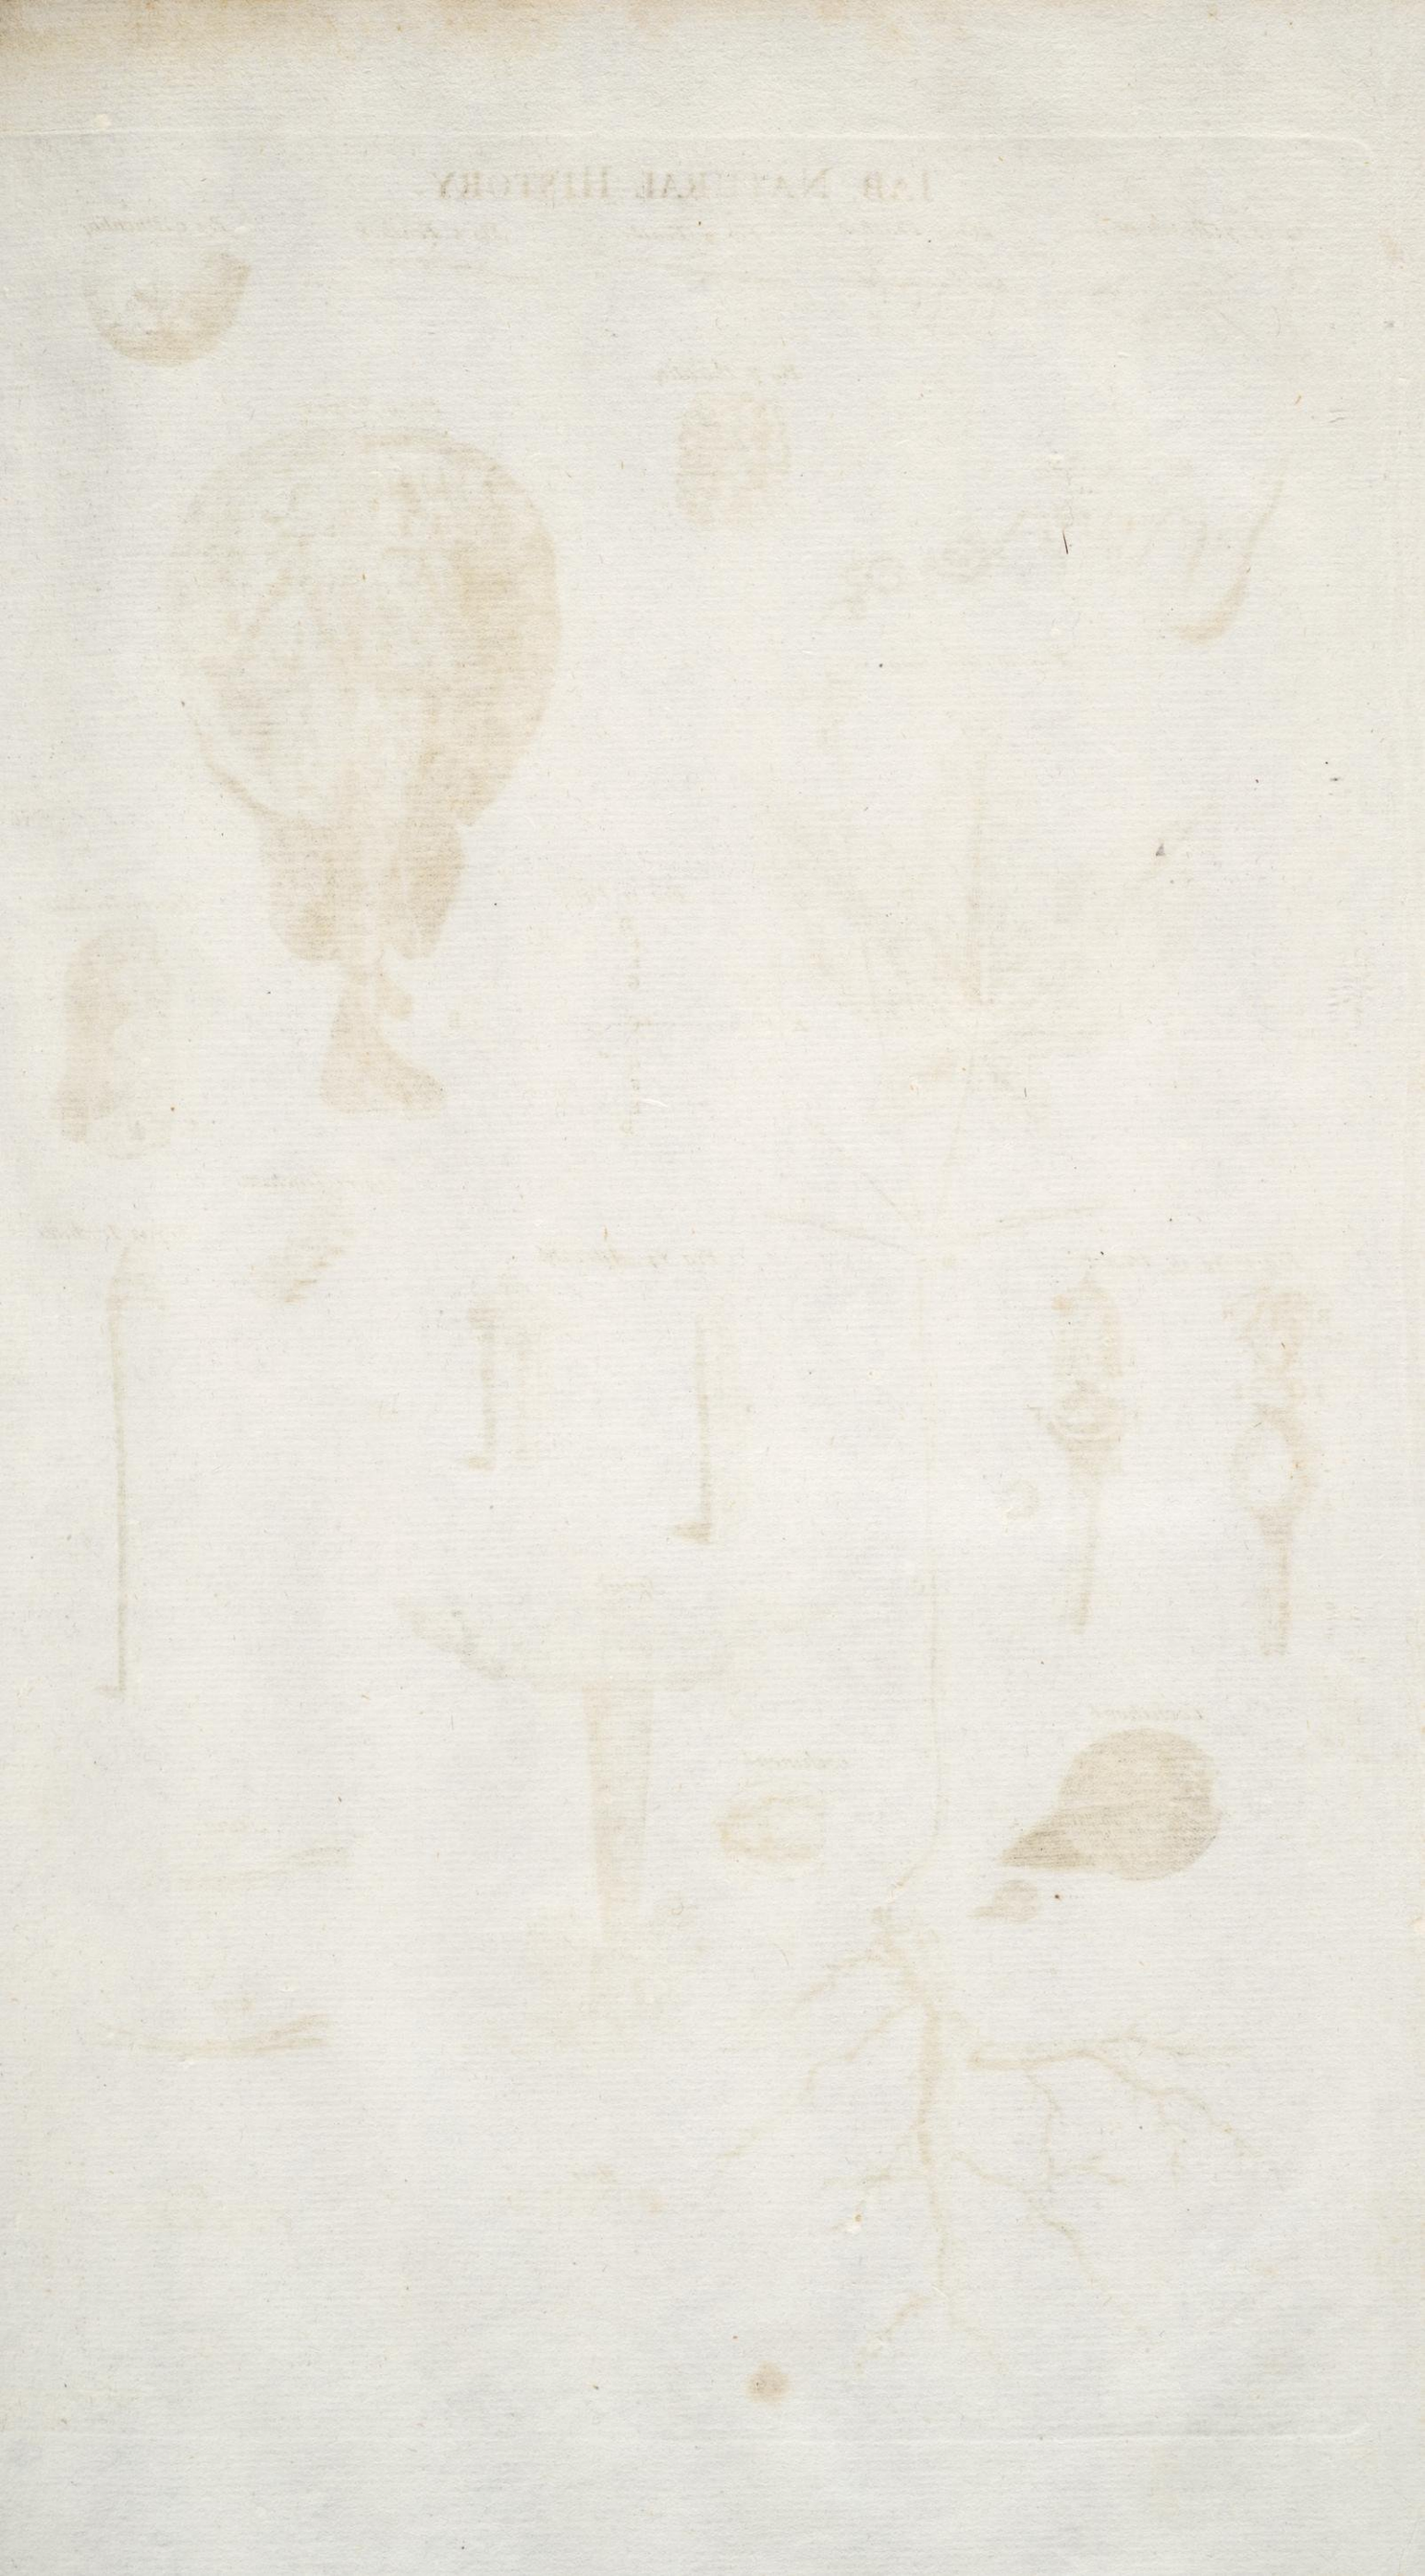
Blancard defines it, a large, ſoft, reddiſh, painful Tumor, ariſing uſually on the Back, ſometimes on the Shoulders: Its Root is very ſmall, yet it grows ſo prodigiouſly, that it ſometimes equals a Melon, or Gourd.

Nattæ, or, as ſome call them, *Nates*, oftenеſt appear on the Neck, much after the manner of *Talpæ*. See TALPA.

They are of the Oedematous Kind, and are to be extirpated by Inciſion, and their Return prevented by red precipitate, Vitriol, or burnt Allom ſtrew'd on the Place.

Bartholine mentions a Lady, who cured herſelf of a *Nutta*, by biting it off.

NATURAL, ſomething concerning *Nature*, belonging to *Nature*, ariſing from a Principle of *Nature*, or conformable to the ordinary Courſe and Order of *Nature*. See NATURE.



When a Stone falls downwards, we vulgarly ſay it does it by a *Natural* Motion; but if it be thrown upwards, its Motion is ſaid to be violent. So Water ſuſpended in a ſucking Pump, is ſaid to be out of its *Natural* Place: Cures wrought by Medicines, are *Natural Operations*; but the miraculous ones wrought by Chriſt, *Supernatural*. See SUPERNATURAL, &c.

NATURAL *Children*, are thoſe born out of lawful Wedlock. See BASTARD.

NATURAL *Horizon*, is the ſenſible or phyſical Horizon. See HORIZON.

NATURAL *Law*. See *Law of* NATURE.

NATURAL *Day*, NATURAL *Year*, See DAY. YEAR.

N.o XIII

NATURAL *Faculty*, is that Power, arising from the Blood's Circulation, which is conſpicuous in all the Secretions performed within the Body; that Secretion alone excepted, which is made at the Origin of the Nerves. See FACULTY.

NATURAL *Functions*, in the Animal Oeconomy, are thoſe Actions whereby things taken into the Body, are changed, and aſſimilated, ſo as to become Parts of our Body. See FUNCTION.

Theſe are the Actions of the *Viſcera*, the Veſſels that receive, retain, move, change, mix, ſecern, apply, excern, and ſpend the Humours of the Body. See DIGESTION, NUTRITION, &c.

NATURAL *Inclinations*, are thoſe Tendencies, or Motions of the Mind, towards things ſeemingly good, which are common, in a greater or leſs degree, to all Mankind.

Natural Inclination, according to F. *Mallebranch*, is the ſame thing with regard to Minds, that Motion is with regard to Bodies; and as all the Varieties in the Material World ariſe from the ſeveral Motions of Bodies, ſo do all thoſe of the Intellectual World from Inclinations; and as all Motions are the Reſults of Impreſſions immediately communicated by the Finger of the Creator; ſo all Inclinations are certainly nothing elſe but continual Impreſſions of the Will of the Creator, on that of the Creature; and muſt therefore of neceſſity be agreeable to his; and therefore can naturally have no principal End, but his Glory; nor any ſecondary one, but their own Preſervation, and that of others; both ſtill with regard to his Will who gave them Being.

Now, as, properly ſpeaking, there is but one Love in God, *viz.* that of himſelf; ſo he only impreſſes one Love or Deſire in us, which is that of Good in the general. 'Tis this general Love, or Deſire, is the Principle of all our particular ones; as, in effect, 'tis the Will itſelf: The Will being defined to be a continual Impreſſion of the Author of Nature, which carries the Mind of Man to Good in general. See WILL.

But the Impreſſion towards Good in the general, doth not only proceed from God, but alſo all our Inclinations to particular Goods; as, *v. g.* Self-preſervation, &c. See PASSION.

NATURAL *Hiſtory*, a Deſcription of any of the Natural Products of the Earth, Water, or Air; *v. g.* Beaſts, Birds, Fiſhes, Metals, Minerals, and Foſſils; together with ſuch extraordinary Phænomena, as at any time appear in the Material World; ſuch as Meteors, and Monſters, &c. See HISTORY.

Beſide *General Natural Hiſtory*, as thoſe of *Pliny*, &c. there are *Particular* ones; and that of two kinds: The firſt, thoſe which only conſider one kind of Things, ſuch as the *Hiſtory of Shells*, of Dr. *Liſter*; of *Fiſhes*, of *Willoughby*; that of *Birds*, of the ſame; that of *Plants*, of *Ray*, or *Rolfincius*; thoſe of *Inſects*, of *Swammerdam*, and *Mouffet*; that of *Animals*, of *Geſner*; that of *Foſſils*, of *Lockmund*, &c.

The ſecond, thoſe which conſider the ſeveral kinds of natural Things found in particular Countreys, or Provinces; as the *Natural Hiſtory* of *Dauphine*, by *Chorier*; the *Natural Hiſtory of the Antilles*, by F. *Tertre*, and M. *Lonvillieres*; thoſe of *Oxfordſhire* and *Staffordſhire*, by Dr. *Plott*; that of *Lancaſhire*, by *Leigh*; of *Northamptonſhire*, by *Morton*; and that of the ſame County, expected from Mr. *Bridges*; that of the Weſtern Iſlands, by *Martin*, &c.

NATURAL *Philoſophy*, that Science which conſiders the Powers of *Nature*, the Properties of *Natural* Bodies, and their mutual Action on one another; otherwiſe call'd *Phyſics*. See PHYSICS.

NATURAL *Magic* is that which only makes uſe of natural Cauſes. See MAGIC.

NATURAL *Cauſe*, ſee CAUSE.

NATURAL, in Heraldry, is uſed where Animals, Fruits, Flowers, &c. are blazon'd with the Colours they naturally have, tho different from the common Colours of Heraldry: and this is to prevent the Armories being accus'd of Falſity, when blazon'd with the Names of Colours unknown in Heraldry.

NATURAL, in Muſic, is uſed variouſly. Sometimes, it is taken for *Diatonic*; and ſometimes for *Phyſical*, in which latter Senſe, *Natural Muſic* is that performed by *Natural* Organs, *i. e.* Vocal Muſic, in contradiſtinction to Artificial, or Inſtrumental.

NATURAL *Harmony* is that produced by the *Natural*, and Eſſential Chords of the Mode. See HARMONY.

NATURAL *Note* is uſed in oppoſition to *Flat* and *Sharp* Notes, which are call'd Artificial Notes. See NOTE, SCALE, &c.

NATURAL is alſo uſed for ſomething coming immediately out of the hands of Nature, in oppoſition to *Factitious*, or *Artificial*, which ſignifies ſomething wrought by Art.

Biſhop *Wilkins* obſerves, that there appears a world of difference between *Natural* and Artificial Things when view'd with Microſcopes; the firſt ever ſhews adorn'd with all imaginable Elegance and Beauty; the latter, tho the moſt curious in the World, infinitely rude and unhewn: The fineſt Needle appears a rough Bar of Iron; and the moſt accurate Engraving or Emboſſment, as if done with a Mattock or Trowel.

NATURALIST, a Perſon who has ſtudied *Nature*, and is well verſed in *Natural* Bodies, eſpecially in what relates to Metals, Minerals, Stones, Vegetables, and Animals.

Ariſtotle, *Ælian*, *Pliny*, *Solinus*, and *Theophraſtus* were the greateſt *Naturaliſts* among the Antients; but they fell into abundance of Errors, which have been corrected by the happy Induſtry of the Moderns. *Aldrovandus* is the moſt Copious and Compleat of the modern *Naturaliſts*; his Work is in ſeventeen Volumes in *Folio*.

NATURALIZATION, in Law, the Act of Naturalizing any one, or of putting any Foreigner into the Condition of a natural-born Subject, and entitling him to the Rights and Privileges thereof. See DENIZEN.

In *France*, *Naturalization* is the King's Prerogative; in *England* 'tis only done by Act of Parliament. In *France*, *Swiſs*, *Savoyards*, and *Scots*, need not any *Naturalization*, being reputed *Regnicoles*, or Natives.

NATURALS, *Res Naturales*, in Medicine: In every Animal, howſoever ſick and diſeaſed, there is ſtill remaining ſome degree of Life, and Strength; and the Cauſes and Effects of each: Theſe are call'd *Naturals*, *Natural things*, *things according to Nature*; and ſometimes barely *Nature*; in contradiſtinction to *Non-Naturals*, which ſee.

NATURE, *Natura*, φυσις, is a Term very variouſly uſed. *Ariſtotle* has a whole Chapter wrote expreſly to enumerate the various Acceptations of the *Greek* Word φυσις, render'd in *Engliſh*, *Nature*; and among *Latin* Writers, the different Acceptations are ſo many, that a certain Author reckons up fourteen or fifteen. Mr. *Boyle*, in a preciſe Treatiſe of the *vulgarly receiv'd Notion of Nature*, gives us eight principal ones.

NATURE, then, is uſed for the Syſtem of the World; the Machine of the Univerſe, or the Aſſemblage of all created Beings.

In this Senſe we ſay, the *Author of Nature*; the Sun is call'd the *Eye of Nature*, becauſe he illumines the Univerſe, and the *Father of Nature*, becauſe he warms the Earth, and makes it fruitful. And thus we ſay of the Phœnix, or a Chimæra, that there is no ſuch thing in *Nature*.

Inſtead of the word *Nature* in this Senſe, Mr. *Boyle*, to avoid Ambiguity, and Abuſe of the Word, propoſes to have *World*, or *Univerſe* ſubſtituted. See WORLD.

NATURE, in a more confined Senſe, comprehends the ſeveral kinds of Beings, Created and Increated; Spiritual and Corporeal. See ENS.

In this Senſe, we ſay, *Human Nature*, meaning all Men together that poſſeſs the ſame Spiritual, Reaſonable Soul. *Angelical Nature*; the *Divine Nature*, &c.

And in this Senſe, the School Divines ſay, *Natura Naturans*, & *Natura Naturata*, ſpeaking of God, who is the *Natura Naturans*, as giving Being and *Nature* to all others; in oppoſition to the Creatures, who are the *Natura Naturata*, as receiving their Nature.

NATURE, in a ſtill more reſtrained Senſe, is uſed for the Eſſence of a thing; or that which the Schoolmen call the *Quiddity* thereof, that is, the Attribute which makes it what it is.

In this Senſe, the *Carteſians* ſay, 'tis the *Nature* of the Soul to think.

And here the word Eſſence, Mr. *Boyle* would have obtain, in lieu of *Nature*. See ESSENCE.

NATURE is particularly uſed for the eſtabliſh'd Order, and Courſe of material Things, the Series of Second Cauſes, or the Laws which God has impoſed on the Motions impreſs'd by him. See CAUSE.

In this Senſe it is we ſay, Phyſics is the Study of *Nature*. *Nature* makes the Night ſucceed the Day; *Nature* has made Reſpiration neceſſary to Life, &c.

Thus *S. Thomas* defines *Nature* a kind of divine Art, given to Beings, which carries them to the End they are determined for: In effect, *Nature*, in this Senſe, is nothing elſe but that Concatenation of Cauſes and Effects, or that Order and Oeconomy which God has eſtabliſhed in the Parts of his Creation.

In this Senſe too we ſay, that Miracles are Effects above the Powers of *Nature*: So Art forces or ſurpaſſes *Nature*, by means of Machines, and moving Powers, by reaſon they produce Effects which exceed what we findin the common Courſe of Things. See MIRACLE, &c.

NATURE, again, is taken for an Aggregate of Powers belonging to any Body, eſpecially a living one.

In this ſenſe Phyſicians ſay, that *Nature* is ſtrong, weak, or ſpent; or, that in ſuch a Diſeaſe, *Nature* left to herſelf, will perform the Cure.

NATURE, ſtill more ſtrictly, is uſed for the Action of Providence, the Principle of all things; or, that ſpiritual Being which is diffuſed throughout the Creation, and

moves and acts in all Bodies, and gives them certain Properties, and procures certain Effects. See PROVIDENCE.

In this, which Mr. *Boyle* conſiders as the moſt uſual Senſe, *Nature* is nothing elſe but God, acting himſelf, and according to certain Laws he himſelf has fix'd. See GOD.

This ſeems pretty agreeable to the Opinion of many of the Antients, who made *Nature* the God of the Univerſe, the To Παν, who preſides over, and governs all; tho others own'd this an imaginary Being, and by *Nature* meant no more than the Qualities, or Vertues which God has given his Creatures, and which their Poets and Orators took occaſion of perſonifying.

F. *Mallebranch* ſays, the *Nature* ſo much talk'd of in the Schools is fit for nothing but to lead us back to Idolatry; the antient Heathens hereby underſtanding ſomething, which, without being God, acts continually throughout the Univerſe. Thus the Idol *Nature* muſt be an actual Principle, which, with the concurrence of God, is the next and immediate Cauſe of all the Changes which befall Matter. Which ſeems to fall in with the Opinion of the *Anima Mundi*; as if *Nature* were a Subſtitute of God, or a collateral Cauſe with God, or a middle Being between God and created Things. See ANIMA MUNDI.

Ariſtotle defines *Nature*, *Principium & Cauſa motus & ejus in quo eſt primo per ſe & non per accedens.* A Definition ſo obſcure, that none of his Commentators, with all their Gloſſes, have been able to render it intelligible.

This Principle, which the *Peripatetics* call'd *Nature*, they ſuppoſed to act neceſſarily; and was therefore deſtitute of Knowledge or Liberty. See NECESSITY.

Thus alſo the *Stoics* conceived *Nature* as a certain' Spirit or Virtue diffuſed throughout the Univerſe, which gave every thing its Motion, ſo that all muſt be dragg'd away by the invariable Order of a blind *Nature*, and an inevitable Neceſſity. See FATE.

In ſpeaking of the Action of *Nature*, no more is to be underſtood, but that *Bodies act on one another*, in a manner *agreeable to the general Laws of Motion which the Creator has eſtabliſhed.*

In this lies the Myſtery of that great Word, which is only a compendious way of expreſſing the Action of all Bodies: But the *Mechaniſm of Bodies*, would, perhaps, better expreſs what is here meant by *Nature*. See MECHANISM.

Some, Mr. *Boyle* obſerves, will have the *Nature* of a thing to be only the Law that it receives from the Creator, and according to which it acts on all Occaſions. But this is an improper, and figurative Expreſſion.

The ſame Author propoſes a Notion of *Nature* as more fit than any yet given to paſs for the principal one of *Nature*; with regard to which many Axioms and Expreſſions relating to that Word, may be conveniently underſtood. In order to this, he diſtinguiſhes between *General* and *Particular Nature.*

General Nature he defines the Aggregate of the Bodies that make up the World in its preſent State, conſider'd as a Principle by virtue whereof they act and ſuffer according to the Laws of Motion preſcribed by the Author of things.

Particular Nature of any Subordinate or Individual conſiſts in the general *Nature* apply'd to a diſtinct Portion of the Univerſe. Or it is a Convention of the Mechanical Properties (as Magnitude, Figure, Order, Situation, and Local Motion) of Parts convenient and ſufficient to conſtitute of, or entitle to, its particular Species or Denominations, the particular Body they make up; the Concourſe of all theſe being conſider'd as the Principle of Motion, Reſt, &c.

Laws of NATURE, are Axioms, or general Laws, and Rules of Motion, and Reſt obſerved by natural Bodies in their Actions on one another; and in all the Changes which befall them in their *Natural* State. See LAW.

The *Laws of Nature*, and of Motion, are, in effect, the ſame; Cuſtom, indeed, has made ſome difference, and we find Authors call the particular Caſes of Motion, *Laws of Motion*; which ſee under MOTION; the more General, or Catholic ones, and thoſe from which, as from Axioms, the others are deduced, they call *Laws of Nature.*

Of theſe, Sir *Iſaac Newton* has eſtabliſhed three.

Laws of NATURE.

1. *Every Body perſeveres in the ſame State, either of Reſt, or uniform rectilinear Motion; except ſo far as it is forced to change that State by ſome foreign Force.*

Thus Projectiles perſevere in their Motions, except ſo far as they are retarded by the Reſiſtance of the Air, and the Cauſe of Gravity; and thus a Top, whoſe Parts by their Coheſion, are continually drawing one another out of their rectilinear Motion, only ceaſes to run round becauſe reſiſted by the Air, and the Friction of the Plane whereon it moves. And thus the larger Bodies of the Planets and Comets preſerve their progreſſive and circular Motions a long time undiminiſhed in Regions void of all ſenſible Reſiſtance. See VIS *Inertiæ*, RESISTANCE, and MEDIUM.

2. *The Change of Motion is ever proportional to the moving Force whereby it is effected, and in the Direction of the Right Line wherein that Force is impreſs'd.*

If a certain Force produce a certain Motion; a double Force will produce double the Motion; a triple Force triple the Motion, whether it be impreſs'd all at once, or ſucceſſively, and by degrees. And this Motion (ſince it is ever directed to the ſame Point with the generating Force) if the Body were in Motion before, is either to be added to it, as if the Motions conſpire; or ſubſtracted from it, as where contrary; or added obliquely, as where oblique; and is compounded with it, according to the Determinations of each.

3. *Reaction is always contrary and equal to Action; or the Actions of two Bodies upon one another are always mutually equal, and directed contrary ways.*

Whatever preſſes, or pulls another, is equally preſs'd or pull'd thereby. Thus, if I preſs a Stone with my Finger, the Finger is equally preſs'd by the Stone. If a Horſe draw a Weight by a Rope, the Horſe is equally drawn back towards the Weight; for the Rope being equally ſtretch'd each way, will with an equal Endeavour to relax itſelf, drive the Horſe toward the Stone, and the Stone towards the Horſe, and will hinder the Progreſs of the one, as much as it promotes that of the other.

Again, if any Body by ſtriking on another, do in any manner change its Motion, it will, itſelf, by means of the other, undergo an equal Change in its own Motion, by reaſon of the Equality of the Preſſure.

In theſe Actions the Changes are equal; not thoſe, we mean, of the Velocities, but thoſe of the Motions, the Bodies being ſuppoſed free of any other Impediments. For the Changes of Velocities, which are likewiſe made contrary ways, in as much as the Motions are equally changed, are reciprocally proportional to the Bodies. See REACTION.

This Law alſo obtains in Attractions. See ATTRACTION.

NATURE, in Proſody: A Syllable is ſaid to be long or ſhort by *Nature*, to ſignify that it is ſo without any Rule of Grammar, to render it ſo by Poſition, or otherwiſe.

NAVAL, ſomething relating to Ships, or Navigation. See SHIP and NAVIGATION.

In this ſenſe we ſometimes ſay, *Naval Strength*, *a Naval Combat*, &c.

NAVAL *Crown*, *Corona Navalis*, among the antient *Romans*, a Crown adorn'd with Figures of Prows of Ships, confer'd on Perſons who in Sea-Engagements firſt boarded the Enemy's Veſſel. See CROWN.

Tho *A. Gellius* ſeems to ſpeak generally, where he ſays, the *Naval Crown* was adorn'd with Prows of Ships; *Lipſius* diſtinguiſhes two kinds of *Naval Crowns*: The one he calls *Simple*, the other *Roſtrata.*

The firſt he ſuppoſes plain, and given to the common Soldiers, &c. The latter much more Glorious, adorn'd with Prows of Ships, and only given to Generals, or Admirals, who had gain'd ſome important Victory at Sea.

NAVE, in Architecture, *Navis Eccleſiæ*, the Body of a Church; or the Place where the People are diſpoſed; reaching from the Rail or Balluſter of the Choir to the chief Door. The Antient *Greeks* call'd it *Pronaos.* See CHURCH.

The *Nave* of a Church belongs to the Pariſhioners; 'tis they are to repair it, &c.

Baldus derives the Word from the *Greek* ναὸς, Temple; which *Salmaſius* brings from ναυς, ναῦς, Ship; by reaſon the Vault or Roof of a Church bears reſemblance to a Ship.

NAVEL, a Part in the middle of the Belly, by Anatomiſts call'd *Umbilicus.* See UMBILICUS.

NAVEL-*String*, by Anatomiſts is call'd *Funiculus Umbilicalis.* See FUNICULUS.

NAVICULARE *Os*, in Anatomy, the third Bone in the Foot, between the *Aſtragalus*, and the *Oſſa Cuneiformia*, thus call'd from *Navis*, a Ship, to which it bears ſome Reſemblance; for which reaſon likewiſe it is ſometimes call'd *Cymbiforme*, from *Cymba*, a Boat, and *Scaphoides*, from a *Greek* Word of the like import. See FOOT.

It has behind it a large *Sinus*, which receives the fore convex Head of the firſt Bone, and before it, is convex; 'tis diſtinguiſhed into three Heads, which are received into the *Sinus's* of the *Oſſa Cuneiformia.*

NAVIGATION, the Art, or Act of *Sailing*; or of conducting a Veſſel from one Place to another, the ſafeſt and moſt commodious way.

This Art, in the full Latitude of the Word, comprehends three parts; *viz.* Firſt, the Art of conſtructing and building Ships. (ſee SHIP.) Second, the loading of Ships. (ſee BURDEN.) And, Third, the Direction and Government of

of the Ship; which is in a peculiar Senſe call'd *Navigation*, or *Sailing*. See SAILING.

In this reſtrained Senſe of the Word, *Navigation* is either *Improper*, or *Proper*.

The *firſt*, uſually call'd *Coaſting*, is where the Ports are on the ſame, or a very neighbouring Coaſt; and where the Veſſel is ſeldom out of ſight of Land, or out of reach of Sounding. See COASTING.

In this, little elſe is required, but an Acquaintance with the Lands, the Compaſs, and Sounding-Line; each of which ſee in its Place, COMPASS and SOUNDING.

The *latter* is where the Voyage is long, and out in the main Ocean. In this, beſides the Requiſites in the former, are likewiſe required the uſe of *Mercator*'s Chart, *Azimuth*, and *Amplitude Compaſſes*, *Log-Line*, and other Inſtruments for Celeſtial Obſervations, as *Quadrants*, *Foreſtaffs*, &c. See each Inſtrument, *&c.* in its Place.

Navigation turns principally on four things; two whereof being known, the reſt are eaſily found from them by the Tables, Scales, and Charts.

Theſe four things are, the Difference in Latitude, Difference in Longitude, the Reckoning or Diſtance, and the Courſe or Rumb of the Wind.

The *Latitudes* are eaſily found, and with ſufficient Accuracy. See LATITUDE.

Nor is there any thing wanting to the Perfection of *Navigation*, but to determine the *Longitude*.

The Mathematicians of many Ages have applied themſelves with the utmoſt Aſſiduity to ſupply this grand *Deſideratum*, but hitherto in vain; notwithſtanding the magnificent Rewards of ſeveral Princes and States to the Diſcoverer.

For the various Methods that now occaſionally obtain at Sea, ſee LONGITUDE.

The *Courſe* and *Diſtance*, we have already obſerved, are had by the Log-Line, or dead Reckoning, and the Compaſs.

The Poets refer the Invention of the Art of *Navigation* to *Neptune*, ſome to *Bacchus*, others to *Hercules*, others to *Jaſon*, others to *Janus*, who is ſaid to have made the firſt Ship. See SHIP. Hiſtorians to the *Æginetes*, the *Phœnicians*, *Tyrians*, and the antient Inhabitants of *Britain*.

Some will have it, the firſt hint was taken from the flight of the Kite; others, as *Oppian de Piſcibus*, Lib. I. from the Fiſh call'd *Nautelus*. Others aſcribe it to Accident: But Scripture refers the Origin of ſo uſeful an Invention to God himſelf, who gave the firſt Specimen thereof in the Ark built by *Noah* under his Direction. For the Raillery the good Man underwent on account of his Enterprize, ſhews evidently enough, the World was then ignorant of any thing like *Navigation*, and that they even thought it impoſſible.

However, Hiſtory repreſents the *Phœnicians*, eſpecially thoſe of their Capital *Tyre*, as the firſt *Navigators*; being urged to ſeek a foreign Commerce by the Narrowneſs and Poverty of the Slip of Ground they poſſeſs'd along the Coaſts; by the Conveniency of two or three good Ports; and by their natural Genius to Traffic.

Accordingly, *Lebanon*, and the other neighbouring Mountains furniſhing them with excellent Wood for Ship-building, in a ſhort time they were Maſters of a numerous Fleet, which conſtantly hazarding new *Navigations*, and ſettling new Trades, they ſoon arrived at an incredible Pitch of Opulency and Populouſneſs: inſomuch as to be in a Condition to ſend out Colonies; the Principal of which was that of *Carthage*, which keeping up their *Phœnician* Spirit of Commerce, in time not only equal'd *Tyre* itſelf, but vaſtly ſurpaſs'd it; ſending their Merchant-Fleets thro' *Hercules*'s *Pillars*, now the Straights of *Gibralter*, along the Weſtern Coaſts of *Africa* and *Europe*; and even, if we believe ſome Authors, to *America* itſelf, the Diſcovery whereof ſo many Ages afterwards, has been ſo glorious to the *Spaniards*. See COMMERCE.

Tyre, whoſe immenſe Riches and Power are repreſented in ſuch lofty Terms both in ſacred and profane Authors, being deſtroy'd by *Alexander the Great*; its *Navigation* and Commerce were transfer'd by the Conqueror to *Alexandria*, a new City, admirably ſituated for thoſe purpoſes, propos'd for the Capital of the Empire of *Aſia*, which *Alexander* then meditated: And thus aroſe the *Navigation* of the *Egyptians*, which was afterwards ſo cultivated by the *Ptolemys*, that *Tyre* and *Carthage* (which laſt, after having a long time diſputed Empire with the *Romans*, was at length ſubdued) were quite forgot.

Egypt being reduced into a *Roman* Province after the Battel of *Actium*, its Trade and *Navigation* fell into the hands of *Auguſtus*; in whoſe time *Alexandria* was only inferior to *Rome*, and the Magazines of the Capital of the World wholly ſupplied with Merchandiſes from the Capital of *Egypt*.

At length, *Alexandria* itſelf underwent the Fate of *Tyre* and *Carthage*; being ſurpriz'd by the *Saracens*, who, in ſpite of the Emperor *Heraclius*, overſpread the Northern Coaſts of *Africa*, &c. whence the Merchants being driven, *Alexandria* has ever ſince been in a languiſhing State, tho ſtill it have a conſiderable Part of the Commerce of the Chriſtian Merchants, trading to the *Levant*.

The Fall of *Rome*, and its Empire, drew along with it, not only that of Learning, and the polite Arts, but that of *Navigation*; the *Barbarians*, into whoſe hands it fell, contenting themſelves with the Spoils of the Induſtry of their Predeceſſors.

But no ſooner were the more Brave among thoſe Nations well ſettled in their new Provinces, ſome in *Gaul*, as the *Franks*; others in *Spain*, as the *Goths*; and others in *Italy*, as the *Lombards*; but they began to learn the Advantages of *Navigation* and Commerce, and the Method of managing them, from the People they had ſubdued; and this with ſo much ſucceſs, that in a little time ſome of them became able to give new Leſſons, and ſet on foot new Inſtitutions for its Advantage.

Thus it is to the *Lombards* we uſually aſcribe the Invention and Uſe of *Banks*, *Book-keeping*, *Exchange*, and *Rechange*, &c. See BANK, EXCHANGE, *&c.*

It does not appear which of the *European* People, after the Settlement of their new Maſters, firſt took themſelves to *Navigation* and Commerce; ſome think it began with the *French*, tho the *Italians* ſeem to have the juſteſt Title to it; and are accordingly ordinarily look'd on as the Reſtorers hereof, as well as of the politer Arts, which had been baniſhed together, from the time the Empire was torn aſunder.

'Tis the People of *Italy* then, eſpecially, and particularly thoſe of *Venice* and *Genoa*, who have the Glory of this Reſtoration; and it is to their advantageous Situation for *Navigation*, they in great meaſure owe their Glory.

In the bottom of the *Adriatic* were a great number of marſhy Iſlands, only ſeparated by narrow Channels, but thoſe well ſcreen'd, and almoſt inacceſſible, the Reſidence of ſome Fiſhermen, who here ſupported themſelves by a little Trade of Fiſh and Salt, which they found in ſome of theſe Iſlands. Thither, then, the *Veneti*, a People Inhabiting that part of *Italy* along the Coaſts of the Gulph, retir'd, when *Alaric* King of the *Goths*, and afterwards *Attila* King of the *Huns*, ravaged *Italy*.

Theſe new Iſlanders, little meaning that this was to be their fixed Reſidence, did not think of compoſing any Body Politic; but each of the ſeventy two Iſlands of this little *Archipelago*, continued a long time under its ſeveral Maſters, and each made a diſtinct Common-wealth: When their Commerce was become conſiderable enough to give Jealouſy to their Neighbours, they began to think of Uniting into a Body. And it was this Union, firſt begun in the ſixth Century, but not compleated till the Eighth, that laid the ſure Foundation of the future Grandeur of the State of *Venice*.

From the time of this Union, their Fleets of Merchant-Men were ſent to all the Parts of the *Mediterranean*, and at laſt to thoſe of *Egypt*, particularly *Cairo*; a new City, built by the *Saracen* Princes on the Eaſtern Banks of the *Nile*; where they traded for their Spices, and other Products of the *Indies*.

Thus they flouriſh'd, increas'd their Commerce, their *Navigation*, and their Conqueſts on the *Terra firma*, till the famous League of *Cambray* in 1508, when a number of jealous Princes conſpir'd to their Ruin; which was the more eaſily effected by the Diminution of their *Eaſt-India* Commerce, which the *Portugueſe* had got a part of, and the *French* another.

Genoa, which had apply'd itſelf to *Navigation* at the ſame time with *Venice*, and that with equal ſucceſs, was a long time a dangerous Rival, diſputed with it the Empire of the Sea, and ſhared with it the Trade to *Egypt*, and other Parts both of the Eaſt and Weſt.

Jealouſy ſoon began to break out, and the two Republics coming to blows, 'twas three Centuries almoſt continued War, e'er the Superiority was aſcertain'd; when towards the end of the fourteenth Century, the fatal Battel of *Chioza* ended the noble Striſe: The *Genoeſe*, who till then had uſually the Advantage, having now loſt all; and the *Venetians* almoſt become deſperate, at one happy Blow, beyond all Expectation, ſecur'd to themſelves the Empire of the Sea, and Superiority in Commerce.

About the ſame time that *Navigation* was retriev'd in the Southern Parts of *Europe*, a new Society of Merchants was form'd in the North, which not only carried Commerce to the greateſt Perfection it was capable of till the Diſcovery of the one and other *India*, but alſo form'd a new Scheme of Laws for the Regulation thereof, which ſtill obtain under the Name of *Uſe and Cuſtom of the Sea*.

This Society is that famous Aſſociation of the *Hans* Towns, commonly ſuppoſed to have begun about the Year 1164. See HANS *Towns*.

The modern State of *Navigation* in *England*, *Holland*, *France*, *Spain*, *Portugal*, &c. is too popular to need a particular Detail. See COMMERCE and COMPANY.

We ſhall only add, that in examining the Reaſons of Commerce's paſſing ſucceſſively from the *Venetians*, *Genoeſe*, and *Hans-Towns*, to the *Portugueſe* and *Spaniards*; and from thoſe again to the *Engliſh* and *Dutch*; it may be eſtabliſhed as a Maxim, That the Relation of Commerce and *Navigation*, or, if we may be allow'd to ſay it, their Union, is ſo intimate, that the Fall of the one, inevitably draws after it the other; and that they will always either flouriſh or dwindle together.

Hence ſo many Laws, Ordinances, Statutes, &c. for its Regulation; and hence particularly that celebrated *Act of Navigation*, which an eminent Author calls the *Palladium*, or tutelary Deity of the Commerce of *England*; which is too important not to be here mentioned; as it is the ſtanding Rule, not only of the *Engliſh* among themſelves, but alſo of other Nations with whom they traffic.

Act of Engliſh NAVIGATION, is a Statute whereby the Parliament of *England* have ſettled every thing relating to *Navigation* and Commerce.

Till this Act, all Nations were at liberty to import all kinds of Merchandizes, whether of their own Growth, or loaden elſewhere, and that on their own Veſſels.

Cromwell firſt perceiving the Prejudice this Liberty did to the *Engliſh* Commerce, which was now almoſt wholly in the hands of Foreigners, chiefly the *Dutch*, whom he hated; animated the *Engliſh*, by ſeveral Acts of his Parliaments, to reſume their Trade into their own hands; and particularly paſſed an Act prohibiting the *Dutch* from importing any Merchandizes, except thoſe of their own Growth or Manufacture, which were very few.

Upon the Reſtoration, the firſt Parliament *Charles* II. call'd, diſtinguiſhing, in *Cromwell*, the Politician from the Parricide, condemn'd the Memory of the one, and follow'd the Plan of the other with regard to *Navigation* and Commerce; by paſſing that celebrated *Bill or Act of Navigation*, which ſtill ſubſiſts in its full Latitude, and its antient Vigour. Its Date is the 23d of *September* 1660. Its chief Articles follow.

1. That no Merchandizes ſhall be imported or exported to or from any of the *Engliſh* Colonies in *Aſia*, *Africa*, or *America*, but on Veſſels built within the Dominions of *England*, or really belonging to *Engliſhmen*, and whoſe Maſters, and at leaſt three fourths of the Crew are of that Nation, on pain of Forfeiture of the Goods and Veſſel.

2. That no Perſon born out of the Subjection of *England*, or not naturaliz'd, ſhall exerciſe any Commerce in thoſe Colonies for himſelf, or others.

3. That no Merchandizes of the Growth of *Aſia* or *America*, ſhall be imported into any of the Dominions of *England* on any other than *Engliſh* Veſſels.

4. That none of the Commodities of *Europe* ſhall be imported into *England* by any other Veſſels than thoſe of the Parts, Countries, and States where the Commodities grow, or are manufactured.

5. That all Kinds of Fiſh, and Train-Oils not fiſh'd by *Engliſh* Veſſels, imported into *England*, ſhall pay double Duties.

6. That the Commerce from Port to Port in *England* and *Ireland* ſhall be carried on wholly by *Engliſh* Veſſels and Merchants.

7. That none but *Engliſh* Veſſels ſhall reap the Benefit of the Diminutions made, or to be made in the Cuſtoms.

8. All foreign Veſſels are prohibited importing into *England* and *Ireland* any of the Commodities of *Muſcovy*, or even any Maſts, or other Woods, foreign Salt, Pitch, Roſin, Hemp, Raiſins, Prunes, Oils of Olive, any kind of Corn, or Grain, Sugars, Aſhes and Soap, Wine, Vinegar, Brandy, Currants, and other Commodities the Product of the *Turkiſh* States, except Veſſels built in the Places where the Commodities grow or are manufactured, or where 'tis uſual to take them up; and unleſs the Maſter and three fourths of the Crew be Natives of the Country where they are loaden.

9. That to prevent all falſe Declarations to favour the Entry of foreign Goods, all thoſe mention'd in the laſt Article ſhall be deem'd to belong to Strangers that are not brought in Veſſels of the Quality mention'd in the firſt Article; and as ſuch ſhall pay the Duties uſed to be paid by other Commodities.

10. That to prevent Frauds in buying and diſguiſing foreign Veſſels, the Proprietors ſhall take an Oath that they really belong to them, and that no Foreigner has any part in them.

11. That *Engliſh* Veſſels, or reputed *Engliſh*, may import into the Dominions of *England*, any Merchandizes of the *Levant*, tho not taken up in the Places where they grow, or are manufactured. Provided it be in ſome Part of the *Mediterranean* beyond the Straights of *Gibralter*. And the ſame is underſtood of Commodities brought from the *Eaſt-Indies*; provided they be taken up in ſome Port beyond the Cape of *Good-Hope*: And thoſe from the *Canaries*, and other Colonies of *Spain*; and the *Azores*, and other Colonies of *Portugal*, which are allow'd to be ſhip'd, the one in *Spaniſh* Ports, the other in *Portugueſe*.

12. Theſe Penalties, Prohibitions, and Confiſcations not to extend to Goods taken from the Enemies of *England*, nor to Fiſh caught by the *Scots*, or their Corn, and Salt, which may be imported into *England* by the *Scotch* Veſſels.

5. Five Shillings *per* Ton Duty is impoſed on every *French* Veſſel arriving in any Port of *England*, ſo long (and even three Months longer) as 50 Sols *per* Ton lies on the *Engliſh* Veſſels in *France*.

Laſtly, That Sugars, Tobacco, and other Commodities of the Growth of the *Engliſh* Colonies, ſhall not be imported into any other Part of *Europe*, but the Dominions of *England*. And that Veſſels going out of the Ports of the ſame Crown for the *Engliſh* Colonies, ſhall give 1000 *l.* Security, if under one hundred Tons, and 2000 *l.* if above, e'er they depart, that they will import their Cargo into ſome Port in the ſaid Dominions; and the like, e'er they quit thoſe Colonies, that they will land their whole Cargo in *England*.

NAVIS, *Argo Navis*, or the Ship *Argo* in Aſtronomy, a Conſtellation of the Southern Hemiſphere. See ARGO.

NAUMACHIA, NAUMACHY, a Spectacle, or Shew, among the antient *Romans*, repreſenting a Sea-Fight.

The Word is alſo uſed for a *Circus* incompaſſed with Seats and Porticos; the Pit whereof, ſerving as an *Arena*, was fill'd with Water for the exhibiting of Sea-Fights. See CIRCUS.

There were ſeveral of theſe *Naumachias* at *Rome*; three built by *Auguſtus*, one by *Claudius*, and another by *Domitian*. *Nero's Naumachia* ſerv'd for the Reverſe of his Medals.

The Word comes from the *Greek* ναῦς, *Veſſel*, and μαχη, *pugna*, fight.

NAUSEA, in Medicine, a Retching, or Propenſity and Endeavour to Vomit; ariſing from a Loathing of Food, excited by ſome viſcous Humour that irritates the Stomach, and urges it thus to diſcharge itſelf; or a *Nauſea* is when the thoughts or ſight of proper Food create a Sickneſs in the Stomach, or a Tendency to Vomit.

The uſual Cauſes of a *Nauſea*, and *Anorexia*, are hard Drinking, great Heat, a Fever, Conſumptions, Laxneſs of the Stomach occaſion'd by Tea, &c. Narcotics, as Tobacco, Paſſions of the Mind, Suppreſſion of Evacuations inducing a Plethora, foul Stomach, tenacious Humours lodg'd therein, &c.

Boerhaave defines a *Nauſea* Anatomically, to be a retrograde Spaſmodic Motion of the Muſculous Fibres of the *Oeſophagus*, Stomach, and Inteſtines; attended with Convulſions of the Abdominal Muſcles, and the *Septum tranſverſum*. See VOMITING.

Nauſea and Vomiting only differ from one another, as more or leſs Violent. The *Nauſea* is properly the Effort the Stomach makes to Vomit, which has not always the Effect.

The Word is *Latin*, form'd from the *Greek* ναῦσα, of ναῦς, *Navis*, Ship: In regard, People, at the beginning of their Voyages, are uſually inclined to Vomiting.

NAUTICAL *Planiſphere*, a Deſcription of the Terreſtrial Globe upon a Plane, for the uſe of Mariners. See PLANISPHERE and *Sea*-CHART.

NAUTICAL *Chart*, ſee *Sea*-CHART.

NAUTICAL *Compaſs*, the Sea-Compaſs, ſee COMPASS.

NAUTICUS, in Anatomy, a Muſcle; call'd alſo *Tibialis Poſticus*. See TIBIALIS.

NAUTILUS, in Natural Hiſtory, a petrified Shell, found in the Earth; in other reſpects like thoſe found in the Sea, or in Rivers. See FOSSIL, PETREFACTION, SHELL, and STONE.

NAVY, the Fleet, or Shipping, of a Prince, or State. See FLEET.

The Direction of the *Navy Royal* of *England* is in the Lord High-Admiral, and under him in the Principal Officers and Commiſſioners, who all hold their Places by Patent. See ADMIRAL.

Principal Officers of the Navy are four, *viz.* The *Treaſurer*, whoſe Buſineſs is to receive Moneys out of the Exchequer, and to pay all the Charges of the *Navy*, by Warrant from the Principal Officers. The *Comptroller*, who attends, and comptrolls all Payment of Wages, is to know the Rates of Stores, to Examine and Audit all Accounts, &c. The *Surveyor*, who is to know the State of all Stores, and ſee Wants ſupply'd, to eſtimate Repairs, charge Boatſwains, &c. with what Stores they receive; and at the End of each Voyage, to State and Audit Accounts. And laſtly, *The Clerk of the Acts*, whoſe Buſineſs is to Record all Orders, Contracts, Bills, Warrants, &c.

Commiſſioners of the Navy, are five. The firſt Executes that Part of the Comptroller's Duty which relates to the Victuallers Accounts. The ſecond, another Part of the ſaid Comptroller's Duty relating to the Accounts of the Store-Keepers of the Yards. The third has the Direction of the

Navy

Navy at the Port of *Portſmouth*. The fourth has the ſame at *Chatham*. And the fifth at *Plymouth*.

The *Navy* was antiently Victualled by Contract; but the Victualling is now under Commiſſioners, who keep their Office on *Tower-Hill*. See VICTUALLING-*Office*.

The ordinary Expence of the *Navy* in a Year of Peace, continuing in Harbour, is ſo well regulated, that it amounts to ſcarce 130000 *l. per Annum*.

The number of Ships and Veſſels in the *Navy*, as it ſtood in the Year 1710, are 7 Firſt-Rates, 13 Second-Rates, 48 Third-Rates, 65 Fourth-Rates, 68 Fifth-Rates, 40 Sixth-Rates, 5 Fire-Ships, 7 Bomb-Veſſels, 18 Yatchts, 1 Advice-Boat, 2 Brigantines, 7 Sloops, 4 Store-Ships, 13 Hulks, 26 Hoys, 2 Smacks. See RATE.

NAZAREATE, the State and Condition of a *Nazarite*, or *Nazarean* among the *Jews*. See NAZARITE.

The *Nazareate* was a Separation from the reſt of Mankind; particularly in three things; 1. In that the Perſons devoted hereto drank no Wine. 2. In that they did not ſhave their Hair. 3. In avoiding the Touch of dead People, which they held a Defilement.

The *Nazareate* was of two Kinds, the one Temporary, the other for Life. The Rabbins enquire what the Term of the Temporary *Nazareate* was, and determine it by the *Cabbala*; for ſince, in Scripture, *Numbers* vi. 5. where 'tis ſaid, *Domino ſanatus erit*, the *Hebrew* Verb, יהוה *erit*, conſiſts of four Letters; the firſt and third whereof taken as numeral Letters, do each make 10, and the reſt each 5, all together 30; the Term of the *Nazareate*, ſay they, was 30 Days. See CABBALA.

NAZARITE, or NAZARENE, in the Old Teſtament, is uſed for a Perſon diſtinguiſhed and ſeparated from the reſt, by ſomething extraordinary, either his Sanctity, Dignity, or ſome Vow.

In the Book of *Numbers*, ch. vi. we find the Vow of a *Nazarite* deſcribed; *i. e.* the Vow whereby a Man or Woman *ſeparate* themſelves to the Lord; and the Conditions, or Effects thereof as to Abſtinence, *&c.* See NAZAREATE.

The Word comes from the *Hebrew* נזר *Nazar*, to diſtinguiſh, ſeparate; in which it differs from *Nazarean*, an Inhabitant of the Country call'd *Nazareth*, which comes from נוד *Natzar*, or *Netzer*, to *ſave*, *preſerve*.

NAZARITES, or NAZARENES, were likewiſe a Kind of Sectaries in the Church, in the firſt Ages thereof.

S. *Epiphanius* tells us the *Nazareans* were the ſame with the *Jews* in every thing relating to the Doctrine and Ceremonies of the Old Teſtament; and only differ'd from them in this, that they added Chriſtianity thereto, profeſſing to believe that Jeſus Chriſt was the Meſſiah.

There were two Kinds of *Nazarites*, the one *Pure*, who kept the Law of *Moſes* and Chriſtianity together; the other, real *Ebionites*. See EBIONITES.

Eccleſiaſtical Writers tell us, that St. *Matthew* preached the Goſpel to the *Jews* at *Jeruſalem*, and the reſt of *Paleſtine*, in their own Language; and that accordingly they had his Goſpel written in the *Hebrew* of that Time. And S. *Epiphanius* adds, that this Goſpel was preſerved entire among the *Nazareans*; only he doubts whether they might not have retrench'd the Genealogy of Jeſus Chriſt, which was not in the Copy of the *Ebionites*. S. *Jerome*, who tranſlated it out of *Hebrew* into *Greek* and *Latin*, ſays, A great many People took the *Hebrew* Goſpel uſed by the *Nazareans* and *Ebionites*, to be the Original of S. *Matthew*.

Hence *Baronius* in his *Annals* ſays, if the Vulgate *Latin* Verſion were to be reform'd, it ſhould rather be done by the *Hebrew* Original, than by the *Greek*; which is but a Copy.

Caſaubon treats this Opinion of *Baronius* as impious, as not being able to conceive how the Authority of the *Greek* Verſion ſhould depend on a Text quite loſt. He adds, That it was never uſed by any but the *Nazareans*, *Ebionites*, and ſome other Heretics; and that it was full of Fables, as having been alter'd and corrupted by thoſe Heretics.

NEALING, or rather ANNEALING, a Term uſed for the Preparing of ſeveral Matters by heating or baking them in an Oven, or the like.

NEALING *of Glaſs*, is the baking of Glaſs to dry, harden, and give it the due Conſiſtence, after it has been blown, and faſhion'd into the proper Works. See GLASS.

This is uſually perform'd in a kind of Tower, call'd the *Leer*, built over the Melting-Furnace. See FURNACE.

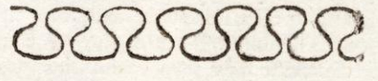
NEALING *of Glaſs* is alſo uſed for the Art of Staining Glaſs with Metal Colours. See PAINTING *on Glaſs*.

NEALING *of Steel*, is the heating it in the Fire to a blood-red Heat; and then taking it out, and letting it cool gently of itſelf. See STEEL.

This is done to make it ſofter, in order to Engrave or Punch upon it. See TEMPERING.

NEAP-TIDES, the Tides in the 2d and 4th Quarters of the Moon; which are low Tides, in reſpect of the Spring-Tides. See TIDES.

NEAT-WEIGHT, the Weight of a Commodity without the Cask, Bag, or Caſe. See WEIGHT.



NEBULOUS, *Cloudy*, in Aſtronomy, a Term apply'd to certain of the fix'd Stars, which ſhew a dull, hazy Light, and are leſs than thoſe of the ſixth Magnitude, and ſo ſcarce viſible to the naked Eye, to which, at beſt, they only appear like little dusky Specks or Clouds.

Through a moderate Teleſcope, theſe *Nebulous* Stars plainly appear to be Congeries or Cluſters of ſeveral little Stars. See STAR.

In the *Nebulous* Star call'd *Præſepe*, in the Breaſt of *Cancer*, there are reckon'd 36 little Stars; three of which, Mr. *Flamſtead* gives us in his Catalogue. See CANCER.

In the *Nebulous* Star of *Orion* are reckon'd 21. F. *le Compte* adds, that in the *Pleiades* are 40; 12 in the Star in the middle of *Orion*'s Sword; in the extent of two Degrees of the ſame Conſtellation, 500; and 2500 in the whole Conſtellation. See ORION.

NEBULY, NEBULE, or NEBULOUS, in Heraldry, a Term uſed when a Coat is charged with ſeveral little Figures, in form of Clouds, running within one another; or when the Out-line of a Bordure, Ordinary, *&c.* is indented or waved, after the manner in the adjoining Figure.

NECESSARY, in a Philoſophical Senſe, that which cannot but be, or cannot be otherwiſe. See NECESSITY.

The Schoolmen make a great many Kinds, or Diviſions hereof: As,

NECESSARY *in Cauſing*: when there is a Cauſe from which an Effect muſt *neceſſarily* follow. NECESSARY *in Predicating*. And, NECESSARY *in Being*.

There is alſo a *Logical* NECESSARY: *Phyſical* NECESSARY: *Metaphyſical*, and *Moral* NECESSARIES.

NECESSITY, what is done by a *neceſſary* Cauſe, or by an irreſiſtible Power; in oppoſition to Liberty. See LIBERTY and POWER.

Neceſſity is uſually confounded with Conſtraint; yet, in God, the *Neceſſity* of being Good is not any Conſtraint, but a Perfection. In effect, *Neceſſity*, according to *Rochefaucault*, differs from Conſtraint in this, that the former is join'd with the Pleaſure and Inclination of the Will, to which Conſtraint is contrary.

Simplicius, from *Plato* and *Epictetus*, diſtinguiſhes two Kinds of *Neceſſity*; the one *Violent* or *Coactive*, which is oppoſite to Liberty; the other *Spontaneous* or *Voluntary*, very conſiſtent with it; for this, adds he, it is that *neceſſitates* all things to act according to their Nature, as being connatural to them; ſince αὐτοκίνητον, a thing that moves itſelf, muſt of *Neceſſity* be moved according to its own Nature, *i. e.* the Will: That is, ſince it is τὸ αὐτοκίνητον, a Self-mover, it muſt neceſſarily move according to its own Nature, *i. e.* ſpontaneouſly.

This Diſtinction is admitted by many of the Divines, particularly S. *Auguſtine*, who urges it againſt the *Pelagians*, as is ſhewn by *Janſenius*.

The Schools diſtinguiſh a *Phyſical Neceſſity*, and a *Moral Neceſſity*; a Simple, *Abſolute Neceſſity*, and a *Relative* one.

A Phyſical NECESSITY is the want of a Principle, or of the natural Means neceſſary to act, which is otherwiſe call'd a *Phyſical* or *Natural Impotence*. See IMPOTENCE.

A Moral NECESSITY, or Impotence, is only a great Difficulty, ſuch as that ariſing from a long Habitude, a ſtrong Inclination, or violent Paſſion.

A Simple, or *Abſolute* NECESSITY, is that which has no dependance on any State, or Conjuncture, or any particular Situation of things, but is found every where, and in all the Circumſtances in which the Agent can be ſuppoſed.

Such is in a blind Man the *Neceſſity* he is under of not diſtinguiſhing Colours.

Relative NECESSITY, is that which places him in a real Incapacity of acting, or not acting in thoſe Circumſtances, and that Situation he is found in; tho in other Circumſtances, and another State of things, he might act, or not act.

Such, in the Opinion of the *Janſeniſts*, is the *Neceſſity* of doing Evil in a Man, who, with a violent Paſſion, has only a feeble Grace to reſiſt it; or the *Neceſſity* of doing well in a Man, who having Grace of ſeven or eight Degrees of Strength, has only Concupiſcence of two or three Degrees to withſtand.

All theſe Kinds of *Neceſſity* are oppoſite to *Liberty*; ſince even in the laſt, 'tis as impoſſible for the Man to act, or not act, as if he were in a State of *Abſolute*, *Simple*, and *Phyſical Neceſſity*.

The Schoolmen admit other Species of *Neceſſity*; *Antecedent*, *Concomitant*, *Conſequent*, *&c.*

Antecedent NECESSITY, is that ariſing from an antecedent

Cauſe, neceſſarily operating. Such is the *Neceſſity* of the Sun's Riſing to-morrow Morning.

Concomitant NECESSITY ariſes from an antecedent and neceſſary Cauſe, but depends on the Circumſtances of the Effect; the Effect all the while being free. Thus 'tis neceſſary *Peter* ſhould ſit, ſuppoſing he is ſitting.

NECK, a Part in the human Body, and in that of ſeveral other Animals, between the Head and the Trunk of the Body. See BODY.

All Animals have *Necks* except thoſe without Lungs and Voice, as Fiſhes and Frogs.

The upper Part before is call'd the *Throat*; and the lower Part the *Pomum Adami*. The Hole between the two *Clavicles* is call'd the *Jugulum*, by the *Greeks* σφαγὴ, Murther; it being very eaſy to kill in this Part. The hind Part of the *Neck* is call'd *Cervix*; and the Hole between the firſt and ſecond *Vertebra*, the *Nape*; that underneath, *Epomis*.

Its lateral Parts commence from the bottom of the Ears, and are call'd *Parotides*.

The inner Parts of the *Neck* are ſeven *Vertebræ*, the *Trachea*, *Larynx*, *Jugular* Veins, Carotid Arteries, the Intercoſtal Nerve, that of the eighth Pair, with the Recurrent, and ſeveral Muſcles. See each Part under its proper Article.

The NECKS *of Quadrupeds*, Mr. *Derham* obſerves, are always equal to the Length of their Legs; to enable them to reach the Ground for their Food, without ſtooping the Body. See QUADRUPED and LEG.

Indeed, the Elephant is an Exception from the Rule; its *Neck* is very ſhort; but then it has a peculiar Proviſion by a Proboſcis, or Trunk. See PROBOSCIS.

Another thing remarkable in the *Necks* of Graminivorous Quadrupeds, is a ſtrong, tendinous and inſenſible *Aponeuroſis*, or Ligament, braced from the Head to the middle of the Back; by means whereof they are enabled conſtantly to hold down the Head, tho very heavy, to gather their Food without Pain or Labour.

NECROLOGY, a Book, antiently kept in Churches and Monaſteries; wherein were regiſter'd the Benefactors to the ſame, the Time of their Deaths, and the Days of their Commemoration; as alſo the Deaths of the Priors, Abbots, Religious Canons, &c.

This was otherwiſe call'd *Calendar*, and *Obitory*. See CALENDAR, &c.

The Word comes from the *Greek* νεκρὸς, *Mors*, Death, and λόγ☉.

NECROMANCY, the Art, or Act of communicating with Devils, and doing ſurpriſing Feats by their Aſſiſtance; particularly calling up the Dead: From νεκρ☉, *Death*, and μαντεια, *Enchantment*. See MAGIC, SORCERY, &c.

NECROSIS, in Medicine, a compleat Mortification of any part; call'd alſo Sideratio and Sphacelus. See SPHACELUS, &c.

The Word is *Greek*, νέκρωσις, where it has the ſame Signification.

NECTAR, among the antient Poets, the Drink of the fabulous Deities of Antiquity.

NEEDLE, a very familiar little Inſtrument, or Utenſil, made of Steel, pointed at one end, and pierced at the other; uſed in Sewing, Embroidery, Tapiſtry-Work, &c.

Needles make a very conſiderable Article in Commerce; and the Conſumption thereof is almoſt incredible. The Sizes are from N° 1, the largeſt; to N° 25, the ſmalleſt.

There is ſcarce any Commodity cheaper than *Needles*; which will appear ſomething extraordinary to the Reader, after he has been ſhewn the infinite Number of Operations they undergo e'er brought to Perfection.

Manufacture of NEEDLES.

German and *Hungary* Steel is of moſt repute for *Needles*. The firſt thing, is to paſs it thro' a Coal-fire, and under a Hammer, to bring it out of its ſquare Figure into a Cylindrical one. This done, 'tis drawn thro' a large Hole of a Wire-drawing Iron; return'd into the Fire, and drawn thro' a ſecond Hole of the Iron, ſmaller than the firſt; and thus ſucceſſively from Hole to Hole, till it have acquir'd the degree of Fineneſs requir'd for that Species of *Needles*; obſerving every time it is to be drawn, that it be greas'd over with Lard to render it the more manageable. See WIRE-*Drawing*.

The Steel thus reduced into a fine Wire, is cut in Pieces of the length of the *Needles* intended. Theſe Pieces are flatted at one end on the Anvil, in order to form the Head and Eye. They are then put in the Fire, to ſoften 'em further, and thence taken out, and pierc'd at each extreme of the flat Part, on the Anvil, by force of a Punchion of well temper'd Steel, and laid on a leaden Block, to bring out, with another Punchion, the little Pieces of Steel remaining in the Heads.

The Corners are then filed off the Squares of the Heads, and a little Cavity filed on each ſide the flat of the Head. This done, the Point is form'd with a File; and the whole filed over. They are then laid to heat red-hot, on a long, flat, narrow Iron, crooked at one end, in a Charcoal-fire; and when taken out thence, are thrown into a Baſon of cold Water to harden. On this Operation, a good deal depends; too much heat burns 'em; and too little leaves 'em ſoft; the Medium is only to be learnt by Experience.

When harden'd, they are laid in an Iron-Peel, on a Fire more or leſs briſk, in proportion to the Thickneſs of the *Needles*, taking care to move 'em from time to time; this ſerves to temper 'em, and take off their Brittleneſs; Care, here, too, muſt be taken of the degree of Heat.

They are then ſtreightned one after another with the Hammer; the Coldneſs of the Water uſed in hardning 'em having twiſted the greateſt part of 'em.

The next Proceſs is the Poliſhing. To do this, they take twelve or fifteen Thouſand *Needles*, and range 'em in little Heaps againſt each other on a Piece of new Buckram, ſprinkled with Emery Duſt. The *Needles* thus diſpoſed, Emery Duſt is thrown over 'em, which is again ſprinkled over with Oil of Olives. At laſt, the whole is made up into a Roll, well bound at both ends.

This Roll is then laid on a Poliſhing Table, and over it a thick Plank loaden with Stones, which two Men work backwards and forwards a day and half, or two days ſucceſſively. By which means, the Roll thus continually agitated by the Weight and Motion of the Plank over it, the *Needles* within ſide being rubb'd againſt each other with the Oil and Emery, are inſenſibly poliſhed.

In *Germany*, inſtead of Hands, they poliſh with Water-Mills.

After Poliſhing, they are taken out, and the Filth waſh'd off 'em with hot Water and Soap: then wiped in hot Bran a little moiſten'd, placed, with the *Needles*, in a round Box ſuſpended in the Air by a Cord, which is kept ſtirring till the Bran and the *Needles* be dry. The *Needles* thus wiped in two or three different Brans, are taken out and put in wooden Veſſels to have the good ſeparated from thoſe whoſe Points or Eyes have been broke either in poliſhing or wiping; the Points are then all turn'd the ſame way, and ſmooth'd with an Emery-ſtone turn'd with a Wheel.

This Operation finiſhes 'em; and there remains nothing but to make 'em into Packets of two hundred and fifty each.

Chirurgeons NEEDLES, are crooked, and their Points triangular. They are of different Sizes, and bear different Names according to the Purpoſes they are uſed for.

The largeſt are *Needles for Amputation*; the next, *Needles for Wounds*; the fineſt, *Needles for Sutures*. They have others very ſhort and flat, for Tendons; others, ſtill ſhorter, and the Eye placed in the middle, for the tying together of Veſſels, &c. See SUTURE, &c.

Magnetical NEEDLE, in Navigation, &c. a *Needle* touch'd with a Load-ſtone, and ſuſpended on a Pivot or Centre, on which, playing at liberty, it directs itſelf to certain Points in, or under the Horizon. See MAGNET.

Magnetical Needles are of two Kinds, *viz. Horizontal* and *Inclinatory*.

Horizontal NEEDLES, are thoſe equally balanced on each ſide the Pivot which ſuſtains 'em; and which, playing Horizontally, with their two extremes point out the North and South Points of the Horizon. For their Application and Uſe, ſee COMPASS.

Conſtruction of an Horizontal NEEDLE. A Piece of pure Steel is provided, of a length not exceeding ſix Inches, leſt its Weight impede its Volubility; very thin, to take its Verticity the better; not perforated with any Holes, &c. for Ornament ſake, which prevent the equable diffuſion of the Magnetic Virtue.

A Perforation is made in the middle of its Length, and a braſs Cap or Head ſolder'd on, whoſe inner Cavity is Conical, ſo as to play freely on a Stile or Pivot, headed with a fine Steel Point.

The North Point of the *Needle* in our Hemiſphere is made a little lighter than the Southern, the Touch always deſtroying the Balance, if well adjuſted before, and rendring the North End heavier than the South, and thus occaſioning the *Needle* to dip. See DIPPING-*Needle*.

Now to give the *Needle* its Verticity, or directive Faculty, 'tis to be rubb'd leiſurely on each Pole of a Magnet, from the South Pole towards the North; firſt beginning with the Northern End, and going back at each repeated rub, towards the South. A Rub in a contrary Direction takes away the Power communicated by the former. See POLE and TOUCHING.

If after Touching, the *Needle* be out of its *Equilibrium*, ſomething muſt be filed off from the heavier Side, till it balance evenly.

Needles

Needles in Sea-Compaſſes are uſually made in a Rhomboidal, or oblong Form. See their Structure under the Article COMPASS.

A *Needle*, on Occaſion, may be prepared without touching it on a Load-ſtone: For a fine Steel *Needle*, gently laid on the Water, or delicately ſuſpended in the Air, will direct itſelf to the North and South.

Thus, alſo, a *Needle* heated in the Fire, and cooled again, in the Direction of the Meridian, or even only in an erect Situation, acquires the ſame Faculty. See MAGNETISM, POLE, &c.

The *Needle* is not found to point preciſely to the North, except in very few Places; but deviates from it, more or leſs, in different Places, and that too at different Times; which Deviation is call'd the

Declination of the NEEDLE, the Variation of the Horizontal *Needle* from the Meridian; or the Angle it makes with the Meridian, when freely ſuſpended in a Horizontal Plane. See DECLINATION.

Inclinatory, or *Dipping-Needle*, ſee DIPPING-*Needle*.

NEEP-*Tides*, ſee NEAP-*Tide*.

A Ship is ſaid to be *Beneeped* when ſhe wants Water to bear her off the Ground.

NEFASTUS, a *Latin* Term. The *Romans* uſed the Term *Dies Nefaſti*, for thoſe Days wherein it was not allow'd to adminiſter Juſtice, or hold Courts; nor for the Pretor to pronounce the three ſolemn Words or *Formula*'s of the Law, *do*, *dico*, *addico*, I give, I appoint, I adjudge. See FASTUS.

Theſe Days were diſtinguiſh'd in the Calendar by the Letter *N*, or by *N. P. Nefaſtus Primo*; as when the Day was only *Nefaſtus*, for the firſt Part thereof. See DAY.

NEGATION, in Logic, an Act whereby the Mind ſeparates one Idea from another; or affirms the one is different from the other. As, the Soul is not the Body.

NEGATIVE, a Term that denies, or implies a Denial, of any thing.

Logicians, &c. ſay, A *Negative* cannot be proved but by converting it into an Affirmative.

NEGATIVE *Heretics*, in the Language of the Inquiſition, are thoſe, who being accuſed of Hereſy, by Witneſſes, whoſe Evidence they don't deny, ſtill keep on the *Negation*, make open Profeſſion of the Catholic Doctrine, and declare their abhorrence of Hereſy.

There are alſo *Negative Schiſms*, and *Poſitive* ones. In the *Negative*, 'tis ſufficient to reject the Errors of a Church without ſeparating from it, or ſetting up a diſtinct Society.

NEGATIVE *Pains*, the Laws whereby certain Perſons are excluded from Honours, Dignities, &c. without inflicting any direct and poſitive Pains.

NEGATIVE *Quantities*, in Algebra, thoſe affected with the Sign —. See QUANTITY.

Negative Quantities, are the Effects of poſitive ones; where Poſitive end, there *Negative* ones commence. See POSITIVE.

NEGATIVE *Pregnant*, in Law, a *Negative* which implies or brings forth an Affirmative: As if a Man being impleaded to have done a thing on ſuch a Day, and in ſuch a Place, denies he did it, *Modo & forma declarata*; which implies nevertheleſs that he did it in ſome ſort.

NEGATIVELY, NEGATIVE, in the School-Philoſophy, is variouſly uſed in contradiſtinction to Poſitively. See POSITIVELY.

NEGRO'S, a Kind of Slaves, which make a conſiderable Article in the modern Commerce.

The *Negro's*, properly call'd *Blacks*, or *Moors*, are a People of *Africa*, whoſe Country extends on each ſide the River *Niger*, and is call'd *Nigritia*: Tho, whether the People communicated their Name to the River, &c. or received it therefrom, is not eaſily determined.

The Origin of *Negro's*, and the Cauſe of that remarkable Difference in Complexion from the reſt of Mankind, has much perplex'd the Naturaliſts; nor has any thing ſatisfactory been yet offer'd on that head. See BLACKS.

They are brought from *Guinea*, and other Coaſts of *Africa*, and ſent into the Colonies in *America*, to cultivate Sugar, Tobacco, Indigo, &c.

This Commerce, which is ſcarce defenſible on the foot either of Religion, or Humanity, is now carried on by all the Nations that have Settlements in the *Weſt-Indies*; particularly the *Engliſh*, *Dutch*, *Spaniards*, and *Portugueſe*; the *Spaniards*, indeed, have few *Negro's* at firſt hand, but have always treated with other Nations, to furniſh them therewith: Thus they were formerly furniſhed by the Company of the *Grilles*, eſtabliſhed at *Genoa*; ſince by the *Aſſienta* in *France*; and ſince the Peace of *Utrecht*, by the *Engliſh South-Sea Company*. See ASSIENTA and COMPANY.

The beſt *Negro's* are brought from *Cape Verd*, *Angola*, *Senegal*, the Kingdom of *Joloffes*, that of *Galland*, *Damel*, the River *Gambia*, &c.

A *Negro* between 17 or 18 and 30 Years of Age, was antiently only valued at about 45 *s.* in the Commodities proper for that Country, which are Brandies, Iron, Linnen, Paper, Braſs-Pots, Baſons, &c. But their Value is now much enhanced, and it is ſeldom they meet with a good *Negro* for five Pounds. They frequently give ſeven or eight.

There are various ways of procuring them: Some, to avoid Famine, ſell themſelves, their Wives and Children, to their Princes, or great Men, who have wherewithall to ſubſiſt them. Others are made Priſoners in War; and great numbers ſeiz'd in Excurſions, made for that very purpoſe by the petty Princes upon one another's Territories; in which 'tis uſual to ſweep away all both Old and Young, Male and Female.

The *Negro's* make a frequent Practice of ſurprizing one another while the *European* Veſſels are at Anchor, and dragging thoſe they have thus caught to 'em, and ſelling them in ſpite of themſelves; and 'tis no extraordinary thing to ſee the Son ſell, after this manner, his Father or Mother, and the Father his own Children, for a few Bottles of Brandy, or a Bar of Iron.

As ſoon as the Ship has its Complement, it immediately makes off; the poor Wretches, while yet in ſight of their Country, falling into ſuch deep Grief and Deſpair in the Paſſage, that a great part of 'em languiſh, fall into Sickneſs, and die: others of 'em diſpatch themſelves, by refuſing any Food; others by ſtopping their Breath, in a manner peculiar to themſelves, by turning and folding their Tongue, which immediately ſtrangles them; others daſh out their Brains againſt the Ship; and others jump over board.

The only ſure means to preſerve 'em, is to have ſome Muſical Inſtrument play to 'em, be it ever ſo mean. But this exceſſive Love for their Country abates as they get further off.

At their arrival in the Colonies, each *Negro* is ſold for 38 or 40 Pounds. They make the chief Riches of the Inhabitants of the Iſlands, &c. A Man, *v. g.* who has twelve *Negroes*, is eſteem'd a rich Man.

NEIF, NAF, *Nativa*, in our antient Cuſtoms, a Bond-Woman, or She-Villain. See NATIVUS.

Antiently, Lords of Manors ſold, gave, or aſſigned their *Neifs* and Natives. See SLAVE, VILLAIN, &c.

Writ of NEIFTY, is an antient Writ whereby the Lord claim'd ſuch a Woman for his *Neif*.

NE *injuſte Vexes*, a Writ which lies for a Tenant againſt the Lord forbidding him to diſtrain on the Tenant, who has formerly prejudiced himſelf by doing or paying more than he needed.

NEMÆAN *Games*, one of the four kinds of Games, or Combats, celebrated among the antient *Greeks*. See GAMES.

Some ſay, they were inſtituted by *Hercules*, on occaſion of his killing the *Nemæan* Lion; and that it was on that account they had their Name, as alſo the Place of Celebration, the Foreſt of *Nemæa*.

Others relate, That the ſeven Chiefs ſent to *Thebes*, under the Conduct of *Polynices*, being extremely pinch'd in their Journey with Thirſt, met with *Hypſipyle* of *Lemnos*, who had in her Arms *Opheltes* Son of *Lycurgus*, Prieſt of *Jupiter*, and *Eurydice*. They begging her to ſhew 'em ſome Water, ſhe laid the Child down on the Graſs, and conducted 'em to a Well. In her Abſence, a venomous Serpent kill'd the Child; upon which the Nurſe, out of an exceſs of Grief, grew deſperate. The Chiefs, at their return with her, kill'd the Serpent, buried the young *Opheltes*, and to divert *Hypſipyle*, inſtituted the *Nemæan Games*.

Pauſanias refers the Inſtitution thereof to *Adraſtus*, and the Reſtoration thereof to his Deſcendants.

Laſtly, *Hercules*, on his Victory over the *Nemæan* Lion, augmented the Games, and conſecrated them to *Jupiter Nemæus*. *Ælian* ſays, 'Twas indeed the ſeven Chiefs going to the Siege of *Thebes*, that inſtituted them; but adds, that 'twas in favour of *Pronactes*.

They were open'd with Sacrificing to *Nemæan Jove*, appointing him a Prieſt, and propoſing Rewards for ſuch as ſhould be Victors in the Games.

They were held every three Years, in the Month call'd *Panemos* by the *Corinthians*, and *Boedromion* by the *Athenians*.

The *Argians* were the Judges, and ſat clothed in black, to expreſs the Origin of the Games. As they were inſtituted by Warriors, none at firſt were admitted to 'em but Military Men, and the Games themſelves were only *Equeſtrian* and *Gymnic*; at length they were open to the People, and other Kinds introduced.

The Conquerors were crown'd with Olive, till the time of the War with the *Medes*; when, a Blow they receiv'd in that War, occaſion'd them to change the Olive for Smallage, a funeral Plant. Tho others maintain, that the Crown was originally Smallage, on account of the Death of *Opheltes*, otherwiſe call'd *Archemorus*; this Plant being ſuppoſed to have receiv'd the Blood which run from the Wound made by the Serpent.

NEMINE *Contradicente*, i. e. *None contradicting it*, a Term chiefly uſed in Parliament, when any Matter is carried with univerſal Conſent.

NENIA, or NÆNIA, in the antient Poetry, a kind of Verſes ſung at the Obſequies of the Dead. See OBSEQUIES.

Authors repreſent them as ſorry Compoſitions, ſung by hired Women-Mourners. The firſt Riſe of theſe *Nenia* is aſcribed to the *Phrygians*.

The Word comes from the *Greek* νυία, on which *Scaliger* obſerves that it ſhould be wrote in *Latin Nenia*, not *Nænia*.

Guichart notes *Nænia* to have antiently been the Name of a Song to lull Children a-ſleep, and conjectures it to come from the *Hebrew* נין *Nin*, Child.

In the Heathen Antiquity, the Goddeſs of Tears and Funerals was call'd *Nænia*, whom ſome ſuppoſe to have given that Name to the Funeral-Song; and others to have taken her Name from it. Some will have the one, and ſome the other, form'd from the Sound or Voice of thoſe that weep.

NEOMENIA, in the Schools, &c. a Term uſed for the *New Moon*. See MOON.

Some ſay, the *Jews* reckon'd two kinds of *Neomeniæ*, or New Moons; the firſt on the Day of her Conjunction with the Sun; the ſecond on that of her Apparition, or *Phaſis*; and add, that they celebrated two Paſſovers, by reaſon of the uncertainty which of theſe Days it ſhould be held on.

F. *Hardouin*, on the contrary, maintains, they had no other *Neomenia* but that of the Moon's Conjunction with the Sun; which it was eaſy to aſcertain by Aſtronomical Calculation: whereas the other was liable to Miſtakes; the Moon ſometimes not ſhewing herſelf till four or five days after her Conjunction. See PASSOVER.

NEOPHYTES, NEOPHYTÆ, *i. e. New Plants*, in the Primitive Church, were new Chriſtians; or the Heathens newly converted to the Faith.

The Fathers never diſcover'd the Myſteries of their Religion to the *Neophytes*.

The Term is ſtill apply'd to the Converts which the Miſſionaries make among the Infidels. The *Japoneſe Neophytes* in the latter end of the 16th, and beginning of the 17th Century, are ſaid to have ſhewn Prodigies of Courage and Faith, equal to any in the Primitive Church.

The Word has formerly been likewiſe uſed for New Prieſts, or thoſe firſt admitted into Orders; and ſometimes for the Novices in Monaſteries.

Originally the Word ſignifies a *new Plant*, being form'd of the *Greek* νεος, new, and φύω, I produce, *q. d.* newly born; Baptiſm, whereby they commenced *Neophytes*, being a kind of new Birth.

NEPENTHE, in Pharmacy, a Name given to an Opiate, or *Laudanum*, by *Theo. Swingerus*, from the great Opinion he had of its giving Eaſe in all manner of Pain; the Word importing as much, from the Privative, νή, *non*, or *abſque*, without; and πενθος, *Luctus*, Sorrow.

The *Nepenthe* mention'd in antient Authors, was a Plant, now unknown. *Homer* ſays, it was a Plant of *Egypt*; and adds, that *Helena* made uſe of it to charm her Hoſts, and make 'em forget their Pains.

Some Authors ſay, it was the Plant we call *Helenium*, and others *Ænopia*. M. *Petit* has a Diſſertation on the antient *Nepenthe*.

NEPER's, NAIPER's, or NAPIER's *Bones*, an Inſtrument, whereby Multiplication and Diviſion of large Numbers are much facilitated and expedited; ſo call'd from its Inventor *J. Neper*, Baron of *Merchiſton* in *Scotland*.

Conſtruction of NEPER's *Bones*.

Five Rods, Plates, or *Lamellæ*, are provided of Wood, Metal, Horn, Paſtboard, or other Matter, (Tab. ALGEBRA, *Fig.* 1.) of an oblong Form, and divided each into nine little Squares; each of which is reſolved into two Triangles by Diagonals.

In theſe little Squares are wrote the Numbers of Multiplication Table; in ſuch manner as that the Units, or right-hand Figures, are found in the right-hand Triangle; and the Tens or the left-hand Figures, in the left-hand Triangle: As in the Figure.

Uſe of NEPER's *Bones in Multiplication*.

To multiply any given Number by another; diſpoſe the *Lamellæ* in ſuch manner, as that the top Figures may exhibit the Multiplicand; and to theſe, on the left-hand, join the *Lamellæ* of Units; in which ſeek the right-hand Figure of the Multiplicator; and the Numbers correſponding thereto, in the Squares of the other *Lamellæ*, write out, by adding the ſeveral Numbers occurring in the ſame Rhomb together, and their Sums. After the ſame manner write out the Numbers correſponding to the other Figures of the Multiplicator; let them be diſpoſed under one another as in the common Multiplication; and laſtly, add the ſeveral Numbers into one Sum.

For Example. Suppoſe the Multiplicand 5978, and the Multiplicator 937. From the outermoſt Triangle on the right-hand (Tab. ALGEBRA, *Fig.* 2.) which correſponds to the right-hand Figure of the Multiplicator 7, write out the Figure 6, placing it under the Line. In the next Rhomb, towards the left, add 9 and 5; their Sum being 14, write the right-hand Figure, *viz.* 4, againſt 6; carrying the left-hand Figure, 1, to 4 and 3, which are found in the next Rhomb. The Sum 8, join to the 46, already put down: after the ſame manner, in the laſt Rhomb, add 6 and 5, the latter Figure of the Sum 11, put down as before, and carry 1 to the 3 found in the left-hand Triangle; the Sum 4 join as before on the left of 1846: Thus will you have the *Factum* of 7 into 5978; and after the ſame manner will you have the *Factum* of the Multiplicand, into the other Figures of the Multiplicator: The whole added together gives the whole Product.

Uſe of NEPER's *Bones in Diviſion*.

Diſpoſe the *Lamellæ* ſo, as that the uppermoſt Figures may exhibit the Diviſor; to theſe, on the left-hand, join the *Lamellæ* of Units. Deſcend under the Diviſor, till you meet thoſe Figures of the Dividend, wherein 'tis firſt requir'd, how oft the Diviſor is found, or at leaſt the next leſs Number, which is to be ſubſtracted from the Dividend; the Number correſponding to this, in the Place of Units, write down for a Quotient. By determining the other parts of the Quotient after the ſame manner, the Diviſion will be compleated.

For Example. Suppoſe the Dividend 5601386, and the Diviſor 5978; ſince it is firſt asked how often 5978 is found in 56013, deſcend under the Diviſor, (Tab. ARITH. *Fig.* .) till in the loweſt Series you find the Number 53802, approaching neareſt to 56013; the former whereof is to be ſubſtracted out of the latter, and the Figure 9 correſponding thereto in the *Lamellæ* of Units write down for the Quotient. To the Remainder 2211, join the following Figure of the Diviſor 8; and the Number 17934 being found, as before, to be the next leſs Number thereto, the correſponding Number in the *Lamellæ* of Units, 3, is to be wrote down for the Quotient; and the Subſtraction to be continued as before. After the ſame manner the third and laſt Figure of the Quotient will be found to be 7; and the whole 937.

NEPHEW, a Term relative to Uncle and Aunt, ſignifying a Brother or Siſter's Son; who, according to the Civil Law, is in the third Degree of Conſanguinity; and according to the Canon Law, in the ſecond. See AGNATION and COGNATION.

The Word is form'd from the *Latin Nepos*; which in the corrupt Ages of that Language ſignified the ſame thing.

NEPHRITES, or NEPHRITICUS *Dolor*, in Medicine, a Name given to a painful Diſeaſe occaſion'd by the Stone or Gravel in the Kidneys. See STONE.

The Word is borrow'd from the *Greek* νεφριτης, *Diſeaſe of the Reins*; from νεφρος, *Rein*. See KIDNEY.

The *Greeks* give the Name νεφρις, to the firſt *Vertebra* of the Loins, from its neighbourhood to the Kidneys. See VERTEBRA.

NEPHRITIC, ſomething that relates to the Kidneys. See KIDNEY.

The Word is form'd of the *Greek* νεφρος, Rein, Kidney.

NEPHRITIC *Colic*, is a Colic or Pain ariſing from a Stone or Gravel in the Reins, &c.

This is the moſt cruel of all *Colics*. See COLIC.

NEPHRITICS, Medicines proper for Diſeaſes of the Kidneys, particularly the Stone. See STONE, &c.

Such particularly are the Roots of Althæa, Dog's Graſs, Sparagraſs, Sago, Pellitory of the Wall, Mallows, Pimpernella, red Chich-Peas, Peach-Kernels, Turpentine, &c. See LITHONTHRIPTIC.

NEPHRITICUM *Lignum*, a kind of Medicinal Wood growing in *New Spain*, chiefly in the Kingdom of *Mexico*; call'd by the *Indians*, *Coalt Tiapalcypathy*, as being ſovereign againſt *Nephritic* Pains. See WOOD.

It muſt be choſen well clear'd of its Bark and Rind; it is of a bitter Taſte, and a reddiſh yellow Colour; but when infuſed in cold Water, gives it a ſky-blue Tincture, when view'd by a falſe Light, and a gold Colour, by a true one: A little of any Acid being mixed with the Tincture, both Colours diſappear, but a little Oil of Tartar reſtores its ſky-blue. See COLOUR.

Some ſubſtitute Ebony, and others red *Braſil* Wood for *Lignum Nephriticum*, but the Deceit becomes apparent by infuſing it in Water.

NEPHRITICUS *Lapis*, a precious Stone, ſo call'd from its extraordinary Virtues againſt the Stone and Gravel in the Kidneys. See STONE.

'Tis a kind of Jaſper, of a greyiſh Colour, mix'd with a little blue, ſometimes white and black; and only differs from Jaſper, in its being harder, and always without any thing of red.

'Tis brought chiefly from *New Spain*, where it is ſometimes found in Pieces large enough to make moderate Cups. There is ſome likewiſe found in *Old Spain* and *Bohemia*.

This Stone is very dear, by reaſon of the wonderful Virtues aſcribed to it. A Cup made of it was ſold for 1600 Crowns in the time of the Emperor *Rudolphus* II.

The beſt for Medicinal Uſe is of a bluiſh grey, fat and unctuous, as *Talc* of *Venice*.

The *Indians* of *New Spain*, who firſt diſcover'd its uſe, and taught it the *Europeans*, wear it hung about their Neck, after having cut it in various Figures, chiefly Beaks of Birds: Whence ſome *Charletans* take occaſion to counterfeit it, by cutting *Jada*, and other Stones, into like Figures; and ſell it at great Prices to thoſe who have an Opinion of its *Nephritic* Faculty.

NEPOTISM, a Term uſed in *Italy*, in ſpeaking of the Authority which the Pope's Nephews, *i. e.* his Baſtards, have in the Adminiſtration of Affairs, and in the Care the Popes take to raiſe and enrich them.

Many of the Popes have endeavoured to reform the Abuſes of *Nepotiſm*, but hitherto in vain. *Leti* has wrote expreſly on the Subject, *Il Nepotiſmo*.

NEPTUNALIA, Feaſts held among the Antients in honour of *Neptune*.

The *Neptunalia* differ'd from the *Conſualia*, in that the latter were Feaſts of *Neptune*, conſider'd as preſiding over Horſes and the Manage. See CONSUALIA.

Whereas the former were Feaſts of *Neptune* in the general, and not conſider'd under any particular Quality. They were celebrated on the 10th of the Calends of *Auguſt*.

NEREIDS, or NEREIDES, Fabulous Deities of the Antients, ſuppoſed to inhabit the Sea. See GOD.

The *Nereids* were fifty in number; all the Sons of *Neptune* by the Nymph *Doris*. Their Name and Genealogies are deſcribed by *Heſiod*.

NERVE, in Anatomy, a round, white, long Body, like a Cord, compoſed of ſeveral Threads, or Fibres; deriving its Origin from the Brain, or the Spinal Marrow; and diſtributed throughout all the Parts of the Body; ſerving for the Conveyance of a Juice call'd *Animal Spirits*, for the performance of Senſation and Motion. See SENSATION, MUSCULAR *Motion*, &c.

For the Origin of the Nerves: From every Point of the Cortex of the Brain, there ariſe minute medullary Fibres; which, in their Progreſs uniting together, at length become ſenſible, and thus conſtitute the *Medulla* of the Brain, and the Spine. See CORTEX, MEDULLA, &c.

Hence they are continued, and in their farther Progreſs, become diſtinguiſh'd or ſeparated by Coats which are detach'd to them from the *Dura* and *Pia Mater*, into ſeveral diſtinct *Faſciculi*, or *Nerves*; reſembling, in the Poſition of their component *Fibrillæ*, ſo many Horſes Tails, wrapp'd up in a double Tunic. See FIBRE.

'Tis probable that the medullary Fibres of the *Cerebellum*, riſing up towards the fore-parts of the *Medulla Oblongata*, do, part of them, join the *Nerves* ariſing thence, but ſo as ſtill to retain their different Origin, Progreſs, and Functions. The reſt of the Fibres of the *Cerebellum* are ſo mix'd with thoſe of the Brain, as that there is, perhaps, no part of the whole *Medulla Oblongata*, or *Spinalis*, where there are not found Fibres of each kind; and thus, to conſtitute the Body of each *Nerve*, both kinds of Fibres contribute; tho the end and effect of each be quite different. See CEREBEL, &c.

The *Nerves* thus form'd, and ſent from the *Medulla Oblongata* and *Spinalis* while within the *Cranium*, are *ten Pair*; tho very improperly ſo accounted; inaſmuch as moſt of them do in reality conſiſt of ſeveral diſtinct, very large *Nerves*.

From the Spinal Marrow, continued without the *Cranium*, there ariſe, after the like manner, thirty Pair, to which may be added another Pair ſent from the *Vertebræ* of the Neck, augmented in its Progreſs by Branches from the ſecond and third Pair, and at laſt join'd to the eighth Pair.

All theſe, while within the *Medulla*, are pulpous; as ſoon as they quit it, they acquire a Sheath, or Caſe, wherewith being defended, they proceed to the *Dura Mater*, which is perforated into an open *Vagina*, reaching as far as the *Foramina* of the *Cranium*, deſtin'd for the tranſmiſſion of *Nerves*; where the nine firſt Pair, and the *Acceſſory* Pair, aſſuming this *Vagina*, or Caſe, paſs ſafely out of the *Cranium*.

The other thirty and one Pair deſcend thro' Spaces between the Commiſſures of the *Apophyſes* of the *Vertebræ*; whence, firm, hard, and well cloath'd as they are, they are diſperſed thro' all, even the ſmalleſt Points of the ſolid Parts of the Body yet known. See SOLID.

The Coats, or Covers of theſe *Nerves* are every where inveſted with Blood-Veſſels, Lymphatics, and other Veſicles of a very tight Texture, which ſerve to collect, ſtrengthen, and contract the *Fibrillæ*; and from which many of the Phænomena of the *Nerves*, and of Diſeaſes, are accountable.

As ſoon as the laſt Extremities of the *Nerves* are about to enter the Parts to which they belong, they again lay aſide their Coats, and become expanded either into a kind of thin *Membranula*, or into a ſoft Pulp. See MEMBRANE and FLESH.

Now, upon conſidering firſt, That the whole vaſcular Medulla of the Brain goes to the conſtituting of the *Fibrillæ* of the *Nerves*; nay, is wholly continued into, and ends in them; Secondly, That upon compreſſion, tearing, diſperſion, putrefaction, &c. of the Medulla of the Brain, all the Actions uſed to be perform'd by the *Nerves* ariſing thence, are immediately aboliſhed, even tho the *Nerves* continue entire and untouch'd; Thirdly, That the *Nerves* themſelves are every where found lax, pendulous, crooked, retrograde, and oblique, yet effect Motion and Senſation almoſt inſtantaneouſly; Fourthly, That when cloſe bound or compreſs'd, tho in all other reſpects entire, they loſe all their Faculty in thoſe Parts between the Ligature and the Extremes to which they tend, without loſing any in thoſe Parts between the Ligature and the Medulla of the Brain, or *Cerebellum*: it evidently appears, that the *nervous Fibrillæ* do continually take up a Humour or Juice from the Medulla of the Brain, and tranſmit it by ſo many diſtinct Canals to every Point of the whole Body; and by means hereof alone perform all their Functions in Senſation, Muſcular Motion, &c. See SENSATION and MUSCLE.

Which Humour is what we popularly call *Animal Spirits*, or the *Nervous Juice*. See ANIMAL *Spirit*.

Nor does there appear any Probability in that Opinion maintain'd by ſome; *viz.* That the *Nerves* perform all their Action by the Vibration of a tenſe *Fibrilla*; which is inconſiſtent with the nature of a ſoft, pulpous, flaccid, crooked, wavy *Nerve*, and with that nice diſtinctneſs wherewith the Objects of our Senſes are repreſented, and Muſcular Motions perform'd.

Now, after the ſame manner as the Arterial Blood is perpetually carried into all the Parts of the Body furniſh'd with thoſe Veſſels; ſo we conceive a Juice prepar'd in the Cortex of the Brain and *Cerebellum*, convey'd thence every Moment thro' the *Nerves* to every Point of the ſolid Body. The ſmallneſs of the Veſſels in the Cortex, as exhibited in *Ruyſch's Injections*, which yet are only Arterious, and therefore incredibly thicker than the laſt Emiſſary derived thence, ſhew how ſlender theſe hollow *Nervous Stamina* muſt be. But the great Bulk of the Brain compared with the exceeding Smallneſs of each *Fibrilla*, ſhews, that their number muſt be great beyond the limits of all Imagination.

And again, the great Quantity of Juice conſtantly brought hither, and violently agitated, will occaſion a conſtant Plenitude, Openneſs, and Action of theſe little Canals.

But, as freſh Juice is every moment prepared, and the laſt is continually protruding the former; as ſoon as it has done its laſt Office, it ſeems to be driven out of the laſt Filaments into the ſmalleſt Lymphatic *Venulæ*, both about the Glands, and elſewhere; thence into the Lymphatics ſomewhat larger; and again from theſe to the common Lymphatic Veſſels with the Valves of Veins, and at length into the Veins and the Heart; and thus like the other Juices of the Body, does it make its Circuit round the Body. See CIRCULATION *of the Spirits*.

Upon the whole, if we conſider the great Bulk of the Brain, *Cerebellum*, *Medulla Oblongata*, and *Medulla Spinalis*, with regard to the Bulk of the reſt of the Solids of the Body; the great number of *Nerves* diſtributed hence throughout the whole Body; that the Brain and *Carina*, that is the Spinal Marrow, are the Baſis in an Embryo, whence, according to the great *Malpighi*, the other parts are afterwards form'd; and laſtly, that there is ſcarce any part of a Body, but what feels or moves; it will appear very probable, that all the ſolid parts of the Body are wove out of nervous Fibres, and conſiſt wholly of 'em. See STAMEN.

The Antients only allow'd of ſeven *Pairs* or *Conjugations of Nerves*, proceeding from the Brain; which, with their Functions, they compriſed in theſe two *Latin* Verſes:

Optica prima, oculos movet altera, tertia guſtat,
Quartaq; quinta audit, vaga ſexta eſt, ſeptima linguæ.

But the Moderns, as before obſerv'd, reckon ten, which are as follow.

NERVES *of the Brain, or Cerebrum.*

Olfactory NERVES, *Par Olfactorium*, or the Olfactory Pair, ariſes in the fore-part of the Brain, juſt below the *Os Frontis*; theſe being pretty thick near the *Os Cribroſum*, are

there call'd *Proceſſus Papillares*, which Dr. *Drake* takes to be a properer Name in that Place, than that of *Nerves*; they appearing rather Productions of the *Medulla Oblongata*, whence the *Olfactory Nerves* ariſe, than diſtinct *Nerves*. As ſoon as they have made their way thro the *Os Cribroſum*, they are diſtributed throughout the Membranes of the Noſe. Their Uſe is in the Senſation of Smelling. See SMELLING.

Optic NERVES. Theſe paſs the Skull thro two Perforations in its Baſis, a little above the *Sella Equina*, and are thence convey'd to the Tunics of the Eye; whereof, the *Retina*, ſuppoſed to receive the Objects of Viſion, is an Extenſion of the inner or medullary part alone. See VISION and RETINA.

NERVES *that move the Eyes*, *Oculorum Motorii*, ariſe from the *Crura* of the *Medulla Oblongata*, near the Annular Protuberance; whence they march out between two Branches of the Cervical Artery; and paſſing out of the Skull at an irregular oblong hole, immediately under the former, are ſpent on thoſe Muſcles of the Eyes call'd *Attollent*, *Depriment*, *Adducent*, and *Obliquus inferior*; except ſome ſmall Fibres ſpent in the Muſcles of the upper *Palpebra*. See EYE.

Pathetic NERVES, ariſe behind the *Teſtes*, and paſſing out of the Skull at the ſame Foramen with the former Pair, ſpend themſelves wholly on the Trochlear Muſcle.

Fifth Pair of NERVES, the largeſt of all thoſe coming from the Brain, has its uſe as well as diſtribution more extenſive; ſerving both for Senſe and Motion, for Touch and Taſte. It ſends Branches not only to the Eyes, Noſe, Palate, Tongue, Teeth, and moſt parts of the Mouth and Face, but alſo to the Breaſt, lower Venter, *Præcordia*, *&c.* by means of the Intercoſtals, which are partly compoſed of Branches of this *Nerve*; whence ariſes a Conſent or Sympathy between the ſeveral Parts of the Body. See CONSENT *of Parts*.

It ariſes from the Annular Protuberance, near the *Proceſſus Cerebelli*, and is at its Origin very large, but before its egreſs from the *Dura Mater* is divided into two Branches, each conſiſting of innumerable nervous Fibres, whereof thoſe of one Branch are pretty tough and firm; the other ſoft and lax. A little beyond the *Sella*, it forms a *Plexus* call'd *Ganglioformis*, near which, each *Nerve* is divided into an *interior* and *poſterior* Branch.

The *Anterior* or Fore-Branch, after a few Twigs ſent to the *Dura Mater*, enters the Receptacle on each ſide the *Sella*; whence it ſends off one or two Twigs to the Intercoſtal; and as ſoon as it emerges thence, is again ſubdivided into three nearly equal Branches. The *uppermoſt* paſſing the *Foramen Lacerum* into the Orbit of the Eye, is immediately ſubdivided into three leſs Branches; the firſt of which, after ſending Twigs to the *Tunica Adnata*, *Glandula Lacrymalis*, the Muſcles that draw up the Noſe, and the orbicular Muſcles, running over the Muſcle which draws up the upper Eye-lid, is ſpent on the Muſcles of the Forehead, and the common Integuments of the fore-part of the Head.

The *ſecond* Branch running under the *Pathetics* and *Motoru*, is divided into two; whereof the outer and ſmaller ſends off ſeveral *Fibrillæ* into the Fat that envelopes the Optic *Nerve*; and joining with others from the third Pair, forms a ſort of *Plexus* on the Trunk of the Optic *Nerve*; whence *Fibrillæ* are detach'd into the *Muſculus Deprimens*, *Adducens*, and the *Tunica Sclerotica*. The inner and bigger Slip is ſubdivided into four Twigs; the firſt running over the Optic *Nerve*, enters the *Sclerotica*, and is ſpent in that Membrane. The ſecond, returning into the Skull by a peculiar Perforation, pierces the *Dura Mater*, and, ſometimes turning back again, paſſes out of the Skull thro one of the Holes of the *Cribriforme*, and is diſtributed into the interior Membrane of the Noſe. The third Twig is ſpent partly on the Eye-lids and their orbicular Muſcles, the external Integument of the Noſe, and the Muſcles which draw it upwards. The fourth is diſtributed by ſeveral Twigs into the Eye-lids and orbicular Muſcles. The third Slip of the upper Branch is ſpent on the *Glandula Innominata* and *Tunica Adnata*.

The *leſs inferior* Branch, e'er it leave the Skull, enters the Orbit of the Eye, and running along the outſide of the *Muſculus Abducens*, goes out again at a little Perforation peculiar to it; after which it divides into ſeveral Fibres, ſome of which go to the Integuments of the Cheeks; the reſt to the Muſcles that raiſe the upper Lip. As ſoon as it quits the Skull at the third Foramen, it is ſubdivided into three little Branches, the firſt of which, after ſome Twigs beſtow'd on the *Maſſeter*, the Teguments of the Face, the Gums, and upper Teeth; enters a peculiar Sinus of the Bone making the lower part of the Orbit, and goes out at a Hole particular to it; after which it divides into ſeveral *Fibrillæ* which go to the Teguments of the Face, the upper Lip, the Muſcle that draws the lower part of the Noſe laterally, and the inner Muſcle of the Noſe.

The *ſecond ſmall* Branch running downwards behind the Ducts which go from the Noſe to the Fauces, is divided into two; the upper whereof is diſtributed by many Twigs into the *Membrana Pituitaria*. The lower, paſſing a peculiar Hole on the hind and lateral part of the Bone of the Palate, is diſtributed into that ſpongy Fleſh that lines the Palate, and the tough Membrane that covers it.

The *third little* Branch is ſpent on that part of the *Membrana Pituitaria* that lines the Fauces upon the *Uvula* and Muſcles thereabouts, and upon the Tonſils.

The *greater* or *poſterior* Branch, after ſending a few Twigs to the *Dura Mater*, paſſes the Skull thro the fifth Foramen; and having ſent off ſome Twigs to the *Buccinator*, *Maſſeter*, and the Muſcles of the lower Jaw, is divided into three conſiderable Branches.

The *firſt* paſſes to the Root of the Tongue, and thence proceeding forwards, ſends ſeveral Branches to the Maxillary Glands. It ſends others along the inner Subſtance of the Tongue, which end in Capillaries at its Extremity, and joining every where with the Branches of the ninth Pair, ſerve both the Muſcles and Papillary Glands, and contribute to the Taſte, as well as the Motion of the Tongue.

The *ſecond*, or middle Branch, after diſtributing a Twig into the Maxillary Glands, and the Muſcles *Styloglоſſus*, and *Mylogloſſus*, enters the hollow of the lower Jaw, along which it runs accompanied with Branches of the Carotid Arteries and little Veins, which return to the internal Jugulars; and beſides ſending off a Twig to each Tooth, with the Membranes of the foreſaid Veſſels, contributes to form a Membrane which lines the whole Sinus. At the fourth Grinder it divides into two; the leſs whereof runs to the joining of the Jaw; the bigger, paſſing out at a peculiar Perforation, is divided into ſeveral Fibres, which are diſpoſed into the Muſcles of the lower Lip and Chin.

The *third* or exterior Branch, is ſpent on the parotid Glands.

Sixth Pair of NERVES, or the *Guſtatorii*, riſe from the Medullary Tracts of the *Centrum Ovale*, below the annular Proceſs, and proceeding forwards, enters the ſame Receptacle, or Sinus of the Skull, on the ſide of the *Sella*, as the fifth Pair does; whence ſending off a Twig to join thoſe of the fifth Pair, in their paſſage to the Intercoſtals, it goes out of the Skull at the ſame Hole with the *Motorii Oculorum*, and ends in the abducent Muſcles of the Eye; ſending withal ſome Twigs to the Tongue. See TONGUE.

The Seventh Pair, or Auditory NERVES, ariſing from the medullary Tract of the fourth Ventricle, and paſſing out of the Skull thro a Hole of the *Os Petroſum*, divides into two Branches, or *Portions*, a *hard* and a *ſoft* one. The *hard* entring a little *Sinus* in the upper part of the Bone that conſtitutes the Barrel of the Ear; ſends off a Twig which diſtributes itſelf into the *Dura Mater*, except ſome ſmall Twigs which go to the Membrane that lines the Ear, to the internal Muſcles that line the Ear, and the fine Membrane that clothes the inſide of the Cavity of the *Apophyſis Mamillaris*. After this, the hard Branch ſends off two other Twigs, one to the eighth Pair, the other to the *Tympanum*, whoſe Chord it forms; whence creeping over the *Malleolus*, it goes out of the Ear, and ſends a Ramification to the Tongue.

The ſame hard Branch, coming out of the *Proceſſus Mamillaris*, ſends ſome Twigs to the Maſſeter, and others to the Glands about the Ear; where it divides into two other Ramifications; the interior beſtowed on the Glands, the Cheek, and the upper Lips, the reſt on the lower *Palpebra*, and the external part of the Face. The exterior Ramification, beſtowing ſome *Fibrillæ* on the Glands, out of which it iſſues, divides into two; the upper diſtributed into the *Quadratus* and outer parts of the under Lip; the lower ſpent on the Integuments of the fore and lateral part of the Neck, lower Jaw, and the *Maſtoidal* Muſcle.

The *ſoft* and larger *Portion* of this Pair divides into three Ramifications, the upper whereof paſſes a ſmall *Foramen* into the *Concha*, where expanding, it forms a fine Membrane which lines its inner Surface. The ſecond and third Ramifications are alſo ſpent on the inner parts of the *Concha* and ſemicircular Ducts, which they furniſh with Membranes, the immediate Organs of Hearing. See HEARING.

Eighth Pair of NERVES, or the *Par Vagum*, ſprings from the *Medulla Oblongata*, a little above the *Olivaria Corpora*, and paſſes out of the Skull thro the ſame Perforations with the lateral *Sinus's* of the *Dura Mater*.

This, in its progreſs, is join'd by the *Par Acceſſorium*, and a little further by a Twig of the hard part of the ſeventh Pair, and at the ſecond *Vertebra* of the Neck by the *Nerves* that iſſue from the Cervical Marrow; and detaches ſeveral Twigs to the Muſcles of the *Larynx*, *Gula*, Neck, *&c.* particularly the *Ganglioform Plexus*, form'd by its Union with a Branch of the Intercoſtal. Hence deſcending to the Thorax, it makes another *Plexus* under the *Clavicle*, whence ariſes the *Recurrent Nerve* on the right ſide, as on the left it has its Riſe from the Trunk of the *Nerve* itſelf. The right Recurrent is reflected at the Axillary Artery, the left at the deſcending Branch of the *Aorta*; each running aſide the

Trachea, impart ſome Twigs to it, and terminate in the Muſcles of the *Larynx*. Their Uſe is in the Formation and Modulation of the Voice. See VOICE.

Againſt the Origin of the *Aorta* it ſends off a Branch towards the Heart; which dividing into two, the leſſer twiſts about the Pulmonary Vein; the bigger proceeds to the *Pericardium*, and Heart, after having ſent off a Twig, which with others from the Intercoſtals, make the *Plexus Cardiacus ſuperior*: proceeding ſtill further, it ſends out ſeveral Ramifications, which, meeting together, make the *Plexus Pneumonicus*, whence ariſe Fibres that conſtringe the Veſſels and Veſicles of the Lungs. In its Paſſage downwards, it diſtributes ſeveral Branches to the *Oeſophagus*, along which it runs.

About the lower *Vertebræ* of the Neck, the Trunk divides into two Branches, the external and internal, communicating all along by ſeveral Ramifications, and at length reuniting. The reſt of this Pair joins with the Intercoſtals in the formation of ſeveral *Plexus's* in the lower Venter, and in them ſeems to terminate. See PLEXUS.

Along with theſe, and wrapp'd up in the ſame Coat from the *Dura Mater*, paſſes the

Acceſſory NERVE, or *Par Acceſſorium*. It has its Origin from the *Medulla* contain'd in the *Vertebræ* of the Neck. Soon after its return out of the Skull, it leaves the *Par Vagum* again, and is diſtributed into the Muſcles of the Neck and Shoulders.

Intercoſtal NERVES, conſiſt of *nervous* Filaments derived partly from the Brain, *viz.* Branches of the fifth and ſixth Pair; and partly from the Spinal Marrow, by thoſe Branches they receive from the Vertebral *Nerves*.

In each Trunk of theſe *Nerves*, e'er it arrives at the Thorax, are two *Cervical Plexus's*, the upper whereof receives a Branch from each Trunk of the *Par Vagum*; the under ſends out ſeveral Ramifications to the *Oeſophagus* and *Aſpera Arteria*, and particularly a large one to the recurrent *Nerve*. From the ſame *Plexus* deſcend two other Ramifications to the *Cardiac Plexus*; which are join'd a little lower by a third, from which the *Intercoſtal Nerve* deſcending to the Clavicles, divides into two, and embraces and conſtringes the ſubclavian Artery; thence entring the Thorax, it receives three or four Twigs from the upper *Vertebral Nerve*, together with which it conſtitutes the *Intercoſtal Plexus*; and thence deſcending along the ſides of the *Vertebræ*, and receiving a *nervous* Twig from each of them to the *Os Sacrum*, and entring the *Abdomen*, it forms ſeveral conſiderable *Plexus's*, *viz.* the *Lienaris*, *Hepaticus*, the two *Renales*, *Meſentericus magnus*, and two little ones in the *Pelvis*. See PLEXUS.

Ninth Pair of NERVES, *Motorii Linguæ*, ariſe from the middle of the *Centrum Ovale*, by three or four ſmall Twigs, and go out of the Skull near the Proceſs of the *Occiput*; and ſend their Branches to the Tongue.

They may be likewiſe call'd *Guſtatorii*, as they contribute, together with the Branches of the fifth and ſixth Pair, to the Senſation of Taſting. See TASTING.

Tenth Pair of NERVES, ariſe by two or three Branches from the *Medulla oblongata*, juſt below the *Corpora Pyramidalia* and *Olivaria*, or rather, at the beginning of the *Medulla Spinalis*; whence reflecting a little backwards, it goes out of the Skull between the firſt *Vertebra* of the Neck, and the Proceſs of the *Occiput*.

It is ſpent on the external Muſcles of the Head and Ears. See EAR, *&c.*

NERVES *from the Spinal Marrow.*

The *Spinal* NERVES, (*i. e.* thoſe ſpringing from the *Medulla* after its egreſs out of the Skull, where it lays aſide the name *Oblongata*, and aſſumes that of *Spinalis*) are thirty Pair: Of which, ſome are reckoned as belonging to the Neck, as having their Origin thence, and call'd *Cervical Nerves*; others to the *Dorſum*, or Back, and call'd *Dorſal Nerves*; others to the Loins, call'd *Lumbal Nerves*, and the reſt to the *Os Sacrum*.

Cervical NERVES. Of theſe there are ſeven Pair: The firſt Pair ariſe between the firſt and ſecond *Vertebra* of the Neck, and, contrary to the reſt, come out before and behind; whereas the other ſix Pair come out laterally from the Junctures of the *Vertebræ*, thro particular Perforations near the tranſverſe Proceſſes. They go to the Muſcles of the Head and Ear.

The ſecond Pair contributes the main Branch towards the formation of the *Diaphragmatic Nerves*, which, according to *Vieuſſens*, ſpring only from the fourth and ſixth Pair.

The three laſt Pair of the Neck joining with the two firſt of the *Dorſum*, or Thorax, make the *Brachial Nerves*.

All the *Cervical Nerves* ſend innumerable Branches to the Muſcles, and other parts of the Head, Neck, and Shoulders.

Dorſal NERVES are in number twelve. Theſe, excepting what the two upper pair contribute to the *Brachial Nerves*, are generally diſtributed into the Intercoſtal and Abdominal Muſcles, the *Pleura* and external parts of the Thorax.

Lumbal NERVES, are five Pair: The firſt of which ſends two Branches to the lower ſide of the Diaphragm. The ſecond ſome Twigs to the Genital Parts, and others, as well as the three following, to give the firſt Roots to the *Crural Nerves*. The reſt of the Branches of the *Lumbal Nerves* are diſtributed into the Muſcles of the Loins and adjacent Parts.

NERVES *of the Os Sacrum*, are ſix Pair; the firſt three or four Pair whereof are beſtow'd wholly on the Crural *Nerves*; the reſt on the Muſcles of the *Anus*, *Veſica*, and Genital Parts.

Brachial NERVES, are the Offſpring, partly of the *Cervicals*, and partly of the *Dorſals*. Theſe, after the ſeveral Branches whereof they are compoſed have been variouſly complicated and united, run but a little way in a Trunk e'er they divide again into ſeveral Branches, variouſly diſtributed into the Muſcles of the Skin and Arms.

Diaphragmatic NERVES, are likewiſe the Offſpring of the Cervicals. Theſe, after joining in a Trunk, run thro the *Mediaſtinum* undivided, till they arrive near the Diaphragm, into which they ſend off ſeveral Branches; ſome into the Muſcular, others into the Tendinous part of it.

Crural NERVES, conſiſt of an Union of ſix or ſeven Pair, *viz.* the three laſt of the Lumbal, and three or four firſt of the *Os Sacrum*. Theſe, after having ſpent their upper Branches on the Muſcles of the Thigh and Skin, as far as the Knee, proceed in a Trunk downwards, which ſends its Branches to the Extremities of the Toes, ſupplying as it goes, the Muſcles and Skin of the Leg and Foot. This is the largeſt and firmeſt nervous Trunk in the Body.

NERVES, in Botany, are long, tough, Strings running either a-croſs, or length-wiſe of the Leaves of Plants. See LEAVES.

NERVES, in Architecture, are the Mouldings of the Projecting-Arches of Vaults; or thoſe ariſing from the Branches of Ogives, and croſſing each other diagonally in *Gothic* Vaults, ſerving to ſeparate the Pendentives. See VAULT, OGIVE, *&c.*

NERVOSA *Corpora*, in Anatomy. See CAVERNOSA *Corpora*.

NERVOUS *Spirit*, or *Juice*, is a pure, ſubtile, volatile Humour, better known by the Name of *Animal Spirits*; ſecreted from the Arterious Blood in the Cortical Part of the Brain, collected in the *Medulla Oblongata*, and thence driven, by the force of the Heart, into the Cavities of the Nerves; to be convey'd by them throughout the Body, for the Purpoſes of Senſation and Animal Motion. See SPIRIT.

NEST, ſee NIDUS.

NESTORIANS, a Sect of antient Heretics; ſtill, as 'tis ſaid, ſubſiſting in ſome parts of the *Levant*.

They take their Name from *Neſtorius*, who, of a Monk, became a Prieſt, and a celebrated Preacher, and was at length, after the Death of *Siſinnius* in 428, rais'd by *Theodoſius* to the See of *Conſtantinople*.

At firſt he ſhew'd a world of Zeal againſt Hereſy in his Sermons before the Emperor; but at length taking the liberty to ſay, that he found in Scripture, that *Mary was the Mother of Jeſus*, but that he no where found, that *Mary was the Mother of God*, his Auditory was ſhock'd, and a great part of 'em retir'd from his Communion.

His Writings were ſoon ſpread thro *Syria* and *Egypt*, where he made many Converts, notwithſtanding the vigorous Oppoſition of St. *Cyril*.

His diſtinguiſhing Tenet was, that there are two Perſons in Jeſus Chriſt; and that the Virgin was not his Mother as God, but only as Man.

The Doctrine was condemn'd in the Council of *Epheſus*, at which aſſiſted above 200 Biſhops; and *Neſtorius* was anathematiz'd and depoſed from his See.

Neſtorius was not the Author of this Error; but borrow'd it at *Antioch*, where he had ſtudied. *Theodorus Mopſueſtanus* had taught the ſame before him.

'Tis ſomething difficult to determine whether or no the *Chaldee* Chriſtians, who ſtill profeſs *Neſtorianiſm*, have preciſely the ſame Sentiments with *Neſtorius*, whom they ſtill eſteem as their Patriarch. They have made ſeveral Reunions with the *Romiſh* Church, but none of 'em have ſubſiſted long. The moſt conſiderable was that under the Pontificate of *Paul* V.

Till the time of Pope *Julius* III, they acknowledg'd none but one Patriarch, who aſſumed the Quality of Patriarch of *Babylon*; but a diviſion ariſing among 'em, the Patriarchate became divided, at leaſt for a Time; and a new Patriarch was appointed by that Pope, who made his Reſidence at *Caremita* in *Meſopotamia*; whoſe Succeſſor, however, unable to withſtand the Power of the Patriarch of *Babylon*, was obliged to retire within the Confines of *Perſia*. Thus

Matters

Matters ſtood till the Pontificate of *Paul* V. under whom there was a ſolemn Re-union with the *Romiſh* Church, whom their Patriarch ſolemnly own'd for the Mother, &c. of all Churches; ſending his Miniſters to *Rome* to negotiate the Union, and compoſing an Explication of the Articles of Religion, where their Diſputes with the *Romiſh* Church were repreſented as only verbal, &c.

NET, NEAT, in Commerce, ſomething pure, and unadulterated with any foreign Mixture.

Thus, Wine is ſaid to be *Net* when not falſify'd or balderdaſh'd; and Coffee, Rice, Pepper, &c. are *Net*, when the Filth and Ordures are ſeparated from them.

A Diamond is ſaid to be *Net* when it has no Stains or Flaws; a Cryſtal, when tranſparent throughout.

NET is alſo uſed for what remains after the Tare has been taken out of the Weight of any Merchandize; *i.e.* when it is weigh'd clear of all Package. See TARE.

Thus we ſay, a Barrel of Cochineal weighs 450 Pounds; the Tare is 50 Pounds, and there remains *Net* 400 Pounds.

NET-*Produce*, a Term uſed to expreſs what any Commodity has yielded, all Tare and Charges deducted.

The Merchants ſometimes uſe the *Italian* Words, *Netto procedido*, for *Net-Produce*.

NET-*Maſonry*, ſee MASONRY.

NETE *Hyperboleon*, in the antient Muſic, the name of the higheſt and moſt acute of the Chords of the Lyre, or the antient Scale, or Diagramma. See DIAGRAMMA.

It anſwer'd to the *A*, *mi*, *la*, of the third Octave of the Organ, or the modern Syſtem.

The Word is compoſed of the *Greek* νητε and υπεξβολεων, *i. e. The laſt of the higheſt Chords.*

NETE *Diazeugmenon*, in the Antient Muſic, was one of the Chords of the Lyre, or Syſtem of the Antients. See DIAGRAMMA.

It anſwers to the *E*, *ſi*, *mi*, of the third Octave of the Organ, or modern Syſtem.

The Word comes from the *Greek* νητε and διαζευγμένων, *laſt of the ſeparate ones*; where is underſtood the word *Chord.*

NETE *Synemmenon*, in the Antient Muſic, the Name of the higheſt Chord of a Tetrachord of the *Greek* Syſtem, added to make the *b ſoft* fall between the *Meſe* and *Parameſe*, *i.e.* between *la* and *ſi*. See DIAGRAMMA.

This Chord had the ſame Sound with the *Paranete Diazeugmenon*, or our *la* by *b mollis.*

The Word comes from the *Greek* νητε and συνεμμένον, *the laſt of thoſe added*; where is underſtood the word *Chord.*

NEURITICS, or NERVINES, in Medicine, Remedies proper for Diſeaſes of the Nerves, and Joints.

Such are Betony, Lavender, Roſemary, Sage, Laurel, Marjoram, and other among the Cephalics.

The Word is form'd from the *Greek* νεύρος, *Nervus.* Hence alſo

NEUROGRAPHIA, in Anatomy, a Deſcription of the Nerves. See NERVE.

Raim. Vieuſſens, a Phyſician of *Montpellier*, has an excellent Treatiſe in *Latin*, under the Title *Neurographia Univerſalis*, where he ſhews, that there are more Ramifications of the Nerves in the Skin, than in the Muſcles, and all the other parts. See SKIN.

Duncan, another Phyſician of the ſame Place, has a Treatiſe call'd *Neurographia Rationalis.*

Neurographia is ſomething more general than

NEUROLOGY, which implies a Diſcourſe of the Nerves; in as much as the former may be underſtood, not only of Diſcourſes on the Nerves, but alſo of Figures and Engravings, repreſenting them; whereas the latter is reſtrained to diſcourſing alone.

NEUTER, a Perſon free or indifferent, who has eſpouſed neither Party, and is neither Friend nor Foe.

Thus we ſay a Judge is to be *Neuter* in the Cauſes he judges; and thus, we ſay, in Queſtions, where Reaſon appears *Neuter*, a Man muſt ever incline to the Side of the Unhappy.

NEUTER, in Grammar, is uſed for a ſort of Gender of Nouns which are neither Maſculine, nor Feminine. See GENDER.

The *Latins* have three kinds or Genders, Maſculine, Feminine, and *Neuter*. In *Engliſh*, and other modern Tongues, there is no ſuch thing as *Neuter* Nouns. See NOUN.

Verbs NEUTER, by ſome Grammarians call'd *Intranſitive Verbs*, are thoſe that govern nothing, and that are neither active nor paſſive. See VERB.

When the Action expreſs'd by the Verb has no Object to fall upon, but the Verb alone ſupplies the whole Idea of the Action, the Verb is ſaid to be *Neuter*; as *I ſleep*, *thou yawneſt*, *he ſneezes*, *we walk*, *ye run*, *they ſtand ſtill.*

Some divide *Verbs Neuter* into, *1ſt*, Such as don't ſignify any Action, but a Quality; as *albet*, it is white; or a Situation, as *ſedet*, he ſits; or have ſome relation to Place, as *adeſt*, he is preſent; or ſome other State or Attribute, as *regnat*, he rules, &c.

And, *2dly*, thoſe that do ſignify Actions, tho thoſe ſuch as don't paſs into any Subject different from the Actor; as *to dine*, *to ſup*, *to play*, &c.

But this latter kind ſometimes ceaſe to be *Neuter*, and commence active; eſpecially in *Greek* and *Latin*, when a Subject is given them; as *vivere vitam*, *ambulare viam*, *pugnare pugnam.* Thus the old *French* Poets ſay, *Soupirer ſon tourment*; the *Engliſh*, to *ſigh his Woes*, &c.

But this is obſerved only to obtain where ſomething particular is to be expreſs'd, not contain'd in the Verb; as *vivere vitam beatam*, to live a happy Life; *pugnare bonam pugnam*, to fight a good fight, &c.

According to the Abbot *de Dangeau*, *Verbs Neuter* may be divided into *active* and *paſſive*; the firſt thoſe that form their Tenſes in *Engliſh* by the auxiliary Verb *to have*; in *French* by *avoir*. The ſecond thoſe that form them in *Engliſh* with the Verb *to be*; in *French*, *etre.*

Thus, *to ſleep* and *to yawn*, *dormer* and *eternuer*, are *Neuters* active. *To come*, and *to arrive*, are *Neuters* paſſive.

The ſame Author ſubdivides each Kind into ſeveral Branches. See VERB.

NEUTRALITY, the State of a Perſon or Thing that is *Neuter*. See NEUTER.

NEUTRAL *Salts*, among Chymiſts, are a ſort of intermediate Salts between Acids and Alcalies; partaking of the nature of both. See SALT, ACID, and ALCALY.

Mr. *Boyle* alſo gives the Appellation *Neutral* to a ſort of Spirits, differing in divers Qualities both from Vinous, Acid, and Urinous Spirits. Theſe he alſo calls Anonymous and *Adiaphorous* Spirits. See ADIAPHOROUS.

NEWEL, in Architecture, the upright Poſt, which a Pair of Winding-Stairs turn about; or that part of the Stair-Caſe which ſuſtains the Steps. See STAIR.

The *Newel* is a Cylinder of Stone, which bears on the Ground, and is form'd by the ends of the Steps of the Winding-Stairs.

There are alſo *Newels of* Wood, which are pieces of Wood placed perpendicularly, receiving the Tenants of the Steps of Wooden-Stairs into their Mortices, and wherein are fitted the Shafts and Reſts of the Stair-Caſe, and the Flights of each Story.

NEW-*Moon*, that State of the Moon a little before, and a little after her Conjunction with the Sun. See MOON and CONJUNCTION.

NEWTONIAN *Philoſophy*, the Doctrine of the Univerſe, and particularly of the heavenly Bodies; their Laws, Affections, &c. as deliver'd by Sir *Iſaac Newton*. See PHILOSOPHY.

The Term *Newtonian Philoſophy*, is apply'd very differently; whence divers confuſed Notions relating thereto.

Some Authors, under this *Philoſophy*, include all the Corpuſcular Philoſophy conſider'd as it now ſtands corrected and reform'd by the Diſcoveries and Improvements made in ſeveral parts thereof, by Sir *I. Newton*. In this ſenſe it is that *Graveſande* calls his *Elements of Phyſics*, *Introductio ad Philoſophiam Newtoniam.*

And in this ſenſe the *Newtonian* is the ſame with the *New Philoſophy*, and ſtands contradiſtinguiſh'd to the *Carteſian*, the *Peripatetic*, and the antient *Corpuſcular*. See CORPUSCULAR, PERIPATETIC, CARTESIAN, &c.

Others, by *Newtonian Philoſophy*, mean the Method or Order which Sir *I. Newton* obſerves in philoſophizing; *viz.* the Reaſoning, and drawing of Concluſions directly from Phænomena, excluſive of all previous Hypotheſes; the beginning from ſimple Principles; deducing the firſt Powers and Laws of Nature from a few ſelect Phænomena, and then applying thoſe Laws, &c. to account for other things. To this Purpoſe, the ſame *Graveſande* explains himſelf in his *Inſtitut. Newton. Philoſ.*

And in this ſenſe, the *Newtonian Philoſophy* is the ſame with the *Experimental* Philoſophy; and ſtands oppoſed to the Antient *Corpuſcular*. See EXPERIMENTAL, &c.

Others, by *Newtonian Philoſophy*, mean that wherein Phyſical Bodies are conſider'd Mathematically; and where Geometry and Mechanics are apply'd to the Solution of Phænomena: In which ſenſe, the *Newtonian* is the ſame with the *Mechanical* and *Mathematical* Philoſophy. See MECHANICAL.

Others, again, by *Newtonian Philoſophy*, underſtand that part of Phyſical Knowledge, which Sir *I. Newton* has handled, improved, and demonſtrated, in his *Principia.*

Others, laſtly, by *Newtonian Philoſophy*, mean, the new Principles which Sir *I. Newton* has brought into Philoſophy; the new Syſtem founded thereon; and the new Solution of Phænomena thence deduced: or that which characterizes, and diſtinguiſhes his Philoſophy from all others. Which is the ſenſe wherein we ſhall here chiefly conſider it.

As to the Hiſtory of this *Philoſophy*, we have but little to ſay: It was firſt made public in the Year 1686, by the Author,

Author, then a Fellow of *Trinity*-College, *Cambrigde*; and in the Year 1713, republiſhed with conſiderable Improvements. Several other Authors have ſince attempted to make it plainer; by ſetting aſide many of the more ſublime Mathematical Reſearches, and ſubſtituting either more obvious Reaſonings, or Experiments, in lieu thereof; particularly *Whiſton* in his *Prælect. Phyſ. Mathemat.* and *Graveſande* in *Element. & Inſtit.*

Notwithſtanding the great Merit of this Philoſophy, and the univerſal Reception it has met with at home, it gains ground very ſlowly abroad; *Newtonianiſm* has ſcarce two or three Adherents in a Nation; but *Carteſianiſm*, *Huygenianiſm*, and *Leibnitzianiſm* remain ſtill in poſſeſſion.

The *Philoſophy* itſelf is laid down chiefly in the third Book of the *Principia*. The two preceding Books are taken up in preparing the way, and laying down ſuch Principles of Mathematicks as have the moſt relation to *Philoſophy*: Such are the Laws and Conditions of Powers. And theſe, to render them leſs dry and geometrical, the Author illuſtrates by *Scholia* in *Philoſophy*, relating chiefly to the Denſity and Reſiſtance of Bodies, the Motion of Light, and Sounds, a Vacuum, &c.

In the third Book he proceeds to the *Philoſophy* itſelf; and from the ſame Principles deduces the Structure of the Univerſe; and the Powers of Gravity, whereby Bodies tend towards the Sun and Planets; and from theſe Powers, the Motions of the Planets and Comets, the Theory of the Moon and the Tides.

This Book, which he calls *de Mundi Syſtemate*, he tells us, was firſt wrote in the popular way: But conſidering, that ſuch as are unacquainted with the ſaid Principles, would not conceive the Force of the Conſequences, nor be induced to lay aſide their antient Prejudices; for this Reaſon, and to prevent the thing from being in continual Diſpute; he digeſted the Sum of that Book into Propoſitions, in the Mathematical manner; ſo as it might only come to be read by ſuch as had firſt conſider'd the Principles. Not that it is neceſſary, a Man ſhould maſter them all. Many of them, even the firſt-rate Mathematicians, would find a Difficulty in getting over. 'Tis enough to have read the Definitions, Laws of Motion, and the three firſt Sections of the firſt Book; after which, the Author himſelf directs us to paſs on to the Book *de Syſtemate Mundi*.

The ſeveral Articles of this Philoſophy, are deliver'd under their reſpective Heads in this Dictionary; as SUN, MOON, PLANET, COMET, EARTH, AIR, CENTRIPETAL *Force*, RESISTANCE, MEDIUM, MATTER, SPACE, ELASTICITY, &c. A general Idea, or Abſtract of the Whole, we ſhall here gratify the Reader withal; to ſhew in what Relation the ſeveral Parts ſtand to each other.

The great Principle on which the whole Philoſophy is founded, is the *Power of Gravity*. This Principle is not new: *Kepler*, long ago, hinted it in his *Introduct. ad Mot. Martis*. He even diſcovered ſome of the Properties thereof, and their Effects in the Motions of the primary Planets: But the Glory of bringing it to a Phyſical Demonſtration was reſerved to the *Engliſh Philoſopher*. See GRAVITY.

His Proof of the Principle from Phænomena; together with the Application of the ſame Principle to the various other Appearances of Nature, or the deducing thoſe Appearances from that Principle, conſtitute the *Newtonian Syſtem*; which, drawn in Miniature, will ſtand thus.

I. The Phænomena are, 1. That the Satellites of *Jupiter* do, by *Radii* drawn to the Center of the Planet, deſcribe Areas proportional to their Times; and that their Periodical Times are in a ſeſquiplicate Ratio of their Diſtances from its Centre: in which all Obſervations of all Aſtronomers agree. 2. The ſame Phænomenon holds of the Satellites of *Saturn*, with regard to *Saturn*; and of the Moon with regard to the Earth. 3. The periodical Times of the primary Planets about the Sun, are in a ſeſquiplicate Ratio of their mean diſtances from the Sun. But, 4. The primary Planets do not deſcribe Areas any way proportional to their periodical Times, about the Earth; as being ſometimes ſeen Stationary, and ſometimes Retrograde with regard thereto. See SATELLITES, PERIODS, &c.

II. The Powers whereby the Satellites of *Jupiter* are conſtantly drawn out of their rectilinear Courſe, and retain'd in their Orbits, do reſpect the Center of *Jupiter*, and are reciprocally as the Squares of their diſtances from the ſame Centre. 2. The ſame holds of the Satellites of *Saturn* with regard to *Saturn*; of the Moon with regard to the Earth: And of the primary Planets with regard to the Sun. See CENTRIPETAL *Force*.

III. The Moon gravitates towards the Earth, and by the Power of that Gravity is retain'd in her Orbit: And the ſame holds of the other Satellites with reſpect to their primary Planets; and of the Primaries with reſpect to the Sun. See MOON.

As to the Moon, the Propoſition is thus proved: The Moon's mean diſtance is 60 Semidiameters of the Earth; her Period, with regard to the fix'd Stars, is 27 Days, 7 Hours, 43 Minutes; and the Earth's Circumference 123249600 *Paris* Feet. Now, ſuppoſing the Moon to have loſt all its Motion, and to be let drop to the Earth, with the Power which retains her in her Orbit; in the ſpace of one Minute ſhe will fall $15\frac{1}{12}$ *Paris* Feet; the Arch ſhe deſcribes in her mean Motion at the diſtance of 60 Semidiameters of the Earth being the verſed Sine of $15\frac{1}{12}$ *Paris* Feet. Hence, as the Power as it approaches the Earth, increaſes in a duplicate Ratio of the diſtance inverſly; ſo, as at the Surface of the Earth, 'tis 60×60 greater than the Moon: A Body falling with that Force in our Region muſt, in a Minute's time, deſcribe the ſpace of $60 \times 60 \times 15\frac{1}{12}$ *Paris* Feet; and $15\frac{1}{3}$ *Paris* Feet in the ſpace of one Second.

But this is the Rate at which Bodies fall, by their Gravity, at the Surface of our Earth; as *Huygens* has demonſtrated, by Experiments with Pendulums. Conſequently, the Power whereby the Moon is retain'd in her Orbit, is the very ſame we call *Gravity*: For if they were different, a Body falling with both Powers together, would deſcend with double the Velocity, and in a Second of Time deſcribe $30\frac{1}{6}$ Feet. See DESCENT *of Bodies*.

As to the other ſecundary Planets, their Phænomena with reſpect to their primary ones, being of the ſame kind with thoſe of the Moon about the Earth; 'tis argued, by Analogy, they depend on the ſame Cauſes: It being a Rule or Axiom all Philoſophers agree to, That Effects of the ſame kind, have the ſame Cauſes. Again, Attraction is always mutual, *i. e.* the Reaction is equal to the Action. Conſequently, the primary Planets gravitate towards their ſecundary ones; the Earth towards the Moon, and the Sun towards 'em all. And this *Gravity*, with regard to each ſeveral Planet, is reciprocally as the Square of its diſtance from its Centre of Gravity. See ATTRACTION, REACTION, &c.

IV. All Bodies gravitate towards all the Planets; and their Weights towards any one Planet, at equal diſtances from the Centre of the Planet, are proportional to the Quantity of Matter in each.

For the Law of the Deſcent of heavy Bodies towards the Earth, ſetting aſide their unequal Retardation from the Reſiſtance of the Air, is this; that all Bodies fall equal ſpaces in equal times: But the nature of Gravity or Weight, no doubt, is the ſame on the other Planets, as on the Earth. See WEIGHT.

Suppoſe, *e. gr.* ſuch Bodies raiſed to the Surface of the Moon, and together with the Moon deprived at once of all Progreſſive Motion, and drop'd towards the Earth: 'Tis ſhewn, that in equal Times they will deſcribe equal Spaces with the Moon; and, therefore, that their Quantity of Matter is to that of the Moon, as their Weights to its Weight.

Add, that ſince *Jupiter*'s Satellites revolve in times that are in a ſeſquiplicate Ratio of their diſtances from the Centre of *Jupiter*, and conſequently at equal diſtances from *Jupiter* their accelerating Gravities are equal; therefore, falling equal Altitudes in equal Times, they will deſcribe equal Spaces: juſt as in heavy Bodies on our Earth. And the ſame Argument will hold of the primary Planets with regard to the Sun. And the Powers whereby unequal Bodies are equally accelerated, are as the Bodies; *i. e.* the Weights are as the Quantities of Matter in the Planets. And the Weights of the primary and ſecundary Planets towards the Sun, are as the Quantities of Matter in the Planets and Satellites.

And hence are ſeveral Corollaries drawn relating to the *Weights* of Bodies on the Surface of the Earth, Magnetiſm, and the *Exiſtence* of a Vacuum. Which ſee under the Articles VACUUM, WEIGHT, and MAGNETISM.

V. Gravity extends itſelf towards all Bodies, and is in proportion to the Quantity of Matter in each.

That all the Planets gravitate towards each other, has been already ſhewn; likewiſe, that the Gravity towards any one conſider'd apart, is reciprocally as the Squares of its Diſtance from the Centre of the Planet: Conſequently, Gravity is proportional to the Matter therein. Further, As all the Parts of any Planet, A, gravitate towards another Planet, B; and the Gravity of any part is to the Gravity of the whole, as the Matter of the part to the Matter of the whole; and Reaction equal to Action: The Planet B will gravitate towards all the Parts of the Planet A; and its Gravity towards any part, will be to its Gravity towards the whole, as the Matter of the part to the Matter of the whole.

Hence, we derive Methods of finding and comparing the *Weights* of Bodies towards different Planets; of finding the *Quantity of Matter* in the ſeveral Planets; and their *Denſities*: Since the Weights of equal Bodies revolving about Planets, are as the Diameters of their Orbits directly, and as the Squares of the Periodical Times, inverſly; and the Weights at any diſtance from the Centre of the Planet are greater or leſs in a duplicate Ratio of their diſtances, inverſly: And ſince the Quantities of Matter

n the Planets are as their Powers at equal distances from their Centres: And, lastly, since the Weights of equal and homogeneous Bodies towards homogeneous Spheres, are, at the Surfaces of the Spheres, as the Diameters of those Spheres; and, consequently, the Densities of heterogeneous Bodies are as the Weights at the Diameters of the Spheres. See DENSITY,

VI. The common Centre of Gravity of the Sun, and all the Planets, is at rest: And the Sun, tho always in Motion, yet never recedes far from the common Center of all the Planets.

For, the Matter in the Sun being to that in *Jupiter* as 1033 to 1; and *Jupiter*'s distance from the Sun to the Semidiameter of the Sun in a Ratio somewhat bigger; the common Center of Gravity of *Jupiter* and the Sun, will be a Point a little without the Sun's Surface. And by the same means the common Centre of *Saturn* and the Sun will be a Point a little within the Sun's Surface: And the common Centre of the Earth, and all the Planets will be scarce one Diameter of the Sun distant from the Centre thereof. But the Centre is always at rest: Therefore, tho the Sun will have a Motion this and that way, according to the various Situations of the Planets, yet it can never recede far from the Centre. So that the common Centre of Gravity of the Earth, Sun, and Planets may be esteem'd the Centre of the whole World. See SUN and CENTRE.

VII. The Planets move in Ellipses that have their *Foci* in the Centre of the Sun; and describe Areas proportional to their Times.

This we have already laid down *à posteriori*, as a Phenomenon: And now, that the Principle of the heavenly Motions is shewn, we deduce it therefrom *à priori*. Thus: Since the Weights of the Planets towards the Sun are reciprocally as the Squares of their distances from the Centre of the Sun; if the Sun were at rest, and the other Planets did not act on each other; their Orbits would be Elliptical, having the Sun in their common Umbilicus; and would describe Areas proportional to the Times: But the mutual Actions of the Planets are very small, and may be well thrown aside. Therefore, &c. See PLANET and ORBIT.

Indeed, the Action of *Jupiter* on *Saturn* is of some consequence; and hence, according to the different Situations and Distances of those two Planets, their Orbits will be a little disturbed. See DISTURBING *Force*.

The Sun's Orbit too, is sensibly disturbed by the Action of the Moon: And the common Centre of the two describes an Ellipsis round the Sun placed in the Umbilicus; and with a Radius drawn to the Centre of the Sun, describes Areas proportional to the Times. See EARTH and SATURN.

VIII. The Aphelia and Nodes of the Planets are at rest. Excepting for some inconsiderable Irregularities arising from the Actions of the revolving Planets and Comets.—Consequently, as the fix'd Stars retain their Position to the Aphelia and Nodes; they, too, are at rest. See NODE, STAR, &c.

IX. The Axis, or Polar Diameter of the Planets, is less than the Equatorial Diameter.

The Planets, had they no diurnal Rotation, would be Spheres; as having an equal Gravity on every side: But by this Rotation, the Parts receding from the Axis, endeavour to rise towards the Equator, which, if the Matter they consist of be fluid, will be affected very sensibly. Accordingly *Jupiter*, whose Density is found not much to exceed that of Water on our Globe, is observed by the Astronomers to be considerably less between the Poles, than from East to West. And on the same Principle, unless our Earth were higher at the Equator than towards the Poles, the Sea would rise under the Equator, and over-flow all near it. See SPHEROID.

But this Figure of the Earth, Sir *Is. Newton* proves likewise *à posteriori*; from the Oscillations of Pendulums being slower, and smaller, in the Equatorial, than the Polar Parts of the Globe. See PENDULUM.

X. All the Moon's Motions, and all the Inequalities in those Motions, follow from these Principles: *E. gr.* Her unequal Velocity, and that of her Nodes, and Apogee in the Syzygies and Quadratures; the differences in her Eccentricity, and her Variation, &c. See MOON, QUADRATURE, SYZYGY, &c.

XI. From the Inequalities in the Lunar Motions, we can deduce the several Inequalities in the Motions of the Satellites. See SATELLITES.

XII. From these Principles, particularly the Action of the Sun and Moon upon the Earth, it follows, that we must have Tides; or that the Sea must swell and subside twice every Day. See TIDES.

XIII. Hence likewise follows, the whole Theory of Comets; as, that they are above the Region of the Moon, and in the Planetary Spaces; that they shine by the Sun's Light reflected from them; that they move in Conic Sections, whose *Umbilici* are in the Centre of the Sun: and by Radii drawn to the Sun, describe Areas proportional to the Times; that the Orbits, or Trajectories, are very nearly Parabolas; that their Bodies are solid, compact, &c. like those of the Planets, and must therefore acquire an immense heat in their *Perihelia*; that their Tails are Exhalations arising from them, and encompassing them like Atmospheres. See COMET.

The Objections rais'd against this *Philosophy*, are chiefly against the Principle *Gravity*; which some condemn as an *occult Quality*, and others as a *miraculous*, and præter-natural Cause; neither of which have longer any room in sound Philosophy. Others, again, set it aside, as destroying the Notion of *Vortices*; and others, as supposing a *Vacuum*. But these are all abundantly obviated under the Articles GRAVITY, ATTRACTION, VORTEX, VACUUM, QUALITY, &c.

NEXUS *of Matter*, see COHESION.

NICHE, in Architecture, a Cavity, or Sinking, in the Thickness of a Wall; to place a Figure, or Statue in. See STATUE.

The larger *Niches* serve for Groups of Figures; the small ones for single Statues, sometimes only for Busts.

The Word comes from the *Italian Nicchio*, Sea-Shell; in regard the Statue is here inclosed as in a Shell; or, perhaps, by reason of the Shell wherewith the Top of some of them is adorn'd.

Great Care must be taken to proportion the *Niches* to the Figures; and that the Pedestals of the Figures be proportion'd to the *Niches*.

Round NICHE, is that whose Plan and Circumference are Circular.

Square NICHE, That where they are Square.

Angular NICHE, That form'd in a Corner of the Building.

Ground NICHE, That which, instead of bearing on a Massive, has its Rise from the Ground; as the *Niches* of the Portico of the Pantheon at *Rome*: These are otherwise call'd Tribunals. See TRIBUNAL.

Niches are sometimes made with Rustic-work, sometimes with Shell-work, and sometimes of Crail'd, or Arbor-work.

NICHOLAITANS, or NICOLAITANS, one of the most antient Sects in the Christian Church. It had its Name from *Nicholas*, a Person ordain'd a Deacon of the Church of *Jerusalem* together with St. *Stephen*.

The distinguishing Tenet of the *Nicholaitans*, as represented by Ecclesiastical Historians, is, that all Married Women should be common; to take away all occasion of Jealousy.

Other Authors tax *Nicholas* with other Impurities; but *Clemens Alexandrinus* imputes them all to his Disciples, who, he says, abused their Master's Words. *Nicholas*, it seems, having a very beautiful Wife, was suspected by the Apostles as jealous of her, and as being a lascivious Man.

To remove this suspicion, he call'd his Wife; and to shew he was not at all attach'd to her, offer'd any of them the liberty of espousing her. This is confirm'd by *Eusebius*, who adds, that *Nicholas* never had more than one Wife.

Other things charg'd on the *Nicholaitans*, are, That they made no scruple of eating Meats offer'd to Idols: That they maintain'd that the Father of Jesus Christ was not the Creator: That some of them adored one *Barbelo*, who inhabited the eighth Heaven, and who proceeded from the Father, and was the Mother of *Jaldabaoth*; or, according to others, of *Sabaoth*, who had forcibly taken possession of the seventh Heaven. Others of them gave the Name *Prounicos* to the Mother of the heavenly Powers; but all ascribe infamous Actions to her, and with her authorize their own Impurities. Others shewed Books, and pretended Revelations under the Name of *Jaldabaoth*.

Irenæus and *Epiphanius* relate these and other Extravagancies; and represent the *Nicholaitans* as Authors of the Sect of *Gnostics*. See GNOSTICS.

Cocceius, *Hoffman*, *Vitringa*, and *Maius*, take the Name *Nicholaitan* to be coin'd, to signify a Man addicted to Pleasure and Debauchery; adding, that it has nothing to do with *Nicholas* one of the seven Deacons. And, as the Doctrine of the *Nicholaitans* is mention'd in the *Apocalypse*, immediately after mention made of *Balaam*, and his Doctrine, they compare the two Names *Balaam* and *Nicholas*, which, in their Originals, the one in *Greek*, the other *Hebrew*, have nearly the same signification, *viz. Prince, or Master of the People*.

Maius adds, 'twas probable enough the *Nicholaitans* might value themselves on being the Disciples of one of the seven Deacons; but that it was without any ground: notwithstanding what the Antients, ever too credulous, have represented to the contrary.

NICOTIANA, or *Herba Nicotiana*, a Term given to *Tobacco*; from *Nicot* the *French* Ambassador at the Court of *Portugal*, who first sent it into *France* in 1560, and gave it

his

his own Name; as he himſelf tells us in his Dictionary. See TOBACCO.

NICTITATING *Membrane*, in Anatomy, a thin Membrane which covers the Eyes of ſeveral Creatures, and ſhelters them from Duſt, or too much Light; yet is ſo thin, that they can ſee indifferently well through it. See EYE.

The *Nictitating Membrane* is chiefly found in the Bird and Fiſh Kind. See BIRD and FISH.

This *Membrane* in the Eagle's Eye, is remarkably cloſe and firm, inſomuch as to be accounted as a ſecond Eye-lid: And hence that remarkable Firmneſs of the Eagle's Sight in viewing the Sun. See EAGLE.

NIDUS, *Neſt*, a Depoſitory, wherein certain Animals, Fowls particularly, Inſects, and Reptiles lodge their Eggs, for Incubation; and wherein, when hatch'd, they nurſe their Young till they become able to ſhift for themſelves.

The Word is *Latin*, and ſuppoſed to be derived from *Nidor*, ſtrong, or ill Smell; in regard the Neſts of Animals uſually ſtink.

Mr. *Derham* ſays, he has often wonder'd how Waſps, Hornets, and other Inſects that gather dry Materials (as the Duſt of Wood ſcraped off for that purpoſe) ſhould find a proper Matter to cement and glue their Combs, and line their Cells; but he adds, That in all probability 'tis in their own Bodies: as in the *Tinea Veſtivora*, the Cad-Worm, &c.

Geodart obſerves of his *Eruca* that fed on Leaves, that it made its Cell on Leaves glued together with its own Spittle.

NIECE, a Term relative to Uncle and Aunt, ſignifying Brother or Siſter's Daughter; which, in the Civil Law, is the third Degree of Conſanguinity, and in the Canon Law, the ſecond. See AGNATI and COGNATI.

NIENT *Comprize*, in Law, an Exception taken to a Petition as injuſt; becauſe the thing deſired is not in that Act, or Deed whereon the Petition is grounded.

Thus, a Perſon deſires of the Court to be put in Poſſeſſion formerly adjudg'd to him among other Lands: The adverſe Party pleads that this Petition is not to be granted, by reaſon tho the Petitioner had a Judgment for certain Lands and Houſes, yet this Houſe is not *comprized* therein.

NIEPE, NEPE, or NEEP *Tides*, are thoſe Tides which happen when the Moon is in the middle of the ſecond and laſt Quarters. See TIDE.

The *Niepe-Tides* are oppoſite to the Spring-Tides; and as the higheſt of the Spring-Tides is three Days after the Full or Change, ſo the loweſt of the *Niepe* is four Days before the Full or Change; on which occaſion the Seamen ſay, That it is *deep Niep*.

When a Ship wants Water, ſo that ſhe cannot get out of the Harbour, off the Ground, or out of the Dock, the Seamen ſay, *She is Nieped*.

NIGHT, that Part of a Natural Day, during which the Sun is underneath the Horizon. See DAY.

Or *Night*, is that Space of Time wherein the Sun is out of our Hemiſphere.

Under the Equator, the *Nights* are always equal to the Days. Under the Poles, the *Night* holds half the Year.

The antient *Gauls* and *Germans* divided their Time not by Days, but *Nights*; as appears from *Tacitus* and *Cæſar*. And the People of *Iceland* and the *Arabs*, do the ſame at this day. The ſame is obſerved of our *Saxon* Anceſtors.

Thus, in the Council of *Cloveſhoe*, *Anno* 824, we read, *Ibi finita & proſcripta contentione coram Epiſcopo poſt* 30 Noctes, *illum Juramentum ad Weſtminſter deductum eſt*. Whence our Cuſtom of ſaying, *Seven-night*, *fort-night*, &c.

NIGHT-*Mare*, a popular Name for a Diſeaſe by the *Greek* Phyſicians call'd *Ephialtes*, and the *Latins*, *Incubus*; to which People lying a-ſleep on their Backs, and having their Stomach charg'd with heavy Food difficult of Digeſtion, are very liable. See INCUBUS.

The Diſeaſe makes the ſleeping Patient appear as if oppreſs'd with a huge Weight on the Breaſt; whence he ordinarily imagines ſome Spectre or Fantom ſtopping his Breath.

The Diſeaſe does not ariſe, as was antiently imagined, from groſs Vapours filling the Ventricles of the Brain; but rather from a too great repletion of the Stomach which prevents the Motion of the Diaphragm, and, of conſequence, the Dilatation of the Breaſt neceſſary to Reſpiration.

Others take it to be produced by a Convulſion of the Muſcles of Reſpiration. See EPHIALTES.

Etmuller obſerves, That the *Arabs* call this Diſeaſe a *Nocturnal Epilepſy*; ſince upon its prevailing much, it degenerates into an Epilepſy; and is in effect the *Prodromus* hereof in young People, as in old ones of an Apoplexy.

NIHIL, NIHILUM, *Nothing*; among the School Philoſophers, is what has no real *Eſſe*, and is only conceived negatively, and denominated by a Negative. See ESSE.

NIHIL *Capiat per Billam*, or *per Breve*, is a Form uſed when Judgment is given againſt the Plaintiff, ſo as to bar his Action, or overthrow his Writ.

NIHIL *Dicit*, is a failing to put in an Anſwer to the Plaintiff's Plea by the Day aſſign'd.

NIHILI *Album*, ſee POMPHYLAX.

NIHILS, or NICHILS, Iſſues, which the Sheriff that is oppoſed ſays are nothing worth, and Illeviable; for the Inſufficiency of the Parties that ſhould pay them.

Clerk of the NICHILS, *Nihilorum Clericus*, is an Officer of the Exchequer who makes a Roll of the Sums which are *Nichil'd* by the Sheriff. See EXCHEQUER.

NILOMETRE, an Inſtrument uſed among the Antients, to meaſure the height of the Water of the *Nile*, in its over-flowings. See OVERFLOWING.

In the *French* King's Library is an *Arabic* Treatiſe on *Nilometres*, entitled *Neili fi alnal al Nil*; wherein are deſcribed all the overflowings of the *Nile* from the 1ſt Year of the *Hegira* to the 875th.

Herodotus mentions a Column erected in a Point of the Iſland *Delta*, to ſerve as a *Nilometre*: And there is ſtill one of the ſame kind in a Moſque of the ſame Place.

As all the Riches of *Egypt* ariſe from the over-flowing of the *Nile*, the *Egyptians* uſed to ſupplicate them at the hands of their *Serapis*, and committed the moſt execrable Crimes, as Actions, forſooth, of Religion, to obtain the Favour. This occaſion'd *Conſtantine* expreſly to prohibit theſe Sacrifices, &c. and to order the *Nilometre* to be removed into the Church; whereas till that time it had been in the Temple of *Serapis*. *Julian* the Apoſtate, had it replaced in the Temple, where it continued till the Time of the Great *Theodoſius*. See on the Subject of *Nilometres*, the *Acta Eruditorum Lipſii*, *Anno* 1686.

The Word comes from the *Greek* νεῖλος, *Nile*, (and that from νέα ἰλύς, *New Mud*; or, as others will have it, from νέω, *I flow*, and ἰλυς, *muddy*) and μέτρον, *Meaſure*.

The *Greeks* ordinarily call'd the *Nilometre*, *Niloſcope*.

NIMBIS, in Antiquity, a Term ſignifying a Circle, obſerved on certain Medals, around the Heads of ſome Emperors; anſwering to the Circles of Light, or *Aureolæ*, placed around the Images of Saints.

The *Nimbis* is ſeen on the Medals of *Maurice*, *Phocas*, and others, even of the upper Empire.

NIMETULAHITE, a kind of Religious among the *Turks*; ſo call'd from *Nimetulahi* their Inſtitutor.

When a *Turk* would be admitted into the Order, he is to ſhut himſelf up cloſe in a Chamber forty Days, tied down to four Ounces of Food *per* Day. The term expired, the *Nimetulahites* take him by the Hand, and lead him a *Mooriſh* Dance accompanied with an infinity of ridiculous Actions, or Geſtures; till the violence of the Exerciſe, with his former Regimen, throw him down on the Ground. This Fall is conſtrued an Extaſy, during which he is ſuppoſed to have a Viſion.

The *Nimetulahites* meet every *Monday* in the Night-time, and ſing Hymns to God, &c.

NIPPLE, ſee BREASTS.

NISI *Prius*, in Law, a Writ Judicial, which lieth in Caſes, where the Jury being impanel'd, and returned before the Juſtices, one of the Parties requeſts to have ſuch Writ, for the Eaſe of the Country, whereby to will the Sheriff to cauſe the Inqueſt to come before the Juſtices in the ſame Country.

It is call'd a Writ of the *Niſi Prius*, and its Effect is, that the Sheriff is hereby commanded to bring to *Weſtminſter* the Men impanell'd at a certain Day, or before the Juſtices of the next Aſſizes, *Niſi die Lunæ apud talem Locum prius venerint*, &c.

NITRE, in Natural Hiſtory, a ſort of Salt, thus call'd by the Antients; by the Moderns, more uſually, *Saltpetre*. See SALTPETRE.

Naturaliſts differ as to the Point whether our Saltpetre be the *Nitre* of the Antients. *G. C. Schelhamer* has a particular Treatiſe on the Subject, *de Nitro tum veterum tum noſtro Commentarius*.

Moſt other Authors hold the antient *Nitre* to be Mineral or Foſſil; whereas our Saltpetre is Artificial. *Serapion* ſays, their Mines of *Nitre* were like thoſe of common Salt, and that it was form'd out of running Water congeal'd in its Progreſs into a ſort of Stone. He adds, That their *Nitre* was of four kinds, diſtinguiſh'd by the Countries whence it came; *viz.* the *Armenian*; *Roman*; *African*; call'd *Aphronitre*, and by *Avicenna*, *Baurach*; and the *Egyptian*, which was the moſt famous, giving Name to all the reſt; itſelf denominated from *Nitria*, a Province in *Egypt*, where it was found in great abundance. He aſſures us, too, that their *Nitre* was of divers Colours, *viz.* white, red, and livid; that ſome was cavernous, like a Spunge; others cloſe and compact; others tranſparent like Glaſs; and others ſcaly.

Schelhamer gives a different Account: The Antients, he obſerves, diſtinguiſh'd between Νίτρον, *Nitre*, Ἀφρονίτρον, *Aphronitre*, and Ἀφρὸς νίτρου, *Spuma Nitri*, or *Scum of Nitre*.

He

He adds, That *Agricola*, &c. is miſtaken in aſſerting that there were antiently Mines in *Lydia*, *Magneſia*, *Caria*, &c. out of which *Nitre* was dug like Stones out of a Quarry: And that the *Nitre* uſed by the Antients was brought out of ſeveral Countries mentioned by *Pliny*, *L.* xxxi. *c.* 10. A Lake in *Macedonia*, whoſe Waters were *Nitrous*, and in the middle whereof, however, was a Spring of freſh Water, furniſh'd the greateſt Quantity, and the beſt: It was call'd *Calluſtricum* from a neighbouring Cape in the Gulf of *Theſſalonica*, and was form'd like a Cruſt on the Surface of the Water during the Dog-days. The Waters of the Lake *Aſcanius* in *Bithynia*, and thoſe of certain Springs near *Chalcis*, were ſweet and potable towards the Surface, yet *nitrous* at bottom.

There was alſo *Nitre* gather'd on the Ground near *Philippi*, in *Thrace*; but it was little, and of no great value.

The Valleys of *Media* alſo furniſh'd ſome. And there were *Nitre*-Pits in *Egypt*, as there are Salt-Pits among us. See NATRON and NITRIAN *Waters*.

The chief Virtue the Antients aſcribe to their *Nitre*, is, that of drying, deterging, and attenuating; and, as ſuch, it was uſed in Ulcers, Diſorders of the Eyes, the Itch, the Bite of Serpents, Gout, &c. They alſo took it inwardly to reſolve and attenuate viſcid Humours: But its cooling Quality, whereof the modern Phyſicians make ſo much uſe, they were unacquainted withall.

'Tis excellent in Diſeaſes of the Heart, accompanied with a propenſity to vomit.

Abundance of our Phyſicians are full of the Notion of a *volatile Nitre* abounding in the Air; and a world of Phænomena they account for from the Operation of the Particles thereof. See AIR.

That the Atmoſphere abounds with Saline Particles, is moſt certain; for being filled continually with Effluvia from the Earth and Sea, it muſt needs have from both a great Quantity of Saline Corpuſcles; and theſe will be of different Kinds, according to the Variety of thoſe Salts from whence they are derived. See SALT.

But why theſe ſhould be moſtly ſuppoſed of a *Nitrous* nature, is not ſo eaſy to prove; for Saltpetre is by no means found in greater Quantity than the other Salts, eſpecially common Salt; nor is it of a much more volatile Nature than they, nor capable of being raiſed more eaſily, or by a leſſer heat. But ſince Soot, and that which produces it, Smoak, is found to abound very much with a truly volatile Salt; and ſince ſuch a kind of Salt is produced frequently by the Putrefaction of Animal and Vegetable Bodies, 'tis probable the Air may abound with Salts of this kind, among many other decompounded ones of different Natures and Names. See ATMOSPHERE, &c.

Spirit of NITRE, ſee SPIRIT.

NOBILIARY, a Collection, or Hiſtorical Account of the Noble Families of a Province, or Nation.

Chorier has publiſhed a *Nobiliary* of *Dauphine*; and *Caumartin*, another of *Provence*. The *Germans* are particularly careful of their *Nobiliaries*, to keep up the Purity of their Families.

NOBILISSIMUS, in Antiquity, a Title, or Quality given to the Princes of the Imperial Family. See TITLE.

F. *Doucine* advances, That the Title *Nobiliſſimus* was firſt given under the Emperor *Juſtin*; yet we find the Title, *Nobilis Cæſar*, or *Nob. C.* that is, *Nobiliſſimus Cæſar*, on Medals long before that Time, even as early as *Trajan*. So that even M. *Tillemont* is miſtaken where he ſays, The Quality of *Nobiliſſimus* is not to be found in Hiſtory before the Time of *Conſtantine the Great*, who firſt gave it to his two Brothers; after which it was attributed to ſuch of the Emperor's Children as were not *Cæſars*.

Triſtan adds, That the *Cæſars* bore the Title of *Nobiliſſimi* in all Ages; but that the *Nobiliſſimate* firſt became a diſtinct independent Dignity in the Time of *Conſtantine the Great*.

NOBILITY, a Quality that dignifies, or renders a Thing *Noble*; particularly, that raiſes a Perſon poſſeſs'd thereof above a Peaſant, or Commoner. See NOBLE.

In *England*, indeed, but no where elſe, the Term *Nobility* is reſtrain'd to Degrees of Dignity above Knighthood. See KNIGHT.

Some refer the Origin of *Nobility* in *Europe* to the *Goths*; who, after they had ſeiz'd a Part of *Europe*, rewarded their Captains with Titles of Honour, and call'd them *Nobles*, *Nobiles*, to diſtinguiſh them from the common People.

Nobility, in *England*, is only confer'd by the King, and that by Patent; in virtue whereof, it becomes Hereditary. In other Countries there are other ways of acquiring it.

Thus, in *France*, *v. gr.* there are ſeveral Offices which convey perfect *Nobility*, and ſuch as deſcends to Poſterity. Such are all Offices of the Crown, thoſe of *Counſellor of Eſtate*, &c.

Others they have which only communicate an Acceſſory, or Perſonal *Nobility*, which dies with the Perſon. Thus, a *Counſellor in Parliament* enjoys all the Rights and Exemptions of *Nobility*; yet his Son is never reputed *Noble*; unleſs there have been a Succeſſion of them, and both Father and Grandfather have been *Noble*; which they call *Patre & Avo Conſulibus*.

They have a third Kind of *Nobility*, call'd *Nobility of the Bell*, *de la Cloche*; which is what the Mayors and Sheriffs of certain Cities, as *Lions*, *Bourges*, *Rochel*, *Poitiers*, &c. acquire in virtue of their Magiſtracy.

The *Nobility* of *England* is call'd the *Peerage* of *England*. See PEERAGE.

Its Degrees are only five, *viz.* That of a *Duke*, *Marquiſs*, *Earl* or *Count*, *Viſcount*, and *Baron*. See each Degree under its proper Article, DUKE, MARQUISS, &c.

The Privileges of the *Engliſh Nobility* are very conſiderable: They are all eſteem'd as the King's Hereditary Counſellors; and are privileged from all Arreſts, unleſs for Treaſon, Felony, breach of Peace, Condemnation in Parliament, and Contempt of the King. No Supplicative can be granted againſt them; no *Capias*, or *Exigent*, ſued againſt them for Action of Debt, or Treſpaſs; no *Eſſoigne* lies againſt them: In Criminal Caſes, they are only to be tried by a Jury of Peers, who are not put to their Oath; but their Verdict *upon their Honour* ſuffices. In their Abſence they are allow'd a Proxy to Vote for them; and in all Places of Truſt are allow'd to conſtitute Deputies, by reaſon of the Neceſſity the Law ſuppoſes them under of attending the King's Perſon.

Guillim obſerves, That if an Appeal of Murther or Felony be ſued by a Commoner, againſt a Peer, he ſhall be tried by Commoners, not Peers.

No Peer may go out of the Kingdom without the King's leave: If any have leave, he is to return upon the King's Writ, or to forfeit Goods and Chattels.

Anton. Matthæus obſerves, That *Nobility* among the *Romans* was a quite different thing from what it is among us. The *Nobles* of the *Romans* were either thoſe rais'd to the Magiſtrature, or deſcended from Magiſtrates: There was no ſuch thing as *Nobility* by Patent.

Bartoli ſays, That Doctors, after they have held a Chair in an Univerſity for twenty Years, became *Noble*; and are entitled to all the Rights of Counts. See COUNT.

But this Claim is not admitted at Court, &c. tho *Bartholis*'s Sentiments be back'd with thoſe of ſeveral other Authors, particularly *Chaſſaneus* in his *Conſuetudin. Burgundiæ*; *Boyer ſur la Coutume de Berry*; *Faber de Dig. deſ.* &c. which laſt, however, reſtrains *Bartholis*'s Rule to Doctors in Law, and Princes Phyſicians. See DOCTOR.

By an Edict of the *French* King, in 1669, 'tis declared, That Trade ſhall not derogate from *Nobility*, provided the Perſon don't ſell by retail. See COMMERCE.

In *Bretagne*, by antient Cuſtom, a *Noble* loſes nothing by Trading even in retail: But he reaſſumes all his Rights as ſoon as he ceaſes Traffic; *his Nobility having ſlept all the time.*

In *Germany*, a Woman not *Noble* by Birth doth not become *v. gr.* a Counteſs, or Baroneſs, by marrying a Count, or Baron. A Lady of the higher Degree, indeed, becomes a Princeſs by marrying a Prince; but this doth not hold of a Lady of the lower *Nobility*. See MARRIAGE.

On the Coaſt of *Malabar*, Children are only capable of being *Noble* by the Mother's ſide; it being allow'd them to take as many Husbands as they pleaſe, and to quit them when they think good.

NOBLE, a Perſon who has a Privilege which raiſes him above a Commoner, or Peaſant; either by Birth, by Office, or by Patent from his Prince. See NOBILITY.

In *England*, the word *Noble* is of a narrower import, than in other Countries, being confined to Perſons above the Degree of Knights; whereas, abroad, it comprehends not only Knights, but alſo what we ſimply call *Gentlemen*. See KNIGHT, GENTLEMAN, &c.

The *Nobles* of *England* are alſo call'd *Pares Regni*, as being *Nobilitate Pares*, tho *Gradu Impares*. See PEER.

The Word comes from the *Latin*, *Nobilis*, form'd from the antient *Noſcibilis*, diſtinguiſhable, remarkable.

The *Venetian Nobleſſe* is famous: 'Tis in this that the Sovereignty of the State reſides. It is divided into three Claſſes: The firſt only comprehends 24 Families.

The ſecond includes the Deſcendants of all thoſe who were wrote in the golden Book, in 1289, and deſtined to govern the State, which then began to be Ariſtocratic.

The third conſiſts of ſuch as have bought the Dignity of *Noble Venetians*.

This laſt Claſs is only admitted to the inferior Employs; The two former, to all indifferently.

The Title of *Noble Venetians* is ſometimes alſo given to foreign Kings, Princes, &c.

NOBLE, or *Roſe Noble*, a Money of Account containing 6 *s.* 8 *d.* See MONEY.

The *Noble* was antiently a real Coin, under the Denomination of *Noble*, or *Roſe Noble*. See COIN.

Authors obſerve, that there has not been any Piece of Gold or Silver of this Name, coin'd with us, ſince 9 *H.* V. They were firſt coin'd by *Edw.* III. in 1334.

The *Noble* contain'd 80 *d.* the ſame with the preſent Money of Account: Its half was call'd *Obolus*, containing 40 *d.* its fourth part the *Quadrance*, or Farthing in thoſe days, 20 *d.*

NOCTAMBULI, a Term of equal import with *Somnambuli*, applied to Perſons who have a Habit of riſing, and walking about in their Sleep. See SLEEP.

The Word is a compound of the *Latin Nox*, Night, and *ambulo*, I walk.

Skenkius, *Horſtius*, *Clauderus*, and *Hildanus*, who have wrote of Sleep, give us divers unhappy Hiſtories of ſuch *Noctambuli*.

The Diſorder conſiſts in this, that the proper Organs of Muſcular Motion are at liberty, while the Organs deſtined for Senſation are bound up, or in a State of Inaction. See MUSCULAR *Motion* and SENSATION.

To conceive the Cauſe, it is to be obſerv'd, that the Laws of the Union of the Soul and Body, are ſuch, as that certain Ideas follow upon certain Motions of the Fibres of the Brain; and certain Motions of thoſe Fibres upon certain Ideas. Now, by much thinking on any one thing, the Fibres acquire ſome permanent Situation, which gives a freer Paſſage to the Spirits towards a certain part of the Body than ordinary. If then the Animal Spirits become too copious, or too much agitated, or conſiſt of parts too ſolid; they throw themſelves into the Paſſages they find the moſt open, glide into the Nerves and Muſcles correſponding to thoſe Paſſages, and there produce the Motions proper to thoſe Muſcles.

Accordingly, the Body riſes and walks; tho the Soul be excluded from thinking on the Objects that uſe to employ it on ſuch occaſions.

The Bilious, according to *Horſtius*; the Melancholic, according to *Salius*; and the Sanguine, according to *Libavius*, are the moſt ſubject to thoſe *nocturnal* Vagaries.

The Remedies are all ſuch things as temper the Agitation of the Spirits, and relax the Fibres; as Bleeding, and all Coolers, either internally or externally: Aperitives too, have a good effect; but the beſt Remedy is Cold-Bathing.

NOCTILUCA, among Naturaliſts, a Species of Phoſphorus, ſo call'd becauſe it ſhines in the Night, and without any Light being thrown on it; as that made of Urine, &c. by which it is diſtinguiſhed from the other Species of Phoſphorus, which, e'er they ſhine, muſt be expoſed to the Sun-Beams; ſuch as is the *Bolonian*-Stone, &c. See PHOSPHORUS and BOLONIAN-*Stone*.

Mr. *Boyle*, in a particular Treatiſe on the Subject, gives an Account of three *Noctilucæ*. The firſt, invented by *Krafft*, he calls the *Conſiſtent*, or *Gummous Noctiluca*, as being of a Texture not unlike that of a Cherry-Gum. This, on account of its uninterrupted Action, is, by the *Germans*, call'd the *Conſtant Noctiluca*; among us it is now known under the denomination of *ſolid Phoſphorus*.

The ſecond, *Liquid*, invented by the ſaid *Krafft*; being only a Diſſolution of the former in a convenient Liquor. The third Kind was prepared by Mr. *Boyle* himſelf; and of a different Nature from both the other; for, it would not ſhine of itſelf, like either of them, but required the Contact of the Air (tho not any external Rays or Heat) to make it produce Light, which would be very durable, in a well-ſtopp'd Veſſel. Add, that it was not the Body that ſhone, but an Exhalation, or Effluvium mix'd with the Air; on which accounts, the Inventor gives it the Denomination of the *Aerial Noctiluca*.

The ſame Mr. *Boyle*, afterwards, prepared another ſort; which, from the little pellucid Fragments, or Cryſtals therein, he denominated the *Icy Noctiluca*.

NOCTURNAL, ſomething that relates to *Night*, *Nox*; in contradiſtinction to *Diurnal*. See NIGHT and DIURNAL.

In this ſenſe we ſay, *Nocturnal Aſſemblies*; *Nocturnal Pollutions*, &c. See POLLUTIONS, &c.

NOCTURNAL *Pains*, a frequent Concomitant of Venereal Diſorders, which can only be palliated with Narcoticks: nothing but a Mercurial Courſe, or a long continued uſe of Diet-Drinks can entirely remove them.

NOCTURNAL *Arch*, in Aſtronomy, the Arch of a Circle deſcribed by the Sun, or a Star, in the Night.

Semi-NOCTURNAL *Arch of the Sun*, is that Portion of a Circle he paſſes over between our Meridian, and the Point of the Horizon wherein he riſes; or, between the Point of the Horizon where he ſets, and our Meridian.

NOCTURNAL, is particularly uſed for a *Star-Dial*, or an Inſtrument uſed to determine the Hour of the Night; chiefly at Sea, from the Altitude, or Depreſſion of ſome of the Stars about the Pole. See DIAL.

There are *Nocturnals* of various Contrivances; ſome of them Projections of the Sphere: Thoſe ordinarily uſed are adapted either to the Pole Star, or the two Stars in *Urſa minor*, call'd the Guards.

Conſtruction of the NOCTURNAL.

The Inſtrument conſiſts of two Circular Plates, (Tab. NAVIGATION, *Fig.* 13.) applied on each other. The greater, which has a Handle to hold the Inſtrument, is about 2 ½ Inches Diameter, and is divided into 12 Parts, agreeing to the 12 Months; and each Month ſubdivided into every fifth Day: And ſo as that the middle of the Handle correſponds to that Day of the Year, wherein the Star here regarded has the ſame right Aſcenſion with the Sun.

If the Inſtrument be fitted for two Stars, the Handle is made moveable. The upper left Circle is divided into 24 equal Parts, for the 24 Hours of the Day, and each Hour ſubdivided into Quarters, as in the Figure. Theſe 24 Hours are noted by 24 Teeth; to be told in the Night. Thoſe at the Hours 12, are diſtinguiſhed by their length. In the Centre of the two circular Plates, is adjuſted a long Index A, moveable upon the upper Plate. And the three Pieces, *viz.* the two Circles and Index, are join'd by a Rivet which is pierced thro the Centre, with a Hole two Inches in Diameter for the Star to be obſerv'd thro.

Uſe of the NOCTURNAL.

Turn the upper Plate till the longeſt Tooth mark'd 12, be againſt the Day of the Month on the under Plate; then bringing the Inſtrument near the Eye, ſuſpend it by the Handle, with the Plane nearly parallel to the Equinoctial; and viewing the Pole-Star thro the Hole of the Centre, turn the Index about, till, by the Edge coming from the Centre, you ſee the bright Star or Guard of the little Bear; if the Inſtrument be fitted to that Star; and that Tooth of the upper Circle, that is under the edge of the Index, is at the Hour of the Night on the edge of the Hour-Circle, which may be known without a Light, by accounting the Teeth from the longeſt, which is for the Hour 12.

NODATED *Hyperbola*, a kind of Hyperbola, which, in turning round, croſſes itſelf. See CURVE and HYPERBOLA.

NODE, NODUS, in Chirurgery, a Tumour ariſing on the Bones, uſually proceeding from ſome Venereal Cauſe. See TUMOR and BONE.

It ſeems generated of a thick, cold, viſcid Humour, which is often found very difficult to reſolve.

They frequently apply to it a leaden Plate cover'd with Mercury. The Cure is firſt attempted by *Emplaſt. de Ranis cum Mercurio*; which failing, ſome Mercurial Unguent is now and then rubb'd on them; and afterwards Mercurial Plaiſters made of Cinnabar, &c. applied.

Some Phyſicians call it *Exoſtoſis*; others give the Name *Nodus* to all Tumors ariſing on the Joints, and Nerves.

NODE, *Nodus*, is alſo uſed for the Tumors, or Protuberances ariſing on the Joints of old Gouty People; call'd alſo *Tophi*. See TOPHUS.

They are ſuppoſed to be form'd of a thick, crude, heavy, viſcid indigeſted Matter; mix'd with a hot, ſharp, bilious Juice, the groſſer and more terreſtrial Part whereof being detain'd, grows into a ſtony ſort of Concretion. See GOUT.

NODES, in Aſtronomy, the two Points wherein the Orbit of a Planet interſects the Ecliptic. See ORBIT and ECLIPTIC.

Such are the two Points C and D, (Tab. ASTRON. *Fig.* 33.) whereof the *Node* C, where the Planet aſcends Northwards above the Plane of the Ecliptic, is call'd the *Aſcending Node*, the *Northward Node*, and the *Head of the Dragon*; and thus mark'd ☊. The other *Node* D, where the Planet deſcends to the South, is call'd the *Deſcending Node*, the *Southward Node*, or the *Dragon's Tail*; thus mark'd ☋. See DRAGON's *Head* and *Tail*, &c.

The right Line D C, wherein the two Circles interſect, is call'd *the Line of the Nodes*. See LINE.

It appears from Obſervation, that the Line of the *Nodes* of all the Planets conſtantly changes its Place, and ſhifts its Situation *in conſequentia*; *i. e.* from Eaſt to Weſt, contrary to the Order of the Signs.

Thus, by a retrograde Motion, the Line of the Moon's *Nodes* finiſhes its Circuit in 19 Years; in which time, after having receded from any Point of the Ecliptic, it returns to the ſame. See MOON.

When the Moon is in the *Nodes*, ſhe is alſo in the Ecliptic, *viz.* twice in each Period; when ſhe is at her

greateſt diſtance from the *Nodes*. *viz.* in the Points E, F, ſhe is ſaid to be in her Limits. See LIMIT.

The Moon muſt be in one of the *Nodes* when there is an Eclipſe, either of the Sun or Moon. See ECLIPSE, PLANET, &c.

NODE, in Dialling, is ſometimes uſed for the Style, Index, or Gnomon of a Dial. See GNOMON.

Sometimes it is alſo uſed for a Hole in the Ceiling of a Room, or in the Window, for the making of a Dial on the Floor, Wall, or the like.

NODUS, or *Knot*, ſee KNOT.

NODUS *in Poetry*, &c. ſee INTRIGUE.

NODULUS, in Pharmacy, a Bag of Medicinal Ingredients put into Beer or Wine, the Tincture whereof the Patient is to take.

NOETIANS, a Sect of antient Heretics, Diſciples of *Noetius*, an *Epheſian*, the Maſter of *Sabellius*.

They only allowed of one Perſon in the Godhead; *viz.* the Father; and accordingly taught, that 'twas God the Father that ſuffered: An Error, ſays *Epiphanius*, who wrote an hundred Years after *Noetius*, never heard of before; tho 'tis certain there had been other *Patripaſſians* in the Church before him. See PATRIPASSIAN.

Being reprehended by his Superiors, *Noetius* made them this Anſwer: *What harm have I done? I adore one only God; I own none but him. He was born, ſuffered, and is dead.*

NOLI *me tangere*, in Medicine, a kind of Cancer, or a malignant Eruption in the Face, occaſioned by an extremely ſharp, corroſive Humour. 'Tis ſaid to be very dangerous touching it; for, frequently, in endeavouring to cure it, 'tis irritated the more, and the Patient's Death haſtened.

Hence its Name, which literally ſignifies, *don't touch me*.

NOLI *me tangere*, is chiefly uſed among us for an external Ulcer in the *Alæ* of the Noſe; proceeding often from a Venereal Cauſe, tho ſometimes the Effect of a Scrophulous Conſtitution. See ULCER.

It does not always confine itſelf to the Alæ, but will ſpread and corrode the very Subſtance of the Noſe. The Cure is difficult, eſpecially when it ariſes from a bad Conſtitution.

The Botaniſts alſo deſcribe a Plant under this denomination, which it derives from a ſingular Property it has, of darting out its Seed when ripe, upon the firſt approach of the Hand to touch its Pods. See SEMINATION.

NOMADES, a Name given, in Antiquity, to ſeveral Nations or People, whoſe whole Occupation was to feed and tend their Flocks; and who had no fix'd Place of Abode, but were conſtantly ſhifting, according to the Conveniences of Paſturage.

The moſt celebrated among the *Nomades* were thoſe of *Africa*, who inhabited between *Zengitania* to the Eaſt, and *Mauritania* to the Weſt.

Saluſt ſays, they were a Colony of *Perſians* brought into *Africa* with *Hercules*.

The *Nomades* of *Aſia* inhabited the Coaſts of the *Caſpian* Sea.

The *Nomades* of *Scythia* were, and ſtill are, the Inhabitants of *Little Tartary*.

The Word comes from the *Greek* νέμω, *I feed*.

NOMANCY, the Art of divining the Fates of Perſons by means of the Letters that form their Names. See NAME.

Nomancy is more uſually call'd *Onomancy*. See ONOMANCY.

The Word is a Compound of the *Latin*, *Nomen*, Name, and μαντεία, *Divination*.

Nomancy, or, as it ſhould rather be call'd, *Nominomancy*, or *Onomatomancy*, ſeems to be nothing elſe but the Cabbaliſtic *Gematria*. See CABBALA.

NOMARCHA, in Antiquity. *Egypt* was antiently divided into ſeveral Regions, or Quarters, call'd *Noma's*, from the *Greek* νόμος, taken in the Senſe of a Diviſion; and the Officer who had the Adminiſtration of each *Noma* from the King, was call'd *Nomarcha*, from νόμος, and ἀρχὴ *Command*.

NOMBRIL *Point*, in Heraldry, is the next below the Feſs-Point; or the very Centre of the Eſcutcheon. Suppoſing the Eſcutcheon divided into two equal Parts below the Feſs; the firſt of theſe Diviſions is the *Nombril*; and the lower the *Baſe*. See POINT and ESCUTCHEON.

NOME, or NAME, in Algebra, is any Quantity with a Sign prefixed or added to it, whereby it is connected with ſome other Quantity; upon which the whole becomes a *Binomial*, or *Trinomial*, &c. See QUANTITY.

Thus $a+b$ is a Binomial, whoſe Names are a and b; and $a+b+c$ a Trinomial, whoſe Names are a, b, and c, &c. See BINOMIAL, TRINOMIAL.

NOMENCLATOR, among the *Romans*, was uſually a Slave, who attended Perſons that ſtood Candidates for Offices, and prompted them the Names of all the Citizens they met, that they might ſollicite them, and call them by their Names; which among that People, was the higheſt piece of Civility. See CANDIDATE.

The *Nomenclator* was alſo call'd *Protocollus*.

NOMENCLATOR *of the Roman Church*, was an Officer, whoſe Buſineſs was to call the Perſons whom the Pope invited to Dinner. He alſo liſten'd to thoſe who demanded Audience; in the ſame manner as thoſe now retain'd by the Cardinals, call'd *Auditors*.

NOMENCLATURE, a Catalogue of ſeveral of the more uſual Words in any Language, with their Significations; compiled in order to facilitate the Uſe of ſuch Words to thoſe who are to learn the Tongue.

We have *Latin*, *Greek*, *French*, &c. *Nomenclatures*.

NOMINA *Villarum*, an Account of the Names of all the *Villages*, and the Poſſeſſors thereof, in each County, drawn up by the ſeveral Sheriffs, at the Inſtance of King *Edw.* I. and return'd by them into the Exchequer; where it is ſtill preſerved.

NOMINALS, or NOMINALISTS, a Sect of School-Philoſophers, the Diſciples and Followers of *Ocham*, an *Engliſh* Cordelier in the 14th Century.

The *Nominaliſts* were great dealers in Words; whence they were vulgarly denominated *Word-ſellers*.

They had the denomination *Nominaliſt*, becauſe, in oppoſition to the *Realiſts*, they maintain'd, that Words, not Things, were the Object of Dialectics. See REALISTS, &c.

This Sect had its firſt Riſe towards the end of the XIth Century, and pretended to follow *Porphiry* and *Ariſtotle*; but it was not till *Ocham*'s time that they bore this Name.

The *Nominals* were the Founders of the Univerſity of *Leipſic*: There are many yet abroad, who pique themſelves on being *Nominals*.

The *Nominals*, with the *Stoics*, admit the formal Conceptions, or Ideas of Things, as the Subject and Foundation of Univerſality; but to this they add Names, which repreſent and ſignify, after the ſame univocal manner, and without any diſtinction, a great variety of ſingle things alike in Genus and Species.

Whence it is they are call'd *Nominals*; as pretending, that to become Learned, 'tis not enough to have juſt Ideas of things, but 'tis likewiſe required to know the proper Names of the *Genera* and *Species* of Things, and to be able to expreſs them clearly and preciſely, without Confuſion, or Equivocation.

NOMINATION, the Action of Naming, and appointing a Perſon for ſome Function, Employ, or Benefice.

The Word is chiefly uſed for the Right of Preſenting to a Benefice, &c. See BENEFICE, &c.

In Common Law, however, there is a difference between *Nomination*, and Preſentation; the former being properly a Power which a Man has, by virtue of a Manor, or otherwiſe, to appoint, or name a Clerk to a Patron of a Benefice, to be by him *preſented* to the Ordinary. See PRESENTATION and COLLATION.

NOMINATIVE, in Grammar, the firſt Caſe of Nouns which are declinable. See CASE.

The ſimple Poſition, or laying down of a Noun, or Name, is call'd the *Nominative Caſe*; yet is it not ſo properly a *Caſe*, as the Matter or Ground whence the other Caſes are to be form'd, by the ſeveral Changes and Inflexions given to this firſt Termination. See NOUN.

Its chief uſe is to be placed in Diſcourſe before all Verbs, as the Subject of the Propoſition, or Affirmation; as, *Dominus regit me*, the Lord governs me; *Deus exaudit me*, God hearkens me.

NOMINATOR, he who names, or preſents a Perſon to an Office, or Benefice.

Hence *Nominee*, the Perſon named or preſented.

Errard obſerves, there are ſome Cuſtoms where the *Nominator* is reſponſible for the Solvability of the *Nominee*.

NOMOCANON, a Collection of Canons, and of Imperial Laws, relating or conformable thereto. See CANON.

The firſt *Nomocanon* was made by *Johannes Scholaſticus* in 554.

Photius, Patriarch of *Conſtantinople* in 883, compiled another *Nomocanon*, or Collection of the Civil Laws with the Canons: This is the moſt celebrated. *Balſamon* made a Commentary on it in 1180.

NOMOCANON, is alſo a Collection of the antient Canons of the Apoſtles, Councils, and Fathers, without any regard to Imperial Conſtitutions; ſuch is that publiſhed by *M. Cotelier*.

NOMOCANON again, is ſometimes uſed for a Penitential Book of the *Greeks*.

The Word is compoſed of the *Greek* νόμος, *Lex*, Law; and κανὼν, Canon, Rule.

NON-

NON-*Ability*, in Law, an Exception taken againſt the Plaintiff, or Defendant, upon ſome Cauſe, why he cannot commence a Suit in Law; as Præmunire, Outlawry, Profeſs'd in Religion, Excommunicate, or a Stranger born.

This laſt holds only in Actions real, and mixed; and not in perſonal, except he be both a Stranger and an Enemy.

The Civilians ſay, that ſuch Man hath not *Perſonam ſtandi in judicio.*

NON *admittas*, or *Ne admittas*, a Writ which lies for the Plaintiff in a *Quare Impedit*, or him that has Action of *Darre in Preſentment* depending in the Common-Bench, and fears the Biſhop will admit the Clerk of the Defendant during the Suit between them.

NON-*Appearance*, a Default in not Appearing in a Court of Judicature. See APPEARANCE.

NON-*Claim*, in Law, the omiſſion, or neglect of him who ought to challenge his Right within a time limited. See CLAIM.

By ſuch neglect, he is either barr'd of his Right; as at this day, upon *Non-claim* within five Years after a time, and Right to him accrued; or of his Entry by Deſcent, for want of *Claim* within five Years after the Diſſeiſin.

NON *Moleſtando*, a Writ which lies for him who is moleſted contrary to the King's Protection granted him.

NON *Omittas*, a Writ which lies where the Sheriff having deliver'd a former Writ to a Bailiff of a Franchiſe in which the Party it is to be ſerved on, dwells; and the Bailiff having neglected to do it: Upon the Sheriff's returning, that he deliver'd it to the Bailiff; this ſecond Writ ſhall be directed to the Sheriff, charging him to execute the King's Command himſelf.

NON *Ponendo in Aſſiſis, & Juratis*, a Writ granted on divers Occaſions to Men for the freeing them from ſerving on Aſſizes and Juries; as by reaſon of Old Age, *&c.* See JURY, *&c.*

NON *Procedendo ad Aſſiſam Rege inconſulto*, a Writ to ſtop the Trial of a Cauſe appertaining to one who is in the King's Service, *&c.* till the King's Pleaſure be further known.

NON *ſanæ Memoriæ*, or *Non ſane Memorie*, is an Exception taken to an Act declared by the Plaintiff or Demandant to be done at a time when the Party that did it was Mad, or not in his Wits; as to a laſt Will, *&c.* See NON *Compos.*

NON *ſum Informatus*, ſee INFORMATUS *non ſum.*

NON-*Reſidence*, in Law, is applied to ſuch Spiritual Perſons as are not reſident on, but do abſent themſelves, for one Month together, or two at ſeveral times of the Year, from their Benefices. See BENEFICE.

Regularly, Perſonal Reſidence is required of Eccleſiaſtical Perſons upon their Cures. See RESIDENCE.

NON-*Reſidentia pro Clericis Regis*, is a Writ directed to the Ordinary, charging him not to moleſt a Clerk employ'd in the King's Service, on account of his *Non-Reſidence.*

NON-*Suit*, in Law, a Renunciation of the Suit, by the Plaintiff or Demandant; moſt commonly upon the diſcovery of ſome Error, or Defect, when the Matter is ſo far proceeded in, as that the Jury is ready at the Bar, to deliver their Verdict.

The Civilians term it *Litis renunciationem.*

NON *Compos mentis*, a Phraſe denoting a Perſon not to be of ſound Memory, or Underſtanding.

Of this, in common Law, there are ſaid to be four Kinds: Firſt, an Ideot born; Secondly, He that by Accident loſeth his Memory and Underſtanding; Thirdly, a Lunatic, that has *Lucida intervalla*, ſometimes has Underſtanding, and ſometimes not; Fourthly, He that by his own act, for a time, depriveth himſelf of his right Senſes, as a Drunkard: But this laſt kind ſhall give no Privilege to him or his Heirs.

A Deſcent takes away the Entry of an Ideot, tho the want of Underſtanding were perpetual.

NON *obſtante*, *notwithſtanding*, in Law, a Term, or Clauſe uſual in Statutes and Patents. *All Grants of ſuch Penſions, and every* Non obſtante *therein contained, ſhall be void. Henry* III. took up the Clauſe *Non obſtante*, (firſt introduced by the Pope) in his Grants.

NON-*obſtancy*, in the *Romiſh* Canon Laws, makes the third part of the Proviſions of the Court of *Rome*; beginning with *Non obſtantibus*; and comprizing Abſolutions of Cenſures, Rehabilitations, and neceſſary Diſpenſations, for the Enjoyment of Benefices. None inferior to the Pope can uſe the Clauſe *Non obſtante.*

NON *Term*, the Time of Vacation between Term and Term. See VACATION.

It was antiently call'd *the Times or Days of the King's Peace.* See PEACE *of God and the Church.*

Among the *Romans* it was call'd *Feriæ*, or *Dies Nefaſti.* See FERIÆ and NEFASTI.

NON *eſt factum*, in Law, an Anſwer to a Declaration, whereby a Man denieth that to be his Deed whereupon he is impleaded.

NON *eſt Culpabilis*, *He is not Guilty*, in Law, the general Plea to an Action of Treſpaſs, whereby the Defendant abſolutely denies the Fact charg'd on him by the Plaintiff; whereas in other ſpecial Anſwers, the Defendant grants the Fact to be done, but alledges ſome Reaſons in his Defence, why he lawfully might do it.

As this is the general Anſwer in an Action of Treſpaſs, *i. e.* a Criminal Action civilly proſecuted; ſo is it in all Actions criminally follow'd, either at the Suit of the King, or others, wherein the Defendant denies the Crime objected to him.

NON *Plevin*, *Non plevina*, a Default in not Replevying of Land in due time.

Hengam writes, That the Defendant ſhould be ſure to replevy his Lands ſeiz'd by the King, within fifteen Days. And that if he neglects, then, at the Inſtance of the Plaintiff at the next Court-Day, he ſhall loſe his Seiſin, *ſicut per defaltam poſt defaltam.*

By *Stat. 9 Edw.* 3. it was enacted, That no Perſon ſhould thenceforward loſe his Land becauſe of *Non Plevin.*

NON-*Tenure*, an Exception to a Count, whereby the Party urges, that he holdeth not the Land mentioned in the Count, or at leaſt ſome part of it.

Weſt diſtinguiſhes *Non-Tenure* into *General* and *Special.* The firſt, where one denies himſelf ever to have been Tenant to the Land in queſtion. The ſecond, where he only alledges that he was not Tenant the Day whereon the Writ was purchaſed.

NON *liquet*, *it does not appear*: A Verdict given by a Jury, when a Matter is to be defer'd to another Day of Trial. See VERDICT.

The ſame Phraſe was uſed among the *Romans*; after hearing the Cauſe, ſuch of the Judges as thought it not ſufficiently clear to pronounce upon, caſt a Ballot into the Urn with the two Letters *N L*, for *Non Liquet.*

NON-*Entity*, *Nihil*, or *Nothing*, is whatever has no real Being, and is only conceived Negatively, or only claims a negative Denomination. See ESSE, ESSENCE, *&c.*

NON-*Naturals*, in Medicine, *Res Non Naturales*, are the Cauſes and Effects of Diſeaſes, whether near or remote. See DISEASE.

Phyſicians have digeſted all the Cauſes of Diſeaſes into ſix Claſſes, which they call the ſix *Non-naturals.* Theſe are,

1. Air. 2. Meat and Drink, 3. Motion and Reſt. 4. The Paſſions of the Mind. 5. Excretions and Retentions. 6. Sleep and Waking. See each under its proper Article, AIR, MEAT, DRINK, *&c.*

They are thus call'd, becauſe by their uſe or abuſe they become either Good, *Naturals*, or Evil, *Contra-naturals.*

But the Diviſion, in effect, is of no great uſe; the Cauſes of Diſeaſes being much more commodiouſly laid down otherwiſe. See DISEASE.

NONÆ and *Decimæ* were Payments antiently made to the Church by thoſe who were Tenants of their Farms.

The *Nonæ* were the Rent or Duty claim'd for things belonging to Husbandry; the *Decimæ* were claim'd in Right of the Church. See DECIMÆ.

NONAGE, in Law, an Incapacity of doing certain things from a want of Age. See AGE.

The Term of *Nonage* is different, with regard to different things. In Matters of Inheritance, a Man is in his *Nonage* till twenty-one Years; for Marriage till fourteen, *&c.* See MINORITY.

NONAGESIMAL, in Aſtronomy, the 90th Degree of the Ecliptic, reckon'd from its Eaſtern Point. See ECLIPTIC.

The Altitude of the *Nonageſimal* is equal to the Angle of the Ecliptic, and paſſes thro the Poles thereof: Whence the Altitude of the *Nonageſimal*, under a given Elevation of the Pole, is eaſily found.

If the Altitude of the *Nonageſimal* be ſubſtracted from 90°, the Remainder is the Diſtance of the *Nonageſimal* from the Vertex.

NONAGIUM, in Law, the ninth part of moveable Goods; antiently paid in nature of a *Mortuary*; being claim'd by the Clergy upon the Death of thoſe of their Pariſh. See MORTUARY.

At firſt it was a third Part of the Goods, and was call'd *Tertragium*; till by a Bull of *Clement* VI. it was reduced to a Ninth.

NONAGON, a Figure having nine Angles and Sides. See POLYGON,

NONCONFORMISTS, the Name of a Religious Sect, or rather of a number of Sects, in *England.*

The Term was antiently confin'd to the *Puritans*, or rigid *Calviniſts*; at preſent it extends to all who Diſſent from the eſtabliſhed Church, the *Romaniſts* alone excepted. See DISSENTER.

The Word had its Riſe from a Declaration of King *Charles* I. who appointed that all the Churches of *England*

and

and *Scotland* ſhould have the ſame Ceremonies and Diſcipline; the Acquieſcence wherein, or Diſſenting from which, determined *Conformity*, and *Nonconformity*.

NONCUPATIVE, in the Schools, a Term uſed to expreſs ſomething that is only nominal, or has no Exiſtence but in Name.

Felix of *Urgel* maintain'd, that Jeſus Chriſt, as Man, was only God *Noncupatively*, *i. e.* only by Name. *Alcuin*, in his Anſwer to *Felix*, maintains, that 'tis to fall into *Neſtorianiſm* to diſtinguiſh two Sons of God in Jeſus Chriſt, the one Natural, the other Adoptive; and two Gods, the one Real, the other *Nuncupative*.

NONCUPATIVE, or *Nuncupative Will*, in Law, a laſt Will or Teſtament only made verbally, or *viva voce*, and not put in Writing. See WILL and TESTAMENT.

NONES, NONÆ, in the *Roman* Calendar, the fifth Day of the Months *January*, *February*, *April*, *June*, *Auguſt*, *September*, *November*, and *December*; and the ſeventh of *March*, *May*, *July*, and *October*: Theſe four laſt Months having ſix Days before the *Nones*, and the others only four. See CALEND.

The Word apparently has its Riſe hence, that the Day of the *Nones* was nine Days before the Ides, and might be call'd *Nono-Idus*. See IDES.

March, *May*, *July*, and *Auguſt* had ſix Days in their *Nones*; by reaſon theſe alone in the antient Conſtitution of the Year by *Numa*, had 31 days apiece; the reſt having only 29, and *February* 30. But when *Cæſar* reform'd the Year, and made other Months contain 31 Days, he did not likewiſe allot them ſix Days of *Nones*. See CALENDAR, YEAR, MONTH, &c.

NONE, is alſo one of the ſeven Canonical Hours, in the *Romiſh* Church.

None is the laſt of the leſſer Hours that comes before *Veſper*; and anſwers to three a-clock in the Afternoon. See VESPER.

The ſingle Office, and that for the Dead, end at *Nones*, which Father *Roſweyd* obſerves, was antiently the Hour for the breaking up of the *Synaxis*, or uſual Meetings at Church of the Primitive Chriſtians.

The Hour of *Nones* was alſo the uſual time for taking the Repaſt on Faſt-days; tho ſome would keep the Faſt till Night. See FAST.

NONUS *Humeri Placentini*, in Anatomy, a Muſcle, call'd alſo *Rotundus minor*. See ROTUNDUS.

NORMAL *Line*, in Geometry, is uſed for a *perpendicular Line*. See PERPENDICULAR.

NORROY, or *North Roy*, *i. e.* Northern King; the Title of the third of the three Kings at Arms, or Provincial Heralds. See KING *at Arms*, and HERALD.

His Juriſdiction lies on the North ſide of *Trent*, whence his Name; as *Clarencieux*, on the South. See CLARENCIEUX.

NORTH, in Coſmography, one of the Cardinal Points of the Horizon, being that Interſection of the Horizon and Meridian neareſt the *North-Pole*. See CARDINAL *Point* and HORIZON.

NORTH-*Star*, the laſt in the Tail of the little Bear; call'd alſo the *Pole-Star*. See POLE-*Star*.

NORTH *Wind*, NORTH *Pole*, NORTH *Sea*, NORTH *Sea Company*, NORTH *Wall*, NORTH *Dial*, &c. } See { WIND. POLE. SEA. COMPANY. WALL. DIAL, &c.

NORTH *Eaſt*, a Rhumb, or Point, in the middle between the Eaſt, and the *North*. See RHUMB and POINT.

NORTH *Weſt*, is a Point or Rhumb in the middle between the *North* and Weſt. See WEST, &c.

NORTH *North Eaſt*, *North Eaſt and by Eaſt*, are Subdiviſions of the Compaſs between the *North* and Eaſt. See WIND.

NORTHERN *Signs*, are thoſe ſix on the *North* ſide of the Equator. See SIGN.

NORTHERN *Light*, or *Aurora Borealis*, ſee AURORA BOREALIS.

NORTHERN *Aſpect* or *Expoſure*, ſee EXPOSURE.

NORTHING, in Navigation, the difference of Latitude a Ship makes in ſailing towards the *North* Pole. See SAILING, LATITUDE, &c.

NOSE, the external Organ of Smelling; or that Part in Men, rais'd in the middle of the Face. See FACE.

The *Noſe* is uſually divided by Anatomiſts into external and internal; a diviſion of very little ſervice.

It is farther ſubdivided into ſeveral Parts which make up its external Figure: Whereof the firſt is the *Dorſum*, or Ridge, running along the whole length of it; one part whereof, about the middle, more prominent than the reſt, is call'd the *Spine*; and the Extreme, which in many is turn'd round, the *Orbiculus*: The Sides are call'd the *Alæ* or *Pennæ*.

The Teguments of the Noſe are common to the reſt of the Face. Under theſe appear the Muſcles of the Noſe, which are three Pair, *viz.* the *Elevatores Alæ Naſi*, ſerving to pull the *Alæ* upwards, and turn them outwards; the *Dilatores Alæ Naſi*, which draw them from each other, and widen the external Apertures of the Noſtrils; and the *Conſtructores Alæ Naſi*, which draw them downwards nearer each other; and at the ſame time the upper Lip alſo downwards. See each Muſcle deſcribed under its proper head, ELEVATORES *Alæ Naſi*, &c.

The Frame of the *Noſe* is chiefly ſupported by two Bones, which end in Cartilages, of a triangular Figure; and are divided in the middle by a third, call'd *Septum*, into two Partitions, call'd the *Nares*, or *Noſtrils*.

This *Septum* likewiſe ends in a Cartilage; by means of which Cartilages, the lower part of the *Noſe* is render'd moveable, which the upper, being perfectly oſſeous, is not. The Cartilages of the *Alæ* are tied to the other by Ligaments, which looſe Connexion renders them moveable.

The Bones of the *Noſe* are either *Proper*, or *Common*. The firſt of the *Proper*, are the two external ones that conſtitute the *Dorſum*, and are join'd to the *Oſſa frontis*, the fourth Bone of the upper Jaw, and to each other, uſually *per harmoniam*. See DORSUM *Naſi*.

In the Concave of the Arch of theſe two Bones, at their Union internally, is placed the bony part of the *Septum*. Its upper part joins the *Os Ethmoides*; but in Adults is continued ſo as the *Ethmoides*, and its Proceſs, call'd *Criſta Galli*, appear of a piece with the *Septum*. The *Septum* is thinneſt in the middle, and divides the right Noſtril from the left; tho its Poſition is ſeldom perpendicular. It is capp'd with another thin Bone, from its Figure call'd *Vomer Aratri*, and is join'd to the fourth Bone of the upper Jaw, and to the *Oſſa Palati*. See SEPTUM.

The other proper Bones are the *Turbinata*, or *Spongioſa*, two of which are uſually found in each Noſtril, ſometimes three, one over the other. The middlemoſt, when there are three, is ſo placed as to ſhelter the Perforation of the *Antrum maxillæ ſuperioris* into the Noſtril, and prevents the ſudden ruſhing in of Air from the Noſtril into the *Antrum*. They are all very porous, and turn'd, not unlike the Shell *Concha Veneris*. In Quadrupeds, theſe Bones are very numerous. See SPONGIOSA.

The common Bones of the *Noſe* are ſuch as make Fences for the *Foramina Narium*, and help to compoſe the Parts adjacent. The largeſt of theſe is the fourth Bone of the upper Jaw, which has the greateſt ſhare in framing the *Foramina*. See JAW.

Theſe fourth Bones, with the *Septum* and *Oſſa turbinata*, chiefly frame the internal Parts of the *Foramina*. In the upper part, a Portion of the *Os frontis*, the inſide of the *Os Unguis*, the *Os Cribroſum*, with part of the *Sphenoides*; and backwards towards the Fauces, the *Oſſa Palati*, help to compoſe the *Foramina*.

Beſide the Cavities circumſcribed by the Bones now mentioned, the *Foramina* have ſeveral collateral Cavities that open into them: The largeſt is that call'd *Antrum Genæ*; by Dr. *Highmore*, *Antrum maxillæ ſuperioris*, framed in the fourth Bone of the upper Jaw, near two Inches long, and an Inch broad; the bony Parts of which, with the *Sphenoides*, make the *Foramen lacerum externum*. Its lower Surface makes a thin Covering to all the Roots of the *Molares*, and *Canini*; which frequently upon drawing a Tooth, to which it ſticks, is taken along with it, whereby this Cavity is open'd into the *Alveolus*, and conſequently into the Mouth.

All theſe Cavities of the *Noſe* and Cheek, as alſo the *Oſſa turbinata*, *Septum*, &c. are inveſted with a Membrane furniſh'd with large Arteries from the *Carotides*; and Veins, which empty themſelves into the Jugulars; and Nerves, from the fifth Pair, as well as the *Olfactory* Nerves.

In this Membrane are a great number of ſmall Glands, placed very near each other, from whence flows all that *Pituita*, commonly diſcharg'd at the Noſtrils.

By means of this Mucus or *Pituita* is the Membrane kept ſoft, and defended from the Injuries of extraneous Bodies, eſpecially thoſe of the Air, which muſt paſs this way in Inſpiration when the Mouth is ſhut. See MUCUS.

By this means, the Olfactory Nerves, here diffuſed, are render'd capable of the Perception of odoriferous Effluvia; which the dryneſs of the Part would be apt to deſtroy. See SMELLING.

Beſides this uſe of the *Noſe*, which is the principal, Nature has made it, as it were, a *Diverticulum* to the Eyes; there being a conſiderable Paſſage into each Noſtril that empties itſelf under the middle *Os turbinatum*, ariſing from two Apertures call'd *Puncta Lachrymalia*, at the great *Canthus*.

By this way, the ſuperfluous Moiſture of the Eyes is carried off, which would otherwiſe incommode the Cheeks; as in effect it does, when thoſe Parts are affected with any diſorder; as in the *Ægylops*, and *Fiſtula Lacrymalis*. See FISTULA, &c.

The Diſeaſes to which the *Noſe* is ſubject, are a *Coryza*, *Ozæna*, *Polypus*, *Sarcoma*, and *Noli me tangere*, beſide Sneezing, and a loſs of Smelling. See each in its Place.

Amb.

Amb. Parce in his 23*d* Book, mentions an *Italian* Chirurgeon, who had the Art of reſtoring loſt *Noſes*, or making them come again after they were cut off. His Method was to make an Aperture in his Patient's Arm, and there to engraft the mutilated *Noſe*; the Arm being bound up for 24 days, the *Noſe* took Root in the Wound, and glued itſelf with the Fleſh of the Arm, and grew to its Bulk; which done, he cut off the Fleſh of the Arm, and faſhion'd the *Noſe* to his liking, apply'd it in its place, and heal'd the Wounds at leiſure.

This Operation we ſee burleſqu'd in *Hudibras: So learned* Taliacotius, *&c.* and alſo in the *Acta Eruditorum Lipſii*, *Anno* M.DC.LXXXII.

Hagarup, a *Dane*, maintains, that the *Noſe* is in ſome meaſure fitted for an Organ of Sight, and that a Man may ſee thro it; grounding his Opinion on the Authority of *Smetius*, who in his 5th Book of *Medicinal Miſcellanies*, relates of his own Knowledge, that a Youth, quite blind in other reſpects, could ſee the Light, and was able to diſcern the Whiteneſs of Flowers by the *Noſe*.

But, for our part, we ſhould rather account for theſe Senſations from the Faculties of feeling and ſmelling, than thoſe of ſeeing: Not but there is a very great Reſemblance between the various Organs of Senſe, enough to give ground to the Opinion, that they only differ as more or leſs delicate; for which reaſon we don't abſolutely reject the Inſtance given by *Grimaldi*, of a Man who could diſtinguiſh Colours by his feeling.

The Nerves, whoſe Texture and Conſtitution, for any thing we know, is the ſame throughout the whole Body, are confeſſedly the Vehicles of all Senſations from without; and thoſe are all depoſited in the ſame Senſory, whether they be brought from the Eye, the Ear, the *Noſe*, *&c.* and that ſingular *Apparatus*, obſervable in each Organ, ſeems rather intended for the *Bene eſſe*, than the *Eſſe* of that Senſe; rather to ſtop and detain the tranſient Effluvia, to collect them where too ſcanty, diſperſe them where too copious, ſoften them where too rude, and break their force where too violent, and by this means to proportion them to the ſeveral degrees of Fineneſs, Tenſion, *&c.* of the Nerves of the reſpective Organs, in order to render the Senſations adequate to the ends; than to produce them. See SENSATION.

In *Tartary*, the greateſt Beauties are thoſe who have the leaſt *Noſes*. *Rubruqus* mentions the Wife of the Great *Cinghis-can*, the Mother of *Tamerlane*, as a celebrated Beauty, becauſe ſhe had only two Holes for a *Noſe*. In moſt other Countreys, *China* excepted, great *Noſes* are in honour.

The *Crim-Tartars* break the *Noſes* of their Children while young, as thinking it a great piece of Folly to have their *Noſes* ſtand before their Eyes.

NOSOLOGY, a Diſcourſe, or Treatiſe, of *Diſeaſes*. See DISEASE.

The Word is compounded of νοσος, Malady, Diſeaſe, and λογία. Hence,

NOSOCOMIUM, an Hoſpital, or Infirmary, for the Reception of the Diſeaſed. See HOSPITAL, LAZAR, *&c.*

NOSTRILS, *Nares*, the two Apertures or Cavities of the *Noſe*, thro' which the Air paſſes, and which ſerve to convey Odours, and to carry off the *Pituita* ſeparated in the *Sinus* of the Baſe of the *Cranium*. See NOSE.

The *Noſtrils* are ſeparated by a Cartilage, and lined with a very ſenſible Membrane. See SMELLING.

Cicero obſerves, that the Situation of the *Noſtrils* ſo near the Mouth, is very convenient; as the judging of the Smells of Meats and Drinks, is a great part of their Office: he adds, that their erect Poſition argues the Creator's Wiſdom, in regard all Odours riſe from below upwards. See ODOUR.

NOT *Guilty*, ſee NON *eſt Culpabilis*.

NOTARICON, the third Part, or Species of the *Jewiſh* Cabbala. See CABBALA.

Rabbi *Nathan*, in his great *Aruch*, ſays, that *Notaricon* is when a ſingle Letter is taken for the Sign of a Thing, *i. e.* for a whole Name. He adds, that the Word comes from the *Latin Notarius*, a Perſon who writes in Notes, or Short-Hand. R. *Elias Levita* gives the ſame Account in his *Theſbetes*, except that in lieu of one Letter for a Word, he mentions two or three.

But after all, neither the one nor the other is alone ſufficient: For as a ſingle Letter frequently makes a Word; ſo in *Notaricon*, a whole Word ſometimes ſtands for a ſingle Letter.

There are therefore two principal Kinds of *Notaricon*: The firſt is, when by *Aphereſis*, or *Apocope*, the firſt or laſt Letters of ſeveral Words are join'd to make a ſingle Word or Phraſe; which therefore is of two kinds, the one Initial, the other Final: and each is done ſeveral Ways, *viz.* either by taking the Letters the common way, or backwards. Tho, there is alſo a third kind made, as the Rabbins call it, by Leaps, *i. e.* by leaping over ſome Letters.

The firſt of theſe Kinds, which the Rabbins call *Raſche Theboth*, appears very antient; and is ſuppoſed by ſome, well verſed in the *Hebrew*, to have took its Origin from the *Pſalms*, and other Places of Scripture, proceeding alphabetically, *i. e.* the firſt Verſe beginning with א, the firſt Letter of the Alphabet; the ſecond with ב, the ſecond Letter, *&c.* See an Inſtance of this firſt Kind of *Notaricon* under the Head MACHABEE.

The ſecond Kind is alſo very common, and call'd *Sophe Theboth*, *i. e.* the End of Words. For inſtance, by telling the laſt Letters of the Words, מה שמו מהלי, *Mihi quodnam nomen eſt. Quodnam?* they find the Name of God *Jehovah*. This is ſtill more puerile, when they take the Letters backwards.

The third Kind is more modern, more groſs, and perplexed. Here a Letter gives a whole Word, inſtead of a Word's only giving a Letter; ſo that a Word ſhall furniſh a whole Phraſe.

Thus, for an example; in the firſt Word of *Geneſis*, בראשית, *In the Beginning*, is found *he created the Heaven and the Earth, the Sea, the Abyſs*, &c.

NOTARY, a *Scribe*, or *Scrivener*; or one who takes *Notes*, and ſhort Draughts of Contracts, or other Inſtruments. See NOTE.

NOTARY, *Notarius*, among the *Romans*, was a Name common to all who wrote under the Direction of others, or who received, and kept Sentences, and Contracts.

From the 44th Novel of *Juſtinian*, it appears, that Contracts were firſt wrote in Notes, or Abbreviations, by the *Notaries* or Clerks of the *Tabelliones*; and were not yet obligatory. Afterwards they were wrote at length by the *Tabellio* himſelf, then ſign'd and ſeal'd. See TABELLIO.

NOTARY, is particularly uſed for an Officer, who draws, and keeps Notes and Minutes of Contracts, Obligations, and other Inſtruments, paſſed before him, and delivers out authentic Copies, *&c.* thereof.

Rague au diſtinguiſhes between *Notarii*, *Notaries* and *Tabelliones*: *Notaries*, he ſays, in ſeveral Cities, are only to receive and paſs the Minutes of Contracts, and to deliver them to the Parties in brief; being obliged to carry them to the *Tabelliones* to be kept, and to have engroſſed Copies delivered out to the Parties.

He adds, that the *Notaries* were antiently Clerks of the *Tabelliones*; and that ſeparating, by degrees, from their Maſters, they at length erected Offices of their own: and at laſt took place of the *Tabelliones*, who were ſuppreſs'd.

They had their Name *Notarii* from *Notæ*; becauſe antiently they wrote in Notes, or Short-hand.

NOTARIES are now little uſed among us, except in Mercantile Affairs; tho' in *France* they ſtill ſubſiſt in their Legal Capacity. The *Notaries* of the *Chatelet* are called the King's Counſellors, and Note-Keepers.

Thoſe among us, are called *Notaries Public*; and have the drawing, paſſing, keeping, iſſuing, *&c.* of all the Deeds, Contracts, Charter-parties, *&c.* in the Mercantile World. In their Books are alſo regiſter'd Proteſts, Remonſtrances, *&c.*

In the firſt Ages of the Church, there were *Eccleſiaſtical Notaries*, whoſe Office was to collect and preſerve the Acts of the Martyrs. They were ſuppoſed to have been firſt inſtituted by St. *Clement*. Their Number was ſeven, and they were diſpoſed in the ſeven Quarters or Regions of *Rome*.

Pope *Fabian*, judging the Short-hand of the *Notaries* too obſcure for common Uſe, added ſeven Sub-deacons to 'em, to tranſcribe at length what the *Notaries* drew in ſhort.

At length theſe *Notaries* were laid aſide, and two other Kinds eſtabliſh'd in their ſtead, *viz. Apoſtolical Notaries*, and *Epiſcopal Notaries*; whoſe Buſineſs lies in Spiritual and Beneficiary Inſtruments.

NOTATION, in Arithmetic, the Art of Characterizing Numbers, or of deſigning them by proper Figures. See CHARACTER.

The Choice of Arithmetical Characters is arbitrary: Hence, in various Nations, they are various. But perhaps there are none ſo commodious as thoſe commonly uſed in *Europe*, uſually ſaid to have been invented by the *Arabs*, and thence call'd *Arabic Characters*; tho' Dr. *Wallis* obſerves, that *Altepedi*, an *Arab*, refers the Invention to the *Indians*. See *Numeral* CHARACTER.

The *Greeks*, *Hebrews*, and other Eaſtern Nations, as alſo the *Romans*, expreſs'd Numbers by the Letters of their common Alphabet. See *Literal* CHARACTER.

NOTATION, in Algebra, is the repreſenting of Quantities by Letters of the Alphabet; or calling them by thoſe Names. See QUANTITY, CHARACTER, *&c.*

NOTÆ *Maternæ*, *Mother's Spots*. See NÆVUS.

NOTE, *Nota*, a Mark made in a Book or Writing, where there occurs ſomething remarkable, and worthy of particular *Notice*.

NOTE, is alſo uſed for an Obſervation, or Explication of ſome Paſſage in an Author, added in the Margin, at the bottom of the Page, or elſewhere, by an Editor.

In this ſenſe, *Note* ſtands contra-diſtinguiſhed to Text. See TEXT.

The *Notes* make the principal Differences in the Editions of Claſſic, &c. Authors. We have *Virgil*, *Horace*, *Terence*, &c. with *Ruæus*'s *Notes*, the *Dauphin*'s *Notes*, *Dacier*'s *Notes*, *Bentley*'s *Notes*, *Hare*'s *Notes*; with *Notis Variorum*, &c. See VARIORUM.

NOTE is alſo a minute, or ſhort Writing, containing ſome Article of Buſineſs. In this ſenſe we ſay, a *Promiſſory Note*, a *Note under hand*, a *Bank Note*, &c. See PROMISSORY, BANK, &c.

To *Note a Bill*, is when a Public Notary goes to be a Witneſs, or take notice that a Merchant will not accept or pay it. See BILL.

NOTE *of a Fine*, is a Brief of a Fine made by the Chirographer, before it be ingroſſed. See FINE and CHIROGRAPHER.

NOTE is alſo uſed for a Character, or Abbreviature, ſerving to denote, or expreſs ſomething in a little compaſs. See CHARACTER, SYMBOL, ABBREVIATURE, and NOTATION.

The antient Notaries wrote all in *Notes*, or Short-hand; whence they were ſometimes denominated *Curſores*, *Quia notis Curſum verba expediebant*. See NOTARY.

NOTES in Muſic, are Characters which mark the Tones, *i. e.* the Elevations, and Fallings of the Voice; and the ſwiftneſs, or ſlowneſs of its Motions. See SOUND.

In the general, under *Notes* are comprehended all the Signs, or Characters uſed in Muſic, for the making Harmony of Sounds. See CHARACTER.

But, in Propriety, the Word only implies the Marks which *denote* the degree of Gravity, or Acuteneſs, to be given each Sound. See GRAVITY.

The *Greeks* uſed the common Letters of their Alphabet for muſical *Notes*; and in regard more *Notes* were needed than they had Letters, the defect was ſupply'd by the different Situation of the Letters, *viz.* by placing of them upright, inverted, &c. and by cutting off, or doubling ſome Strokes.

Thus the ſame Letter *Pi*, expreſs'd different *Notes* in all the following forms, Π, Ц, ⊐, ⊐, Γ, ⅂. For every ſeveral *Mode* they had 18 Signs.

Now, *Alipius* gives us Signs for 15 different *Modes*, which with the differences of the *Genera*, and the diſtinction between Voice and Inſtrument, Mr. *Malcolm* obſerves, makes in all 1620 *Notes*. Not that they had ſo many diſtinct Characters; but the ſame Character has different Significations, on different Occaſions. Thus Φ in the *Diatonic* Genus is *Lycanos Hypaton* of the *Lydian* Mode; and *Hypate meſon* of the *Phrygian*.

The *Latins*, in the time of *Boethius*, had eaſed themſelves of ſo needleſs a Burthen; and only uſed the firſt 15 Letters of their Alphabet for *Notes*. Theſe, Pope *Gregory* conſidering that the Octave was the ſame in effect with the firſt, and that the order was the ſame in the upper and lower Octave of the Gamut, reduced to ſeven; which were to be repeated in a different Character.

At length, in the 11th Century, a *Benedictine*, one *Guido Aretin*, in lieu of the Letters, ſubſtituted the ſix Syllables *ut*, *re*, *mi*, *fa*, *ſol*, *la*; placing them on different Lines, and marking them with Points. Laſtly, it was thought proper to add *Notes* likewiſe in the Spaces. See GAMUT.

Of the ſeven muſical *Notes*, *ut*, *re*, *mi*, *fa*, *ſol*, *la*, *ſi*, the firſt ſix are aſcribed to *Aretine*, who is ſaid to have invented them at *Pompoſa* in the Dutchy of *Ferrara*. The ſeventh, *viz.* *ſi*, was added, according to ſome, by *Vander Putten*; according to others, by *Le Maire*. It ſerves very good purpoſes, in avoiding the difficulty of the Diviſions remaining in *Guido*'s Scale.

Indeed *Voſſius* won't allow *Guido* the Honour of inventing any of them; but ſhews that the *Egyptians* had uſed them long before him; in which he is confirmed by the Teſtimony of *Halicarnaſſeus*: However, common Fame aſcribes to him not only the *Notes*, but alſo the Lines, Letters, or Clefs, Flats, and Sharps.

The *Notes ut*, *re*, *mi*, &c. he is ſaid to have taken from a Hymn in the Veſpers of S. *J. Baptiſt*, *Ut queant laxis reſonare fibris*, &c. See MUSIC.

Hitherto the *Notes* only ſerved to expreſs the Degrees of Tune; they were all of equal value as to time; till about the Year 1330, *John de Meurs*, a Doctor of *Paris*, gave different Figures to the different Points, to expreſs the Quantity of Time each was to be dwelt upon.

There are three things to be conſider'd in theſe *Notes*. 1. The *Quantity*, *i. e.* the ſize and figure of the head. 2. The *Quality*, *i. e.* the Colour of the head, whether it be white or black, full or open. 3. The *Properties*, as the *Italians* expreſs themſelves, *viz.* whether the *Note* is accompanied with a Virgula, or Comma, or not. It muſt likewiſe be conſider'd whether the *Notes* be ſeparate and diſtinct, or bound together.

The ſeveral muſical *Notes*, are, the *Large*, which contains 8 Meaſures, tho *Merſennus* makes it 12. (ſee its Figure under CHARACTER;) the *Long*, containing 4 Meaſures; the *Breve*, containing 2; the *Semibreve*, containing 1; the *Minim* $\frac{1}{2}$; the *Crochet* $\frac{1}{4}$; the *Quaver* $\frac{1}{8}$; the *Semiquaver* $\frac{1}{16}$; and the *Demiſemiquaver* $\frac{1}{32}$.

Uſually we only diſtinguiſh ſix principal *Notes*, repreſented by as many different Characters, *viz.* the *Semibreve*, equal to two Minims; the *Minim*, equal to two Crochets; the *Crochet*, equal to two Quavers; the *Quaver*, equal to two Demiquavers; and the *Semiquaver*, equal to two Demiſemiquavers. See each under its proper Article, SEMIBREVE, MINIM, CROCHET, &c.

The Mathematicians compute, that one may make 720 Changes, or Varieties with ſix *Notes*, without ever repeating the ſame twice; and that of the *Notes* of each Octave, one may make 40320 different Tunes, or Songs. See CHANGE, COMBINATION, &c.

NOTHING, *Nihil*, *Nihilum*, or *Non Ens*, ſee NIHIL.

The Schoolmen diſtinguiſh between *Nothing* taken *ſtrictly*, which is what is impoſſible, or implies a Contradiction; and *Nothing* taken more *generally*: which is both poſſible, and impoſſible while in a State of poſſibility. See POSSIBLE.

Again, they diſtinguiſh *Nothing* into *Negative*, which is the abſence of Reality in any Subject; and *Privative*, which is the abſence of Reality in a Subject capable thereof, or wherein it ought to be found.

NOTHUS, a *Latin* Term, properly ſignifying *Baſtard*, or a Perſon of ſpurious Birth. See BASTARD.

Hence it is apply'd figuratively by Phyſicians, &c. to ſuch Diſeaſes as tho, in reſpect of a Similitude of Symptoms, &c. they have the ſame Denomination as ſome others; yet are of different Origin, Seat, or the like, from the ſame. See EMPYEMA, &c.

NOTHUS, is ſometimes alſo uſed for the back part of the Cheſt.

NOTHÆ *Coſtæ*, in Anatomy, the five loweſt Ribs on each ſide; call'd Baſtard, or Spurious Ribs, in regard they don't join with the Breaſt-Bone as the other Ribs do, nor are they, as the others are, bony, but cartilaginous. See RIBS.

NOTION, in Logic, an Idea, or Repreſentation of any thing, in the Mind. See IDEA.

M. *Leibnitz* is very accurate in the Diſtinction of *Notions*, in the *Acta Erudit. Leipſ. Anno* 1684.

A *clear* NOTION, he defines to be ſuch a one as ſuffices us to recollect the Object; *v. gr.* that a given Figure is reckon'd in the number of Triangles.

An *obſcure* NOTION, is that which doth not ſuffice to recollect the Object; ſuch, *v. gr.* is that of a Plant, which upon ſeeing, you are in doubt whether or no it be the ſame you had ſeen elſewhere, and which is call'd by this or that Name.

Diſtinct NOTION is that wherein you are able to aſſign the very Marks, or Characters by which you recollect the thing; *v. gr.* That a Circle is a Figure terminated with a curve Line returning into itſelf, the ſeveral Points whereof are equally diſtant from one and the ſame intermediate Point.

A *confuſed* NOTION is that wherein you are not able to aſſign the Marks or Characters whereby you recollect the Object; tho it be reſolvable into them. Such, *v. gr.* is the *Notion* of red Colour.

An *adequate* NOTION, that wherein you have diſtinct *Notions* of the Marks or Characters whereof it is compoſed; ſuch, *v. gr.* is the *Notion* of a Circle above inſtanced, where you have diſtinct *Notions* of the Curve returning into itſelf, of the intermediate Point, and of the equal Diſtance and Termination.

An *inadequate* NOTION, that wherein you have only a confuſed *Notion* of Characters that enter a diſtinct one.

Some confuſed *Notions* are admitted into Mathematics; *viz.* ſuch whoſe reſolution is of no great Conſequence to any Demonſtrations.

Thus, *Euclid* does not reſolve the *Notion* of Equalities, tho it enter the *Notion* of an equilateral Triangle, a Rhombus, &c. inaſmuch as the Propoſitions for whoſe Demonſtration it ſhould be uſed, are eaſily granted without ſuch a detail; as, *v. gr.* that things equal to the ſame third, are equal to one another, &c. But no *Notions* are admitted into the Number of Mathematical Definitions, except diſtinct ones, and thoſe too as adequate as poſſible, or as occaſion requires. See DEFINITION.

The Schoolmen diſtinguiſh *Notions* into *formal*, and *objective*; and each of theſe they ſubdivide into *firſt*, and *ſecond*.

A firſt formal NOTION, is the Knowledge we have of any thing according to what it is, or has in itſelf; as the Knowledge of Fire, *quatenus* Fire; of a light Body, *quatenus* light, &c.

A first objective NOTION, is the thing itſelf known, according to what it is, or has in itſelf; as the Fire known as Fire, &c.

Second formal NOTION, is the Knowledge of a thing according to what it receives from the Underſtanding; as, of Fire, that it is the Subject; and not the Predicate.

Second objective NOTION, is what agrees to the thing by means of the Operation of the Intellect, or what it receives from the Intellect.

Common NOTIONS, call'd alſo *Prænotions*, προλήψεις, and κοιναι ἐννοιαι, are certain Principles ſuppoſed to be innate, and which therefore are ſelf-evident, *i. e.* appear, or are known by their own Light, without the Intervention of any Medium, or Proof; being impreſs'd, as it were, by the Finger of God; to ſerve as the Foundations of all our Concluſions in the Sciences, which are to be demonſtrated hereby. See *Innate* IDEA.

Theſe *common Notions*, conſider'd as the Foundations of Sciences, are call'd *Axioms*. See AXIOM.

They are call'd *common*, not as if ſo actually and neceſſarily perceived by every Perſon, that no body could be ignorant of, or deny them; but becauſe they are judged to be true, and certain by all Perſons of ſound Reaſon. For the ſame Reaſon as we ſay, *Such a Food is wholeſome*; not that it is ſo to all Men, but to all that are of a ſound Body, and Conſtitution. *Ariſtot. Topic.* c. 4.

There are two kinds of *common Notions*, viz. *Theoretical*, which lay the Ground-works for Speculation; ſuch are, Every thing either is, or is not; nothing can be made by itſelf; the whole is greater than a part; equal things being added to equal, the Sums are equal: And *Practical*, which lay the Foundation for Honeſty, and good Morals; ſuch are, God is to be loved and worſhipped; our Parents to be honoured; to give every body their due; to do as we would be done by. ——

Some Philoſophers, however, and thoſe of beſt Note, deny the Reality of any Innate, or *Common Notions*; urging, that the Mind does not need any actual *Notions* to prepare it to think, but that an innate Faculty of Thinking may ſuffice; as appears in an Infant, from its perception of Pain, Taſte, Colour, &c. They add, that the common Organs of Senſe, if they have but Objects preſented to them, and the Faculty we have of reflecting on, and variouſly combining or ordering the Ideas received thereby, are ſufficient to furniſh us with all the Stock of Knowledge we have. See KNOWLEDGE.

NOTITIA, NOTICE, a Term uſed for ſomething that has come under the Knowledge of a Perſon. Hence *Notification*, the Action of giving Notice, &c.

NOTITIA is alſo uſed as the Title of certain Books compoſed for giving a particular Knowledge of the Places, Roads, &c. of a Province or Kingdom, Dioceſe, &c. as appears by the *Notitia Imperii*, &c.

M. *Valois* has given a *Notitia Galliarum*, which is a Collection of the ſeveral Names the Cities and Provinces of that Kingdom have bore at different times.

The *Notitiæ Dignitatum Imperii*, both Eaſtern and Weſtern, are of the utmoſt uſe both in the *Roman* and in Eccleſiaſtical Hiſtory; yet are they of little Service, at leaſt to young People, without good Notes; ſuch are thoſe of *Pancirollus*, &c. And unleſs the Text, which is ſtrangely corrupted and mutilated, be ſupplied.

NOTORIOUS, ſomething known, manifeſt, and publick.

Hence *Ars Notoria*, a Chimerical Science or Art, whereby it is pretended a Perſon may arrive at the Knowledge of all Things, all Sciences, &c. And that by Infuſion, without any Labour, or Trouble, beſide that of making a few Ceremonies.

NOTRE *Dame*, *Our Lady*, a Term frequently uſed for the Holy Virgin.

Hence Feaſts of *Notre Dame*; the Office of *Notre Dame*; Congregations, Nunneries, Orders of *Notre Dame*. See VIRGIN.

NOVALE, in our antient Cuſtoms, Land newly plowed, and converted into Tillage; and which had not been till'd within the Memory of Man, before.

——*Quod* Novale *ſemel fuit, ſemper erit* Novale *quoad decimarum retentionem vel ſolutionem.* What was once *Novale*, will ever remain ſo, as to the paying, or non-paying of Tythes. Thus, *Excepta decima* Novalium *cujuſdam Terræ quam de novo excoluerunt.* Pat. *6 Edw.* 3. See FRUTECTUM.

NOVALE is ſometimes alſo uſed for fallow Land, *i. e.* Land which has been plowed for two Years, and reſts, or lies fallow one more; or that lies fallow every other Year. See FALLOW.

NOVATIANS, a Sect of antient Heretics, ſo called from *Novatus*, an *African* Biſhop; and *Novatian* a Prieſt of *Rome*.

Novatian firſt ſeparated himſelf from the Communion of Pope *Cornelius*, on pretence of his being too eaſy in admitting to Repentance thoſe who had fallen off in times of Perſecution.

Novatus coming to *Rome*, join'd himſelf to the Faction of *Novatian*: and both maintain'd, That there was no other admiſſion into the Church but by the Repentance in Baptiſm; grounding their Opinion on that of St. *Paul*: *'Tis impoſſible for thoſe once enlightened, and who have taſted the heavenly Gift, if they fall away, to retrieve themſelves by Repentance.*

Not that they denied but a Perſon fallen into any Sin, how grievous ſoever, might obtain Pardon by Repentance; for they themſelves recommended Repentance in the ſtrongeſt Terms. But their Doctrine was, That the Church had it not in its power to receive Sinners into its Communion; as having no way of remitting Sins but by Baptiſm, which, once received, could not be repeated.

In proceſs of Time, the *Novatians* ſoftened and moderated the Rigour of their Maſter Doctrine; and only refuſed Abſolution to very great Sinners.

The two Leaders were proſcribed, and declared Heretics, not for excluding Penitents from Communion; but for denying that the Church had a Power of remitting Sins.

The *Novatians* were alſo call'd *Catharets*, from καθαροὶ, *pure*, q. d. *Puritans*.

NOVATION, or *Innovation*, in the Civil Law, a change, or alteration of an Obligation, whereby it becomes extinguiſhed, or annihilated.

Thus when an Obligation is diſcharged without receiving any Money; but a ſimple Promiſe is accepted in its ſtead; this occaſions a *Novation*.

There are two kinds of *Novations*; the one voluntary, the other neceſſary and conſtrained.

Neceſſary NOVATION is that made in conſequence of a Sentence, or Decree of Juſtice.

Voluntary NOVATION is made three ways, *viz.* by changing the Cauſe of the Obligation without the Intervention of any other Perſon; by changing the nature of the Obligation; and by Delegation, as when the Debtor makes over a Debt to the Creditor for his Satisfaction.

In all theſe Caſes there is a will to *Innovate*: Accordingly *Juſtinian* ſays, *Voluntate non Lege novandum.*

NOVEL, *New*; ſee ROMANCE.

NOVEL, in Juriſprudence, a Term uſed for the Conſtitutions of ſeveral Emperors, *viz. Juſtin*, *Tiberius*, *Leo*, and particularly *Juſtinian*. See CONSTITUTION and LAW.

Moſt of *Juſtinian's Novels* were originally *Greek*; and afterwards, tranſlated into *Latin*. Their Number 165, comprized in nine Collections, or Chapters. See CIVIL *Law*.

They had their name *Novel*, either from their making a great Alteration in the Face of the antient Law; or, as *Cujas* rather thinks, becauſe made on new Caſes, not yet conſider'd, and after the reviſal of the Code, compiled by order of the Emperor.

Wherever *Accurſius* ſpeaks of *Novels*, he means thoſe publiſhed in *Greek* by *Juſtinian*; the *Latin* Verſion of them made in the time of *Bulgarus*, he calls *Authentics*, by reaſon of its Exactneſs and Fidelity. See AUTHENTICS.

NOVEL *Aſſignment*, in an Action of Treſpaſs, is an Aſſignment of Time, Place, or ſuch like, in a Declaration, more particularly than it was in the Writ.

NOVEL *Diſſeiſin*, ſee ASSIZE *of Novel Diſſeiſin*.

NOVEMBER, the eleventh Month in the Year; but the ninth in the Year of *Romulus*; whence its Name. See MONTH.

NOVENDIAL, or *Novemdial*, in Antiquity, a Sacrifice among the *Romans*, held on occaſion of any Prodigy's appearing to menace them with ill Fortune. See SACRIFICE.

It had its Name from the Term of its Celebration, *viz. Novem dies*, Nine Days.

NOVEMSILES, in Mythology, a Species of Gods worſhipped among the antient *Romans*.

The *Dii Novemſiles*, were the Gods of the *Sabines*; adopted by *Romulus*, and a Temple built to them in conſequence of a Vow by King *Tatius*.

Some Antiquaries take the Name to have been given to thoſe which were laſt placed among the Number of the Gods; as *Hercules*, *Veſta*, *Sanctity*, *Fortune*, &c.

NOVEMVIR, a Magiſtrate of *Athens*, in the Number of the *Nine*.

The *Novemvirs* were the chief Magiſtrates of the City: Their Office only held for one Year. Their Chief was call'd *Archon*, whoſe Name was recorded in the *Athenian* Feaſts; as, at *Rome*, that of the Conſuls. See ARCHON.

The ſecond bore the Title of King, the third that of *Polemarcha*, *i. e.* Chief of the Troops, and the remaining ſix, *Theſmotetes*.

NOVICE, a Perſon not yet ſkill'd or experienced in an Art or Profeſſion.

In the antient *Roman* Militia, *Novicii*, or *Novitii*, were the young raw Soldiers, diſtinguiſhed by this Appellation from the Veterans. See VETERAN.

In the antient Orders of Knighthood, there were *Novices*, or Clerks in Arms, who went thro a kind of Apprenticeſhip e'er they were admitted Knights. See KNIGHT.

NOVICE is particularly uſed in Monaſteries for a Religious yet in his, or her Year of Probation, and who has not made the Vows. See NOVICIATE.

In ſome Convents the Subprior has the Direction of the *Novices*. In Nunneries, the *Novices* wear a white Veil; the reſt a black one.

A *Novice* is not eſteemed dead in Law, but is capable of Inheriting till the time of actual Profeſſion; nor can his Benefices be given away, during the Year of Probation, without his conſent.

The Council of *Trent* prohibits a *Novice* from aſſigning over his Benefices till two Months before the Expiration of his Year of Probation; and he may even reſume them if the Profeſſion be null.

A *Novice* is not allow'd to make any Donation to his Superior, by reaſon of the Dependance he is under.

Novices may either quit the Convent during their *Noviciate*, or may be turn'd off by the Convent.

NOVICIATE, a Year of Probation, appointed for the Trial of Religious, whether or no they have a Vocation, and the neceſſary Qualities for living in the Rule; the Obſervation whereof they are to bind themſelves to by Vow. See PROBATION.

The *Noviciate* laſts a Year at leaſt; in ſome Houſes more. 'Tis eſteem'd the Bed of the Civil Death of a *Novice*, who expires to the World by Profeſſion. See Vow and PROFESSION.

NOVICIATE is alſo uſed for the Houſes, or Places where *Novices* are inſtructed.

In this ſenſe, the *Noviciate* is frequently a Cloiſter ſeparated from the grand Dormitory.

NOUN, *Nomen*, in Grammar, a *Name*, or a Word that expreſſes the Subject ſpoke of; or expreſſes a Subject whereof ſomething is, or may be, affirmed; as *Man*, *Food*, *Whiteneſs*, *Henry*, &c. See WORD and NAME.

A *Noun*, therefore, in Language, anſwers to an Idea in Logic. See IDEA.

The generality of Subjects ſpoke of have particular Names; yet there are others, which, without being attach'd to the ſame particular Subject, are yet real *Nouns*.

Thus, beſide the particular Name, which each Perſon bears, and whereby others denote him, he gives himſelf another when he ſpeaks of himſelf; as *I* and *My Self*.

'Tis only the more particular Names that in Grammar have retain'd the Quality of *Nouns*; the more general ones are call'd Pronouns. See PRONOUN.

Nouns, again, are to be view'd in another Light, *viz.* as divided into *Nouns Subſtantive*, and *Nouns Adjective*.

They are call'd *Subſtantives* when the Objects they deſign are conſider'd ſimply, in themſelves, and without any regard to their Qualities. See SUBSTANTIVE.

They are call'd *Adjectives* when their Objects are conſider'd as clothed with any Qualities. See ADJECTIVE.

Thus, when I ſay ſimply the *Heart*, the word Heart is call'd a *Noun Subſtantive*; inaſmuch as it does not expreſs any of its Qualities: But if I ſay, the *generous Heart*, or the *perfidious Heart*, I then conſider the Heart as accompanied with the Quality *generous*, or the Quality *perfidious*. For this reaſon, the Words *generous* and *perfidious* are call'd *Nouns Adjectives*, becauſe they add a Quality to the Object.

But in effect the Object is alone deſign'd by the *Nouns Subſtantives*; which in this view are alone the proper *Nouns*.

Adjectives, at bottom, are only Modificatives of *Nouns*; tho in one view they may be conſider'd as *Nouns*; *viz.* as they don't ſo much repreſent a Quality or Circumſtance of the Object, as the Object itſelf, clothed with that Quality or Circumſtance. Nor muſt it be omitted, that a *Noun Adjective* frequently becomes a Subſtantive: For as its nature is to expreſs the Quality of an Object, if that Quality happen to be the Object itſelf ſpoke of, then, according to our firſt Definition, it becomes a Subſtantive.

Thus, if I ſay a *good Intention*, the word *good* is here an *Adjective*, repreſenting the Intention as clothed with the Quality of Goodneſs; but if I ſay *the Good is to be choſen*, 'tis evident that *Good* is here the Subject ſpoke of, and of conſequence is a *Noun Subſtantive*. Nor are there Caſes wanting wherein *Nouns Subſtantive* become *Adjectives*.

'Tis true, in the common uſe of Grammar, *Nouns* that are really *Adjectives*, are not reckon'd as ſuch; none being eſteem'd as ſuch, but thoſe which without any, or at leaſt any conſiderable change in their Inflexion and Termination, are join'd indifferently to *Nouns Subſtantives* of different Genders.

Nouns are again divided into *Proper* and *Appellative*.

Nouns Proper are thoſe which expreſs a particular Thing or Perſon, ſo as to diſtinguiſh it from all other Things of the ſame Kind, as *Socrates*. See PROPER.

Nouns Appellative, are thoſe common to ſeveral Individuals of the ſame Kind, as *Man*, *Angel*, &c. See APPELLATIVE.

NOURISHMENT, ſee NUTRITION.

NOWED, *Nouée*, i. e. *Knotted*, in Heraldry, is applied to the Tails of ſuch Creatures as are very long, and ſometimes repreſented in Coat-Armour as if tied up in a Knot.

NUBECULA, *little Cloud*, in Medicine, a Term ſometimes uſed for a Diſeaſe in the Eye, wherein Objects appear as thro a Cloud, or Miſt.

The *Nubecula* ſeems to ariſe from certain groſs Particles detain'd in the Pores of the *Cornea*, or ſwimming in the aqueous Humour, and thus intercepting the Rays of Light.

NUBECULA is alſo uſed for a Matter, in form of a Cloud, ſuſpended in the middle of the Urine. This they ſometimes alſo call *Cnæorema*. See URINE.

NUCHA, the hinder Part, or Nape of the Neck; call'd alſo *Cervix*. See CERVIX.

NUCHTHEMERON, ſee DAY.

NUCIFEROUS, from *Nux*, a Nut, and *fero*, to bear; Botaniſts call all Trees thus, which bear Nuts.

NUCKIANÆ *Glandulæ*, in Anatomy, a Number of ſmall Glands ſituate in that part of the Skull wherein the Orbits of the Eyes are, between the abducent Muſcle of the Eye, and the upper part of the *Os Jugale*. See GLAND and CRANIUM.

They were thus denominated from their Inventor Dr. *Nuck*.

The ſame Author gave his Name to a Salivary Duct, *Ductus Nuckianus*. See SALIVARY, &c.

NUCLEUS, a *Latin* Word, literally denoting the Kernel of a Nut, or Stone-Fruit; or, more ſtrictly the edible Part contained within the Skin of the Kernel. See FRUIT.

Botaniſts uſe it in a larger ſenſe, for any Fruit or Seed contained within a Husk or Shell.

Hevelius, and ſome other Aſtronomers, uſe the Word *Nucleus* for the Body of a Comet, which others call its *Head*, in contradiſtinction to its *Tail*, or Beard. See COMET.

Some alſo apply the Term *Nucleus* to the Central-Parts of the Earth, and other *Planets*; as ſuppoſing them to be looſe from the exterior Part, which they conſider as a Cortex or Shell. See MAGNETISM.

NUCLEUS, in Architecture, is the middle Part of the Flooring of the Antients; conſiſting of Cement which they put betwixt a Lay, or Bed of Pebbles, cemented with Mortar made of Lime and Sand.

NUDE *Contract*, *Nudum Pactum*, a bare Contract, or Promiſe of a Thing without any Conſideration: *Ex quo*, ſay the Lawyers, *non oritur actio*. See CONTRACT and COVENANT.

NUDE *Matter*, ſee MATTER.

NUDITIES, in Painting, and Sculpture, thoſe Parts of a human Figure not cover'd with any Drapery; or thoſe Parts where the Carnations appear. See CARNATION.

NUEL, or rather *Newel* of a Stair-Caſe, ſee NEWEL and STAIR-*Caſe*.

NULLITY, the Quality of a thing *null*, *i. e.* void, and of no effect; by reaſon of ſomething contrary to Law, to Cuſtom, or to Form.

There are two kinds of *Nullities* to invalidate a Contract, Title, &c. viz. *de facto*, and *de jure*. The former where the thing commences *Null ipſo facto*, as ſoon as the thing is proved: In the latter, the Act does not immediately become *Null*, but a handle is given thereby to have it intirely annulled or ſet aſide. See DE FACTO, &c.

NUMBER, in Arithmetic, a Collection, or Aſſemblage of ſeveral Units. See UNIT.

Stevinus chuſes to define *Number* to be that whereby the Quantity of any thing is expreſs'd. Agreeably to which, Sir *I. Newton* conceives *Number* to conſiſt, not in a Multitude of Units, as *Euclid* defines it, but in the abſtract Ratio of a Quantity of any kind to another Quantity of the ſame kind which is accounted as Unity. And on this view he divides *Number* into three Kinds, *viz. Integers*, *Fractions*, and *Surds*. See each under its proper Article, INTEGER, FRACTION, and SURD.

Wolfius defines *Number* to be ſomething which refers to Unity as one right Line refers to another. Thus, aſſuming a right Line for Unity, a *Number* may likewiſe be expreſſed by a right Line.

A leſs general Definition of *Number*, that Author thinks won't comprehend the ſeveral kinds of whole *Numbers*, Fractions, Rationals, and Surds.

The Schoolmen, keeping to *Euclid*'s Definition, hold *Number* to conſiſt of Matter and Form: The *Matter* is the things number'd; *e. gr.* Coins: The *Form*, the Idea

whereby

whereby comparing the ſeveral Pieces, we bring them into one Sum, as ten: So that *Number* depends altogether on the Mind of the Perſon that *numbers*; whence changing the Idea at pleaſure, an hundred Men ſhall only be call'd one, or it ſhall be two, or four, &c.

Hence, ſay they, the Form of a *Number*, is not any thing added to the things *number'd*; for the Idea is a mere Mode of the Mind, not any thing ſuperadded to the things. And hence, tho there may be ſome Efficacy in *Number*, conſider'd with reſpect to the Matter, as when we ſay, *A triple Rope is not eaſily broke*; yet there is none in reſpect to Form: For what Alteration ſhould my Idea make? And hence the Folly of the Philoſophy of *Numbers*.

The ſame Philoſophers call *Number* a *diſcrete Quantity*: *Quantity*, as it admits of more and leſs; and *diſcrete*, ſince the ſeveral Units it conſiſts of are not united, but remain diſtinct.

For the Manner of deſigning, or characterizing Numbers, ſee NOTATION.

For that of expreſſing or reading thoſe already characteriz'd, ſee NUMERATION.

Mathematicians, conſidering *Number* under a great many Circumſtances, different Relations, and Accidents, make many Kinds of *Numbers*.

A determinate NUMBER, is that refer'd to ſome given Unit; as a Ternary, or three; which is what we properly call a *Number*.

An indeterminate NUMBER, that refer'd to Unity in the general; which is what we call Quantity. See QUANTITY.

Homogeneal NUMBERS, are thoſe refer'd to the ſame Unit.

Heterogeneal NUMBERS, thoſe refer'd to different ones. For every *Number* ſuppoſes ſome determinate Unit, which is determined by the Notion to which we have regard in *Numbering*. *E.gr.* 'tis a diſtinguiſhing Property of a Sphere, that the ſeveral Points of its Surface are equidiſtant from its Centre: If then, this be laid down as a Note of Unity, all Bodies to which it agrees will have the nature of Unity; and are the ſame Units, *quatenus* contain'd under this Notion. But if Spheres be diſtinguiſhed, *e. gr.* with regard to the Matter they are compoſed of; then thoſe which before were the ſame Units, commence different. Thus, ſix golden Spheres and three golden Spheres are *homogeneal Numbers* among themſelves; and three braſs Spheres and four ſilver ones, are *heterogeneous Numbers*.

Whole NUMBERS, call'd alſo *natural Numbers*, and *Integers*, or ſimply *Numbers*, are all the various Aſſemblages of Unity, or the Ideas we have of ſeveral Multitudes; or, according to *Wolfius*, all thoſe which, in the manner of expreſſing, refer to Unity, as a Whole does to a Part.

Broken NUMBERS, or *Fractions*, are thoſe conſiſting of ſeveral parts of Unity, or thoſe which refer to Unity as a Part to the Whole. See FRACTION.

Rational NUMBER, is that commenſurable with Unity.—*Rational whole Number*, is that whereof Unity is an *Aliquot* part.———*Rational broken Number*, that equal to ſome *Aliquot* part or parts of Unity.———*Rational mixt Number*, that conſiſting of a whole *Number* and a broken one, or of Unity and a Fraction. See FRACTION.

Irrational NUMBER, or *Surd*, a *Number* incommenſurable with Unity. See SURD.

Even NUMBER, that which may be divided into two equal parts, or without Remainder or Fraction; as 4, 6, 8, 10, &c. The Sum, as alſo the Difference, and the *Factum*, or Produce of any Number of even *Numbers*, is always an even *Number*,

An *even Number* multiply'd by an *even Number*, produces an *evenly even Number*.

An *even Number* is ſaid to be *evenly even*, when it may be meaſur'd or divided without any Remainder by another *even Number*.

Thus, twice four being eight, eight is an *evenly even Number*.

A *Number* is ſaid to be *unevenly even*, when it may be equally divided by an uneven *Number*; as 20, which may be divided by 5.

Uneven NUMBER, that which exceeds an *even Number* at leaſt by Unity; or which cannot be divided into two equal Parts. Such are 3, 5, 9, 11, &c.

The Sum, or the Difference, of two *uneven Numbers*, makes an *even Number*; but the *Factum* of two makes an *uneven* one.

If an even *Number* be added to an *uneven* one, or if the one be ſubſtracted from the other; in the former Caſe, the Sum, in the latter the Difference, is an *uneven Number*. But the *Factum* of an even and an *uneven Number*, is even.

The Sum of any even *Number* of *uneven Numbers*, is an even *Number*; and the Sum of any *uneven Number* of *uneven Numbers*, is an *uneven Number*.

Primitive or *prime* NUMBER, is that which is only diviſible by Unity; as, 5, 7, 11, &c.

Prime NUMBERS *among themſelves*, are thoſe which have no common Meaſure beſide Unity; as 12 and 19.

Compound NUMBER, is that diviſible by ſome other *Number* beſides Unity; as 8, diviſible by 4, and by 2.

Compound NUMBERS *among themſelves*, thoſe which have ſome common Meaſure beſides Unity; as 12 and 15.

Perfect NUMBER, that whoſe *aliquot* Parts added together, make the whole *Number*; as 6, 28, &c. The *aliquot* Parts of 6, being 3, 2, and 1 = 6. And thoſe of 28, being 14, 7, 4, 2, 1. which together make 28.

Imperfect NUMBERS, thoſe whoſe *aliquot* Parts added together, make either more or leſs than the Whole, whereof they are Parts.

Imperfect Numbers, are diſtinguiſh'd into *Abundant* and *Defective*.

Abundant NUMBERS, are thoſe whoſe *aliquot* Parts added together, make more than the *Number* whereof they are Parts; as 12, whoſe *aliquot* Parts, 6, 4, 3, 2, 1. make 16.

Defective NUMBERS, are thoſe whoſe *aliquot* Parts added together, make leſs than the *Number* whoſe Parts they are; as 16, whoſe *aliquot* Parts, 8, 4, 2, and 1. only make 15.

Plane NUMBER, that ariſing from the Multiplication of two *Numbers*; *ex. gr.* 6, which is the Product of 3 multiply'd by 2. The *Numbers* which thus multiply'd produce a *Plane Number*, as here, 2 and 6, are call'd the *Sides* of the Plane.

Square NUMBER, the Product of any *Number* multiply'd by itſelf; thus 4, the *Factum* of 2, by 2, is a *ſquare Number*. See SQUARE.

Every *ſquare Number* added to its Root, makes an *even Number*.

Cubic NUMBER, the Product of a *ſquare Number*, multiply'd by its Root; *ex. gr.* 8, the Product of the *ſquare Number* 4, multiply'd by its Root 3. See CUBE.

All *Cubic Numbers*, whoſe Root is leſs than 6, *v. g.* 8, 27, 64, 125, being divided by 6, the Remainder is their Root itſelf. Thus 8 being divided by 6, 2, the Remainder of the Diviſion, is the Cube Root of 8. For the *Cubic Numbers* beyond 125; 216, the Cube of 6, divided by 6, leaves no Remainder; 346, the Cube of 7, leaves a Remainder 1, which added to 6, gives the Cube Root of 343. And 512, the Cube of 8, divided by 6, leaves 2, which added to 6, makes the Cube Root of 512. So that the Remainders of the Diviſions of the Cubes above 216, divided by 6, being added to 6, always give the Root of the *Cubic Number* divided; till that Remainder be 5, and of conſequence 11 the Cube Root of the *Number* divided: But the *Cubic Number* above this, being divided by 6, there remains nothing, the Cube Root being 12. Thus, if you continue to divide the higher Cubes by 6, you muſt not add the Remainder of the Diviſion to 6, but to 12, the firſt Multiple of 6; and thus coming to the Cube of 18, the Remainder of the Diviſion muſt not be added to 6, nor to 12, but to 18: and thus *in infinitum*.

Monſ. *de la Hire*, from conſidering this Property of the *Number* 6, with regard to *Cubic Numbers*, found that all other *Numbers* rais'd to any Power whatſoever, had each their Diviſor, which had the ſame effect with regard to them, that 6 has with regard to Cubes. And the general Rule he has diſcover'd, is this: If the Exponent of the Power of a *Number* be even, *i. e.* if that Power be rais'd to the 2d, 4th, 6th, &c. Power, it muſt be divided by 2; and the Remainder, if there be any, added to 2, or to a Multiple of 2, gives the Root of the *Number* correſponding to its Power, *i. e.* the 2d or 6th Root, &c. But if the Exponent of the Power of the *Number* be *uneven*, *i. e.* if it be rais'd to the 3d, 5th, 7th, &c. Power, the Duple of that Exponent will be the Diviſor which ſhall have the Property here requir'd.

Polygonous NUMBERS, the Sums of Arithmetical Progreſſions, beginning with Unity. Theſe, where the Difference of Terms is 1, are call'd *Triangular Numbers*; where 2, *Square Numbers*; where 3, *Pentagonal Numbers*; where 4, *Hexagonal Numbers*; where 5, *Heptagonal*, &c. See POLYGON.

Pyramidal NUMBERS. The Sums of Polygonous *Numbers*, collected after the ſame manner as the Polygons themſelves are gather'd out of Arithmetical Progreſſions, are call'd *firſt Pyramidal Numbers*.

The Sums of the firſt Pyramidals, are call'd *ſecond Pyramidals*. The Sums of the ſecond Pyramidals, are call'd *third Pyramidals*, &c.

In particular, they are call'd *Triangular Pyramidal Numbers*, if they ariſe out of *Triangular Numbers*. *Firſt Pentagonal Pyramidals*, if they ariſe out of *Pentagons*, &c. See PYRAMID.

Cardinal NUMBERS, thoſe which expreſs the Quantity of Units; as 1, 2, &c.

Ordinal NUMBERS, thoſe which expreſs the Order or Rank; as 1ſt, 2d, 3d, &c.

Golden NUMBER, in Chronology, a Period of 19 Years, invented by *Meton* the *Athenian*; at the end whereof, the ſame Lunations return in the ſame Days, tho' not preciſely in the ſame Hour and Minute of the Day. See PERIOD and LUNATION.

Hence this Period, call'd by the *Greeks Enneadecaeteris*, is not perfectly juſt; there being a *Proemptoſis*, or Leap, at the end of each 312 Years, *i. e.* in that time, the Lunations fall out a Day ſooner than the *Golden Number* expreſſes them. See PROEMPTOSIS.

This, among other things, was what engag'd Pope *Gregory* XIII. to reform the Calendar, to throw out the *Golden Number*, and ſubſtitute the Cycle of Epacts inſtead of it. For the Uſe of the *Golden Number*, which, in the *Julian* Calendar, ſerves to find the New Moons, only ſerves in the *Gregorian* to find the Cycle of Epacts. See EPACT; ſee alſo CYCLE, and CALENDAR.

This *Number* is ſaid to have had its Name, *Golden*, from the Greatneſs of its Uſe; or becauſe the *Athenians* receiv'd it with ſo much Applauſe, that they had it wrote in the publick Market in Letters of Gold.

M. *Caſſini* defines the *Golden Number* after a new manner. He ſays, 'tis the Number of Years elaps'd ſince that which had the New Moon on its firſt Day; as that of the Year 1500, whoſe *Golden Number* was 0; which he takes for his Epocha. See METONIC.

NUMBER, in Grammar, is a Modification of Nouns, Verbs, *&c.* to accommodate them to the Varieties in their Objects, conſider'd with regard to *Number*. See NOUN, *&c.*

Nouns or Names agreeing to ſeveral Things, may be conſider'd either as apply'd to one of thoſe Things ſingularly, or to a *Number* of them; and thoſe either conſider'd as ſeveral, or as united. To diſtinguiſh theſe Caſes, two *Numbers* have been invented, the *Singular* and *Plural*.

When a Noun indicates an Object conſider'd as ſingle, or alone, or a number of them conſider'd as united together, 'tis ſaid to be of the *Singular Number*; as a Tree, a Troop, a Temple. See SINGULAR.

When it indicates ſeveral Objects, and thoſe as diſtinct, it is of the *Plural Number*; as Trees, Temples. Thus when I ſpeak of myſelf, as making part of ſeveral others, inſtead of *I*, I ſay *We*, *&c.* See PLURAL.

The *Greeks* have a third *Number*, which they call the *Dual Number*, as ſignifying two. The *Hebrews* have ſomething like it; but then it only takes place when the Words ſignify a thing double either by Nature, as the Hands, the Eyes, *&c.* or by Art, as Sciſſars, Tongs, *&c.*

As to Common and Appellative Names, they ſeem all naturally to require a *Plural Number*, yet are there ſeveral which have none; as the Names of Gold, Steel, *&c.*

The Difference of *Numbers* in Nouns is expreſs'd by a Difference of Termination or Ending.

In *Engliſh*, the *Singular* is uſually converted into *Plural*, by adding *s*; as Tree, Trees; Hand, Hands, *&c.* Where the Pronunciation requires it, as when the *Singular* ends in *s*, or *x*, *ſh*, or *ch*, 'tis uſually done by the Addition of *es* inſtead of *s*.

The *Plurals* of Adjectives, tho' vary'd from the *Singulars* in moſt other Languages; yet in *Engliſh* are generally the ſame. See VERB.

NUMBERS, in Poetry, Oratory, Muſic, *&c.* are certain Meaſures, Proportions, or Cadences, which render an Air, Verſe, or Period, agreeable to the Ear. See VERSE, MEASURE, *&c.*

Poetical and Proſaic Numbers, are ſomewhat different: *Poetical* NUMBERS conſiſt in a certain Harmony, in the Order, Quantities, *&c.* of the Feet and Syllables; which make the Piece muſical to the Ear, and fit it for Singing: for which all the Verſes of the Antients were intended. 'Tis of theſe *Numbers Virgil* ſpeaks in his IVth *Eclogue*.

——*Numeros memini ſi verba tenerem.*

And again, in the VIth *Eclogue*:

Tum vero in Numerum Faunoſq; Feraſq; videres
Ludere——

The *Numbers* are what conſtitute the Air and Character of a Verſe; and denominate it *ſmooth*, or *ſoft*, or *low*, or *rough*, or *rapid*, or *ſonorous*. The following Lines of *Milton* furniſh an Inſtance of ſoft eaſy *Numbers*.

Then feed on Thoughts, which voluntary move
Harmonious Numbers; as the tuneful Bird
Sings darkling, and in ſhadieſt Covert hid,
Tunes her Nocturnal Note:——

How different from the *Numbers* of theſe:

Arms meet with Arms, Faucheons with Faucheons claſh,
And Sparks of Fire, ſtruck out from Armour, flaſh.
But when loud Surges laſh the ſounding Shore,
The hoarſe rough Verſe ſhould like the Torrent roar.

Rhetorical or Proſaic NUMBERS, are a ſort of ſimple unaffected Harmony, leſs glaring than that of Verſe; yet ſuch as is perceiv'd, and affects the Mind with Pleaſure. The *Numbers* are that by which the Style is ſaid to be *eaſy*, *free*, *round*, *flowing*, *&c.* See STYLE.

A fine Inſtance of *Numbers* we have in that Paſſage of *Tully* for *Marcellus*: *Nulla eſt tanta vis, tantaq; copia quæ non ferro ac viribus debilitari frangiq; poſſit.* All the Beauty of which would be entirely loſt to any tolerable Ear, if the *Numbers* were a little inverted, thus: *Nulla eſt vis tanta, & copia tanta quæ non poſſit debilitari frangiq; viribus & ferro.*

Numbers are a Thing abſolutely neceſſary in all Writing, and even all Speech. Hence *Ariſtotle*, *Tully*, *Quintilian*, *&c.* lay down abundance of Rules as to the beſt manner of intermixing *Dactyls*, *Spondees*, *Anapeſts*, *Iambus's*, *Choraic* and *Dichoraic Moloſſus's*, *&c.* in order to have the *Numbers* perfect.

The Subſtance of what they have done, is reducible to what follows: 1. The Style becomes *numerous*, by the alternate Diſpoſition and Temperature of long and ſhort Syllables; ſo, as that the Multitude of ſhort ones neither render it too haſty, nor that of long ones too ſlow and languid.

Thus, *Tully* to *Cæſar*: *Domuiſti Gentes immanitate barbaros; multitudine innumerabiles, locis infinitas, omni copiarum genere abundantes, &c.*

Sometimes, indeed, long or ſhort Syllables are deſignedly thrown together, without any ſuch Mixture; to paint the Celerity or Slowneſs of a Thing by that of the *Numbers*; as,

Quadrupedante putrem ſonitu quatit ungula campum.
Æneid. l. 8.

Luctantes Ventos, Tempeſtateſq; Sonoras.
Id. l. 1.

2. The The Style becomes *numerous* by the intermixing of Words of one, two, and more Syllables; *e. gr. Vivis & vivis non ad deponendam ſed ad confirmandam audaciam.* Whereas the too frequent repetition of Monoſyllables renders the Style pitiful, and grating; *e. gr. Hac in Re nos hic non feret.*

3. It contributes greatly to the *numeroſuneſs* of a Period, to have it cloſed by magnificent and well ſounding Words; as, *Qui locus quietis ac tranquilitatis pleniſſimus fore videbatur, in eo maximæ moleſtiarum, & turbulentiſſimæ tempeſtates extiterunt.*

4. The *Numbers* depend not only on the nobleneſs of the Words in the Cloſe, but of thoſe in the whole tenor of the Period; as in the fine Oration of *Cicero* for *Fonteius*, Brother of one of the Veſtal Maids. *Nolite pati, Judices, aras Deorum immortalium, Veſtæque matris, quotidianis Virginum Lamentationibus de Veſtro Judicio commoveri.*

5. To have the Period flow eaſily and equably, the harſh concurrence of Letters and Words is to be ſtudiouſly avoided, particularly the frequent meeting of rough Conſonants; as *Ars ſtudiorum, Rex Xerxes:* The beginning the firſt Syllable of a Word with the laſt of the preceding; as, *Res mihi inviſæ ſunt:* The frequent repetition of the ſame Letter or Syllable; as in that Verſe of *Ennius*, *Africa terribili tremit horrida terra tumultu:* And the frequent uſe of like-ending Words; as *Amatrices*, *Adjutrices*, *Præſtigiatrices fuerunt.*

Laſtly, The utmoſt Care is to be taken, leſt in aiming at *Oratorial Numbers*, you fall into *Poetical* ones; and inſtead of Proſe, write Verſe; which even *Cicero* himſelf is ſometimes guilty of; witneſs, *Cum loquitur tanti fletus gemituſque fiebant.* See VERSE.

NUMERAL *Letters*, thoſe Letters of the Alphabet, which are generally uſed for Figures; as I, V, X, C, D.

NUMERAL *Characters*. See CHARACTER.

NUMERALS, in Grammar, are thoſe Words which expreſs *Numbers*; as *Six*, *Eight*, *Ten*, *&c.* See ORDINALS.

NUMERATION, in Arithmetic, the Art of valuing, pronouncing, or reading, any *Number*, or Series of *Numbers*. See NUMBER.

The Characters whereby Numbers are ordinarily expreſs'd, are the nine following ones, *viz.* 1, 2, 3, 4, 5, 6, 7, 8, 9. It being the Law of the common *Numeration*, that when you are arrived at ten, you begin again, and repeat as before; only expreſſing the Number of Tens.

Weigelius, indeed, ſhews how to number without going beyond a Quaternary, *i. e.* by beginning to repeat at each Fourth. And *Leibnitz*, in what he calls his *Binary Arithmetic*, begins to repeat at every Second; only uſing two Characters, 1 and 0. But theſe are rather Matters of Curioſity than Uſe. See BINARY *Arithmetic*.

That the nine Numerical Notes may expreſs not only Units, but alſo Tens or Decads, Hundreds or Centuries, Thouſands, *&c.* they have a local Value given them; ſo, as that when either alone, or when placed in the right-hand place, they denote Units; in the ſecond place, Tens; in the third, Hundreds; in the fourth, Thouſands. See NOTATION, *&c.*

Now,

Now, *To expreſs any written Number, or aſſign the proper Value to each Character*; Divide the propoſed Number by Comma's into Claſſes, allowing three Characters in each Claſs; beginning at the right-hand. Over the right-hand Figure of the third Claſs, add a ſmall Mark or tranſverſe Line; over the right-hand Figure of the fifth Claſs, add two Marks or tranſverſe Lines; over that of the ſeventh, three, &c. The Number to the left of the firſt Comma, expreſs by Thouſands; that which has over it the firſt tranverſe Line, expreſs by Millions; that with two, by Billions; that with three, by Trillions, &c. Laſtly, the left-hand Character of each Claſs, expreſs by Hundreds; the middle one, by Tens; and the right-hand one, by Units. Thus will the *Numeration* be effected.

E. gr. The following Numbers, $2'''$, 125, 473″, 613, 578′, 432, 597. is thus expreſs'd or read: Two Trillions, one hundred twenty Millions of Billions, four hundred ſeventy three Billions, ſix hundred thirteen Thouſands of Millions, and five hundred ſeventy eight Millions, four hundred and thirty two thouſand, five Hundred and ninety ſeven.

NUMERATOR, in Arithmetic, a Term uſed in ſpeaking of Fractions. It ſignifies the Number that denotes the Parts of the Integer, and is placed over the little Bar, which ſeparates it from the under Number, call'd the *Denominator*, which ſhews into how many Parts the Integer is divided. See DENOMINATOR.

Thus, *v. g.* $\frac{7}{10}$ expreſſes ſeven Tenths; where 7 is the *Numerator*, and 10 the Denominator. See FRACTION.

NUMERICAL, ſomething that relates to *Number*.

NUMERICAL *Algebra*, is that which makes uſe of Numbers inſtead of Letters of the Alphabet. See ALGEBRA.

NUMERICAL *Difference*, is the difference whereby one Individual is diſtinguiſhed from another. See INDIVIDUAL.

Hence a thing is ſaid to be *Numerically the ſame, idem Numero* or *numerice*, when it is the ſame in the ſtricteſt Senſe of the Word. See UNITY and IDENTITY.

NUMERO, in Commerce, &c. a Term prefixed to any Number of things; marked, or abbreviated thus, N°.

De NUMERO, *i. e.* by Tale, is uſed in antient Authors for the payment, *e. gr.* of a Pound in a certain *Number* of Pieces, *e. gr.* 20 Shillings; in contradiſtinction to a *Libra penſa*, or Pound weighed out. See POUND.

NUMISMATOGRAPHIA, a *Greek* Term uſed for the Deſcription and Knowledge of antient Medals and Coins, whether of Gold, Silver, or Braſs. See MEDAL and COIN.

Fulvius Urſinus, *Auguſtine* Biſhop of *Terracona*, *Erizzo* a noble *Venetian*, and *Sambucus* a *Poliſh* Gentleman, have all been ſucceſsful in the *Numiſmatographia*: Nor muſt the more modern Authors on the ſame Subject be omitted; *viz.* the two *Mezzabarba's*, *Patin*, *Spanheim*, *Hardouin*, *Morel*, *Vaillant*, *Jobert*, *Baudelot*, *Beger*, and among ourſelves, *Evelyn*.

NUMMUS, a Piece of antient *Roman* Money; whereof there were two Kinds: the one Gold, the other Silver. See MONEY.

The Gold *Nummus*, call'd *Stater* and *Aureus*, weigh'd two Drachms, and was worth, according to *Budæus*'s Computation, about 16 *s.* Sterling.

The Silver *Nummus* was juſt the *Roman Denarius*, which weigh'd one Drachm. See COIN.

The *Jewiſh Nummus* was their Shekel. See SHEKEL.

NUN, NONNE, an old Word, antiently uſed for a Female Religious; and ſtill retain'd in that ſenſe in our Language; and in other Languages, particularly the *French*; but by way of Ridicule and Burleſque. See RELIGIOUS.

Hence alſo *Nunnery*, a Monaſtery of Female Religious. See MONASTERY.

The Word comes from *Nonna*, *Nonnana*, or *Nonnanis*; all *Latin* Terms, firſt uſed for Penitents, then for Religious.

Borel derives it from *Nonni*, or *Nonnæ*, which in *Italian* ſignifies *Grandfathers*, or *Grandmothers*. And adds, that it was apply'd by way of Honour to the Woman, as that of Father to the Man, *Religious*. See FATHER.

NUNDINAL, a Name which the *Romans* gave to the eight firſt Letters of the Alphabet, uſed in their Calendar. See LETTER.

This Series of eight Letters, A, B, C, D, E, F, G, H, is placed and repeated ſucceſſively from the firſt to the laſt Day of the Year; one of theſe always expreſs'd the Market-Days, or the Aſſemblies call'd *Nundinæ*, *quaſi Novendinæ*, becauſe they returned every nine Days.

The Country People, after working eight Days ſucceſſively, came to Town the ninth, to ſell their ſeveral Commodities, and to inform themſelves of what related to Religion and Government.

Thus the *Nundinal* Day being under the Letter A, on the 1ſt, 9th, 17th, and 25th Days of *January*, &c. the Letter D will be the *Nundinal* Letter of the Year following.

Theſe *Nundinals* bear a good deal of reſemblance to the Dominical Letters; which return every eight Days, as the *Nundinals* did every nine. See DOMINICAL *Letter*.

NUNTIO, an Ambaſſador from the Pope, to ſome Catholic Prince or State; or a Perſon who attends, on the Pope's behalf, at an Aſſembly of ſeveral Ambaſſadors. See EMBASSADOR.

The Word *Nuntio* has the ſame Import with Embaſſador, but is reſtrain'd in its Uſe to the Embaſſadors of Popes alone; as that of *Internuntio* is to his Envoy Extraordinary.

Brantom informs us, that when he firſt came to Court, the *Nuntio* had only the Title of *Embaſſador*.

The *Nuntio* has a Juriſdiction, and may delegate Judges in all the States he reſides, except in *France*, where he has no Authority but that of a ſimple Embaſſador.

NUPER *Obiit*, in Law, a Writ which lies for a Co-heir, being deforced by her Co-partner, of Lands or Tenements, whereof their common Father or Anceſtor died ſeized in Fee Simple.

If the Anceſtor died ſeized in Fee Tail, the Co-heir deforced ſhall have a *Formedon*. See FORMEDON.

NUPTIAL, ſomething that relates to Marriage. See MARRIAGE.

NURSERY, in Gardening, is generally uſed in the ſame ſenſe as *Seminary*, *viz.* for a Seed-plot for the raiſing of young Trees, or Plants. See SEMINARY.

Some Authors, however, make a difference between the two; holding *Nurſery*, properly, not to be a place wherein Plants are ſown; but a place for the reception and rearing of young Plants, which are removed, or tranſplanted hither from the Seminary, &c.

Mr. *Lawrence* recommends the having ſeveral *Nurſeries*, for the ſeveral Kinds of Trees: One for tall *Standards*; *viz.* Apples, Aſhes, Elms, Limes, Oaks, Pears, Sycamores, &c. Another for *Dwarfs*, *viz.* ſuch as are intended for Apricocks, Cherries, Peaches, Plumbs, &c. And a third for *Ever-Greens*.

The *Nurſery for Standards* ſhould be in a rich, light Soil; ſown, with the proper Seeds, in *October*, or *November*. For *Apples* and *Pears*, Crab- and Wild-Pear Kernels, are to be preferred for Stocks: *Elms* and *Limes* are to be raiſed from planted Suckers: *Walnuts* to be ſown with the green Shell upon 'em, to preſerve them from Mice. This *Nurſery*, if it be well managed and weeded for two Years, the Crabs and Pears will be fit for Grafting and Inoculating the third Year. See ORCHARD.

Firs and Pines are to be raiſed from thoſe little Seeds, taken out of their large Apples.

The *Nurſery for Dwarfs* does beſt by itſelf, that it may not be over-top'd by taller Trees. Stones of Apricocks and Peaches are not proper to raiſe thoſe Trees; but in lieu thereof, ſow the Stones of the Pear-Plumb, Muſſel or *Bonum Magnum* Plumb; which prove better and more laſting than the former. For Stocks for all ſorts of Cherries, black Cherry-Stones do beſt. See STOCK.

Mr. *Mortimer* directs all Stone-Fruit to be ſown quickly after gathering; for that if they be kept, they will be two Years e'er they come up. Add, that if they have not all the Moiſture of the Winter to rot the Shells, the Kernel will ſcarce come up at all.

To furniſh the *Nurſery of Ever-Greens*, the ſeveral ſorts of Seeds or Berries, as Yew, Holly, Juniper, &c. are to be put in ſo many diſtinct Pots or Boxes, with fine Mould over them, and thus buried for a year; after which, they are to be taken out and ſown.

If they were to be ſown when gather'd like other Seeds, they would not come up the firſt year, nor grow ſo kindly.

NUSANCE, in Law, is uſed not only for a thing done to the annoyance of another in his Fee Lands or Tenements; but alſo the Aſſize or Writ lying for the ſame.

The Writ of *Nuſance*, *de Nocumento*, is either ſimply *de Nocumento*, or *de parvo Nocumento*.

Manwood makes three Kinds of *Nuſances* in the Foreſt; the firſt, *Common Nuſance*; the ſecond, *Special Nuſance*; the third, *General Nuſance*.

Writs of *Nuſances* are now popularly term'd *Treſpaſſes*, and Actions upon the *Caſe*. See TRESPASS, &c.

The Word is derived from the *French Nuire*, to hurt.

NUT, *Nux*, a ſort of Fruit, incloſed in a hard Cortex or *Shell*. See FRUIT.

Of theſe we have divers Kinds; ſmall Nuts, Filberds, Cheſnuts, Walnuts, &c. See FILBERD and NUX.

NUTATION, in Aſtronomy, a kind of Trepidation, or tremulous Motion of the Axis of the Earth; whereby, in each annual Revolution, it is twice inclined to the Ecliptic; and as often returns to its former Poſition. See EARTH.

That the Moon has a like Motion, is ſhewn by Sir *Iſ. Newton*, in the firſt Book of his *Principia*; but he obſerves withal, that this Motion muſt be very ſmall; and ſcarce ſenſible. See MOTION and AXIS.

NUTMEG, a kind of Aromatic Nut, or Spice, brought from the *Eaſt Indies*; whereof there are two Kinds, *Male* and *Female*. See SPICE.

The

The *Female* is that chiefly uſed among us; its Form is round, its Smell agreeable, and its Taſte hot and pungent.

The *Male* is a wild Nut, of a longiſh Form, and without either Taſte or Smell; yet ſometimes put off, while yet in the Pod, for the Female.

The *Nutmegs* are encloſed in three different Covers: The firſt, thin, reddiſh, of an agreeable Smell and aromatic Taſte, call'd *Mace*; by others, tho' improperly, *Flower of Nutmeg*. This wraps up the Shell, and opens in proportion as the Pod grows. The Shell, which makes the ſecond Cover, is hard, thin, and blackiſh. Under this, is a greeniſh Film of no uſe; and in this is found the *Nutmeg*, which is properly the Kernel of the Fruit. Every *Nutmeg* has a little Hole in it, which ſome ignorantly take for a Defect.

The beſt *Nutmegs* are thoſe gather'd in *April*. They muſt be choſen heavy, of a whitiſh brown Colour, well marbled without ſide, reddiſh within, having a fat unctuous Humour, and an agreeable Smell.

As to the Mace, it muſt be choſen in large Leaves of a high Colour, like the *Nutmeg* in Taſte and Smell. See MACE.

Nutmegs comfited green, are excellent to fortify the Stomach, and reſtore the natural Heat. They are particularly eſteem'd Carminative. The Powder, *Duke*, eſteem'd a Sovereign againſt Rheums, is only *Nutmeg* pulverized with Sugar, and a little Cinnamon.

Nutmegs, by Diſtillation, or Expreſſion, yield an Oil, ſaid to have wonderful Virtues.

The whole Commerce of *Nutmegs* is in the hands of the *Dutch Eaſt-India Company*.

The *Nutmeg*-Tree is propagated after a particular manner. *Tavernier* tells us, that the Birds devouring the *Nutmeg* when ripe, give it back whole by Stool; and that thus falling down to the Ground, beſmear'd with a viſcous Matter, it takes Root, and produces a Tree. See MISLETO.

NUTRITION, in the Animal Oeconomy, the Acceſſion or Appoſition of new Parts in the Body, ſimilar to thoſe it already conſiſted of; either for its Augmentation, or for the Reparation of ſuch as are wore off.

By the continual Motion of the Fluids in the minute Veſſels of the Body, and the Actions of the Muſcles, *&c.* ſmall Parcels are of neceſſity wore off from the Solids, become mix'd with the Fluids, move with them, and are at length eliminated and exhaled thro' the Pores. See PORE and SOLID.

And at the ſame time, the Fluids, diminiſh'd as they are by a conſtant Attrition, apply to the Orifices of the perſpiring Veſſels, and vaniſh out of the Body. See PERSPIRATION.

Hence the Animal Body, by the very Condition of its Frame, becomes ſoon liable to Deſtruction.

To preſerve Life, therefore, 'tis neceſſary that a Reſtitution be made to the Juices and Solids of the Body; equal, and ſimilar to thoſe loſt in thoſe Motions; which is what we call the Action of *Nutrition*.

Now the loſt Juices are eaſily ſupply'd by Meat, Drink, Air, *&c.* taken into the Stomach, digeſted, converted into Chyle, then into Blood, and thence ſecreted by the proper Ducts, and carry'd by the Action of the Body, to the proper Receptacles; after the manner laid down under the Articles DIGESTION, CHYLIFICATION, SANGUIFICATION, and SECRETION.

But the *Nutrition* of the ſolid Parts is much more obſcure. This indeed has proved the Subject of infinite Doubts and Differences among Authors; nor had we any rational or ſatisfactory Account of the ſame, till that of the accurate *Boerhaave*, whoſe Doctrine is as follows.

Every ſolid Part of the Body conſiſts of other leſſer ones, in all reſpects like the larger; Veſſels, *v. g.* of Veſicles, and thoſe of others ſtill ſmaller; Bones of *Officles*, *&c.* Which Structure goes beyond all Limits of Senſe, however aſſiſted by Art; as appears by the Experiments and Obſervations of *Malpighi*, *Ruyſch*, *Leewenhoeck*, and *Hook*. Yet is it ſcarce poſſible this Diviſion and Subdiviſion ſhould be infinite, as that of Foods and Juices is.

Again, it appears from Microſcopes, Injections, ſmall Wounds, Exſiccations, *&c.* that the ſolid Parts of the Body are very ſmall, compared with the Fluids; and it is almoſt demonſtrable from conſidering the Riſe, and Generation, of the Veſſels, and the Reſolution of the greater Veſſels into their ſmaller conſtituent ones, that all the ſolid Maſs in the Body is conſtructed of mere Nerves, as its Elements. See NERVE, STAMEN, *&c.*

And in effect, all this Maſs, an incredibly ſmall Particle only excepted, at firſt aroſe out of what was a very ſmall Colliquament, much like the nervous Juice itſelf; as is abundantly ſhown by the great *Malpighi* in his two Treatiſes on incubated Eggs. For neither does the White of the Egg nouriſh, till, by means of the Incubation, it have paſs'd innumerable degrees of Fluidity, from its firſt Thickneſs to that exceeding Subtility wherein it terminates. But even then, the Liquor thus given to the Embrio, is exceedingly thick, in compariſon with what it is to be when converted into its Veſſels and *Viſcera*.

Now the firſt tender Solids ariſing from this ſubtile Humour, do again paſs infinite intermediate Degrees, e'er they arrive at their utmoſt State and Conſiſtence; as is ſhewn by *Malpighi* in *Eggs*, and by *Ruyſch* in *Embrio's* and *Fœtus's*. Hence, therefore, it follows, that the Solids, in their firſt Formation out of the Liquids whence they ariſe, only differ from 'em in Reſt, Coheſion, and Figure. Therefore ſuch a Particle, now in its fluid State, will become a part of the Solid to be form'd out of it, as ſoon as there happens to be a Power to effect its Coheſion with the other ſolid Parts; howſoever that Coheſion is effected.

This Coheſion is eaſily produced in a Fibre already form'd, if there happen to be a proper Cavity in the Solid, left open by ſome loſt Particle, and at the ſame time a Particle in the Fluid, anſwerable thereto in Bulk, Figure, and Nature; and laſtly, a Power wherewithal to intrude it into that Place, or accommodate it thereto. Thus will ariſe a real *Nutrition* of the Solids in the minute Veſſels, by whoſe Union the large ones are form'd; that is, in the Nerves, or in Veſſels ſimilar thereto. Which being impracticable by any other Liquid than that brought into theſe Veſſels; it appears very evident that the nervous Juice, at leaſt a Juice perfectly like it, is the immediate Matter of *Nutrition*: Whence *Nutrition* appears one of the laſt and moſt perfect Actions in the Body; ſince to have this laudable, all the precedent Actions muſt of neceſſity have been ſo. See SPIRIT.

The Chyle therefore, which ſome make the immediate Matter of *Nutrition*, is, indeed, fitted to fill the larger Veſſels, but cannot nouriſh or reſtore them. This, when attenuated, chang'd, more intimately mix'd in the Lungs by means of Reſpiration, and thus fitted for the Paſſage of certain Veſſels, is, indeed, rendred fitter, yet far from being quite fit, to be the Matter of *Nutrition*. See CHYLE.

But, by the repeated Action of the Lungs, the *Viſcera*, Veſſels, *&c.* there is form'd out of this Humour, a ſoft, tenacious, plaſtic, inſipid Serum, which thickening by the Fire, becomes perfectly like the White of an Egg. This Fluid, therefore, has in it all the Conditions found in that from whence, by ſure Experience, we know all the ſolid Parts of an Animal, ariſe, by meer Incubation. It is therefore a ſtep nearer, but is not yet quite diſpoſed for Nutriment. Much leſs is the Cruor, or red, globular Part of the Blood ſo. Neither are yet fitted to enter the Veſſels; yet both the one and other are, by different Authors, made the *Nutritive* Juice. See BLOOD, SERUM, and CRUOR.

But as the Heat of Incubation, ſo the Action of the *Viſcera* and Veſſels, on the Serum, introduces various Changes therein; till at length a part of it be rendred ſubtile enough for the Purpoſe required. This, when exhauſted, is inſtantly repaired: and thus we have the true immediate Matter of *Nutrition*.

But this ſame Humour loſing too many of its oily Parts, by many repeated Circulations, is rendred too ſharp; and being likewiſe ſtrip'd of its moſt liquid Parts, from the ſame Cauſe, becomes too denſe; and is thus rendred unfit for this Secretion. Hence the neceſſity of new Chyle, and new Food, to keep up *Nutrition*.

The Matter of *Nutrition* thus aſcertain'd; *the Manner wherein, and the Cauſe whereby it is effected*, are as follow. A Juice being driven directly thro a full, conic or cylindric, elaſtic or rigid Canal; if its Courſe be from a wider to a narrower Part, or if it have any thing to oppoſe its Motion, will endeavour to ſtretch the Sides of its Canal according to the Axis of its Length. This muſt be the Caſe, every where in the Body, except, perhaps, in the Veins and Receptacles. By this *Niſus*, or Endeavour, how weak ſoever, continually repeated, the Veſſels will be inſenſibly lengthen'd out; and in lengthning, will be made more and more ſlender. Hence the laſt Extremities of the Veſſels, which in Man are extremely ſmall, are continually ſtretch'd and rendred leſs and leſs coherent, *i. e.* ſtill nearer and nearer to Diſſolution; and thus at length will they cohere ſo weakly, as ſcarce to differ from Fluids.

While ſuch Motion goes on, therefore, and the Propulſion is continued, there will, of neceſſity, happen theſe two things: Firſt, the outmoſt Particles of the minuteſt Tubes being torn off, will again be converted into a kind of Humour, what part of the Body ſoever they ſtick in. Secondly, the ſmalleſt Particles, which by their Union compoſed the ſlendereſt *Fibrillæ*, will be ſo ſeparated from each other, as to leave open Interſtices in thoſe Places, where, before, they cohered. Both theſe Effects will be produced at all times, and in all parts of the Body, ſo long as Life continues; eſpecially where Nature is ſtrong, and the Actions of the Body violent. But the ſame Humour whereby theſe Effects are produced, containing abundance of Particles ſimilar to thoſe thus ſeparated and loſt, conveys and applies them to thoſe Interſtices, by that very *Impetus* whereby it en-

endeavours to diſtend the Canals; and thus intercepted, at length, it forms, adapts, and faſtens them, ſo as to adhere in the ſame manner as the former.

The Matter, Preparation, Application, Energy of Motion, ſtill remaining the ſame; what from time to time is loſt, is thus preſently reſtored; and the Solids continue in the ſame State as before, *i. e.* they are perpetually *nouriſh'd*, and ſupply'd, and preſerv'd.

In this the Creator's Wiſdom is very conſpicuous; in that the ſame Power which inevitably deſtroys, does repair again at the ſame time, and by the ſame Action; and that the greater the Loſs is, the more copious is the Supply: and laſtly, that thoſe Parts, firſt ſpent in the Action of the Body, are the firſt reſtored.

Further, 'tis evident that the newer, the more tender, and the nearer the moving Cauſe theſe Veſſels are, the more eaſily will they be lengthen'd, diſtended, deſtroy'd and repair'd: Our Bodies, therefore, the nearer to their Origin, the more do they grow. For, the Action ſtill continuing, the greater Veſſels become more extended by their Fluid; and at the ſame time the ſmaller, whereof the Membranes or Coats of the larger are compoſed, are compreſs'd, dried, and at laſt concreted, and grow up; whence ariſes a Firmneſs, indeed, of the Fibres, but a Loſs of the Veſicles.

Thus what were, formerly, Veſſels, commence mere hard Ligaments; and thus the Fluids once fix'd, the ſeveral Veſſels coaleſce: from the Concurrence of theſe Cauſes ariſe the Strength, Hardneſs, Rigidity, and Thickneſs of the ſolid Parts.

Hence, the Number of Veſſels is greateſt in Embryo's, and as Age comes on, ſenſibly diminiſhes; and hence it is that their Weakneſs conſtantly declines, and their Strength and Firmneſs increaſes. In young People, therefore, the Quantity of Humours is redundant, and greatly exceeds the Solids: In old Men, the Solids exceed the Fluids. And hence we ſee the Reaſon, Manner, and Appearance of Growth, State, Declenſion, and at length of Death from pure old Age. See DEATH.

A Perſon who conſiders this Account, and compares it with what is actually obſervable in the Body, will find every Circumſtance to obtain: Thus the whole *Cuticula* is every where, and at all times, conſtantly deſquammating, peeling off, and again renewing; and thus the Hair, Nails, Teeth, continually rubb'd, torn, and wore off, come again; Parts taken off from the Veſſels, and the Bones, ſoon grow again. And the Sordes, or Filth, rubb'd off from the Extremities of the Veſſels, when examin'd by a Microſcope, or diluted and view'd in Water, appear plainly to conſiſt both of ſolid and fluid Parts; and thoſe carry'd off by Waſhing, Shaving, *&c.* are the ſame.

Hence, too, we ſee that a general Increaſe of the Bulk of the Body, with regard to Habit, as in fat, fleſhy, brawny Perſons, does not ariſe from any Increaſe of the Solids, but by their Extenſion into larger Cavities, crowded with ſtagnant Humours. And hence Fatneſs becomes hurtful, as it loads, weakens, and ſuffocates. See FATNESS.

Whence ariſes a very conſiderable Diſtinction between *Nutrition* and *Repletion*; to which a Phyſician muſt have eſpecial regard: the one ſtrengthening and condenſing the Veſſels, the other weakening, looſening, and extending the ſame. See PLENITUDE.

Hence, laſtly, we ſee why the Fabric of the Solids is not deſtroy'd by the contain'd Fluids; how our Machine comes to ſubſiſt ſo long; why, when a Nerve is corrupted, the *Nutrition* of that part it belongs to, ceaſes; and why the ſame obtains in an Artery: Why in an Embryo there are no Solids, in a *Fœtus* very few, in old Men a great deal; and why even the Nerves, Tendons, Arteries, and Receptacles, become firſt Cartilaginous, then Bony.

NUTRITION *of Plants.* See VEGETATION, SAP, CIRCULATION, *&c.*

NUTRITION, in Pharmacy, a kind of Preparation, conſiſting in the gradual Mixture of Liquors of different Natures, by ſtirring them together till they have acquired a thick Conſiſtence; as in making *Butter of Saturn*, or *Unguentum Nutritum.*

NUTRITIOUS *Juice.* See NUTRITION.

NUTRITIVE *Faculty.* See FACULTY.

NUTRITUM, a deſiccative, cooling, Unguent, prepared by the Agitation and *Nutrition* of ſome Preparation of Lead, with Oil and Vinegar, or the Juice of *Solanum*, in a Mortar. See UNGUENT.

NUX *Vomica*, the Fruit, or, as ſome will have it, the Stone of the Fruit of a Tree, growing in ſeveral Parts of *Egypt*, or in the Iſlands *Timor* and *Ceylon*.

It is round and flat, of a grey Mouſe-colour without, and various Colours within; ſometimes yellow, ſometimes white, ſometimes brown. The largeſt, whiteſt, neweſt, and cleaneſt, are the beſt.

This Drug is an aſſured Poiſon for all Animals except Men. See POISON.

On the contrary, *Hermannus*, *Botanic* Profeſſor at *Leyden*, who has wrote expreſly on it, ſays that thoſe of *Timor* and *Ceylon* are excellent Sudorifics, and to be rank'd among Diuretic Medicines.

NUX *Galla.* See GALLS.

NUX *Indica*, the Fruit of the Tree call'd *Cacao*. See CACAO.

NYCTAGES, a Religious Sect, diſtinguiſh'd by their inveighing againſt the Practice of waking in the Night to ſing the Praiſes of God; in regard, ſaid they, the Night was made for Reſt.

The Word comes from the *Greek* νύξ, *Night.*

NYCTALOPIA, or *Nocturna Cæcitas*, a Diſeaſe of the Eyes, which prevents their ſeeing, when the Sun is ſet, and the Light begins to diminiſh. See BLINDNESS. *Celſus* calls it *Imbecilitas Oculorum.*

Others will have the *Nyctalopia* to be properly a Diſeaſe, that prevents the ſeeing by Day, not by Night: which is the ſenſe *Hippocrates* uſes it in; and in which ſenſe it is ſuppos'd owing to the Spirits being too much diſſipated in the Day, but collected by Night. See SIGHT.

However, in the general, any Diſeaſe which prevents the ſeeing at any particular time, when others ſee, is call'd *Nyctalopia.*

Boerhaave ſays, the *Nyctalopia* conſiſts in this, that the *Uvea* is immovable, and at the ſame time very open.

The Word comes from the *Greek* νυξ, *Night*, and αλωπηξ, *Fox*; this Animal being ſaid to ſee leſs by Day than Night.

In the *Philoſophical Tranſactions*, we have an Inſtance of a *Nyctalopia*, or *Nocturna Cæcitas*, in a Youth of twenty Years of Age; who had been affected with it as long as he could remember. Dr. *Parham* aſſures us, he had a good Sight all Day, and diſtinguiſh'd Objects at all Diſtances as well as any body; but when Twilight once came, he was quite blind, and ſaw nothing at all; nor could make ſcarce any uſe either of Fire, Candle, or Glaſſes. Yet his Eyes, upon Examination, ſhew'd nothing at all amiſs; nor had he any Vertigo, or other Diſeaſe of the Head. The Cloudineſs, as he himſelf told the Doctor, uſed to come gradually on him like a Miſt, as Day-light declined. He always ſaw alike in all Aſpects of the Moon, felt no Pain by Fire or Candle-light, and was the ſame in Summer as Winter.

Dr. *Briggs* accounts for the Caſe thus: "As Vapours are "raiſed in great quantity during the Day-time; which be- "ing condenſed by the Coldneſs of the Evening, fall a- "gain, and render the Air, near the Earth, the thicker: "So, perhaps, the Humours in the Eyes of this Youth may "be affected; and, in the Evening, rendred groſſer, and "more turbid. As we ſee in Urines, which frequently "grow clear, or turbid, as Heat or Cold is apply'd to "them. By ſuch Thickneſs or Spiſſitude of the Humours, "the Rays being either reflected, or too much refracted, do "not reach the *Retina*, or at leaſt ſtrike it too feebly."

NYCTELIA, *Orgya*, or Feaſts in honour of *Bacchus*; ſo call'd, becauſe held in the Night time. See ORGYA.

A great part of the Ceremony conſiſted in running thro' the Streets, with Bottle and Glaſs in hand, drinking: but there was no Impurity unpractis'd in them.

The *Athenians* celebrated the *Nyctelia* every three Years, at the beginning of the Spring.

NYMPH, NYMPHA, in Mythology, a ſort of Heathen Divinity, ſuppoſed to preſide over Waters, Rivers, and Fountains. See GODDESS.

Some extend the Word further, and comprize under it the Goddeſſes of the Fountains, Foreſts, and Trees; call'd particularly *Oreades*, *Dryades*, and *Hamadryades.*

Meurſius is of opinion, the *Greeks* borrow'd their Notion of theſe Divinities from the *Phœnicians*; for *Nymphæ* in their Language ſignifying *Soul*, the *Greeks* imagin'd, that the Souls of the antient Inhabitants of *Greece* were become *Nymphs.* Particularly the Souls of thoſe who had inhabited the Woods, were call'd *Dryades*; thoſe who had inhabited the Mountains, *Oreades*; thoſe who had dwelt on the Sea-Coaſts, *Nereades*; and laſtly, thoſe who had their Place of Abode near Rivers, or Fountains, *Naides.* See DRYADES, OREADES, *&c.*

The Word *Nymph*, according to ſome other Authors, comes from the *Greek* νυμφη, a *Bride*, or Woman newly marry'd; and was apply'd to theſe Deities, becauſe repreſented under the Figure of young Maids.

Others derive *Nymph* from *Lympha*, Water; in regard of their inhabiting near the Waters.

NYMPHA, among Naturaliſts, a Term ſometimes uſed for the little Skin wherewith Inſects are encloſed, both while they are in the Egg, and after they have undergone an apparent Transformation. See INSECT.

Others uſe the Word *Nympha* for the Change itſelf of the *Eruca*, or Worm, into a flying Animal, after having laid aſide its former Skin; which, as *Swammerdam* ſhews, is not effected by any proper Transformation, but by ſimple Accretion, or Growth of the Parts, whence the Skin

is by degrees ſtretched, and at laſt burſts; as is the Caſe, likewiſe, in Chickens and Frogs. But the generality of Authors uſe *Nymphæ* for the Inſects themſelves, while they have yet only the Form of Worms or Maggots.

The Word properly ſignifies *Bride*, or *new-married Woman*; it being now, when it has laid aſide its former Skin, that it begins to ſhew all its Parts diſtinctly. In this Change it loſes its Motion for a while, as when in the Egg; ſo that theſe Inſects are twice in their *Nympha* State; firſt, in the Egg, which is their firſt *Nympha*; and again in this Change, which is their ſecond.

The only difference between them conſiſts in this, that in the latter the Members appear more diſtinctly. *Swammerdam* calls this latter *Nympha Aurea* or *Aurelia*, and *Chryſalis*; and the other ſimply *Nympha*. The *Nymphæ* are otherwiſe diſtinguiſh'd into *Nympha Animal Vermiformis*, and *Vermiculus Oviformis*.

The Eggs of Bees firſt change into Maggots; theſe Maggots, incloſ'd in their *Alveoli* or Cells, are tranform'd into *Aureliæ* or *Nymphæ*, and twelve Days afterwards come out Bees.

NYMPHÆ, or ALÆ, in Anatomy, are two ſoft, ſpongy, red Bodies, deſcending from the Top of the *Clitoris* to the Sides of the urinary Paſſage; thus reaching to about the middle of the Orifice of the *Vagina:* where they grow leſs and leſs, till they diſappear. See CLITORIS, *&c.*

Their Breadth is uncertain, uſually in Maids half a finger: ſometimes they are larger, and are capable of being diſtended to a great degree; ſo as to hang a good way out of the Body: whence, in ſome, theſe, as well as the *Clitoris*, have been forced to be cut. See NYMPHOTOMIA.

The Uſe of the *Nymphæ* is, by ſwelling in the Act of Coition, to embrace the *Penis*, and by their Senſibility to affect the Woman, and mutually invite to Procreation. See GENERATION.

Their Subſtance is very ſpongy, compos'd of Membranes, and Veſſels looſely cohering, and therefore diſtendible.

NYMPHÆUM, among the Antients, a public Hall, or Building, magnificently adorn'd and diſpos'd for Banqueting and Entertainment; where thoſe who wanted Conveniencies at home, held their Marriage-Feaſts, *&c.*

Some Authors rather take the antient *Nymphæum* for a Grotto, adorn'd with Statues, Jets, and other Ornaments; and that it had its Name, by Corruption, from *Lymphæum*, of *Lympha*, Water: In which ſenſe it muſt have been a public Bath.

The Word comes from the *Greek* νυμφη, *Spouſe*.

NYMPHOMANIA, in Medicine, the ſame with *Furor Uterinus*. See UTERINUS.

NYMPHOTOMIA, in Chirurgery, a Retrenchment or Cutting off part of the *Nymphæ*, when they are ſo large and tumid, as to prevent the Conſummation of Marriage, or render it very difficult. See NYMPHÆ.

The *Egyptians*, *Galen* obſerves, frequently practis'd the *Nymphotomia*; but in our Parts of the World, it is rarely found neceſſary.

When it happens to be ſo, the Caſuiſts give their Judgment, that the Woman is oblig'd to undergo it.

The *Nymphotomia* is properly the Circumciſion of Women. See CIRCUMCISION.

O.

O.

O, The fourteenth Letter of the Alphabet; and the fourth Vowel. See LETTER and VOWEL.

The Grammarians call it a close Vowel; becauſe pronounced in ſhutting the Mouth.

Among the *Latins*, the *O* bore ſo great an Affinity with the *U*, that they frequently confounded them; writing *Conſol*, and pronouncing *Conſul*. See *Gruter's Inſcript.*

Thus, alſo, they wrote *Aequom* for *Æquum*, *Aorelius* for *Aurelius*, *Compaſcuos*, *Duomvir*, &c.

The *Greeks* had two *O's*, *viz. Omicron*, *o*, and *Omega* *ω*; the firſt pronounced on the tip of the Lips, with a ſharper Sound; the ſecond in the middle of the Mouth, with a fuller Sound, equal to *oo* in our Language. The long and ſhort Pronunciation of our *O* are an Equivalent to the two *Greek* ones; the firſt as in *obey*; the ſecond as in *ſuppoſe*.

O, among the Antients, was a Numerical Letter, ſignifying Eleven; as in the Verſe,

O Numerum geſtat qui nunc undecimus extat.

When a Daſh was added at top, as $\overline{O}$, it ſignify'd eleven Millions.

Among the *Iriſh*, the Letter *O* at the beginning of the Name of a Family, is a Character of Dignity, annexed to great Houſes. Thus in the Hiſtory of *Ireland*, we frequently meet with the *O Neals*, *O Carrols*, &c. conſiderable Houſes in that Iſland.

Cambden obſerves, that 'tis the Cuſtom of the Lords of *Ireland*, to prefix an *O* to their Names, to diſtinguiſh them from the Commonalty.

A Majuſcule *O*, in Muſic, is a Note call'd by us *Semibreve*; by the *Italians*, *Circulo*; making what they call *Tempo perfetto*. See NOTE.

The Antients uſed *O* as a Mark of triple Time; from a Notion that the Ternary, or Number 3, was the moſt perfect of Numbers, and therefore properly expreſs'd by a Circle, the moſt perfect of Figures.

O *Nt.* in the Exchequer. As ſoon as a Sheriff enters a Perſon into his Account for Iſſues, Amerciaments, and mean Profits; the Practice is to mark on his Head *O Nt*, which ſignifies, *Oneratur niſi habeat ſufficientem Exonerationem:* and immediately he becomes the King's Debtor, and a *Debet* is ſet on his Head.

Upon this the Parties become Debtors to the Sheriff, and are diſcharg'd to the King. See SHERIFF.

OAK-*Balls*, OAK-*Apples*, or OAK-*Cones*, in Natural Hiſtory, a kind of *Galls*, or Excreſcencies ariſing out of the *Oak*.

For their *Generation* and *Uſe*, ſee GALLS.

OAKHAM, OAKAM, or OAKUM, in the Sea-Language, denotes the Matter of old Ropes untwiſted, and pull'd out again into looſe Hemp, like Hurds of Flax, to be uſed in the Calking of Ships. See CALKING.

OAR, or rather ORE, in Natural Hiſtory, the Mineral Glebe, or Earth dug out of Mines, to be purify'd, and the Metalline Parts procured, and ſeparated from the ſame. See MINE and METAL.

The *Oar* is frequently call'd the *Mineral*; and among the Antients, *Marchaſite*; tho' the Moderns affix another Idea to that Name. See MINERAL and MARCHASITE.

OAR, in Navigation, an Inſtrument whereby a Boat, Barge, Galley, &c. is row'd, or advanc'd along the Water. See ROWING; ſee alſo BOAT, GALLEY, &c.

In a Veſſel with *Oars*, the Water is to be conſider'd as the Point of Support, or *Fulcrum*; the *Oar* as a Lever; the Boat as the Burden to be moved, and the Rower's Hand the moving Power. See LEVER.

The Burden is to be conſider'd as apply'd to that Point of the Lever, where the *Oar* reſts on the Boat: The greater therefore the Diſtance of the Hand from that Point, and the leſs the Diſtance of the Water from that Point, the greater Effect will the *Oar* have.

OARISTUS, or OARYSTUS, a Term in the *Greek* Poetry, ſignifying a Dialogue betwixt a Husband and his Wife; ſuch as that in the VIth Book of the *Iliad*, between *Hector* and *Andromache*.

Scaliger obſerves, that the *Oariſtus*, properly, is not any particular little Poem, or any entire Piece of Poetry; but a part of a great one. He adds, that the Paſſage now cited in *Homer*, is the only proper *Oariſtus* extant in the antient Poets.

OATH, *Juſ-jurandum*, is uſually defined a Religious Aſſertion, or Aſſeveration; wherein a Perſon invokes the Almighty, renounces all Claim to his Mercy, or even calls for the Divine Vengeance upon himſelf, if he ſpeak falſely.

Some Civilians look on this Definition as too lax, ſince it may agree to Perjury; and would have this eſſential to an Oath, that the thing affirm'd be true. But this is arbitrary. See PERJURY.

An *Oath* is eſteem'd a kind of Civil Medium, between the Perſon that gives it, and him to whom it is given; whereby ſome Controverſy, or other Matter, which could not otherwiſe be determin'd, is brought to an Iſſue.

Its Form, and the Ceremonies it is attended withal, are arbitrary, and various, in various Countries.

The *Oaths* we make to God are call'd *Vows*, and in ſome Caſes *Sacraments*. See VOW and SACRAMENT.

OATH, in a Legal Senſe, is a ſolemn Action, whereby God is call'd to witneſs the Truth of an Affirmation given before one or more Perſons, impower'd to receive the ſame.

Legal Oaths end with, *So help me God*; antiently with, *So help me God at his Holy Dome*, i.e. *Judgment*. See DOMESDAY.

Our Law-Books ſay, this *Oath* is call'd a *Corporal Oath*; becauſe the Party, when he ſwears, touches the Goſpels with his right Hand. But in ſome old Cuſtoms of *Anjou* and *Main*, it appears that Corporal *Oath* was a ſimple Affirmation, or Vow of Faith and Fidelity, made by a Vaſſal who was no Liege, by lifting up his Hand; in contradiſtinction to that made by a Liege Vaſſal, by laying his Hand on the Goſpel. See HOMAGE, FEALTY, VASSAL, &c.

An *Oath* is call'd *Canonica Purgatio*, becauſe allow'd by the Canons; to diſtinguiſh it from *Vulgares Purgationes*, *viz.* by Battle, Fire Ordeal, &c. which the Church always diſallow'd. See PURGATION, ORDEAL, COMBAT, DUEL, CHAMPION, &c.

In ſmall Matters, which the Plaintiff could not prove, or if he could, if his Proof were ſet aſide, the Defendant might purge himſelf by his own *Oath*; which was call'd *Jurare propria Manu*.

But in Matters of more weight, he was to bring other credible Perſons, uſually of the ſame Quality with the Plaintiff, to ſwear that they believed the Defendant had ſwore the Truth.

Theſe were call'd *Sacramentales*; and their Number was greater or leſs, according to the Quality of the Defendant, and the Nature of the Thing in queſtion. Hence, *Jurare duodecima* Manu.

OATH is alſo uſed for a ſolemn Promiſe faithfully to execute or obſerve ſomething. Tryals in Common Law depend on Twelve, or Twenty-four Men, who take their *Oaths* to declare the Truth, as it ſhall appear to them. See JURY.

In this ſenſe we ſay *State Oaths*; the *Oath of Supremacy*, *Oath of Allegiance*, *Oath of Abjuration*. See ALLEGIANCE, SUPREMACY, &c.

At the meeting of a new Parliament, the Commons, all, take the *Oaths* of Allegiance, Supremacy, and Abjuration. See PARLIAMENT.

Kings and Princes ſwear to the Performance of the Treaties they make: Tho, antiently, they did not ſwear of themſelves; but others ſware in their Name.

Thus in a Treaty in 1177, between the Emperor *Frederic Barberoſa*, *Roger* King of *Sicily*, Pope *Alexander* III. and the Cities of *Lombardy*; the Count *de Dieſſe*, by the Emperor's Order, ſwore, upon the Soul of that Monarch, that he would faithfully obſerve the Peace; and, at the ſame time, *Romuald* Archbiſhop of *Salerna*, and Count *Roger*, ſwore, on the Goſpel, that when the Emperor's Meſſengers ſhould arrive in *Sicily*, King *Roger* ſhould procure ſome of his Lords to ſwear for him.

OAZY, or OARY *Ground*; ſo the Seamen call ſoft, ſlimy, or muddy Ground.

OBEDIENCE, OBEDIENTIA, *Canonical* OBEDIENCE. See CANONICAL.

Obedientia, in our antient Cuſtoms, was uſed in the general, for every thing that was enjoyn'd the Monks by the Abbot.

In a more reſtrain'd ſenſe, *Obedientia* was uſed for the Farms which belong'd to the Abbey, to which the Monks were ſent *vi ejuſdem Obedientiæ*, either to look after the Farms, or collect the Rents.

Hence, alſo, thoſe Rents themſelves were call'd *Obedientiæ*.

OBELISK, OBELISCUS, a quadrangular Pyramid, very ſlender, and high; rais'd as an Ornament, in ſome public Place, to ſhew ſome Stone of enormous Size, and frequently charg'd

charg'd with Inſcriptions and Hieroglyphics. See MONUMENT.

The difference between *Obeliſks* and Pyramids, according to ſome, conſiſts in this, that the latter have large Baſes, and the former very ſmall ones.

Tho *Cardan* makes the difference to conſiſt in this, that *Obeliſks* are to be all of a piece, or conſiſt of a ſingle Stone, and Pyramids of ſeveral. See PYRAMID.

The Proportions of the Heighth and Thickneſs are nearly the ſame in all *Obeliſks*; that is, their Height is nine, or nine and a half, ſometimes ten times their Thickneſs; and their Thickneſs, or Diameter a-top is never leſs than half, nor greater than three fourths of that at bottom.

This kind of Monument appears very antient; and we are told was firſt made uſe of to tranſmit to Poſterity the principal Precepts of Philoſophy, which were engraven in hieroglyphical Characters hereon.

In After-times they were uſed to immortalize the Actions of Heroes, and the Memory of Perſons beloved.

The firſt *Obelisk* we know of, was that raiſed by *Ramiſes*, King of *Egypt*, in the time of the *Trojan* War. It was 40 Cubits high, and, according to *Herodotus*, employ'd 20000 Men in the Building. *Phius*, another King of *Egypt*, raiſed one of 45 Cubits; and *Ptolemy Philadelphus* another of 88 Cubits, in memory of *Arſinoe*.

Auguſtus erected one at *Rome* in the *Campus Martius*, which ſerv'd to mark the Hours on a horizontal Dial drawn on the Pavement. See DIAL.

F. *Kircher* reckons up 14 *Obeliſks* celebrated above the reſt, *viz.* that of *Alexandria*, that of the *Barberins*, thoſe of *Conſtantinople*, of the *Mons Eſquilinus*, of the *Campus Flaminius*, of *Florence*, of *Heliopolis*, of *Ludoviſio*, of S. *Mahut*, of the *Medici*, of the *Vatican*, of M. *Cælius*, and that of *Pamphila*.

The *Egyptian* Prieſts call'd *Obeliſks* the *Sun's Fingers*, becauſe ſerving as Styles, or Gnomons to mark the Hours on the Ground. The *Arabs* ſtill call them *Pharaoh's Needles*: whence the *Italians* call them *Aguglia*; and the *French*, *Aiguilles*.

Borel derives the Word from the *Greek* ὀβελὸς, a Broach, Spindle, Point, or a kind of long Javelin.

Pliny ſays, the *Egyptians* cut their *Obeliſks* in form of Sun-Beams; and that in the *Phœnician* Language, the word *Obeliſk* ſignifies *Ray*.

OBELISK, in Grammar, is a Character, in form of a Dagger (†) ſerving to refer the Reader to ſome Note, or other Matter in the Margin. See CHARACTER.

OBELUS, in Antiquity, is a little Line, or Stroke, like a Needle; whence its Name, ὀβελὸς, *Needle*.

The Word is chiefly uſed in ſpeaking of *Origen's Hexapla*; wherein he diſtinguiſhes, with an Aſterisk, or Star, the Supplements he makes to the Text of the *Septuagint*, where it falls ſhort of the *Hebrew* meaning; and with an *Obelus*, or little Line (—) thoſe Places where the *Septuagint* had any thing not in the *Hebrew*. See HEXAPLA.

St. *Jerom* ſays, the *Obelus* was only uſed in thoſe Places where ſomething was to be retrench'd from the *Septuagint*, as ſuperfluous; and the Aſterisk in thoſe that were defective.

Theſe Marks frequently occur in antient Manuſcripts. Uſually the *Obelus* is accompanied with two Dots; the one above, the other underneath, as (÷); and the Aſterisk, a St. *Andrew's* Croſs, canton'd with four Points.

OBESITY, Fatneſs, in Medicine, the State of a Perſon too much charged with Fat, and Fleſh; otherwiſe call'd *Corpulency*. See FAT.

Etmuller defines it to be ſuch an increaſe both of the Venter and Limbs, as impedes the Actions of the Body, eſpecially Motion and Reſpiration.

Obeſity, *Boerhaave* obſerves, does not conſiſt in the Solids of the Body being increaſed, but by their being diſtended to a greater Pitch by the abundance of Humours collected in them. See SOLID, &c.

Hence, *Obeſity* occaſions ſeveral Diſeaſes; uſually Apoplexies.

It was held Infamous among the *Lacedemonians*. Hiſtory tells us of a *Spaniard* who had been ſo exceedingly Fat, that when he became lean again, his Skin would make ſeveral turns or folds quite around him. *Sennertus* mentions a Man that weigh'd 600 Pounds.

Etmuller affirms, that there is no better Remedy againſt *Obeſity* than *Acetum Scilliticum*. *Borel* recommends the Chewing of Tobacco; which *Etmuller* diſſuades, leſt it induce a Conſumption.

OBJECT, in Philoſophy, ſomething apprehended, or preſented to the Mind, by Senſation, or by Imagination. See SENSATION and IMAGINATION.

Or, OBJECT is ſomething that affects us by its Preſence; or ſomething that moves the Eye, Ear, or ſome of the other Organs of Senſe; or, at leaſt, is repreſented to us by the Imagination.

Thus, Ideas are the immediate *Objects* of the Mind in thinking; Bodies, their Relations, Attributes, &c. the mediate.

The word *Object* is derived from the *Latin*, *Objicere*, to preſent to, to ſet before; which is compoſed of *ob* and *jacio*, I lie againſt. Whence the School-Philoſophers define it to be that about which a Power, Act, or Habit, is employ'd. Thus, Good is the *Object* of the Will; Truth of the Underſtanding: So, Colour is the *Object* of Sight; Sound of Hearing, &c. See OBJECTIVE.

There are ſeveral Conditions requiſite to an *Object of Senſe*; as, that it be *Material*; that it be within a certain *diſtance*, of a competent *extent*, its ſenſible Qualities ſufficiently *intenſe*, &c.

'Tis the *Object* that reflects or emits the Rays of Light which occaſion Viſion. *Objects* of themſelves are inviſible; we only ſeem to perceive them becauſe the different Texture of their Surface, diſpoſing them to reflect differently colour'd Rays, occaſion in us ſeveral Senſations of Colour, &c. which we attribute to them. See COLOUR, VISION, &c.

The *Objects* of the Eye, or of Viſion, are painted on the Retina; tho not erect, but inverted, according to the Laws of Optics. This is eaſily ſhewn from *Cartes's* Experiment of laying bare the vitreous Humour on the back part of the Eye; and clapping over it a bit of white Paper, or the Skin of an Egg, and then placing the fore-part of the Eye to the Hole of a darkned Room.

By this means is had a pretty Landskip of the *Objects* abroad, painted invertedly on the back of the Eye. See RETINA.

How, in this Caſe, the *Objects* which are painted inverted ſhould be ſeen erect, is matter of Controverſy. See SEEING.

The Schoolmen diſtinguiſh *Objects* into *next*, *proxima*, which are thoſe the Power, or Habit is immediately employ'd on; in which ſenſe, Colour is the next *Object* of Sight: And *remote*, which are thoſe only perceiv'd by means of the former; in which ſenſe, the Wall is the remote Object of Sight, ſince we only ſee it by means of its Colour, &c.

Hence it appears that there is a ſort of ſubordination of *Objects*. But, note, that a *next Object*, with regard to a *remote* one, is properly a Subject, not an *Object*. See SUBJECT.

They alſo diſtinguiſh OBJECTS *per ſe*, which are what properly move or affect our Senſes; and theſe are the ſenſible Qualities: And *Objects per Accidens*, which are *Subſtances*, and only affect us by being inveſted with ſenſible Qualities. See QUALITY and SUBSTANCE.

Again, they diſtinguiſh between *Common* OBJECTS, which are ſuch as affect divers Senſes, as are Motion, Figure, &c. And *Proper* OBJECTS, which only affect one. See SENSE.

OBJECT-*Glaſs* of a Teleſcope, or Microſcope, is the Glaſs placed at that end of the Tube which is next the *Object*. See TELESCOPE, MICROSCOPE, and GLASS.

To prove the Regularity and Goodneſs of an OBJECT-*Glaſs*.

Strike two concentric Lines on a Paper, the one having its diameter the ſame with the Breadth of the *Object-Glaſs*; the other half that Diameter: Divide the inner Circumference into ſix equal parts, and making ſix fine ſmall Holes therein with a Needle; cover one ſide of the Glaſs with this Paper. Then expoſing it to the Sun, receive the Rays that paſs thro theſe ſix Holes, on a Plane, at a juſt diſtance from the Glaſs; and by withdrawing or approaching this Plane, from or to the Glaſs, we ſhall find whether the Rays that paſs thro theſe ſix Holes, unite exactly together at any diſtance from the Glaſs; if they do, we may be aſſured of the Regularity of the Glaſs; that is, of its juſt Form; and at the ſame time we obtain exactly the Glaſs's Focal Length.

Indeed, there is ſcarce any better way of proving the Excellency of an *Object-Glaſs*, than by placing it in a Tube, and trying it with ſmall Eye-Glaſſes at ſeveral diſtant Objects; for that *Object-Glaſs* that repreſents Objects the brighteſt, and moſt diſtinct, that bears the greateſt Aperture, and moſt convex, and concave Eye-Glaſs, without colouring or hazineſs, is the beſt.

To prove whether Object-Glaſſes *be well center'd.*

Hold the Glaſs at a due diſtance from the Eye; and obſerve the two reflected Images of a Candle; where thoſe Images unite or coaleſce, there is the true Centre. If this be in the middle, or Central-Point of the Glaſs, 'tis truly centred.

OBJECT is alſo uſed for the Matter of an Art or Science; or that about which it is employ'd: in which Senſe, the Word coincides with *Subject*. See SUBJECT, &c.

The School-Philoſophers diſtinguiſh divers kinds of *Objects* in the ſame Science, *viz.*

Material OBJECT, which is the thing itſelf that is conſider'd, or treated of: And thus it is the human Body is the *Object* of Medicine.

Formal

Formal OBJECT, is the manner of considering it: And thus the same human Body consider'd with a view to the healing it, is the *Formal Object* of Medicine.

OBJECTUM *quod complexum*, of an Art, is the aggregative Whole; or a Collection of all the objective Conclusions, or Consequences found in the Science. *Objectum quod incomplexum*, is a Collection of all the Subjects of the objective Conclusions. Thus, *Therefore Air is elastic*, is the complex Object of one Branch of Physics; and *Air* itself, or the Subject of the Conclusion, the incomplex Object of the same Branch.

OBJECTUM *quo Complexum*, is a Collection of all the objective Antecedents of the Science. *Objectum quo incomplexum*, is a Collection of all the Mediums, or Arguments contain'd in those Antecedents, and whereby those Conclusions are proved.

In these Cases the *Object* is said to be *complex*, inasmuch as it includes both an Affirmation and Negation; and *incomplex*, as it includes neither: *Quod*, as being that which (*quod*) is shewn in the Science; and *quo*, as being that whereby (*quo*), the Conclusions therein are proved.

They have here, also, an *Object per se*, and *per accidens*; *Objectum adæquatum*, and *inadæquatum*; *Attributionis*, and *Attributum*.

OBJECTION, in Reasoning, something urged to overthrow an Opinion; or, a Difficulty raised against an Allegation, or Proposition of a Person we are disputing withall.

The answering of *Objections* comes under that Branch of Oratory, or that Part of an Oration call'd the *Confirmation*, or *Confutation*. See CONFIRMATION and CONFUTATION.

OBJECTIVE, *Objectivus*, is used in the Schools in speaking of a thing which exists no otherwise than as an Object known. The *Esse*, or Existence of such thing is said to be *Objective*. Others call it *Ratio Objectiva*. See OBJECT.

The Word is also used for the Power or Faculty by which any thing becomes intelligible; and for the Act itself, whereby any thing is presented to the Mind, and known.

Hence a thing is said *to exist* OBJECTIVELY, *Objectivè*, when it exists no otherwise than in being known; or in being an Object of the Mind. See EXISTENCE.

This, some will have to be a real *Esse*; others deny it. See ESSE.

OBIT, in our antient Customs, was a funeral Solemnity, or an Office for the Dead; commonly performed when the Corps lay uninterr'd in the Church.

OBIT is also an Anniversary-Office, or Mass, held yearly in the *Romish* Church, on a certain day, in Memory of a Person deceased. See MASS and ANNIVERSARY.

One of the most antient *Obits* in *Europe*, is that of King *Childebert*, founded in the Abby of *St. Germains Desprez*; and said on the Eve of St. *Thomas*'s Day.

The Tenure of *Obit*, or Chauntry Lands held of the Subjects, is decreed to be extinct with us, by *Stat.* 1 *Edw.* 6. See TENURE, SERVICE, &c.

OBITUARY, a Register, wherein are wrote the Names of the Dead, and the Days of their Burial. See REGISTER.

These in some Places are call'd *Mortuaries*. See MORTUARY.

The Term is sometimes also used for a Book containing the Foundation, or Institution of the several *Obits*; but this is more frequently call'd *Martyrology*. See MARTYROLOGY.

OBLATA properly signifies things given, or offer'd, particularly to the King, by any of his Subjects. See OFFERING.

In the Exchequer, *Oblata* signifies old Debts; brought, as it were, together, from preceding Years, and put to the present Sheriffs Charge.

These are thus call'd, by reason the *Oblata*, or Offerings were so strictly look'd to in the Reigns of King *John* and *Henry* III. that they were enter'd into the Fine-Roll, under the Term *Oblata*, and if not paid, put in charge to the Sheriff.

OBLATI, antiently, were secular Persons, who resign'd themselves, and their Estates to some Monastery, and were admitted as Lay-Brothers. See LAY-BROTHER.

There were some of these *Oblati*, properly call'd *Donati*, who gave their Persons, their Families, and Effects; and even enter'd into a kind of Servitude themselves and their Descendants. They were admitted by putting the Bell-Ropes of the Church around their Necks, and, as a Mark of Servitude, a few Pence on their Heads.

These *Donati* took Religious Habits, but those different from the Monks.

In the Archives of the Abby of St. *Paul de Verdun*, is a Permission given in 1360, to a Man of that Abby to marry a Wife, on condition, that of the Children arising from the Marriage, one half should belong to the Abby in quality of *Oblati*; the other half to the Bishop. This kind of *Oblati* are said to have taken their first Rise in the Eleventh Century.

In the earlier Times, those only were call'd *Oblati* whom their Parents engaged from their Infancy to the Monastic Life. Those who embraced it themselves, when at an Age capable of Choice, were call'd *Converts*.

The *Oblati* made no Profession, yet kept the Celibate, lived in Obedience to the Superiors, and did the drudgery of the Monastery; yet they differ'd from Servants, who were allow'd to marry. The *Oblati* and *Donati* were Servants of Devotion, as the others were of Condition.

Helyot says, the *Oblati* differ'd from Converts, inasmuch as the latter made the Profession, and wore the Habit.

OBLATI were also in *France* a kind of Lay-Monks, antiently placed by the King in all the Abbeys and Priories in his Nomination; to whom the Religious were obliged to give a Monk's Allowance, on account of their ringing the Bells, and sweeping the Church and the Court.

These Places were usually fill'd with lame Soldiers and Invalids, some of whom had Pensions or Benefices without any Duty; but these *Oblati*, with their Pensions, have since been all removed to the Hotel of the Invalids at *Paris*.

OBLATIONS, OFFERINGS, properly denote *Sacrifices*, or things offer'd to God. See SACRIFICE.

In the Canon Law, *Oblations* are defined to be any thing offer'd, by godly Christians, to God and the Church, *i. e.* to the Priests, whether they be moveable or immoveable.

Oblations were antiently of various kinds, *viz. Oblationes Altaris*, which the Priests had for saying Mass; *Oblationes Defunctorum*, given by the last Wills of the Faithful to the Church; *Oblationes Mortuorum*, those given by the Relations of the Dead, at Burials; *Oblationes Pœnitentium*, those given by Penitents; and *Obligationes Penticostales*. See PENTICOSTALES.

Till the fourth Century, the Church had no other fixed Revenues, nor any other means of Subsistence, but *Oblations*. See TYTHE.

OBLIGATION, an Act whereby a Person engages, or binds himself, or is bound by another, to do something; as to pay a Sum of Money, to be Surety for any one, &c.

The Acceptance of a Bill of Exchange is a kind of *Obligation*. See BILL.

The exacting of Interest on a Sum due by a simple *Obligation*, is accounted *Usury*. See USURY.

All *Obligations* arise from Contracts, or *quasi* Contracts; from Crimes, or *quasi* Crimes; and in the *Roman* Law, were either *Civil*, or *Prætorian*; *i. e.* either approved by the Civil Law, or introduced by the Prætor.

There are three kinds of *Obligations*; *Natural*, *Civil*, and *Mixed*.

Natural OBLIGATIONS are founded on the mere Bond of natural Equity, without any Civil Necessity, and without producing any Action of Constraint: Such is the *Obligation* of a Minor.

Civil OBLIGATION, is that supported on Civil Authority alone, and which induces a Constraint, without any Principle or Foundation in natural Equity: Such is the *Obligation* of a Man condemn'd unjustly.

Lastly, *a mixed* OBLIGATION, or an *Obligation* both Natural and Civil, is that which being founded in natural Equity, is further confirm'd and enforced by Civil Authority.

There are Personal *Obligations*, Hypothecary *Obligations*, *Obligations* of Goods, others by Body, *Obligations* solidary, others for a Part or Portion.

OBLIGATION, in a more strict Sense, is an Instrument, or Bond, containing a Penalty with a Condition annexed, for payment of Money at a certain time; or for Performance of Covenants, &c.

A Bill is commonly without a Penalty, and without Condition; yet a Bill may be *obligatory*. *Coke on Littl.*

Till the Conquest, Writings were render'd *Obligatory* by certain Marks of Gold Crosses, &c. The *Normans* first introduced the Custom of making Bills and *Obligations* with a Print or Seal in Wax set to every one's Signet, attested by three Witnesses. See SIGNATURE, SEAL, &c.

OBLIQUATION, in Catoptricks. *Cathetus of Obliquation*, is a right Line drawn perpendicular to a Mirror, in the Point of Incidence, or Reflexion of a Ray. See CATHETUS, MIRROR, &c.

OBLIQUE, in Geometry, something *a-slant*, *in-direct*; or that deviates from the Perpendicular. See PERPENDICULAR.

OBLIQUE *Angle*, in Geometry, is an Angle that is either acute, or obtuse; *i. e.* any Angle, except a right Angle. See ANGLE.

OBLIQUE-*angled Triangle*, is that whose Angles are *Oblique*, *i. e.* either obtuse or acute. See TRIANGLE.

OBLIQUE *Line*, a Line which falling on another, makes an *oblique* Angle. See LINE.

A Line falling *obliquely* on another, makes the Angle on one ſide obtuſe, and that on the other, acute.

Oblique *Plains*, in Dialling, are ſuch as decline from the Zenith, or incline toward the Horizon. See Dial-*Plain*.

The Obliquity, or Quantity, of this Inclination, or Reclination, is eaſily found by a Quadrant; it being an Arch of ſome Azimuth, or vertical Circle, intercepted between the Vertex of the Place and of that Plane.

This Azimuth, or vertical Circle, is always perpendicular to the Plane. See Dialling.

Oblique *Percuſſion*, is that wherein the Direction of the ſtriking Body, is not perpendicular to the Body ſtruck; or is not in a Line with its Center of Gravity. See Percussion.

The Ratio an *oblique* Stroke bears to a perpendicular one, is demonſtrated to be as the Sine of the Angle of Incidence to the Radius.

Oblique *Powers*. See Powers.

Oblique *Projection*, in Mechanicks, is that where a Body is impell'd in a Line of Direction, which makes an *oblique* Angle with the Horizontal Line. See Projection.

Oblique *Sphere*, in Geometry, is that whoſe Horizon cuts the Equator *obliquely*; and one of whoſe Poles is rais'd above the Horizon, equal to the Latitude of the Place. See Sphere.

'Tis this Obliquity that occaſions the Inequality of Days and Nights. See Night and Day.

Thoſe who live under an *oblique* Sphere (as we, and all thoſe in the temperate Zone, do) never have their Days and Nights equal; except in the Equinoxes. See Equinox.

Oblique *Aſcenſion*, in Aſtronomy, an Arch of the Equator intercepted between the firſt Point of *Aries*, and that Point of the Equator which riſes together with a Star, &c. in an *oblique* Sphere. See Ascension.

The *oblique* Aſcenſion is numbred from Weſt to Eaſt; and is more or leſs according to the different Obliquity of the Sphere.

Oblique *Deſcenſion*, an Arch of the Equator, intercepted between the firſt Point of *Aries*, and that Point of the Equator, which ſets with a Star, &c. in an *oblique* Sphere; and reckon'd from Weſt to Eaſt. See Descension.

The Difference between the right and *oblique* Aſcenſion, is call'd the *Aſcenſional Difference*. See Ascensional.

To find the Oblique *Aſcenſion and Deſcenſion by the Globe*. See Globe.

Oblique *Sailing*, in Navigation, is when the Ship is in ſome intermediate Rhumb, between the four Cardinal Points; and thus makes an *oblique* Angle with the Meridian, and continually changes both its Latitude and Longitude. See Rhumb.

Oblique Sailing is of three Kinds; *viz. Plain Sailing*, *Mercator's Sailing*, and *Great Circle Sailing*. See Sailing.

The Seamen alſo call the Application of the Method of calculating the Parts of *oblique* plane Triangles, in order to find the Diſtance of a Ship from any Cape, Head-Land, &c. *Oblique Sailing*.

Oblique, *Obliquus*, in Anatomy, is uſed, ſubſtantively, for ſeveral Muſcles of the Head and Eye; particularly, the

Obliquus *Capitis Major*, or *Par* Obliquum *Inferius*, the ſixth Muſcle of the Head; ſo call'd, becauſe ſerving to turn the Head aſide: tho' it has neither its Origin nor Inſertion in the Head. See Head.

It riſes fleſhy from the external Parts of the Spine of the ſecond *Vertebra* of the Neck, and ſwelling into a fleſhy Belly, runs *obliquely* to the tranſverſe Proceſs of the firſt *Vertebra*.

This ſome rank among the Muſcles of the Neck. See Neck.

Obliquus *Capitis Superior*, or *Minor*, the ſeventh Muſcle of the Head, which ſpringing fleſhy from the tranverſe Proceſſes of the ſecond *Vertebra* of the Neck, and aſcending *obliquely*, is inſerted laterally into the *Occiput*.

Others will have its Origin to be in the *Occiput*, where the common Opinion places its Inſertion; its Inſertion they make in the tranſverſe Proceſſes of the firſt *Vertebra*, near that of the ſame Side.

The two *oblique* Muſcles, by pulling the tranſverſe Proceſs, give the Head a ſemi-circular Motion. See Vertebra.

Obliquus *Oculi Superior*, or *Major*, the fifth Muſcle of the Eye. See Eye.

It has its Origin in the upper part of the Orbit; whence tending upwards towards the inward *Canthus* of the Eye, it paſſes thro' a Cartilage on the Bone of the Forehead, call'd *Trochlea*; whence alſo the Muſcle itſelf is call'd *Trochlearis*; thence it is reflected to its Termination in the *Sclerotica*, on the back part of the Ball of the Eye.

When this Muſcle acts, that part of the Ball of the Eye is drawn downwards towards the *Trochlea*, whereby the Pupil is directed downwards, towards the leſſer *Canthus*, and at the ſame time the whole Ball of the Eye ſomewhat outwards.

Obliquus *Oculi Inferior*, or *Minor*, riſes from the external Margin of the lower part of the Orbit, near the inner *Canthus*; whence riſing towards the outward *Canthus*, it terminates near the other.

It draws the Ball of the Eye outwards, and turns its Pupil upward, contrary to the former.

Obliquus *Deſcendens*, or *Declivis*, a very broad Pair of Muſcles of the Abdomen, each covering one half thereof, and part of the Thorax; ſo call'd from the *oblique* Courſe of its Fibres. It ariſes from the two laſt true Ribs and five ſpurious ones; and is indented with the *Serratus Major Anticus* by five or ſix Digitations, each whereof receives a Nerve from the Interſtices of the Rib: It ſprings likewiſe from the Margin of the *Ilium*; and ends in a broad Tendon in the *Linea Alba*.

Beſides the ordinary Uſe aſcribed to it by all Anatomiſts, which is to compreſs the Inteſtines and Bladder; *Cowper* and *Gliſſon* attribute to it another, which is to turn the Trunk of the Body without moving the Feet.

Obliquus *Aſcendens*, or *Acclivis*, lies under the lower part of the former; running with a Courſe juſt contrary, from the lower part upwards. Its fleſhy Fibres have their Origin from the Edge of the *Ilium*, and end at the ſpurious Ribs. It terminates with a large double Tendon in the *Linea Alba*; the upper part whereof creeping over the *Muſculus Rectus*; and the other creeping under it, and joining together at the *Linea Alba*; do, as it were, ſheath the *Rectus*.

Its Uſe is to ſhut and compreſs the Belly, as alſo the Cavity of the *Thorax* in Reſpiration; and it aſſiſts, with its Antagoniſts, the *Deſcendents*, in turning the Body without moving the Legs.

Obliquus *Auris*, lies in the external Part of the Canal of the Aqueduct; whence paſſing upwards and backwards, it enters the *Tympanum*, by a very *oblique* Sinuoſity immediately above the Bony Circle, to which the *Tympanum* is fix'd; and is inſerted into the ſlender Proceſs of the *Malleus*.

Oblique *Caſes*, in Grammar, are all the Caſes of the Declenſions of Nouns, beſides the Nominative. See Case.

OBLIQUITY, that which denominates a Thing *oblique*. See Oblique.

The *Obliquity of the Sphere*, is the Cauſe of the Inequality of Seaſons, of Nights and Days. See Season, &c.

Obliquity *of the Ecliptic*, is the Angle which the Ecliptic makes with the Equator. See Ecliptic.

Meſſ. *Caſſini* and *de la Hire*, make the *Obliquity* of the Ecliptic, by their Obſervations, 23°, 29′. M. *le Chevalier de Louville*, from later Obſervations, makes it 23°, 28′, 41″.

The ſame Author, giving the Hiſtory of the ſeveral Determinations of this *Obliquity*, by all Aſtronomers in all Ages, obſerves, that it conſtantly diminiſhes; and thence takes occaſion to ſuſpect, that the real *Obliquity* of the Ecliptic itſelf may have been diminiſh'd ſince the time of the antient Aſtronomers.

He goes ſo far, as even to fix the Proportion of the Diminution, which he makes to be at the rate of half a Minute in fifty Years. According to an antient Tradition among the *Egyptians*, mention'd by *Herodotus*, the Ecliptic was formerly perpendicular to the Equator.

The Libration of the Sphere makes ſome Alterations in the *Obliquity* of the Ecliptic; ſo that *Wolfius* reckons a great *Obliquity* of 23°, 53′; a mean *Obliquity* of 23°, 41′; and a ſmall one of 23°, 30′.

OBLONG, in Geometry, a Figure longer than it is broad. See Figure.

Thus, a Rectangle, or Parallelogram, is an *Oblong*; ſee Parallelogram: and an Ellipſis an *Oblong*; ſee Ellipsis.

OBOLATA *Terræ*, in our antient Law-Books, is a certain Quantity of Land, which ſome Authors fix at half an Acre; tho' others make it but half a Perch. *Thomaſius* ſays, that *Obolum Terræ* contains ten Feet in length, and five in breadth. See Fardingdeal.

OBOLUS, an antient Silver Money, of *Athens*, the ſixth part of a Drachma; worth ſomewhat more than our Penny. See Drachma; ſee alſo Coin.

The Word comes from the *Greek* ὀβολος, of ὀβελὸς, *Needle*; either becauſe it bore the Impreſſion of a Needle; or becauſe, according to *Euſtachius*, it was in form thereof. But thoſe now in the Cabinets of Antiquaries, are round.

Obolus was alſo uſed among our Anceſtors for half a Noble, or Florin; where the Noble was eſteem'd as the Penny; and its quarter part a Farthing.

In effect, in the old Hiſtories and Accounts of Coins, we are to underſtand, by the Word *Denarius*, the whole Coin, be it Angel, Rial, &c. by the *Obolus* its half; and by *Quadrans* its fourth Part. See MONEY.

OBOLUS, in Medicine, is uſed for a Weight of ten Grains; or half a Scruple. *Du Cange* ſays it weighs three Carats, or four Grains of Wheat: Others divide the *Obolus* into ſix Areolæ; and the Areola into ſeven Minutes. Others divide it into three Siliquæ, each Siliqua into four Grains, and each Grain into a Lentil and half. See GRAIN, &c.

Among the *Sicilians*, *Obolus* was the Weight of a Pound.

OBREPTITIOUS, a Quality of a Letter Patent, or other Inſtrument bearing ſome Favour, Title, or Conceſſion; denoting it obtain'd of a Superior by Surprize, or by concealing from him the Truth, which was neceſſary to have been expreſs'd, to render it valid.

In this ſenſe the Word ſtands oppoſed to *Surreptitious*, where ſome Falſhood has been expreſs'd, in order to procure it the more eaſily.

Obreption annuls the Grant, wherever found.

By the Canon Law, a Perſon demanding a Benefice, without expreſſing thoſe he is already poſſeſs'd of, forfeits, &c. by the *Obreption*.

OBRINES, an Order of Knights inſtituted in the XIIIth Century, by *Conrade* Duke of *Mazovia* and *Cujavia*; whom ſome Authors alſo call Duke of *Poland*.

He firſt gave them the Name of *Knights of Jeſus Chriſt*. Their firſt Grand Maſter was *Bruno*. Their chief End was to defend the Country from the *Pruſſians*, who were yet Idolaters, and committed great Cruelties.

Duke *Conrade* putting them in poſſeſſion of Fort *Obrin*; they hence took a new Name: and it was agreed between them, that whatever Lands they conquer'd from the *Pruſſians*, ſhould be equally divided with him.

But the *Pruſſians* blocking up the Fort, ſo that none of the Knights could get out; the Order became uſeleſs, and was ſoon ſuppreſs'd. Upon this, *Conrade* call'd in the *Teutonic* Knights. See TEUTONIC *Order*.

OBSCURA *Camera*. See CAMERA *obſcura*.

OBSCURA *Clare*. See CLARO *obſcura*.

OBSCURE, ſomething that is *dark*, or that only admits a little Light. See LIGHT and SHADOW.

OBSCURE is alſo uſed in a figurative ſenſe, for a thing that is not clear, expreſs, and intelligible; that one does not fully apprehend; or that may be conſtrued in divers Senſes.

CLEAR *Notion*, or *Idea*. See NOTION and IDEA.

OBSCURITY, that which denominates a Thing *obſcure*.

Obſcurity is a Fault that may either be in the Perception, or Diction.

Obſcurity in the Perception, ariſes chiefly hence, that we do not conceive Things as they are, or as we find them; but as we judge them to be, e'er we know them: ſo that our Judgment precedes our Knowledge, and is made the Rule, or Standard, of our Conceptions. Whereas Nature and Reaſon direct, that Things ſhould be judged of according as they are known; and that they are to be known, not as they are in themſelves, but only in ſuch manner as God was pleas'd to have them known.

Obſcurity in the Diction, may ariſe, firſt, from the Ambiguity of the Senſe; ſecondly, from the Figures or Ornaments of Rhetoric; thirdly, from the Novelty, or Obſoleteneſs of the Words.

OBSECRATION, in Rhetoric, a Figure whereby the Orator implores the Aſſiſtance of ſome God, or Man. See FIGURE.

This Figure *Cicero* makes admirable uſe of, for K. *Deiotarus*; to *Cæſar*——*Per Dexteram te iſtam oro, quam Regi Deiotaro hoſpes, hoſpiti porrexiſti: Iſtam inquam dexteram non tam in bellis & in prælis, quam in promiſſis & fidem firmiorem.*

——Thus *Virgil*:

Quod te per Cœli jucundum lumen & Auras
Per Genitorem oro, per Spem ſurgentis Iuli
Eripe me his invicte malis ——

OBSEQUIES, *Funeral Solemnities*, or Ceremonies performed at the Burials of eminent Perſonages. See FUNERAL.

The Word is derived from the *Latin Obſequium*, Obedience; theſe *Obſequies* being the laſt Devoirs we can render to the Deceaſed.

OBSERVANCE, literally denotes the Act of *obſerving* a Rule, Law, or Ceremony.

Hence the Term is ſometimes alſo uſed for a Rule, Statute, or Ordonnance to be *obſerv'd*.

OBSERVANCE, OBSERVANTIA, is particularly underſtood, in a Monaſtic Senſe, of a Community of Religious, who are tied to the perpetual Obſervation of the ſame Rule. In which ſenſe the Word coincides with *Congregation*, or *Order*. See ORDER, &c.

The Cordeliers denominate themſelves the *Religious of the Obſervance*; the *great* and the *leſſer Obſervance*. See CORDELIERS.

Among the *Bernardines*, there are Monks of the *ſtrict Obſervance*, who eat nothing but Fiſh. See BERNARDINE.

OBSERVANTINES, Religious Cordeliers of the *Obſervance*. In *Spain*, there are bare-footed *Obſervantines*.

OBSERVATION, in the Sea-language: The Seamen call an *Obſervation* the taking the Sun's, or any Star's Meridian Altitude, in order thereby to find their Latitude. See MERIDIAN-*Altitude*.

For the Method of making an *Obſervation*, ſee LATITUDE.

The finding of a Latitude from the Meridian-Altitude obſerved, they call *working of an Obſervation*.

OBSERVATIONS in Aſtronomy, ſee CELESTIAL *Obſervations*.

OBSERVATORY, a Place deſtined for *obſerving* the Heavenly Bodies; or, a Building uſually in form of a Tower, raiſed on ſome Eminence, for making of Aſtronomical Obſervations.

The more celebrated *Obſervatories*, are, 1. The *Greenwich Obſervatory*, built in 1676, by Order of King *Charles* II. at the ſolicitation of Sir *Jonas Moor* and Sir *Chriſtopher Wren*; and furniſhed with the moſt accurate Inſtruments by the ſame; particularly a noble Sextant of 7 Feet Radius, with Teleſcope-Sights.

The Perſon to whom the Province of Obſerving was firſt committed, was Mr. *J. Flamſtead*; a Man, who, as Dr. *Halley* expreſſes it, ſeem'd born for the Employment. For the ſpace of fourteen Years, with unwearied Pains he watch'd the Motions of the Planets; chiefly thoſe of the Moon, as was given him in charge; that a new Theory of that Planet, exhibiting all her Irregularities, being found, the Longitude might thence be determined.

In the Year 1690, having provided himſelf of a Mural-Arch of 7 feet Diameter, well fix'd in the Plane of the Meridian, he began to verify his Catalogue of the fixed Stars, which hitherto depended altogether on the Diſtances meaſured with the Sextant, after a new and very different Manner, *viz.* by taking the Meridian-Altitudes, and the Moments of Culmination, or the right Aſcenſion and Declination.

This Inſtrument he was ſo pleas'd with, that he laid the uſe of the Sextant almoſt wholly aſide. Thus was the Aſtronomer Royal employ'd for thirty Years; in the Courſe of which Time, nothing had appear'd in public, worthy ſo much Expence and Preparation: So that the Obſerver ſeem'd rather to have been employ'd for his own ſake, and that of a few Friends, than for the Public; tho it was notorious, the Obſervations that had been made were very numerous, and the Papers ſwell'd to a great Bulk.

This occaſion'd Prince *George* of *Denmark*, in the Year 1704, to appoint certain Members of the *Royal Society*, viz. the Honourable *Fr. Roberts*, Sir *C. Wren*, Sir *I. Newton*, Dr. *Gregory*, and Dr. *Arbuthnot*, to inſpect *Flamſtead*'s Papers, and chuſe out of them ſuch as they ſhould think fit for the Preſs; purpoſing to print them at his own Expence: But the Patron of the Work dying, e'er the Impreſſion was half finiſhed, it lay ſtill for ſome time; till at length it was reſum'd by order of Queen *Anne*; and the Care of the Preſs committed to Dr. *Arbuthnot*; and that of Correcting, and ſupplying the Copy, to Dr. *Halley*.

Such was the Riſe and Progreſs of the *Hiſtoria Cæleſtis*; the principal Part whereof is the Catalogue of fixed Stars, call'd alſo the *Greenwich Catalogue*. See CATALOGUE.

The *Greenwich Obſervatory* is found by very accurate Obſervation to lie in 51°, 28′, 30″, North Latitude.

2. The *Paris Obſervatory* built by the late *Louis* XIV. in the *Fauxbourg St. Jaques*.

It is a very ſingular, but withall a very magnificent Building; the Deſign of M. *Perrault*. 'Tis 80 feet high, and a-top is a Terras. 'Tis here M. *de la Hire* has been employ'd.

The Difference in Longitude between this and the *Greenwich Obſervatory* is 2°, 20′ Weſt.

In it is a Cave, or Cellar, 170 feet deſcent, for Experiments that are to be made far from the Sun, &c. particularly ſuch as relate to Congelations, Refrigerations, Indurations, Conſervations, &c.

3. *Tycho Brahe's* Obſervatory was in the little Iſland *Ween*, or *Scarlet Iſland*; between the Coaſts of *Schonen* and *Zeland*, in the *Baltic*.

It was erected and furniſhed with Inſtruments at his own Expence; and call'd by him *Uraniburg*.

Here he ſpent twenty Years in obſerving the Stars. The Reſult is his Catalogue. See CATALOGUE.

Mr. *Gordon*, in *Phil. Tranſ.* obſerves, that this was none of the fitteſt Places for ſome kind of Obſervations, particularly the Riſings and Settings; as lying too low, and being land-

lock'd

lock'd on all the Points of the Compaſs but three; and the Land-Horizon exceedingly rugged and uneven.

4. *Pekin Obſervatory.* Father *Le Compte* deſcribes a very magnificent *Obſervatory* erected and furniſhed by the late Emperor of *China*, in his Capital, at the Interceſſion of ſome Jeſuit Miſſionaries, chiefly Father *Venbieſt*, whom he made his chief Obſerver.

The Inſtruments are exceedingly large; but the Diviſions leſs Accurate, and the Contrivance, in ſome reſpects, leſs Commodious than thoſe of the *Europeans*. The chief are an Armillary, Zodiacal Sphere of 6 *Paris* feet Diameter, an Equinoctial Sphere 6 feet Diameter, an Azimuthal Horizon 6 feet Diameter, a large Quadrant 6 feet Radius, a Sextant 8 feet Radius, and a Celeſtial Globe 6 feet Diameter.

OBSESSION, the Action of being beſet by an Evil Spirit; which, without entring the Body, torments, and, as it were, beſieges the Perſon without: In which it differs from *Poſſeſſion*. See POSSESSION.

The Marks of *Obſeſſion*, according to ſome, are a being hoiſted into the Air, and thrown violently down without being hurt; ſpeaking Languages never learnt; having an Averſion to all Acts and Offices of Religion, &c.

Some Phyſicians look on all Caſes of *Obſeſſion* as Natural, and curable by natural Medicines, particularly an Unguent call'd *Unguentum Carriohteri*, with Purgatives, or Vomitives.

Of this Opinion is Doctor *Gabriel Clauder*, Member of the *Leopoldine* Academy; which he ſtrengthens with the Teſtimony of *Fromannus*, in his Treatiſe *de Faſcinationibus*; *Ganſius de Coralliis*, who obſerves, that it has been confeſs'd by many Witches and Sorcerers, that the Plant *Millepertius*, *Hypericon*, and other Simples, &c. incommode them terribly, and prevent their Operations,

He confirms this Sentiment hence, that the Devil in thoſe he thus beſets, makes uſe of the Melancholic Humour or the *atra Bilis*, and the groſſer Impurities of the Blood, without always acting immediately of himſelf. For which he refers to the Books of *Melchior Sebizius* and *Jerom Jordan*, *de Divino in homine*; and gives the Proceſs of a Cure of a manifeſt *Obſeſſion* of a Child of a Year old at *Delitſchebourg*, three Leagues from *Leipſic*.

OBSIDIONALIS, an Epithet the *Romans* gave to a ſort of Crown wherewith they honour'd ſuch of their Generals as had delivered a *Roman* Army beſieged by the Enemy, and had obliged them to decamp. See CROWN.

It was alſo call'd *Graminea*, becauſe made of Graſs, or Herbs found on the Spot, or Soil.

'Twas the Soldiery who beſtow'd this Crown; which, doubtleſs, was the reaſon of its not being of a more precious Matter.

The Word comes from the *Latin Obſidio*, Siege.

OBSTRUCTION, in Medicine, a lett or ſtoppage of the Paſſage of the Humours in the Body of an Animal. See DISEASE.

Obſtructions are ſuppoſed to ariſe from the groſs Parts of the Blood, detain'd in the Extremities of the Veſſels, and thus blocking them up.

Some Phyſicians doubt whether there be any ſuch thing as *Obſtructions* in the Viſcera; and rather attribute the Inconveniencies uſually aſcribed to *Obſtructions*, to the Acrimonies and Crudities of the Stomach: But their Reaſons are not convincing. 'Tis true, *Obſtructions* may not perhaps be ſo frequent as is ufually ſuppoſed; and many of the Symptoms aſcribed to them, are doubtleſs owing to Diſorders of the Stomach; but then there's no denying that there are any *Obſtructions* at all in the Viſcera, &c. Schirrus's, and other kinds of Tumours are inconteſtable Proofs hereof. See TUMOUR, SCHIRRUS, &c.

Obſtructions frequently prove the Cauſes of Dropſies. See DROPSY.

OBTURATOR, in Anatomy, a Name given to two Muſcles of the Thigh; by reaſon of their ſhutting, or covering up the Foramen or Aperture between the *Os Pubis*, and the Hip-Bone.

The *Obturator internus* and *marſupialis* are the two Parts, or Diviſions that make the *Gemini*. See GEMINI and MARSUPIALIS.

The *Obturator externus* ariſes fleſhy from the exterior Margin of the *Os Pubis* and *Iſchium*, and is inſerted tendinous at the Root of the great Trochanter.

OBTUSE literally imports *blunt*, *dull*, &c. in oppoſition to *acute*, *ſharp*, *brisk*, &c. See ACUTE, &c.

OBTUSE *Angle*, in Geometry, an Angle of more than 90 Degrees, *i. e.* more than a Quadrant of a Circle; or an Angle greater than a right Angle. See ANGLE.

OBTUSE-ANGLED *Triangle*, is a Triangle one of whoſe Angles is *obtuſe*. See TRIANGLE.

OBVENTIONS, OBVENTIONES, in our antient Law-Books, ſignify *Offerings*.

Sometimes the Word alſo ſignifies Rents, and Revenues properly of Spiritual Livings.

OCCASIO, in our antient Law-writers, is taken for a Tribute which the Lord impoſes on his Vaſſals or Tenants, *Propter occaſiones bellorum & aliarum Neceſſitatum*.

And hence *Occaſionari* ſignifies to be charged or loaded with Payments.

OCCASIONAL *Cauſe*, &c. ſee CAUSE, &c.

OCCIDENTAL, a Term uſed chiefly in reſpect of Commerce, to diſtinguiſh Commodities brought from the *Weſt-Indies*, i. e. *America*, from thoſe brought from the *Eaſt-Indies*, which are ſaid to be *Oriental*. See ORIENTAL.

In this ſenſe we ſay, *Occidental Bezoard*; ſee BEZOARD. *Occidental Pearl*; ſee PEARL.

OCCIPITAL, in Anatomy, a Term applied to the Parts of the *Occiput*, or of the hinder Part of the Head. See OCCIPUT.

OCCIPITAL *Bone*, ſee OCCIPITIS *Os*.

OCCIPITALES, or OCCIPITAL *Muſcles*, are a Pair of Muſcles of the Head, whoſe Origin is in the ſame Place with that of the *Frontales*, *i. e.* in the upper Part of the Head near the Vertex, but which go a quite oppoſite Courſe, *viz.* from before, hindwards, and are inſerted into the lower Part of the hairy Scalp, or Skin of the *Occiput*, which they ſerve to draw upwards.

Dr. *Drake* obſerves, that the *Occipitalis* and *Frontalis* are one continued digaſtric Muſcle on each ſide; that Part call'd the *Occipitalis*, after a ſmall Aſcent, becomes a thin Tendon, and marches over the whole *Bregma*, where it divides; the one Part going on to the *Os Jugale*, the other, growing fleſhy, acquires the Name *Frontalis*. See FRONTALIS.

OCCIPITIS *Os*, or *Os proræ*, in Anatomy, the fourth Bone of the *Cranium*; ſo call'd from its ſituation in the *Occiput*. See OCCIPUT.

'Tis the hardeſt and thickeſt of all the Bones of the *Cranium*. Its Figure is triangular. In new-born Children it is divided into four; but grows up, and becomes one in time.

It is join'd to the Bones of the *Sinciput*, at the *Lambdoidal Suture*; as likewiſe to the *Petroſa*, and *Os Sphenoides* at the *Sphenoidal Suture*.

The Parts of this Bone are either ſolid, or hollow, *i. e.* empty. The ſolid are two Proceſſes, call'd *Coronæ*. The hollow Parts are either *Foramina*, or *Sinus's*.

The *Foramina* are either Common, or Proper: The Common are two, one on each ſide common with the *Oſſa Petroſa*, affording a Paſſage to the Nerves, *Par Vagum*, and to the internal Jugular Veins.

The proper *Foramina* are five: The firſt is very large, and thro this it is that the ſpinal Marrow paſſes. Two others give paſſage to the Nerves of the Tongue, and the two laſt an entrance to the cervical Arteries. See NERVE, &c.

It has two large *Sinus's* within-ſide, for the reception of the two Hemiſpheres of the *Cerebellum*. See CEREBELLUM.

On each ſide the *Foramina* which give Paſſage to the ſpinal Marrow, is uſually a Proceſs lined with a Cartilage, articulated with the firſt *Vertebra* of the Neck. In lieu of this, is ſometimes only a Prominence of the Bone; which, or the Proceſs where 'tis found, receives the Inſertions of the Muſcles of the Head, whereof there are ten, *viz.* the *Par ſplenium*, *Par complexum*, *Par rectum majus externum*, *Par rectum minus externum*, *Par obliquum ſuperius*, *Obliquum interius*, *Par Maſtoideum*, *Rectum internum majus*, *Rectum internum minus*, and *Rectum laterale*; each of which ſee in its proper Place.

OCCIPUT, the hinder Part of the Head, or Skull; or the Part wherein is the *Os Occipitis*. See HEAD, CRANIUM, &c.

Scultetus obſerves, that the Cauterization of the *Occiput* is very frequent in many Places.

OCCULT, ſomething ſecret, hidden, or inviſible.

The *Occult Sciences* are Magic, Necromancy, Cabbala, &c. See MAGIC, &c.

Agrippa has ſeveral Books of *Occult Philoſophy*, full of the vaineſt, wildeſt Dreams; and *Fludd* nine Volumes of the *Cabbala*, or *Occult Science*, wrapt up under Figures, or *Hebrew* Characters.

Weak Philoſophers, when unable to diſcover the Cauſe of an Effect, and unwilling to own their Ignorance, ſay it ariſes from an *occult* Virtue, an *occult* Cauſe, an *occult Quality*. See QUALITY, &c.

OCCULT, in Geometry, is uſed for a Line that is ſcarce perceivable, drawn with the Point of the Compaſſes, or a black-lead Pencil. See LINE.

Occult, or dry Lines, are uſed in ſeveral Operations; as the raiſing of Plans, Deſigns of Building, Pieces of Perſpective, &c. They are to be effaced when the Work is finiſhed.

GLI OCCULTI, of *Breſcia*, in *Italy*, are the Academiſts of that City. See ACADEMY.

OCCULTATION, in Aſtronomy, the Time a Star, or Planet, is hid from our Sight in an Eclipſe. See ECLIPSE.

Circle of perpetual OCCULTATION, is a Parallel in an oblique Sphere, as far diſtant from the depreſſed Pole, as the Pole is from the Equator.

Between this Line and the Pole, all the Stars contain'd, do never riſe; but lie conſtantly hid under the Horizon of the Place.

OCCUPANCY, in the Civil Law, is the Poſſeſſion of ſuch things as at preſent belong to no private Perſons, but, however, are capable to be made ſo; as by ſeizing or taking of Spoils in War; of things wild by Nature, as Birds, and Beaſts for Game, &c. or by finding things before undiſcovered, or truly loſt, or loſt by their proper Owners.

OCCUPANT, in Law. If a Tenant hold Lands, &c. for the Term of another's Life; and ſuch Tenant die firſt, leaving that other to ſurvive; he that firſt enters to hold that Term out, is call'd an *Occupant*, by reaſon his Title comes by the firſt Occupation.

So if a Tenant for his own Life, grant over his Eſtate to another; if the Grantee dies, there ſhall be an *Occupant*.

OCCUPATION, in Law, the putting a Man out of his Freehold in time of War.

This is all one with the *Diſſeiſin* in time of Peace; only that the former is deem'd not ſo great an Offence. See DISSEISIN.

The Word is alſo uſed for the Holding, Tenure, or Poſſeſſion; as when it is ſaid, ſuch Land is in the Tenure or *Occupation* of ſuch a Man, that is, in his Poſſeſſion. See POSSESSION.

OCCUPATIONS, in the Statute *de Bigamis*, are taken for Uſurpations upon the King, by uſing Liberties or Franchiſes a Perſon is not entitled to.

As an unjuſt Entry upon the King into Lands and Tenements, is call'd an *Intruſion*; ſo an unlawful uſing of Franchiſes, is call'd an *Occupation*.

OCCUPAVIT, in Law, a Writ that lies for him who is ejected out of his Land, or Tenement in time of War; as a *Novel Diſſeiſin* lies for one ejected in time of Peace. See DISSEISIN.

OCEAN, the grand Sea, which encompaſſes or inveſts the whole Earth. See EARTH and SEA.

The *Ocean* is that vaſt Sea wherein the two grand Continents known to us, the new and old, are incloſed like Iſlands. See CONTINENT, &c.

By Computation it appears, that the *Ocean* takes up conſiderably more of what we know of the terreſtrial Globe, than the dry Land. See TERRAQUEOUS-*Globe*.

Dr. *Keill* computes the Surface of the whole *Ocean* to be 85490506 Square Miles; ſo that ſuppoſing the Depth of the *Ocean* at a Medium to be $\frac{1}{4}$ of a Mile, the Quantity of Water in the whole will be 21372626 $\frac{1}{2}$ Cubic Miles.

Yet Dr. *Burnet* computes that all the Waters in the Ocean were not ſufficient to drown or overflow the dry Land ſo high as the Scriptures ſay it was at the Deluge: Seven or eight *Oceans*, according to him, would ſcarce have ſufficed. See DELUGE.

The *Ocean* penetrating the Land at ſeveral Streights, quits its Name of *Ocean*, and aſſumes that of *Sea*, or Gulf; to which are uſually added ſome Epithet to diſtinguiſh it; as *Mediterranean-Sea*, *Perſian-Gulf*, &c. See SEA and GULF.

In very narrow Places it is call'd Streights, *Sinus*. See STREIGHT.

The *Ocean* takes different Names according to the divers Countreys it borders on; as the *Britiſh Ocean*, *German Ocean*, &c.

According to *Maty*, the *Ocean* may be commodiouſly divided into *Superior*, or Upper; and *Inferior*, or Lower.

The *Upper* OCEAN, which the Antients call'd the *Exterior*, as environing all the known Parts of the World, he ſubdivides, according to the four Cardinal Points, into the *Northern*, *Southern*, *Eaſtern*, and *Weſtern*.

The *Northern Ocean*, call'd alſo *Glacial*, *Frozen*, and *Scythian*, is that Part of the *Upper Ocean* next the North-Pole, bounded on the South with the Arctic-Circle, and the Northern Coaſts of *Europe* and *Aſia*, and on the North with the unknown Lands about the Pole.

'Tis call'd the *Icy*, or *Frozen Ocean*, becauſe thoſe who have attempted a Paſſage thro it to *China*, &c. have always been ſtop'd with the Ice; and *Scythian*, becauſe waſhing the Coaſts of *Scythia*.

The *Weſtern*, or *Atlantic Ocean*, is that Part of the *Grand Ocean* which waſhes the Weſtern Coaſts of *Europe* and *Africa*, extending from the Arctic Circle to the Equinoctial.

Southern, or *European Ocean* is that Part reaching from the Equinoctial to the unknown Antarctic Lands.

Eaſtern, or *Indian Ocean*, has its firſt Name from its Situation to the Eaſt; as its latter from *India*, the chief Country it waſhes.

It reaches from the Coaſt of *Ajan* to the Iſle *Aux Larrons*, i.e. of *Thieves*.

The *Inferior*, or *American* OCEAN, is that vaſt Part of the *Grand Ocean* which waſhes the Coaſts of *America*; unknown, in great meaſure at leaſt, to the Antients. It is divided into three Parts, *viz.*

1. The *North Sea*, which waſhes the Eaſtern Coaſts of *America*, from the Arctic-Circle to the Tropic of *Capricorn*.

2. The *Magellanic-Sea*, extending from the Tropic of *Capricorn* to the *Terra Auſtralis Incognita*.

3. The *South-Sea*, or *Pacific*, which waſhes the Weſtern Coaſts of *America* to the Eaſt, as far as the Iſle of *Thieves*; and from South to North from the Tropic of *Capricorn* to the Land of *Jeſſo*.

For the Saltneſs of the OCEAN, ſee SALTNESS.

For the Tides obſerved in the OCEAN, ſee TIDES.

Phil. Sachſius, in 1664, printed a Diſſertation entitled, *Oceanus Microcoſmicus*, dedicated to *Bartholin*; wherein he ſhews that there is a circular Motion in the Waters, like that of the Blood in the human Body: That they all come from the *Ocean*, and return thither again. The Thought is *Solomon's*, *Eccleſ.* ch. 7. See VAPOUR, SPRING, &c.

The word *Ocean* comes from the *Latin Oceanus*, of the *Greek* ὠκεανὸς, which *Euſtathius* fetches from ὠκέως ναειν, to ſlide ſwiftly. Others ſay, the *Greeks* borrow'd it from the *Phœnicians*, who call'd the Circumference of the *Ocean* *Og*, from the *Hebrew* עוג *Hhog*, Circuit, Ambit.

OCHLOCRATIA, a Form of Government, wherein the Populace has the whole Power and Adminiſtration in its own hand.

The Word comes from the *Greek* ὄχλος, Multitude, and κρατος, Power.

OCTAGON, in Geometry, a Figure of eight Sides and eight Angles. See FIGURE and POLYGON.

When all the Sides and Angles are equal, it is call'd a *Regular Octagon*, or an *Octagon* that may be inſcribed in a Circle.

OCTAGON, in Fortification, is a Place that has eight Baſtions. See BASTION.

OCTAHEDRON, in Geometry, one of the five Regular Bodies, conſiſting of eight equal Faces, or eight Equilateral Triangles. See REGULAR *Body*.

The *Octahedron* may be conceiv'd as conſiſting of two Pyramids put together at their Baſes. See PYRAMID.

Its Solidity therefore is had by multiplying the quadrangular Baſe of either, by one third of the perpendicular Height of one of them; and then doubling the Product. See SOLIDITY.

The Square of the Side of an *Octahedron* is in a ſubduple Ratio of the Diameter of the circumſcribing Sphere.

OCTAHETERIDES, in Chronology, &c. the Space, or Duration of eight Years.

The Word is form'd from the *Greek* ὀκτωετηὶς, compoſed of οκτω, Eight, and ἔτος, Year.

OCTANT, or OCTILE, in Aſtronomy, an Aſpect, or Poſition of two Planets, &c. wherein their Places are diſtant an eighth Part of a Circle, or 45 Degrees, from one another. See ASPECT.

OCTAPLA, a Term in the ſacred Learning, uſed for a kind of *Polyglot* Bibles, conſiſting of eight Columns. See BIBLE and POLYGLOT.

In the 1*ſt* Column was the *Hebrew* Text in *Hebrew* Characters; in the 2*d*, the ſame Text in *Greek* Characters; in the 3*d* the *Greek* Verſion of *Aquila*; in the 4*th* that of *Symmachus*; in the 5*th*, the *Septuagint*; in the 6*th*, that of *Theodotion*; in the 7*th*, that call'd the fifth; the laſt was that call'd the ſixth.

Origen was the Author of the *Octapla*, as well as of the *Tetrapla*, and *Hexapla*. See HEXAPLA, &c.

The Word implies ſomething with eight Rows, or Columns.

OCTATEUCH, in the ſacred Literature, is uſed for the eight firſt Books of the Old Teſtament; viz. *Geneſis*, *Exodus*, *Leviticus*, *Numbers*, *Deuteronomy*, *Joſhuah*, and *Judges*.

Procopius of *Gaza*, has ten Commentaries on the *Octateuch*.

OCTAVE, in Muſic, an harmonical Interval conſiſting of 8 Tones, or Degrees of Sound. See INTERVAL and DEGREE.

The moſt ſimple Perception the Soul can have of true Sounds, is that of *Uniſon*; in regard the Vibrations there begin and end together. The next to this is the *Octave*; wherein the more acute Sound makes preciſely two Vibrations, while the graver or deeper makes one; and wherein, by conſequence, the Vibrations of the two meet at every Vibration of the more grave. See TUNE, GRAVITY, &c.

Hence Uniſon and *Octave* paſs almoſt for the ſame Concord. See UNISON.

Hence alſo the Proportion of the Sounds that form the *Octave* are in Numbers, or in Lines, as 2 to 1: ſo that two Chords or Strings of the ſame Matter, Thickneſs, and Tenſion,

Tenſion, one whereof is double the length of the other, produce the *Octave*. See CHORD.

The *Octave* is call'd by the Antients *Diapaſan*, becauſe containing all the ſimple Tones and Concords; all of which derive their Sweetneſs from it, as they ariſe more or leſs directly out of it. See CONCORD.

To be juſt, it muſt contain diatonically 7 Degrees, or Intervals; and conſequently 8 Terms, or Sounds, whence its Name, *Octave*.

The *Octave* containing in it all the other ſimple Concords, and the Degrees being the Differences of theſe Concords; it is evident the Diviſion of the *Octave* comprehends the Diviſion of all the reſt. See SYSTEM.

By joining, therefore, all the ſimple Concords to a common Fundamental, we have the following Series:

1 : 5/8 : 4/5 : 3/4 : 2/3 : 3/5 : 1/2 : 1/3.
Fund. 3*d* l, 3*d* g, 4*th*, 5*th*, 6*th* l, 6*th* g, 8*ve*.

Again, the Syſtem of *Octave* containing all the original Concords; and the compound Concords being the Sum of *Octave*, and ſome leſſer Concord; in order to have a Series to reach beyond an *Octave*, we muſt continue them in the ſame Order thro a ſecond *Octave*, as in the firſt; and ſo on thro a third and fourth *Octave*. Such a Series is call'd the Scale of MUSIC. See SCALE.

Tho the Compoſition of *Octaves* may be carried on infinitely, yet three or four *Octaves* is the greateſt length we go in ordinary Practice. The old Scales went no further than two, or at moſt three *Octaves*, which is the full compaſs of an ordinary Voice. And, notwithſtanding the Perfection of the *Octave*, yet after the third, the Agreement diminiſhes very faſt; nor do they ever go ſo far at one Movement, as from one extreme to the other of a double or triple *Octave*; ſeldom beyond a ſingle *Octave*: Nor is either Voice or Inſtrument well able to go beyond. To form a fourth *Octave*, if the acuter String be half a Foot, which is but a ſmall Length to give a clear Sound; the longer muſt be eight Feet. If then we go beyond the fourth *Octave*, either the acute Term will be too ſhort, or the grave one too long.

The *Octave* is not only the greateſt Interval of the ſeven original Concords, but the firſt in degree of Perfection. As it is the greateſt Interval, all the leſs are contain'd in it: Indeed, the manner wherein the leſs Concords are found in the *Octave*, is ſomewhat extraordinary; *viz.* by taking both an harmonical and arithmetical Mean between the Extremes of the *Octave*, and then both an arithmetical and harmonical Mean between each Extreme, and the moſt diſtant of the two Means laſt found; *i. e.* between the leſs Extreme and the firſt arithmetical, and between the greater Extreme and the firſt harmonical Mean, we have all the leſſer Concords. See CONCORD.

Mr. *Malcolm* obſerves, that any Wind-Inſtrument being over-blown, the Sound will riſe to an *Octave*, and no other Concord; which he aſcribes to the Perfection of the *Octave*, and its being next to Uniſon.

From this ſimple and perfect Form of the *Octave*, ariſes this peculiar Property, that it may be doubled, tripled, &c. and ſtill be Concord; *i. e.* the Sum of two or more *Octaves* are Concord; tho the more Compound, gradually, the leſs agreeable. He adds, there is that Agreement between its Extremes, that whatever Sound is Concord to one Extreme of the *Octave*, is ſo to the other.

Des Cartes, from an Obſervation of the like kind, *viz.* that the Sound of a Whiſtle or Organ-Pipe, will riſe to an *Octave*, if forcibly blown; concludes, that no Sound is heard, but its acute *Octave* ſeems ſomeway to echo or reſound in the Ear.

OCTAVE, or OCTABIS, in Law, the 8th day after any Feaſt, incluſively.

Among the *Romaniſts*, *Octave* is uſed for the Space, or Period of 8 Days allow'd for the Celebration of a Feaſt, or Service in commemoration of ſome Saint, or on other ſolemn Occaſions.

Eaſter, *Whitſontide*, *S. John Baptiſt*, *S. Lawrence*, *Epiphany*, the *Dedication*, &c. are celebrated with *Octaves*.

The Office in the *Octave* is ſemi-double.

OCTIL, or OCTANT, in Aſtrology, an Aſpect of two Planets when diſtant from each other by an 8th of the Zodiac, *i. e.* a Sign and half, or 45°.

OCTOBER, is the 8th Month of the Year, in *Romulus*'s Calendar; tho the 10th in that of *Numa*, *Julius Cæſar*, &c. See MONTH, CALENDAR, &c.

It hath always retain'd its firſt Name, in ſpight of all the different Names the Senate and *Roman* Emperors would have given it: For the Senate order'd this Month ſhould be call'd *Fauſtinus*, in honour of *Fauſtina* the Wife of *Antoninus* the Emperor. *Commodus* would have had it bear the Name of *Invictus*; and *Domitian* made it be call'd *Domitianus* according to his own Name.

OCTOSTYLE, in the antient Architecture, the Face of a Building or Ordonnance, containing 8 Columns.

The 8 Columns of the *Octoſtyle* may either be diſpoſed in a right Line, as in the *Pſeudodiptere* Temple of *Vitruvius*, and in the *Pantheon*; or in a Circle, as in the round *Monoptere* Temple of *Apollo Pythius* at *Delphi*, &c.

OCTO *Tales*, ſee TALES.

OCULARES *Dentes*, or *Cynodentes*, the *Eye-Teeth*; ſee TEETH.

OCULI *Cancri*, ſee CRABS-*Eyes*.

OCULI, *Eyes*, in Botany, the *Gemmæ*, or Buds of a Plant juſt putting forth, or the Knots out of which the Buds ariſe. See BUD and GERM; ſee alſo PRUNING, ENGRAFTING, &c.

OCULUS, in Anatomy, ſee EYE.

ODA, in the *Turkiſh Seraglio*, ſignifies a *Claſs*, *Chamber*, or *Order*. See SERAGLIO.

The Grand Signor's Pages are divided into five Claſſes or Chambers, call'd *Oda*. See PAGE.

The firſt, which is the loweſt in Dignity, is call'd the *Great*, from the Number of Perſons that compoſe it.

Theſe are the Juniors, who are taught to read, write, and ſpeak the Languages; which are the *Turkiſh* for this World; the *Arabic* for Paradiſe; and the *Perſian* for Hell, by reaſon of the Hereſy of the People who ſpeak it.

The ſecond is call'd *Little*; where, from the Age of 14 or 15 Years, the Youth are train'd up to Arms, and the Study of ſuch polite Learning as the *Turks* are acquainted withall; *viz.* Logic, Arithmetic, Geometry, and a little Aſtrology.

In each of theſe Chambers, is a Page of the Privy-Chamber who commands them, as the Prefects in the Colleges of the Jeſuits.

The third Chamber call'd *Kilar-Oda*, comprehends two hundred Pages; which, beſide their other Exerciſes, are commanded by the *Kilerdgi Bachi*, for the ſervice of the Buttery and Fruitery.

The fourth only conſiſt of twenty-four, which, under the *Khazineda-Bachi*, take care of the Treaſure in the Grand Signor's Apartment, where they never enter with any Clothes on that have Pockets.

The fifth is call'd *Khas-Oda*, *i. e.* Privy-Chamber, and conſiſts of forty Pages, which attend the Emperor's Bed-Chamber. The firſt of this Chamber is call'd *Oda-Bachi*, the ſecond *Stliktar*, &c.

Eight of theſe Pages keep conſtant Guard every Night in the Emperor's Bed Chamber. They are poſted in ſeveral Places, ſome nearer him, others farther off, according to their degrees in the Chamber. They are to take care the Light kept conſtantly in the Chamber, don't glare in his Eyes, and awake him; and if they find him diſturb'd with any troubleſome Dream, to take care he be awaked by one of the Aga's.

ODABACHI, or ODDOBASSI, an Officer in the *Turkiſh* Soldiery, equivalent to a Sergeant, or Corporal among us.

The common Soldiers, and *Janizaries* call'd *Oldachis*, after having ſerv'd a certain Term of Years, are preferr'd, and made *Biquelars*; and of *Biquelars* in time become *Odabachi's*, *i. e.* Corporals of Companies, or Chiefs of certain Diviſions, whoſe Number is not fix'd, being ſometimes ten, and ſometimes twenty.

Their Pay is 6 Doubles *per* Month, and they are diſtinguiſh'd by a large Felt, a foot broad, and above a foot long, hanging on the Back with two long Oſtrich Feathers.

ODE, in the antient Poetry, a *Song*; or Compoſition proper to be ſung, and compoſed for that purpoſe; the ſinging uſually accompanied with ſome muſical Inſtrument, chiefly the Lyre; whence the *Ode* became denominated *Lyric*. See SONG and LYRIC.

Ode, in the modern Poetry, is a Lyric Poem, conſiſting of long and ſhort Verſes, diſtinguiſh'd into *Stanza's*, or *Strophes*, wherein the ſame meaſure is preſerved throughout.

The Word comes from the *Greek* ᾠδή, *Singing*.

The *Odes* of the Antients, *Voſſius* obſerves, had a regular Return of the ſame kind of Verſe, and the ſame Quantity of Syllables in the ſame Place of every ſimilar Verſe: "But there is nothing (ſays he) but confuſion of Quanti-"ties in the modern *Odes*; ſo that to follow the natural "Quantity of our Syllables, every Stanza will be a different "Song."

He ſhould have obſerv'd, however, that all the antient *Odes* were not of ſuch kind. But he proceeds: "The "Moderns have no regard to the natural Quantity of the "Syllables, and have introduced an unnatural and barba-"rous Variety of long and ſhort Notes, which they apply "without any regard to the natural Quantity of the Syl-"lables: ſo that it is no wonder our vocal Muſic has no "effect." *de Poem. Cantu.* See VERSE, VOCAL *Muſic*, QUANTITY, &c.

Among the Antients, *Ode* ſignified no more than a *Song*; with us, they are different things. Their *Odes* were generally in honour of their Gods; as many of thoſe of *Pindar*

dar and *Horace*: ſometimes on other Subjects; as thoſe of *Anacreon*, *Sapho*, &c.

The *Engliſh Odes* are generally compoſed in praiſe of Hero's and great Exploits; as thoſe of *Prior*, of *Welſted*, &c.

The diſtinguiſhing Character of the *Ode* is *Sweetneſs*: The Poet is to ſooth the Minds of his Readers by the variety of the Verſe, and the delicacy of Words, the beauty of Numbers, and the deſcription of things moſt delightful in themſelves. Variety of Numbers is eſſential to the *Ode*.

At firſt, indeed, the Verſe of the *Ode* was but of one kind; but for the ſake of Pleaſure, and the Muſic to which they were ſung, they by degrees ſo varied the Numbers and Feet, that their Kinds are now almoſt innumerable. One of the moſt conſiderable is the *Pindaric*, diſtinguiſh'd by the Boldneſs and Rapidity of its Flights. See PINDARIC.

The antient *Ode* had originally but one *Stanza*, or *Strophe*; but was at laſt divided into three Parts: The *Strophe*, *Antiſtrophe*, and *Epode*; the Prieſts going round the Altar, ſinging the Praiſe of the Gods, call'd their firſt Entrance *Strophe*, *i. e.* turning to the left; the ſecond, turning to the right, they call'd *Antiſtrophe*; *i. e.* returning. And accordingly, the Song, in thoſe different Places, was call'd *Ode* and *Epode*. See STROPHE and ANTISTROPHE.

Laſtly, ſtanding ſtill before the Altar, they ſung the remainder; which they alſo call'd *Epode*. See EPODE.

ODEUM, among the Antients, was a Place deſtined for the Rehearſal of the Muſic to be ſung on the Theatre.

ODEUM was alſo uſed for other Buildings that had no relation to the Theatre: *Pericles* built an *Odeum* at *Athens*, where muſical Prizes were contended for. *Pauſanias* ſays, that *Herod* the *Athenian* built a magnificent *Odeum* for the Sepulchre of his Wife.

The *Latin* Writers alſo uſe the Word *Odeum* for the Choir of a Church. Grammarians are exceedingly in the dark about the ſignification of the Word among the Antients.

ODIO & *Atia*, antiently call'd *Breve de bono & malo*, is a Writ ſent to the Under-Sheriff, to enquire whether a Man, being committed to Priſon on ſuſpicion of Murder, be committed on *Malice*, or *Ill Will*, or upon juſt ſuſpicion.

ODONTALGIA, in Medicine, the *Tooth-Ach*; one of the moſt common, yet moſt cruel Pains the Body is ſubject to. See TOOTH.

Its Cauſe is a ſharp Seroſity, thrown on the Membrane that lines the Sockets, or *Alveoli* of the Teeth. The Liquor is ſometimes ſo very ſharp and corroſive, that it eats away the Teeth by little and little, and makes 'em fall piece-meal.

Its more remote Cauſes are Sugars, very hot things, and very cold Acids, &c.

The Diſeaſe is frequently attended with an Inflammation, or *œdematous* Tumor of the Jaw. It is ſometimes alſo owing to a Worm found in the Root of the Tooth.

The *Curioſi Naturæ*, Decad II. mention an *Odontalgy* cured by a Box on the Ear given the Patient; and add an Inſtance of Blindneſs and *Odontalgy* cauſed by ſhaving a Man's Beard. The very ſight of a Remedy frequently drives away the Pain.

The Word is form'd from the *Greek* ὀδὼς, Tooth, and ἄλγος, Pain.

ODONTOIDES, in Anatomy, an *Apophyſis* in the middle of the ſecond *Vertebra*; ſo call'd from its reſemblance to a Tooth. See VERTEBRA.

Its Surface is ſomewhat unequal, that the Ligament which comes out of it and binds it to the *Occiput*, may take the better hold.

It is alſo encompaſſed with a ſolid Ligament, contriv'd on purpoſe to prevent the ſpinal Marrow from being compreſs'd by this *Apophyſis*.

The Word is form'd from the *Greek* ὀδὼς, Tooth, and εἶδος, Form.

ODOR, or ODOUR, ſee SMELL.

ODORAMENTUM, in Pharmacy, a Medicine apply'd for the benefit of its ſmell, whether it be fetid, or agreeable. See SUFFIMENTUM.

Such are frequently uſed in Hyſteric and Hypocondriac Diſorders; *e. gr.* *Aſſa fœtida*, *Camphor*, &c.

ODORATION, ſee SMELLING.

ODOROUS and ODORIFEROUS *Things*, are ſuch as exhale a brisk, agreeable Smell, ſenſible at a diſtance.

Such are the *Jeſſamin*, *Roſe*, *Tube-Roſe*, &c.

ODYSSEE, an Epic Poem of *Homer*; wherein he relates the Adventures that befel *Ulyſſes* in his Return to *Italy* from the Siege of *Troy*. See EPIC.

The Deſign of the *Iliad*, F. *Boſſu* obſerves, is to inſtruct the States of *Greece* conſider'd as united in one Body, or as Parts of the Whole; and that of the *Odyſſee*, to inſtruct thoſe ſame States, conſider'd in their private Capacities. See ILIAD.

A State conſiſts of two Parts: The Head which commands, is the firſt; and the Members that obey, the ſecond. Now, Inſtructions are required both for the one and the other; but it is poſſible to have them both convey'd under the ſame Perſon.

The Fable, then, of the *Odyſſee* is as follows: A Prince had been obliged to quit his Country, and lead an Army of his Subjects upon a foreign Expedition: after having glorioufly executed this, he was upon his Return home; but in ſpite of all his Endeavours, was detained for ſeveral Years by Tempeſts which threw him on ſeveral Countreys very different from one another as to Manners, Cuſtoms, Polity, &c.

In the Dangers he had to ſtruggle withall, his Companions, neglecting his Advice, all periſh, thro their own default. In the mean time, the great Men of his Country, abuſing his Abſence, commit ſtrange Diſorders in his Palace, ſquander his Treaſure, lay Snares for his Son, and will needs force his Wife to chuſe a Husband among them; all this from an Opinion he was entirely loſt. But at length he returns; and having diſcover'd himſelf to his Son, and ſome others of his Friends who had perſiſted in their Allegiance, he becomes an Eye-Witneſs of their Inſolence; puniſhes them as they deſerv'd, and reſtores that Peace and Tranquillity to his Iſland, which had been baniſhed during his Abſence. See FABLE.

The Truth or Moral whereon this Fable is founded, is, that a Perſon's Abſence from home, ſo as that he cannot have an Eye to his Affairs, occaſions great Diſorders. Accordingly, the Hero's Abſence is the principal and moſt eſſential Action of the Piece; and takes up the greateſt Part of the Poem.

This Poem, *Boſſu* adds, is more calculated for the People, than the *Iliad* is, where the Subjects are rather ill uſed out of the ill Conduct of the Princes, than by their own fault. The great Names of Hero's, *Ulyſſes*, &c. don't here repreſent the pooreſt Peaſants leſs than Princes, *Cæſars*, *Alexanders*, &c. The meaneſt People are as liable to ruin their Eſtates and Families by Negligence, &c. as the greateſt; and accordingly have as much need of *Homer*'s Lectures, and are as capable of profiting by them, as Kings themſelves. See ÆNEID.

Gerard Croeſus, a Dutchman, in a Book intitled ΟΜΗΡΟΣ ΕΒΡΑΙΟΣ, printed at *Dort* in 1704, endeavours to prove that the Subjects of *Homer*'s two Poems are taken from the Scriptures; and that that of the *Odyſſee*, in particular, is nothing elſe but the Adventures of the *Iſraelites* till the Death of *Moſes*; and that the *Odyſſee* was compoſed before the *Iliad*, the Subject whereof is the taking of *Jericho*. What Fancies!

The Word is form'd from the *Greek* ὀδυσσεια, of ὀδυσσεὺς, *Ulyſſes*.

OECONOMICS, that Part of Moral Philoſophy which teaches how to manage the Affairs of a Family, or Community. See MORALITY and OECONOMY.

OECONOMUS, a Perſon appointed to direct, and manage a vacant Church Revenue, or that of an Hoſpital or Community.

OECONOMUS was alſo antiently uſed for a Protector, or Advocate, who defended the Rights and Effects of Churches, Monaſteries, &c. See ADVOCATE and AVOUEE.

The Name was alſo given to a Church-Officer who took care of the Buildings and Repairs of the Church, and received and diſtributed Alms according to the Directions of the Biſhop.

In this ſenſe, the ſixth Council appoints that every Church have its *Oeconomus*.

OECONOMY, the prudent Conduct, or diſcrete, frugal Management of a Man's Eſtate, or that of another

To recommend *Oeconomy*, a modern Author obſerves, that Land as good as moſt in *England* is let at 20 *s.* an Acre *per Annum*; and ſold at 20 Years Purchaſe, or for 20 Pounds. Now, in an Acre of Land are 43560 ſquare feet, and in 20 Pounds are 4800 Pence: by which dividing 43560, the Quotient will be 9, and 360 remaining; which ſhews that one Penny will Purchaſe 9 ſquare feet and almoſt 13 Inches of Land, *viz.* a Piece 3 feet long and 3 broad, and ſomething more.

Whence it follows, that two Shillings purchaſes a Piece of Ground of 216 Feet; *viz.* 18 feet long, and 12 feet broad; enough to build a pretty Houſe upon, and room for a little Garden.

Animal OECONOMY, the firſt Branch of the Theory of Medicine; or that which explains the Parts of the human Body, their Structure and Uſe; the Nature and Cauſes of Life and Health, and the Effects or Phænomena ariſing from them. See MEDICINE.

This is otherwiſe call'd *Phyſiology*; and its Objects juſt enumerated are call'd Naturals, or *res ſecundum Naturam*. See NATURALS.

Legal, or *Jewiſh* OECONOMY or *Diſpenſation*, is the manner

ner wherein God thought good to guide and govern his People under the Miniſtry of *Moſes*.

This included not only the Political and Ceremonial Laws; but alſo the Moral Law, inaſmuch as it pronounced a Curſe on all thoſe who did not fulfil it perfectly.

Evangelical, or *Chriſtian* OECONOMY or *Diſpenſation*, is uſed in oppoſition to the Legal; and comprehends all that relates to the Covenant of Grace, which God has made with Men by Jeſus Chriſt.

OECUMENICAL, ſignifies as much as *General*, or *Univerſal*,

The Word is form'd of the *Greek* οἰκουμενικὸς, of οἰκουμένη, the habitable Earth; or, the whole Earth.

In this ſenſe we ſay, an *Oecumenical* Council, or Synod; meaning one at which the whole Chriſtian Church aſſiſted, or were invited to. See COUNCIL.

Du Cange obſerves, that many of the Patriarchs of *Conſtantinople*, aſſumed to themſelves the Quality and Denomination of *Oecumenical* Patriarchs; particularly *John the Faſter* in 590, and *Cyril* his Succeſſor.

Gregory the Great of *Rome*, was exceedingly enraged at it; pretending it was a Title of Pride, and a Character of Antichriſt; as ſuppoſing the Title *Oecumenic* to imply Univerſal Biſhop, or Biſhop of all the World; whereas, in effect, it imply'd no more, than the Quality of Chief of the Eaſtern Church; in like manner as the firſt Doctor of the Church of *Conſtantinople* was call'd *Doctor Oecumenicus*.

The Title *Oecumenical* Biſhop was firſt offer'd *Leo* I. but he refuſed it; nor did his Succeſſors accept of it for a long time. The 5th Council of *Conſtantinople* gave it to *John*, Patriarch of the City; tho ſome of the *Romaniſts* pretend that the Emperor *Phocas* gave it, by way of Preference, to the Biſhop of *Rome*.

But thoſe of *Conſtantinople* have preſerv'd it; and ſo late as the Council of *Baſil*, that Patriarch uſed the Title. But *Oecumenical* here is only to be underſtood as of the Extent of each Patriarch. See PATRIARCH.

OEDEMA, or OEDEMATOUS *Tumor*, a Tumor which appears whitiſh, ſoft, and lax, without any notable change of Colour, Heat, Pain, or Pulſation; and which yields to the Preſſure of the Finger ſo as for ſome time to retain the Dent or Impreſſion thereof. See TUMOR.

The general Cauſe of *Oedematous Tumors*, is vulgarly ſuppoſed to be a *Pituita*, as it is call'd, or a phlegmy Humour in the Body. Contuſions, Fractures, Luxations, &c. when of long ſtanding, often give riſe to *Oedemas*, eſpecially in Dropſical and Aged Perſons; ſo do irregular Living, want of Exerciſe, Ruptures, Diſorders of the Lymphatics, Defluxions of Humours, Weakneſs of the Joints, &c.

Its chief Seat is the Legs: In a *Leucophlegmatia*, the whole Body is *Oedamatous*. It frequently comes upon other Diſeaſes, eſpecially *Clinics*; and is familiar to Women with Child. 'Tis dangerous when it tends to an *Alceſs*; when it hardens, it becomes ſchirrous. See OEDEMATOUS.

Hippocrates uſes the word *Oedema* for any Tumor in general.

There are alſo *Spurious Oedema's*; in which caſe the pituitous Humour is mix'd with other Humours; whence the Tumor becomes *Eryſipelatous*, *Schirrous*, and ſometimes *Gypſous*; and hence Wens, &c.

The Word comes from the *Greek* οἰδεῖν, whence οἴδημα, a Tumor contrary to Nature.

OEDEMATOUS, in Medicine, ſomething that is of the nature of an *Oedema*; ſeiz'd, or afflicted with an *Oedema*.

Thus we ſay an *Oedematous Arm*, *Oedematous Legs*, &c.

The Phyſicians divide Tumours into *Inflammatory*, *Oedematous*, *Schirrous*, *Scrophulous*, *Cancerous*, &c. See TUMOR.

Oedematous Tumors ſeldom, of themſelves, prove dangerous, or mortal; but when they are of long continuance, the effect of old Age, or a dropſical Habit; when they grow hard, ſchirrous, painful, or come to ſuppurate, the Cure is generally tedious and uncertain. Thoſe which attend Wounds, Fractures, or the like, are leſs difficult to cure. See OEDEMA.

They are eaſily diſcuſs'd in their firſt Formation by the external Application of Solutions of Bay-Salt, Nitre, crude Sal Armoniac, &c. in *Spaniſh* Wine, Urine, Lime-Water, or other lixivious Fluids; while the Patient ſubmits to a Courſe of Purgatives, to diſcharge the Matter repell'd by ſuch Applications.

Under the Claſs of *Oedematous Tumors*, are ranked *Condylomata*, *Criſtæ*, *Rhagades*, *Thymi*, *Talpæ* and *Nates*, the *Ganglio* and *Pſydracium*. See each under its proper Article, CONDYLOMA, CRISTA, &c.

OENELÆUM, in Pharmacy, a Mixture compoſed of thick black Wine and Oil of Roſes.

In Fractures with Wounds, where the Bone is not bare, *Sculletus* orders that the Compreſſes, to make them ſtick, be drench'd with *Oenelæum*, to ſooth the Pain, and prevent an Inflammation; and the Bandages to be every day moiſten'd with the ſame, till the Inflammation be out of all danger.

The Word is form'd from the *Greek* οἶνος, Wine, and ἔλαιον, Oil.

OENESTERIA, in Antiquity, Sacrifices, held by the Youth of *Athens*, before the firſt time of cutting the Hair, and ſhaving the Beard.

Theſe Sacrifices were offer'd to *Hercules*; and the Quantity of what was offer'd was regulated by Law.

The Etymology of the Word, which comes from οἶνος, Wine, ſhews that the Matter thus offer'd was Wine.

OENOPTES, a kind of Officer or Cenſor at *Athens*, who attended at their Feaſts, regulated the number of Cups each was to drink, and took care that none drank too much or too little.

Thoſe who would not be kept within the bounds of Temperance, were preſented by the *Oenoptes* to the *Areopagus*. They were alſo call'd *Eyes*, *Oculi*.

OESOPHAGÆUS, in Anatomy, one of the Muſcles of the *Pharynx*, which it encompaſſes round like a Ring. See PHARYNX.

'Tis ſingle, and ſerves to ſqueeze the Aliment down, by cloſing the *Pharynx* after the manner of a *Sphincter*; whence ſome call it the *Sphincter Gulæ*; others call it the *Deglutitor*, or Swallower. See SPHINCTER, DEGLUTITION, &c.

Dr. *Drake* will have it no more than a Production of the *Pterygopharingæus*, whoſe Fibres ſurround the *Pharynx* from a tendinous Line on the back part of it: Tho *Verheyen* makes it a diſtinct Pair.

OESOPHAGUS, in Anatomy, the *Gula*, or Gullet; a membranous Pipe or Paſſage, whereby our Food and Drink is convey'd to the Stomach. See FOOD, &c.

The *Oeſophagus* deſcends from the Mouth to the Stomach, between the *Aſpera Arteria* and the *Vertebræ* of the Neck and Back, in a ſtrait Line, excepting for a little deflection about the fifth *Vertebra* of the *Thorax*, where it turns a little to the right, to make way for the great Artery, which runs along with it to the ninth; where turning again towards the laſt, it croſſes the Artery, and piercing the Diaphragm, ends at the left Orifice of the Stomach. See STOMACH.

It conſiſts of ſeveral Coats or Membranes, uſually reckoned three; tho ſome make four, others five or ſix, allowing the *Cruſta Villoſa* to be one: Which laſt diviſion, Dr. *Drake* follows as moſt accurate.

The firſt Coat is *membranous*, and only deſign'd for a Covering for the reſt; and ſeems only a continuation of the outward Membrane of the Stomach, derived from the *Peritonæum*, tho ſome derive it from the Pleura, and others from the Diaphragm.

The ſecond is *Muſcular*, conſiſting of ſtrong, fleſhy Fibres, like other Muſcles; ſo that it ſeems to make the Gullet a hollow fiſtulous Muſcle. According to *Steno* and *Willis*, it conſiſts of two Orders of Fibres, going from top to bottom in ſpiral Lines, contrary to and decuſſating each other. Which Deſcription is very exact of the Gullet of Ruminants, but not ſo of that of Men. In Men it conſiſts of two fleſhy *Lamellæ*, like two diſtinct Muſcles: The outward compoſed of ſtrait longitudinal Fibres; the inner of annular Fibres, without any obſervable Angles. The uſe of this Coat is to promote Deglutition: The longitudinal Fibres, when in contraction, ſhortning the *Oeſophagus*, and making its Capacity larger to admit of the Matter to be ſwallow'd; and the annular, on the contrary, contracting the Capacity, and cloſing behind the deſcending Aliment, preſs it downward. So that the two Orders of Fibres ſeem to act as Antagoniſt-Muſcles to each other. See DEGLUTITION.

The next Coat, call'd the *Vaſcular*, conſiſts of a double Membrane; the outer form'd of irregular Fibres and innumerable Veſſels interwoven; the inner, of ſtrait longitudinal Fibres mix'd with little Glands; whence ſome call it the *Glandulous*. This Membrane adheres cloſely to another within, call'd the *Nervous-Coat*, which is exceedingly fine, and made up of exceſſively ſlender Fibres, variouſly diſpoſed. It is continued to that which covers the Fauces, Mouth, and Lips; whence it happens, that tickling the bottom of the Fauces by vellicating this Membrane, provokes a retching to Vomit. See VOMITING.

This Membrane is the Organ of Senſation; and in this Part, as ſome think, is the Seat of Thirſt, or the Organ whereby the Appetite of Drinking is excited. See THIRST. It is lined inwardly with a villous Cruſt, which Dr. *Drake* takes to be the excretory Ducts of the Glands, and not unlike the *Cuticula* of the *Cutis*, to defend the ſubjacent Membrane. In Excoriations, this is ſometimes caſt out at the Mouth.

The upper opening of the *Oeſophagus*, ſituated at the bottom of the Fauces, is call'd the *Pharynx*. See PHARYNX.

OESYPON, a kind of fatty Mucilage, of the conſiſtence of an Unguent; of a greyiſh Colour, and a ſickiſh diſagreeable

agreeable ſmell, drawn from the greaſy Wool growing on the Throats and between the Buttocks of Sheep.

This Wool they waſh, boil it in Water to ſcower, let the Lotions or Decoctions ſtand for ſome time, and from the top skim off a fatty Subſtance, which being ſtrain'd thro' a linen Cloth, and ſet to cool, makes the *Oeſypon*, much uſed externally to reſolve, ſoften, and appeaſe Pain.

The Word is form'd from the *Greek* ὶς, Sheep; and σήπεσθαι, to be corrupted; the *Oeſypon* being a filthy, and, as it were, corrupted Matter, drawn from Sheep.

OFFA *Alba*, a Name *Van Helmont* gives to the white Coagulum ariſing from a mixture of the rectify'd Spirit of Wine with Spirit of Urine.

Note, The Spirit of Urine muſt be diſtill'd from well fermented Wine; and that muſt be well dephlegmated, elſe no *Offa* will ariſe.

OFFERTORY, an Anthem ſung, or play'd on the Organ, at the time the People are making an Offering. See ANTHEM and OFFERING.

Antiently the *Offertory* conſiſted of a Pſalm ſung with its Anthem; tho it is ſomewhat dubious whether the Pſalm was ſung entire; St. *Gregory* mentioning, that when it was time, the Pope looking at the Choir who ſung it, gave the Sign when they ſhould end.

The Name *Offertory* was alſo given to the Linen whereon the Offerings were laid. Dr. *Harris* ſays, 'twas properly a Piece of Silk or fine Linen wherein the Offerings of each Church were wrapp'd up.

OFFICE, OFFICIUM, in a moral Senſe, *Duty*; or that which Virtue and right Reaſon directs us to do.

Virtue, according to *Chauvin*, is the *Purpoſe* of doing well; the thing which immediately follows, or ariſes from this Purpoſe, is *Obedience*; which ſame is alſo denominated *Officium*; ſo that an *Office* is the Object of an Obedience to Virtue. See VIRTUE.

Cicero, in his Diſcourſe of *Offices*, cenſures *Panætius*, who had wrote before him on the ſame, for omitting to define the Thing or Subject on which he wrote; yet does he himſelf fall under the ſame Cenſure. He inſiſts much on the Diviſion of *Offices*; but forgets the Definition. In other of his Pieces we find him defining an *Office* to be an Action which Reaſon requires to be done: *Quod autem ratione actum ſit, id* Officium *appellamus*. De Finib.

The *Greeks*, he obſerves, made two Species of *Offices*; *Perfect*, call'd by them κατόρθωμα; and *Common*, or indifferent, call'd καθῆκον; which they define ſo, as, that what is abſolutely right, makes a *perfect Office*; and what we can only give a probable Reaſon for, an *intermediate Office*. See REASON.

OFFICE, in a Civil Senſe, is the mutual Aid, and Aſſiſtance which Men owe to one another.

Benevolence inſpires a Man with an Endeavour to do good *Offices* to all Mankind. See COMMON *Place*.

OFFICE is alſo a particular Charge, or Truſt, whereby a Man is authoriz'd to do ſomething. See OFFICER.

Loyſeau defines it a Dignity attended with a public Function.

The Word is primarily uſed for thoſe of Judicature and Policy; as the *Office* of a Secretary of State, of a Juſtice of Peace, of a Sheriff, &c.

Offices are either Venal, or not Venal: *Venal Offices* are thoſe bought with Money. Venal *Offices* are alſo diſtinguiſh'd into two kinds; *viz. Dominial* and *Caſual*; *Dominial*, or *Offices in Fee*, are thoſe abſolutely torn off and ſeparated from the King's Prerogative, ſo as not to become Vacant by death, but paſſing in the nature of a Fee, or Inheritance. See FEE.

Of theſe we have but few Inſtances among us, which go beyond a firſt Reverſion.

Caſual Offices are thoſe given for Life, by Patent, Commiſſion, &c. and which become vacant, by the Officer's death, to the King's profit; unleſs the Officer have before reſign'd, or diſpoſed of it.

The Venality of *Offices* is of no long ſtanding. See VENALITY.

OFFICE is alſo uſed for a Place, Apartment, or Board, appointed for the Officers to attend in, for the diſcharge of their reſpective *Offices*, or Employments.

Such are the *Secretary's Office*, the *Six Clerks Office*, the *Paper-Office*, *Signet-Office*, the *Prothonotor's Office*, *Pipe-Office*, *King's Silver-Office*, *Exciſe-Office*, *Office of the Ordnance*, &c. See each in its Place, SECRETARY, SIX CLERK, PAPER, SIGNET, EXCISE, ORDNANCE, &c.

Of ſuch *Offices*, ſome are diſtinguiſh'd by the Name of Boards, and others of Chambers; as the *Board of Green Cloth*, &c. See GREEN *Cloth*, CHAMBER, &c.

Where the Inquiſition obtains, the Tribunal thereof is call'd the *Holy-Office*. See INQUISITION.

In the Canon-Law, *Office* is uſed for a Benefice which has no Juriſdiction annex'd to it. See BENEFICE.

OFFICE is alſo uſed, in Law, for an Inquiſition made to the King's Uſe of any thing found by Inquiſition made *ex Officio*.

Thus to traverſe an *Office*, is to traverſe an Inquiſition taken of *Office* before an Eſcheator.

To return an *Office*, is to return that which is found by virtue of the *Office*.

In this ſenſe there are two ſorts of *Offices* iſſuing out of the Exchequer by Commiſſion; *viz.* an *Office* to intitle the King in the thing inquir'd into; and an *Office* of Inſtruction.

OFFICE is alſo uſed for Divine Service celebrated in public. See LITURGY.

St. *Jerom* is the Perſon, who, at the Requeſt of Pope *Damaſus*, is ſaid to have firſt diſtributed the Pſalms, Epiſtles, and Goſpels in the Order they are now found in the *Romiſh Office*. The Popes *Gregory* and *Gelaſus* added the Prayers, Reſponſes, and Verſes; and St. *Ambroſe* the Graduals, Hallelujahs, &c.

In the *Romiſh* Church, *Office* is particularly uſed for the manner of performing the *Office*; which varies every Day. Thus they ſay the *Office* of Sunday; of ſuch a Saint, &c. The *Office* is either ſingle, half double, or double.

Again, *Office* is apply'd to the particular Prayer which is prefer'd in honour of a Saint. When any Perſon is Canoniz'd, a particular *Office* is at the ſame time aſſign'd him out of the common *Office* of the Confeſſors, the Virgin, or the like. See SAINT and CANONIZATION.

Thus we ſay, the *Office* of the Virgin; of the Holy Spirit; of the Paſſion; the Holy Sacrament, &c. The *Office* of the Dead is rehears'd every day, excepting Feaſt-days, among the *Carthuſians*. The *Office* of the Holy Virgin is alſo added to the *Office* of the Day, in the Order of *Bernardines*.

OFFICES, with regard to Architecture, are all the Lodges and Apartments that ſerve for the neceſſary Services and Occaſions of a Great Houſe or Palace; particularly thoſe which have a relation to Eating; as Kitchens, Parterres, Brew-Houſes, Confectionaries, Fruiteries, Granaries, &c. as alſo Wood-houſes, Equeries, &c. See HOUSE, BUILDING, &c.

The *Offices* are commonly in the Baſſecours; ſometimes they are ſunk under-ground, and well vaulted, &c.

OFFICER, a Perſon provided of a Charge, or Office. See OFFICE.

Great OFFICERS *of the Crown, or State*, are the Lord High Steward, the Lord Chancellor, the Lord High Treaſurer, the Lord Preſident of the Council, the Lord Privy-Seal, the Lord Great Chamberlain, the Lord High Conſtable, the Earl Marſhal, and Lord High Admiral. See each under its proper Article, CHANCELLOR, TREASURER, MARSHAL, &c.

OFFICERS *of Juſtice*, are thoſe who are charg'd with the Adminiſtration of Equity and Juſtice in the Courts thereof. See COURT.

Royal OFFICERS are thoſe who adminiſter Juſtice in the King's Name; as the *Judges*, &c. See JUDGE.

Subaltern OFFICERS, thoſe who adminiſter Juſtice in the name of Subjects; ſuch are thoſe who act under the Earl-Marſhal, Admiral, &c.

OFFICERS *of Policy*, are thoſe in whom the Government and Direction of the Affairs of a Community are inveſted; as Mayors, Sheriffs, &c. See POLICY.

OFFICERS *of War*, are thoſe who have Command in the Forces.

Theſe are either General, Field, or Subaltern *Officers*.

General Officers are ſuch whoſe Command is not limited to a ſingle Troop, Company, or Regiment; but extends to a whole Body of Forces; ſuch are the General, Lieutenant-Generals, Major-Generals, and Brigadiers. See GENERAL, &c.

Field Officers are ſuch as have Command over a whole Regiment; ſuch are the *Maitres de Camp*, Colonels, and Majors.

Subaltern Officers, are the Lieutenants, Cornets, Enſigns, Sergeants, and Corporals. See each *Officer* under his proper Article, CAPTAIN, COLONEL, &c.

Commiſſion OFFICERS are ſuch as are appointed by the King's Commiſſion; thus call'd in contradiſtinction to *Half Officers*, or *Warrant Officers*, who are appointed by the Colonel's, or Captain's Warrant.

Sea-OFFICERS, or *Officers of the Marine*, are thoſe who have Command in Ships of War.

Flag-OFFICERS are the Admirals, Vice-Admirals, and Rear-Admirals. See FLAG, ADMIRAL, &c.

OFFICERS *of the Houſhold*, are the Lord Steward, Treaſurer of the Houſhold, Comptroller, Cofferer, Maſter, Clerks of the Green-Cloth, &c. The Lord Chamberlain, Vice-Chamberlain, Gentlemen of the Privy and Bed-Chamber, Gentlemen-Uſhers, Grooms, Pages, Maſter of the Wardrobe, of the Ceremonies, &c. The Maſter of the Horſe, Avenor, Equeries, Surveyors, &c. See HOUSHOLD, ſee alſo each *Officer* in his proper Article.

Staff OFFICERS are ſuch as in the King's Preſence bear a white Staff; and at other times, going abroad, have a white Staff borne before them by a Footman bare-headed.

Such are the Lord Steward, Lord Chamberlain, Lord Treaſurer, &c.

The white Staff is taken for a Commiſſion; and at the Death of the King, the *Officers* break their Staff over the Hearſe made for the King's Body, and thereby diſcharge their inferior *Officers*.

OFFICIAL, in the Canon-Law, the Biſhop's Deputy, or Lieutenant; or an Eccleſiaſtical Judge appointed by a Biſhop, Chapter, Abbot, &c. See COURT.

Of theſe there are two Kinds; the one, as it were, Vicar-General of the Church; exerciſing Juriſdiction throughout the whole Dioceſe, call'd by the Canoniſts *Officialis Principalis*; in our Statute-Law the Biſhop's Chancellor. See CHANCELLOR.

There is no Appeal from his Court to the Biſhop; his being eſteem'd the Biſhop's Court. See BISHOP'S *Court*.

The other kind, call'd *Officialis Foraneus*, as having his Juriſdiction *foris*, & *extra Civitatem*, is erected by the Biſhop when the Dioceſe is very large; having a certain Extent of Territory aſſign'd him, wherein he reſides.

This *Official* has but a limited Juriſdiction, tho he have *univerſitatem Cauſarum*, and exerciſe it in the Biſhop's Name. Our Statute Laws call him Commiſſary. See COMMISSARY.

The Biſhops, eſpecially thoſe of large Sees, finding themſelves oppreſs'd with a multiplicity of Buſineſs; at firſt, diſcharg'd a part of it upon their Archdeacons and Prieſts; to whom they gave Commiſſions revocable at pleaſure. Theſe they call'd *Vicarii*, or *Officiales*.

As we don't meet with this Term any where before the Conſtitutions of *Sextus*, 'tis pretty apparent the Cuſtom had not its Riſe till the End of the 13th Century.

In proceſs of Time, the Function was divided into two; and the Title *Official* given to thoſe with whom the Biſhop entruſted the Exerciſe of litigious Juſtice; and that of Vicars General, or Grand Vicars, to thoſe who had the voluntary Juriſdictions.

The Number of *Officials* was ſoon exceſſively multiply'd; and not only Biſhops, but Chapters and Archdeacons would have their *Officials*.

The *Officials*, by degrees, had drawn to their Cognizance and Juriſdiction, moſt of the Civil Cauſes; till they were taken out of their hands by Appeals, &c.

OFFICIAL, in Common Law, is a Deputy appointed by an Archdeacon for the executing of his Juriſdiction.

OFFICIALTY, the Court, or Juriſdiction, whereof the *Official* is Head.

The Practice of *Officialties* is now reduced into a little Compaſs; and Actions of Promiſes, and Diſſolutions of Marriages, are the principal things tranſacted therein.

OFFICINAL, in Pharmacy, a Term apply'd to ſuch Medicines, whether Simple or Compound, as the College of Phyſicians requires to be conſtantly kept in the Apothecarys Shops, ready to be made up in extemporaneous Preſcription. See PRESCRIPTION.

The *officinal Simples* are appointed, among us, by the College of Phyſicians; and the manner of making the Compoſitions directed in their Diſpenſatory. See DISPENSATORY, COMPOSITION, &c.

The Word is form'd of the *Latin Officina*, Shop.

OFFING, in the Sea-Language, that part of the Sea a good diſtance from Shore; where there is deep Water, and no need of a Pilot to conduct the Ship into Port.

Thus if a Ship from Shore be ſeen ſailing out to Seaward, they ſay ſhe ſtands for the *Offing*; and if a Ship having the Shore near her, have another a good way without her, or towards the Sea, they ſay, that Ship is in the *Offing*.

OFF-SETS, in Gardening, &c. are young Shoots that ſpring, and grow from Roots that are round, tuberous, or bulbous.

The Word is alſo uſed for the looſe, outer, brown Skins in Tulips, Onions, &c.

OFF-SETS, in Surveying, are Perpendiculars let fall, and meaſur'd from the Stationary-Lines, or the Lines between one Station and another, to the Hedge, Fence, or Extremity of the Incloſure. See SURVEYING.

OGEE, or O G, as it is frequently wrote, or OGIVE, in Architecture, a Moulding, conſiſting of two Members, the one concave, and the other convex; the ſame with *Cymatium*. See CYMATIUM.

Vitruvius makes each Member a Quadrant of a Circle; *Scamozzi*, and ſome others, make them ſomewhat flatter, and ſtrike them from two equilateral Triangles.

Its Form bears ſome reſemblance to that of an S.

OGIVE is alſo uſed for an Arch, or Branch of a *Gothic* Vault, which, in lieu of being Circular, paſſes diagonally from one Angle to another, and forms a Croſs between the other Arches which makes the ſide of the Square, whereof the Arches are Diagonals. See ARCH and VAULT.

The middle, where the *Ogives* cut or croſs each other, is call'd the Key, which is ſometimes cut in form of a Roſe, or a *Cul de Lampe*. The Members or Mouldings of the *Ogives* are call'd Nerves, Branches, or Reins; and the Arches which ſeparate the *Ogives*, double Arches. See VAULT.

OGRESSES, or AGRESSES, in Heraldry, ſee PELLETS.

OIL, a fatty, unctuous, inflammable Matter, drawn from ſeveral natural Bodies. See FAT.

The word *Oil* is ſometimes apply'd to the Juices which diſtil naturally from Plants and Trees; as Balm, &c. but more ſtrictly to thoſe Juices drawn by Expreſſion from Plants, Fruits, Grains, or Seeds; as *Oil of Olive*, *Nut-Oil*, &c. See EXPRESSION.

The Word is form'd from the *Latin Oleum*, of *Olea*, Olive-Tree, the Fruit whereof abounds in ſuch Juice. See OLIVE.

The Kinds of *Oils*, their Properties, Manners of Expreſſion, &c. are almoſt infinite: For the generality of them, the Reader is refer'd to the proper Articles; ſuch as could not be more conveniently inſerted, are as follow.

OIL *of Olives*, is the moſt popular, and moſt univerſal of all others; being that chiefly uſed in Medicine, in Foods, Salads, and in the Manufactures. See SALAD, &c.

It is drawn from Olives by Preſſes or Mills made for the purpoſe. The Fruit is gather'd when at its utmoſt Maturity in *December* and *January*, as it begins to redden; when 'tis put under the Mill, as ſoon as gather'd, it yields that *Oil* ſo very ſweet, and of ſo charming an Odour, call'd *Virgin-Oil*. But, as the Olives newly gather'd yield but little *Oil*, thoſe who rather regard Quantity than Goodneſs, leave them on the Ground for ſome time, e'er they preſs them.

Neither the Smell nor Taſte of this ſecond *Oil* is very agreeable; tho there is a third Kind ſtill worſe, which is the common *Oil* procured by throwing boiling Water on the Preſſings, and repreſſing them more ſtrongly.

The conſumption of this *Oil* is incredible; the South Parts of *France*, *Provence*, *Languedoc*, &c. as alſo *Candia*, ſome Parts of *Italy*, &c. yield vaſt Quantities. Its uſe every body knows; it being reputed one of the moſt univerſally uſeful things in the whole World.

OIL *of ſweet Almonds*, cold drawn, or without Fire, is prepared various ways. Some peel the Almonds as they pound 'em; others pound 'em without peeling. Some warm 'em in luke-warm Water; others *in balneo Mariæ*; ſome only bruiſe 'em; others beat 'em into a Paſte. In effect there are as many different ways of preparing this *Oil*, as there are Perſons who make it their buſineſs to prepare it.

In this diverſity, *Pomet* gives us a Method eaſier and leſs expenſive than any of the reſt; which, it ſhould ſeem, we cannot do better than follow.

Method of procuring Oil of ſweet Almonds *by Expreſſion, without Fire.*

Take a Pound and a half of peel'd ſweet Almonds, new and dry; after pounding 'em in a Mortar, paſs 'em thro' a coarſe Sieve, lay 'em in a Hair-Cloth, and put 'em under the Preſs between two Plates of Copper, Steel, or the like; preſs 'em gently; and when all the unctuous and fluid Part is expreſs'd, you will have a ſweet *Oil* without any Sediments, which is ſcarce avoidable in any of the other manners.

Palm OIL, or *Oil of Senegal*, a thick unctuous Liquor, of a yellow Colour, and a Violet-ſmell; ſo call'd becauſe drawn, by Ebullition or by Expreſſion, from the Fruit of a kind of Palm-Tree, growing in ſeveral Places of *Africa*, eſpecially in *Senegal*.

The *Africans* uſe this *Oil* as we do Butter; and burn it when old. In *Europe* 'tis eſteem'd a ſovereign Remedy againſt cold Humours; and even ſaid to give eaſe in the Gout. 'Tis ſometimes counterfeited with Wax, *Oil* of Olives, *Iris*, and Turmeric; but the Trick is found out either by Air or Fire. The Air alters the Colour of the Genuine, and leaves the Counterfeit unchanged; and on the contrary, Fire changes the Counterfeit, not the Genuine.

OIL *of Camomile*, an *Oil* made with the Flowers of this Plant ſteep'd in *Oil* of Olives, and expoſed to the Sun in the heat of Summer: Its Colour is blueiſh; ſome add fine Turpentine. It is the moſt eſteem'd when old. 'Tis uſed for the cure of ſeveral kinds of Wounds; and is reputed a kind of Balm.

OIL *of Petrol*, ſee NAPHTA.

OIL *of Amber*, ſee AMBER.

OIL *of Antimony*, or *Butter of Antimony*, ſee ANTIMONY.

OIL *of Arſenic*, or *Butter of Arſenic*, ſee ARSENIC.

OIL *of Aſpic*, or *Spike*, an *Oil* drawn from the Flowers or little Leaves of a Plant of the ſame Name, growing in the South Parts of *France*, reſembling our Lavender. 'Tis of a white Colour, and an aromatic Smell; and is the only *Oil* diſſolvable

diſſolvable in *Sandarach*; whence the genuine *Oil* is eaſily diſtinguiſhed from the counterfeit, which is *Oil* of Turpentine mix'd with a little *Petrol*. It is uſed by Painters and Farriers; and is of ſome uſe in Medicine, where it makes a part in ſeveral *Galenical* Compoſitions.

OIL *of Balm*, ſee BALM.
OIL *of Ben*, ſee BEN.
OIL *of Cacao*, ſee CACAO.
OIL *of Camphor*, ſee CAMPHOR.
OIL *of Cinnamon*, ſee CINNAMON.
OIL *of Caſtor*, ſee CASTOREUM.
OIL *of Wax*, ſee WAX.
OIL *of Cumin*, ſee CUMIN.
OIL *of Fennel*, ſee FENNEL.
OIL *of Nutmeg*, ſee NUTMEG.
OIL *of Guaiacum*, ſee GUAIACUM.
OIL *of Cloves*, ſee CLOVES.
OIL *of Lavender*, ſee LAVENDER.
OIL *of Lentiſc*, ſee LENTISCUS.
OIL *of Lime*, ſee LIME.
OIL *of liquid Amber*, ſee BALM.
OIL *of Mace*, ſee NUTMEG.
OIL *of Millepertuis*, ſee MILLPERTUIS.
OIL *of Mathiolus*, ſee SCORPION.
OIL *of Neroli*, ſee ORANGE.
OIL *of Nuts*, ſee NUT.
OIL *of Orange*, ſee ORANGE.
OIL *of black Pitch*, ſee PITCH.
OIL *of Roſemary*, ſee ROSEMARY.
OIL *of Sardine*, ſee SARDINE.
OIL *of Sage*, ſee SAGE.
OIL *of Cotton*, ſee COTTON.
OIL *of Sulphur*, ſee SULPHUR.
OIL *of Turpentine*, ſee TURPENTINE.
OIL *of Thyme*, ſee THYME.
OIL *of Tortoiſe*, ſee TORTOISE.

Virgin OIL, is underſtood of *Oils* expreſs'd from Olives, Nuts, &c. freſh gather'd, without being heated, too much preſs'd, &c. See OIL *of Olives*.

Granulated OIL is that fix'd in little Grains; this is the beſt, and moſt eſteem'd, eſpecially of *Oils* of Olives.

Oil frequently takes new Names from the Drugs mix'd with it; as *Oil of Roſes*, which is that mix'd with Roſes; *Oil of Jaſmin*, that perfum'd with Jaſmin.

Plato obſerves, that *Oil* is deſtructive to all Plants; and he adds too, to the Life of all Animals, except thoſe of Man, to which it is agreeable, as alſo to the reſt of his Body. He adds further, that 'tis very uſeful to the external parts of the Body, but hurtful to the internal. *Fernelius* obſerves that *Oil* ſoftens, moiſtens, and lubricates the Body, and takes off the ſenſe of Wearineſs; for which reaſon the *Greeks* call it *Acopum*; and renders the Body prompt and agile. *Dioſcorides* ſays it cures Leproſies, &c.

OIL, among the Chymiſts, is the ſecond of the Elements, or Hypoſtatical Principles; otherwiſe call'd *Sulphur*. See ELEMENT, PRINCIPLE, and SULPHUR.

All natural Bodies yield *Oil*, either by Diſtillation; Putrifaction; or Liquation call'd *per Deliquium*: And hence the Chymiſts will have it a neceſſary Ingredient in the Compoſition of all Bodies. They make it the Principle of Odours; and to the Diverſities thereof, aſcribe all the differences of Bodies in reſpect of Smells. See SMELL.

All Plants yield a fetid *Oil* at the end of Diſtillation; but Aromatic ones beſide this yield another *Oil*, which riſes after the Phlegm, and at the beginning of the Diſtillation: This they call an *Eſſential Oil*, becauſe it retains the natural ſmell of the Plant; whereas the ſecond *Oil*, even that of Aromatic Plants, ſtinks intolerably. See ESSENTIAL.

M. *Homberg*, from an Obſervation that Plants which yield the moſt Acid, yield likewiſe the moſt *Oil*; took occaſion to think that the Acid might aſſiſt the *Oil* to diſengage itſelf from the Body, and to riſe in Diſtillation; which he found to anſwer in the Experiment. Mineral Acids prov'd to have more force on the *Oils* of Plants, and put 'em in a condition of riſing in Diſtillation, and in greater Quantity by the Action of Fire, than Vegetable ones. Accordingly, whereas the Perfumers find a deal of difficulty in raiſing eſſential *Oil* of Roſes; and ſcarce get an Ounce out of an hundred Pounds of the Flower: M. *Homberg*, on his Principle, got at leaſt one third more; *viz.* by laying the Roſes fifteen days in Water impregnated with Spirit of Vitriol, before Diſtillation.

The Chymiſts Doctrine of Principles, Mr. *Boyle* ſhews to be very deficient in the Article *Oils*: For the Characteriſtic of a Sulphur, or that which denominates a thing ſuch, is Inflammability: Now, there are at leaſt three Subſtances manifeſtly different in Conſiſtence, Texture, or both; which, according to that Notion, ought to be referr'd to Sulphurs: For ſometimes the inflammable Subſtance obtain'd from a mix'd Body by means of Fire, appears in form of an *Oil* that will not mix with Water; ſometimes in form of an inflammable Spirit, which will readily unite with that Liquor; and ſometimes alſo in form of a conſiſtent Body almoſt like common Sulphur. *Producib. of Chym. Prin.*

Dr. *Slare* in *Philoſ. Tranſact.* gives us a Scheme, or Analyſis of *Oils*. He diſtinguiſhes *Oils* into Vegetable, Animal, and Mineral.

The Vegetable he divides into *Eſſential*, and not *Eſſential*.

The *Eſſential* again, are either perfect Stillations made by the Analyſis of the Chymiſt's Fire; where the oleaginous Particles are truly ſeparated from all other; as thoſe from the Seeds of Cummin, Fennel, and Dill: or light and etherial, uſually drawn from the Tops of Plants, and ſpecifically lighter than Water, ſome of 'em than Spirit of Wine; as thoſe from Thyme, Wormwood, Hyſop, Lavender, Roſemary, Penny-royal, Rue, Sage, Savin, &c. Or ponderous, which commonly ſink in Water.

Thoſe *not Eſſential*, are imperfect, or made by Expreſſion; which are decompounded of ſeveral parts of the Plants; as of Almonds, Olives, Wallnuts, Lime, Rape, &c.

The *Animal* OILS are either thoſe of the ſolid Parts, as Harts-horn, Human-Skull, Hoofs, &c. Or thoſe of the Fluids, as of Human-Blood.

Laſtly, the *Mineral* OILS are thoſe of Amber, Petroleum, *Barbadoes* Tar, and Bees-Wax.

Of theſe *Oils*, there are twelve that by a Mixture of compound Spirit of Nitre, make an Ebullition, Exploſion, and Flame. Eighteen that make an Ebullition and Exploſion without Flame: And four that produce neither. See EBULLITION, FLAME, &c.

OIL-*Bag*, a Veſſel in Birds, replete with an unctuous Subſtance, ſecreted by one, ſometimes two, Glands for the purpoſe, diſpoſed among the Feathers; which being preſs'd by the Bill or Head, emits its *oily* Matter, for the Dreſſing and Preening the Feathers. See FEATHER and PREENING.

OINTMENT, in Pharmacy and Surgery, &c. See UNGUENT.

OKER, or OCHER, in Natural Hiſtory, a yellow, dry, fat, ſoft, foſſil Earth; found in Copper and Lead Mines, ſometimes in thoſe of Silver, and ſometimes in Mines of its own. See EARTH.

Others ſeem more rightly to refer *Oker* to the Claſs of Semi-metals, than of Earths. It conſiſts, according to them, of Earth and a Metal, particularly Iron, combined. See SEMI-METAL.

Mr. *Boyle* aſſures us he has ſeen a Piece of *Oker* richer in Metal than moſt Iron-Ores; and which was even render'd magnetical by heating and then cooling it in a perpendicular poſition. See MAGNET and MAGNETISM.

Some Authors eſteem *Oker* proper to promote the melting of Metals, when they are too harſh and brittle; but its chief Uſe is in Painting.

'Tis only the yellow *Oker* is natural; the red is prepared from the yellow by calcining it in the Fire till it have acquir'd its redneſs.

The Beds are uſually from one hundred fifty to two hundred foot deep; and their thickneſs from four to eight Inches, between a white Sand which covers them a-top, and a yellow argillous Earth underneath.

The beſt *Oker* is that of *Berry* in *France*. There are ſeveral Kinds dug up in *England*, all bordering on the red; ſome of them uſed in poliſhing Looking-Glaſſes.

The Word comes from the *Greek* ὤχρα, yellow Earth.

Oker, in effect, is always impregnated with Iron, and is what generally gives to the Chalybeat Springs their medicinal Virtues; many of which we ſee, upon ſtanding of the Water, will depoſite the *Oker* at the bottom of the Veſſel.

OLD *Age*, ſee LONGÆVITY.

OLEAGINOUS, ſomething that partakes of the nature of *Oil*; or out of which Oil may be expreſs'd. See OIL.

Thus Olives, Nuts, Almonds, &c. are *oleaginous* Fruits, or Fruits out of which *Oil* is expreſs'd. See FRUIT. Pines, Firs, &c. are *oleaginous* Woods, yielding Roſin, Turpentine, &c. See ROSIN, &c.

Of all Woods, *oleaginous* ones burn the beſt. See FUEL.

An *oleaginous* Urine in malignant Fevers is a ſign of Death. See URINE.

OLECRANUM, in Anatomy, an Eminence behind the Bend of the Elbow; being the Part whereon the Arm bears when we reſt on the Elbow. See ARM.

This Eminence is nothing elſe but the poſterior *Apophyſis* of the Head of the Ulna, which ſtays that Bone, and prevents its ſlipping back; ſo as to form an acute Angle when the Arm is bent. See ULNA.

The *Olecranum* is received into the hind Sinus of the lower end of the Humerus; and with the fore Protuberance of the Ulna, which is received into the fore Sinus of the Humerus, forms a perfect Ginglymus, whereby the two Bones move as on a Hinge.

OLERON-*Laws*, or the *Sea-Laws of* OLERON, are a Set of antient Laws, relating to Maritime Affairs, made by K. *Richard* I. See LAW.

They are thus call'd, becauſe made in the *Oleron*, an Iſland in the Bay of *Aquitaine*, at the Mouth of the River *Charent*.

OLFACTORY *Nerves*, in Anatomy, the firſt Pair of Nerves ſpringing out of the *Medulla oblongata*; ſo call'd as being the immediate Inſtruments of Smelling. See SMELLING.

The Antients call'd them *Proceſſus Papillares*; which Dr. *Drake* thinks a more ſuitable Name, till their arrival at the *Os Cribroſum*; in regard they rather appear Productions of the *Medulla oblongata*, than diſtinct Nerves; againſt which, their manifeſt Cavities, and their Communication with the Ventricles, argue. See MEDULLA *oblongata*.

The *Olfactory* Nerves have their Riſe juſt below the *Os frontis*, and are diſtributed in the Membranes of the Noſe. See NERVE.

OLIBANUM, in Pharmacy, a kind of Gum, or Reſin, uſually call'd male *Frankincenſe*. See INCENSE.

It has its name *Olibanum*, *quaſi oleum Libani*; becauſe diſtilling in form of an Oil, from a Tree on Mount *Libanon*.

It is brought to us in large white Tears, bordering a little on the yellow; very heavy, of a ſharp bitter Taſte, and a brisk Smell.

'Tis diſtinguiſh'd from the female, or common Incenſe, by the largeneſs of the Drops. 'Tis very glutinous, conſequently ſtrengthening; and partakes enough of the Turpentine to render it ſomewhat detergent; 'tis more uſed in compound ſtrengthening Plaiſters, than in inward Compoſitions.

OLIGARCHY, a Form of Government, wherein the Adminiſtration is in a few Perſons; ſuch are the States of *Venice* and *Genoa*.

The *Oligarchy* amounts to the ſame thing with an Ariſtocracy. See ARISTOCRACY.

The Word is form'd from the *Greek* ὀλίγος, few; and ἀρχὴ, Command, Government.

OLIO, or OGLIO, a ſavoury Diſh, or Food, compoſed of a great variety of Ingredients.

The Forms of *Olio's* are various; to give a Notion of the ſtrange Aſſemblage, we ſhall here add one from an approved Author.

Take Rump of Beef, Neat's Tongues boil'd and dry'd, and *Bolonia* Sauſages; boil 'em together, and after boiling two Hours, add Mutton, Pork, Veniſon, and Bacon, cut in bits; as alſo Turnips, Carrots, Onions, and Cabbage, Borage, Endive, Marigolds, Sorrel, and Spinage; then Spices, as Saffron, Cloves, Mace, Nutmeg, &c. This done, in another Pot put a Turkey or Gooſe, with Capons, Pheaſants, Widgeons, and Ducks, Partridges, Teals, and Stock-doves, Snipes, Quails, and Larks, and boil them in Water and Salt. In a third Veſſel, prepare a Sauce of white Wine, ſtrong Broth, Butter, Bottoms of Artichokes and Cheſnuts, with Colliflowers, Bread, Marrow, Yolks of Eggs, Mace and Saffron. Laſtly, diſh the *Olio*, by firſt laying out the Beef and Veal, then the Veniſon, Mutton, Tongues, and Sauſages, and Roots over all; then the largeſt Fowls, then the ſmalleſt, and laſtly pour on the Sauce.

OLITORY, a Kitchen-Garden, or a Garden of Herbs, Roots, &c. for Food. See GARDEN.

OLIVARIA *Corpora*, in Anatomy, are two Protuberances in the under part of the Brain, placed on each ſide the *Corpora Pyramidalia*, towards the lower end; having their Name from their Figure, which reſembles that of an Olive. See BRAIN.

OLIVE, a Stone-Fruit, which yields plenty of Oil; the Produce of the Olive-Tree. See OIL.

There are three Kinds of *Olives*, frequently ſold; different in Size and Goodneſs; *viz.* thoſe of *Verona*, which are the beſt; thoſe of *Spain*; and thoſe of *Provence*.

The *Olives*, while on the Tree, are intolerably bitter, without any thing of that delicious Taſte which procures them admittance at the richeſt Tables. To fit 'em for that, they muſt be prepared as follows.

Manner of Preparing, or Pickling OLIVES.

In the Month of *June* and *July*, long e'er the *Olives* are fit to yield their Oil, they are gather'd, and laid to ſteep ſome days in freſh Water; when taken out, they are put in another Water prepared with Barillia, or Kali, with Aſhes of *Olive* Stones calcined; or at leaſt with Lime.

They are next laid in a Liquor of Water and Salt, with which they are put in thoſe little Barrels, wherein they are brought to us. To give 'em the Flavour, they throw over 'em an Eſſence uſually compoſed of Cloves, Cinnamon, Coriander, and Fennel. This Eſſence is a kind of Secret among thoſe who deal herein; and, in effect, 'tis in this that all the difficulty of the Preparation lies.

Manner of Drawing Oil of OLIVES.

The *Olives* being gather'd, are laid for ſome time on the Ground to drain, and to ripen further; they are then ground into a Paſte with a Mill-ſtone: The Paſte is put in large Frails, and boiling Water poured over them. Laſtly, the whole is preſs'd; by means whereof the Oil is eaſily ſeparated, and ſwims a-top of the Water.

OLIVE-*Colour*, is a yellow, mingled with black. The Term is chiefly uſed in ſpeaking of the Teint of the Complexion. The *Spaniards* and *Indians* are rarely white; generally *Olive*-complexion'd,

OESTRUM *Veneris*, Extaſy of Deſire, or Love; a Term ſometimes given the *Clitoris*, from the laſcivious Titillation it is capable of. See *Clitoris*.

OLYMPIAD, in Chronology, a Space, or Period of four Years; whereby the *Greeks* reckon'd their Time. See EPOCHA.

This Method of Computation had its Riſe from the *Olympic Games*, which were celebrated every fourth Year, near the City *Piſa*, or *Olympia*, in *Peloponneſus*. See OLYMPIC.

The firſt *Olympiad* commenced, according to ſome, in the Year 3938 of the *Julian* Period; the Year from the Creation 3208; the Year before Chriſt 776; and 23 Years before the Foundation of *Rome*: Or rather, as others will have it, in the Year of the World, 3251; the Year of the *Julian* Period, 3941; and 23 Years before the Building of *Rome*.

The *Peloponneſian* War begun on the firſt Year of the 87th *Olympiad*. *Alexander the Great* died the firſt Year of the 114th; and Jeſus Chriſt was born the firſt Year of the 195th *Olympiad*.

The *Olympiads* were alſo call'd *Anni Iphiti*, from *Iphitus*, who inſtituted, or at leaſt renewed the Solemnity of the *Olympic Games*.

We don't find any Computation by *Olympiads* after the 364th, which ended with the Year of Chriſt 440.

In a Charter of our K. *Ethelbert*, the Years of his Reign are reckoned by *Olympiads*.

OLYMPICS, or OLYMPIC *Games*, were ſolemn Games, famous among the antient *Greeks*; inſtituted, according to ſome, by *Hercules* in honour of *Jupiter*; and held every 4th Year, or every 49th Month, on the Banks of the *Alpheus*, near *Olympia* a City of *Elis*; to exerciſe their Youth in five Kinds of Combats. See GAMES.

Theſe *Games* became ſo conſiderable, that the *Greeks* made 'em their Epocha; diſtinguiſhing their Years by the Returns of the *Olympics*. See OLYMPIAD.

Thoſe who were Conquerors in them, were ſo honour'd by their Country-men, that at their Return, a piece of the Wall of the City was pull'd down to give paſſage to their Chariot. The Prize contended for, was a Crown of Laurel. See OLYMPIONICS.

OLYMPIC *Fire*, is ſometimes uſed for the Fire ariſing from the Sun's Rays collected in the Focus of a Burning-Glaſs. See FIRE and BURNING-*Glaſs*.

Gli OLYMPICI, the Title of the Academiſts of *Vicenza*, in *Italy*. See ACADEMY.

OLYMPIONICI, *Olympionics*, in Antiquity, an Appellation given to thoſe who came off Victorious in the *Olympic Games*. See OLYMPIC.

The *Olympionics* were infinitely honour'd in their Country, as being eſteem'd to have done it immortal Honour. The *Athenians* particularly, were ſo laviſh in their Preſents to the *Olympionics* their Country-men, that *Solon* found it neceſſary to reſtrain their Liberality by a ſpecial Law, which imported that the City ſhould give 500 Drachma's to the *Olympionics*; which amounted to about 58 Ounces of Silver, our Weight. No very conſiderable Sum.

OMBRE, a celebrated Court-Game at Cards; play'd by two, by three, or by five Perſons; but generally by three.

In *Ombre* by three, nine Cards are dealt to each Party; the whole *Ombre* Pack being only 40; by reaſon the Eights, Nines, and Tens are thrown aſide: He that wins, muſt take five Tricks, or four when the other five are divided, ſo as one have two, and the other three.

The Game of *Ombre* is borrow'd from the *Spaniards*; and requires all the Phlegm and Gravity of that People in the playing. The Name ſignifies as much as the *Game of Man*; *Ombre*, or *Hombra*, in *Spaniſh*, ſignifying Man, in alluſion to the Thought, and Attention requir'd herein. We ſhall here give an Idea of the Oeconomy thereof.

In *Ombre by three*; after the Cards are dealt, if none of the Parties think their hand ſtrong enough to attempt for the Stake or Game, they all *paſs*; and, after ſomething put down to the former Stake, deal over again. If any

will

will attempt for it, he henceforth is call'd the *Ombre*; and the other two become leagued together, like two Partners at Whisk, to defend it againſt him. Note, each has the refuſal of being *Ombre*, according to his Order of Seniority.

There are two ways of his undertaking for the Game: In the firſt, which is the moſt uſual, after chuſing what he will have Trumps, he *diſcards*, or lays aſide what number of his Cards he pleaſes, and in their lieu takes an equal Number from the remainder of the Pack; the like do the other two. The other way is, when he dare truſt to his own Hand, and therefore declines to diſcard, or change any Cards, but leaves that to the others; which is call'd playing *ſans prendre*: If he gains the Point in this latter Caſe, he reaps ſomewhat extraordinary, more than in the firſt.

If he fail, he is ſaid to be *beaſted*; and the Failure is call'd a *Remiſe*, or *Repueſte*; and if one of the Defenders of the Stake win more Tricks than he, he is ſaid to win *Codille*, and takes up the Stake the *Ombre* play'd for: And in both caſes, the *Ombre* is to forfeit the Value of the Stake play'd for to the Board.

If the *Ombre* win all the nine Tricks; it is call'd winning the *Vole*, and he reaps doubly; and if he attempt it, and miſcarry, he ſuffers proportionably. The Overſights, and Irregularities committed in the courſe of the Game, are call'd *Beaſties*, and ſubject the Perſons chargeable therewith to Forfeitures.

Laſtly, as to the Order and Value of the Cards at *Ombre*, it is to be obſerv'd, that the Ace of Spades, call'd *Spadille*, is always the firſt or higheſt Trump, in whatever Suit the Trump be; the Duce of Trumps, when Trumps is of either of the black Colours; or the Seven, if of the black, is the ſecond Trump, and call'd *Manille*; the Ace of Clubs, call'd *Baſto*, the third; and if either of the red Suits be Trump, the Ace of that Suit, call'd *Punto*, the fourth. The reſt in the black Suits are valued according to the following Order, *viz.* King, Queen, Knave, Seven, Six, Five, Four, and Three. In the red Suits they follow thus; King, Queen, Knave, Duce, Three, Four, Five, and Six.

The three firſt, or principal Trumps, are call'd *Matadores*; which have this Privilege, that they are not obliged to attend an inferior Trump when it leads; but for want of another ſmall Trump, the Perſon may renounce Trumps, and play any other Card. Add, that if the three *Matadores* be in the hands of the *Ombre*, in caſe he be beaſted, he is to forfeit for 'em; or, if he gain his Point, he is to have a conſideration for 'em; but for nothing leſs than three. And it muſt be further noted, that the Trumps immediately ſucceeding theſe, *viz.* Punto, King, Queen, &c. if they be found in the ſame hand with the former, are alſo reputed as *Matadores*, and to be allowed, or forfeited for like the reſt: And this as low as the Sequence reaches without interruption.

There are ſome Varieties in the manner of playing the Game of *Ombre*: Sometimes he who has *Spadille*, is oblig'd to play, let his Game be ever ſo bad; which is call'd *Force Spadille*. Sometimes, when all have paſs'd, a Perſon undertakes the Game on condition of diſcarding, and making up his hand e'er he names Trump; which is call'd *Gaſcarille*.

In *Ombre by five*, which ſome even prefer to that *by three*, as not requiring ſo much Attention; only eight Cards a-piece are dealt; and five Tricks muſt be won, otherwiſe the *Ombre* is *beaſted*.

Here the Perſon who undertakes the Game, after naming the Trump, calls a King to his Aſſiſtance; upon which, the Perſon in whoſe hand the King is, without diſcovering himſelf, is to aſſiſt him as a Partner, and to ſhare his Fate. If between both, they can make five Tricks, the *Ombre* wins; and then the auxiliary King ſhares the Spoil; and *vice verſa*.

If the *Ombre* venture the Game without calling in any King; this too is call'd playing *ſans prendre*; in which caſe the other four are all againſt him, and he muſt win five Tricks alone, or be *beaſted*. The reſt is much the ſame as *by three*; *mutatis mutandis*.

OMBRE *de Soleil*, in Heraldry, *Shadow of the Sun*, is when the Sun is borne in Armoury, ſo, as that the Eyes, Noſe, and Mouth, which at other times are repreſented, do not appear.

OMELET, a Fricaſſee, or Preparation of Eggs, with other Ingredients in a Pan; very uſual in *Spain*.

Menage derives the Word from the *Italian Ammella*, little Soul; which, he ſays, that People uſe for the nice Bits among the Entrails of Fowls, &c. uſed for Fricaſſees, as Livers, Hearts, Kidneys, Gizzards, &c. From whence, by reſemblance, is form'd *Amelette*, a Fricaſſee of Eggs: Tho *Tripod* derives the Word from ἅμα, together, and λύειν, to dilute, moiſten, mix; and M. *de la Motte le Vayer* from the *French Oeuf*, Egg, and *melez*, mingled.

The Forms of *Omelets* are various: A noted Author in this way, prefers the following one. The Eggs being beaten, are to be ſeaſon'd with Salt and Pepper, and then fried in Butter made boiling hot: This done, Gravy to be poured on, and the whole ſtrew'd with Chives and Parſley ſhred ſmall. When one ſide is fried enough, it is to be turn'd on the other.

There are alſo *Omelets with Sugar*; *Farced Omelets*; *Omelets* the *Turkiſh* way, &c.

OMEN, a Sign, or Indication of ſomething Future, taken from the Mouth of a Perſon ſpeaking.

Feſtus derives the Word *Omen* from *Oremen*, *quod fit ore*. See AUGURY.

OMEN *Prærogativum*, among the *Romans*, was the Vote of the firſt Tribe or Century, in their *Comitia*.

When a Law, &c. was propoſed, or an Election to be made, an Urn was brought in to the Prieſts there preſent, into which were caſt the Names of the Tribes, or Centuries, or *Curiæ*; as the *Comitia* were either *Tributa*, or *Centuriata*, or *Curiata*. And the Lots being drawn, that Tribe, Century, &c. whoſe Name came up firſt, was call'd *Tribus*, or *Centuria Prærogativa*, becauſe their Voices were ask'd firſt. And ſo much did the *Romans* depend on this Prerogative Century, that the reſt generally follow'd them. Hence a Perſon who had the Voices of the Prerogative, was ſaid to have the *Prerogative Omen*.

OMENTUM, in Anatomy, the *Caul*, *Epiploon*, *Rete*, or *Reticulum*, a fat, thin Membrane ſpread over the Inteſtines, and following them in all their Sinuoſities. See INTESTINES.

It reaches from the bottom of the Stomach (to which it is connected) to the Navel, at which it ordinarily terminates; tho in ſome Subjects it goes further, ſo as upon a Rupture of the *Peritonæum*, to fall into the *Scrotum*. Beſides the Stomach, it is faſten'd to the concave Part of the Liver, the back-ſide of the *Duodenum*, part of the *Colon*, the Back, and the Spleen; its other Extremity to the ſmall Guts.

Its Form reſembles that of a Pouch, or Sachel, which may be inflated with a Blow-pipe to the Capacity of a Gallon.

Its Subſtance is membranous, conſiſting of two Leaves, or Coats, between which, and on the Surfaces of which, are innumerable Veins, Arteries, Nerves, and *Vaſa Adipoſa*, or Fat Veſſels, variouſly interwove, and by their Interſections dividing the Part into a Multitude of little *Areolæ*, reſembling the Maſhes of a fine Net; whence its Name, *Rete*.

The Fat, in its proper Ducts, running along with the other Veſſels, renders theſe *Areolæ* very obſcure; while the intermediate Spaces are fill'd with a tranſparent Membrane, full of ſmall Holes; ſo that the whole appears a beautiful kind of Net. Its Arteries come from the *Cæliac* and *Meſenterics*, and its Veins run to the *Porta*, and are call'd *Epiploicæ*; its Nerves from the Intercoſtals.

The Fat, here, as in the *Membrana Adipoſa*, is either brought by the Ducts into the *Adipoſe* Cells, or deliver'd from the Cells into the Ducts; for the Fineneſs of the Veſſels, &c. renders their Courſe exceeding difficult to trace: 'Tis even doubted whether or no they be hollow. *Malpighi*, and many others, incline to the former Opinion; and take the *Omentum* to be nothing elſe but a large Pouch, full of innumerable little ones, fill'd with Fat; they add, that the *Ductus Adipoſi* are real Veſſels ariſing out of the *Omentum*, and ſpreading themſelves, by means of the *Membrana Adipoſa*, throughout the whole Body; diſtributing Fat to every Part, in the ſame manner as the Arteries diſtribute Blood. See FAT and DUCTUS *Adipoſi*.

The particular Uſe of the *Omentum* is to promote the Periſtaltic Motion of the Guts, by lubricating them with its oily Subſtance, which tranſudes thro' its Pores; and by following them in their Doublings and Windings, to ſerve as a Bolſter to ſlide upon; and by filling up their Hollows, preventing their being too much diſtended with Flatulencies, yet giving way to them when replete with Aliment.

The *Omentum* is ſingle in all Animals, excepting Monkeys, in which it is triple or quadruple.

OMOPHORIUM, a little Cloak, antiently wore by the Biſhops, over their Shoulders; thereby to repreſent the good Shepherd who brings home the ſtray'd Sheep on his Shoulders.

For this reaſon it was put off at the opening of the Goſpels, becauſe then the true Shepherd Jeſus Chriſt, was ſuppoſed preſent in Perſon.

Some confound the *Omophorium* with the *Pallium* wore by the Patriarchs; but there was this difference, that the *Pallium* was a long Cloak, of Purple, and was peculiarly reſerved for Patriarchs; tho ſince given to ſome Biſhops by way of diſtinction. See PALLIUM.

The Word is pure *Greek*, form'd from ὦμος, Shoulder, and φέρω, I carry.

OMOPLATE, in Anatomy, is uſed in the general for the Shoulder; but, particularly for two Bones ſituate on the hind part of the upper Ribs, one on each ſide.

Theſe Bones are broad, and eſpecially in the middle; thick in their *Apophyſes*; of a triangular Form, concave within, and convex without; and are join'd to the Clavicles and Arms.

The Word comes from the *Greek* ωμος, Shoulder, and πλατυς, broad.

OMPANORATE, the Title bore by the Prieſts of the Iſland of *Madagaſcar*.

Theſe are the School-Maſters of the Country, and teach *Arabic* and Writing. They have ſeveral Books, but none of them contain more than ſome Chapter of the *Alcoran*, and a few phyſical Recipes.

They are divided into ſeveral Orders, bearing ſome Reſemblance to our Eccleſiaſtical Dignities: As *Ombiaſſe*, Secretary, or Phyſician; *Tibon*, Subdeacon; *Mouladzi*, Deacon; *Faquihi*, Prieſt; *Catibon*, Biſhop; *Lamlamaha*, Archbiſhop; *Ompitſiquili*, Prophets or Diviners; *Sabaha Calif*, or Chief of the Religion.

The *Ompanorates* deal much in Taliſmans, and other Charms, which they call *Hitidzi*, and which they ſell to the Grandees of the Place. They alſo make little Statues or Images, call'd *Auli*, which they conſult as Oracles; and to which they aſcribe various Powers; as the making rich, deſtroying Enemies, &c. They have public Schools, where they teach their Superſtitions and Sortileges. The *Ompitſiquili* practiſe Neomancy, and are moſtly conſulted on Diſeaſes, and the Succeſs of Affairs; reſolving all Queſtions by Figures drawn on a little Table, cover'd with Sand.

OMPHACIN, in Pharmacy, a kind of Oil, pretended to be drawn from Olives while yet green, and ſour; but *Pomet* charges it as an Impoſture; adding, that Olives yield no Oil at all till perfectly ripe. See OIL and OLIVE.

The Word is derived from the *Greek* ομφαξ, unripe Grape.

OMPHALOCELE, in Medicine, a kind of *Hernia*, or Tumor, in the Navel; ariſing like other Hernia's from a Relaxation or Rupture of the *Peritonæum*. See HERNIA.

Its remoter Cauſes are violent Strains, loud Cries, abundance of ſerous Humour, difficult Delivery, &c.

The Word is form'd from the *Greek* ὀμφαλον, Navel, and κήλη, Tumor. 'Tis otherwiſe call'd *Exomphalus*. See EXOMPHALUS.

OMPHALO-*Meſenteric*, in Anatomy. All *Fœtus's* are wrap'd in at leaſt two Coats, or Membranes; moſt of them have a third, call'd *Allantoides*, or Urinary. Some, as the Dog, Cat, Hare, &c. have a fourth, which has two Blood-Veſſels, *viz.* a Vein and an Artery, call'd *Omphalo-Meſenterics*, becauſe paſſing along the String to the Navel, and terminating in the *Meſentery*. See FOETUS, SECUNDINE, &c.

OMPHALOPTIC, in Optics, a Glaſs that is convex on both ſides, popularly call'd a Convex-Lens. See CONVEX-*Lens*.

ONANIA, and ONANISM, Terms ſome late Emperics have framed to denote the Crime of Self-pollution; mentioned in Scripture to have been practiſed by *Onan*, and puniſhed in him with Death. 'Tis the ſame with what in other places of Scripture, particularly *Levit.* ch. xx. is call'd *giving of Seed to Moloch*; for which the Puniſhment allotted is ſtoning to Death. See POLLUTION.

ONDEE, in Heraldry, ſee WAVY.

ONERANDO *pro rata Portionis*, a Writ which lies for a Joint-Tenant, or Tenant in Common, when diſtrain'd for more Rent than the Proportion of his Land comes to.

ONGLEE, is uſed by the *French* Heralds to denote the Talons or Claws of Beaſts or Birds, when of Colours different from the Body.

ONIROCRATIA, in Divination, the Art of Expounding Dreams. See DREAM, DIVINATION, &c.

It appears from ſeveral Paſſages of Scripture, that there was, under the *Jewiſh* Diſpenſation, ſuch a thing as foretelling future Events by Dreams; but then there was a particular Gift, or Revelation required for that purpoſe.

It ſhould ſeem hence, that Dreams are really ſignificative, and do forebode ſomething to come; and all that is wanting among us is the *Onirocratia*, the Art of knowing what: yet 'tis the Opinion of many, that Dreams are mere Chimera's; bearing, indeed, ſome Relation to what has paſs'd, but none to what is to come. As to the Caſe of *Joſeph*, 'twas poſſible for God, who knew all things, to diſcover to him what was in the Womb of Fate; and to introduce that, he might take the occaſion of a Dream: Not but that he might as well have foretold it from any other Accident or Circumſtance whatever. Unleſs God, to give the Matter more weight, ſhould purpoſely communicate ſuch a Dream to *Pharaoh*, in order to fall in with the popular Notions of Dreams and Divination, which then prevail'd among the *Egyptians*.

The word *Onirocratia* is form'd from the *Greek* ὀνειρος, Dream, and κρατεω, I poſſeſs.

ONIROCRITIC, a Title given to Interpreters of Dreams, or thoſe who judge of Events from the Circumſtances of Dreams.

The Word is form'd from the *Greek* ὀνειρος, *Dream*, and κεισις, *Judgment*.

There is no great regard to be had to thoſe *Greek* Books call'd *Onirocritics*; nor do we know why the Patriarch of *Conſtantinople* and others ſhould amuſe themſelves with writing on ſo pitiful a Subject.

Rigault has given us a Collection of the *Greek* and *Latin* Works of this kind; one attributed to *Aſtrampſichus*, another to *Nicephorus* Patriarch of *Conſtantinople*; to which are added the Treatiſes of *Artemidorus*, and *Achmet*. But the Books themſelves are little elſe but Reveries; a kind of waking Dreams, to explain and account for ſleeping ones.

The Secret of *Onirocriticiſm*, according to them all, conſiſts in the Relation ſuppoſed to be between the Dream, and the Thing ſignify'd; but they are far from keeping to the Relations of Agreement and Similitude; and frequently have recourſe to others of Diſſimilitude, and Contrariety.

ONIX, or ONYX, in Natural Hiſtory, a precious Stone, accounted a Species of Opake Agat. See PRECIOUS *Stone*, AGAT, &c.

Its Colours are uſually white and black, which appear as diſtinct as if laid on by Art. There are ſome brought from *Arabia*, mix'd with a greyiſh Hue; which, after taking off one Lay or Zone, ſhew another underneath, of a different Colour. Whence it takes the Name *Memphites* or *Camehuia*, q. d. *another Stone*. White Zones or Girdles are eſſential to an *Onix*.

The Word *Onix*, in the *Greek* Language, ſignifies *Nail*; the Poets making this Stone to have been form'd by the *Parcæ*, from a Piece of *Venus*'s Nails, cut off by *Cupid* with one of his Arrows.

Dioſcorides and *Galen* rank Alabaſter among the number of *Onix's*; tho' this is very remote from the Sentiment of the Moderns. See ALABASTER.

ONKOTOMY, in Chirurgery, the Operation of opening a Tumor, or Abſceſs; from the *Greek* ὀγκος, *Tumor*, and τεμνω, *I cut*. See TUMOR, &c.

ONOMANCY, or NOMANCY, the Art of divining the good or evil Fortune to befall a Man, from the Letters of which is his Name. See NAME.

Onomantia was a very popular and reputable Practice among the Antients: The *Pythagoreans* taught, that the Minds, Actions and Succeſſes of Men, were according to their Fate, Genius, and Name; and *Plato* himſelf ſeems ſomewhat inclinable to the ſame Opinion. *Auſonius* expreſſes it to *Probus*, thus:

Qualem creavit Moribus,
Juſſit vocari Nomine,
Mundi ſupremus Arbiter.

Thus he plays with tippling *Meroe*, as tho' her Name told ſhe would drink mere Wine, without Water, or, as he calls it, *Merum Merum*. Thus *Hippolitus* was obſerved to be torn in pieces by his Coach-Horſes, as his Name imported; and thus *Agamemnon* ſignify'd he ſhould linger long before *Troy*. *Priam*, that he ſhould be redeem'd out of Bondage in his Childhood. Hitherto may be alſo referred that of *Claudius Rutilius*:

Nominibus certis credam decurrere Mores?
Moribus aut potius Nomina certa dari?

'Tis a frequent Obſervation in Hiſtory, that the greateſt Empires and States have been founded and deſtroy'd by Men of the ſame Name. Thus *Cyrus*, the Son of *Cambyſes*, begun the *Perſian* Monarchy; and *Cyrus*, the Son of *Darius*, ruin'd it. *Darius*, Son of *Hyſtaſpes*, reſtored it; and again, *Darius*, Son of *Arcanus*, utterly overthrew it. *Philip*, Son of *Amintas*, exceedingly enlarged the Kingdom of *Macedonia*; and *Philip*, Son of *Antigonus*, wholly loſt it. *Auguſtus* was the firſt Emperor of *Rome*, *Auguſtulus* the laſt. *Conſtantine* firſt ſettled the Empire of *Conſtantinople*; and *Conſtantine* loſt it wholly to the *Turks*.

'Tis an Obſervation of the like kind, that ſome Names are conſtantly unfortunate to Princes: As *Caius* among the *Romans*; *John* in *France*, *England*, and *Scotland*; and *Henry* in *France*.

One of the great Rules of *Onomancy* among the *Pythagoreans*, was, That an even Number of Vowels in a Name ſignify'd an Imperfection in the left Side of the Man; and an odd Number, in the right. Another Rule was, that thoſe Perſons were the moſt happy, in whoſe Names the Numeral Letters, added together, made the greateſt Sum; for which reaſon, ſay they, it was that *Achilles* vanquiſh'd *Hector*; the Numeral Letters in the former Name amounting, forſooth, to a greater Number than in the latter.

And it was doubtleſs from a Principle much of the ſame kind, that the young *Romans* toaſted their Miſtreſſes at their

their Meetings, as often as there were Letters in their Names. Thus *Martial*,

Nævia ſex Cyathis, ſeptem Juſtina bibatur.

Rhodeginus deſcribes a ſingular kind of *Onomantia*: Thus *Theodotus*, King of the *Goths*, being curious to know the Succeſs of his Wars againſt the *Romans*; an *Onomantical Jew* order'd him to ſhut up a Number of Swine in little Styes, and to give ſome of them *Roman*, to others, *Gothic* Names, with different Marks to diſtinguiſh them; and there to keep them to a certain Day: which being come, upon inſpecting the Styes, they found thoſe dead, to whom the *Gothic*, and thoſe alive, to whom the *Roman* Names were given: Upon which the *Jew* foretold the Defeat of the *Goths*.

The Word *Onomantia* is form'd from the *Greek* ὄνομα, *Name*, and μαντεία, *Divination*. Indeed there is ſomething ſingular in the Etymology: for, in ſtrictneſs, *Onomancy* ſhould ſignify *Divination by Aſſes*; from ὄνος, *Aſinus*, and μαντεια. And to ſignify *Divination by Names*, it ſhould be *Onomatamancy*.

ONOMATOPÆA, in Grammar, &c. a Figure of Speech, whereby Names and Words are form'd to the Reſemblance of the Din or Sound made by the Thing ſignify'd; as *Tricque-Track*, from the Noiſe the Ladies make at this Game: And from the ſame Source ariſes the *Buzzing* of Bees, the *Grunting* of Hogs, the *Cackling* of Hens, the *Snoring* of People aſleep, the *Claſhing* of Arms, &c.

The ſureſt Etymologies are thoſe deduced by the *Onomatopæia*. See ETYMOLOGY.

The Word is form'd from the *Greek* ὄνομα, *Name*, and ποιῶ, *fingo*, I make, feign.

ONONYCHITES, ſomething that has the *Hoofs*, that is, the *Feet of an Aſs*: A Name the Heathens, in the firſt Century, gave the God of the Chriſtians, becauſe they owned and adored the ſame God with the *Jews*. Now 'twas a Notion, (howſoever it had its Riſe) as appears from *Cor. Tacitus*, *Hiſt. lib.* 5. *c.*16. That the *Iſraelites*, much afflicted with Thirſt, were led to a Spring by an Aſs going to drink; and that in gratitude for the Benefit, they worſhipped an Aſs; and that the Chriſtians did ſo likewiſe. See *Tertull. Apol.*

The Word is form'd from the *Greek* ὄνος, *Aſs*, and ὄνυξ, *Hoof*.

ONTOLOGY, or ONTOSOPHY, the Doctrine, or Knowledge *de Ente*, of *Being*, in the General, or Abſtract. See ENS.

Ontology coincides with what in the Schools we more uſually call *Metaphyſicks*. See METAPHYSICKS.

ONYCOMANCY, or as ſome have it, ONYMANCY, a kind of Divination by means of the Nails of the Fingers. See NAIL.

The antient Practice was to rub the Nails of a Youth with Oil and Soot, or Wax; and to hold up the Nails thus rubbed againſt the Sun. Upon them were ſuppoſed to appear Figures or Characters, which ſhew'd the Thing requir'd.

Hence, our modern Chiromancers call that Branch of their Art, which relates to the Inſpection of Nails, *Onycomancy*.

The Word is form'd from the *Greek* ὄνυξ, *Nail*, and μαντεία, *Divination*.

OPACITY, in Philoſophy, a Quality of ſome Bodies, which renders them *Opake*, *i. e.* impervious to the Rays of Light. See LIGHT.

The Term *Opacity* is uſed in oppoſition to Tranſparency. See TRANSPARENCY.

Opacity, according to the *Carteſians*, conſiſts in this, that the Pores of the Body are not all ſtrait, or directly before each other; or rather, not pervious every way.

But this Doctrine is deficient; for tho' it muſt be allow'd that to have a Body tranſparent, its Pores muſt be ſtraight, or rather, open every way: Yet how it ſhould happen, that not only Glaſs and Diamonds, but even Water, whoſe Parts are ſo very moveable, ſhould have all their Pores open and pervious every way; and at the ſame time, the fineſt Paper, or the thinneſt Gold Plate, ſhould exclude the Light for want of ſuch Pores, is inconceivable. So that another Cauſe of *Opacity* muſt be found.

Now, all Bodies have vaſtly more Pores or Vacuities, than are neceſſary for an infinite Number of Rays to find a free Paſſage thro them in right Lines, without ſtriking on any of the Parts themſelves. For ſince Water is nineteen times lighter, *i. e.* rarer, than Gold; and yet Gold itſelf is ſo very rare, that Magnetic Effluvia paſs freely thro' it without any oppoſition; and Quickſilver is readily receiv'd within its Parts, and even Water itſelf by Compreſſion, it muſt have much more Pores than ſolid Parts: Conſequently, Water muſt have at leaſt forty times as much Vacuity as Solidity. See PORE.

The Cauſe therefore why ſome Bodies are *opake*, does not conſiſt in the want of rectilinear Pores, pervious every way; but, either in the unequal Denſity of the Parts; or in the Magnitude of the Pores, and being either empty, or fill'd with a different Matter; by means whereof the Rays of Light, in their Paſſage, are arreſted by innumerable Refractions and Reflexions; till, falling at length on ſome ſolid Part, they become quite extinct, and are utterly abſorb'd. See RAY and REFRACTION.

Hence Cork, Paper, Wood, &c. are opake; while Glaſs, Diamonds, &c. are pellucid. For in the Confines, or joining of Parts alike in Denſity, ſuch as thoſe of Glaſs, Water, Diamonds, &c. among themſelves; there ariſes no Refraction or Reflection, by reaſon of the equal Attraction every way. So that ſuch of the Rays of Light as enter the firſt Surface, paſs ſtraight thro' the Body; excepting ſuch as are loſt and abſorb'd, by ſtriking on ſolid Parts. But in the bordering of Parts unequal in Denſity; ſuch as thoſe of Wood and Paper, both with regard to themſelves, and with regard to the Air or empty Space in their larger Pores, the Attraction being unequal, the Reflections and Refractions will be very great; thus the Rays will be unable to paſs thro' ſuch Bodies, being continually bandied about, till they become extinct. See ATTRACTION, &c.

That this Interruption, or Diſcontinuity of Parts, is the chief Cauſe of *Opacity*, Sir *Iſaac Newton* argues to appear hence, that all opake Bodies immediately begin to be tranſparent, when their Pores become fill'd with a Subſtance of equal, or almoſt equal Denſity with their Parts: Thus Paper dipt in Water or Oil, the Stone call'd *Oculus Mundi* ſteep'd in Water, Linnen Cloth dipt in Oil or Vinegar, and other Subſtances ſoak'd in ſuch Fluids as will intimately pervade their little Pores, become more tranſparent than before. On the contrary, the moſt tranſparent Subſtances, by emptying their Pores, or ſeparating their Parts, may be render'd very opake: Thus Salts, or wet Paper, or *Oculus Mundi*, by drying; Horn, by ſcraping; Glaſs, by pulverizing or flawing; and Water itſelf, by being beat into Bubbles or Froth, are render'd *Opake*.

Indeed, to render Bodies opake and colour'd, their Interſtices muſt not be leſs than of ſome determinate Size: For the moſt opake Bodies that are, if their Parts be very minutely divided, as when Metals are divided in Acid Menſtruums, become perfectly tranſparent. See COLOUR, TRANSPARENCY, &c.

OPAL, a precious Stone, of various Colours. See PRECIOUS *Stone*.

In it are ſeen the Red of the Ruby, the Purple of the Amethyſt, the Green of the Emerald; beſides Yellow, and ſometimes Black and White.

When the Stone is broke, moſt of theſe Colours diſappear; which ſhews that they ariſe by Reflection from one or two principal ones.

Its Form is always either round or oval; its prevailing Colour white. Its Diverſity of Colours makes it almoſt of equal Value with a Saphir or Ruby.

Tavernier ſays, perhaps ſomewhat too poſitively, that there are Mines of *Opal* in *Turkey*. Other Authors, antient and modern, ſay, *Cyprus*, *Arabia*, *Egypt*, *Bohemia*, and *Hungary*, produce it; whence it is diſtinguiſh'd into two kinds, *Oriental* and *Occidental*. 'Tis too ſoft to bear poliſhing with Pewter or Lead; ſo that they are obliged to poliſh it with *Tripoli*.

Pliny among the Antients, and *Porta* and *Albertus Magnus* among the Moderns, are very copious on the Virtues of the *Opal*; forſooth, becauſe it has the Colours of all the other precious Stones, it muſt have all their Virtues too. The Antients call'd it *Paideros*, from its promoting Love and Good-Will. *Pliny* and *Solinus* mention a Species of *Opal*, call'd *Execontalitha*, which had ſixty Colours.

Artificial OPAL. In the *Philoſoph. Tranſact.* Mr. *Colepreſſe* gives us an account of the manner of counterfeiting *Opal*, as practiſed at *Harlem*. He ſays, the Counterfeit is very lively, and thinks it only perform'd by the Degrees of Heat, which produce the Colours. When the Compoſition is melted, they take out ſome on the Point of an Iron Rod, which being cool'd either in the Air or Water, is colourleſs and pellucid; but being put into the Mouth of the Furnace on the ſame Rod, and there turn'd by the Hand for a little ſpace, hath its little Bodies ſo variouſly poſited in various Parts of the ſame Piece, that the Light falling on them, being variouſly modify'd thereby, repreſents the ſeveral Colours ſeen in the natural *Opal*. He adds, the Colours may be deſtroy'd and reſtored, according to the various Motions of its Particles by Heat.

OPALIA, or OPICONSIVA, Feaſts celebrated at *Rome*, in honour of the Goddeſs *Ops*. *Varro* ſays, they were held three days after the Expiration of the *Saturnalia*.

According to *Macrobius*, they were held the nineteenth of *December*, which was one of the Days of the *Saturnalia*. He adds,

adds, that these two Feasts were celebrated in the same Month, because *Saturn* and *Ops* were Husband and Wife; and that it was to them we owe the Invention of Corn and Fruits: for which reason, the Feast was not held till the Harvest and Fruit-time were intirely over.

Lastly, he observes, that the Vows offer'd to the Goddess, were made sitting on the Ground; to shew that she was Earth, the Mother of all things.

OPENING *a Vein*, see BLEEDING.

OPENING *Flank*, in Fortification, is that part of the Flank which is cover'd by the Orillon. See FLANK.

OPENING *of Trenches*, is the first Breaking of Ground by the Besiegers, in order to carry on their Approaches towards a Place. See TRENCH.

OPENING *of Gates*, in Astrology, is, when one Planet separates from another, and presently applies to a third bearing Rule in a Sign opposite to that ruled by the Planet with which it was join'd.

OPERA, a Dramatic Composition set to Music, and sung on the Stage; accompanied with musical Instruments; and enrich'd with magnificent Dressings, Machines, and other Decorations.

Bruyere says, that 'tis essential to the *Opera* to keep the Mind, the Eyes, and Ears in an Enchantment: *S. Evremond* calls the *Opera* a chimerical Assemblage of Poetry and Music; where the Poet and Musician each cramp the other.

The *Opera* we derive from the *Venetians*, among whom 'tis held one of the principal Glories of their Carneval. See COMEDY.

While the *English* and *French* Comic and Tragic Theatres were forming, the *Venetians* invented the *Opera*: The Abbot *Perrin*, Introductor of Embassadors to *Gaston* Duke of *Orleans*, was the first who form'd the Design of introducing 'em into *Paris*; and he obtain'd the King's Privilege for the same in 1669. And it was not long e'er it pass'd thence into *England*. The Spectator observes, that the *French* Music agrees with their Accent and Pronunciation, much better than the *English*; and are at the same time better calculated for the gay Humour of that People. See RECITATIVE.

At *Rome* they have a kind of *Spiritual Opera's*, frequent in Lent; consisting of Dialogues, Duos, Trios, Ritornella's, Chorus's, &c. The Subject whereof is taken out of the Scripture, the Life of some Saint, or the like. The *Italians* call 'em *Oratorio*: The Words are frequently *Latin*; and sometimes *Italian*.

OPERATION, in the general, the Act of exerting, or exercising some Power, or Faculty, upon which an Effect follows. See POWER.

The noblest *Operation* of Man, is that by the Schoolmen call'd Vital, or Immanent, *viz.* the *Operation* of the Mind; which, with regard to the Understanding, is threefold; Apprehension or Perception, Discretion or Judgment, and Reasoning or Discourse. See APPREHENSION, JUDGMENT, and DISCOURSE. The directing of these makes the Object of Logic. See LOGIC.

With regard to the Will, the immanent *Operations* are Willing and Nilling; to which are refer'd Loving and Hating. See WILL.

OPERATION, in Medicine, a methodical Action of the Hand, on the human Body; to re-establish Health. See CHIRURGERY.

Bleeding is a very common, but at the same time a dangerous *Operation*. See PHLEBOTOMY and BLEEDING.

Trepanning is one of the finest *Operations* in Chirurgery. See TREPANNING. The *Cæsarian Operation* is the cutting a Woman with Child, and drawing out the Child through one side. See CÆSARIAN.

The other Chirurgical *Operations*, are *Sutures*, *Tapping*, *Castrating*, *Cutting* for the Fistula, *Amputation*, *Extirpation*, *Cupping*, &c. See each in its Place in this Work.

OPERATION is particularly used in Medicine, for the Manner wherein any Remedy produces its salutary Effect; or that Series of Actions, mediate and immediate, whereby the remote End is effected. See MEDICINE.

See *the Operations of each Kind of Medicines under the proper Heads*, SPECIFICS, PURGATIVES, EMETICS, OPIATES, &c.

OPERATIONS, in Chymistry, are the Processes, or Experiments, by means whereof the proper Changes are produced in Bodies, and the Effects of the Art procured. See CHYMISTRY.

Now, the Changes Chymistry produces in Bodies are reducible to two Kinds, *viz.* an Union of Parts, and a Separation thereof: Thus Chymistry either separates Spirits, Salts, Oils, &c. or compounds 'em together.

A Chymical *Operation*, then, consists in changing the Situation of the Parts; particularly, either in moving some Parts, but not the Whole, which is call'd *separating*; or in adding new Parts, which is call'd *uniting*.

All Chymical *Operations*, therefore, are reducible to two Kinds, *viz.* such whereby the Parts of Bodies before join'd or united, are separated, which the antient Chymists call'd *Solution*; and such whereby the Parts before dis-joined are combined, or united, call'd *Coagulation*. See SOLUTION and COAGULATION.

Some, however, object Digestion as a third Species of *Operation*, not reducible to either of 'em: But *Boerhaave* shews, that it is a Composition of both. See DIGESTION.

Most Chymists, however, look on this Division as scarce accurate and minute enough, and subdivide it into a number of particular, or subordinate *Operations*; as *Calcination*, *Vitrification*, *Distillation*, *Sublimation*, *Cohobation*, *Amalgamation*, *Fermentation*, *Putrefaction*, &c. See each in its Place, CALCINATION, VITRIFICATION, SUBLIMATION, DISTILLATION, FERMENTATION, &c.

OPERATION, in Theology, is used for the Actions both of the Word, and the Man, in Jesus Christ.

The Orthodox teach, that there are two *Operations* in Jesus Christ, the one divine, the other human; and not one *Theandric Operation*, as was the Doctrine of the *Monothelites* and *Monophysites*. See THEANDRIC, &c.

OPERATOR, in Medicine, &c. a Person who *operates*, or works with the Hand, on the human Body, to preserve, or restore, its Health.

Thus we say *Operator for the Stone*, meaning a *Lithotomist*, or a Person who cuts. See LITHOTOMY. *Operator for the Eyes*, a Person who couches Cataracts, &c. See CATARACT. *Operator for the Teeth*, a Tooth-Drawer. See TOOTH.

OPHITES, in Natural History, a sort of variegated Marble; otherwise call'd *Serpentine*. See MARBLE and SERPENTINE.

It is thus call'd from the *Greek* ὄφις, *Serpent*; by reason its Spots resemble those of that Animal.

OPHITES is also a Sect of antient Heretics, who sprung out of the *Gnostics*; so call'd from their worshipping the Serpent that seduced *Eve*.

This Serpent, they taught, was instructed thoroughly in all Knowledge; and make it the Father and Author of all the Sciences. On which Principle they built a thousand Chimera's; part of which may be seen in St. *Epiphanius*. See GNOSTIC.

They said this Serpent was the Christ; that he was very different from Jesus born of the Virgin, into whom, said they, the Christ descended; and that 'twas this Jesus, not the Christ, that suffered. Accordingly, they made all those of their Sect renounce Jesus.

The *Sethians*, or *Sethites*, mentioned by *Theodoret*, were either the same with the *Ophites*, or very little different from them.

OPHIUCHUS, in Astronomy, a Constellation of the Northern Hemisphere; call'd also *Serpentarius*. See SERPENTARIUS.

OPHTHALMIA, or OPTHALMIA, in Medicine, a Disease of the Eyes; properly, an Inflammation of the *Tunica Adnata*, or *Conjunctiva*; accompanied with a redness, heat, and pain. See EYE.

The *Ophthalmia* is either moist, or dry: In the first, there is a shedding of Tears; in the second, none at all.

It sometimes happens in the *Ophthalmia*, that the two Eye-lids are so distorted, that the Eye continues constantly open, without being able to shut; which is call'd χάσμωσις; sometimes the Eye-lids are so fasten'd together, that the Eye cannot be open'd, which is call'd φυμωσις, *q. d.* closure of things that should be open.

The immediate Cause of the *Ophthalmia*, is the Blood flowing in too great abundance in the little Vessels of the *Adnata*, so as to stagnate therein, and distend them. The remote Causes are the same with those of other Inflammations.

Celsus calls the *Ophthalmia*, *Lippitudo*, by reason of a Gum sticking to the Eye-lids in this Disease, which the *Latins* call *Lippa*.

In Summer 'tis frequent to have Epidemic *Ophthalmia's*.

Snow apply'd to the afflicted Eye, is reputed a good Remedy for the *Ophthalmia*: The *Ephemerides* of the *Leopoldine* Academy mention an *Ophthalmia* cured by applying Cows-dung, while hot, between two linnen Clothes, to the Eye. A Fox's Tongue, and the Fat and Gall of a Viper, are emperical Preservatives against the *Ophthalmia*.

The Word is form'd from the *Greek* ὀφθαλμος, Eye.

Pitcairn, and some others, distinguish an external and internal *Ophthalmia*; the first in the *Adnata*, which is that hitherto spoke of; the second in the *Retina*. The Symptoms or Indications of the latter, are *Muscæ volitantes*, Dust seeming to fly in the Air, &c. See MUSCÆ, &c.

This, when inveterate, degenerates, or ends in a *Gutta Serena*, or *Amaurosis*. See GUTTA *Serena*, &c.

The Cure of *Ophthalmia's*, according to the modern Practice, depends chiefly on the due repetition of Purgatives. If these fail, recourse is had to Vesicataries, Issues, Setons, &c. Tho' *Pitcairn* prefers Bleeding; it being his Observation,

tion, that no Diſeaſe requires copious bleeding ſo much as the *Ophthalmia*.

OPHTHALMICS, Medicines proper for Diſeaſes of the Eyes; as *Ophthalmic* Waters, *Ophthalmic* Powders, Ointments, &c. See EYES.

There is an excellent *Ophthalmic* prepared of Sugar of *Saturn*.

The fifth Pair of Nerves of the Brain, dividing into three Branches; the firſt is call'd *Ophthalmic*, becauſe it goes to the Eye: This again ſubdivides into two Branches, after ſending out ſeveral Twigs which encompaſs the Optic Nerves, and are diſtributed in the *Choroides*. See NERVE.

OPHTHALMOGRAPHIA, that Branch of Anatomy which conſiders the Structure and Compoſition of the Eye; the Uſe of its Parts, and the principal Effects of Viſion. See EYE.

Our Countryman, Dr. *William Briggs*, has publiſhed an excellent *Ophthalmographia*, and *Plempius* another.

The Word is form'd from the *Greek* οφθαλμος, Eye; and γραφη, Deſcription.

OPHTHALMOSCOPIA, that Branch of Phyſiognomy which conſiders a Perſon's Eyes; to deduce thence the Knowledge of his Temperament, Humour, and Manners. See PHYSIOGNOMY.

OPIATE, in Medicine, any Compoſition wherein Opium is an Ingredient. See OPIUM.

The Word is frequently alſo apply'd to Confections, Antidotes, and Electuaries; tho ſome ſay 'tis only properly applicable to ſoft Compoſitions: In which ſenſe it is defined an internal Remedy, variouſly compoſed of Powders, Pulps, Liquors, Sugar, or Honey, reduced into a ſoft Conſiſtence. See CONFECTION, ELECTUARY, &c.

The *Opiate* of *Solomon* is a Compoſition of great Fame, ſo call'd from one *Solomon*, a Phyſician, its Inventor; and firſt publiſhed by *Laurence Joubert*.

There are a particular kind of *Opiates*, call'd *Incarnatives*, for the Teeth and Gums, made of Alum, Sumach, Lignum Aloes, Myrrh, Maſtic, &c. reduced into Powder.

OPIATES is alſo uſed in the general for all Medicines given with an Intention to procure Sleep; in which ſenſe the Word is of the ſame Import with Narcotics, Hypnotics, Soporifics, and Pacifics. See SLEEP, NARCOTIC, HYPNOTIC, &c.

The Operation of *Opiates*, or the manner wherein they produce their Effect in the Body, Dr. *Quincy* thus lays down:

All Pain is a Stimulus on the Part affected, and is attended with Contractions of the pained Membranes, which occaſion a greater Afflux than ordinary of the nervous Juice that way: On the other hand, Pleaſure, or a delightful Senſation in any part, is accompanied with a ſmooth Undulation, and eaſy Reflux of the nervous Juice towards the Brain. This is, as it were, the Entertainment of the Mind; with which being taken up, it doth not determine the Spirits to the Organs of Motion: that is, there is ſuch a Relaxation of the muſcular Fibres, and ſuch a Diſpoſition of the nervous Fluid, as is neceſſary to Sleep. See PAIN, &c.

Now, 'tis ſhewn that an agreeable Senſation produced in the Stomach, together with a diſtention of its Membranes, is the immediate Cauſe of that Sleepineſs, to which we are inclinable after Eating; the one engaging the Mind, the other acting on the Body. For Pleaſure amuſes the Soul, and the Fulneſs of the Veſſels in the Brain, checks and hinders, in ſome meaſure, the derivation of the nervous Juice into the Organs.

Now, to apply this; a moderate Doſe of an *Opiate*, uſually tranſports People with a pleaſing Senſation, to that degree, that, as they often expreſs themſelves, they are in Heaven; and tho they do not always ſleep, (which proceeds from the preſentation of pleaſing Images to the Mind ſo ſtrongly, that, like Dreams, they do over-engage the Fancy, and ſo interrupt the State of Reſt) yet they enjoy ſo perfect an Indolence and Quiet, that no Happineſs in the World can ſurpaſs the Charms of ſo agreeable an Extaſy.

Thus we have from theſe Medicines, but in a far more eminent degree, all thoſe Effects which are obſerved to follow upon that grateful Senſe in the Stomach, which a moderate Fulneſs produceth. For no Bodies are ſo fit and able pleaſingly to affect our ſenſible Membranes, as thoſe which conſiſt of volatile Parts, whoſe Activity is tempered and allay'd by the Smoothneſs of ſome which are lubricating and oily; for they lightly rarify the Juices of the Stomach, and cauſe a pleaſant Titillation of its nervous Coat, whereby there is induced an agreeable Plenitude, and the Mind is entertained with Ideas of Satisfaction and Delight.

And thus, we eaſily ſee upon what Mechaniſm the other Virtues of *Opiates* depend; for their eaſing Pains, checking Evacuations, &c. proceed not only from the Mind's being taken up with a pleaſing Senſe, whereby it is diverted from a diſagreeable one; but all Pain being attended with a Contraction of the Part, the Relaxation of the Fibres, which they cauſe, eludes and deſtroys the Force of the Stimulus.

Opiates are found to abate immoderate Secretions and Evacuations, which they do by removing that Irritation of the Organs, whereby they are occaſion'd. And herein lies the incraſſating Quality of thoſe Medicines, in that the twitching Senſe upon the Membranes of the Lungs, Bowels, &c. being leſſen'd, the ſharp Humour is ſuffer'd to lodge there in a greater Quantity, before it is ſo troubleſome as to be thrown off and expell'd; it being all one as if there were no Irritation of the Part, if the uneaſy Senſe thereof be not regarded by the Mind. And theſe Effects will all be heightned by the Mixture of the *Opiate* Particles with the Blood; which is hereupon rarify'd, and diſtends its Veſſels, eſpecially thoſe of the Brain; and this does ſtill, to a greater degree, leſſen the Influx of the nervous Fluid to the Parts, by preſſing upon the *Tubuli*, or little Canals, through which it is derived. Whence the reaſon of that Difficulty of breathing, which *Opiates* occaſion; this Symptom being inſeparable from the Rarefaction of the Blood in the Lungs.

OPINION, a probable Belief; or a doubtful, and uncertain Judgment of the Mind. See BELIEF.

Opinion may be ſtrictly defined the Aſſent of the Mind to Propoſitions not evidently true at firſt ſight; nor deduced, by neceſſary Conſequence, from others that are ſo; but ſuch as carry the Face of Truth. See TRUTH, and ERROR, alſo FAITH, &c.

The Schools define it, *Aſſenſus Intellectus cum formidine de oppoſito*; An Aſſent of the Underſtanding, with ſome fear or diſtruſt on the contrary part. Thus the Logicians ſay, that Demonſtration begets *Science*, or Knowledge; and probable Arguments beget *Opinion*. See KNOWLEDGE and PROBABILITY.

Wherever the Mind's Acquieſcence in a Truth propoſed to it, is accompanied with any Doubt, this is what we call an *Opinion*. See DOUBTING.

Plato makes *Opinion* a Medium between Knowledge and Ignorance; clearer and more expreſs than Ignorance; yet more obſcure and unſatisfying than Knowledge. See IGNORANCE.

OPISTHOTONOS, in Medicine, a kind of Convulſion, wherein the Body is bent backwards, ſo as to form, as it were, a Bow; in which ſenſe the Word is uſed in oppoſition to *Emproſthotonos*, wherein the Body is bent forwards. See CONVULSION.

The *Opiſthotonos* ariſes from a tonic Motion of the Muſcles of the poſterior Parts of the Body; eſpecially thoſe on the back of the Head.

The Word is compounded of the *Greek* οπισω, backward, behind, and τεινειν, *tendere*, to ſtretch, bend.

OPIUM, in Pharmacy, &c. a Juice drawn from the Head of the black Poppy, and afterwards inſpiſſated. See POPPY.

When the Juice flows of itſelf, thro' Inciſions made in the Poppy Heads, it is properly call'd *Opium*; when drawn by Expreſſion, it aſſumes the Name of *Meconium*. See MECONIUM.

The difference between the Qualities and Virtues of the two Juices, is very conſiderable: The former is preferable on all accounts; but it is exceeding rare; the *Turks*, among whom it is produced, and who make great uſe of it, never allowing it to be exported: ſo that it is the latter that is ordinarily uſed among us, and ſold for *Opium*.

'Tis moſtly brought from the *Levant* and *Cairo*; generally very impure; the *Levantines*, to ſhorten their Labour, and to have the more Juice, drawing it equally from the Heads and the Leaves of Poppies, by Expreſſion, and then reducing it to the thickneſs of an Extract by Fire.

It muſt be choſen dry, the ſmootheſt, and blackeſt poſſible, of a drowſy ſmell, and neither rugged, nor ſticky, nor all in a Maſs.

'Tis a popular Error, that there is any ſuch thing as *white Opium*; for tho' the Juice as it runs from the Heads of the Poppies be of a Milk-colour, it always becomes of a very deep brown as it thickens. Wherever it is found yelloviſh or ſoft, 'tis a ſign the Juice has not had Fire enough.

Prepared Opium is call'd *Laudanum*; of which there are two Kinds: the one, *Simple*; extracted by means of Rain-Water, and Spirit of Wine: The other *Compound*, call'd *Laudanum Opiatum*; wherein there enter ſeveral other Ingredients. See LAUDANUM.

The Uſes of *Opium* are to ſooth Pain, to excite Sleep, to ſtop Vomiting and Looſeneſſes. Its Doſe is from half a Grain to two Grains. Some Perſons, who have much habituated themſelves to it, can take 50 or 60 Grains. *Charas* ſays, he has taken 12 Grains himſelf; and adds, he knew one who made no ſcruple of 36. And in the *Philoſ. Tranſ.* we have an inſtance of one Mrs. *Lovelock*, who, in a Fever, in three days time, took 102 Grains.

It raiſes the Spirits, occaſions agreeable Senſations, and has much the ſame effect with Wine or ſtrong Spirits. The *Turks* ordinarily take to the quantity of a Drachm when

they go to Battel, or undertake any Affair that requires Vigour and Force.

Opium ſtops, for a time, all Overflowings of Humours, Fluxes, Hemorrhages, &c. probably from the ſmoothneſs and roundneſs of its Parts, which by a kind of Titillation, oblige the Inteſtines, and other Veſſels to contract themſelves. See OPIATES.

Willis, *Sylvius*, and *Muller* look on *Opium* as a coagulating Poiſon, which fixes the Spirits in the Nerves. *Wepfer* and *Pitcairn*, on the contrary, maintain it to be a hot diſſolving Poiſon, which ſubtilizes the Blood, exalts and reduces it into Vapours, which bloat up the Arteries; and the bloated Arteries compreſſing the Veins and Nerves, ſhut up the Paſſage of the Spirits. See POISON.

By Analyſis, it is found to contain a great deal of volatile Salt.

The Word is form'd from the *Greek* ὀπός, Juice.

OPOBALSAMUM, in Pharmacy, a whitiſh Juice, Gum, or Reſin, diſtilling from the Branches of a Tree call'd *Balſamum*, or the *Balm-Tree*. See BALM.

'Tis whitiſh, pretty thick, tranſparent, of a Smell approaching Turpentine, but much more agreeable.

'Tis the ſame with the celebrated *Balſamum verum*, or Balm of the *Levant*; at leaſt the difference is not viſible, nor can Authors fix it. See BALM.

It obtains a Place among the Alexipharmics, and is a good Ingredient in the *Theriaca Andromachi*, and Mithridate; very ill ſupply'd with the expreſſed Oil of Mace for a Succedaneum, which does not at all come up to the ſubtilty and activity of its Parts, but is of a much heavier Texture.

This, as all other Balſams, is Suppurative, Deterſive, and Incarnating, apply'd outwardly to Tumors, Ulcers, or green Wounds. See BALSAM.

OPOPANAX, or OPOPONAX, in Pharmacy, a Gum, yellow without-ſide, white within, fat, brittle, of an agreeable Taſte, and a very ſtrong Smell. See GUM.

The *Latins* call it *Panaces Herculeum*, from *Hercules*, who is ſuppos'd to have invented it, or rather who firſt diſcover'd its ſpecific Virtues. 'Tis one of the three celebrated *Panacea*, or univerſal Medicines, they attributed ſuch wonderful Virtues to. The two others are the *Aſclepium* and *Chironium*; the firſt found by *Eſculapius*, the ſecond by *Chiron*. See PANACEA.

The Gum *Opoponax* flows by Inciſion from a Plant growing abundantly in *Achaia*, *Beotia*, *Phocis*, and *Macedonia*: while 'tis liquid, 'tis white; but as it dries and hardens, it aſſumes a beautiful golden yellow.

There are three Kinds imported; that in Tears; that in the Maſs; and that counterfeited, or flatted.

The firſt is the beſt, and the ſecond is the better, as it has the more Tears; the third is a rank Sophiſtication, and good for little.

It is little uſed internally; tho' *Etmuller* ranks it among Cathartics. Its chief Uſe is in the Cure of Wounds; whence it enters the Compoſition of the *Unguentum Divinum*, with the *Galbanum*, *Ammoniac*, and *Bdellium*.

The Word is form'd from the *Greek* ὠπός, *Juice*, and πανάξ, the Name of the Tree which yields it.

OPPILATION, in Medicine, the Act of obſtructing, or ſtopping up the Ducts, or Paſſages of the Body, by evil or peccant Humours. See OBSTRUCTION.

The Word is chiefly uſed for Obſtructions of the lower Belly.

Viſcid, heavy Foods, difficult of Digeſtion, are *oppilative*; don't paſs off well, but ſtop in the Mouths of the Veſſels.

OPPONENT, a Perſon who withſtands, or oppoſes another. See OPPOSITION.

The Term is chiefly uſed in ſpeaking of Scholaſtic or Academic Diſputes or Exerciſes, where a Perſon who oppoſes a Theſis, or impugns it by his Objections, is call'd *Opponens*, Opponent.

OPPOSITES, *Oppoſita*, *ſimply*, among Logicians, are ſuch Things as differ among themſelves; ſo, as not to differ in like manner with ſome third. By which Circumſtance, *Oppoſites* differ from *Diſparates*.

The Schoolmen reckon four Kinds of *Oppoſites*; viz. *relatively*, *contrarily*, *privatively*, and *contradictorily Oppoſites*. For either, ſay they, the Oppoſition is between *Ens* and *Ens*, or between *Ens* and *Non Ens*: If the former, it is either with a dependant *Ens*, which makes a *relative* Oppoſition, the loweſt of all; or an independent one, which is a *contrary* one: If with a *Non Ens*, it is either with a *Non Ens ſecundum quid*, which is *privative*; or with a *Non Ens* ſimply, which is the higheſt Oppoſition. See RELATIVE, CONTRARY, PRIVATIVE, and CONTRADICTORY.

OPPOSITES, *Oppoſita*, *complexly*, are Propoſitions that claſh with each other: As, Man is an Animal; and Man is not an Animal. See OPPOSITION.

OPPOSITE *Angles*. If a Line S T (Tab. GEOMETRY, Fig. 46.) meet two other Lines, A P and B R, in different Points A and B, but in the ſame Direction; the Angles *u* and *y*, as alſo *z* and *y*, hereby form'd, are call'd *oppoſite Angles*; particularly, *u* the external *oppoſite Angle*, and *z* the internal *oppoſite Angle* of *y*.

OPPOSITE *Cones*, or a *double Cone*, two ſimilar Cones, vertically *oppoſite*, and having the ſame common Axis. See CONE.

OPPOSITE *Sections*, are the two Hyperbola's made by a Plane cutting both thoſe Cones.

If a Cone be cut by a Plane through its Vertex, and afterwards by a ſecond Plane parallel to the former; this latter Plane produced thro the *oppoſite Cone* will there make the *oppoſite Sections*. See SECTIONS.

OPPOSITION, in Geometry, the Relation of two Things, between which a Line may be drawn perpendicular to both.

OPPOSITION, in Logic, a Quality of Diſagreement, between Propoſitions that have the ſame Subject, and the ſame Attribute. See PROPOSITION.

Oppoſition, is ſaid by Logicians to be either Complex, or Incomplex.

Incomplex, or *Simple* OPPOSITION, is the Diſagreement of two things, which will not ſuffer each other to be in the ſame Subject: Thus Heat is oppoſed to Cold; Sight to Blindneſs, &c. Which *Oppoſition* has already been obſerved to be of four Kinds. See OPPOSITE.

Complex OPPOSITION, is defined by *Ariſtotle* to be the affirming, and denying the ſame Predicate of the ſame Subject, not taken equivocally for the ſame, according to the ſame, in the ſame manner, and at the ſame time: As *Socrates* is learned; and *Socrates* is not learned.

The later Schoolmen, deviating from their Maſter, define *Oppoſition* an Affection of the Enunciation, whereby two abſolute Propoſitions, the ſame Extremes being ſuppoſed in the ſame Order, and Number, and underſtood, without any ambiguity, of the ſame thing, oppoſe each other, either in reſpect of Quantity, or of Quality; or of both.

According to the former Definition, there are three Species of *Oppoſition*; *Contrary*, *Subcontrary*, and *Contradictory*: According to the ſecond, a fourth Species is admitted, *viz. Subaltern*.

To know how and wherein, Propoſitions are oppoſite, they muſt be compared in Quantity and Quality, all the ways they can be compared in. If they be oppoſite in Quality and Quantity; *i.e.* if the one be Affirmative, and the other Negative; the one Univerſal, the other Particular, they are ſaid to be *contradictory*; *v. gr.* No Pleaſure is allow'd; ſome Pleaſure is allow'd. See CONTRADICTORY.

If they be only oppoſite in Quality, and not in Quantity, they are call'd *Contraries*, if Univerſal; and *Sub-contraries*, if Particular; *v. gr.* All uſe of Wine is Evil; no uſe of Wine is Evil. Some Means of preſerving Reputation are allow'd; ſome Means of preſerving Reputation are not allow'd. See CONTRARY, &c.

If the Propoſitions be only oppoſite in Quantity, they are call'd *Subalterns*; *v. gr.* Every Man is liable to Sin; ſome Man is liable to Sin. But this laſt is no proper *Oppoſition*; inaſmuch as the univerſal Propoſition always includes the particular one.

Singular Propoſitions, which can only be oppoſed in Quality, are reducible to contradictory ones.

The eſſential Properties of Propoſitions conſider'd with regard to their *Oppoſition*; are, 1. That of two contradictory Propoſitions, there is one always true, and another falſe. 2. Two contrary Propoſitions can never be both true; but may be both falſe. 3. Sub-contrary Propoſitions may be all true at the ſame time; as happens when the Attribute is accidental to the Subject; but when it is eſſential to it, the one is true, the other falſe. 4. Subalterns may be either true or falſe at the ſame time; or the one may be true, the other falſe. If the Attribute be eſſential to the Subject, the ſubaltern Affirmatives are true, and the Negatives falſe; but if the Negatives deny the Subject an Attribute incompatible with the Subject, they will be both true. When the Attribute is accidental to the Subject, the univerſal Subaltern is ordinarily falſe, and the particular one true.

OPPOSITION, in Rhetoric, a Figure, whereby two things are aſſembled together, which appeared incompatible; as when *Horace* ſays, a *wiſe Folly*.

In *Bouhours*'s Notion, this Figure, which ſeems to deny what it eſtabliſhes, and contradicts itſelf in Appearance, is very Elegant.

OPPOSITION, in Aſtronomy, is that Aſpect, or Situation of two Stars, or Planets, wherein they are diametrically oppoſite to each other, or 180° a-part. See CONJUNCTION.

When the Moon is diametrically *oppoſite* to the Sun, ſo that ſhe ſhews her whole illumined Face; ſhe is ſaid, with regard to the Sun, to be in *Oppoſition*; and ſhe is then ſaid to be in her *Full*, and ſhines all Night long. See PHASIS.

Eclipſes of the Moon never happen but when ſhe is in *Oppoſition* with the Sun, and when they both meet in the Nodes of the Ecliptic. See ECLIPSE. *Mars* in his *Oppoſition* to the Sun, is nearer the Earth than he is to the Sun.

OPPROBRII *Lapis*, ſee *Lapis* VITUPERII.

OPSONOMUS, in Antiquity, a Magiſtrate of *Athens*, whereof there were two, or three; choſen out of the Senate, or Council. Their Office was to inſpect the Fiſh-Market, and to take care that every thing were done in Order, and according to the Laws.

OPTATIVE, in Grammar, the third Mood of the Conjugations of Verbs, ſerving to expreſs an ardent Deſire or Wiſh for any thing. See MOOD.

Inſtead of a particular Mood, or a particular Set of Inflexions to expreſs this Deſire, the *Engliſh*, *Latins*, &c. expreſs it by an Adverb of Wiſhing prefix'd to it. The *Latins* by *Utinam*; the *French* by *Plût a Dieu*; and the *Engliſh* by *Would to God*, &c.

In theſe Languages, ſetting aſide the Adverb, the *Optative* is the ſame with the Subjunctive; the Inflexions of the Verb, which make what we call the Moods, are the ſame in both.

Indeed, in the *Greek*, the Wiſh is expreſs'd by a particular Inflexion, thence call'd *Optative*; and in the *French*, *Spaniſh*, and *Italian*, there is ſomething like it; their triple Tenſes ſerving the ſame purpoſes. But the *Optative* Mood may be ſafely retrench'd from the *Latin* and *Engliſh*. See SUBJUNCTIVE.

OPTERIA, among the Antients, Preſents made to a Child, the firſt time a Perſon ſaw it.

The Word was alſo uſed for the Preſents which the Bridegroom made his Bride when ſhe was conducted to him; this being the firſt time he ſaw her. See *Barthol. de Puerp. Vet.*

The Word is form'd from the *Greek* ὀπτομαι, I ſee.

OPTICS, is properly the Science of direct Viſion. See VISION.

Tho', ſometimes, the Word is uſed in a larger Senſe for the Science of Viſion, or Viſibles in general: In which Senſe it includes Catoptrics, and Dioptrics; and even Perſpective. See CATOPTRICS, DIOPTRICS, and PERSPECTIVE.

Optics in its more extenſive Acceptation, is a mix'd Mathematical Science, which explains the manner wherein Viſion is perform'd in the Eye; treats of Sight in the general; gives the Reaſons of the ſeveral Modifications or Alterations which the Rays of Light undergo in the Eye; and ſhews why Objects appear ſometimes greater, ſometimes ſmaller, ſometimes more diſtinct, ſometimes more confuſed, ſometimes nearer, ſometimes more remote. See LIGHT, EYE, &c.

In this extenſive Signification, it is conſider'd by Sir *Iſ. Newton* in his admirable Work call'd *Optics*.

Optics makes a conſiderable Branch of Natural Philoſophy; both as it explains the Laws of Nature, according to which Viſion is perform'd; and as it accounts for abundance of Phyſical Phenomena, otherwiſe inexplicable. For what can be determined about Light, Colours, Tranſparency, Opacity, Brightneſs, Meteors, the Rainbow, Parrhelia, &c. but on Principles of *Optics*? What about the Nature of the Stars? The Structure of the Mundane Syſtem? The Motions of the Planets? The Eclipſes of the Luminaries? &c.

Optics, therefore, make a conſiderable Part of Aſtronomy. See ASTRONOMY.

From *Optics* likewiſe ariſes *Perſpective*; all the Rules whereof have their Reaſon or Foundation in *Optics*. Indeed *Tacquet* makes Perſpective a part of *Optics*; tho' *John* Archbiſhop of *Canterbury*, in his *Perſpectiva Communis*, calls *Optics*, Catoptrics, and Dioptrics by the Name Perſpective. See PERSPECTIVE.

Euclid has wrote on the antient *Optics* and Catoptrics: Dioptrics were unknown to them. F. *Honorat. Fabri* has an Abridgment of *Optics*, Catoptrics, and Dioptrics. Father *Eſchinard* a Century of Problems in *Optics*. *Vitellio*, and *Alhazon* have done well on the Principles of *Optics*. Father *Kircher* has a large Volume on the Secrets of *Optics*, of Light, and Shadow; and its ſurprizing Effects, which paſs on the People for Magic. We have alſo *l'Optique & Catoptrique* of F. *Merſenne*, *Paris* 1651. *Dioptrique Oculaire* of Fath. *Cherubin*, *Paris* 1671, Fol. *Chriſt. Scheineri Optica*, *Lond.* 1652. *Jacobi Gregorii Optica*, *Lond.* 1663. *Joh. Bap. Porta de Refractione Optices*. *Barrovii Lectiones Opticæ*, *Lond.* 1669. *Principe Generale de l'Optique*, by Mr. *Leibnitz*, in the *Leipſic* Acts, 1682. *L'Occhiale all' Occhio*, or *Dioptrica Practica*, *Carol. Ant. Mancini*, *Boulogne* 1660, 4°. *Phyſico-Matheſi, de Lumine, Coloribus & Iridi*, per F. *Mar. Grimaldi*, *Bononiæ* 1665, 4°. *Cogitationes Phyſico-Mechanicæ de Natura Viſionis*, per *Joban. Ott. Scaphuſam*, *Heidel.* 1670, 4°. And, who ought to have been named firſt, the great Sir *I. Newton*, in his *Optics*, *Engliſh* and *Latin*, 4°.

OPTIC-*Nerves*, the ſecond Pair of Nerves, ſpringing from the *Crura* of the *Medulla Oblongata*, and paſſing thence to the Eye. See NERVE.

Theſe Nerves approach, by degrees, in their receſs from their Origin; and at length meet, in the Baſis of the Brain, near the Infundibulum. Thence they again ſeparate, but without decuſſating; and proceed, one to each Eye. See EYE.

They are cover'd with two Coats, which they take from the *Dura* and *Pia Mater*; and which, by their Expanſions, form the two Membranes of the Eye, call'd the *Uvea* and *Cornea*. See UVEA, &c.

The *Retina*, which is a third Membrane, and the immediate Organ of Sight, is only an Expanſion of the fibrous, or inner, and medullary Part of theſe Nerves. See RETINA.

The Conſtruction of the *Optic-Nerve* ſeems to be different from that of the other Nerves, which all appear to conſiſt of hard Fibres: For this, e'er it enters the Orbit of the Eye, is only a Coat or Cover form'd by the *Pia Mater*, and including a Production of the *Medulla* of the Brain; which is eaſily ſeparated from it. At its entrance into the Eye, it takes another Coat from the *Dura Mater*; which two Coats are bound together by exceedingly fine Filaments: That from the *Pia Mater* is continued in the *Choroides*, and that from the *Dura Mater* in the *Uvea*.

From their Entrance within the Orbit, to the Ball of the Eye, the *Medulla*, encloſed under the two Coats, is ſeparated into a number of little Cells anſwering to each other. See VISION.

OPTIC-*Pencil*, or *Pencil of Rays*, is that Aſſemblage of Rays by means whereof any Point or Part of an Object is ſeen. See PENCIL and RADIANT.

Some *Optic* Writers laugh at the Notion of *Optic-Pencils*, and maintain 'em mere Chimera's.

OPTIC-*Pyramid*, in Perſpective, is the Pyramid A B C O (Tab. PERSPECTIVE, *Fig.* 12.) whoſe Baſe is the viſible Object A B C; and its Vertex, in the Eye O; form'd by Rays drawn from the ſeveral Points of the Perimeter to the Eye.

Hence alſo appears, what is meant by *Optic Triangle*.

OPTIC *Rays*, are particularly uſed for thoſe wherewith an *Optic-Pyramid*, or *Optic-Triangle*, is terminated; as O A, O C, O B.

OPTIC *Axis*, is a Ray paſſing through the Centre of the Eye; or the middle of the *Optic-Pyramid*, &c.

OPTIC *Chamber*, ſee *Camera* OBSCURA.

OPTIC-*Glaſſes*, are Glaſſes ground either concave, or convex, ſo as either to collect, or diſperſe the Rays of Light; by means whereof Viſion is improved, and the Eye ſtrengthned, preſerved, &c.

For the manner of Grinding and Poliſhing *Optic-Glaſſes*, ſee GRINDING, POLISHING, GLASS, &c.

For their Phenomena, ſee LENS, MIRROR, &c.

The Principal among *Optic-Glaſſes*, are *Teleſcopes*, *Microſcopes*, *Spectacles*, *Reading-Glaſſes*, *Magic Lanthorns*, &c. See the Conſtruction and Uſe of each under its proper Article, TELESCOPE, MICROSCOPE, SPECTACLE, MAGIC *Lanthorn*, &c.

OPTIC *Place* of a Star, &c. is that Point of its Orbit in which it appears to be, to our Eye. See PLACE.

This is either *true*; as when the Eye is ſuppoſed at the Centre of the Earth, or Planet it inhabits; or *apparent*, as when at the Circumference. See APPARENT, PLANET, &c.

The difference between the two, is the *Parallax*. See PARALLAX.

OPTICAL *Inequality*, in Aſtronomy, is an apparent Irregularity in the Motions of far diſtant Bodies; ſo call'd, becauſe not really in the moving Bodies, but ariſing from the Situation of the Spectator's Eye: So that were the Eye in the Centre, it would always ſee the Motions uniform.

The *Optical Inequality* may be thus illuſtrated: Suppoſe a Body revolving in the Periphery of a Circle A B D E F G Q, (Tab. OPTICS, *Fig.* 40.) and moving through equal Arches A B, B D, D E, E F, in equal Times; and ſuppoſe the Eye in the Plane of the ſame Circle, but at a diſtance from it, viewing the Motion of the Body from O: When the Body goes from A to B; its apparent Motion is meaſured by the Angle A O B, or the Arch H L, which it will ſeem to deſcribe. But in an equal time, while it moves thro' the Arch B D, its apparent Motion will be determined by the Angle B O D, or the Arch L M, which is leſs than the former Arch H L. And when arrived at D, it will be ſeen at the Point M of the Line N L M. But it ſpends the ſame time in deſcribing D E, which is equal to A B or B D; and when arrived at E, is ſtill ſeen at M; appearing Stationary in all the Space from D to E. When it arrives at E, the Eye will ſee it in L; and at G, will appear at H; ſo that it will ſeem to have gone retrograde: And, laſtly, from Q to P, it will again appear Stationary.

OPTIMATES, in Antiquity. One of the Diviſions of the *Roman* People, was into *Optimates* and *Populares*.

According to *Tully*'s Deſcription, the *Optimates* were the beſt Citizens; or thoſe who deſir'd their Actions might be approved by the better Sort; and the *Populares* thoſe, who, out of a Thirſt of Vain-glory, did not ſo much conſider what was right, as what would pleaſe the Populace, and get an Intereſt in them. But others rather make the *Optimates* to be the vigorous Aſſertors of the Dignity of the Chief Magiſtrate, and the Sticklers for the Grandeur of the State; who cared not if the inferior Members ſuffer'd, if it were for the Advancement of the Commanding Powers: And the *Populares* thoſe who courted the Favour of the Populace, and encouraged them to demand larger Privileges, to bring Matters nearer to a Level.

OPTION, the Power, or Faculty of Wiſhing, or Chuſing; or the Choice a Perſon makes of any thing.

When a new Suffragan Biſhop is conſecrated, the Archbiſhop of the Province, by a cuſtomary Prerogative, claims the Collation of the firſt vacant Benefice, or Dignity, in that See, according as he ſhall chuſe; which Choice is call'd the Archbiſhop's *Option*.

OR, in Heraldry, *Yellow*, or the Colour of Gold. See COLOUR and METAL.

Without this, or Argent, there can be no good Armory.

In the Coats of Nobles, it is call'd *Topaz*; and in thoſe of Sovereign Princes, *Sol*. It is repreſented in Engraving by ſmall Points, or Dots, all over the Field, or Bearing; as in the Figure.

It is accounted the Symbol of Wiſdom, Temperance, Faith, Force, Conſtancy, &c.

ORACLE, an Anſwer, uſually couch'd in very dark and ambiguous Terms, ſuppos'd to be given by Dæmons of old; either by the Mouth of their Idols, or by thoſe of their Prieſts, to the People who conſulted them on Things to come.

In this ſenſe we ſay, the Prieſteſs was ever in a Rage when ſhe gave Oracles. *Ablancourt* obſerves, that the Study or Reſearch of the Meaning of *Oracles*, was but a heartleſs Thing; and that they were never underſtood till after the Accompliſhment. Hiſtorians relate, that *Cræſus* was trick'd by the Ambiguity and Equivocation of the *Oracle*:

Ibis redibis nunquam in bello peribis.

ORACLE is particularly uſed for the Dæmon who gave the Anſwer, and the Place where it was given. See DÆMON.

The principal *Oracles* of Antiquity are, that of *Aba*, mention'd by *Herodotus*; that of *Amphiaraus*; that of the *Branchydes* at *Didymus*; that of the Camps at *Lacedemon*; that of *Dodona*; that of *Jupiter Ammon*; that of *Nabarea*, in the City *Anarlaca*, near the *Caſpian* Sea; that of *Trophonius*, mention'd by *Herodotus*; that of *Chyſopolis*; that of *Claros* in *Ionia*; that of *Miletus*; that of *Mallos*; that of *Patarea*; that of *Pella* in *Macedonia*; that of *Phaſelides* in *Cilicia*; that of *Sinope* in *Paphlagonia*; that of *Orpheus*'s Head, mention'd by *Philoſtratus* in his Life of *Apollonius*.

But of all others, the *Oracle* of *Apollo Pythius* at *Delphos*, was the moſt celebrated; this was conſulted, *en dernier reſſort*, by moſt of the Princes of thoſe Ages. See PYTHIUS.

M. *Bayle* obſerves, that at firſt it gave its Anſwers in Verſe; and that it fell at length to Proſe, upon the People's beginning to laugh at the Poorneſs of its Verſification.

'Tis a pretty general Opinion among the more Learned, that *Oracles* were all meer Cheats and Impoſtures; either calculated to ſerve the avaritious Ends of the Heathen Prieſts, or the political Views of the Princes.

M. *Bayle* ſays poſitively, they were meer human Artifices, in which the Devil had no hand. He is ſtrongly back'd by *Van Dale*, and M. *Fontenelle*, who have wrote expreſly on the Subject.

There are two Points in diſpute on the Subject of *Oracles*, *viz.* whether they were human, or diabolical Machines; and whether or no they ceaſed upon the Publication or Preaching of the Goſpel.

Plutarch has a Treatiſe on the ceaſing of ſome *Oracles*; and *Van Dale*, a *Dutch* Phyſician, has a Volume to prove they did not ceaſe at the Coming of Chriſt; but that many of them ceaſed long before; and that others held till the fall of *Paganiſm*, under the Empire of *Theodoſius the Great*; when *Paganiſm* being diſſipated, theſe Inſtitutions could no longer ſubſiſt.

Van Dale was anſwer'd by a *German*, one *Mœbius*, Profeſſor of Theology at *Leipſic*, in 1685. M. *Fontenelle* eſpouſed *Van Dale*'s Syſtem, and improved upon it in his *Hiſtory of Oracles*; and ſhew'd the Weakneſs of the Argument uſed by many Writers in behalf of Chriſtianity, drawn from the ceaſing of *Oracles*.

F. *Malthus*, a learned Jeſuit, has anſwer'd both *Van Dale* and *Fontenelle*. He labours to prove that there were real *Oracles*, and ſuch as can never be attributed to any Artifices of the Prieſts or Prieſteſſes; and that ſeveral of theſe became ſilent in the firſt Ages of the Church, either by the Coming of Jeſus Chriſt, or by the Prayers of the Saints.

This Doctrine is confirm'd by a Letter from Father *Bouchet*, Miſſionary, to Father *Malthus*; wherein 'tis declared, that what Father *Malthus* ſays of the antient *Oracles*, is experimented every day in the *Indies*.

It ſeems, according to the Miſſionary, that the Devil ſtill gives *Oracles* in the *Indies*; and that, not by Idols, which would be liable to Impoſture; but by the Mouths of the Prieſts, and ſometimes of the By-ſtanders: 'tis added, that theſe *Oracles*, too, ceaſe, and the Devil becomes mute, in proportion as the Goſpel is preach'd among them.

'Twas *Euſebius* who firſt endeavour'd to perſuade the Chriſtians, that the Coming of Jeſus Chriſt had ſtruck the *Oracles* dumb; tho' it appears from the Laws of *Theodoſius*, *Gratian*, and *Valentinian*, that the *Oracles* were ſtill conſulted as low as the Year 385. *Cicero* ſays, the *Oracles* became dumb, in proportion as People, growing leſs credulous, began to ſuſpect them for Frauds.

Plutarch alledges two Reaſons for the ceaſing of *Oracles*: The one was *Apollo*'s Chagrin; who, it ſeems, took it in dudgeon to be interrogated about ſo many Trifles. The other was, that in proportion as the *Genii*, or Demons, who had the Management of the *Oracles*, died, and became extinct, the *Oracles* muſt neceſſarily ceaſe. He adds a third, and more natural Cauſe of the ceaſing of *Oracles*, *viz.* the forlorn State of *Greece*, ruin'd and deſolated by Wars. For, hence, the Smallneſs of the Gains, let the Prieſts ſink into a Poverty and Contempt, too bare to cover the Fraud.

Moſt of the Fathers of the Church took it to be the Devil that gave *Oracles*; and look'd on it as a pleaſure he took to give dubious and equivocal Anſwers; to have a handle to laugh at them. *Voſſius* allows, that 'twas the Devil who ſpoke in *Oracles*; but thinks that the Obſcurity of his Anſwers, was owing to his Ignorance as to the preciſe Circumſtances of Events. That artful and ſtudied Obſcurity, wherein the Anſwers were couch'd, ſhew'd the Embarraſs the Devil was under; as thoſe double Meanings they uſually bore, provided for their Accompliſhment. Where the Thing foretold, did not happen accordingly, the *Oracle*, forſooth, was miſunderſtood.

Euſebius has preſerv'd ſome Fragments of a Philoſopher, call'd *Oenemaus*; who, out of Reſentment for his having been ſo often fool'd by them, wrote an ample Confutation of all their Impertinences: "When we come to conſult "thee, ſays he to *Apollo*, if thou ſeeſt what is in Futurity, "why doeſt thou uſe Expreſſions that won't be underſtood? "Doeſt thou not know that they won't be underſtood? "If thou doeſt, thou takeſt pleaſure in abuſing us; if thou "doeſt not, be inform'd of us, and learn to ſpeak more clear- "ly. I tell thee, that if thou intendedſt an Equivoque, the "*Greek* Word whereby thou affirm'd that *Cræſus* ſhould "overthrow a great Empire, was ill choſen; and that it "could ſignify nothing but *Cræſus*'s conquering *Cyrus*. If "Things muſt neceſſarily come to paſs, why doeſt thou "amuſe us with thy Ambiguities; what doeſt thou, Wretch "as thou art, at *Delphos*; employ'd in muttering idle Pro- "phecies!"

But *Oenemaus* is ſtill more out of humour with the *Oracle*, for the Anſwer which *Apollo* gave the *Athenians*, when *Xerxes* was about to attack *Greece* with all the Strength of *Aſia*. The *Pythian* declar'd, that *Minerva*, the Protectreſs of *Athens*, had endeavour'd in vain to appeaſe the Wrath of *Jupiter*; yet that *Jupiter*, in complaiſance to his Daughter, was willing the *Athenians* ſhould ſave themſelves in wooden Walls; and that *Salamine* ſhould behold the Loſs of a great many Children, dear to their Mothers, either when *Ceres* was ſpread abroad, or gather'd together.

Here *Oenemaus* loſes all patience with the God of *Delphos*: "This Conteſt, ſays he, between Father and Daugh- "ter, is very becoming the Gods. 'Tis excellent, that "there ſhould be contrary Inclinations and Intereſts in Hea- "ven.——Pure Wizzard, thou art ignorant whoſe the Chil- "dren are, that *Salamine* ſhall ſee periſh; whether *Greeks* "or *Perſians*. 'Tis certain, they muſt be either one or the "other; but thou neededſt not have told ſo openly, that "thou kneweſt not which. Thou concealeſt the Time "of the Battle under thoſe fine poetical Expreſſions, "*Either when* Ceres *is ſpread abroad, or gather'd together*: "And wouldſt thou bambouzle us with ſuch pompous Lan- "guage? Who knows not that if there be a Sea-fight, it "muſt either be in Seed-time or Harveſt? 'tis certain it "cannot be in Winter. Let Things go how they will, "thou wilt ſecure thyſelf by this *Jupiter*, whom *Minerva* is "endeavouring to appeaſe. If the *Greeks* loſe the Battle,

"*Jupiter*

" *Jupiter* prov'd inexorable to the laſt; if they gain it, " why then *Minerva* at length prevail'd."——

ORACLES *of the Sibyls*, ſee SIBYLLINE *Oracles*.

ORAL, ſomething deliver'd by the Mouth or Voice.

In this ſenſe we ſay, *Oral Tradition*, &c. See TRADITION.

ORANGE, a Fruit, too well known to need a particular Deſcription; yet yielding too many Kinds of Merchandize, to be paſs'd over.

The *Latins* call it *Aurantium* or *Malum aureum*, Golden Apple, from its Colour.

Oranges are ordinarily brought from *Nice*, *Cioutat*, the Iſles of the *Hieres*, *Genoa*, *Provence*, *Portugal*, the *American* Iſlands, and even *China* and the Coaſts of *India*.

They were firſt brought into *Europe* from *China*, by the *Portugueſe*; and 'tis ſaid the very Tree, whence all the *European Orange*-Trees were produc'd, is ſtill preſerv'd at *Liſbon*, in the Houſe of the Count *S. Laurent*.

Thoſe moſt eſteem'd, and that are made Preſents of as Rarities, in the *Indies*, are no bigger than a Billiard-Ball; when ſweeten'd with a little Sugar, they are eſteem'd excellent for Diſorders of the Breaſt.

Oranges are ordinarily comfited in Halfs and Quarters. They are firſt peel'd, then ſcoop'd and dry'd in a Stove.

Orangeat is the *Orange*-Peel cut in pieces and candied. *Italy* furniſhes a great deal of Flower of *Oranges*, either dry or liquid.

The Water of Flower of *Oranges*, call'd *Water of Napha*, comes moſtly from *Provence*. To be good, it muſt be very bitter, and not above a Year old.

There are various Oils drawn from *Oranges*: The Oil of *Neroli* is the Produce of the Flowers by Diſtillation. That drawn from the Skin by Water and an Alembic, is altogether as good. There is alſo an Oil drawn from little *Oranges*, or *Orangelettes*, by ſteeping them five or ſix Days in common Water, and diſtilling them with the ſame Water in an Alembic. Theſe Oils are all eſteem'd good for deſtroying of Worms in Children; but are very apt to be ſophiſticated with Oil of Ben, or that of ſweet Almonds.

ORANGEADE, a Drink made of *Orange*-Juice, Water, and Sugar.

Lemery ſays, it may be given to People in the height of a Fever.

ORANGE *Colour*, is a Colour that partakes equally of Red and Yellow; or is a Medium between the two. See COLOUR.

In Heraldry, the Term *Orange* is given in Blazon to all Roundles that are *Tenne* or *Tawney*.

ORANGERY, a Gallery in a Garden, or Parterre; expos'd to the South; but well cloſed with a Glaſs Window, to preſerve the Oranges in, during the Winter Seaſon.

Orangery is alſo uſed for the Parterre, where the *Oranges* are expos'd in kindly Weather. The *Orangery* of *Verſailles* is the moſt magnificent that ever was built.

ORATION, a Speech, or Harangue, framed according to the Rules of Oratory; and ſpoke in public. See ORATORY.

All the Kinds of *Orations* may be reduc'd to three Heads: *viz.* the *Demonſtrative*, the *Deliberative*, and the *Judicial*.

To the demonſtrative Kind belong, *Panegyrics*, *Genethliacs*, *Epithalamia*, *Epicedia*, *Euchariſtiæ*, *Epinecia*, and *Congratulations*. See PANEGYRIC, GENETHLIAC, &c.

To the deliberative Kind belong, *Perſuaſion*, *Diſſuaſion*, *Exhortation*, and *Commendation*.

To the judicial Kind belong, *Accuſation*, *Confirmation*, *Confutation*, &c. *See each under its proper Article*, CONFIRMATION, &c.

ORATORY, the Art of ſpeaking well; the ſame with Rhetoric: the difference between the two being only in the Names; the firſt of which is *Latin*, the other *Greek*. See RHETORIC.

ORATORY is alſo uſed among the *Romaniſts*, for a Cloſet, or little Apartment, in a large Houſe, near a Bed-Chamber, furniſh'd with a little Altar, or an Image, for private Devotion.

The antient *Oratories* were little Chappels, adjoining to Monaſteries, wherein the Monks ſaid their Prayers e'er they had any Churches. Several little Councils and Synods have condemn'd the Uſe of private *Oratories*. See CHAPPEL.

In the VIth and VIIth Centuries, *Oratories* were little Churches, frequently built in Church-yards; without either Baptiſtery, Cardinal Prieſt, or any public Office; the Biſhop ſending a Prieſt to officiate occaſionally.

ORATORY is alſo uſed for a ſort of Society, or Congregation of devout Perſons; who form a kind of Monaſtery, and live in Community; but without being oblig'd to make any Vows: Thus,

Prieſts of the ORATORY, are a Community of Secular Prieſts, who live together in a Monaſtic Manner, but without any Vows; firſt eſtabliſh'd at *Rome*, about the Year 1590, by S. *Philip Neri*, a *Florentine*, under the Title of *Oratory* of *Sancta Maria in the Valicella*.

On the Model of this, the Cardinal *Berulle* eſtabliſh'd a Congregation of the *Oratory of Jeſus* in 1612, in *France*; which has ſince increas'd: ſo that there are now 60 Houſes of *Prieſts of the Oratory*.

There is ſome difference, however, between the *Italian*, and *French* Inſtitutions: S. *Philip Neri*, to prevent the Confuſion which the great Number of Houſes uſually occaſion in Congregations; would have his to be a ſingle Houſe. And tho' others were at liberty to form the like Congregations, yet they ſhould have no Dependance on one another.

For this reaſon, the Houſes of the *Oratory* in *Italy* and *Flanders* are all Independent; whereas thoſe in *France* have a Relation to each other, and all depend on the ſame Chief, who has the Quality of Superior General; and, with three Aſſiſtants, governs the whole Congregation. See CONGREGATION.

ORB, ORBIS, in Aſtronomy, a Spherical Body, or Space, contain'd under two Superficies; the one Concave, the other Convex. See SPHERE.

The antient Aſtronomers conceiv'd the Heavens, as conſiſting of ſeveral vaſt, azure, tranſparent *Orbs*, inclos'd in one another: Or vaſt Circles, which in their Area include the Bodies of the Planets; the Radii whereof are compriz'd between the Centre of the Earth, and the higheſt Point to which the Planet riſes; ſuppoſing the Earth to be in the Centre. See HEAVENS.

There are *Orbs Concentric*, *i. e.* having the ſame Centre; and *Orbs Excentric*. See CONCENTRIC, &c.

The *Magnus Orbis*, or *Great Orb*, is that wherein the Sun is ſuppos'd to revolve; or rather that wherein the Earth makes its annual Circuit. See ORBIT.

ORB, in Aſtrology. An *Orb* of Light is a certain Sphere or Extent of Light, which the Aſtrologers allow a Planet beyond its Centre.

They ſay, that provided the Aſpects do but fall within this *Orb*, they have almoſt the ſame effect, as if they pointed directly againſt the Centre of the Planet. See ASPECT.

The *Orb* of *Saturn*'s Light they make to be 10 Degrees; that of *Jupiter* 12. that of *Mars* 7°, 30′. that of the *Sun* 17°. that of *Venus* 8°. that of *Mercury* 7°. that of the *Moon* 12°, 30′.

ORBICULARE *Os*, *Orbicular Bone*, in Anatomy, is one of the Bones of the inward Ear; tied by a ſlender Ligament to the Sides of the Lobes of the Ear; and named from its Figure, which is round. See EAR.

It was firſt diſcover'd by *Fran. Sylvius*: Its Uſe is in the Extenſion and Relaxation of the Tympanum. See TYMPANUM.

ORBICULARIS, or *Conſtrictor Labiorum*, in Anatomy, is one of the Muſcles of the Lips. See CONSTRICTOR.

The *Orbicularis* is ſingle; its Fibres make a Ring about the Mouth, and ſerve to conſtringe and draw up the Lips, and by that means to ſhut the Mouth, &c. It alſo ſerves to advance, or ſtretch them outwards; and has the chief part in the Action of Kiſſing. Whence it is alſo call'd *Oſculatorius*, or the Kiſſing Muſcle.

Verheyen will not have it one Muſcle, but a Pair, whoſe Fibres meet, and join at both Corners of the Mouth; tho' other Authors are unanimous in making it ſingle, and call it a *Sphincter*. See SPHINCTER.

ORBICULARIS, or *Deprimens Palpebrarum*, is a Muſcle ſpringing from each Corner of the Eye, and anſwer'd by another of like Figure and Structure in the lower Eye-lid; which are therefore often conſider'd as one *Orbicular* Muſcle. See EYE-LID.

Its Fibres inviron the Eye-lids, and are inſerted into 'em, not unlike the Sphincters of other Parts. It is faſten'd to that part of the Margin of the Orbit, towards the Noſe, made by the fourth Bone of the upper Jaw.

ORBIT, in Aſtronomy, the *Path* of a Planet or Comet; or the Line deſcrib'd by its Centre in its proper Motion in the Heavens. See PLANET, &c.

The Sun's, or rather the Earth's *Orbit*, is the Curve which it paſſes along in its annual Revolution; call'd the *Ecliptic*. See ECLIPTIC.

The *Orbit* of the Earth, and that of all the primary Planets, is an Ellipſis; in one of whoſe Foci, the Sun is placed; in which Ellipſis they move according to this Law, that a Radius drawn from the Centre of the Sun to the Centre of the Planet, always deſcribes Areas proportional to the Times. See EARTH, SUN, &c.

The antient Aſtronomers made the Planets deſcribe circular *Orbits*, with an uniform Velocity. *Copernicus* himſelf could not believe they ſhould do otherwiſe; *Fieri nequit*, ſays he, *ut Cœleſte corpus ſimplex uno Orbe inequaliter moveatur*. So that to account for their Inequalities, they were obliged to have recourſe to Eccentrics and Epicycles; from the embarraſs whereof, *Copernicus* himſelf could not entirely diſintangle himſelf. See EPICYCLE, &c.

But after him came Aſtronomers, who, with a little more Phyſics, have made no difficulty of changing theſe circular *Orbits* into Elliptic ones; and of making 'em move with different Velocities in different Parts thereof.

Of theſe Elliptic *Orbits*, there have been two kinds aſſign'd: The firſt, that of *Kepler*, which is the common Ellipſis; to which *Seth Ward*, tho' he himſelf keeps to it, thinks one might venture to ſubſtitute circular *Orbits*, by uſing two Points taken at equal Diſtances from the Centre on one of their Diameters, as they do in the Foci of the Ellipſis. The ſecond is that of M. *Caſſini*; whoſe Character is this, that the Products of the right Lines drawn from each Point of its Circumference are every where equal; whereas in the common Ellipſis, 'tis the Sum of thoſe right Lines that is always the ſame. See ELLIPSIS.

M. *Varignon* ſhews how inconſiſtent *Copernicus*'s Sentiment is with the Mechaniſm of the Heavens: Since the Forces which Planets have to retain 'em in their *Orbits*, muſt almoſt always conſpire to make 'em move with really different Velocities; and that among an infinity of Caſes, there is but one wherein they can move uniformly.

The Semi-diameter of the Earth's *Orbit*, Dr. *Gregory* makes 94,696,969 Miles *Engliſh*; and the Semi-diameter of *Saturn's Orbit* about 10 times as great.

The *Orbits* of the Planets are not all in the ſame Plane as the Ecliptic, or the Earth's *Orbit* round the Sun; but variouſly inclined to it, and to one another. But ſtill the Plane of the Ecliptic interſects the Plane of the *Orbit* of every Planet in a right Line, which paſſes through the Sun. See INCLINATION.

The Quantities of the Inclinations of the Planes of the *Orbits* of the primary Planets to that of the Ecliptic, are as follow: That of *Saturn*, is an Angle of 2 Degrees $\frac{1}{2}$: That of *Jupiter*, an Angle of 1 Deg. 20 Min. That of *Mars* is almoſt 2 Deg. *Venus* is a little more than 3 Deg. 20 Min. And that of *Mercury* a little more than 7 Degr. See SATURN, MARS, VENUS, &c.

The *Orbits of Comets*, *Caſſini* takes to be Rectilinear; but Dr. *Halley*, from Sir *Iſaac Newton*'s Theory, ſhews them to be parabolical, having the Sun in one of their Foci. See COMET.

ORBITS, in Anatomy, the two large Cavities, wherein the Eyes are plac'd. See EYE.

Their Figure is pyramidal: They are form'd of ſix ſeveral Bones; and are perforated at bottom, to give paſſage to the Optic Nerves.

ORBITER, in Anatomy, a Name ſometimes given to two Holes or Cavities, either from their Reſemblance of, or Nearneſs to, the Orbits of the Eyes.

The *Orbiter Externus*, is the Hole in the Cheek-Bone below the Orbit.

The *Orbiter Internus*, is a Hole in the Coronal-Bone of of the Scull, within the Orbit. See CORONAL.

ORCHARD, a Seminary or Plantation of Fruit-Trees, chiefly Apples. See FRUIT-*Tree*.

'Tis a Rule among Gardeners, that thoſe *Orchards*, *cæteris paribus*, thrive beſt, which lie open to the South, South-Weſt, and South-Eaſt; and are ſcreen'd from the North: the Soil dry, and deep.

Orchards are ſtock'd by Tranſplantation; ſeldom by Semination. See PLANTING, NURSERY, &c.

The Seaſon for tranſplanting Apple-Trees into *Orchards*, is in the Months *October* and *November*. If the Leaves be not all off at the time they are remov'd, they muſt be pull'd off. They are likewiſe to be prun'd. Trees may be tranſplanted into *Orchards* after three Years Grafting; and ought not to be ſet at a leſs diſtance than eight Yards, nor greater than fourteen: And the richer the Land, the greater the Diſtance.

The Trees are tranſplanted to beſt purpoſe, when young; for Trees ten or twelve Years old, a narrow Trench muſt be dug the *November* before, deep enough to meet the ſpreading Roots, at ſuch a diſtance all around the Tree, as the Roots are to be cut off at. In making the Trench, the Roots to be cut off clean, and without ſplitting or bruiſing the Bark, and the Trench fill'd up again. This will enable the Tree, upon Removal, to draw more Nouriſhment than otherwiſe it would, and ſo thrive better in its new Manſion. See TRANSPLANTATION, INOCULATION, ENGRAFTING, &c.

The Side-Branches of all tall *Orchard Fruit-Trees*, are to be cut off till the Tree be arriv'd at the height deſir'd. If the Tree be to ſpread low, ſome are to be left on each Side; ſo as to form a kind of Balance. For the firſt three Years, at leaſt, they muſt not grow thick and buſhy-headed; this muſt be prevented, by cutting off ſome of the inſide Shoots, and ſuch as grow croſs each other, or pendant. See PRUNING.

The Soil, if not rich enough, is to be amended in two or three Years; by opening it around the Tree, and on the outſide the Ground firſt dug, when the Tree was ſet; and in a Month's time filling it up again with a proper Compoſt or Manure. See MANURE; ſee alſo PRUNING and COMPOST.

ORCHESTRA, in the Drama, the lower part of the antient Theatre; made in form of a Semi-Circle, and ſurrounded by the Seats. See THEATRE.

It was ſo call'd, becauſe in the *Grecian* Theatres it was a Place where they kept their Balls; from ὀρχεῖσθαι, which ſignifies *to dance*.

The *Orcheſtra* among the *Greeks* made a part of the Scene; but on the *Roman* Theatres, none of the Actors went down to the *Orcheſtra*, which was taken up with Seats for the Senators; anſwering nearly to the *Pit* in our Theatre. See SCENE, &c.

ORDEAL, or ORDAEL, or ORDEL *Purgation*, a Form of Tryal, *i. e.*. of evincing Innocence or Guilt; practis'd in *England* in the time of *Edward the Confeſſor*, and ſince, as low as King *John* and King *Henry* III. See TRYAL.

It was call'd *Purgatio Vulgaris*, or *Judicium*, in oppoſition to *Bellum*, or *Combat*, the other Form of Purgation. See PURGATION and COMBAT.

The Practice of *Ordeals* did not only obtain in *England*, but alſo in *France* and *Germany*: It was condemn'd by Pope *Stephen* II. and aboliſh'd by a Declaration of *Henry* III.

The *Ordeal* was of various Kinds, *viz.* that of Fire, that of red-hot Iron, that of cold Water, that of judicial Pottage, that of hallow'd Cheeſe, that of boiling Water, that of the green Croſs, and that of Dice laid on Relicks, cover'd with a woollen Cloth.

But the more popular Kinds were thoſe of red-hot Iron and Water: the firſt for Freemen, and People of faſhion; the ſecond for Peaſants. See JUDICIUM, FIRE, WATER, &c.

'Tis a popular Story in our Hiſtories, that *Emma*, Mother of *Edward the Confeſſor*, being accus'd of too much Familiarity with the Biſhop of *Leiceſter*, demanded the *Ordeal* of red-hot Iron; and paſs'd bare-footed, and hood-wink'd, over nine red-hot Plough-ſhares, without touching any of them.

The Word, in the original *Saxon*, ſignifies *a great Judgment*. There were particular Maſſes for theſe *Ordeals*.

ORDEFF, or OREDEFF, a Word frequently uſed in Charters of Privileges, for a Liberty whereby a Man claims the Ore found in his own Ground. See ORE.

It properly ſignifies Ore lying under ground; as, *a Delf of Coal*, is Coal lying in Veins under ground.

ORDER, in Architecture, a Syſtem of the ſeveral Members, Ornaments, and Proportions of Columns, and Pilaſters: Or, a regular Arrangement of the projecting Parts of a Building; eſpecially thoſe of a Column: ſo as to form one beautiful Whole. See COLUMN.

Perrault defines an *Order* to be what is regulated by the Ordonnance, when it preſcribes the Proportions of entire Columns, and determines the Figure of certain Parts proper to them, according to the different Characters their different Uſes and Ends require. See ORDONNANCE.

M. *le Clerc* defines an *Order* to be a Column charg'd with an Entablature, and ſupported on a Pedeſtal.

The Definitions *Vitruvius*, *Barbaro*, *Scamozzi*, &c. give of *Order*, are ſo obſcure, that it were vain to repeat them: without dwelling, therefore, on the Definition of a Word, which Cuſtom has eſtabliſh'd; 'tis ſufficient to obſerve, that there are five *Orders* of Columns; three whereof are *Greek*, *viz.* the *Doric*, *Ionic*, and *Corinthian*; and two *Italic*, *viz.* the *Tuſcan*, and *Compoſite*.

The three *Greek Orders* repreſent the three different Manners of Building, *viz.* the *Solid*, *Delicate*, and *Mean*; the two *Italic* ones are imperfect Productions thereof. The little regard the *Romans* had for theſe laſt, appears hence, that we don't meet with one Inſtance in the Antique, where they are intermix'd. That Abuſe the Moderns have introduc'd, by the Mixture of the *Greek* and *Latin Orders*, *Daviler* obſerves, ariſes from their want of Reflection on the Uſe made thereof by the Antients.

The Origin of *Orders* is almoſt as antient as human Society: The Rigour of the Seaſons firſt led Men to make little Cabins, to retire into; at firſt, half under ground, and the half above, cover'd with Stubble: At length growing more expert, they planted Trunks of Trees an-end, laying others a-croſs, to ſuſtain the Covering. See ARCHITECTURE.

Hence they took the Hint of a more regular Architecture; for the Trunks of Trees, upright, repreſent Columns: the Girts, or Bands, which ſerv'd to keep the Trunks from burſting, expreſs'd Baſes and Capitals; and the Summers laid a-croſs, gave the Hint of Entablatures; as the Coverings, ending in Points, did of Pediments. This is *Vitruvius*'s Hypotheſis; which we find very well illuſtrated by M. *Blondel*. See CAPITAL, PEDESTAL, &c.

Others take it, that Columns took their Riſe from Pyramids, which the Antients erected over their Tombs; and that the Urns, wherein they enclos'd their Aſhes, repreſented

ſented the Capitals, whoſe Abacus was a Brick, laid thereon to cover the Urns: But *Vitruvius*'s Account appears the more natural.

At length, the *Greeks* regulated the Height of their Columns on the foot of the Proportions of the human Body: The *Doric* repreſented a Man of a ſtrong, robuſt Make; the *Ionic* that of a Woman; and the *Corinthian* that of a Girl: Their Baſes and Capitals were their Head-Dreſs, their Shoes, &c. See BASE, &c.

Theſe *Orders* took their Names from the People, among whom they were invented: *Scamozzi* uſes ſignificative Terms to expreſs their Character; when he calls the *Tuſcan*, the *Gigantic*; the *Doric*, the *Herculean*; the *Ionic*, the *Matronal*; the *Compoſite*, the *Heroic*; and the *Corinthian*, the *Virginal*. *See each Order under its proper Article*, TUSCAN, &c.

To give a general Idea of the *Orders*; it muſt be obſerv'd, that the whole is compos'd of two parts at the leaſt, *viz.* the *Column*, and *Entablature*; and of four parts at the moſt; when there is a *Pedeſtal* under the Column, and one *Acroter*, or little Pedeſtal, a-top of the Entablature: That the Column has three parts, *viz.* the *Baſe*, the *Shaft*, and the *Capital*; the Entablature has three likewiſe, *viz.* the *Architrave*, the *Friſe*, and *Cornich*: Which Parts are all different in the ſeveral Orders. *See each Part under its proper Article.*

Tuſcan ORDER is the firſt, moſt ſimple, and ſolid; its Column is ſeven Diameters high; and its Capital, Baſe, and Entablature, have but few Mouldings for Ornaments. See TUSCAN.

Doric ORDER, is the ſecond, and the moſt agreeable to Nature. It has no Ornament on its Baſe, or on its Capital. Its height is eight Diameters. Its Friſe is diſtinguiſh'd by Triglyphs and Metopes. See DORIC.

Ionic ORDER, is the third; and a kind of mean Proportional between the ſolid and delicate Manner. Its Capital is adorn'd with Volutes, and its Cornich with Denticles. See IONIC.

Mich. Angelo, contrary to all other Authors, gives the *Ionic* a ſingle Row of Leaves at the bottom of the Capital.

Corinthian ORDER, invented by *Callimachus*, is the fourth, the richeſt, and moſt delicate. Its Capital is adorn'd with two Rows of Leaves, and eight Volutes, which ſuſtain the Abacus. Its Column is ten Diameters high, and its Cornich has Modillions. See CORINTHIAN.

Compoſite ORDER, the fifth and laſt, (tho' *Scamozzi* and *le Clerc* make it the fourth) is ſo call'd, becauſe its Capital is compos'd out of thoſe of the other *Orders*; having the two Rows of Leaves of the *Corinthian*, and the Volutes of the *Ionic*. It is alſo call'd the *Roman*, becauſe invented among that People. Its Column is ten Diameters high; and its Cornich has Denticles, or ſimple Modillions. See COMPOSITE.

Ruſtic ORDER, is that adorn'd with Ruſtic Quoins, Boſſages, &c. See RUSTIC.

Attic ORDER, is a little *Order* of low Pilaſters, with an architrav'd Cornich for its Entablature; as that of the Caſtle of *Verſailles* over the *Ionic* on the ſide of the Garden. See ATTIC.

M. *Blondel* calls the little Pilaſters of Attics and Mezzanines, *falſe Orders*.

Perſian ORDER, is that which has Figures of *Perſian* Slaves, inſtead of Columns, to ſupport the Entablature. See PERSIAN.

Caryatic ORDER, is that whoſe Entablature is ſupported with Figures of Women, inſtead of Columns. See CARYATIDES.

Gothic ORDER, that which deviates from the Ornaments and Proportions of the Antique; and whoſe Columns are either too maſſive, in manner of Pillars; or too ſlender, like Poles: its Capitals out of all meaſure; and carv'd with Leaves of wild Acanthus, Thiſtles, Cabbage, or the like. See GOTHIC.

French ORDER, is a new contriv'd *Order*, wherein the Capital conſiſts of Attributes agreeing to that People; as Cocks-Heads, Flowers-de-Lys, &c.

Its Proportions are *Corinthian*: Such is that of M. *le Brun*, in the Grand Gallery of *Verſailles*; and that of M. *le Clerc*.

M. *le Clerc* gives a ſecond *Tuſcan Order*, and a *Spaniſh Order*, beſides his *French Order*. The *Tuſcan* he ranks between the firſt *Tuſcan* and *Doric*. Its height he makes 23 Semi-diameters, 22 Minutes. The Column to have 15, the Pedeſtal 5, and the Entablature 3, and 22 Minutes: And he propoſes its Friſe to be adorn'd with Turtles, which are the Arms of *Tuſcany*.

The *Spaniſh Order* he places between the *Corinthian* and *Compoſite*. The whole *Order* he makes 30 Semi-diameters, 28 Minutes; whereof the Column has 19, and 25 Min. the Pedeſtal 16, and 18 Min. and the Entablature 4, and 15 Min. The Horns of the Abacus he ſuſtains with little Volutes; the middle, in lieu of a Roſe, has a Lion's Snout: that Animal being the Symbol of *Spain*, and expreſſing the Strength, Gravity, and Prudence of that Nation.

ORDER, is alſo uſed for a Claſs or Diſtinction of the Members of the Body of a State; with regard to Aſſemblies, Precedence, &c.

In this ſenſe, *Order* is a kind of Dignity, or honourable Quality, which, under the ſame Name, is common to ſeveral Perſons; and which, of itſelf, does not give them any particular public Authority, but only Rank, and a Capacity of arriving at Honours and Employments.

To abridge this Definition; *Order* is a Dignity, with an Aptitude for a public Employ; by which it is diſtinguiſh'd from an *Office*, which has the Exerciſe and Function of a public Truſt. See OFFICE.

In this ſenſe, Nobility is an *Order*, &c. Clericature an *Order*, &c. See NOBILITY, &c.

ORDER is alſo the Title of certain antient Books, containing the Divine Office, with the *Order* and Manner of its Performance.

Roman Order, that wherein are laid down the Ceremonies which obtain in the *Roman* Church.

ORDER, in Aſtronomy. A Planet is ſaid to go according to the *Order* of the Signs, when it is direct; proceeding from *Aries* to *Taurus*, thence to *Gemini*, &c. It goes contrary to the *Order* or Succeſſion of the Signs, when retrograde, *i.e.* when it goes back from *Piſces* to *Aquarius*. See DIRECTION, RETROGRADATION, &c.

ORDER, in War, an Arrangement of the Parts of an Army, either by Land or Sea; or a Diſpoſition of the Battalions, and Squadrons, of Men, or Veſſels, for marching or engaging.

An *Order of Battel*, conſiſts of one, two, or three Lines.

An *Order of March*, is diſpos'd in two or three Columns, according to the Ground. The *Orders* and Evolutions make the Science of Tactics. See TACTICS.

Order is particularly uſed for the equal Diſtance of one Rank or File from another. The uſual *Order* in Files is three Foot; in Ranks ſix Foot. The open *Order* is twice as much.

ORDERS, by way of Eminency, or *Holy* ORDERS; a Character peculiar to Eccleſiaſtics, whereby they are ſet a-part for the Miniſtry. See ORDINATION.

This the *Romaniſts* make their ſixth Sacrament. See SACRAMENT.

In the Reformed *Churches*, there are but three *Orders*; *viz.* Biſhops, Prieſts, and Deacons: In the *Romiſh* Church there are ſeven, excluſive of the Epiſcopate: All which the Council of *Trent* enjoins to be received and believ'd on pain of *Anathema*.

They are diſtinguiſh'd into *Petty*, or *Secular Orders*; and *Major*, or *Sacred Orders*.

The *Petty*, or *Minor Orders*, are four; *viz.* thoſe of Porter, of Exorciſt, of Reader, and of Acolythes. Thoſe in *Petty Orders* may marry without any Diſpenſation. In effect, theſe *Petty Orders* are only look'd on as Formalities, and as Degrees neceſſary to arrive at the higher *Orders*; yet the Council of *Trent* is very ſerious about them; enjoins that none be admitted into them, without underſtanding *Latin*; and recommends it to the Biſhops to obſerve the Intervals of conferring them, that the Perſons may have a ſufficient time to exerciſe the Functions of each *Order*: Yet it leaves the Biſhops a Power of diſpenſing with thoſe Rules; ſo that the four *Orders* are uſually conferr'd the ſame day, and only make the firſt part of the Ceremony of Ordination.

The *Greeks*, as well as the Reform'd, diſavow theſe *Petty Orders*, and paſs immediately to the Sub-diaconate.

Their firſt Riſe, *Fleury* dates in the time of the Emperor *Juſtinian*. There is no Call nor Benefice requir'd for the four *Petty Orders*; and a Baſtard may even enjoy them without any Diſpenſation; nor does Bigamy diſqualify.

The *Sacred*, or *Major Orders*, we have already obſerv'd, are three; *viz.* thoſe of Deacon, Prieſt, and Biſhop. See DEACON, PRIEST, and BISHOP.

The Council of *Trent*, retrieving the antient Diſcipline, forbids any Perſon being admitted to the *Major Orders*, unleſs he be in peaceable poſſeſſion of a Benefice ſufficient for a decent Subſiſtence; allowing no Ordinations on Patrimonies or Penſions; except where the Biſhop judges it for the Service of the Church.

A Perſon is ſaid to be promoted to *Orders per ſaltum*, when he has not before paſs'd the inferior *Orders*. The Council of *Conſtantinople* forbids any Biſhop being ordain'd without paſſing all the Degrees; yet Church-Hiſtory furniſhes us with Inſtances of Biſhops conſecrated, without having paſſed the *Order* of Prieſthood: and *Panormus* ſtill thinks ſuch an Ordination valid.

Military ORDERS, are certain Companies of Knights, inſtituted by Kings and Princes; either in defence of the Faith, or on other Occaſions, as to confer Marks of Honour,

and

and make distinctions among their Subjects. See KNIGHT.

There have been five *Orders* purely Military in *England*; *viz.* those of Knights of the Garter, Knights Bannerets, Knights of the Bath, Knights Batchelors, and Knights Baronets. See the Institution of each under its proper Article, GARTER, BATH, BARONET, &c.

The *French* have had five Military *Orders*, *viz.* that of the *Genette*, instituted by *Charles Martel*; but which soon fell. The *Order of the Virgin* Mary, since call'd the *Order of the Star*, instituted by King *John* in 1352. The *Order* of St. *Michael*, instituted in 1469, by *Lewis* IX. The *Order of the Holy Spirit*, or the *blue Ribbon*; the Knights of the Holy Spirit are first to be Knights of St. *Michael*. *Order of St.* Louis, instituted by *Louis* XIV. in 1693.

The Princes of the Blood, Marshals of *France*, Admiral, and General, become Knights of St. *Louis* by their Office.

Religious Military Orders, are those instituted in defence of the Faith, and privileged to say Mass; and withal prohibited Marriage, &c.

Of this kind are the Knights of *Malta*, or of St. *John of Jerusalem*; such also were the Knights *Templars*, the Knights of *Calatrava*, Knights of St. *Lazarus*, *Teutonic* Knights, &c. See each under its proper Article, MALTA, TEMPLAR, &c.

Father *Putignani* accounts those *Military Orders* where Marriage is not allow'd, real *Religious Orders*. F. *Papebroch* says, it is in vain to search for *Military Orders* before the XIIth Century.

Religious ORDERS, are Congregations or Societies of Religious, living under the same Superior, in the same Manner, and wearing the same Habit. See RELIGIOUS and CONGREGATION.

Religious Orders may be reduced to five kinds, viz. *Monks*, *Canons*, *Knights Mendicants*, and *Regular Clerks*. See each under its proper Article, MONK, CANON, &c.

Father *Mabillon* shews, that till the IXth Century, almost all the Monasteries in *Europe* follow'd the Rule of St. *Benedict*; and that the distinction of *Orders* did not commence till upon the Reunion of several Monasteries into one Congregation. That S. *Odo*, Abbot of *Cluny*, began first this Reunion, bringing several under the Dependence of *Cluny*: That, a little afterwards, in the XIth Century, the *Camaldules* arose; then, by degrees, the Congregation of *Vallambrosa*; the *Cistercians*, *Carthusians*, *Augustines*; and at last, in the XIIIth Century, the *Mendicants*. He adds, that *Lupus Servatus*, Abbot of *Ferrieres*, in the IXth Century, is the first that seems to distinguish the *Order* of St. *Benedict* from the rest, and to speak of it as a particular *Order*. See BENEDICTINE.

White Order is the *Order* of Regular Canons of St. *Augustine*. See AUGUSTINE.

Black Order, the *Order* of *Benedictines*. These Names were first given these two *Orders* from the Colour of their Habit; but are disused since the Institution of several other *Orders*, who wear the same Colours.

Grey Order, the antient Name of the *Cistercians*; but since the change of the Habit, the Name suits 'em no more. See CISTERCIANS.

ORDER, in the Geometry of Curves, see LINE and CURVE.

ORDINAL, ORDINALE, in our Law-Books, a Book containing the *Order*, or Manner of performing Divine Offices: *In quo ordinatur Modus*, &c.

ORDINAL, in Grammar, an Epithet given to such Numbers as mark the *Order* of things, or in what Rank they are placed. See NUMBER.

Thus, First, Second, Tenth, Hundredth, &c. are *Ordinal Numbers*.

ORDINANCE, or ORDONNANCE, a Law, Statute, or Command of a Sovereign, or Superior. See LAW, &c.

Ordinance of Parliament, is ordinarily used in the same Sense as *Statute*, or Act of Parliament. See STATUTE.

In the Parliament Rolls, Acts are often call'd *Ordinances of Parliament*: Tho' in some Cases we find a difference made between the two; *Ordinances* being only temporary things, and capable of being alter'd by the Commons alone; whereas an Act is a perpetual Law, and cannot be alter'd but by King, Lords, and Commons. See ACT.

Sir *Edward Coke*, however, asserts, That an *Ordinance of Parliament* is to be distinguish'd from an Act, inasmuch as the latter can be only made by the King, and the threefold Consent of the Estates; whereas the former is ordained with or by two of them.

Ordinance of the Forest, is a Statute made in the 34th Year of *Hen.* I. relating to Forest Matters. See ASSISE.

In the *French* Jurisprudence, *Ordonnances* are such Laws as are established by the King's Authority alone. All *Ordonnances* begin with *a tous Presens & a venir Salut.*

ORDINANCE, or ORDNANCE, is also a general Term for all sorts of Great Guns, or Cannon, used in War. See GUN and CANNON.

The several Parts of a Piece of *Ordnance* are thus nam'd, *viz.* The Outside, round about the Piece, is call'd the *Superficies of her Metal*. The Substance, or whole Mass of Metal is call'd her *Body*. The Part next us, when she stands ready to fire, the *Breech* or *Coyle*; and the Pummel, or round Knob at the end of it, the *Cascabell*; by some the *Cascabell-Dock*. The *Trunnions* are the two Knobs, Spindles, or Ears, which hold the Piece in the Carriage. *Maniglions* or *Dolphins* in the *German* Guns, are two Handles placed on the Back of the Piece near the Trunnions, and near the Centre of Gravity, to mount and dismount 'em more easily. The Rings about it are four: The *Base-Ring* is that which is next below the Touch-hole: The next above the Touch-hole is call'd the *Reinforced-Ring*: The next to that forward, the *Trunnion-Ring*: The next to that the *Cornice-Ring*: That at the Mouth, the *Muzzle-Ring*, or the Freeze: All the Rings near the Mouth are sometimes call'd the *Freezes*. As to the internal Parts; the whole Cavity or Bore of the Piece is call'd her *Chase*. That part of the Cavity between the Trunnions and the Muzzle or Mouth, the *vacant Cylinder*: The part from the Trunnions to the end of the Cavity, or so much of it as containeth (or is loaded with) the Powder and Shot, is call'd the *Chamber*. The Diameter of the Mouth, the *Calibre*. The Space between the Shot, and the hollow Superficies of the Piece within, is call'd the *Vent*; being the difference between the Diameter of the Shot, and of the Mouth of the Piece.

Ordnance in *England* is distinguish'd into two kinds, *viz.* *Field-Pieces*, which are from the smallest to twelve Pounders; and *Cannon of Battery*, which are from a Culverin to a whole Cannon.

Each of these Divisions is again subdivided; the first into Base, Rabinet, Falconet, Falcon, Minion ordinary, Minion largest, Saker least, Saker ordinary, Demi-culverin least, and Demi-culverin ordinary. The second into Culverin least, Culverin ordinary, Culverin largest, Demi-cannon least, Demi-cannon ordinary, Demi-cannon large, and Royal whole Cannon.

The Lengths and Weights of each whereof, as also the Weights of the Bullets they carry; see expressed in a particular Table under the Article CANNON. See also each Piece under its proper Head, CANNON, DEMICANNON, CULVERIN, SAKER, &c.

The Strength and Serviceableness of a Piece of *Ordnance* depends very much on the thickness of the Metal, especially about its Chamber and Breech, which is call'd its Fortification.

Of this there are three Degrees both for Cannons and Culverins: Such as are ordinarily fortify'd, are call'd *Legitimate Pieces*. Those whose Fortification is lessen'd, are call'd *Bastard Pieces*. Those doubly-fortify'd, are call'd *Extraordinary Pieces*. The Fortification of a Gun is reckoned from the thickness of the Metal at the Touch-hole, at the Trunnions, and at the Muzzle, in proportion to the Diameter of the Bore. The doubly-fortify'd Pieces are a full Diameter of the Bore in thickness at the Touch-hole, $\frac{11}{16}$ of it at the Trunnions, and $\frac{7}{8}$ at the Muzzle: The lessen'd Cannons have but $\frac{3}{4}$, or $\frac{12}{16}$ of the Diameter of their Bore, in thickness at the Touch-hole, $\frac{9}{16}$ at the Trunnions, and $\frac{5}{8}$ at the Muzzle. All the double-fortify'd Culverins, and all the lesser Pieces of that kind, have a Diameter and $\frac{3}{4}$ at the Touch-hole, $\frac{11}{16}$ at the Trunnions, and $\frac{9}{16}$ at the Muzzle. And the ordinary fortify'd Culverins, are every way as the double-fortify'd Cannon; and the lessen'd Culverins as the ordinary Cannon, in all respects. The ordinary-fortify'd Cannons have $\frac{7}{8}$ at the Touch-hole, $\frac{5}{8}$ at the Trunnions, and $\frac{3}{4}$ at the Muzzle.

ORDINANCE, in Painting, see ORDONNANCE.

ORDINARY, something that happens, or passes frequently, usually. See EXTRAORDINARY.

Thus we say, the *Ordinary* Course of Things: Whatever is done without Miracles, is done by *ordinary* Agents.

Embassador, or *Envoy in* ORDINARY, he who is sent to reside statedly, and for a number of Years, in the Court of some Prince or State, to keep up a good Understanding, and see to the Interests of his Nation. See EMBASSADOR, ENVOY, RESIDENT, &c.

ORDINARY is also apply'd to several Officers and Servants belonging to the Houshold, who attend on common Occasions.

Thus we say, Physician in *Ordinary*, &c.

ORDINARY, in the Civil Law, is any Judge vested with Authority to take cognizance of Causes, in his own Right, as he is a Magistrate; and not by Deputation. See JUDGE.

ORDINARY, in Common and Canon Law, is the Bishop of the Diocese; or he who has *Ordinary* Ecclesiastical Jurisdiction within that Territory; and the Collation to Benefices therein. See BISHOP, COURT, ECCLESIASTICAL, &c.

There

There are ſeveral Chappels, Chapters, Abbeys, &c. exempted from the Juriſdiction of the *Ordinary*. See CHAPPEL, ABBEY, &c.

The *Romiſh* Canoniſts call the Pope *Ordinary of Ordinaries*, ſince by the *Lateran* Council he has uſurped the Right of Collating, by Prevention, to all Benefices; in excluſion of the *Ordinary* Collators. See COLLATION.

ORDINARY *of Aſſizes and Seſſions*, was a Deputy of the Biſhop of the Dioceſe, antiently appointed to give Malefactors their Neck-Verſes, and judge whether they read or not; alſo to perform Divine Service for 'em, and aſſiſt in preparing them for Death.

ORDINARY, or *Honourable* ORDINARY, in Heraldry, a Denomination given to certain Charges properly belonging to that Art. See CHARGE.

The *Honourable Ordinaries* are ten in Number, *viz.* the *Chief*, *Pale*, *Bend*, *Feſſe*, *Bar*, *Croſs*, *Saltier*, *Chevron*, *Bordure*, and *Orle*. See each in its Place, CHIEF, PALE, &c.

The Heralds give ſeveral Reaſons for their being call'd *Honourable*; *viz.* 1. Their great Antiquity, as having been uſed ever ſince Armoury was ſet on foot. And, 2. for that they denote the Ornaments moſt neceſſary for noble and generous Men: Thus the Chief repreſents the Helmet, Wreath, or Crown, covering the Head: The Pale repreſents his Lance or Spear: The Bend and Bar, his Belt: The Feſſe his Scarf: The Croſs and Saltier, his Sword: The Chevron, his Boots and Spurs: And the Bordure and Orle, his Coat of Mail.

As to the allotting or diſtributing of theſe *Ordinaries*, ſome Authors write, that when a Gentleman having behav'd himſelf gallantly in Fight, was preſented to the Prince or General, and a ſuitable Coat-Armour ordered him; if he were wounded on the Head, they gave him a Chief; if in the Legs, he had a Chevron; and if his Sword and Armour were diſcoloured with the Blood of Enemies, a Croſs or Bordure.

Some Authors have attempted to increaſe the Number of *honourable Ordinaries* to twenty; adding to thoſe abovementioned, the plain *Quarter*, the *Giron*, the *Eſcutcheon*, *Cappe* dexter and ſiniſter, *Emmanch* dexter and ſiniſter, *Chauſſe* dexter and ſiniſter, and the *Point*. But theſe are not yet authorized.

ORDINARII, in Antiquity, a ſort of Gladiators; being thoſe appointed to exhibit Combats on certain ſtated days, &c. See GLADIATOR.

ORDINATES, in Geometry, and Conics, are Lines drawn from any Point of the Circumference of an Ellipſis, or other conic Section, perpendicularly a-croſs the Axis, to the other ſide. See CONIC *Section*.

The *Latins* call 'em *Ordinatim applicatæ*: Such are the Lines M M, (Tab. CONICS, *Fig.* 26.) half of each of theſe, as the Lines E M, are properly only *Semi-ordinates*, tho' popularly call'd *Ordinates*. See SEMI-*Ordinate*.

In Curves of the ſecond Order; if any two parallel right Lines be drawn ſo as to meet the Curve in three Points: a right Line which cuts theſe Parallels ſo, as that the Sum of two Parts terminating at the Curve on one ſide the Secant, is equal to the third part terminated at the Curve on the other ſide; will cut all other right Lines parallel to theſe, and that meet the Curve in three Points, after the ſame manner; *i. e.* ſo as that the Sum of the two Parts on one ſide will be always equal to the third Part on the other ſide; and theſe three Parts equal on either ſide, Sir *Iſaac Newton* calls *Ordinatim applicatæ*, or *Ordinates of Curves of the ſecond Order*. See CURVE.

ORDINATE *in a Parabola*, ORDINATE *in an Hyperbola*, ORDINATE *in an Ellipſis*, } See { PARABOLA. HYPERBOLA. ELLIPSIS.

ORDINATE *Ratio*, is that wherein the Antecedent of the firſt Ratio is to its Conſequent as the Antecedent of the ſecond is to its Conſequent. See RATIO.

ORDINATION, the Action of conferring Holy Orders; or of initiating a Candidate into the Diaconate, or Prieſthood. See ORDERS.

The *Ordination* of Biſhops is properly call'd *Conſecration*. See BISHOP and CONSECRATION.

Ordination has always been eſteem'd the principal Prerogative of Biſhops; and they ſtill retain the Function as a Mark of Sovereignty in their Dioceſe. In the antient Diſcipline, there was no ſuch thing as a vague and abſolute *Ordination*; but every one was to have a Church, whereof he was to be *ordained* Clerk or Prieſt.

In the 12th Century, they grew more remiſs, and *ordained* without any Title or Benefice. See BENEFICE.

The Council of *Trent* reſtored the antient Diſcipline, and appointed that none ſhould be *ordained* but thoſe who were provided of a Benefice ſufficient to ſubſiſt 'em. The Shadow of which Practice ſtill obtains among us.

The Reformed hold the Call of the People the only thing eſſential to the Validity of the Miniſtry; and teach, that *Ordination* is only a Ceremony which renders the Call more Auguſt and Authentic. The Council of *Rome* in 744, orders that no *Ordinations* ſhall be held except on the firſt, fourth, ſeventh, and tenth Months.

With us, *Ordination-Days* are the ſecond Sunday in *Lent*, *Trinity*-Sunday, and the Sunday following the firſt Wedneſday after *September* the 14th, and *December* the 13th.

Pope *Alexander* II. condemns *Ordination per ſaltum*, as they call it; *i. e.* the Paſſage to a ſuperior Order without having paſs'd the inferior.

ORDNANCE, or ORDINANCE-*Office*, is the ſtanding, grand Magazine of Arms, Habiliments, Inſtruments, and Utenſils of War, as well by Sea as Land; not only for thoſe lodged in the Tower, but in all the Gariſons, Caſtles, Forts, &c. in *Great Britain*, from whence, as occaſion requires, his Majeſty's Armies, &c. are ſupply'd. See OFFICE and ORDINANCE.

The Officers of the *Ordnance* are, the *Maſter-General*, from whom are derived all Orders and Diſpatches relating to the ſame, as the Service ſhall beſt require. This Poſt has of late been annexed to the Office of General and Commander in Chief. See MASTER.

Under him is a *Lieutenant-General of the Ordnance*, who receives Orders from the Maſter-General, and the reſt of the Prime Officers at the Board; ſees 'em duly executed; orders the firing of the Guns on Days of Rejoicing, and ſees the Train of Artillery fitted out, when order'd to the Field. See LIEUTENANT.

Next to him is the *Surveyor-General*, who has the Inſpection of the *Ordnance*, Stores, and Proviſions of War, in the Cuſtody of the Store-keepers; he allows all Bills of Debt, keeps a Checque on Labourers, &c. See SURVEYOR.

Under theſe is a *Clerk of the Ordnance*, who records all Orders and Inſtructions given for the Government of the Office; with all Patents, Grants, Names of Officers, &c. draws all Eſtimates for Proviſions, and ſupplies all Letters, Inſtructions, Commiſſions, Deputations, Contracts, &c. ſerves as a Checque between the two Accomptants of the Office, the one for Money, the other for Stores.

This Office hath alſo a *Store-Keeper*, who takes into his Cuſtody all *Ordnance*, Ammunition, Stores, &c. thereto belonging; and indents, and gives in legal Security for the ſafe keeping thereof; and renders an exact Account from time to time.

Here is alſo a *Clerk of the Deliveries*, whoſe Duty is to draw up all Proviſions, either at the Tower, or any other of his Majeſty's Magazines, to ſee them duly executed, &c. And a *Treaſurer*, thro' whoſe hands paſſes the Money of the whole Office, as well for payment of Salaries, as Debentures.

ORDONNANCE, or ORDINANCE, in Painting, the Diſpoſition of the Parts of a Painting, either with regard to the whole Piece, or to the ſeveral Parts; as the Groups, Maſſes, Contraſts, Aſpects, &c. See PAINTING.

The Doctrine of ORDONNANCE *is compriz'd in the following Rules.*

In the *Ordonnance* there are three things regarded, *viz.* the Place, or Scene, where; the Diſtribution, how; and the Contraſt.

In the firſt, regard is to be had to the *Diſpoſition* of things to ſerve as a Ground-Work; and to the *Plan*, or Poſition of Bodies: Under the former whereof, come, 1. The *Landskip*; whether an uninhabited Place, where there is a full liberty of repreſenting all the Extravagancies of Nature; or inhabited, where the Marks of Cultivation, &c. muſt be exhibited. See LANDSKIP.

2. The *Building*, whether Ruſtic; wherein the Painter's Fancy is at liberty: Or *Regular*; wherein a nice Attention is required to the Orders. See ORDER.

3. The *Mixture* of both; wherein 'tis a Maxim to compoſe in great Pieces, and make the Ground-Plot big enough; to neglect ſome little Places, in order to beſtow more on the whole Maſs; and to ſhew the more conſiderable Places with the more advantage; and to make ſome Agitation in all the things that move.

As to the *Plan* of Bodies; they are either ſolid; which again, are either ſo by Nature, and which muſt be proportion'd to their Places; or Artificial, where regard muſt be had to the Rules of Geometry, Perſpective, Architecture, &c. Or they move; which they do, either by a voluntary Motion, wherein care muſt be had to proportion 'em to their Situation, and to ſtrengthen 'em by the regarding Equilibrium; or by ſome extraordinary Power, as Machines, &c. where the Cauſes of their Motions muſt appear. Or they are things at a diſtance. In all which, an even Plane muſt ſtill be propoſed to find their preciſe Situation, and ſettle their Place by ſudden breaks and diſtances agreeable to their Perſpective. See EQUILIBRIUM, PERSPECTIVE, &c.

In placing the Figures, regard muſt be had, 1. To the *Group*, which connects the Subject, and ſtays the Sight. In this are to be conſider'd the Knot, or *Nodus*, which binds the Group; and the Nearneſs of Figures, which we may

call the Chain, as it holds 'em together; that the Group be ſuſtain'd by ſomething looſe and diſtinct from it; and by the ſame join'd and continued to the other Groups: And that the Lights and Shadows be ſo diſpoſed, as that we may at once ſee the Effects of all the Parts of the Compoſition. See GROUP.

2. To the *Actions*, wherein forced Attitudes are to be avoided; and ſimple Nature ſhewn in her moſt advantageous Poſtures. In weak and lean Figures, the Nudities not to be ſhewn; but occaſions of covering 'em ſought. In all human Figures, ſpecial Care to be taken, the Head be well placed between the Shoulders; the Trunk on the Haunches, and the whole on the Feet. See ATTITUDE.

3. To the *Drapery*; which is to be adjuſted ſo, as it may appear real Garments, and not Stuffs looſely thrown on. The Folds to be ſo diſpoſed, as to leave the great parts wherein the Nudity may appear, free; ranging the little Folds about the Joints, and avoiding 'em on the Relievo of the Members. And, laſtly, to diſpoſe the Draperies, by raiſing the Stuff, and letting it fall lightly, that the Air ſuſtaining the Folds, may let 'em fall ſoft. See DRAPERY.

Laſtly, in the *Contraſt*, are to be conſider'd the Actions, which vary infinitely: The Aſpects, which, in Actions of the ſame kind, may, by their difference, make a Contraſt: The Situation, according as they meet above or under the Sight, far or near. And, laſtly, the Cuſtom; which extends, indeed, to all parts of Painting, but is particularly to be regarded in the *Ordonnance*; to be managed diſcretely, however, and ſtiffneſs and formality avoided. See CONTRAST.

ORDONNANCE, in Architecture, is nearly the ſame as in Painting; *viz.* the Diſpoſition of the Parts of a Building, both with regard to the whole, and to one another. See BUILDING.

Vitruvius defines *Ordonnance* to be that which regulates the Size of all the Parts of a Building with reſpect to their Uſe.

This Definition is cenſur'd by M. *Perrault*, who takes the *Ordonnance* to conſiſt in the Diviſion of the Plan or Spot of Ground whereon the Building is to be rais'd; *i. e.* in the apportioning or laying it out, agreeable with the intended Dimenſions of the whole Fabric; which Mr. *Evelyn* expreſſes in fewer Words by the determining of the Meaſures of what is aſſign'd to compoſe the ſeveral Apartments.

On this Foundation, *Ordonnance* is the judicious Contrivance of the Plan or Model; as when the Court, Hall, Lodgings, &c. are neither too large nor too little: But the Court, *v. gr.* affords convenient Light to the Apartments about it, and is large enough for uſual Acceſs. The Hall of fit Capacity to receive Company; the Bed-Chambers accordingly, &c. When theſe Diviſions are either too great or too ſmall with reſpect to the Place, as a large Court to a little Houſe, or a little Chamber in a magnificent Palace; the fault is in the *Ordonnance*.

This the Antients call'd *Taxis*; and diſtinguiſhed it from *Diatheſis*, Diſpoſition; which is, where all the Parts and Members of a Building are aſſign'd their juſt Place and Situation with regard to their Quality, Office, Rank, &c. without any regard to the Dimenſions or Quantity: As, that the Veſtible or Porch precede the Hall, the Hall the Parlor, that the Withdrawing Room, &c. The Bed-Chambers, again, to the Sun-riſing; Libraries, Galleries of Paintings, and Cabinets of Curioſities, &c. to the North.

ORE, ſee OAR.

ORGAL, the Lees of Wine dried, and uſed by Dyers to prepare the Cloth for more readily taking their ſeveral Colours. See DYING, COLOUR, TARTAR, &c.

ORGAN, in Muſic, the largeſt and moſt harmonious of all Wind-Inſtruments. See MUSIC.

The Invention of the *Organ* is very antient, tho' it is agreed it was very little uſed till the VIIIth Century. It ſeems to have been borrow'd from the *Greeks*. *Vitruvius* deſcribes one in his tenth Book. The Emperor *Julian* has an Epigram in its praiſe. St. *Jerom* mentions one with twelve Pair of Bellows, which might be heard a thouſand Paces, or a Mile; and another at *Jeruſalem*, which might be heard to the Mount of Olives. The Structure of the modern *Organ* may be conceiv'd as follows.

The *Organ* is a Buffet containing ſeveral Rows of Pipes. The Size of the *Organ* is uſually expreſs'd by the length of its largeſt Pipe: Thus we ſay an *Organ* of 32 Feet, of 16 Feet, of 8 Feet, and of 2 Feet. Church *Organs* conſiſt of two Parts, *viz.* the main Body of the *Organ*, call'd the *great Organ*; and the *Poſitive*, or *little Organ*, which is a ſmall Buffet uſually placed before the great *Organ*.

The *Organ* has at leaſt one Set of Keys, when it has only one Body; and two or three, when it has a Poſitive. The large *Organs* have four, ſometimes five Sets. Beſides, the Pedals or largeſt Pipes have their Key, the Stops or Touches whereof are play'd by the Feet. The Keys of an *Organ* are uſually divided into four Octaves; *viz.* the ſecond Sub-Octave, firſt Sub-Octave, middle Octave, and firſt Octave. Each Octave is divided into twelve Stops or Frets; whereof the ſeven black mark the natural Sounds, and the five white the artificial Sounds; *i. e.* the Flats and Sharps. So that the Keys uſually contain 48 Stops, or Touches. Some Organiſts add to this Number one or more Stops in the third Sub-Octave, as well as in the ſecond. Note, in Harpſichords and Spinets, the natural Stops or Keys are uſually mark'd white, the artificial ones black. The Pedals have about two or three Octaves at the pleaſure of the Organiſt: So that the number of Stops is undeterminate.

Each Key or Stop preſs'd down, opens a Valve or Plug, which correſponds, lengthwiſe, to as many Holes as there are Rows of Pipes on the Sound-Board. The Holes of each Row are open'd and ſhut by a Regiſter or Ruler pierced with 48 Holes. By drawing the Regiſter, the Holes of one Row are open'd, becauſe the Holes of the Regiſter correſpond to thoſe of the Sound-board. So that by opening a Valve, the Wind brought into the Sound-board by a large Pair of Bellows, finds a Paſſage into the Pipe which correſponds to the open Hole of the Sound-board. But by puſhing the Regiſter, the 48 Holes of the Regiſter, not anſwering to any of thoſe of the Sound-Board, that Row of Pipes anſwering to the puſh'd Regiſter are ſhut. Whence it follows, that by drawing ſeveral Regiſters, ſeveral Rows of Pipes are open'd; and the ſame thing happens, if the ſame Regiſter correſpond to ſeveral Rows. Hence the Rows of Pipes become either Simple, or Compound; *Simple*, when only one Row anſwers to one Regiſter; *Compound*, where ſeveral. The Organiſts ſay, a Row is *Compound*, when ſeveral Pipes play upon preſſing one Stop.

The Pipes of the *Organ* are of two kinds; the one with Mouths, like our Flutes; the other with Reeds. The firſt call'd *Pipes of Mutation*, conſiſt,

1. Of a Foot A A B B, (Tab. Music, *Fig.* 1.) which is a hollow Cone, and which receives the Wind that is to ſound the Pipe. 2. To this Foot is faſten'd the Body of the Pipe B B D D. Between the Foot and the Body of the Pipe is a Diaphragm, or Partition E E F, which has a little, long, narrow Aperture to let out the Wind. Over this Aperture is the Mouth B B C C; whoſe upper Lip C C, being level, cuts the Wind as it comes out at the Aperture.

The Pipes are of Pewter, Lead mix'd with a twelfth Part of Tin, and of Wood. Thoſe of Tin are always open at their Extremities; their Diameter is very ſmall, their Sound very clear and ſhrill. Thoſe of Lead mix'd, are larger; the ſhorteſt open, the longeſt are quite ſtop'd; the mean ones partly ſtop'd, and having beſides a little Ear on each ſide the Mouth, to be drawn cloſer, or ſet further aſunder, in order to raiſe or lower the Sound. The wooden Pipes are made ſquare, and their Extremity ſtop'd with a Valve or Tampion of Leather. The Sound of the wooden and leaden Pipes is very ſoft; the large ones ſtop'd, are uſually of Wood; the ſmall ones of Lead. The longeſt Pipes give the greateſt Sound; and the ſhorteſt the moſt acute: Their Lengths and Widths are made in the reciprocal Ratio's of their Sounds; and the Diviſions regulated by their Rule, which they call *Diapaſan*. But the Pipes that are ſhut only have the Length of thoſe that are open, and which yield the ſame Sound. Uſually, the longeſt Pipe is 16 Feet; tho' in extraordinary *Organs* 'tis 32. The pedal Tubes are always open, tho' made of Wood and of Lead.

A *Reed-Pipe* conſiſts of a Foot A A B B, (Tab. Music, Fig. 2.) which carries the Wind into the Shalot, or Reed C D, which is a hollow Demi-cylinder, fitted at its Extremity D, into a kind of Mould I I, by a wooden Tampion F G. The Shalot is cover'd with a Plate of Copper E E F F, fitted at its Extremity F F into the Mould by the ſame wooden Tampion: Its other Extremity E E is at liberty; ſo that the Air entring the Shalot, makes it tremble or ſhake againſt the Reed; and the longer that part of the Tongue which is at liberty F L, is made, the deeper is the Sound. The Mould I I, which ſerves to fix the Shalot or Reed, the Tongue, Tampion, &c. ſerves alſo to ſtop the Foot of the Pipe, and to oblige the Wind to go out wholly at the Reed. Laſtly, in the Mould is ſolder'd the part H H K K, call'd the Tube, whoſe inward opening is a continuation of that of the Reed. The Form of this Tube is different in the different Ranks of Pipes.

The degree of Acuteneſs and Gravity in the Sound of a Reed-Pipe, depends on the Length of the Tongue, and that of the Pipe C K, taken from the Extremity C of the Shalot, to the Extremity K of the Tube.

The Quality of the Sound depends on the Width of the Reed, the Tongue, and the Tube; as alſo on the Thickneſs of the Tongue, the Figure of the Tube, and the Quantity of Wind.

To diverſify the Sounds of the Pipes, they add a Valve to the Port-vent, which lets the Wind go in Fits or Shakes.

Hydraulic ORGAN, a Muſical Machine that plays by means of Water.

Of theſe there are ſeveral in *Italy* in the Grotto's of Vineyards. *Cteſebes* of *Alexandria*, who lived in the Reign of *Ptolemy Evergetes*, is ſaid to have firſt invented *Organs* that plaid by compreſſing the Air with Water, as is ſtill practiſed. *Archimedes* and *Vitruvius* have left us Deſcriptions of the *Hydraulic Organ*. *Felibien*, *de la Vie des Archit.*

In the Cabinet of Q. *Chriſtina*, is a beautiful and large Medallion of *Valentinian*, on the reverſe whereof is ſeen one of theſe *Hydraulic Organs*; with two Men, one on the right, the other on the left, ſeeming to pump the Water which plays it, and to liſten to its Sound. It has only eight Pipes, placed on a round Pedeſtal. The Inſcription is PLACEA SPETRI.

ORGAN, or ORGUES, in War, is a Machine compoſed of ſeveral Harquebuſs or Musket-barrels, bound together; by means whereof ſeveral Exploſions are made at the ſame time; uſed to defend Breaches, and other Places attack'd.

ORGAN is alſo uſed in the general for any thing framed, and deſtined for ſome certain Action, Uſe, or Operation. See FUNCTION.

Hence, ORGAN, or ORGANICAL *Part*, in Phyſiology, is ſuch a Part of the Body as is capable of the performance of ſome perfect Act, or Operation. In which ſenſe, all the Parts, even the moſt ſimple, might be denominated *Organical*.

Theſe *Organs* are divided into *Primary*, and *Secondary*. The *firſt* are thoſe compoſed of ſimilar Parts, and appointed for ſome one ſingle Function: Such as conſiſt of ſeveral of theſe, tho' appropriated to one ſingle Action, are eſteemed of the *ſecondary* kind.

Thus the Veins, Arteries, Nerves, and Muſcles, are *Primary Organs*; and Hands, Fingers, &c. *Secondary Organs*.

ORGAN *of Senſe*, is that part of an animal Body by means whereof it perceives external Objects. See SENSE.

Theſe, ſome divide into *Internal*, which is the Brain; and *External*, *viz.* the Eye, Ear, Noſe, &c. See BRAIN, EYE, EAR, NOSE, &c.

ORGANICAL, in the antient Muſic, was that Part performed with Inſtruments. See MUSIC.

The *Organical* comprehended three Kinds of Inſtruments; *viz. Wind Inſtruments*, as the Trumpet, Flute, &c. *Stringed Inſtruments*, as the Lute, Lyre, &c. And *Pulſatile Inſtruments*, or thoſe play'd on by beating, as Drums, &c. See each in its place, TRUMPET, &c.

ORGANICAL *Part*, is that Part of an Animal or Plant deſtined for the performance of ſome particular Function. See ORGAN and PART.

ORGANICAL *Diſeaſe*, a Diſeaſe in an *organical* Part of the Body, whereby its Function is impeded, ſuſpended, or deſtroy'd. See BODY, DISEASE, &c.

ORGANICAL *Deſcription* of Curves, is the Method of deſcribing them on a Plane, by the regular Motion of a Point. See CURVE.

ORGASM, *Orgaſmus*, in Medicine, an Impetus, or too quick Motion of the Blood, or Spirits; whereby the Muſcles are convulſed or moved with uncommon Force. See SPIRIT, CONVULSION, &c.

The Word is *Greek*, οργασμος, denoting violence, force, onſet.

ORGIA, in Antiquity, Feaſts, and Sacrifices in honour of *Bacchus*, inſtituted by *Orpheus*, and chiefly celebrated on the Mountains by wild, diſtracted Women, call'd *Baechantes*. See BACCHANALIA.

Euſebius derives the Word απὸ τῆς ὀργῆς, fury, madneſs. Others from ὄρος, Mountain; becauſe *Orpheus* removed from *Thrace* to Mount *Citheron*. Others from ὀργας, a Place conſecrated to ſome Divinity. Others from ἐργαν, to remove, repulſe; in regard the Prophane were to be driven away.

Servius ſays, that at firſt *Orgia* was a common Name for all kinds of Sacrifices among the *Greeks*; of the ſame import with the word *Ceremonies* among the *Romans*.

The *Orgia* were alſo call'd *Orphica*, from their Inſtitutor.

ORGUES, or ORGAN, in War, ſee ORGAN.

ORGYIA, an antient *Greek* Meaſure, ſee MEASURE.

ORIENT, *Oriens*, in Geography and Aſtronomy, the *Eaſt*, or Eaſt-point of the Horizon. See EAST.

It is thus call'd from the *Latin Orire*, to ariſe; becauſe it is in this Point the Sun riſes. See RISING.

ORIENT *Equinoctial*, is particularly uſed for that Point of the Horizon wherein the Sun riſes when it enters the Signs *Aries* and *Libra*. See SPRING and AUTUMN.

Northward of this is denominated *Orient Æſtival*; and Southward, *Orient Hybernal*.

ORIENTAL, ſomething ſituated toward the *Eaſt* with regard to us; in oppoſition to *Occidental*.

In this ſenſe we ſay, *Oriental Pearls*, *q. d.* ſuch as are found in the *Eaſt-Indies*. See PEARL.

ORIENTAL *Languages*, meaning the *Hebrew*, *Syriac*, *Chaldee*, and *Cophtic*. See LANGUAGE.

ORIENTAL *Bezoard*, ſee BEZOARD.

In Aſtronomy, a Planet is ſaid to be *Oriental*, when it riſes in the Morning before the Sun. See RISING.

Hence *Orienting*, the turning a thing towards the Eaſt, or diſpoſing it ſo as it may look towards the Eaſt.

In moſt Religions, particular Care has been taken to have their Temples *oriented*. St. *Gregory Thaumaturgus* is ſaid to have made a Mountain give way, becauſe it prevented the *orienting* of a Church he was building.

ORIFICE, the Mouth or Aperture of a Tube, or Pipe, or other Cavity. See TUBE.

In Anatomy, ORIFICE is particularly uſed for the Mouths of the ſeveral Ducts, Veſſels, and other Cavities; as of the Bladder, Uterus, Stomach, &c.

The upper *Orifice* of the Stomach is the part where Hunger is felt; the lower *Orifice* is call'd the *Pylorus*. See HUNGER and PYLORUS.

There are ſome Operations in Chymiſtry, where the *Orifices* of the Veſſel muſt be ſeal'd hermetically. See HEMETICALLY.

The word *Orifice* is alſo uſed by Extenſion for the Aperture of a Wound, or Ulcer. See WOUND and ULCER.

ORIGENIANS, a Sect of antient Heretics, who even ſurpaſs'd the Abominations of the *Gnoſtics*.

St. *Epiphanius* ſpeaks of 'em as ſtill ſubſiſting in his time; but in very ſmall Number. He ſeems to fix their Riſe about the time of the great *Origen*; but does not ſay they took their Name from him. He diſtinguiſhes 'em from the *Origeniſts*, whom he derives from *Origen Adamantus*; adding, indeed, that they firſt took their Name from one *Origen*; by which he intimates, that it was not the Great. And St. *Auguſtine* ſays expreſly it was another.

As to their Doctrine, all that Modeſty will allow to be ſaid, is, that they rejected Marriage; that they uſed ſeveral Apocryphal Books, as the Acts of St. *Andrew*, &c. and that to excuſe their open Crimes, they accuſed the Catholics of doing the ſame in private.

ORIGENISTS, Followers of the Errors of *Origen*. St. *Epiphanius* inſiſts very largely on the Errors of this Father; but as he declares himſelf too warmly againſt him, there may be ſomewhat of Exaggeration in what he ſays. Nor do St. *Jerom*, or *Theophilus* of *Alexandria*, ſeem to have kept their Zeal within the proper bounds in ſpeaking of *Origen*. For which Reaſon, no doubt, it was that St. *Chryſoſtom* himſelf was accuſed of being an *Origeniſt*, becauſe not ſo vehemently bent againſt him. *Origeniſm* ſpread itſelf chiefly among the Monks of *Egypt*.

ORIGINAL, a firſt Draught, Deſign, or Autograph of any thing; ſerving as a Model, or Exemplar, to be imitated, or copied. See DESIGN, MODEL, &c.

Scarce any of the antient Titles, Tenures, &c. are now found in the *Originals*. They are only Vidimus's, or Copies collated with the *Originals*.

ORIGINAL *Sin*, is that Crime we become guilty of at our Birth; by the Imputation of *Adam*'s Diſobedience. See SIN.

Father *Mallebranch* accounts for *Original Sin* from Natural Cauſes, thus: Men at this day retain, in the Brain, all the Traces and Impreſſions of their firſt Parents. For as Animals produce their like, and with like Traces in the Brain; whence it is that Animals of the ſame kind have the ſame Sympathies and Antipathies, and do the ſame things on the ſame Occaſions: So our firſt Parents, after their Tranſgreſſion, received ſuch deep Traces in their Brain, by the Impreſſion of ſenſible Objects, that 'twas very poſſible they might communicate 'em to their Children.

Now, as 'tis neceſſary, according to the Order eſtabliſhed by Nature, that the Thoughts of the Soul be conformable to the Traces in the Brain; it may be ſaid that as ſoon as we are form'd in the Womb, we are infected with the Corruption of our Parents: For having Traces in the Brain like thoſe of the Perſons who gave us being; 'tis neceſſary we have the ſame Thoughts, and the ſame Inclinations with regard to ſenſible Objects.

Thus, of courſe, we muſt be born with Concupiſcence, and *Original Sin*. With Concupiſcence, if that be nothing but the natural Effort the Traces of the Brain make on the Mind to attach it to ſenſible things; and with *Original Sin*, if that be nothing but the Prevalency of Concupiſcence; nothing in effect, but theſe Effects conſider'd as Victorious and as Maſters of the Mind and Heart of the Child.

ORIGINALIA, in the Exchequer, are Records, or Tranſcripts ſent to the Remembrancer's Office, out of Chancery; and differ from *Recorda*, which contain the Judgments and Pleadings in Suits tried before the Barons.

ORILLON, in Fortification, a ſmall rounding of Earth, lined with a Wall; raiſed on the Shoulder of thoſe Baſtions that have Caſements; to cover the Cannon in the retired Flank, and prevent their being diſmounted by the Enemy.

There are other ſorts of *Orillons*, properly call'd *Shoulderings*, or *Epaulements*, almoſt of a ſquare Figure. See EPAULEMENT.

ORION, in Aſtronomy, one of the Conſtellations of the Southern Hemiſphere. See CONSTELLATION.

The Word is form'd from the *Greek* ὄρειν, to rain; the Antients ſuppoſing that it rais'd Tempeſts at its riſing and ſetting.

Stars in the Conſtellation Orion, in *Ptolemy*'s Catalogue are 37, in *Tycho*'s 62, in the *Britannic* Catalogue 80. The Names, Situations, Magnitudes, Longitudes, and Latitudes whereof are as follow:

Stars in the Conſtellation ORION.

	Names and Situations of the Stars.	Signs.	Longitude ° ′ ″	Latitude South. ° ′ ″	Magn.

ORION's *River*, in Aſtronomy, a Conſtellation call'd *Eridanus*. See ERIDANUS.

ORLE, ORLET, or ORLO, in Architecture, a Fillet under the *Ovolo*, or Quarter-round of a Capital. See FILLET.

When 'tis at the Top or Bottom of the Shaft, 'tis call'd *Cincture*. See CINCTURE.

Palladio alſo uſes the Word for the Plinth of the Baſes of Columns and Pedeſtals. See PLINTH.

The Word is *French*; form'd from the *Latin*, *Orletum*, or *Orlum*; of *Ora*, a Border, or Liſt.

ORLE, in Heraldry, an Ordinary in form of a Fillet, drawn round the Shield, near the Edge or Extremity thereof.

Its Breadth is but half that of the Bordure, which contains a ſixth part of the Shield; the *Orle* only a twelfth: Add, that the *Orle* is its own breadth diſtant from the Edge of the Shield; whereas the Bordure comes to the Edge itſelf. See BORDURE.

There is ſometimes one *Orle*, ſometimes two, and ſometimes three: When there are three or more, they take up the whole Shield.

The form of the *Orle* is the ſame with that of the Shield; whence it reſembles an Ineſcutcheon: as in the Figure adjoining.

When an *Orle* is flower'd, 'tis call'd a *Treſſure*. If a Round of Martlets, Cinque-foils, &c. be placed about any Ordinary, in manner of an *Orle*, they are ſaid to be *en Orle*, &c.

ORLOPE, in the Sea Language, the uppermoſt Space or Deck in a great Ship, from the Main-Maſt to the Mizen.

ORNAMENTS, in Architecture, expreſs all the Sculpture, or Carved Work, wherewith a Piece of Architecture is enrich'd. See SCULPTURE and ENRICHMENT.

Vitruvius and *Vignola* alſo uſe the Word to ſignify the *Entablature*. See ENTABLATURE.

Ornaments, in Relievo, are thoſe cut in the Contours of Mouldings; as *Leaves*, *Shells*, *Scrolls*, *Flowers*, &c. *Ornaments, in Creux*, thoſe cut within the Mouldings; as *Eggs*, *Flutes*, &c. See MOULDING.

ORNITHOLOGY, that Branch of Natural Hiſtory, which conſiders and deſcribes *Birds*, their Natures, Kinds, &c. See BIRD.

We have an excellent *Ornithology* of *Fr. Willoughby* Eſq; and another of Mr. *Ray*, a Poſthumous Work, which is only an Abridgment of the former, with the Addition of his *Ichyology*; and ſeveral Kinds wanting in the other.

Willoughby, herein, ſpeaks with aſſurance of a Swan that lived 300 Years; and a Gooſe that they were obliged to kill at 80, by reaſon of its Miſchievouſneſs.

The Word is form'd from the *Greek* ὄρνις, *Bird*, and λογος, *Diſcourſe*.

ORNITHOMANCY, a kind of Divination, or of arriving at the Knowledge of Futurity, by means of Birds. See DIVINATION.

Ornithomancy, among the *Greeks*, was the ſame with Augury among the *Romans*. See AUGURY.

ORPHAN, a Child, or Minor, deſtitute of Father; or that has neither Father, nor Mother.

Hence the *Taborites*, or Followers of *Ziſcha*, finding themſelves, at his Death, without Chief or Conductor, took the Appellation of *Orphans*.

ORPHANS *Money*, or *Tax*. See DUTY.

ORPIMENT, or ORPIN, by the *Latins*, *Auripigmentum*, a Mineral, or Semi-Metal, uſually found in Copper Mines; and ſuppoſed to contain Particles of Gold; which may be extracted by Chymiſtry, but which were never found to countervail the Expence. See MINERAL and SEMI-METAL.

Orpiment is found in Stones, or Glebes, of ſeveral Sizes, and Figures: Its Colour is always yellow, intermixed with other Shades; as green, red, orange, &c.

Sometimes 'tis found almoſt quite red; which is the proper *Sandarach* of the Antients. See SANDARACH.

But that uſually call'd *red Orpiment*, or *red Arſenic*, is only the yellow *Orpiment* heated to a great degree, and put in a Crucible, with Oil of Hemp-Seed, Olives, or Nuts.

Painters, Farriers, &c. make a great Conſumption of this Mineral; but as it is found a violent Corroſive, and a dangerous Poiſon, it muſt be uſed with a great deal of Precaution.

Orpiment muſt be choſen of a Golden Yellow, eaſy to ſcale, and the Scales very thin, ſmall, and ſhining like Gold.

Some make three Kinds of *Orpiment*; *White*, which is the ſame with Arſenic: See ARSENIC. *Yellow*, which is the proper *Orpiment*; and *Red*, which is *Sandarach* or *Realgal*. See REALGAL.

The *Indians* uſe *Orpiment*, corrected with Juice of Lemons, with good Succeſs againſt Fevers.

ORTEIL, in Fortification. See BERME.

ORTHODORON, an antient *Greek* Meaſure. See MEASURE.

ORTHODOXY, a Soundneſs of Doctrine, or Opinion, with regard to all the Points and Articles of Faith.

Orthodoxy is uſed in oppoſition to *Heterodoxy*, or *Hereſy*. See HERESY.

The Word is form'd from the *Greek* ὀρθος, *Right*, and δοξα, *Opinion*, *Judgment*.

ORTHODOXY, or *Feaſt of* ORTHODOXY, is alſo a ſolemn Feaſt in the *Greek* Church, inſtituted by the Empreſs *Theodora*; ſtill held on the firſt Sunday of *Lent*, in memory of the Reſtoration of Images in Churches, which had been taken down by the *Iconoclaſtes*. See ICONOCLASTES.

ORTHOGONIAL, in Geometry, *Right-angled*. When the Term is referred to a plain Figure, it ſuppoſeth one Leg or Side to ſtand perpendicular to the other: When ſpoken of Solids, it ſuppoſeth their Axis to be perpendicular to the Plane of the Horizon.

ORTHOGRAPHY, in Grammar, the Art of Writing, or Spelling juſtly, and with all the neceſſary Letters. See WRITING and SPELLING.

The Word is form'd from the *Greek* γεγραφη, and ορθος, *recta ſcriptio*.

That Diverſity found in moſt of the modern Languages, eſpecially the *French*, between the Pronunciation and *Orthography*, makes one of the principal Difficulties in acquiring 'em; yet does it ariſe from the ſame Source as the Languages themſelves. See LANGUAGE.

The *Gauls*, *e. gr.* forming a new Language from the antient *Latin*, took the Liberty to model the Words to their Fancy: At firſt, indeed, 'tis probable they wrote as they pronounced; but, by degrees, finding that Words pronounced with all their Letters ſounded harſh, they began to pronounce more ſmoothly. Thus, in ſpeaking, they thought fit to ſoften that Harſhneſs reſulting from the concurrence and claſhing of Conſonants; but as the *Orthography*, or Writing, did not offend the Ear, it ſtill continued on its former footing.

Attempts have been ſince made to reduce the Writing to the Pronunciation, or to make us write as we ſpeak; which has occaſion'd great Diſputes. *Pelletier* of *Mans* was the firſt who pleaded for the Change of the *Orthography*; and after him *Maigret*, *Peter Ramus*, *de Bois*, *Menage*, and others; but in vain.

They have, however, occaſion'd a Schiſm among Writers, which has done more harm than the evil they intended to reform: The *French* Writers being now divided into two Parties; one of which retains to the *old*, and the other to the *new Orthography*. The latter, F. *Buffier* obſerves, is the more conſiderable Body, yet are theſe divided among themſelves; ſome being for carrying the Reformation much farther than others.

The chief Matters urged in behalf of the antient *Orthography*, are, that by changing it, we ſhould loſe ſight of the Origin and Etymology of Words borrow'd from the *Greek* and *Latin*, &c. That it does not matter what Characters are uſed to expreſs Sounds in writing, provided one know the relation between thoſe Characters and the Sounds they repreſent: That by a neceſſary conſequence of ſuch Change, the Language would in time be all alter'd, and we ſhould loſe the Uſe of our old Authors; as ours, in their turn, would likewiſe become unintelligible.

What is alledged for the new *Orthography*, is, its being more commodious, natural, eaſy, ſhort, &c.

Some Authors take a middle Courſe between the two Extremes; retrenching the Letters where they are abſolutely uſeleſs, as the *s* in an infinity of Words; and yet ſtudiouſly retaining all the Letters whereon the Etymology has any dependance.

In the *Engliſh*, the *Orthography* is more vague, and unaſcertain'd, than in any other Language we know of. Every Author, nay almoſt every Printer, has his particular Syſtem. Nay, 'tis ſcarce ſo well with us as that: We not only differ from one another; but there is ſcarce any that conſiſts with himſelf. The ſame Word ſhall frequently appear with two or three different Faces in the ſame Work. See ENGLISH.

The Antients who have wrote Treatiſes of *Orthography*, are *Velius Longus*, *Marius Victorinus*, *Flavius Caper*, *Caſſiodorus*, and *Beda*. Among the Moderns, *Torelli*, *Lipſius*, *Dauſquius*, *Scioppia*, *Valla*, and *Manutius* the younger, have wrote on the ſame Subject.

Orthography makes one of the great Diviſions, or Branches of Grammar. See GRAMMAR.

ORTHOGRAPHY, in Geometry, the Art of Drawing, or delineating the fore-right Plan of any Object, and of expreſſing the Heights or Elevations of each Part.

It is call'd *Orthography* from its determining things by perpendicular Lines falling on the Geometrical Plane.

ORTHOGRAPHY, in Architecture, is the Elevation of a Building. See ELEVATION.

The *Orthography* is either External, or Internal.

External Orthography is a Delineation of the external Face or Front of a Building; exhibiting the principal Wall, with its Apertures, Roof, Ornaments, and every thing viſible to an Eye placed before the Building.

Internal Orthography, call'd alſo a *Section*, is a Delineation, or Draught of a Building, ſuch as it would appear, were the external Wall removed. See SECTION.

To lay down the ORTHOGRAPHY *of a Building.*

Draw a right Line for a Baſis or ground Line, (Tab. PERSPECTIVE, *Fig.* 13.) A B, and at one end erect a Perpendicular A D. Upon A B ſet off the widths and diſtances of the Gates, Windows, &c. On the right Line A D, ſet off the Heights of the ſeveral Parts viſible in the Face of the Building, *v. gr.* of the Doors, Windows, the Roof, Chimneys, &c. and apply a Ruler to each Point of Diviſion. The common Interſections of the right Lines drawn from three Points parallel to the Lines A B and A D, determine the external *Orthography* of the Building: And after the ſame manner is the internal *Orthography* laid down. See PERSPECTIVE.

ORTHOGRAPHY, in Fortification, is the Profile, or Repreſentation of a fortify'd Place; or a Draught ſo conducted, as that the length, breadth, height, and thickneſs, of the ſeveral Parts are expreſs'd; ſuch as they would appear, if it were perpendicularly cut from Top to Bottom. See PROFILE and FORTIFICATION.

ORTHOGRAPHY, in Perſpective, a Delineation of the fore-right Plane of any Object. See PERSPECTIVE.

ORTHOGRAPHIC *Projection of the Sphere*, is a Repreſentation of the ſeveral Points of the Surface of the Sphere, as they would appear to the Eye, placed at an infinite diſtance; ſo call'd, becauſe the Perpendiculars from any Point of the Sphere, will all fall in the common Interſection of the Sphere with the Plane of the Projection. See PROJECTION.

ORTHOPNÆA, in Medicine, a great difficulty of Reſpiration, wherein the Patient is obliged to ſit, or ſtand, to be able to breathe. See RESPIRATION.

An *Orthopnæa*, is a Species, or Degree of an Aſthma. See ASTHMA.

It may be cauſed from Pus, thick, or mucilaginous Juices or Polypus's in the *Bronchia*; mercurial, and other Fumes, hindering the playing of the Lungs; Stoppage of Evacuations; Cachexies, ill Digeſtions, or whatever affords viſcid Chyle, or occaſions the Blood to run ſlower through the Lungs, either by ſtraitening the Canals, or thickening the Blood, or hindering the Motion of the Animal Spirits, ſo that they cannot elevate the Breaſt; or that cauſes the Blood to be more rarefy'd, or more in Quantity, ſo that there is not ſufficient room to receive it into the Veſſels of the Lungs.

The Word is compounded of ορθος, right, and πνεειν, to reſpire, breathe.

ORTIVE, *Ortivus*, in Aſtronomy. *Ortive* or Eaſtern Amplitude, is an Arch of the Horizon intercepted between the Point where a Star riſes, and the Eaſt Point of the Horizon, or the Point where the Horizon and Equator interſect. See AMPLITUDE.

ORVIETAN, an Antidote, or Counter-poiſon; ſo call'd, becauſe invented and propagated by an Operator from *Orvieta* in *Italy*; who made Experiments thereof in his own Perſon, on the public Stage, after taking ſeveral Doſes of Poiſons. See ANTIDOTE and POISON.

In *Charras's Pharmacopœia* is a Method of making *Orvietan*; where it appears that Treacle is one of the principal Ingredients. See THERIACA.

OS, in Anatomy, ſee BONE.

Os *Pubis*, Os *Sacrum*, Os *Iſchium*, Os *Hyoides*, Os *Femoris*, &c. } See { PUBIS. SACRUM. ISCHIUM. HYOIDES. FEMUR, &c.

OSCHEOCELE, in Medicine, a kind of *Hernia*, wherein the Inteſtines deſcend into the *Scrotum*. See HERNIA.

The Word is form'd from the *Greek* ὄσχεον, Scrotum, and κήλη, Tumor.

OSCHOPHORIA, in Antiquity, Feaſts inſtituted by *Theſeus*, in acknowledgment for his having deſtroy'd the *Minotaur*, and by that means freed his Country, *Athens*, from the Tribute of ſeven young Men, which were to be ſent every Year into *Crete*, to be devoured by that Monſter. See MINOTAUR.

Some ſay the *Oſchophoria* were inſtituted in honour of *Minerva* and *Bacchus*, who had aſſiſted *Theſeus* in his Enterprize. Others, that they were in honour of *Bacchus* and *Ariadne*.

To celebrate the *Oſchophoria*, the young People who had Fathers and Mothers alive, run to the Temple of *Bacchus* and that of *Minerva*, with Grapes in their Hands. He who arrived there firſt, was the Conqueror; and was to perform the Sacrifice by pouring out of a Phial a Mixture of Wine, Honey, Cheeſe, Flower, and Oil.

The Word is form'd from the *Greek* ὄσχη, Branch of a Vine loaden with Grapes, and φέρω, I bear. *Plutarch* ſays, the *Oſchophoria* were ſo named, becauſe inſtituted by *Theſeus* when on his Return to *Athens*; and the Feaſt celebrated after the Vintage.

OSCILLATION, in Mechanics, *Vibration*; or the reciprocal Aſcent, and Deſcent of a Pendulum. See PENDULUM.

Axis of OSCILLATION, is a right Line, perpendicular to the apparent horizontal one, and paſſing thro' the Centre of the Earth; about which the Pendulum *oſcillates*. See AXIS.

If a ſimple Pendulum be ſuſpended between two Semicycloids, whoſe generating Circles have their Diameter equal to half the Length of the Thread; all the *Oſcillations*, howſoever unequal, will be Iſochronal, or Equi-diurnal. See ISOCHRONAL.

The Time of the entire *Oſcillation* thro' any Arch of a Cycloid, is to the Time of the perpendicular Deſcent thro' the Diameter of the generating Circle, as the Periphery of the Circle to the Diameter. See CYCLOID.

If two Pendulums move in ſimilar Arches, the Times of *Oſcillations* are in a ſubduplicate Ratio of their Lengths.

The Numbers of Iſochronal *Oſcillations*, perform'd by two Pendulums in the ſame Time, are reciprocally as the Times wherein the ſeveral *Oſcillations* are perform'd. See CLOCK.

M. *Huygens*'s whole Doctrine of *Oſcillation*, is founded on this Hypotheſis; That the common Centre of Gravity of ſeveral Bodies, connected together, muſt return preciſely to the ſame height whence it fell; whether thoſe Weights return conjointly, or, whether after their Fall, they return ſeparately; each with the Velocity it had then acquired. See CENTRE *of Gravity*.

This Suppoſition was oppos'd by ſeveral, and very much ſuſpected by others. And others who inclined to believe it true, yet thought it too daring to be admitted into a Science, which demonſtrates every thing.

At length M. *Bernoulli* demonſtrated it by ſtrict Geometry; by referring the Weights to a Lever. After his Death, a more eaſy and natural Demonſtration of the Centre of *Oſcillation* was advanc'd by his Brother. The Subſtance whereof may be conceiv'd as follows.

A ſimple Pendulum of a determinate Length and Weight, raiſed to a determinate Height, whence it is to fall till it recover its vertical Line; employs, in that Fall or Demi-Vibration, a determinate Space of Time, which cannot be either greater or leſs. Which Time is neceſſarily ſuch, becauſe the agitative Force, *i. e.* the Force which produces the Motion of the Pendulum, is determined in every thing that concurs to the Formation thereof: ſo that it can only cauſe one certain Effect.

The agitative Force of the Pendulum is form'd of three Things: 1°. Of the Power or Moment of the Weight. 2°. Of the Maſs or Body tied to the end of the inflexible Rod. 3°. Of the Diſtance of that Body from the Point of Suſpenſion, or, which is the ſame, of the Length of the Rod or the Pendulum.

Now, 1°, The Power of the Weight, be the Cauſe what it will, is that Power which makes a Body fall, and that, *v. gr.* at the rate of fourteen Foot, in the firſt Second of Time. 'Tis viſible, then, that this Force is the Effect of a Quantity which determines thoſe fourteen Feet; and that a heavy Body would paſs more or leſs Space in that ſame firſt Second, if the Force of the Weight were greater or leſs.

2°. As that Force is apply'd to each Point, or infinitely ſmall Part of a Body, the greater this Body is, or the larger its Maſs, the greater Quantity of Motion or Force it has.

3°. The Diſtance of the moving Body from the Point of Suſpenſion, or the Rod, is always the Radius of a Circle, whereof the moving Body deſcribes an Arch: And of conſequence the greater the Radius is, *cæteris paribus*, the larger Arch the Body deſcribes. And at the ſame time, the greater Height it falls from, the greater Velocity it acquires.

Now, the agitative Force of the Pendulum, is only that of the Body faſten'd to the End of the Rod. So that it is the Product of the Force of the Weight, of the Maſs of the Body, and of its Diſtance from the Point of Suſpenſion. The Force of the Weight therefore being always the ſame; and a Body or Weight faſten'd to the End of the Rod, always the ſame; 'tis impoſſible that two ſimple Pendulums of a different Length ſhould be Iſochronal, or ſhould make their Vibrations in the ſame time: for by virtue of thoſe different Lengths, the Velocities will be unequal, and of conſequence, the Times of their Vibrations.

But if it be ſuppos'd that there are in Nature different Forces of Weight; it will then be poſſible that two ſimple Pendulums of different Lengths, ſhould be Iſochronal; the one animated by the natural Weight, the other by the imaginary one. If the imaginary Weight be greater than the natural one, the Pendulum imagin'd Iſochronal to the natural one, will neceſſarily deſcribe a larger Space or Arch in the ſame time; and of conſequence the Weight will be faſten'd at a greater Diſtance from the Point of Suſpenſion. Tho, to have an Iſochroniſm, the two agitative Forces of the two Pendulums muſt be equal; yet of the three Things which compoſe theſe Forces, there are already two greater in the imaginary, than the real Pendulum: the third, therefore, *i. e.* the Maſs of its Weight, muſt be diminiſh'd in the neceſſary Proportion. As the Space or Arch deſcrib'd by the imaginary Pendulum, is greater than that by the natural Pendulum, in the ſame Ratio as the imaginary Weight is greater than the natural one; and a Radius of that Arch, greater in the ſame Ratio, are two Things inſeparable: the two Weights will be always to one another, as thoſe two Radii, or the two Lengths of the two Pendulums; which always gives the Expreſſion of the imaginary Weight, and by a neceſſary Conſequence, that of the diminiſh'd Maſs of the Weight of the imaginary Pendulum. If the Weight be imagin'd leſs than that of the natural one, 'tis eaſy to obſerve how it is to be taken; but that were needleſs in our Deſign.

If now there be a compound Pendulum, charg'd with two Weights faſten'd to the ſame Rod; M. *Bernoulli* conceives each of thoſe Weights removed to a greater Diſtance from the Point of Suſpenſion, than it was before; but both to the ſame; and, diminiſh'd in Maſs, in a due Proportion: ſo as that both together only make one ſimple Pendulum, animated with one Weight the Expreſſion whereof is had, and Iſochronal to the natural compound Pendulum.

Thus we ſhall have one ſimple natural Pendulum Iſochronal to the compound natural one, by having a ſimple natural Pendulum Iſochronal to the ſimple imaginary Pendulum before found; which is very eaſy: ſince as the imaginary Weight is to the natural, ſo is the Length of the ſimple imaginary Pendulum, to the Length of the ſimple natural Pendulum; and 'tis there is the Centre of *Oſcillation* requir'd.

Centre of OSCILLATION, in a ſuſpended Body, is a certain Point therein, each Vibration whereof is perform'd in the ſame manner, as if that Point alone were ſuſpended at that Diſtance from the Point of Suſpenſion.

Or, it is a Point, wherein, if the whole Length of a compound Pendulum be collected; the ſeveral *Oſcillations* will be perform'd in the ſame time as before. See PENDULUM.

Its Diſtance, therefore, from the Point of Suſpenſion, is equal to the Length of a ſingle Pendulum, whoſe *Oſcillations* are Iſochronal with thoſe of the compound one. See CENTRE *of Oſcillation*.

OSCITATION, the Act popularly call'd *Yawning*.

It is perform'd by expanding almoſt all the Muſcles of voluntary Motion at the ſame time; but moſt conſiderably thoſe of the Lungs; by inſpiring a great Quantity of Air, very ſlowly, and after retaining it ſome time, and rarifying it, by

ex-

expelling it again ſlowly, and reſtoring the Muſcles to their natural State.

Hence, its Effects are to move, accelerate, and diſtribute all the Humours of the Body, equably thro' all the Veſſels; thereby diſpoſing the Organs of Senſation, and all the Muſcles of the Body, for the Performance of their reſpective Functions.

OSCULA, in Anatomy, a Term uſed for the Orifices, or Openings of the leſſer Veſſels. See ORIFICE, VESSEL, &c.

OSCULUM, in the new Analyſis. A Circle deſcribed on the Point C, as a Centre (Tab. ANALYSIS, fig. 12.) with the Radius of the Evolute M C, is ſaid to *oſculate*, kiſs, the Curve deſcribed by Evolution in M; which Point M is call'd by the Inventor *Huygens*, the *Oſculum of the Curve*. See EVOLUTE.

The Line M C, is alſo call'd the *Radius of the Oſculum*. See RADIUS.

The Evolute B C E, is the Place of the Centres of all the Circles that *oſculate* the Curve A M I, deſcribed by Evolution. See EVOLUTION.

The Doctrine of the *Oſcula of Curves*, is owing to Monſ. *Leibnitz*, who firſt ſhew'd the Uſe of *Huygens*'s Evolute in meaſuring the Curvatures of Curves. See CURVE.

OSCULUM *Pacis*. Antiently it was a Cuſtom in the Church, that in the Celebration of Maſs, after the Prieſt had conſecrated the Wafer, and ſpoke the Words, *Pax Domini vobiſcum*, the People kiſs'd each other, which was called *Oſculum Pacis*. When this Cuſtom was abrogated, another aroſe; and while the Prieſts ſpoke the Words, a Deacon or Sub-Deacon offer'd the People an Image to kiſs; which they call'd, *Pacem*.

OSIANDRIANS, the Name of a Sect among the Reformed; ſo call'd from *Andrew Oſiander*, Father of *Luke*.

Their diſtinguiſhing Doctrine was, That Man is juſtify'd formally, not by the Faith and the Apprehenſion of the Juſtice of Jeſus Chriſt, or the Imputation of our Saviour's Juſtice, according to the Opinion of *Luther*, and *Calvin*; but by the eſſential Juſtice of God.

Demi-Oſiandrians, were ſuch among the *Oſiandrians*, as held the Opinion of *Luther* and *Calvin* with regard to this Life; and that of *Oſiander* with regard to the other: aſſerting, That Man is juſtify'd here by Imputation, and hereafter by the eſſential Juſtice of God.

OSSA, in Anatomy. See BONES.

OSSICLE, *little Bone*; a Diminutive of *Os*, Bone. See BONE.

In this ſenſe, the Term is uſed among Anatomiſts.

Botaniſts alſo uſe it for the Stone of a Cherry, Plumb, Apricot, or other Stone-Fruit. See STONE-*Fruit*.

OSSIFICATION, in the Animal Oeconomy, the Formation of the Bones. See BONE.

Bones, Dr. *Drake* argues, are form'd out of the moſt comminuted or broken part of the Blood; ſince we ſee that the Blood of old Men, which by a long Courſe of Circulation, becomes in a manner unfit for the common Office of Nutrition, will however *oſſify*, and convert into Bones, many of the Tendons and Ligaments, and even the Coats of the Veſſels themſelves; whoſe Subſtance being next to the Bones the moſt compact, admits only of the ſmalleſt Particles of the Blood; which therefore ſooneſt become *oſſeous*, as they are frequently found. See NUTRITION, &c.

OSTENSIO, was a Tax antiently paid by Merchants, &c. for leave to ſhew or expoſe their Goods to Sale in Markets.

OSTENSIVE *Demonſtrations*, in Logic, ſuch as plainly and directly demonſtrate the Truth of any Propoſition; in which they are diſtinguiſhed from Apogogical ones, or Deductions *ad abſurdum*, or *ad impoſſibile*, which prove the Truth propos'd, by demonſtrating the Abſurdity or Impoſſibility of the contrary. See DEMONSTRATION.

Theſe *Oſtenſive Demonſtrations* are of two ſorts; ſome of which, barely, but directly, prove the thing to be; which they call ὅτι; and others demonſtrate the Thing from its Cauſe, Nature, or eſſential Properties, and theſe are call'd in the Schools διότι.

OSTEOCOLLA, in Natural Hiſtory, *q. d. glue-bone*, a white, or aſh-colour'd Stone, ſhaped like a Bone, and by ſome ſuppoſed to have a quality of uniting broken Bones; on which account it is order'd in ſome Platters; but the preſent Practice has no ſuch Dependance on it.

OSTEOCOPE, an acute Pain, wherein the Patient is affected as if his Bones were breaking.

It ariſes from a ſharp Humour vellicating the *Perioſtium*, or Membrane wherewith the Bones are inveſted.

It is particularly incident to ſcorbutic and pocky Perſons.

The Word is form'd from the *Greek* ὀστέον, Bone, and κοπτειν, to break.

OSTEOLOGY, that Part of Anatomy which teaches the nature of the Bones of the human Body; their Form, Diſpoſition, Articulation, Uſe, &c. See BONE.

Dr. *Clopton Havers* has given us an *Oſteology*; in good repute

The Word is form'd from the *Greek* ὀστέον, Bone, and λόγος, Diſcourſe.

OSTIA, in Anatomy, a Term uſed indifferently with *Oſcula*, *Orifices*, &c. for the Mouths or Apertures of the Veſſels of the Body; as the *Oſtia Vaginæ*, &c. See VAGINA.

OSTRACISM, a kind of popular Judgment or Condemnation among the *Athenians*; or a Sentence of Baniſhment againſt Perſons whoſe too great Power render'd them ſuſpected to the People; or, whoſe Merit and Credit gave Umbrage leſt they ſhould attempt ſomething againſt the public Liberty, and their Power degenerate into Tyranny. See BANISHMENT.

It had its name *Oſtraciſm*, in regard the People gave their Votes, by writing the Name of the Perſon to be baniſh'd in a Shell ὄστρακον, and caſting the Shells into an Urn.

This kind of Baniſhment had nothing infamous in it, as not being for any Crime; but, on the contrary, was held very honourable, as it was a Mark of Popularity.

It laſted for ten Years, but the baniſh'd Perſon had the full enjoyment of his Eſtate all the time.

Oſtraciſm was null, unleſs there were 6000 Citizens in the Aſſembly of the People.

OSTRACITES, in Natural Hiſtory, a kind of cruſty Stone, reddiſh, and in form of an Oiſter-ſhell, and, like that, ſeparable into *Laminæ*; found in ſeveral Places in *Germany*; and held of good Service in the Gravel.

Dr. *Home*, in the *Philoſ. Tranſact.* ſays, it rather diſſolves the little Stones than forces 'em out, as not being remarkably Diuretic. He adds, that he preſcribes it in Powder with a third part of *Flores Chamomeli*. The Doſe is from half a Drachm to a whole one in white Wine.

OSTRACITES is alſo the Name of a kind of *Cadmia* found at the bottom of the Furnaces wher Coppere is purify'd. 'Tis very heavy, and reſembles an Oiſter-ſhell, whence its Name. It is eſteemed aſtringent and deterſive; and is an Ingredient in ſeveral Unguents. See CADMIA.

OTACOUSTIC, a Term apply'd to Inſtruments which aid or improve the Senſe of Hearing. See HEARING.

The Word is form'd from the *Greek* ὠς ὠτὸς, Ear, and ἀκούω, I hear. See ACOUSTIC.

OTALGIA, in Medicine, a Pain in the Ear.

The *Otalgia* uſually ariſes from an Inflammation; ſometimes from a ſharp ſerous Humour, which vellicates the Membrane wherewith the Canal of the Ear is lined. It is ſometimes alſo occaſion'd by a Wound or Ulcer in that Part, or from ſome pungent Matter gather'd within the Ear.

The Word is form'd from the *Greek* ὠς ὠτὸς, Ear, and ἀλγος, Pain.

The Smoke of Tobacco convey'd into the Ear through a Pipe, *Etmuller* recommends as good to aſſuage this Pain; as alſo Millepedes in a proper Vehicle of Oil.

The *Otalgia* ſometimes ariſes from a Worm in the Ear; which is to be drawn out alive, or kill'd within. Warm Milk tempts the Worm to come forth; Wormwood Juice deſtroys it within. See WORMS.

OTIOSI, in the *Hebrew* Cuſtoms. The Learned are exceedingly divided about the *Decem Otioſi*, ten idle Perſons in the *Jewiſh* Synagogues.

Some ſay, they were the three Preſidents and the ſeven Readers; others that they were ten Perſons hired to attend conſtantly at the Synagogue, becauſe, without the Number Ten, it could be no regular Synagogue, nor legal Aſſembly; ſo that the *Decem Otioſi* were ten idle Folks kept in pay, to form, by their Preſence, a legal Synagogue. See SYNAGOGUE.

Vitringa in his *Archi-Synagogue*, refutes this Opinion; and will have them to be ten Directors, or Officers in the Synagogue. He ſhews that each Synagogue had its Directors; and that the Number was greater or leſs according to the Dignity of the Synagogue; that the ſmalleſt had at leaſt two; that, from the firſt times, each Synagogue had its Chief, call'd *Archi-Synagogus*, who had two Colleagues, to be preſent at the Ceremonies, and other Acts of Religion, and to take care every thing were done with decency; but that the *Archi-Synagogus* reſerv'd to himſelf the Power of Teaching: That beſides theſe three, the *Archi-Synagogus* nam'd ſeveral Readers, who read in the Synagogue every *Saturday*; and that theſe made the *Decem Otioſi* of the Synagogue; ſo call'd, becauſe being diſengaged from all other Employment, their whole Attendance was on Divine Service.

OVA, *Eggs*, in Natural Hiſtory, ſee EGG.

OVA, in Anatomy, &c. are little ſpherical Bodies, in form of Bladders, or Bubbles; conſiſting of two concentric

tric Membranulæ, replete with a limpid Humour like the White of an Egg; found under the external Membrane of the *Ovaries* of Women, and connected to the minute Orifices of the Veſicles that compoſe the Subſtance of the *Ovaries* themſelves by a Calix. See OVARY.

After the uſe of Venery, they ſwell ſenſibly, become more and more pellucid, their Membranes grow thicker, and at length raiſe that of the *Ovary*, in form of *Papillæ*; at laſt, breaking the Membrane of the *Ovary*, they are detach'd from their Calix, taken into the Cavities of the *Fallopian* Tubes, and thence convey'd into the Womb; where, being cheriſh'd and impregnated with the Male Seed, they commence Embrio's; or, for want of that, are again ejected. See CONCEPTION, FALLOPIAN *Tube*, MATRIX, EMBRIO, &c.

OVA, in Architecture, are Ornaments in form of Eggs, carved on the Contour of the *Ovolo*, or Quarter-round; and ſeparated from each other by Anchors or Arrows Heads. See OVOLO and QUARTER-*round*.

The *Engliſh* uſually call theſe Ornaments *Eggs and Anchors*.

Inſtead of Eggs, the Antients ſometimes uſed *Hearts*; on which Foundation it was, that they introduced Arrows; to ſymbolize with Love.

OVAL, or *Ellipſis*, is an oblong curvilinear Figure, with two unequal Diameters; or, a Figure incloſed with a ſingle curve Line, imperfectly round, its length being greater than its breadth; like an Egg, whence its Name. See OBLONG.

The proper *Oval*, or Egg-ſhape, is an irregular Figure, being narrower at one end than the other; in which it differs from an *Ellipſis*, which is the Mathematical *Oval*, and equally broad at each end.

The common People confound the two together; the Geometricians alſo call the *Oval*, a *falſe Ellipſis*. See ELLIPSIS.

The Method of deſcribing an *Oval* chiefly uſed among Workmen, is, by a Cord, or String, as F M E, (Tab. GEOMETRY, *Fig.* 48.) whoſe length is equal to the greater Diameter of the *Oval*, and which is faſten'd by its Extremes to two Points or Nails E, *f*, planted in its longer Diameter; by which means the *Oval* is made as much longer, as the two Points or Nails are further a-part.

OVALE *Foramen*, in Anatomy, ſee FORAMEN *Ovale*.

OVALE *Centrum*, ſee CENTRUM *Ovale*.

OVOLO, *Ovum*, in Architecture, a round Moulding, whoſe Profile, or Sweep, in the *Ionic* and *Compoſite* Capitals, is uſually a Quadrant of a Circle; whence it is alſo popularly call'd the *Quarter-Round*. See QUARTER-*Round*.

It is uſually enrich'd with Sculptures among the Antients, in form of Cheſnut-Shells; whence *Vitruvius*, and others of the Antients, call it *Echinus*, *Cheſnut-Shell*. See ECHINUS.

Among us, it is uſually cut with the Repreſentation of Eggs, and Anchors, or Arrows-Heads, placed alternately; whence its *Italian* Name *Ovolo*, Latin *Ovum*, and French *Oeuf*. See OVA.

OVARY, in Anatomy, that Part of an Animal wherein the *Ova* or Eggs are form'd and lodg'd. See OVA.

The *Ovaries* in Women, are alſo call'd *Teſtes Muliebres*, Female Teſticles; from their Uſe, which the Antients ſuppoſed analogous to that of the *Teſtes* in Men. See TESTES.

They are two in Number; lying near the ends of the *Fallopian* Tubes, two Fingers diſtance from the *Uterus*, to which they are connected by a ſtrong Ligament, call'd *Vas deferens*, and in ſome meaſure by the *Fallopian* Tubes, and the broad Ligament about the Region of the *Ilium*. They are faſten'd to the *Peritonæum* by the Spermatic Veſſels, by which means they are kept ſuſpended about the ſame Height with the *Fundus Uteri*. See UTERUS.

Their Figure is Semi-oval; their Surface ſomewhat uneven; their Size different in the different Stages of Life. At the time of Puberty, when largeſt, they uſually weigh a Drachm and half.

They are cover'd with a common Membrane from the *Peritonæum*; their Subſtance is whitiſh, compos'd of a number of little thin membranous and ſlender Fibres, interwoven with Arteries, Veins, and Nerves.

Among theſe Fibres and Veſſels are interſperſed a number of little round Bodies, like Bladders; full of a limpid Subſtance, and call'd *Ova*, or Eggs, of great Uſe in Generation. See GENERATION.

OVATION, in the *Roman* Hiſtory, a leſſer Triumph allow'd to Commanders, for Victories won without the Effuſion of much Blood; or for the defeating Rebels, Slaves, Pyrates, or other unworthy Enemies of the Republick. See TRIUMPH.

Their Entry was on foot, ſometimes on horſeback; but never in a Chariot: and they wore Crowns of Myrtle, call'd *Ovales*, having all the Senate attending in their Retinue.

The Word *Ovatio*, according to *Servius*, is deriv'd from *Ovis*, Sheep; becauſe the Conqueror ſacrific'd a Sheep on this occaſion to *Jupiter*; whereas in the great Triumph, they ſacrific'd a Bull. Others derive it from the Sound or Din of the Acclamations and Shouts of Joy made by the People in honour of the Solemnity; the People and Soldiery, on this occaſion, redoubling the Letter *O*, as in the greater Triumph they did the Words *Io Triomphe*.

The *Ovation* was firſt eſtabliſh'd in the Year of *Rome* 250, or 251; in honour of the Conſul *Poſthumius Tubertus*, after his defeating the *Sabines*.

OVELTY *of Services*, in our Law-Books, an Equality of Services; as when the Tenant Paravail owes as much to the Meſn, as the Meſn does to the Lord Paramount.

OVER-RAKE, in the Sea-Language. When a Ship riding at Anchor, doth ſo over-beat herſelf into an Head-Sea, that ſhe is waſh'd by the Waves breaking in upon her; they ſay, the Waves do *Over-rake* her.

OVER-REACH, in the Manage, is when a Horſe ſtrikes his hind Feet againſt his fore Legs.

The Word is alſo uſed for a Strain, or painful Swelling of the Maſter-Sinew of an Horſe; occaſion'd by ſuch *Over-reach*.

OVER-FLOWING. See INUNDATION.

The *Over-flowing of Lands*, uſed by our Husbandmen, is chiefly effected by diverting the Streams of Rivers, Brooks, Land-Floods, or Springs, or ſome part of them, out of their natural Channel.

When the Streams lie too low for this, they are made uſe of to turn ſuch Engines as may raiſe a ſufficient Quantity of Water to do it. The moſt uſual Engine, on this occaſion, is the *Perſian* Wheel. See PERSIAN *Wheel*.

OVER-RULING *an Objection*, in Law, is the rejecting, or ſetting it aſide.

OVER-RUNNING *a Page*, among Printers, is the running it over again, and diſpoſing the Lines in a different manner. See PRINTING, CORRECTING, &c.

OVERSAMESSA, an antient Fine or Penalty, impos'd, before the Statute of *Hue and Cry*, on ſuch Perſons, as hearing of a Murder or Robbery, did not purſue the Malefactor.

OVERT-ACT, a Term in Law ſignifying an *open Act*; or an Act capable of being manifeſted and proved: in which ſenſe it is diſtinguiſh'd from an intentional Act.

So an *Overt* Word, is a plain, *open* Word; from the *French*, *Ouvert*.

OVICULUM, in the antient Architecture, a little *Ovum*, or Egg.

Baldus will have this to be the *Lesbian Aſtragal* of *Vitruvius*. See ASTRAGAL.

Some uſe the Word *Oviculum* for *Ovolo*. See OVOLO.

OVILIA, or SEPTA, in antient *Rome*, a Place in the *Campus Martius*, at firſt rail'd in, like a Sheep's Pen; whence its Name: Afterwards it was mounted with Marble, beautify'd with Walks and Galleries; as alſo with a Tribunal, or Seat of Juſtice: within which Precinct the People frequently aſſembled, to give their Suffrages for the Election of Magiſtrates. See CAMPUS.

The Aſcent into the *Ovilia* was not by Stairs, but by Bridges made for the time; every Pariſh, Tribe, and Century, as the Aſſembly was Centurate or Tribute, &c. having its proper Bridge. Whence the Proverb, *de Ponte dejiciendus*, where a Perſon is to be barred from giving his Vote. See COMITIA.

OVIPAROUS, in Natural Hiſtory, a Term apply'd to ſuch Animals, as produce their Young *ab Ovo*, from Eggs; as Birds, Inſects, &c. See EGG, INSECT, ANIMAL, &c.

The *Oviparous* Kind ſtands in oppoſition to thoſe which bring forth their Young alive, call'd *Viviparous* Animals; as Man, Brutes, Reptiles, &c. See GENERATION, &c.

Oviparous Animals, may be defined to be ſuch as conceive Eggs, which they afterwards bring forth; and from which, by the Incubation of the Parent, or ſome other Principle of Warmth and Fermentation, at length ariſe Animals; which after they have ſpent the Moiſture or Humour they were ſurrounded withal, and are grown to a ſufficient Bulk, Firmneſs, and Force; break their Shell, and come forth.

The *Oviparous* Kind, beſide Birds, includes divers Species of Terreſtrial Animals; as Serpents, Lizzards, Tortoiſes; Crabs, Lobſters, Frogs, &c. See OVARY.

OUNCE, *Uncia*, a little Weight, the ſixteenth part of a Pound *Avoirdupois*; and the twelfth of a Pound *Troy*. See WEIGHT and POUND.

The *Ounce Avoirdupois* is divided into eight Drachms, and the Drachm into three Scruples. The *Ounce Troy* into twenty Penny Weights, and the Penny Weight into twenty-four Grains. See DRACHM, PENNY-WEIGHT, &c.

The *Ounce* makes the eighth Part of the *French* Mark, and is divided into three Gros, or Drachms; the Drachm into three Penny Weights, or Scruples; and the Scruple into twenty-four Grains: each Grain computed to weigh a Grain of Wheat. See GRAIN, &c.

All precious Merchandizes, as Gold, Silver, Silk, &c. are ſold by the Ounce. See GOLD, SILVER, STANDARD, &c.

Ounce Pearls, are thoſe too ſmall to be ſold by Tale; uſually call'd *Seeds of Pearl*. See PEARL.

Ounce Cottons, are certain Cottons brought from *Damaſcus*, of a Quality ſuperior to the reſt. See COTTON.

The Word *Ounce* is deriv'd from the *Latin Uncia*, the twelfth Part of any Whole; particularly in Geometrical Meaſures, an Inch, or the twelfth Part of a Foot. See INCH.

Whence, UNCIAL *Letters*, large Letters uſed in Inſcriptions, ſuppoſed to be an Inch high. See UNCIAL.

OURAN, or OURAN SOANGUES; the Title of a Sect of Magicians, in the Iſland *Gromboccanore*, in the *Eaſt-Indies*.

The Word implies *Men-Devils*; theſe People, it ſeems, having the Art of rendring themſelves inviſible, and paſſing where they pleaſe, and by that means, doing infinite miſchief: for which reaſon the People hate and fear them mortally, and always kill them on the ſpot, when they can take them.

In the *Portugueſe* Hiſtory, printed 1581, *Folio*; mention is made of a Preſent made by the King of the Iſland, to *Brittio*, a *Portugueſe* Officer, conſiſting of twelve of theſe *Ourans*; with whom he made Incurſions on the People of *Tidore*, kill'd great Numbers, &c.

To try whether, in effect, they had the Faculty aſcribed to them, one of them was tied by the Neck with a Rope, without any poſſibility of diſengaging himſelf by natural means; yet in the Morning 'twas found he had ſlipp'd his Collar.

That the King of *Tidore* might not complain, *Brittio* made war on him with Devils, he diſmiſs'd them at length into their own Iſland.

OUSTED, in our antient Law-Books, a being removed, or put out of poſſeſſion. From the *French Oſter*, to remove, take away.

OUSTER *le Main*, or OTER *le Main*, to *remove or take off the Hand*, in Law, denotes a Livery of Lands out of the King's Hands; or a Judgment given for him that traverſed or ſued a *Monſtrans le Droit*. See MONSTRANS *le Droit*.

When it appear'd upon the Matter diſcuſs'd, that the King had no Right or Title to the Land he had ſeiz'd; Judgment was given in Chancery, that the King's *Hands be amoved*. And hereupon, *Amoveas Manum* was awarded to the Eſcheator to reſtore the Land, &c.

But now all Wardſhips, Liveries, *Ouſter le Mains*, &c. are taken away and diſcharg'd by Statute 12 *Car.* 2.

OUSTER *le Mer*, in Law, a Cauſe of Excuſe or Eſſoin; where a Man not appearing in Court upon Summons, it is alledg'd that he was then beyond the Seas.

The Term is compounded of the *French Oultre*, and *le Mer*, q. d. *beyond the Sea*.

OUTFANGTHEF, a Privilege whereby a Lord is enabled to call any Man (dwelling in his Fee, and taken for Felony in another place) to Judgment in his own Court.

The Word is form'd from the *Saxon ut*, *extra*, without; *fang*, *capio vel captus*; and *deof*, *Thief*: q. d. *Fur extra-captus*.

OUT-LAW, *Utlegatus*, one depriv'd of the Benefit of the Law; and left out of the King's Protection. See OUT-LAWRY.

Bracton ſays, an *Out-Law* forfeits every thing he has; and that from the time of his *Outlawry*, he wears a Wolf's Head; and any body may kill him *Impunè*: eſpecially if he defend himſelf, or fly. But in the beginning of King *Edward* the Third's Reign, it was reſolv'd by the Judges, that it ſhould not be lawful for any Man, but the Sheriff alone (having lawful Warrant therefore) to put to death a Man *out-lawed*.

OUTLAWRY, or UTLAWRY, the Puniſhment of him, who being call'd into Law, and lawfully ſought, does (after an Original Writ with a *Nihil habet*, three Writs of *Capias*, *alias* & *pluries*, return'd by the Sheriff, with a *Non eſt Inventus*, and an Exigent with a Proclamation awarded thereupon) contemptuouſly refuſe to appear.

He muſt alſo be call'd at five County-Court-Days, a Month between each one; and if he appear not in that time, *Pro Ex-lege tenebitur*, *cum Principi non obediat*, *nec Legi*, & *extunc exlegabitur*; *i. e.* he ſhall be pronounced to be out of the King's Protection, and deprived of the Benefit of the Law.

The Effect of which is, if he be *out-law'd* at the Suit of another, in a Civil Cauſe, he ſhall forfeit all his Goods and Chattels to the King: If on Felony, all his Lands and Tenements, which he has in Fee, or for Life, and all his Goods and Chattels. And then, according to *Bracton*, he may periſh without Law, &c. A Minor, or a Woman, cannot be *out-law'd*. A Woman is ſaid to be *waiv'd*, where a Man is *out-law'd*.

OUT-WORKS, in Fortification, thoſe Works made without ſide the Ditch of a fortify'd Place, to cover and defend it. See WORKS and FORTIFICATION.

The moſt ordinary of theſe are Ravelins, or Half-Moons, form'd between the two Baſtions, on the flanquant Angle of the Counterſcarp, and before the Curtain, to cover the Gates and Bridges. See RAVELIN.

OUT-RIDERS, are Bailiffs Errant, employ'd by Sheriffs, or their Deputies, to ſummons People in the remoteſt Parts of their Hundreds, to the County or Hundred Courts. See BAILIFF.

OUT-PARTERS, in our antient Writers, were a ſort of Thieves, or Highway-men, on the Frontiers of *Scotland*, who rode about to fetch in ſuch things as they could lay hold on. See INTAKERS.

OUVERTURE, or OVERTURE, *Opening*, or *Preluding*; a Term uſed for the Solemnities at the beginning of a public Act, or Ceremony; as of an Opera, Tragedy, Concert of Muſic, &c.

The *Overture* of the Theatre, or Scene, is a piece of Muſic, uſually ending with a Fugue.

The *Overture* of the Jubilee is a general Proceſſion, &c.

OVUM *Philoſophicum*, or *Chymicum*, is a glaſs Body, of an oval Form, and reſembling an Egg. See BODY.

OWLER, a Maſter of a Ship, or other Perſon, that conveys Wool, or other prohibited Goods in the Night, to the Sea-ſide, in order to ſhip them off, contrary to Law.

The Name is derived hence, that, like *Owls*, they only ſtir abroad in the Night-time.

OWSE, among Tanners, is Oaken Bark beaten, or ground ſmall; to ſerve in the Preparation of Leather. See BARK and TANNING.

OXGANG *of Land*, is ordinarily taken, in our old Law-books, for fifteen Acres; in *Latin*, *Bovatus Terræ*, q.d. *quantum ſufficit ad iter vel actum unius Bovis*; as much as an Ox will plow. In *Lincolnſhire* they ſtill corruptly call it *Oskin* of Land.

OXYCRATE, in Pharmacy, &c. a Mixture of Water and Vinegar.

The uſual Proportion is one Spoonful of Vinegar to five or ſix of Water.

Oxycrate is proper to aſſuage and refreſh. They make Fomentations of *Oxycrate*, Clyſters of *Oxycrate*, &c.

The Word is form'd from the *Greek* ὀξὺς, ſharp, ſour, and κεϕαννυμαι, I mix.

OXYCROCEUM, in Pharmacy, a Preparation much uſed in Plaiſters, for Fractures, and to form Callus's; compoſed chiefly of Saffron, with Gums diſſolved in Vinegar.

The Word is form'd from the *Greek* ὄξυς, ſharp, ſour, and κρόκος, Saffron.

OXYGALA, *Sour-Milk*. The *Turks* uſe this as a popular Drink, and call it *Igur*. *Vigenere* ſays, they drink ſour Milk diluted with Water, which is found to cool and nouriſh, much better than the Milk alone.

The Word is form'd from the *Greek* οξυς and γαλα.

OXYGONOUS, in Geometry, *acute-angled*; ſomething with an Angle leſs than 90 Degrees. See ACUTE.

The Word is chiefly apply'd to Triangles, where the three Angles are all acute, or leſs than 90 Degrees each. See TRIANGLE.

OXYMEL, in Pharmacy, a Mixture of Honey and Vinegar.

There are two kinds of *Oxymels*; the one ſimple, the other compound.

The *ſimple Oxymel* is compoſed of two parts of good Honey, and one of White-Wine Vinegar, boil'd into the conſiſtence of a Syrup; proper to incide and ſcour any Phlegm adhering to the Throat and Breaſt.

Compound Oxymel only differs from the ſimple, in that to the Honey and Vinegar, they add the Decoction of the five major aperitive Roots, with the Seeds of Smallage, Parſley, and Fennel. It is uſed to open Obſtructions of the Liver and Spleen.

The Word is form'd from the *Greek* ὀξὺς, ſour, and μέλι, *Mel*, Honey.

OXYREGMIA, in Medicine, a Sourneſs or Acidity of the Stomach-Liquor, occaſioning Belches. From ὀξυς and ερευγω, *ructo*. See RUCTATION.

OXYRRHODON, a Mixture of two Parts of Oil of Roſes, and one part of Vinegar of Roſes, ſtirr'd together for ſome time.

To theſe are ſometimes added diſtill'd Waters. It is uſed for Inflammations, and to dry up Tetters.

Scultet preſcribes it as follows; Two Whites of Eggs beaten, one Ounce and half of Vinegar of Roſes, four Ounces of Roſe-Water, and two Ounces of Oil of Roſes.

The Word is compoſed of the *Greek* ὀξὺς, ſour, and ῥοδον, Roſe.

OXYSACCHARUM, a Syrup prepared with Vinegar, the Juice of four Pomegranuts, and Sugar; uſed to cool, refreſh, and reſiſt the malignity of peccant Humours. From ὀξὺς, four, and σακχαρον, Sugar.

OYER, ſeems to have been antiently uſed for what we call *Aſſize*. See ASSIZE *of Novel Diſſeiſin*.

OYER *and Terminer*, is a Commiſſion eſpecially granted to ſome eminent Perſons, for the hearing and determining one or more Cauſes.

It is the firſt and largeſt of the five Commiſſions, by which our Judges of Aſſize do ſit in their ſeveral Circuits. See JUSTICE.

Antiently it was only in uſe upon ſome ſudden Outrage or Inſurrection in any Place. See ASSIZE.

The Term is *French*, and literally denotes to *hear* and *determine*. In our Statutes it is ſometimes wrote *Oyer and Determiner*.

OYER *de Record*, is a Petition made in Court, praying that the Judges, for better Proof ſake, will be pleaſed to hear, or look upon any Record.

In the like Senſe one may demand *Oyer* of Bond, Deed, or Covenant.

OYES, a Corruption of the *French Oyez*, hear ye; being a Term, or Formula whereby the Cryers, in our Courts, enjoin Silence, or Attention e'er they make Proclamation of any thing.

OZÆNA, in Medicine, a fetid Ulcer, in one or both Noſtrils; wherein the Humour is very acrid or corroſive, ſanious, and ſometimes mixed with a bloody Mucus. See ULCER.

It ſometimes proceeds from neglected or ill-managed Wounds, Contuſions, &c. in the Noſtrils; eſpecially in Scorbutic, Scrophulous, or Venereal Habits; and ſometimes follows the Small-Pox.

It often ſpreads and eats thro' the *Alæ*; and at other times preys into the *Septum Naſi*, *Cartilage*, and *Os Palati*; eſpecially in Venereal Caſes. Whence the great danger of the Noſe in that Diſtemper. See VENEREAL.

The Word is *Greek*, ὀζαινα, which ſignifies the ſame thing.

P, A Conſonant, and the fifteenth Letter in the *Engliſh* Alphabet. See LETTER, CONSONANT, &c.

When the *P* is follow'd with an *H* in the ſame Word, it has the Sound of an *F*; thus, *Philoſophy* is pronounced *Filoſophy*.

P and *B* are ſo like each other, that *Quintilian* declares, that in the Word *obtinuit*, his Reaſon required him to put a *b*, but that his Ears could hear nothing but a *p*, *optinuit:* Hence in ancient Inſcriptions, and old Gloſſaries, it appears, theſe two Letters have been often confounded. See *B*.

Several Nations ſtill pronounce one for the other, the *Germans* particularly, who ſay, *ponum vinum* for *bonum vinum*.

Plutarch obſerves, it was uſual for thoſe of *Delphos* to ſay βατεῖν for πιτεῖν, βικὸν for πικὸν; and among the *Latins*, as often as an *s* followed, the *b* was changed into a *p*, as *ſcribo*, *ſcripſi*.

P in the *Italian* Muſic frequently repreſents *piano*; which is what in our Muſic we call *ſoft*, i. e. the Force of Voice, or Inſtrument, are to be diminiſh'd, ſo as to make a Kind of Eccho.

P P ſignifies *piu piano*, i. e. *more ſoft*, or a ſecond Eccho weaker or more remote than the former: and *P P P* ſignifies *pianiſſimo* ſofteſt of all, or a third Eccho, the Voice being, as it were, loſt in the Air.

P. M. among Aſtronomers is frequently uſed for *poſt meridiem*, or Afternoon; and ſometimes for *poſt mane*, after the Morning, *i. e.* after Midnight. See MORNING.

P was alſo uſed among the Ancients as a Numeral Letter, ſignifying the ſame with the *G*, *viz.* an *hundred*; according to the Verſe of *Ugution*.

P ſimilem cum G numerum monſtratur habere.

Tho' *Baronius* thinks it rather ſtood for *ſeven*. See what has been obſerv'd, with reſpect to theſe Numeral Letters in general, under the Letter A.

When a Daſh was added a-top *p*, $\bar{p}$, it ſtood for four hundred Thouſand.

St. *Jerom* obſerves, on *Daniel*, that the *Hebrews* had no *P*, but that the *ph* ſerv'd 'em inſtead thereof. Adding, that thereis but one Word in the whole Bible read with a *P*, viz. *apaduo*.

P, in Preſcription, is uſed for *Pugil*, or the eighth Part of a Handful. See PUGIL.

P. E. ſignify *Partes Equales*, equal Parts of any Ingredients; otherwiſe denoted by ā or *ana*. See ANA.

P P ſignify *Pulvis Patrum*, i. e. *Jeſuit's Powder*, or the *Cortex* in Powder; which is ſo called, becauſe firſt brought into *Europe* by thoſe Fathers. See CORTEX.

PABULUM is ſometimes uſed among Naturaliſts for *Fuel*; or that Part in combuſtible Bodies, which the Fire immediately feeds on, or is ſupported by. See FIRE.

The oily or ſulphurous Part of Fuels is the only proper *Pabulum*. 'Tis that alone, wherein Fire can inhere. See FUEL, SULPHUR, &c.

PACALIA, a Feaſt held among the ancient *Romans*, in Honour of the Goddeſs *Pax*, Peace.

Aldhelmus, *de Laud. Virgin.* and *Bibl. Patrum*, ſpeaking of the impure Feſtivals and Ceremonies of the *Heathens*, calls one of 'em *Pœnalia*, which Paſſage *Gronovius* charges as faulty, alledging, that there was no Feaſt of that Name, but that it ſhould have been *Pacalia*.

The Ancients, who perſonified, and even deified every Thing, were not forgetful of Peace. She had an Altar at *Rome*, and a ſtately Temple, and religious Rites were paid her with great Solemnity.

PACE, *Paſſus*, *Step*, a Meaſure, taken from the Space between the two Feet of a Man, in walking. See MEASURE.

The ordinary *Pace* of a Man is two Foot and a Half. The *Geometrical* or *German Pace* is five Feet. See FOOT.

The Ancient, Roman, and modern Italic Mile conſiſts of a *thouſand Paces*, *Mille Paſſus*. The *French* League is 3000 Paces, the *German* 4000. See MILE, LEAGUE, &c.

PACE, in the Manage, is a certain Manner of Motion or Progreſſion of a Horſe.

The *Natural Paces* of a Horſe are three, *viz.* the *Walk*, *Trot*, and *Gallop*, to which may be added an *Amble*; becauſe ſome Horſes have it naturally. See each under its proper Article, TROT, GALLOP, &c.

For the artificial *Paces*, ſee AIRS.

Horſes that mix their Paces, *i. e.* ſhuffle betwixt a Walk and Amble, &c. are ſeldom of any Value. The Defect proceeds from their fretful, fiery Temper; and ſometimes from a Weakneſs either in their Reins or Legs.

PACE is more particularly underſtood of that eaſy low Motion wherein the Horſe raiſes the two Feet diametrically oppoſite at the ſame time; call'd alſo *Amble*. See AMBLE.

PACIFIC, ſomething *peaceful*, or free from Troubles, Tumults, &c. See PEACEABLE.

Geographers call the South Sea, *Mare Pacificum*, the Pacific Ocean; as being leſs infeſted with Storms than the Atlantic. M. *Frezier* affirms, it does not deſerve that Appellation, and that he has ſeen as violent Tempeſts therein as in any other Sea: But *Magellan*, happening to have a very favourable Wind, and not meeting with any thing to ruffle him, when he firſt traverſed this vaſt Ocean in 1520. gave it the Name, which it has retained ever ſince. *Maty*, however, adds, that the Wind is ſo regular, that the Veſſels wou'd frequently go from *Acapulco* to the *Philippine* Iſlands, without ſhifting a Sail.

In the ancient Church, they gave the Name *Pacific Letters* to all Sorts of Letters Teſtimonial, given by the Biſhop or Chorepiſcopus to their Prieſts when they had occaſion to travel abroad, certifying that the Bearer was a Catholic, and in Communion with the Church. The Life of Pope *Sextus* I. taken from the Pontifical of Pope *Damaſus*, mentions that Pope as the firſt who introduced thoſe Letters call'd *Formatæ* or *Canonicæ*, *Commendatitiæ*, *Communicatoriæ*, *Eccleſiaſticæ*, & *Pacificæ*.

PACIFICATION the Act of Re-eſtabliſhing the public Peace and Tranquillity.

The Word is particularly appropriated to the Periods put to the Religious Broils rais'd in *France*, in the Year 1562, by the Edict of *Nantz*; and the Civil Commotions, between the *Engliſh* and *Scots*, ended in 1636. See EDICT.

PACIFICATOR is commonly underſtood in the ſame Senſe with *Mediator*: But *Wicquefort* makes a Difference.

The Peace being concluded between *France* and *England*, in 1621. the Inſtruments on each Side were put in the Hands of certain Embaſſadors, who had been employed as *Pacificators*, not as Mediators; to be kept till ſuch Time as the Ratifications had been exchanged. So, the Archbiſhop of *Piſa*, the Duke of *Tuſcany*'s Embaſſador at *Madrid*, was never eſteemed a Mediator, tho' the *French* Embaſſadors allow'd him to be preſent at the Conferences held with the Commiſſioners of *Spain*, to act as a *Pacificator* of the Differences between 'em. The Grand Duke had not offer'd his Mediation; nor wou'd *France* have accepted it. *Wicquefort*. p. 2. Sect. 2.

PACK in Commerce. *A Pack of Wool* is a Horſe's Load, containing 17 Stone, and 2 Pounds, or 240 Pound Weight. See SARPLAR and WOOL.

PACT, PACTUM, or PACTION in Law, a Treaty, Covenant or Convention between divers Parties. See COVENANT.

The Word is form'd of the Latin *paciſci*, to bargain, agree, &c.

The Lawyers ſay, *Ex nudo pacto non oritur Lex.* See CONTRACT.

PACTUM, PACTIO, PACT is particularly uſed in the Civil Law, for the Conſent of two or more Parties to the ſame Thing.

Duorum aut plurium in idem conſenſus. L. III. §. 2. *ff de pactis.*

There are two Species of Conventions, *viz.* the *Pact* and *Contract*. A *Pact* againſt good Manners, againſt publick or natural Equity, is null.

PACTA *Conventa*, in *Poland*, are the Articles agreed on between the King and the Republic; and which they mutually oblige each other to obſerve.

PADDOCK or *Paddock-Courſe*, a Piece of Ground, conveniently taken out of a Park, ordinarily a Mile long, and a Quarter of a Mile broad, encompaſſed with Pales, or a Wall, for the exhibiting of Races with Greyhounds for Wagers, Plates, or the like. See PARK.

At one End of the *Paddock* is a little Houſe, where the Dogs are to be enter'd, and whence they are ſlipp'd, near which are Penns to incloſe two or three Deer for the Sport.

The Deer, when turn'd looſe, run all along by the Pale; and the Spectators are placed on the other Side.

Along the Courſe are ſeveral Poſts, *viz.* the *Law-poſt*, 160 Yards from the Dog-houſe and Penns. The *Quarter of Mile Poſt*, *Half Mile Poſt*, *Pinching-poſt*; and the *Ditch*, a Place made to receive the Deer, and preſerve 'em from further Purſuit.

Near the Ditch, are placed Judges or Triers. The Keeper, to ſlip the Dogs fairly, puts a *falling Collar* upon each, to ſlip thro' a Ring, and the Deer being turned looſe and put forward by a Teazer, as ſoon as it is arrived at the Law-poſt, the Dog-houſe Door is thrown open and the Dogs ſlipp'd.

If, now, the Deer ſwerve ſo much, as that his Head is judg'd nearer the Dog-houſe than the Ditch, before he arrive at the Pinching-poſt; it is no Match; but muſt be run over again three Days after. If there be no ſuch Swerve, but the Deer runs ſtraight as far as the Pinching-poſt, then the Dog neareſt him, if he chance to ſwerve, or by any Accident, be blanch'd; or if there be no ſuch Swerve, &c. the Dog that leaps the Ditch firſt, wins the Match.

PADUAN, among Medalliſts, a Modern Medal in Imitation of the Antique; or a new Medal ſtruck with all the Marks and Characters of Antiquity. See MEDAL.

The Name is taken from *Paduan*, a famous *Italian* Painter, who ſucceeded ſo well in the Impoſture, if it may be ſo called, that the beſt Judges are at a Loſs to diſtinguiſh 'em.

Paduan is, properly, applicable to thoſe Medals only, which are ſtruck on the Matrices of the *Paduan*; which are ſtill preſerv'd; tho' it is frequently uſed in the general for all Medals of this Kind.

Jobert obſerves, that there have been a *Paduan* and *Parmeſan* in *Italy*, and a *Carteron* in *Holland*, who had the Knack of imitating the Antique in Perfection.

This *Paduan* was thus called, from the Place of his Birth, *Padua*: His proper Name was *Lewis Leo*; he flouriſh'd in the Beginning of the XVIIth Century. His Son *Octavian*, tho' born at *Rome*, was alſo called the *Paduan*.

PÆAN, in Antiquity, a Hymn in Honour of *Apollo*, or ſome of the other Gods; chiefly uſed on Occaſions of Victory and Triumph. See HYMN.

The *Pæan* took its Name from *Apollo* himſelf; who was denominated *Pæan*, becauſe, in his Combat with the Serpent *Python*, his Mother *Latona* incouraged him to make uſe of his Arrows, by crying frequently ἰὼ παιὰν *Io Pæan*, i. e. *ſmite, ſhoot*.

Thus *Feſtus*, but *Heſychius* rather takes *Apollo* to have been denominated *Pæan* from παίω, θεραπεύω, *I heal*; in Alluſion to his being the Deity of Medicine.

PÆAN or PÆON was alſo the Name of a Foot in the ancient Poetry; ſo called, as commonly ſuppoſed, becauſe appropriated to the Hymn *Pæan*; tho' *Quintilian* derives the Name from its Inventor *Pæon*, a Phyſician. See FOOT.

It conſiſted of four Syllables, the firſt long, the reſt ſhort; as *continuus, facillimus, ſceleratus*, &c.

PÆDO-*Baptiſm*, Infant-Baptiſm, or that conferr'd on Children. See BAPTISM.

The Word is a Compound of the *Greek* παῖς παιδὸς Infant, and βαπτισμὸς, Baptiſm.

PAGAN, a *Heathen*, *Gentile*, or *Idolater*; one who adores the falſe Gods of Antiquity. See IDOLATER, GENTILE, &c.

The Word comes from the Latin *Paganus*, *a Pagis*, Villages. For when the Chriſtians firſt became Maſters of the Cities, they obliged the Heathens to go and live in the Country, where they might ſerve their falſe Gods in Safety.

The Abbot *Fleury* gives another Etymology of the Word *Pagan*. He obſerves that the Emperor *Conſtantine*, going from *Antioch* againſt *Maxentius* in 350. aſſembled all his Troops, and advis'd ſuch as had not receiv'd Baptiſm to receive it immediately; declaring withal, that ſuch as ſhou'd be found unbaptiz'd ſhou'd quit the Service, and go Home.

Hence, perhaps, ſays the Abbot, the Name *Pagan* might be given to thoſe who choſe the latter: The *Latin* Word, *Paganus*, properly ſignifying a Perſon who does not bear Arms; in Oppoſition to *Miles*.

And hence it might, in Time, extend to all Heathens. Or, continues he, the Word might come from *Pagus*, Village, whence the *French Pais* Country, in regard the Peaſants were thoſe who ſtuck longeſt to the Idolatry of the Heathens.

PAGANISM, the Religious Worſhip and Diſcipline of *Pagans*; or the Adoration of Idols and falſe Gods.

The Gods of *Paganiſm* were either Men, as *Jupiter*, *Hercules*, *Bacchus*, &c. or fictitious Perſons, as *Victory*, *Fame*, *Fever*, &c. or Beaſts, as in *Egypt*, *Crocodiles*, *Cats*, &c. or inanimate Things, as *Onions*, *Fire*, *Water*, &c. See GOD.

Baronius derives the Word *Paganus a Pagis* Villages, becauſe, when the Chriſtians became Maſters of the Cities, the Heathens were obliged by the Edicts of *Conſtantine* and his Children, to go and live in the Country Villages, &c. *Salmaſius* will have the Word from *Pagus*, conſidered as originally ſignifying *Gens* or Nation: Whence we ſay indifferently, *Paganiſm* or *Gentiliſm*.

PAGANALIA, an ancient rural Feaſt, thus call'd, becauſe celebrated in the Villages, in *Pagis*. See PAGAN.

In the *Paganalia*, the Peaſants went in ſolemn Proceſſion all around the Village, making Luſtrations to purify it. They had alſo their Sacrifices, wherein they offer'd Cakes on the Altars of the Gods. See FEAST.

Halicarnaſſæus and St. *Jerom* refer the Inſtitution of the *Paganalia* to *Servius Tullus*. They were held in the Month of *February*.

PAGARCHUS, among the Ancients, a petty Magiſtrate of a *Pagus* or little Diſtrict, in the Country; ſeveral Times mentioned in the Novels.

The Word is form'd from *Pagus* Village, and ἀρχὴ Command.

PAGE, a Youth of State, retain'd in the Family of a Prince, or great Perſonage, as an honourable Servant to attend in Viſits of Ceremony, do Meſſages, bear up Trains, Robes, &c. and at the ſame Time to have a genteel Education, and learn his Exerciſes.

The *Pages*, in the King's Houſhold, are various and have various Provinces aſſign'd 'em: As

Pages of Honour, *Pages* of the Preſence-Chamber, *Pages* of the Back-Stairs.

Pages were anciently diſtinguiſh'd from the other Servants in Livery, by their wearing Drawers in lieu of Breeches; and Sleeves turn'd up with Velvet.

The Word is found from the *Greek*, παῖς Child.

Cujas and *Gothefrid* obſerve, that *Pages*, in the Emperor's Families, were called *Pedagogiani Pueri*. *Fauchet* ſays, the Word *Page* was firſt given to the little Boys who attend Tilers to bring 'em their Tiles, &c. That till the Time of *Charles* VI. or VII. the Name was common to the baſeſt Servants, and that 'tis ſince then, that *Page* is become a Term of Honour; and the meaner Servants diſtinguiſh'd from 'em by the Name of *Lacqueys*, &c.

PAGE is particularly uſed in the Seraglio, for the Children of Tribute; or, Slaves who wait on the Grand Signor. They are commanded by the firſt *Aga*; and conſtitute four Claſſes, call'd *Oda*'s. See ODA.

PAGE *of a Book*. See PRINTING.

PAGEANT, a Triumphal Car, Chariot, Arch, or other the like pompous Decoration, variouſly adorn'd with Colours, Flags, &c. carried about in public Shews, Proceſſions, &c. See DECORATION, PROCESSION, &c.

PAGOD, a Name the *Portugueſe* have given to all the Temples of the *Indians*, and Idolaters of the Eaſt. See TEMPLE.

The *Pagods* of the *Chineſe* and *Siameſe* are exceedingly magnificent. Among others, there is one at *Golconda*, whoſe *Niche*, that they pray in, conſiſts of a ſingle Stone, of ſuch prodigious Bulk, that they were five Years in bringing it to to the Place; 600 Men being conſtantly employ'd at it all that Time; and the Machine, that brought it, drawn by 1400 Oxen.

The Revenues of the *Pagod* of the *Janigrate* are ſo great as to ſubſiſt, every Day, from fifteen to twenty Thouſand Pilgrims.

PAGOD is alſo uſed for the Idol adored in the Temple. See IDOL.

Hence the Curious give the Name to thoſe little purcelain Images brought from *China*.

PAGOD is alſo the Name of a Gold Coin current in ſeveral Parts of the *Indies*; on the footing of the Piece of Eight. See COIN, &c.

The *Engliſh* coin *Pagods* at Fort St. *George*; and the *Dutch* at *Palicate*.

There are alſo ſilver *Pagods* ſtruck at *Narſingua*, *Biſnagarg*, &c. which uſually bear the Figure of ſome monſtrous Idol, whence their Names. They are of various Values.

PAIN, an uneaſy Senſation, ariſing from a ſudden and violent Solution of Continuity in the Nerves, Membranes, Veſſels, Muſcles, &c. of the Body. See PLEASURE.

Pain, according to ſome, reſides in a Motion in the Organs of Senſe; according to others, it is an Emotion of the Soul, occaſioned by thoſe Organs. See SENSE.

If it be inquired, what it is occaſions the *Pain* of a Puncture? One may anſwer, that the Puncture cannot ſeparate the Fibres of the Fleſh, without ſhaking the Nerves which proceed thence to the Brain. If it be further asked, why we feel Pain upon a ſhaking of that Part of the Brain? we are at a Stand; there being no neceſſary Connection between Concuſſions of the Brain, and the Senſation of Pain wherewith the Soul is affected.

To account, therefore, for Pain; *F. Mallebranch* obſerves, we muſt have Recourſe to a ſuperior Being, who forms an arbitrary Connection between the Shakes of the Brain, and the Senſations of Pain. See SENSATION.

From the Phyſical Definition of Pain, it follows, that whatever may diſtract the Parts of the Nerves or Membranes from one another may cauſe Pain; but there is nothing in the Compaſs of Nature, which may not do that, with whatever Figures, or Properties, it be endued: For ſince ſomewhat may always be apply'd or added to any other Body, ſuch Body may at length increaſe into a Bulk too big to flow through a Canal of a given Diameter, and will therefore require more Room: Wherefore, while the Sides of a Canal are thruſt outward, beyond what they are uſed to be, that is, the Parts compoſing thoſe Sides, before contiguous, become looſened and moved away from one another; if that Body ſtrike upon thoſe Sides with a brisk *Impetus*, and that *Impetus* be continually renew'd, the Solution will be conſiderable, or the *Niſus* towards a Solution violent, or there will be *Pain*. Wherefore the conſtituent Parts of Fluids being ſufficiently augmented in Dimenſion, and propell'd with a continually repeated *Impetus* againſt any Canal of our Body, may occaſion that Solution, in which conſiſts the Eſſence of Pain.

For it comes to the ſame Thing, whether ſome Parts are added to a Body; or the Parts of that Body are, by any Cauſe whatſoever, ſeparated to ſo great an Interval, near the Sides of a Canal, as to conſtitute a Dimenſion equal to that which aroſe from the Addition of a new Part; for the Bulk may ſo far increaſe both Ways, as that the natural Capacity of the Canal ſhall not be big enough to contain it, without ſome violent Dilatation, and a Diſtraction of the Fibres it is compoſed of: And conſequently Pain muſt enſue.

Farther, as there may be always ſomewhat added to another Body; ſo from any Body may ſomewhat be always taken away; a Body ſo diminiſhed in Dimenſion, and impelled with

with a conſiderable *Impetus* will break thro' the Interſtices of the Fibres, where it is leſs than the Capacity of ſuch Interſtices, and moved obliquely: And becauſe the Superficies of the Fibres are not wont to be contained under Geometrical Right Lines, but to have Particles ſtanding out and prominent; theſe it divides from one another. And thus any Body, of whatſoever Figure, may occaſion in us Pain, ſo it be big enough to diſtend the Veſſels beyond their wonted Meaſure, or ſmall enough to enter the Pores in the Sides of a Canal, with an *Impetus* in the Manner intimated.

And what is thus advanced, with relation to Things within the Veſſels, may be eaſily apply'd to others out of the Veſſels.

PAIN, in Medicine, conſider'd as a Symptom of a Diſeaſe, makes a conſiderable Article in a Palliative Cure. See PALLIATIVE.

Pain is mitigated or aſſwaged divers Ways; as 1. by diluting and ſoftening of Acrimonies, with warm Water mix'd with Flower apply'd by way of Drink, Fomentation, Clyſter or Bath. 2. By reſolving and waſhing away Obſtructions, by the ſame Means and Reſolvents. 3. By relaxing the nervous Veſſels, with Drinks, Fomentations, Baths, the Species of Relaxants, Anodynes and Aperients. 4. By correcting the Acrimony itſelf with proper Remedies. 5. By freeing the obſtruent, obſtructed, and acrimonious Parts from the too much Preſſure of the vital Humour; and by ſoftening, and ſuppurating, and depurating 'em. 6. By rebating or deadening the Senſe by Narcoticks, either internally or externally. See NARCOTICK, &c.

PAIN *fort, & dure*, in Law, an eſpecial Puniſhment for one, who being arraigned of Felony, refuſes to put himſelf upon the ordinary Trial of God and his Country, and thereby ſtands mute by the Interpretation of Law. See MUTE.

This is vulgarly called *Preſſing to Death*. The Proceſs whereof is thus preſcribed:

" He ſhall be ſent back to the Priſon, whence he came, " and be laid in ſome low dark Houſe; where he ſhall lie naked " on the Earth, without any Litter, Ruſhes, or other Cloathing, " and without any Raiment about him, but only ſomething to " cover his Privy-Members; and he ſhall lie upon his Back " with his Head covered, and his Feet; and one Arm ſhall " be drawn to one Quarter of the Houſe, with a Cord, and " the other Arm to another Quarter, and his Legs in the ſame " Manner: Let there be laid upon his Body Iron, or Stone, as " much as he may bear, or more; and the next Day following, " he ſhall have three Morſels of Barley-Bread without Drink; " and the ſecond Day he ſhall have Drink three Times, as " much at each Time as he can drink, of the Water next un- " to the Priſon, except it be running Water; without any " Bread: And this ſhall be his Diet, till he dies.

PAINIM, the ſame with *Pagan*. See PAGAN.

PAINTING, the Art of repreſenting natural Bodies, and giving 'em a Kind of Life, by the Turn of Lines, and the Degrees of Colours.

Painting is ſaid to have had its Riſe among the *Egyptians*: And the *Greeks*, who learn'd it of 'em, carried it to its Perfection; if we may believe the Stories related of their *Apelles*, and *Zeuxis*.

The *Romans* were not without conſiderable Maſters in this Art, in the later Times of the Republic, and under the firſt Emperors; but the Inundation of *Barbarians*, who ruin'd *Italy*, proved fatal to Painting, and almoſt reduced it to its firſt Elements. It was in *Italy*, however, that the Art returned to its ancient Honour, and in the Beginning of the XVth Century; when *Cimabue*, betaking himſelf to the Pencil, tranſlated the poor Remains of the Art, from a *Greek* Painter or two, into his own Country.

He was ſeconded by ſome *Florentines*: The firſt who got any Reputation was *Ghirlandaio*, *Michael Angelo*'s Maſter; *Pietro Perugino*, *Raphael Urbin*'s Maſter; and *Andrea Verocchio*, *Leonardo Da Vinci*'s Maſter.

But the Scholars far ſurpaſſed the Maſters; they not only effaced all that had been done before 'em, but carried Painting to a Pitch from which it has ever ſince been declining.

'Twas not by their own noble Works alone that they advanc'd Painting; but by the Number of Pupils they bred up, and the Schools they form'd.

Angelo, in particular, founded the School of *Florence*; *Raphael*, the School of *Rome*; and *Leonardo*, the School of *Milan*; to which muſt be added, the *Lumbard* School, eſtabliſh'd about the ſame time, and which became very conſiderable under *Georgian* and *Titian*. See SCHOOL.

Beſides the *Italian* Maſters, there were others on this Side the *Alps*, who had no Communication with thoſe of *Italy*; ſuch were *Albert Durer*, in *Germany*; *Holbens*, in *Switzerland*; *Lucas*, in *Holland*; and others in *France* and *Flanders*: but *Italy*, and particularly *Rome*, was the Place where the Art was practis'd with the greateſt Succeſs; and where, from Time to Time, the greateſt Maſters were produced.

To *Raphael*'s School, ſucceeded that of the *Caraches*, which has laſted, in its Scholars, almoſt to the preſent Time; wherein the *French* Painters, by the Munificence of the late *Louis* XIV. ſeem almoſt in Condition to vie with thoſe of *Greece* or *Italy*.

In *Paris* they have two conſiderable Bodies of Painters, the one, the *Royal Academy of Painting and Sculpture*, the other the *Community of Maſters in Painting, Sculpture*, &c. See ACADEMY.

The Art of *Painting* is divided, by *Freſnoy*, into three principal Parts, *Invention*, *Deſign*, and *Colouring*; to which ſome add a fourth, *viz. Diſpoſition*.

Felibien divides Painting into the *Compoſition*, the *Deſign*, and *Colouring*.

Monſ. *Teſtling*, Painter to the late King, divides it, ſomewhat more accurately, into the *Deſign* or *Draught*, the *Proportion*, the *Expreſſion*, the *Clair-obſcure*, the *Ordonnance*, and the *Colouring*; to which his *Engliſh* Tranſlator adds the *Perſpective*. Under each of theſe Heads, he gives us the Rules and Sentiments of the beſt Maſters, which ſee under their proper Articles in this Dictionary, DESIGN, PROPORTION, EXPRESSION, CLAIR-OBSCURE, ORDONNANCE, COLOURING, &c.

Painting is of various Kinds, with regard to the Materials us'd; the Matter whereon they are applied; and the Manner of applying 'em.

Hence come *Painting* in Oil; *Painting* in Water-Colours, or *Limning*; *Painting* in *Freſco*; *Painting* on *Glaſs*; *Painting* in *Enamel*; and *Painting* in *Miniature*.

PAINTING *in Oil*. The Art of Painting in Oil was unknown to the Ancients; and it was a *Flemiſh* Painter, one *John van Eyck*, or *John de Bruges*, who firſt diſcover'd and put it in practice in the Beginning of the XIVth Century: 'Till him, all the Painters wrought in *Freſco*, or in Water-Colours.

This was an Invention of the utmoſt Advantage to the Art; ſince, by means hereof, the Colours of a Painting are preſerv'd much longer and better, and receive a Luſtre and Sweetneſs which the Ancients cou'd never attain to, what Varniſh ſoever they made uſe of to cover their Pieces.

The whole Secret only conſiſts in grinding the Colours with Nut-Oil or Linſeed Oil: But it muſt be own'd, the Manner of Working is very different from that in *Freſco*, or in Water; by reaſon the Oil does not dry near ſo faſt; which gives the Painter an Opportunity of touching and retouching all the Parts of his Figures, as often as he pleaſes: Which, in the other Kinds, is a Thing impracticable.

The Figures too are here capable of more Force and Boldneſs; in as much as the Black becomes blacker, when ground with Oil than with Water; beſides that, all the Colours, mixing better together, make the Colouring ſweeter, more delicate and agreeable, and give an Union and Tenderneſs to the whole Work, inimitable in any of the other Manners.

Painting in Oil is perform'd on *Walls*, on *Wood*, *Canvas Stones* and all Sorts of *Metals*.

To PAINT *on a Wall*: when well dry, they give it two or three Waſhes of boiling Oil; till the Plaſter remain quite greaſy, and will imbibe no more. Over this they apply deſſiccative or drying Colours, *viz.* white Chalk, red Oker, or other Chalks beaten pretty ſtiff. This Couch or Lay being well dry, they ſketch out, and deſign their Subject; and at laſt paint it over, mixing a little Varniſh with their Colours; to ſave the Varniſhing afterwards.

Others, to fortify their Wall the better againſt Moiſture, cover it with a Plaſter of Lime, Marble-Duſt, or a Cement made of beaten Tiles ſoak'd with Linſeed Oil; and at laſt prepare a Compoſition of *Greek* Pitch, Maſtic and thick Varniſh boil'd together, which they apply hot over the former Plaſter: When dry, they lay on their Colours as before.

Others, in fine, make their Plaſter with Lime-Mortar, Tile-Cement, and Sand; and this dry, apply another of Lime, Cement, and Machefer or Iron Scum; which being well beaten and incorporated with Whites of Eggs and Linſeed Oil, makes an excellent Couch or Plaſter. When dry, the Colours are applied as before.

To PAINT *on Wood*; they uſually give their Ground a Couch or Lay of White temper'd with Size; or they apply the Oil abovementioned: The reſt, as in Painting on Walls.

To PAINT *on Linnen or Canvas*; the Canvas being ſtretch'd on a Frame, they give it a Couch or Lay of Size: When dry, they go over it with a Pumice-Stone, to ſmooth off the Knots. By means of the Size the little Threads and Hairs are all laid cloſe on the Cloth, and the little Holes ſtopp'd up, ſo as no Colour can paſs thro'.

When the Cloth is dry, they lay on Oker, which is a natural Earth, and bears a Body; ſometimes, mixing with it a little white Lead to make it dry the ſooner. When dry, they go over it with the Pumice-Stone to make it ſmooth.

After this, they ſometimes add a ſecond Lay compoſed of white Lead, and a little Charcoal Black, to render the Ground of an Aſh-Colour, obſerving in each Manner to lay on as little Colour as poſſible, that the Cloth may not break, and that the Colours, when they come to be painted over, may preſerve the better.

In ſome Paintings of *Titian* and *Paolo Veroneſe* we find they made their Ground with Water, and painted over it with Oil; which contributed much to the Vivacity and Freſhneſs of their Works: For the Water Ground, by imbibing the Oil of the Colours, leaves them the more beautiful; the Oil itſelf taking away a deal of their Vivacity.

As little Oil therefore is to be uſed as poſſible, if 'tis deſired to have the Colours keep freſh: For this Reaſon ſome mix 'em up with Oil of Aſpic, which evaporates immediately, yet ſerves to make 'em manageable with the Pencil.

To PAINT *on Stones or Metals*, 'tis not neceſſary to apply Size, as on Cloth; it ſuffices to add a ſlight Couch of Colours, before you draw your Deſign; nor is even this done, on Stones where 'tis deſired the Ground ſhou'd appear, as incertain Marbles of extraordinary Colours.

All the Colours uſed in *Freſco* are good in *Oil*, except White of Lime and Marble-Duſt. See COLOUR.

Thoſe chiefly uſed are *White Lead* or *Ceruſs*, yellow and white *Maſſicot*, *Orpiment*, *Black Lead*, *Cinnaber* or Vermillion, *Lacca*, blue and green *Aſhes*, *Indigo*, *Lamp-Black*, Burnt *Ivory*, and *Verdigreaſe*, *&c.* See the Preparation, *&c.* of each under its proper Article, CERUSS, ORPIMENT, VERMILLION, LACCA, INDIGO, *&c.*

As to Oils, the beſt are thoſe of Walnuts, of Linſeed, Aſpic, and Turpentine. The deſſiccative or drying Oils, are a Nut-Oil boil'd with Litharge and Sandarac, others with Spirit of Wine, Maſtic and Gum-Lacca. See VARNISH.

To have a Varniſh that ſhall dry readily, they mix Spirit of Wine with Turpentine.

PAINTING *in Water-Colours*. See LIMNING.

PAINTING *in Freſco*. See FRESCO.

PAINTING *in Miniature*. See MINIATURE.

PAINTING *on Glaſs*. See GLASS.

PAINTING *in Enamel*, See ENAMEL.

PAINTING *in Moſaic*. See MOSAIC-WORK.

PAIR, a Collective Term, uſed for two equal and ſimilar Things ordinarily joined together; tho' more frequently for artificial Things, than for natural Ones.

As a *Pair* of Gloves, of Stockings, of Shoes, *&c.*

It is alſo uſed in compound Things, for two Parts alike each other, tho' they only make one Whole; as a *Pair* of Sciſſars, *&c.*

And for a Set or Syſtem of ſeveral Things join'd to make another compleat, as a *Pair* of Bag-pipes, *&c.* and laſtly, by Extenſion, for a Thing that is ſingle, as a *Pair* of Tables, *&c.*

PAIR, *Par*, in Anatomy, an Aſſemblage or Conjugation of two Nerves, having their Origin together in the Brain or Spine, and thence diſtributed into the ſeveral Parts of the Body, one on the one Side, and the other on the other. See NERVE.

Thus we ſay the *firſt Pair*, *ſecond Pair*, *&c.* the *Par vaſum*, *Par quintum*, &c. and ſometimes the *Olfactory Pair*, *Ophthalmic Pair*, *&c.* See VAGUM.

PALACE, *Royal-Houſe*, a Name generally given to the Dwelling-Houſes of Kings, and Princes. See HOUSE.

In Courſe of Time the Name has alſo been applied to the Houſes of other Perſons; taking different Epithets, according to the Quality of the Inhabitants; as *Imperial Palace*, *Royal Palace*, *Pontifical*, *Cardinal*, *Epiſcopal*, *Ducal Palace*, &c.

Procopius derives the Origin of the Word *Palace* from a *Greek*, called *Pallas*, who gave his own Name to a magnificent Houſe he had built: Adding, that *Auguſtus* after him, gave the Name *Palatium* to the Houſe of the *Roman* Emperors on the Hill; which, for that Reaſon, was called the *Palatine* Mount. Others take it the contrary Way; and ſay, that *Romulus*'s Houſe, wherein *Auguſtus* lived, was properly called *Palatium*, becauſe ſituate on the *Palatine* Mount. See PALATINE.

Be this as it will, 'tis certain, *Palatium*, from a proper Name, in Time, became common to all Houſes of Kings.

And as the Kings uſually heard and determined Cauſes in their Houſes, in what Part of the Realms ſoever ſituate; hence alſo *Palatium* became a Name for a Court of Juſtice; thus the *French* have their *Palais*, &c. See COURT.

PALANQUIN, a Kind of Chaiſe, or Chair bore by Men on the Shoulder; much uſed by the People of *China* and the Eaſt, as a Vehicle for their Conveyance from Place to Place.

PALATE, *Palatum*, in Anatomy, the Fleſh that compoſes the *Roof*, *i. e.* the upper and inner Part of the Mouth. See MOUTH.

The *Palate* is lined with a glandulous Coat, under which are great Numbers of pretty conſpicuous Glands, ſcatter'd in the Fore-part of it like Grains of Millet, with many Interſtices, whoſe excretory Ducts, piercing the Membrane, open into the Mouth; but towards the Hind-part, they lie much thicker; and about the Root of the *Uvula* are gathered ſo cloſe together, that they appear to form one pretty large conglomerate Gland, called by *Verheyen*, *Glandula Conglomerata Palatina*.

Towards the Bottom of the Palate, behind the *Uvula*, is a pretty large Perforation, which, a little from its Orifice, divides into two, each whereof goes to one of the Noſtrils.

Many take the Palate to be the Organ of Taſting. See TASTE.

Du Laurener ſays, the Palate has its Name from the Latin *Pali*; becauſe encloſed with two Rows of Teeth, reſembling little Stakes which the *Latins* call *Pali*.

PALATI *Os*, a ſmall ſquare Bone, forming the Hind-part of the *Palate*, and join'd to that Part of the *Os Maxillare* which forms the Fore-part of the Palate. See PALATE & MAXILLA *ſuperior*.

PALATINATE, a Province or Signory, poſſeſs'd by a *Palatine*; and from which he takes his Title, and Dignity. See PALATINE.

The *Palatinates*, now ſubſiſting, are either thoſe of *Germany* or *Poland*.

Thoſe of *Germany* are the Principalities of the Upper and Lower *Rhine*, *i. e.* of *Bavaria* and the *Rhine*. The *Palatinates*, in *Poland*, are the Provinces and Diſtricts of the *Poliſh* Grandees or Senators, who are the Governors thereof.

PALATINE, *Count Palatine*, or *Comes Palatinus* in the ancient Cuſtoms, was a Title given to all Perſons who had any Office or Employment in the Prince's *Palace*. See COUNT.

Mathæus ſays, that *Palatines* were originally thoſe who had the Super-intendance of the *Palace*; the ſame with what the *Greeks* call'd *Curopolatæ*, and the *French*, *Maitres Depalais*; tho', in Time, the Name became more general.

The only *Palatine* of this Kind, now ſubſiſting, is the *Palatine* of the *Rhine*.

The Title *Palatine* was afterwards conferr'd on thoſe delegated by the Prince to hold a Court of Juſtice in ſome Province; and to ſuch among the Lords as had a *Palace*, *i. e.* a Court of Juſtice in their own Houſes.

The *French* Writers make the *Palatinates* of *Champagne* to be the firſt, who bore the Title; which, they will have it, the *Germans* and other People borrowed from them; not they from the *Germans*.

At preſent the Word *Palatine* is reſtrained to a Prince of *Germany*, or a Lord of *Poland* poſſeſs'd of a *Palatinate*. See PALATINATE.

The Word is derived hence, that anciently the Emperors ſent the Judges of their *Palace*, whom they call'd *Comites Palatini*, or *Paltz-graves*, to correct the Abuſes of the other Judges in the Provinces of *Saxony*, *Bavaria*, *Franconia*, and the *Rhine*. See PALSGRAVE.

In the Codes we find a Title, *De Palatinis Sacrarum Largitionum*, who were a Kind of Treaſurers of the Empire.

PALATINI *Ludi*, among the *Romans*, were Games inſtituted in Honour of *Julius Cæſar*, as ſome will have it, or as others, of *Auguſtus*. See GAMES.

'Tis pretended that *Dion* calls 'em *Auguſtales*; which ſhould ſeem to confirm the ſecond Sentiment. Indeed, 'tis certain, that he ſays *Livia* inſtituted particular Games on the *Palatine* Mount, in Honour of that Prince; but he apparently diſtinguiſhes them from thoſe called *Auguſtales*. See AUGUSTALES.

The *Romans* had alſo their *Apollo Palatinus*, a Surname of that Deity, given him in reſpect of the Temple erected to him by *Auguſtus* on the *Palatine* Mount, in Conſequence of a Report of the *Aruſpices*, which required it to be done: *Auguſtus* enrich'd it with a noble Library, as is intimated by *Horace*, Lib. I. Epiſt. III. v. 23.

The *Palatine Tribe* was one of the four Tribes, into which *Rome* was anciently divided by *Servius Tullus*. See TRIBE.

PALATO *Salpingæus*, called alſo *Muſculus Tubæ novus Valſalvæ*, and *Pterygoſtaphilinus Externus*, A Muſcle ariſing broad and tendinous from the Edge of the lunated Part of the *Os Palati*, ſeveral of its Fibres being ſpread on the Membrane that covers the *Foramen Narium*; whence growing into a ſmall thin Tendon, it is reflected about the Hook like the Proceſs of the inner Wing of the *Proceſſus Pterigoidæus internus*, and is inſerted carnous, into all the membranous, fleſhy, and cartilaginous Parts of the Tube which leads from the Palate to the Ear.

It is uſed to dilate and keep open this Tube.

PALATO-STAPHILINUS, in Anatomy, a Muſcle call'd alſo *Pterygoſtaphilinus internus*. See PTERIGOSTAPHILINUS.

PALE a little pointed Stake, or Piece of Wood, uſed in making Incloſures, Separations, *&c.* See PALISSADE.

The *Pale* was an Inſtrument of Puniſhment and Execution among the ancient *Romans*, &c. ſtill continues ſo among the *Turks*. Hence *Empaling*; the paſſing a ſharp Pale tho' the Fundament up the Body. See EMPALING.

The Word comes from the Latin *Palus*, which ſignifies the ſame Thing; whence *Paliſſade*, *&c.*

PALES, or *Piles*, in Carpentry, are Rows or Files of Stakes drove deep into the Ground, to make wooden Bridges over Rivers. See PALLIFICATION.

They ſerve to ſupport the Beams which are laid a-croſs them, from one Row to another; and are ſtrongly bound together with Croſs-Pieces.

PALE, in Heraldry, one of the Honourable Ordinaries of an Eſcutcheon. See ORDINARY.

The *Pale* is a Repreſentation of a Pale or Stake, placed upright, and comprehending the whole Height of the Coat, from the Top of the Chief to the Point.

When ſingle, it is to contain one Third of the Breadth of the Shield. When there are ſeveral they are proportioned ſo, as that two take up two Fifths of the Shield; and three take up three Sevenths: and in thoſe Caſes, the Num-

ber

ber of Pieces is ſpecified as well as that of thoſe they are charged withal, &c.

Pales are bore various Ways, as *Wavy*, *Crenelle*, *Faillis*, *Indented*, *Ingrailed*, &c. There are alſo *Cometed* and *Flaming Pales*, which are Pointed, ſometimes Waved, &c.

The *Pale* in an Armoury is a Mark of Juriſdiction. See the adjoining Figure; He bears *Gules a Pale Or*.

A Coat is ſaid to be *Paled*, when it is equally charg'd with Pales of Metal and Colour.

It is *Counter Paled* when it is cut and the two Demi-Pales of the Chief, tho' of Colours the ſame with thoſe of the Point, yet differ in the Place where they meet; ſo as if the firſt of the Chief be Metal, that correſponding to it, underneath, is of Colour.

The Coat is ſaid to be *Paliſſe*, when the *Pales* are pointed like thoſe uſed in the Defence of Places.

Du Cange derives the Word from the Latin Name *Pallea*, a Piece of Tapiſtry. He adds, that the Ancients gave the Name *Pales* to the Hangings of Walls. Thus, a Chamber was ſaid to be *Paled* with Cloth of Gold, with Silk, &c. as conſiſting of Bands or Stuffs of two Colours. Hence the Origin of the Word Pale a Stake, &c. The Arms of *Arragon* are *Paled* with *Gold* and *Gules*.

Tertullian obſerves, that the *Romans* planted Pales to ſerve as Boundaries of Inheritances; and that they conſecrated them to the God *Terminus*, under the Name of *Pali Terminales*. *Ovid* tells us, they were crowned and adorned with *Flowers*, *Feſtons*, &c. The God was worſhipped before theſe *Pales*.

In PALE, is applied to Things born one above another, in Manner of a *Pale*.

Party per PALE is where the Shield is divided by a ſingle Line thro' the Middle, from Top to Bottom. See PARTY and PALY.

PALED *Flowers*, in Botany, are thoſe that have Leaves ſet about, or ſurrounding a Head, or Thrum; as in Marigolds, &c.

PALÆSTRA, among the antient *Greeks*, a publick Building, where the Youth exerciſed themſelves in Wreſtling, Running, Quoits, &c. See GYMNASIUM.

Some ſay it conſiſted of a College, and an Academy; the one for Exerciſes of the Mind, the other of the Body. But moſt Authors rather take *Palæſtra* to be a *Xyſtus* or mere Academy for Bodily Exerciſes, according to the Etymology of the Word πάλαι, Wreſtling, one of the chief Exerciſes amongſt the Ancients. See XYSTUS.

The Length of the *Palæſtra* was mark'd out into *Stadia*, each equal to 125 Geometrical Paces; and the Name *Stadium* was given to the *Arena* whereon they ran. See STADIUM.

PALÆSTROPHYLAX, among the Ancients, was the Governor of the *Palæſtra*; and of the Exerciſes perform'd therein. See PALÆSTRA.

This Officer was alſo called *Xyſtarcha*. See XYSTARCH.

The Word is form'd from the *Greek* παλαίστρα, & φύλαξ *Guardian*.

PALILIA, a Feaſt among the ancient *Romans* in Honour of the Goddeſs *Pales*. Some call 'em *Parilia*. See FEAST.

They were celebrated by the Shepherds on the firſt of *May*; to beſeech that Goddeſs to take care of their Flocks, and preſerve 'em from Wolves, and Diſeaſes.

Part of the Ceremony conſiſted in lighting Heaps of Straw, and jumping over them.

PALILICIUM, in Aſtronomy, a fix'd Star of the firſt Magnitude, in the *Bull's-Eye*; called alſo *Aldebaran*.

Its Longitude in Mr. *Flamſtead*'s Catalogue is 5°. 27'. 00''. Its Latitude 5°. 29'. 49''. South.

Pliny gives the Name *Palilicium* to the *Hyades*. See HYADES.

PALINDROME, a Verſe, or Sentence, which runs the ſame, read either backwards, or forwards.

The Word is *Greek*, παλίνδρομος, *retro currens*, running backwards: Such is the Verſe

Roma tibi ſubito motibus ibit amor.

Some People of Leiſure have refined upon the *Palindrome*, and compoſed Verſes, each Word whereof is the ſame backwards as forwards. As that Inſtance in *Cambden*.

Odo tenet mulum, madidam mappam tenet Anna.
Anna tenet mappam madidam, mulum tenet Odo.

PALING, in Agriculture, &c. a Kind of Fence-work, for Fruit-Trees, &c. planted in Fields, &c. See FENCE.

It conſiſts of three ſmall Poſts driven into the Ground at a Foot and a Half Diſtance; with Croſs-Bars nail'd to each other, near the Top.

In fixing the *Pales* in Form of a Triangle, Room is to be left for the Tree to play and bow by the high Winds without galling.

The Trees to be bound to a Stake for a Year or two; after which, Fern or Straw may be ſtuffed in betwixt the Tree and uppermoſt Rails to keep it upright.

If the Place be open to Deer, Rabbets, or the like, a Poſt to be nailed to the Bar between every two Pales.

PALINGENESIA, a Term ſignifying *New Birth*; or the Paſſage of the Soul of a Defunct into another Body.

The *Palingeneſia* is almoſt the ſame thing with the *Metempſychoſis* taught by *Pythagoras*, and ſtill believed by the *Brachmans*, *Banians* and other Philoſophers of the Eaſt. See METEMPSYCHOSIS.

The Word is *Greek*, form'd of πάλιν over-again, a-new, and γένεσις *Geneſis*.

PALINODY, a Diſcourſe contrary to a preceding one.

Hence the Phraſe *Palinodiam Canere*, to ſing *Palinody*; to make a Recantation.

The Word, in the original *Greek*, ſignifies to *ſing a-freſh*. Hence it has paſſed as a general Name for Poems, &c. which contain a Retractation in Favour of a Perſon the Poet had before offended.

The Poet *Steſichorus* is ſaid to be the firſt Author of the *Palinody*. The ſixth Ode of the I. Book of *Horace* beginning, *O Matre pulchra*, is a true *Palinody*.

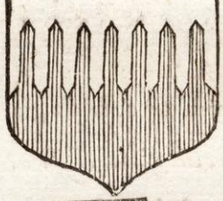
PALINTOCIA, in Antiquity, a Term uſed in two Senſes. 1. For the Delivery of a Child a ſecond Time: Thus the ſecond Birth of *Bacchus*, proceeding out of *Jupiter*'s Thigh, was a *Palintocia*.

2. *Palintocia* was alſo uſed for the Repetition of Uſury, or the refunding of Intereſts. The *Megarians*, having expell'd their Tyrant, ordained the *Palintocia*; that is, they made a Law, that all the Creditors ſhould return to their Debtors the Intereſts they had received for Monies lent.

The Word is form'd from the *Greek* πάλιν a-freſh, a-new, and τόκος of τίκτω, I bring forth.

PALISSADE or PALISSADO, in Fortification, an Incloſure with Stakes or *Pales* driven into the Ground, eight or nine Inches thick; and nine Foot long, three whereof are hid under Ground.

It is uſed to fortify the Avenues of open Forts, Gorges, Half-moons, the Bottoms of Ditches, and the Parapets of Covert-ways; on the Talut of Ramparts; the Top of the Out-works, &c.



There are *Paliſſadoes* made perpendicular; others are made inclining to the Ground, that the Ropes caſt over 'em, to tear 'em up, may ſlip.

PALISSADES *turning*, are an Invention of Mr. *Coehornes*, in order to preſerve the *Paliſades* of the Parapet from the Beſiegers Shot.

He orders them ſo, that as many of them, as ſtand in the Length of a Rod, or in about ten Foot, turn up and down like Traps; ſo as not to be in Sight of the Enemy till they juſt bring on their Attack; and yet are always ready to do the proper Service of *Palliſades*.

PALISSADE, in Gardening, an Ornament in the Allies of Gardens, wherein Trees are planted, which bear Branches from the Bottom, and which are ſpread in ſuch a Manner, as to appear like a Wall covered with Leaves.

Paliſſades are made of Jeſſamin, Filarea, &c.

PALISSE, in Heraldry, a Range of *Paliſſades* before a Fortification, repreſented on a *Feſſe*, riſing up a conſiderable Height; with the Field appearing thro' them. As in the Figure adjoining.

PALL, in Heraldry, a Kind of Croſs, after the Manner of the adjoining Figure; blazoned thus: He beareth *Gules*, a *Croſs Pall Argent*.

PALLA, among the old *Romans*, a Mantle which Women wore over the Gown, call'd *Stola*. See STOLA.

It was bore on the left Shoulder, whence paſſing to the other Side, under the right Arm, the two Ends were bound under the left Arm, leaving the Breaſt and Arm quite bare.

It made abundance of Plaites or Wrinkles; whence, according to *Varro*, it had its Name, *viz.* from πάλλω, *Vibro*, I ſhake, I am very moveable.

Among the *Gauls* there was alſo a Kind of *Palla* wore by the Men, call'd *Gallica Palla*.

PALLADIUM, in Antiquity, a Statue of the Goddeſs *Pallas*, preſerv'd in *Troy*; whereon the Fate of the City depended.

The Tradition was, that in building a Cittadel, in Honour of *Pallas*, and a Temple in the moſt elevated Part thereof; the *Palladium* dropp'd from Heaven, and mark'd out the Place, which the Goddeſs was pleas'd to poſſeſs. After this, *Apollo* gave an Oracle, importing, that *Troy* ſhould never be taken while the *Palladium* was found within its Walls: Which occaſioned *Diomed* and *Ulyſſes* to undertake the ſtealing thereof.

'Tis ſaid, there was anciently a Statue of *Pallas* preſerv'd at *Rome*, in the Temple of *Veſta*: which ſome pretended to be the true *Palladium* of *Troy*, brought into *Italy* by *Æneas*: It was kept among the ſacred Things of the Temple, only known to the Prieſts and Veſtals.

This Statue was eſteem'd the Deſtiny of *Rome*; and there were ſeveral others made perfectly like it, to ſecure it from being ſtollen. See ANCYLE.

There was alſo a *Palladium* in the Citadel of *Athens*, plac'd there by *Nicias*.

Theſe *Palladiums*, in all Probability, were no other than a Kind of *Taliſmans*. See TALISMAN.

PALLET, among Painters, a little oval Table, of Wood, or Ivory, very thin and ſmooth on; and around which the Painters place the ſeveral Colours they have occaſion for, ready for the Pencil. See COLOUR.

The Middle ſerves to mix the Colours on, and to make the Teints requir'd in the Work. It has no Handle, but in Lieu thereof, a Hole at one End, to put the Thumb through to hold it.

The Word comes from the Latin *Paleta*.

PALLET, among Potters, Crucible-Makers, &c. is a wooden Inſtrument, almoſt the only one they uſe, for forming, beating, and rounding their Works. See POTTER.

They have ſeveral Kinds; the largeſt are oval, with a Handle; others are round, or hollow'd triangularly; others, in fine, in manner of large Knives, ſerving to cut off what is ſuperfluous on the Moulds of their Works.

PALLET, in Gilding, is an Inſtrument made of a Squirrel's Tail; uſed to take up the Gold Leaves from the Pillow, to apply and extend 'em on the Matter to be gilt. See GILDING.

PALLET, in Heraldry, is the Moiety or Half of the *Pale*; or a ſmall *Pale*, half the Breadth of the uſual one. See PALE.

The *Pallet* muſt never be charg'd with any thing, either Quick or Dead; neither can it be divided into two equal Parts, but it may be into four, for one fourth Part of the *Pallet*, or $\frac{1}{8}$ Part of the *Pale*, is called an *Endorſe*. See ENDORSE.

If the *Pale* be upon any Beaſt, they ſay, the Beaſt is *Debruiſed* with the *Pale*: But if the Beaſt be upon the *Pale*, they ſay, he is *ſupported* by the *Pale*.

PALLET is alſo a Part belonging to the Ballance of a Watch or Movement. See WATCH and MOVEMENT.

PALLIATION, the Action of mitigating, ſoothing, or diſguiſing a Thing.

Hence, in Medicine, *Palliation* is uſed for the quieting and aſſuaging of Pain, and providing againſt the ſeverer Symptoms of a Diſeaſe, when nothing can be directly levell'd againſt the Cauſe. See PALLIATIVE.

PALLIATIVE *Indication*, is where the Symptoms of a Diſeaſe give too much Trouble, and Danger, to have their Cure deferr'd till the Diſeaſe, whereon they depend, is removed. See INDICATION.

Here, the Symptoms, themſelves, are to be cured, or mitigated a-part: And hence,

PALLIATIVE *Cure*, is the Anſwering of a *Palliative* Indication; or the Removal, or Mitigation of the Symptoms of a Diſeaſe; the Cauſe of the Diſeaſe ſtill remaining. See CURE.

Boerhaave obſerves, that every Mitigation of a Symptom takes away ſomewhat from the Diſeaſe itſelf; ſo that to cure all the Symptoms together, is almoſt to cure the whole Diſeaſe. See SYMPTOM.

The principal Symptoms which call for ſuch a Cure are Thirſt, Pain, too much Waking, and Faintings. See each under its proper Article. PAIN, THIRST, WAKING, &c.

PALLIER, or *Paillier*, in Building, a Landing-Place in a Stair-Caſe; or a Step, which, being broader than the reſt, ſerves to reſt upon. See STAIR-CASE.

The Term is pure *French*, and not much uſed in *Engliſh*. In Perrons, or large Stair-caſes, where there are ſometimes ſeveral *Palliers* in the ſame Range, or Line, they ought to have at leaſt the Width of two Steps.

Thoſe in the Turns of Stair-caſes ought to be as broad as long. *Vitruvius* calls the *Palliers* or Landing-Places of Theatres *Diazomata*.

PALLIFICATION, in Architecture, is the piling of the Ground-work; or ſtrengthening it with Piles, or Timber driven into the Ground; which is practiſed, when they build upon a moiſt or marſhy Soil. See FOUNDATION.

PALLIO *cooperire*. It was an ancient Cuſtom, where Children were born out of lawful Wedlock, and their Parents afterwards intermarried; that thoſe Children, together with the Father and Mother, ſhou'd ſtand *Pallio cooperti* under a Cloath ſpread over them, while the Marriage was a ſolemnizing; which was a Kind of Adoption, and had the Effect of a Legitimation.

Thus *Robert Groſthead*, the famous Biſhop of *Lincoln*, in one of his Letters, *In ſignum legitimationis nati ante Matrimonium conſueverunt poni* ſub pallio *ſuper Parentes eorum extento, in Matrimonii ſolemnizatione.*

Selden, in his Notes on *Fleta*, adds, that the Children of *John of Gaunt*, Duke of *Lancaſter*, by *Catherine Swinford*, tho' legitimated by Act of Parliament; yet were cover'd with the Pall at the Time of the Marriage of their Parents.

PALLIUM or PALL, a Pontifical Ornament wore by Popes, Patriarchs, Primates and Metropolitans of the *Romiſh* Church over their other Garments, as a Sign of their Juriſdiction. See PONTIFICALIA, EPISCOPALIA, &c.

'Tis in Form of a Band, or Fillet, three Fingers broad, and incompaſſes the Shoulder; whence by ſome Authors it is called *Superhumerale*. It has Pendants, about a Palm long, both before and behind; with little *Laminæ* of Lead rounded at the Extremes, and covered with black Silk, with four red Croſſes.

The *Pallium* is made of white Wool, ſhore from off two Lambs, which the Nuns of St. *Agnes* offer every Year, on the Day of her Feaſt, at the ſinging of the Maſs, *Agnus Dei*.

The Lambs are received by the two Canons of the Church of St. *John de Lateran*; who deliver 'em into the Hands of the Apoſtolical Sub-deacons, to whom belongs the feeding and ſhearing of 'em in Seaſon, and who alone have the Right of making theſe *Palliums*; which, when made, they lay over the Bodies of St. *Peter* and St. *Paul* in the Grand Altar of their Church, making Prayers over 'em all Night, according to the Form preſcrib'd for that Purpoſe in the *Roman* Ceremonial.

Some, with *Euſebius*, will have the *Pallium* to have been introduced by Pope *Linus*; adding, that as the *Ephod* was the Mark of the Pontifical Authority in the *Jewiſh* Synagogue, ſo is the *Pallium* in the *Chriſtian* Church. See EPHOD.

Others have obſerv'd, that there is no Mention made hereof before the Year 336.

Laſtly, others will have it firſt granted by *Conſtantine* the Great, to Pope *Silveſter*; from whence it paſs'd to the other Patriarchs and Archbiſhops.

The Pope pretends to the ſole Right of Conferring the *Pallium*; tho' ſome Patriarchs have granted it to their Suffragans, having firſt receiv'd it themſelves from the *Roman* See.

Antiently the Pope uſed to ſend the *Pallium*, to certain of his Dioceſan Biſhops, on whom he laid a good Part of his Authority, and who were a Kind of a Collaterals to him, as the *Patricii* were to the Emperors.

The firſt, who receiv'd it in *France*, was *Vigilius*, Archbiſhop of *Arles*, in order, as *Paſquier* obſerves, to give him the Precedence over the other Biſhops.

Antiently they went to *Rome* to ſeek it in Perſon; afterwards, it was ſent by the Pope's Legates. At laſt the Cuſtom was introduced of ſending Perſons expreſs to demand it, with this Form, *Inſtanter*, *Inſtantius*, *Inſtantiſſime*.

A Metropolitan, till he have received the *Pallium*, cannot conſecrate Biſhops, or Churches, may not be call'd Archbiſhop, &c. Upon a Tranſlation he muſt have the *Pallium* a-freſh; and till then cannot hold a Synod, nor perform any of his Archiepiſcopal Functions.

The *Pallium* was antiently interr'd with the Perſon.

The Uſe of the *Pallium* is reſtrain'd to certain Seaſons and Occaſions; none but the Pope having the Right of wearing it always and in all Places. The Pope ſometimes ſends it to Biſhops on his own Accord; and has ſometimes given the Right hereof to particular Churches. Among the *Greeks* all the Biſhops wear the *Pallium*.

In ancient Titles, &c. we find mention made of another *Pallium*, which was a long Garment ſpread over with Croſſes. *Tertullian* ſays, it was a diſtinguiſhing Garment of the Chriſtians; that of the Heathens being called *Toga*.

PALM, *Palma*, *Span*, an ancient *Roman* long Meaſure, taken from the Extent of the Hand. See MEASURE.

The antient *Roman Palma* was of two Kinds: The *Great Palm*, taken from the Length of the Hand, contained 12 Fingers, Digits, or Finger's-Breadths; equal, according to *Maggi*, to ſeven *Engliſh* Inches, and eight Tenths. See DIGIT.

The *Small Palm*, taken from the Breadth of the Hand, contained 4 Digits or Fingers, equal to two *Engliſh* Inches, and two Thirds.

Yet *Daviler* makes the ancient *Roman Palma* to be equal to 9 *French* Inches, equivalent to eight *Engliſh* Inches $\frac{5}{17}$.

The *Greek Palm* or *Spitha* was of two Kinds. The *Small* contained four Fingers, equal to 2 Inches $\frac{2}{3}$. The *Great* contained 5 Fingers. The double *Greek Palm*, call'd *Dichas*, contained 8 Fingers.

The modern *Palm* is different in different Places where it obtains.

At *Rome* it contains 7 Inches $\frac{5}{10}$: At *Naples*, according to *Riccioli*, 8 Inches: At *Genoa*, according to M. *Petit*, 8 Inches $\frac{8}{10}$: At *Morocco* and *Fez*, 7 Inches $\frac{2}{10}$: In *Languedoc*, and ſome other Parts of *France*, the *Palm* is 8 Inches $\frac{1}{7}$.

At *Leghorn* there are two Kinds of *Palms*, the one for Woollens, the other for Silks. The firſt one Third ſhorter than the latter.

PALMA, in Anatomy, the Inſide of the Hand. See HAND.

PALMS, among Botaniſts, white Buds, ſhooting out of Willows, or Sallows, before the Leaf; of the Expanſions whereof, the Leaves themſelves are form'd. See BUD and GERMINATION.

PALM-SUNDAY, the Sunday next before *Eaſter*-Sunday; or the laſt Sunday in *Lent*. See LENT.

It has been thus called from the primitive Days, on Account of a pious Ceremony then in uſe, of bearing *Palms* in Memory of the Triumphant Entry of *Jeſus Chriſt* into *Jeruſalem*, eight Days before the Feaſt of the Paſſover, deſcribed by St. *Matthew* Chap. XXI, St. *Mark* Chap. XI. and St. *Luke*, Chap. XIX.

The Ancients had alſo other Names for this Day. For 1. they called it *Dominica Competentium*, i. e. *Sunday of the Competents*; becauſe on that Day the Catechumens came to ask the Biſhop Leave to be admitted to Baptiſm, which was conferr'd the Saturday following. See BAPTISM and CATECHUMEN.

They had alſo, then, given 'em the *Symbol* or *Credo* to get off by Heart, to be repeated to the Biſhop in the Ceremony of Baptiſm. See SYMBOL.

2. They called it *Capitilivium*, the *Sunday of waſhing the Head*; by reaſon thoſe, who were to be baptized the following Sunday, were prepared by waſhing their Head this Sunday.

Some Time afterwards they called it *Indulgence Sunday*; by reaſon the Emperors and Patriarchs uſed to diſtribute Gifts on that Day. See INDULGENCE.

PALMARIS, in Anatomy, a Muſcle ſerving to contract the *Palm* of the Hand, in graſping.

It ariſes from the internal Protuberance of the *Humerus*, and by a long and ſlender Tendon, paſſes above the annular Ligament to the Palm of the Hand; where it expands itſelf into a large Aponeuroſis, which cleaves cloſe to the Skin above, and to the Sides of the *Metacarpus* below, and to the firſt Phalanx of the Fingers; by which means it makes four Caſes for the Tendons of the Fingers to paſs thro'.

This Muſcle is ſometimes wanting, but the Aponeuroſis is always there.

PALMARIS *brevis* or *Quadratus*, a Muſcle that lies under the Aponeuroſis of the firſt. It ariſes from the Bone of the *Metacarpus* that ſuſtains the little Finger, and from that Bone of the *Carpus* which lies above the reſt. It goes tranſverſly, and is inſerted into the eighth Bone of the *Carpus*.

It ſerves to draw the Palm of the Hand into a concave Figure.

PALMER, in our antient Writers, is uſed for a *Pilgrim*; and ſometimes for a *Croiſe*, on Account of a Staff made of the *Palm*-Tree which they ever afterwards bore as a Badge of their Devotion. See PILGRIM, CROISE, CROISADE, &c.

PALMISTRY, a Kind of Divination, perform'd by inſpecting the *Palm* of the Hand; call'd alſo *Chiromancy*. See CHIROMANCY.

PALMULARII, more properly call'd PARMULARII, in Antiquity, a Sort of Gladiators, who fought, arm'd with a Sort of a little Buckler, call'd *Parma*. See GLADIATOR and PARMA.

PALPABLE, ſomething that may be perceiv'd by the Senſes, eſpecially the Senſe of Feeling.

Hence Impalpable-Powder. See POWDER.

PALPEBRÆ, in Anatomy, the *Eye-Lids*; or thoſe moveable Covers which ſerve to ſcreen, and defend the Eyes. See EYE.

They conſiſt of a thin muſcular Membrane, covered without-ſide with a ſtrong, yet flexible Skin; and lined within-ſide with a Production, as ſome think, of the *Pericranium*. Their Edges are fortify'd with a ſoft Cartilage, by Means whereof, they are enabled to cloſe the better.

Out of theſe Cartilages grow a Paliſſade of ſtiff Hairs call'd *Cilia*; of great Uſe to warn the Eye of the Approach of Danger, either in ſleeping or waking; to keep off Motes, Flies, &c. in the Air, and break the too fierce Impreſſion of the Rays of Light. See CILIA.

Theſe Hairs, it is obſerv'd, only grow to a certain convenient Length, and never need cutting, as moſt others do; add to this, that their Points ſtand out of the way; thoſe of the upper Eye-lid being bent upwards, as thoſe of the lower downwards; ſo nice was Nature, in ſuch ſmall Matters.

At the Commiſſure, or Joining of the upper and under Eye-lids are formed two Angles call'd *Canthi*. See CANTHUS.

In the Inner of theſe is a Gland call'd *Glandula Lachrymalis*, from which proceed two or three Ducts, which, opening on the inner Surface of the Eye-lid, ſerve to moiſten the Ball of the Eye, and keep its Membranes from growing harſh and dry. See GLANDULA LACHRYMALIS.

Near the other Angle, is a Gland call'd *Innominata*; which helping by ſeveral Branches to irrigate the Eye, the Over-plus is carried to the greater Angle and tranſmitted to the Noſe thro' the *Puncta Lachrymalia*. See LACHRYMALIA PUNCTA.

By theſe Glands it is, that the Humour, call'd Tears, is ſecern'd. See TEARS.

The Eye-lids are both moveable, eſpecially the upper, which has two Muſcles to raiſe and depreſs it, call'd *Attollens*, and *Deprimens* or *Orbicularis*. See ATTOLLENS, DEPRIMENS, &c.

In Quadrupeds the lower *Palpebra* is moveable, and the ſmaller; in Birds, on the contrary, the lower is immoveable, and the greater. Animals that have hard Eyes, as Lobſters, and the Generality of Fiſhes have no *Palpebræ*; as being ſufficiently ſecured without.

In the Generality of Brutes is a Kind of third Eye-lid, which is drawn, like a Curtain, to wipe off the Humidity which might incommode the Eyes; it is called the *Nictitating Membrane*. See NICTITANS.

The Monkey is almoſt the only one that wants it; as being furniſh'd, like Man, with Hands to wipe the Eye on Occaſion.

PALPITATION, in Medicine, a preternatural Beating, or Pulſation of the Heart. See PULSE, &c.

The *Palpitation* of the Heart, is an Irregularity in the Motions of that *Viſcus*, whereby it is driven with Violence towards the Ribs, in its Contraction, attended with a great Feebleneſs of Pulſe. See HEART.

There are ſeveral Degrees of *Palpitation*: Sometimes 'tis great, ſometimes moderate, ſometimes ſmall; 'tis ſometimes ſo impetuous, as to be heard and ſeen.

The *Trepidation* or Trembling of the Heart differs from the *Palpitation*. In the former the Pulſations are faint, ſlow, and faltering; in the latter the Shakes are immoderate, violent, and convulſive. See TREPIDATION.

The Cauſe of the *Palpitation*, according to *Boerhaave*, is uſually an inordinate and violent *Impetus* of the vital Spirits into the *Villi* of the Heart; as in violent Paſſions, ſudden Fear, hyſteric Affections, violent and ſudden Motions. Sometimes it is owing to an Irritation of the Fibres of the Heart, occaſion'd by ſome ſharp *Stimulus*; as an Inflammation of the Heart or *Pericardium*, or ſome other Diſorder thereof from a Stone, Worms, Hairs, an *Aneuriſma*, &c.

Sometimes it ariſes from a thick, copious, polypous Blood: and ſometimes from the Arteries, being become cartilaginous or bony; or their Extremities obſtructed therewith.

In the *Diction. de Trevoux*, an Author, himſelf afflicted with this Diſeaſe, makes a particular Diſquiſition into its Nature, and Cauſe.

Anatomy, he obſerves, ſhews us a great Number of occaſional Cauſes of this Diſeaſe: But Phyſicians are ſtill at a Loſs to determine the efficient Cauſe.

The Moderns, with better Reaſon than the Antients, ſeek for it in the Blood of the Pulmonary Artery, which is ſuppoſed to rebound impetuouſly towards the right Ventricle of the Heart; by being prevented from purſuing its Courſe towards the other Veſſels of the Lungs, ſtopp'd by ſome Obſtruction, or compreſſed from various Cauſes.

In opening the Carcaſſes of People dead of this Diſeaſe, or ſubject to it while living, Worms or *Polypus*'s have been found in the Ventricles of the Heart, and Dropſies or Abſceſſes in the *Pericardium*.

In ſome the Heart is extraordinarily big, and the Pulmonary Artery dilated to double, or quadruple its ordinary Capacity, with Obſtructions of the Pulmonary Vein, conſiſting of cartilaginous Matters which cram its Cavity ſo cloſe, that as *Blanchard* tells us, in his Anatomy, 'tis ſometimes difficult even to get a Pin in.

From theſe Obſervations, ſome have concluded, that the Capillary, &c. Veſſels of the Lungs, oppoſing an impaſſable Dike to the Courſe of the thickeſt Part of the Blood, driven thither by the Contraction of the Heart, ſo as only a ſmall Quantity can find a Paſſage through them; the firſt muſt make an Effort againſt their Sides, and oblige them to give way and ſtretch them out, in Proportion to the Quantity of Blood impelled againſt them by the Contraction of the Heart.

But becauſe the Pulmonary Artery cannot ſtretch wide enough to receive all the Blood of the right Ventricle driven thither at a Contraction; and ſince the Blood, by reaſon of Obſtructions, cannot continue its progreſſive Motion, in Proportion to the Velocity wherewith it is impelled, by the Contraction of the Heart; the Heart at each Contraction fails to expreſs into the Pulmonary Artery, all the Blood it contain'd in its right Ventricle.

Thus that Part of the Blood which remains, receiving the whole Shock impreſſed by the Contraction, returns it again to the Heart by Reflection, ſtriking impetuouſly againſt its Sides, and making it bound and ſhoot towards the Ribs.

The ſame Conſequences will ariſe from Obſtructions of the *Aorta*, preventing the entire Evacuation of the left Ventricle; and generally, from all Obſtructions or Compreſſions of the Veſſels, as *Polypus*'s, Abſceſſes, and Dropſies in the Parts near the Heart. As to Worms, their biting, and gnawing of the fibrous Parts of the Heart, muſt occaſion violent Refluxes of Spirits towards the Brain, follow'd with a copious Effuſion of other Spirits into the Nerves of the Lungs, by the Conſent of Parts. And by ſuch Means violent and convulſive Contractions will be occaſion'd throughout the whole Texture of the Lungs, which oppoſing the free Paſſage of the Blood may occaſion a *Palpitation of the Heart*.

The ſame Diſeaſe may ariſe from a Compreſſion of the Lungs, occaſioned by the extraordinary Rarefaction of vicious and fermentative Juices, ſojourning in the Stomach and Inteſtines; which dilate thoſe Parts to that Degree, that the Diaphragm and Lungs, being extremely ſtraightened, the Blood cannot circulate without Abundance of Difficulty; a *Palpitation* therefore muſt enſue; which will laſt as long as that Rarefaction in the firſt Paſſages.

Such, according to modern Phyſicians, are the immediate Cauſes of the *Palpitation* of the Heart: The remote or occaſional Cauſes are whatever may occaſion ſuch Obſtruction of the Pulmonary Artery, &c.

In the ſame Work, another Phyſician lays down Winds or *Flatus*'s, as a Cauſe of the *Palpitation*; he adds, that the Ancients, to a Man, look'd on that as the moſt ordinary Occaſion thereof: In Effect, ſays he, from this Source may be deduced a Multitude of Cauſes of ſympathetic *Palpitation*, by Means of the Ventricle, the Diaphragm, Mediaſtin, &c.

Others will have the ſole Cauſe of *Palpitation* to be a viſcid Blood; which, by its extraordinary Rarefaction, dilating the Pulmonary Artery, and, by that means, opening the Cavity of its Capillary Veſſels towards their Extremes; or, by this Dilatation, compreſſing the other little Veſſels of the Lungs, prevents the Blood from continuing its circulating Motion with Freedom: and, by that means, opening the Cavity of its Capillary Veſſels towards their Extremes; or, by this Dilatation, compreſſing the other little Veſſels of the Lungs, prevents the Blood from continuing its circulating Motion with Freedom; and thus occaſions a *Palpitation of the Heart*.

All theſe Authors hold the *Palpitation* a dangerous Diſeaſe, and *Galen* obſerves, that thoſe troubled with it, when young, never live to grow old.

According to M. *Piſon*, a Doctor of the Faculty of *Paris*, the *Palpitation* of the Heart may ariſe, either from a too abundant Seroſity, ſwelling the proper Membrance of the Heart; as *Galen* found to be the Caſe in opening a Monkey; or from too great a Quantity of Water contained in the *Pericardium*; by which means, the Heart being ſtraighten'd, and diſabled from moving with its uſual Freedom, is obliged to make ſeveral Jerks or half Beats, inſtead of the regular Motions it had before; or, again, from a Seroſity thrown into the Ventricles of the Heart, either from the grand Veſſels which furniſh the Blood, or from the Lungs, or from the Brain.

Of theſe three Cauſes, the moſt ordinary ſeems to be the two great Extenſion of the *Pericardium*, by Water, as it is found to be in the Bodies of moſt of thoſe open'd after this Diſeaſe. See PERICARDIUM.

The different Cauſes have their different Symptoms. The boiling Seroſity, thrown out of the Blood-Veſſels into the Heart, ſhews itſelf by ſudden Beatings of the Temples, Whizzings in the Ear, dim Sight, wandering Pains in various Parts of the Body.

In that produced by the Abundance of Water in the *Pericardium*, or from the Humour ſwelling the proper Membrane of the Heart; the Heart ſeems as if ſuffocated in Water; the Pulſe weak, the *Palpitation* continual, or nearly ſo, together with a Feveriſhneſs, and a Difficulty of breathing. To which may be added, that the Diſeaſe comes by little and little.

The *Palpitation* ariſing from the Seroſity is cured by bleeding, the other by purging.

PALSGRAVE, a Term uſed among the *Germans*, of the ſame Import with *Palatine*. See PALATINE.

It is compounded of the Latin, *Palatium*, and the Dutch, *Grave*, Governor, *i. e.* Governor or Superintendant of a Prince's Palace. See GRAVE.

PALSY, *Paralyſis*, in Medicine, a Diſeaſe, wherein the Body or ſome of its Parts, loſe their Motion, and ſometimes their Senſation.

The Cauſes of the *Palſy* are an impeded Influx of nervous Spirits into the *Villi* of the Muſcles; or of the arterious Blood into their Veſſels, which may happen from ſome Fault, either in the Brain, the Nerves, Muſcles or their Veſſels.

The *Palſy* is ſaid to be *perfect* or *compleat*, when there is a Privation of Motion and Senſation at the ſame Time.

Imperfect, when one of the two is deſtroy'd, the other remaining,

The *Palſy* is either Univerſal, Lateral, or Particular.

The firſt, call'd *Paraplegia* or *Paraplexia*, is a general Immobility of all the Muſcles that receive Nerves from the *Cerebrum* or *Cerebellum*, except thoſe of the Head: Its Cauſe is uſually ſuppoſed to reſide in the Ventricles of the Brain, or in the Root of the ſpinal Marrow.

Etmuller makes this a different Diſeaſe from the *Paralyſis*, which he ſuppoſes to conſiſt in a Relaxation of the Ligaments and Membranes ſerving for Motion; but the *Paraplegia* in a mere Obſtruction of the Nerves.

The *Paraplegia* is ſeldom a primary Diſeaſe, uſually a ſecondary one, attending or following an Apoplexy, *Scorbutus*, *Carus*, *Arthritis*. See PARAPLEGIA.

The ſecond, call'd *Hemiplegia* is the ſame Diſeaſe with the *Paraplegia*; only that it affects but one Side of the Body: Its Cauſe is the ſame, only reſtrained to one Side of the Brain or ſpinal Marrow.

The third, call'd *particular Paralyſis* or *Palſy*, is where ſome particular Part or Member alone is affected; *E. gr.* where the Motion of the Arm or Leg is deſtroy'd.

Dr. *Quincy* obſerves, that a *Paralyſis* where Motion is deſtroy'd, Senſation remaining, may be produced, firſt, by too much Humidity, ſtretching the muſcular Fibres in Length. Secondly, from cold Things, which thicken the Juices. Thirdly, from external Compreſſion. Fourthly, from hot Things, which ſtraighten the ſupple Membranes and Veſſels. All theſe Cauſes affect either the Blood, or Muſcles; the former, by thickening that Tumour ſo that it cannot ſuddenly rarify; and the latter, by relaxing the Muſcles into too great a Length, by too much Moiſture, or contracting them into too narrow Dimenſions by too much Heat. But the Senſation may yet be preſerv'd, becauſe, notwithſtanding all theſe Hindrances, the animal Spirits and Nerves may not be at all affected.

The Cauſes of the *Paralyſis* where Senſation is deſtroy'd, Motion remaining, he obſerves, may be all thoſe Things which ſo far thicken the animal Spirits in the Nerves, ariſing below the *Cerebellum*, that tho' indeed they may flow into the Muſcles thro' the Nerves, and there, by the Occurſion of ſome Liquor ſecreted from the Blood, rarify; yet they cannot alone flow in ſuch Quantities into the Nerves, as from a very ſlight Cauſe to be made to undulate; whence Senſation will ceaſe without loſing the Motion of the Part.

The Cauſes of this Kind are alſo whatſoever render thoſe Nerves more lax and moiſt, and ſo leſs apt for lively Vibrations; the animal Spirits flowing in the mean time into the Muſcles, from whence Motion is perform'd without Senſation.

The Cure of the *Palſy*, according to *Waldſchmid*, does not differ much from that of the Venereal Diſeaſe. Internally, Mercurials, Sudorifics, and Decoctions of the Woods are good: Externally, Unctions, particularly of ſpirituous and penetrating Things, not on the Part affected, but on the *Spina Dorſi*.

PALUDAMENTUM, in Antiquity, a Garment wore by the *Romans* in Time of War; being the Coat of Arms of their principal Men, eſpecially the General; who, for that Reaſon, were diſtinguiſh'd by the Name *Paludati*.

The Soldiers, having only ſhort Coats, were therefore named *Sagati*. See SAGA.

This Garment was open on the Sides, with ſhort Sleeves, like Angels Wings, and came down no lower than the Navel.

It was either white or red; and *Valerius Maximus* remarks it was an ill Omen to *Craſſus*, that they gave him a black *Paludamentum*: *Pullum ei traditum eſt* Paludamentum, *cum in prælium euntibus album aut purpureum dari ſoleret*.

Cornutus ſays they wore the *Toga* in Peace, and the *Paludamentum* in War. Hence *Togam Paludamento mutavit*.

PALY; when an Eſcutcheon is divided into ſix, eight, or ten even Diviſions *Pale-wiſe*, *i. e.* by perpendicular Lines drawn from the Top to the Bottom: It is blazoned *Paly*, of ſix, eight, or ten &c. Pieces. See PALE.

If the Number be odd, then the Field is firſt named, and the Number of the *Pales* ſpecified.

The like is to be underſtood alſo of *Barry* and *Bendy*. See BARRY, &c.

PALY-BENDY is, when a Coat is divided, both *Pale* and *Bend-wiſe*; as here: The Field *Paly-Bendy*, *Topaz* and *Diamond*.

PAMPINIFORME *Corpus*, in Anatomy, a Sort of *Plexus*, or Knot of Blood-Veſſels, form'd by the Spermatic Veins; which, in their Progreſs through the *Teſtes*, conſtitute a Body, call'd *Corpus Varicoſum Pampiniforme*, or *Pyramidale*. See PYRAMIDALE CORPUS. See alſo TESTICLE, SPERMATIC VEIN, &c.

PANACEA, an univerſal Medicine; or a Remedy for all Diſeaſes. See ELIXIR, &c.

The Word is form'd from the *Greek* πᾶν all, ἀκέομαι, I cure.

The accurate *Boerhaave* overturns the Notion of *Panacea*'s; and ſhews, from the different Cauſes, Natures, Effects, Seats, &c. of Diſeaſes, that ſeveral may be cured by one Medicine; but, all, by none.

He obſerves, that the moſt univerſal Remedies known are *Water*, *Fire*, *Mercury* and *Opium*; and adds, that by theſe alone, cautiouſly diſguiſed, ſome have acquir'd the Reputation of univerſal Phyſicians. See MERCURY, OPIUM, &c.

PANACES, or PANACEOUS, a Name applied to ſeveral Plants, by reaſon of the extraordinary Virtues aſcribed to them.

There are three of theſe *Panaces*; the *Heraclean*, *Aſclepean*, and *Chironian*; ſo called from their Inventors, *Hercules*, *Aſclepias*, and *Chiron*.

The firſt is the *Sphondilium majus* of *J. Bauhin*; from the Root and Stem of this is drawn, by Inciſion, the Gum *Opoponax*. See OPOPONAX.

The

The *Aſclepian*, according to ſome Botaniſts, is a Kind of *Ferula*, which *Gaſ. Bauhin.* calls *Libanotis Ferulæ folio & ſemine.*

The *Chironian*, according to ſome is a Kind of *Helianthemum.*

PANADA, or *Panatella*, a Diet, conſiſting of Bread boil'd in Water, to the Conſiſtence of a Pulp; given to ſick Perſons whoſe Digeſtion is weak, or to whom ſtronger Foods would be improper. See DIET.

'Tis ſometimes made thin; to ſerve as a Drink; and ſometimes likewiſe ſweetened, *&c.* to render it more palatable.

The Word is form'd from the principal Ingredient *Panis* Bread.

PANAGE or PANNAGE in our ancient Cuſtoms. See PANNAGE.

PANARIS or PAYORYCHIA, in Medicine, a painful Tumour or Inflammation, ariſing on the Extremities of the Fingers or Toes, popularly called, among us, *Whitloe.*

It is occaſion'd by a ſharp or ſaline Humour, lodg'd between the Bone and *Perioſteum*, and the Nerves and Tendons.

An infallible Remedy for it, is to open it either with the Point of a Lancet, or with ſome Unguent, and then to dip the Finger in a *Lixivium* of Vine Aſhes.

The *Panaris* is exceedingly reſtleſs. Beſide the mild Kind call'd *Whitloe*, there is alſo a malignant Kind, called a *Felon.* It ſometimes tends to an Impoſthume, but more uſually Gangrenes.

The Word is form'd from the Latin *Panaricium*, which we find in *Apuleius*; and that from the *Greek* παρωνυχία, *i.e.* an Abſceſs at the Root of the Nails.

For the *Panaris*, after bleeding, and the univerſal Remedies, Dr. *Burnet* orders the Patient to hold his Finger a good while in a rotten Egg, or a putrify'd Mouſe. *Helmont* adds, he has ſeen a Finger as big as an Arm, by means of a *Panaris*, cured by rubbing it with Blood, then wrapping it up in a Mole-Skin. *Riverius* adds, that to hold the Finger affected in a Cats Ear, cures a *Panaris* in two Hours. *Obſervat.* 63. *Cent.* 4.

PANATHENÆA, in Antiquity, a Feaſt celebrated at *Athens*, in Honour of *Minerva*, whom the *Greeks* call'd *Athenæ.*

Harpocration and *Suidas* refer their Inſtitution to *Erichtonius* IV. King of *Athens* who lived before *Theſeus. Theodoret*, alone, ſays the Feaſt was eſtabliſh'd by *Orpheus.*

Be this as it will, till *Theſeus*, this was a particular Feaſt of the City of *Athens*, and was called ſimply *Athenæa:* But that Prince uniting all the People of *Attica* into one Republic, they all aſſiſted at the Feaſt; whence the Name *Panathenæa*, i. e. Feaſt of all *Attica.*

In Effect all *Attica* was preſent; and each People ſent a Bullock for the Sacrifices, and for the Entertainment of the vaſt Multitude of People aſſembled.

If they eat a great deal, it appears they did not drink leſs; witneſs the Veſſels they drunk out of, which were called *Panathenaica*, each of which held two Congius's and a half. See CONGIUS.

There were two Kinds of *Panathenæa*; the *Great*, celebrated every five Years; and the *Little*, every Year, or every three Years; if we may credit the Author of the Argument of *Demoſthenes*'s Oration againſt *Midias.*

In the *Panathenæa* was held one of the Proceſſions which the Antients call'd *Pompæ*, compoſed of the briſkeſt old Men, each whereof bore, in his Hand, an Olive-Branch; whence they were called *Thallophori.*

This was to do honour to *Minerva*, in Quality of Inventreſs of the Olive-Tree; on which Account they had likewiſe Combats, wherein the Victors were rewarded with Veſſels of Oil, and crown'd with Olive-Crowns. It was a Crime in any of the Spectators to be clad in black.

The Ceremonies were the ſame in the great, and the little *Panathenæa*; excepting a Banner wherein the Actions of the Goddeſs were repreſented in Embroidery perform'd by Maids, with the Names of thoſe who had diſtinguiſh'd themſelves in the Service of the Republic; which was only bore at the Greater.

PANCARPUS, in Antiquity, a Sort of Spectacle, or Show which the *Roman* Emperors frequently exhibited to the People. See SPECTACLE.

The *Pancarpus* was a Kind of Chace, or Hunt. For the Performance hereof, a Number of Beaſts, as Hares, Deer, Bullocks, *&c.* were ſhut up in the *Circus* or Amphitheatre; into which Trees were frequently tranſplanted, ſo as to form a Kind of Foreſt, wherein the Beaſts were let looſe; whence the *Pancarpus* was alſo called *Sylva.*

The Beaſts were thus abandon'd to the People, *i.e.* to all who were diſpoſed to ſhare in the Pleaſure of the Chace; who purſued, ſhot, killed and cut in Pieces all they could lay hold of.

Heliogabalus, the *Gordian*'s and *Probus*, gave this Diverſion very frequently.

Caſaubon, *Cujas*, *Pithou*, &c. make the *Pancarpus* and *Sylva* the ſame thing; *Salmaſius* will have them different. The *Sylva*, according to him, was a Diverſion, as that above deſcribed; but the *Pancarpus* a Combat, wherein robuſt People, hired for that Purpoſe, fought with wild Beaſts; which Opinion he confirms from *Caſſian*, *Juſtinian*, *Claudian*, *Firmicus*, *Manilius* and *Caſſiodorus.*

The Word is form'd from the *Greek* πᾶς all and καρπὸς Fruit.

Hence the Name was alſo given by the *Athenians* to a Sacrifice, wherein all Kinds of *Fruits* were offer'd.

PANCHREAS, PANCHREATIC See PANCREAS. PANCREATIC JUICE.

PANCHREST, *Panchreſtos*, in Medicine, a *Panacea*, or Remedy for all Diſtempers.

The Word is form'd of the *Greek* πᾶν all, χρηστὸς *Utilis*, uſeful.

PANCHYMAGOGUE, in Pharmacy, an Extract of Aloes, Rhubarb, Senna, Scammony, Jalap, Agaric, Coloquintida and Black Hellebore. See EXTRACT.

Its Name ariſes hence, that being a Compoſition of all the Kinds of Purgatives, it has the Virtue of purging all the Humours of the Body at once. See PURGATIVE.

The Word is form'd from the *Greek* πᾶν all, χυμὸς *Succus*, Juice; and ἀγᾶν *ducere*, to draw off.

PANCRATIUM, among the Antients, a Kind of intermix'd Exerciſe, conſiſting of the *Lucta* or Wreſtling, and Boxing or *Pugilata.*

The *Pancratium* was the third *Gymnaſtic* Exerciſe, and was not introduced till long after the former. See GYMNASTIC.

The People, who engaged in theſe Exerciſes, were called *Pancratiaſtes*; which Name was alſo given to ſuch as did not confine themſelves to one Exerciſe, but ſucceeded in ſeveral different ones.

The Word is compounded of πᾶν all, and κράτος Force.

PANCREAS, in Anatomy, popularly call'd the *Sweetbread*, a huge conglomerate Gland; or a Body compoſed of an infinite Number of little Glands, tied up in the ſame common Membrane; ſituate at the Bottom and Hind-part of the Stomach, and reaching from the *Duodenum* to the Spleen. See GLAND, STOMACH, *&c.*

The Glands it conſiſts of are bound together both by the Veſſels, and by a Membrane proper to each of them; and all together are looſely cloath'd with a thin Membrane, from the *Peritonæum.*

Its Colour is Carnation; its Form like that of a Dog's Tongue, 8 or 9 Fingers long, 2½ broad, and one thick; its Weight 4 or 5 Ounces.

Its Arteries come from the *Cæliac*; its Veins go to the *Porta*; its Nerves come from the *Hepatic plexus.*

Each little Gland has an excretory Duct, which uniting form one common excretory Duct, call'd *Ductus Pancreaticus Virtſungi*, from *Wirtſungus*, Profeſſor of Anatomy at *Padua*, the Diſcoverer thereof.

This Duct, running along the Middle of the *Pancreas*, opens into the Cavity of the *Duodenum*, generally by two Mouths, the one four or five Fingers below the *Pylorus*, ſometimes at the ſame Orifice with the *Ductus Cholidicus*; the other lower. 'Tis of the Bigneſs of a Raven's Quill, near the Inteſtines, but leſs, further off. *De Graaf* obſerves, that it is frequently double.

The *Pancreas* ſerves to ſeparate a peculiar Humour from the Blood, call'd the *Pancreatic Juice.* See PANCHREATIC JUICE.

The Word is form'd of the *Greek* πᾶν all, and κρέας *Caro*, Fleſh.

PANCREAS *Aſellii*, in Comparative Anatomy, is a large Gland in the Middle of the Meſentery of ſome Brutes, eſpecially Dogs; to which, moſt of the Lacteals reſort; and whence the Chyle is conveyed, by large Veſſels, that have their Riſe immediately from the Inteſtines, and call'd *Lactea ſecundi Generis.* See MESENTERY.

It has its Name from the Author who firſt took notice of it *Aſellius.* See LACTEAL.

M. *Perrault* obſerves, that the Fiſh, call'd *Place*, has 440 *Pancreas*'s; tho' it has but five Ducts opening into the Inteſtines, each of which correſpond to 80 *Panchreas*'s and 2 of them to 100 a-piece.

PANCREATIC *Juice*, an inſipid, limpid Juice, or Humour ſeparated from the Blood, and prepared in the *Pancreas.* See PANCREAS.

This Juice is not acid, as moſt Authors have ſuppoſed; nor alcaline, as ſome others; but, a little ſaline, and much reſembling the *Saliva* in its Origin, Veſſels, and Properties.

'Tis carried by the *Pancreatic* Duct into the *Duodenum*, where it ſerves to dilute the Chyle, to render it more fluid and fit to enter the Mouths of the Lacteals; and perhaps to temper and dilute the *Bile*, to change its Viſcidity, Bitterneſs, Colour, *&c.* and make it mix with the Chyle, in order to reduce the ſeveral Taſtes, Odours, and Properties of the ſeveral Foods into one homogeneous one. See BILE, CHYLE, and CHYLIFICATION.

Theo. Janſſen will have the *Pancreatic Juice* to have been known to *Hippocrates* and *Galen.*

De Graef, a *Dutch* Phyſician, has found Means of collecting a Quantity of it for Experiments; and has publiſh'd a Treatiſe expreſs *de Succo Pancreatico.*

Brunner relates, that the *Pancreatic* Duct, in ſeveral Dogs having been tied, and cut; they ſtill continued to eat, and drink, and perform all the other Functions of Life as uſual. One of them ſeemed only to have the better Stomach for it.

PANDECTS, PANDECTA, in Juriſ-prudence, the Digeſt, or Collection made by *Juſtinian*'s Order, of 534 Deciſions or Anſwers of the antient Lawyers, on ſo many Queſtions occurring in Law; to which that Emperor gave the Force and Authority of Laws by the Epiſtle prefixed to them. See DIGEST.

The Word is form'd from the *Greek* πανδέκται, *i. e.* Compilation, or a Book containing all Things. Others, as *Bartoli*, will have it form'd from πᾶν all; as if theſe Books contained the whole Doctrine of the Law.

The *Pandects* conſiſt of fifty Books, and make the firſt Part of the Body of the Civil Law. See CIVIL *Law*.

They were deſign'd by two ππ; but the Copiſts taking thoſe ππ for *ff*, the Cuſtom aroſe of quoting them by *ff*.

Papias extends the Signification of *Pandects*, to the Old and New Teſtament.

The *Florentine Pandects* are thoſe printed from a famous ancient Manuſcript at *Florence*.

PANDECTA *Medicinæ*. There are alſo *Pandects of Medicine*, a Kind of Dictionary of Things relating to Medicine, compiled by *Matt. Sylvaticus* of *Mantua*, who lived about the Year 1297.

Leunclavius has alſo publiſh'd *Pandects* of *Turkey*; and Biſhop *Beveridge Pandects of the Canons*.

PANDICULATION, that Reſtleſſneſs, Stretching, and Uneaſineſs, which uſually accompany the cold Fit of an Intermitting Fever. See INTERMITTING FEVER.

It is ſuppoſed to ariſe from a convulſive Dilatation of the Muſcles, whereby Nature endeavours to throw off ſomething that diſturbs her.

PANDORON, a muſical Inſtrument, uſed among the Antients; reſembling the Lute. See LUTE.

It has the ſame Number of Strings; but they are of Braſs, and of Conſequence give a more agreeable Sound.

Its Frets are of Copper, like thoſe of the Ciſtron; its Back flat, like that of the Guitarre; and the Rims of its Table, as well as its Ribs, cut in Semi-circles.

Du Cange obſerves, that *Varro*, *Iſidore*, and others of the Antients, mention it as having only three Strings.

The Word, according to ſome, is form'd from the *Greek* πᾶν and δῶρον, *i. e.* all Gift, or all Sorts of Gifts. *Iſidore* derives the Name from its Inventor *Pandorus*; others from *Pan*, to whom they attribute its Invention, as well as that of the Flute.

PANEGYRIC, an Oration in Praiſe of ſome extraordinary Perſon, or Virtue. See ORATION.

The *Panegyric* is rank'd among the demonſtrative Kinds of Orations. See DEMONSTRATIVE.

It has its Name from πᾶν all, and ἀγείρω I aſſemble, becauſe it was anciently held in public, and ſolemn Aſſemblies of the *Greeks*, either at their Games, their Feaſts, Fairs, or religious Meetings.

To make them the more ſolemn, they uſed to begin with the Praiſes of the Deity, in whoſe Honour the Games, &c. were celebrated; then they deſcended to the Praiſe of the People or Country where they were celebrated; then to the Princes or Magiſtrates who preſided at them; and at length, to the Champions, eſpecially the Conquerors who had gain'd the Prize.

F. de Colonia lays down two Methods, or Series's obſerv'd in *Panegyricks*.

The *Artificial*, where, without any Regard to the Order of Time, every Thing is reduc'd to certain Heads. Thus, *Tully* refers the whole Praiſe of *Pompey* to his Skill in War, his Virtue, Authority, and Felicity.

The other *Natural*, wherein the Order and Time of Hiſtory are obſerv'd. This Series he divides into three Periods, the Space before the Perſon's Birth, that wherein he lived, and if he be dead, that which follow'd his Death. This Natural Series requires much leſs Art, Genius, &c. than the other.

The Places or Sources of *Panegyric* are chiefly the Family, Country, *Auguries* at his Birth, his Virtues, the Talents of his Body and Mind, Honours, Riches, Manner of his Death, and the Conſequences thereof.

PANEGYRIC, is alſo the Name of a Church-Book, in uſe among the *Greeks*; ſo call'd, as conſiſting of *Panegyrics* or Diſcourſes in Praiſe of *Jeſus Chriſt* and the Saints. See GREEK.

'Tis found in MS. in moſt Churches; but is not the ſame in all; each Church having its particular Saints; and the Compilers of this Kind of Books, uſually ſuiting their Collections to the Taſte of their own Devotion.

They are diſpoſed according to the Order of Months, and frequently conſiſt of 12 Volumes, anſwering to the 12 Months of the Year.

PANEL or PANNEL, in Law, is deriv'd by *Spelman*, from *Pagella* a Schedule, or Page; in which Senſe we ſay a *Panel* of Parchment, a Counter-*Pane* of an Indenture, &c.

But it is more commonly uſed for a Schedule or Roll, containing the Names of ſuch Jurors, as the Sheriff returns to paſs upon the Trial.

Hence the *Empanelling* of a Jury is the Entering of their Names, by the Sheriff, into a *Panel*, or little Schedule of Parchment. See JURY. *In Panello Aſſizæ*, &c,

Coke on Littleton will have *Panel* to be an *Engliſh* Word, ſignifying a little Part; as being a Diminutive of the Word *Pane*, Part. But *Spelman* takes this for an Over-ſight.

PANEL, in Joinery, &c. See PANNEL.

PANES, in the antient Theology. See SATYR.

PANIC, or *Panic-Fear*, a Term uſed for a needleſs, or ill-grounded Fright.

Polyenus fetches the Origin of the Phraſe from *Pan*, one of the Captains of *Bacchus*, who, with a few Men, put a numerous Enemy to rout, by a Noiſe which his Soldiers raiſed in a rocky Valley, favour'd with a great Number of Eccho's. This Stratagem making their Number appear much greater than it really was, the Enemy quitted a very commodious Encampment, and fled.

Hence all ill-grounded Fears have been call'd *Panicks* or *Panic Fears*; and 'twas this gave Occaſion to the Fable of the Nymph Eccho's being belov'd by that God.

Others derive the Origin of the Expreſſion hence, that in the Wars of the *Titans* againſt the Gods, *Pan* was the firſt who ſtruck Terror into the Hearts of the Giants. *Theon* on *Aratus* ſays, he did it by means of a Sea-Shell which ſerv'd him for a Trumpet, whereof he was the Inventor.

PANICULA, PANICLE, in Botany, called alſo *Juba* a ſoft woolly Beard, or String, whereon the Seeds of ſome Plants hang, pendulous, as in Reeds, Millet, &c.

Such are hence called *Paniculated Plants*. See PLANT.

PANNAGE, PANAGE, or PAWNAGE, are uſed in our Law-Books, &c. for the Maſt of Woods; as of Beech, Acorns, &c.

As alſo for the running and feeding of Swine or other Cattel in Foreſts, and the Monies taken by Agiſtors for the ſame.

Pannagium liberum, or free *Pannage*, was a Liberty of free running of Swine in certain Foreſts and Woods; which was a Privilege, granted to certain private Perſons, and ſeveral religious Houſes. *Linwood* defines *Pannagium Paſtus Pecorum in Nemoribus, & in Silvis, ut pote de Glandibus & aliis fructus arborum ſylveſtrium, quarum fructus aliter nec ſolent colligi.*

It is alſo mentioned 20 *Car.* II. *Quiſque villanus habens decem Porcos, dat unum Porcum de Panagio*; by which it appears, that one Hog in 10 was given to *Pannage*.

PANNEL, in Law. See PANEL.

PANNEL, or PANEL, in Joinery, &c. a Tympanum or ſquare Piece of thin Wood, ſometimes carv'd, fram'd, or groov'd in a larger Piece between two Montants or upright Pieces, and two Traverſes or Croſs-Pieces.

Hence *Panels* or Panes of Glaſs, are Compartiments or Pieces of Glaſs of various Forms, Square, Hexagonal, &c.

PANNEL, in Maſonry, one of the Faces of a hewn Stone. See STONE.

Pannel of a Saddle, two Cuſhions full of Hair or Flocks, placed on each Side the Saddle to prevent the Bow from hurting the Horſe. See SADDLE.

The Word is form'd from the *French*, *Panneau* of *Pan*, *flat-ſide*.

PANNICULUS, in Anatomy, a Term frequently uſed for a Membrane. See MEMBRANE.

Hence, *Panniculus adipoſus*, &c. is the ſame with *Membrana adipoſa*, &c. See ADIPOSA, &c.

The Word is *Latin*, form'd by Diminution, from *Pannus*, Cloth, *q. d.* a little Cloth or fine Web.

PANNICULUS *Carnoſus*, is a fleſhy Membrane, which the antient Anatomiſts ſuppoſed to be common to the whole Body; and to be the fourth Integument or Covering thereof, after the *Epidermis*, *Cutis*, and the *Adipoſus*. See SKIN.

This fleſhy *Pannicle*, according to them, is a thick Membrane, which covers the whole Body; and even becomes muſculous in ſome Parts: But the lateſt Anatomiſts deny any ſuch Membrane in the human Body; maintaining, that what the Antients call'd the fleſhy *Pannicle*, is only the fat or adipoſe one. Dr. *Drake* makes it a double Membrane, one Half of which forms the *Membrana adipoſa*, the other Half the *Membrana communis* of the Muſcles. The Uſe the Antients aſcrib'd to the fleſhy *Pannicle* was to wrinkle and contract the Skin; but the Truth is, where-ever the Skin wrinkles, there are particular Muſcles for the Purpoſe, call'd *Cutaneous Muſcles*. See CUTANEOUS.

Theſe Muſcles the Antients own'd; but ſaid their Office was confined to particular Motions; adding, that there are Places where no Fat is found between the *Cutis* and the fleſhy *Pannicle*; which is falſe.

Further, even in Animals which do move the Skin; this *Pannicle* is no more than a cutaneous Muſcle, as well as the *Dartos*.

Some of the modern Anatomiſts, however, admit the fleſhy *Pannicle*, and deny the adipoſe one; ſuppoſing the latter, in reality, only a Part of the former. See FAT and FLESH.

PANNIER, in Architecture. See CORBEL.

PANNUS,

PANNUS, in Medicine, &c. a Diſeaſe of the Eye, popularly call'd the *Web*; and by the *Arabs*, *Zebel*.

The *Pannus* is an Excreſcence ariſing on the *Adnata* or *Conjunctiva*; leſs hard and membranous than the *Unguis*; and repreſenting a Web, or Tiſſue of little Veins ſwell'd with Blood. See CONJUNCTIVA.

Its Cauſe is an Obſtruction of the Blood in the minute Veſſels of that Tunic. Its Cure is almoſt the ſame with that of the *Pterigium* or *Unguis*; between which, and the *Pannus*, there is a great Affinity. See PTERIGIUM.

The chief Difference is, that in the *Unguis*, the membranous Excreſcence only covers Part of the Eye, after the manner of a Nail; whereas in the *Pannus* it covers the whole.

PANTALOON or PANTALON, the Name of an antient Garment, frequent among our Fore-fathers, conſiſting of Breeches and Stockings all of a Piece.

The Word comes from the *Italians*, who firſt introduced this Habit, and who are called *Pantaloni* from St. *Pantaleon*, who was formerly their Patron.

PANTALOON, on the Theatre, is a Buffoon or Maſk who performs High and Groteſque Dances, and ſhews violent and extravagant Poſtures and Airs.

The Word is alſo uſed for the Habit or Dreſs theſe Buffoons uſually wear; which is made preciſely to the Form of their Body, and all of a-piece from Head to Foot. Hence thoſe who wear a Habit of this Kind, for Conveniency, under their other Cloaths are call'd *Pantaloons* of *Venice*.

PANTHEA, among the *Romans*, were ſingle Statues, compoſed of the Figures or Symbols of ſeveral different Divinities. See STATUE.

Father *Joubert*, who calls them *Pantheons*, and who has obſerved them on ſeveral Medals, ſays their Heads are moſt commonly adorn'd with Symbols belonging to ſeveral Gods.

An Inſtance hereof we have in a Medal of *Antoninus Pius*; which at the ſame time repreſents *Serapis*, by the Buſhel it bears; the *Sun*, by the Crown of Rays; *Jupiter Ammon*, by the Ram's Horns; *Pluto*, by the large Beard; and *Eſculapius*, by the Serpent twiſted in his Hand. See STATUE.

M. *Baudelot*, in a Diſſertation on the *Lares*, will have the *Pantheons* to have had their Riſe from the Superſtition of thoſe, who, taking ſeveral Gods for the Protectors of their Houſes, united them all in the ſame Statue, by adorning it with the ſeveral Symbols, proper to each of thoſe Deities. See LARES.

PANTHEON, in Architecture, is a Temple, or Church of a circular Form; dedicated to all the Gods, or all the Saints. See TEMPLE and CHURCH.

It is thus named from the *Greek* πᾶν all, and θεὸς God.

The *Pantheon* of antient *Rome*, is, of all others, the moſt celebrated, and that whence they all take their Name. It was built by *Agrippa*, Son-in-law of *Auguſtus*, in his third Conſulate, 25 Years before *Chriſt*. It was dedicated by him to *Jupiter Ultor*, *Jupiter* the Revenger; and had the Name *Pantheon*, by reaſon of the great Number of Statues of the Gods ranged in Niches all around; and becauſe built round, to repreſent Heaven, the Reſidence of all the Gods. It had but one Door, and one Window; receiving all its Light from the Top of its Dome.

The Pope, obtaining it of the Emperor *Phocas*, converted it into a Church, without any Alteration in the Building, and dedicated it to the Virgin and all the Martyrs. And it ſtill ſubſiſts at *Rome* under the Title of *Notre Dame della Rotonda*. See ROTONDA.

The *Pantheon of Niſmes*, was a Temple in that City, wherein were 12 Niches or Statues, ſuppoſed to have been deſtin'd for the 12 great Gods.

In the Eſcurial is a magnificent Chapel, call'd *Pantheon*, 35 Feet in Diameter, and 38 high, from the Pavement which is of Marble and Jaſper inlay'd. The whole Inſide of the Chapel is of black Marble, excepting the *Luthern* and ſome Ornaments of Jaſper and red Marble.

In this Chapel are depoſited the Bodies of the Kings and Queens: there are only Places made for 26; eight of which are already fill'd. See ESCURIAL.

PAPAL *Crown* is a deep Cap, or Mitre of Cloth of Gold, encompaſſed with three Coronets or Circles of Gold, adorn'd with Flowers; and the Whole enrich'd with precious Stones; having a Globe at top, finiſhed with a Croſs. See CROWN.

PAPILLA, in Anatomy, *Nipple* or *Teat*, a Prominence ariſing from the Middle of the Breaſt, or *Mamma*. See BREAST.

The Colour of the *Papillæ* is various; in different States, and Stages of Life, it is reddiſh, bluiſh, blackiſh. They are encompaſſed with a pale browniſh Circle, call'd the *Areola*.

The lacteal Tubes, coming from the ſeveral Parts of the Breaſts, terminate in the *Papillæ*, with ſeveral nervous, or ſpongious Emiſſaries which communicate with each other by *Anaſtomaſes*, thro' which, in ſucking, the Milk is drawn. See MILK.

PAPILLÆ *Pyramidales*, are little Emminences ariſing from the ſubcutaneous Nerves.

Under the *Cutis* lies a thick Congeries of Nerves, wove into a Kind of Membrane; together with Arteries, Veins, and Lymphaticks: Theſe Nerves ſtanding out above the Level form little *Papillæ*, which laying aſide the outer Coat given them by the *Dura Mater*, form the *Corpus reticulare*, firſt obſerv'd by *Malpighi* in the Feet, Hands, and Tongue; and ſince ſhewn by *Ruyſch*, throughout the whole Body. See RETICULARE.

Theſe *Papillæ* are ſtill moſt numerous and conſpicuous in the Places of acute Senſe, as the Tongue, Glans of the *Penis*, *Vaginæ*, *Labia*, *Oeſophagus*, Ventricle, ſmall Inteſtines, and Tips of the Fingers and Toes, where the *Cutis* they are covered withal is extremely thin. See CUTIS.

In the other Parts of the Body the *Cutis* is thicker, and the *Papillæ* much fewer, ſmaller, &c. See RETICULAR BODY.

Theſe *Papillæ* are ſuppoſed to be the immediate Organ of *Feeling*. See FEELING.

PAPILLÆ of the Tongue, are little Eminences of the Tongue; ſo called from their Reſemblance to the *Papillæ* of the Breaſt. See TONGUE.

From the papillary Tunic of the Tongue ariſe numerous nervous *Papillæ*, which, penetrating the viſcous Subſtance over them, terminate under the Surface of the Tongue. See PAPILLARY.

'Tis by means of theſe *Papillæ* that the Tongue is ſuppoſed to have its Faculty of *Taſting*. See TASTING.

PAPILLÆ, or *Carunculæ Papillares* of the Kidnies, are Bundles of little urinary Pipes, join'd together in the inner Subſtance of the Kidnies. See KIDNEY.

They end in ſhort tubulous Bodies, or larger Pipes, anſwering in Number to the *Papillæ*, which are uſually 12; and are called *Fiſtulæ Membranaceæ*; being only Productions of the membranous Cell, called the *Pelvis*. See PELVIS.

The *Papillæ* ſerve to diſtill the Urine ſeparated from the Arteries, and brought them by the urinary Pipes, into the *Pelvis*. See URINE.

PAPILLARY, in Anatomy, an Epithet given to a Tunic or Membrane of the Tongue, call'd *Papillary Tunic*, *Papillary Membrane*, or *Papillary Body*.

The *Papillary Tunic* or *Body* is the third Tegument, plac'd beneath the exterior Membrane which lines the Tongue, and the viſcous Subſtance next under the ſame. See TONGUE.

The *Papillary Tunic* is full of Nerves derived from the fifth and ninth Pair. From this Tunic ariſe little Eminences, call'd *Papillæ* or *Papillary Eminences*. See PAPILLA.

The Salts and Juices of Bodies, ſtriking againſt theſe Prominences, occaſion Undulations therein, which are immediately communicated to the Spirits contained in the Nerves, which carry them to the Brain, &c. See TASTING.

PAPILLARY *Proceſſes*, a Name the Antients gave to the Olfactory Nerves, from the Place of their Origin, to the *Os Cribroſum*. See NERVE.

Dr. *Drake* thinks this Name becomes them better in this Place than that of Nerves: in regard they rather appear Productions of the *Medulla Oblongata*: whence the Olfactory Nerves ariſe, than diſtinct Nerves; againſt which their manifeſt Cavities, and their Communication with the Ventricles, argue.

PAPILIONACEOUS, in Botany, the Flowers of ſome Plants are thus called, by Botaniſts, as repreſenting ſomething of the Figure of a *Papilio* or Butterfly, with its Wings diſplay'd. See PLANT.

They have four ſuch Leaves, joined together at the Extremities; one in the Middle of the Flower is larger than the reſt, and by ſome called *Vexillum*.

The Plants, that have this Flower, are of the leguminous Kind, as Peaſe, Vetches, &c.

PAPPUS, in Botany, that ſoft light Down, which grows out of the Seeds of ſome Plants, as Thiſtles, Dandelion, Hawkweed, &c. and which buoys them up ſo in the Air, that they may be blown any where about with the Wind. See SEMINATION.

This diſtinguiſhes a Claſs or Kind of Plants, which are hence denominated *Pappoſa*, or *Pappi Flore*.

PAR, in Commerce a Kind of Equality among Monies; or how much a Perſon muſt give of one Kind of Species, to render it juſt equivalent to a certain Quantity of another.

The *Par* differs from the *Courſe* of Exchange in this, that the *Par of Exchange* ſhews what other Nations ſhou'd allow in Exchange; which is certain and fix'd: But the *Courſe* ſhews what they will allow in Exchange; which is uncertain and contingent, ſometimes more, ſometimes leſs. See EXCHANGE.

The Par *of Exchange of the* French *Crown of* 60 *Sols or* 4*s.* 6 *d. Sterl.* with *Foreign* Monies, both real and imaginary, of moſt of the Trading Cities of *Europe*, follows; whence alſo the Relation or *Parity* of thoſe other Monies among themſelves, appears.

The *French* Crowns of 60 Sols is equivalent to 54 Pence *Sterl.* of *England*; to 100 *Deniers* Groſs of *Holland*; and to 101, of thoſe of *Cologne*. To 48 *Sols-Lubs* of *Germany* and *Hambourg*. To 88 *Creuxs* of *Ausbourg* and 90 of *Francfort*, 83 of *Bolzam*, and 84 of *Switzerland*. To 8 *Julio's* and an half of *Rome*, and as many of *Ancona*; to three *Teſtons* of *Florence*, 58 *Soldi* of *Leghorn*, 83 of *Geneva*, 94 of *Milan*, 60

of *Nova*; to 5 *Lires* or *Livres* of *Genoa*, 4 *Lires* and 10 *Soldi* of *Lucca*, 8 *Lires* of *Bergama*, 3 *Lires* and 15 *Soldi* of *Savoy*; to 9 *Carlins* of *Naples*, and as many of *Sicily*; 21 *Groats* and three Fifths of *Venice*, 24 of *Neumbourg*; to 372 *Maravedes* of *Spain*, to 600 *Rays* of *Portugal*, to 4 *Tarins* and 15 *Grains* of *Malta*, to 120 *Aſpers* of *Conſtantinople*, to a *Demi-longre* of Gold of *Hungary*, to 2 *Florins* of *Liege*, 3 of *Strasbourg* and 20 of *Racons*, to 90 *Groats* or *Groch's* of *Poland*, and 24 of *Berlin*, to 80 *Marks* of Copper of *Sweden*, to 50 *Grives* or *Grifs* of Copper of *Muſcovy*, and laſtly to 4 *Hors* of *Denmark*.

PAR, in Anatomy. See PAIR.

PAR *Vagum, or the fourth Pair*, is a very notable Conjugation of Nerves, of the *Medulla oblongata*; thus call'd from their wide *vague* Diſtribution throughout the ſeveral Parts of the Body.

See the Origin, Courſe, Diſtribution, &c. of the *Par vagum* under NERVE.

PAR, a Term of Nobility. See PEER.

PARABLE, a Fable, or Allegorical Inſtruction founded on ſomething real, or apparent in Nature or Hiſtory; from which ſome Moral is drawn, by comparing it with ſome other Thing, wherein the People are more immediately concerned.

Such are thoſe Parables of the *Ten Virgins*, of *Dives and Lazarus*, of the *Prodigal Son*, &c. in the New Teſtament. St. *Matthew* ſays our *Saviour* never ſpoke to the People but by *Parables*.

F. *de Colonia* calls the *Parable*, a *Rational Fable*. See FABLE.

The Word is form'd from the *Greek* παραβάλλειν to compare. Whence *Ariſtotle* defines it a Similitude drawn from Form to Form. *Cicero* calls it a *Collation*, others a *Simile*.

In the New Teſtament it is uſed variouſly. In *Luke* IV. 23. for a *Proverb* or *Adage*. In *Matth.* XV. 15. for a Thing *darkly* and *figuratively expreſs'd*. In *Heb.* IX. 9. &c. for a *Type*. In *Luke* XIV. 7. &c. for a *ſpecial Inſtruction*. *Matth.* XXIV. 32. for a *Similitude* or *Compariſon*. The *Hebrews* call it משל from משל to predominate, to aſſimilate; whence the Proverbs of *Solomon* are call'd משל *Parables* or *Proverbs*.

Aquinas defines *Parable* a ſimilitudinary Diſcourſe; or a Speech which ſays one thing and means another. *Glaſſius* more accurately defines it a *Simile* wherein a fictitious Thing is related as real, and compared with ſome Spiritual Thing, or accommodated to ſignify it.

Some make *Parable* differ from *Fable*; *Grotius* and others will have them the ſame. *Kircher* derives the Uſe of *Parables* from the *Egyptians*.

PARABOLA, in Geometry, a Figure ariſing from the Section of a Cone, when cut by a Plane parallel to one of its Sides. See SECTION

From the ſame Point of a Curve, therefore, only one *Parabola* can be drawn: All the other Sections within thoſe Parallels being Ellipſes; and all without, Hyperbola's. See CONE.

Wolfius defines the *Parabola* to be a Curve wherein the Square of the Semi-ordinate is equal to the Rectangle of the Abſciſſe, and a given right Line call'd the *Parameter* of the Axis or *Latus rectum*.

Hence, a *Parabola* is a Curve of the firſt Order; and as the Abſciſſes increaſe, the Semi-ordinates increaſe likewiſe; conſequently the Curve never returns into itſelf. Hence alſo the Abſciſſe is a third Proportional to the Parameter and Semi-ordinate; and the Parameter a third Proportional to the Abſciſſe and Semi-ordinate; and the Semi-ordinate a mean Proportional between the Parameter and Abſciſſe.

To deſcribe a Parabola. The Parameter A B *Tab. Conicks. Fig.* 8. being given; continue it to C, and from B let fall a Perpendicular, to N. From Centres taken at Pleaſure, with the Compaſſes open to A, deſcribe Arches cutting the right Line B V in I, II, III, IV, V, &c. And the right Line B C in 1, 2, 3, 4, 5, &c. Then will B 1, B 2, B 3, B 4, B 5, &c. be Abſciſſes, B I, B II, B III, B IV, B V, &c. Semi-ordinates. Wherefore if the Lines B 1, B 2, B 3, &c. be transferr'd from the Line B C to that B N, and in the Points 1, 2, 3, 4, &c. Perpendiculars be raiſed, 1 I = B I, 2 II = B II, 3 III = B III, &c. The Curve paſſing thro' the Points I, II, III, &c. is a *Parabola*; and P N its Axis.

Every Point of the *Parabola* may alſo be determined geometrically. *E. gr.* If it is inquired whether the Point M be in the *Parabola* or not? From M to B N let fall a Perpendicular M P. And let P N be equal to the Parameter A B; upon B N deſcribe a Semicircle. For if that paſs thro' M, the Point M is in the *Parabola*.

In a *Parabola* the Diſtance of the *Focus* from the *Vertex* is to the Parameter in a ſubquadruple Ratio: And the Square of the Semi-ordinate is quadruple the Rectangle of the Diſtance of the *Focus* from the *Vertex*, into the Abſciſſe.

To deſcribe a Parabola *by a continued Motion.* Aſſuming a right Line for an Axis, let f A *Fig.* 9. = A F = $\frac{1}{4}a$. In A fix a Ruler D B cutting the Axis f D at right Angles. To the Extremity of another Ruler E C, faſten a Thread fix'd at its other Extreme in the *Focus* F which is to be = A D + A F. If then a Style or Point be fix'd to the Ruler E C, and the Ruler be carried firſt to the Right then to the Left, according to the Direction of the other D B; the Style will mark out a *Parabola*: For F M will be conſtantly = E M = P f = $x + \frac{1}{4}a$, and conſequently the Point M is in a *Parabola*.

Properties of the PARABOLA.

The Squares of the Semi-ordinates are to each other as the Abſciſſes; and the Semi-ordinates, themſelves, in a ſubtriplicate Ratio of the Abſciſſes.

The Rectangle of the Sum of the two Semi-ordinates into their Differenee, is equal to the Rectangle of the Parameter into the Difference of the Abſciſſes: The Parameter therefore is to the Sum of the two Semi-ordinates, as their Difference to the Difference of the Abſciſſes.

In a *Parabola* the Rectangle of the Semi-ordinate into the Abſciſſe, is to the Square of the Abſciſſe, as the Parameter to the Semi-ordinate.

In a *Parabola* the Square of the Parameter is to the Square of one Semi-ordinate, as the Square of the other Semi-ordinate to the Rectangle of the Abſciſſes.

In a *Parabola* the Subtangent is double the Abſciſſe, and the Subternal ſubduple the Parameter.

Quadrature of the *Parabola*. See QUADRATURE.

Rectification of the *Parabola*. See RECTIFICATION.

Centre of Gravity of a *Parabola*. See CENTRE OF GRAVITY.

Centre of Oſcillation of the *Parabola*. See OSCILLATION.

PARABOLA's *of the higher Kinds* are Algebraic Curves, defin'd by $a^{m-1}x = y^m$. *E.gr.* by $a^2x = y^3$, $a^3x = y^4$, $a^4x = y^5$, $a^5x = y^6$, &c. See CURVE.

Some call theſe *Paraboloides*: particularly, if $a^2x = y^3$; they call it a *Cubical Paraboloid*. If $a^3x = y^4$, &c. They call it a *Biquadratical Paraboloid*, or a *Surdeſolidal Paraboloid*. And in reſpect of theſe, the Parabola *of the firſt Kind*, above explained, they call the *Apollonian* or *Quadratic Parabola*.

Thoſe Curves are likewiſe uſed to be referred to *Parabola*'s wherein $a\,x^{m-1} = y^m$. as *E. gr.* $a\,x^2 = y^3$, $a\,x^3 = y^4$, which ſome call *Semi-parabola*'s. They are all comprehended under one common Equation $a^m x^n y^r$, which alſo extends to other Curves, *v. g.* to thoſe wherein $a^2x^2 = y^4$ $a^2x^3 = y^5$, $a^3x^4 = y^7$.

Since in *Parabola*'s of the higher Kinds, $y^m = a^{m-1}x$; If any other Semi-ordinate be called v, the Abſciſſe correſponding to z, will be $v^m = a^{m-1}z$ conſequently $y^m : v^m :: a^{m-1}x : a^{m-1}z$. That is $x : z$. 'Tis a common Property, therefore, of theſe *Parabola*'s, that the Powers of the Ordinates are in the Ratio of the Abſciſſes.

But in *Semi-parabola*'s $y^m : v^m :: a\,x^{m-1} : : x^{m-1} : z^{m-1}$. Or the Powers of the Semi-ordinates are as the Powers of the Abſciſſes, one Degree lower. *E. gr.* In *Cubical Semi-parabola*'s, the Cubes of the Ordinates y^3 and v^3 are as the Squares of the Abſciſſes x^2 and z^2.

Apollonian PARABOLA, is the Common, or *Quadratic Parabola* or *Parabola* of the firſt Kind; ſo called by way of Diſtinction from *Parabola*'s of the higher Kinds: Which ſee.

Quadratic PARABOLA, is the ſame with the *Apollonian*: Which ſee.

PARABOLAN, PARABOLANUS, among the Antients, was a Sort of Gladiator; called alſo *Confector*. See CONFECTOR.

The Name was given them from the *Greek* παραβολὴ of βάλλω to throw, precipitate; in regard they threw themſelves on Danger and Death.

PARABOLAN is alſo uſed in Church-Hiſtory, for a Set of People, eſpecially in *Alexandria*, who devoted themſelves to the Service of Churches, and Hoſpitals. The *Parabolans* were not allowed to withdraw themſelves from their Function, which was the Service of the Sick. They made a Kind of Friary, amounting ſometimes to 600 Perſons; depending on the Biſhop.

The Deſign of their Inſtitution was, that the diſeaſed, eſpecially thoſe infected with the Plague, might not be without Atttendance.

PARABOLIC *Space*, the *Space* or *Area* contained between any entire Ordinate as V V *Tab. Conicks Fig.* 8. and the Curve of the incumbent *Parabola*.

The Parabolic Space is to the Rectangle of the Semi-ordinate into the Abſciſſe, as 2 to 3: to a Triangle inſcribed on the Ordinate as a Baſe, the *Parabolic Space* is as 4 to 3.

Every *Parabolical* and *Paraboloidical Space* is to the Rectangle of the Semi-ordinate into the Abſciſſe as $r\,x\,y : (m + r)$ to $x\,y$, that is, as r to $m + r$.

Segment of a Parabolic Space, is that Space included between two Ordinates. See SEGMENT.

Quadrature of a Parabolical Segment. See QUADRATURE.

PARABOLIC *Pyramidoid*, a ſolid Figure, generated by ſuppoſing all the Squares of the ordinate Applicates in the *Parabola*, ſo placed, as that the Axis ſhall paſs thro' all their Centres at Right Angles; in which Caſe the Aggregate of the Planes will be arithmetically proportional.

The Solidity hereof is had by multiplying the Baſe, by half the Altitude; the Reaſon whereof is obvious: for the component Planes being a Series of Arithmetical Proportionals beginning from 0, their Sum will be equal to the Extremes multiply'd by half the Number of Terms, that is, in the preſent Caſe, equal to the Baſe multiply'd by half the Height.

PARA-

PARABOLIC *Cuneus*, a ſolid Figure form'd by multiplying all the DB's *Tab. Conics Fig.* 10. into the D S's: or which amounts to the ſame, on the Baſe A P B erect a Priſm, whoſe Altitude ſhall be A S or P S; this will be a *Parabolical Cuneus*; which of neceſſity will be equal to the *Parabolical Pyramidoid*; inaſmuch as the component Rectangles, in one, are ſeverally equal to all the component Squares in the other.

PARABOLIC *Conoid*, a ſolid Figure generated by the Rotation of a *Semi-parabola* about its Axis, and is $= \frac{1}{2}$ of its circumſcribing Cylinder.

The Circles conceived to be the Elements of this Figure, are in an arithmetical Proportion, decreaſing towards the *Vertex*.

A *Parabolic Conoid* is to a Cylinder of the ſame Baſe and Height, as 1 to 2; and to a Cone of the ſame Baſe and Height, as $1\frac{1}{2}$ to 1.

PARABOLIC *Spindle*. See PYRAMIDOID.

PARABOLIC *Speculum* or *Mirrour*. See MIRROUR.

PARABOLOIDES, in Geometry, *Parabola*'s of the higher Kinds. See PARABOLA *of the higher Kinds*.

Quadrature of a PARABOLOID. See QUADRATURE.

Rectification of a PARABOLOID. See RECTIFICATION.

Centre of Gravity of a PARABOLOID. See CENTRE.

Quadratic PARABOLOID, *Cubical Paraboloid*, *Surſolidal Paraboloids*. See PARABOLA's *of the higher Kinds*.

PARACENTESIS, in Chirurgery, an Operation in Chirurgery, popularly call'd *Tapping*.

It conſiſts in the opening a little Hole in the lower *Venter* or Belly, to let out Waters collected in the Capacity thereof, or between the Teguments, in an *Aſcites* or *Water-Dropſy*. See DROPSY.

The Antients cut the Aperture with a Lancet; but the Moderns punch it with a Kind of Stillet or Bodkin; clapping a *Cannula* or Tap into the Hole when made, to carry off the Water. See CANNULA.

The Operation is uſually perform'd two or three Fingers Breadth on one Side the Navel, ſometimes a little lower, but always ſo as to avoid the *Linea Alba*.

The Water is uſually drawn off at ſeveral Times, as the Patient's Strength will allow; and a new Puncture is made, every Time the Belly is thus to be emptied.

The *Paracenteſis* does not often ſucceed, tho' often repeated; becauſe the Root of the Diſeaſe, notwithſtanding the carrying off the Water by this Means, is ſtill left behind.

The Word is form'd from the *Greek* παρὰ with, and κεντεῖν *pungere* to prick.

Some Authors give the Name *Paracenteſis* to all Operations either with the Lancet, the Needle, or Punch; not excepting the Operation of Couching for Cataracts; founded on the Etymology of the Word: others reſtrain it to Apertures made in the Head, Breaſt, Belly and *Scrotum*; and others to the ſingle Operation of *Tapping in Dropſies*.

PARACENTRICK *Motion of Impetus*, in Aſtronomy, a Term uſed for ſo much as a revolving Planet approaches nearer to, or recedes farther from the Sun, or Centre of Attraction. See ATTRACTION.

Thus if a Planet in A *Tab. Aſtronomy Fig.* 25. move to B, then is S B T — S A $= b$ B, the *Paracentric* Motion of that Planet.

PARACENTRIC *Sollicitation of Gravity* or *Levity* amounts to the ſame with the *Vis Centripeta*, and, in Aſtronomy, is expreſſed by the Line A L *Fig.* 26. drawn from the Point A parallel to the Ray S B (infinitely near S A) till it interſect the Tangent B L.

PARACLET, a Name the Church has given to the Holy Spirit; from παράκλητος, *Comforter*, *Advocate*.

PARACYNANCHE, in Medicine. See PARASYNANCHE.

PARADE, the Shew, or Expoſal of any Thing to view, in all its Advantages and Ornaments.

Bed of *Parade*, is that wherein a Perſon lies in State.

PARADE, in War, is the Appearance of the Officers and Soldiery at a Poſt aſſign'd them, to put themſelves under Arms, in the beſt Order they can; either to mount, or break up the Guard; or to form a Battalion, or on ſome other Occaſion.

PARADE, in Fencing, the Action of Parrying, or Turning off any Puſh, or Stroke.

There are as many Kinds of *Parades* as of Strokes and Attacks. *Parade* inward, outward, above, below, feign'd, &c.

PARADIGMA or PARADIGM, an Example, or Inſtance of ſomething ſaid, or done. See EXAMPLE.

The Word is form'd of the *Greek* παράδειγμα Exemplar, of παρὰ and δείγνυμι *oſtendo*, q. d. *juxta oſtendo*.

PARADISE, a *Garden of Delights*; a Term primarily uſed for the Place wherein *Adam* was ſeated, during his Innocence; and from which he was expell'd for diſobeying God; call'd in a ſtricter manner, the *Terreſtrial Paradiſe*.

The Word is form'd of the *Greek* παράδεισος *Orchard*, a Place ſtored with Apples, and all Kinds of Fruit. *Moſes* calls it the *Garden of Eden*.

The Critics are in diſpute about the preciſe Place of *Paradiſe*. Some will have it in *Judea*, in the Place where now is the Lake *Geneſareth*; others, in *Syria*, toward the Springs of the *Orontes*, and *Chryſorrhoes*: But, in neither of thoſe Places do we diſcover any Track of the Rivers wherewith *Paradiſe*, in *Moſes*'s Deſcription, was water'd. Others place it in the greater *Armenia* near the Mountain *Ararat*, where *Noah*'s Ark was left; and imagine they there diſcover the Sources of the four Rivers which water'd the Garden of *Eden*, viz. *Euphrates*; *Hiddekel*, now the *Tigre*; *Gihon*, now *Araxes*; and *Piſon*, now *Phazzo*. But Sir *J. Chardin* aſſures us, in his Travels, that the *Phazzo* ſprings out of the Mountains of *Caucaſus*, Northward of the Kingdom of *Imereti*, and far enough from Mount *Ararat*: Beſide that in *Armenia*, we have no Signs of the Countries of *Havilah* and *Ethiopia*, which thoſe Rivers waſh'd after their departing from *Eden*.

There are various other Opinions, as to this Point: *Poſtellus* will have *Paradiſe* placed under the North-Pole; grounding his Notion upon an antient Tradition of the *Egyptians* and *Babylonians*, that the Ecliptic or Sun's Way was at firſt at Right Angles to the Equator; and ſo paſs'd directly over the North-Pole. Others are againſt limiting it to any one Place, and contend, that it included the whole Face of the Earth, which was, as it were, one continued Scene of Pleaſures, till alter'd upon *Adam*'s Tranſgreſſion.

But the moſt common, and withal, moſt probable Opinion is that of *Hopkinſon*, *Huet*, *Bochart*, &c. who place it between the Confluence of the *Euphrates*, and *Tyger*, and their Separation. Theſe Rivers are two of thoſe wherewith the Garden of *Eden* was water'd: *Piſon* was a Branch ariſing out of one of them after their Separation; and *Gihon* another Branch ariſing from the other, on the Side of *Armenia* or the Weſt: Accordingly *Ethiopia*, one of the Countries which theſe Rivers waſh'd was, inconteſtably, *Arabia Deſerta*, for *Moſes* calls his Wife, who was of this Country, an *Ethiopian*; and *Havilah*, the other Country, muſt be the *Chuſiſtan*, in *Perſia*; where there were anciently found *Gold*, *Bdellium*, the *Onyx*, &c. mentioned in *Moſes*'s Deſcription.

PARADISUS, among antient Church-Writers, was a ſquare Court, before Cathedrals, ſurrounded with Piazza's, or Portico's for walking under, ſupported by Pillars. *Matthew Paris* calls it *Parviſus*.

PARADOX, in Philoſophy, a Propoſition ſeemingly abſurd, becauſe contrary to the receiv'd Opinions; but yet true.

The *Copernican* Syſtem is a *Paradox* to the People; the Learned are all agreed of its Truth.

There are even *Paradoxes* in Geometry; a Number whereof are collected by the Jeſuit *Mario Betino*: among others is this, that the Contain'd is greater than the Containing.

The Word is form'd from the *Greek* παρὰ, *contra*, againſt, and δόξα Opinion.

PARADOXI, or PARADOXOLOGI, among the Antients, were a Kind of Mimes or Buffoons, who diverted the People with their Drolling. See PANTOMIME.

They were alſo call'd *Ordinarii* for this Reaſon apparently, that, as they ſpoke without Study or Preparation, they were always ready.

They had another Denomination, *viz. Nianicologi* q. d. Tellers of Children's Tales: And, beſide, were call'd *Aretalogi*, of ἀρετὴ, Virtue as talking much of their own rare Talents and Qualifications.

PARÆNESIS, παραίνεσις, a *Greek* Term, ſignifying Admonition, Inſtruction, Precept, or Exhortation.

The Word is form'd of παρὰ and αἰνέω, *Laudo*.

PARAGE, in Law, and Cuſtoms, an Equality of Name, Blood, or Dignity, but more eſpecially of Land, in the Partition of an Inheritance between Co-heirs. See PEERAGE.

PARAGE, *Paragium*, was particularly uſed in antient Cuſtoms, for an Equality of Condition among Nobles, or Perſons holding Nobly: Thus, when a Fief is divided among Brothers; in this Caſe, the younger hold their Part of the Elder by *Parage*, *i.e.* without any Homage or Service.

This ſtill obtains, in ſome Meaſure, in *Scotland*, where the Husbands of the younger Siſters are not obliged to any Faith or Homage to the Husband of the Elder; nor their Children, to the ſecond Degree.

This *Parage* being an Equality of Duty or Service among Brothers and Siſters, ſome have call'd it *Fratrage* and *Parentage*. The Cuſtomary of *Normandy* defines the *Tenure by Parage* to be, when, a noble Fief being divided among Daughters, the Eldeſt does Homage to the chief Lord for all the reſt, and the youngeſt hold their Parts of the Eldeſt by *Parage*, i. e. without any Homage or Fealty. *Parage* ceaſes at the ſixth Degree incluſively. It likewiſe ceaſes, when any of the Sharers ſell their Part. See HOMAGE.

PARAGOGE, in Grammar, a Figure, whereby a Word is lengthen'd out, by adding a Syllable at the End thereof: as in *dicier* for *dici*. See FIGURE. Or

PARAGOGIC, in Grammar, ſomething added to a Word without adding any thing to the Senſe thereof. In the *Hebrew*, the ה is frequently *Paragogic*; as אברכה for אברך I will praiſe.

The Uſe of *Paragogic* Letters is only to give a more full and agreeable Sound to Words, either for the Sake of the Verſe, or the Period.

The Word is form'd of the *Greek* παραγω I add; compounded of παρ and ἄγω

PARAGORICKS, Medicines preſcrib'd with an Intention to aſſwage Pain. See PAIN.

They are thus call'd, from the *Greek* παραγωρέω I mitigate, abate; but are more ordinarily denominated *Opiates*. See OPIATE.

PARAGRAPH, a Term originally in Juriſ-prudence, ſignifying a Section, or Diviſion of the Text of a Law; otherwiſe call'd an *Article*.

Thus, ſuch a Law is ſaid to be divided into ſo many *Paragraphs*. The Character of a *Paragraph* in a Quotation is, §. See CHARACTER.

The *Greek* Poets alſo uſed *Paragraphs* to mark the Couplets, Strophes, and other Diviſions of Odes, and other poetical Works.

PARAGUAY, or PARAGOUE, in Nat. Hiſtory, a celebrated Plant, of the Shrub Kind, growing in ſome Provinces of *South America*, eſpecially at *Paraguay*, whence its Name; tho' better known, of late, among us, under the Denomination of *South-Sea Tea*.

This Plant, which does not riſe above a Foot and half high, has very ſlender Branches, and Leaves like thoſe of Senna; it may be look'd on as a Kind of Occidental Tea, which, like the Oriental, is taken infuſed in hot Water, to which it communicates a Colour and Smell nearly like thoſe of the beſt Tea ſeen in *Europe*.

There are two Kinds of *Paraguay*, the one call'd ſimply *Paraguay*; the other *Camini*, by the *Spaniards*, *Yerva-Camini*; which laſt is moſt eſteem'd, and ſold for a Third more than the other.

The firſt the *Spaniards* call *Yerva-Conpalos*, *i. e.* Herb with little Sticks, becauſe full of broken Branches, and is chiefly uſed by Domeſticks and Slaves: The latter is the Drink of the richeſt. But both are of ſo much Uſe, and eſteem'd of ſuch abſolute Neceſſity, that no body in that Part of *America* will live without 'em. The Works of the Mines of *Potoſi* wou'd ſtand ſtill, but that the Maſters take care to ſupply the poor Slaves that labour therein, with *Paraguay*. Nor will a Servant engage himſelf with any Maſter, but upon this among other Conditions, that he have nothing but *Paraguay* for Drink.

The *Paraguay* makes one of the moſt conſiderable Articles of the South *American* Commerce. At *Peru*, *Chilly*, and *Buenos Aires*, there are above two Millions Worth ſold *per Annum*; which paſſes almoſt altogether thro' the Hands of the Jeſuits. The Uſe of *Paraguay* began lately to obtain in *England*; where many People ſeem'd to like it as well as Tea. But Foreigners ſay, that their Approbation flow'd as much from their Intereſt as their Taſte; in regard they come ſo eaſily by it, by reaſon of their Commerce with the *Spaniards* of *S. America*, and *Buenos Aires*, ſince the Treaty of *Utrecht* in 1713.

The Preparation of the Plant, and the making it into a Drink is much the ſame with that of Tea, except that they infuſe both Leaves and Wood, that they drink it immediately out of the Veſſel 'tis made in; without letting it have Time to infuſe, by reaſon of the black Tincture it gives; and that, to prevent Leaves and all from coming, they ſuck it thro' a ſilver, or glaſs Pipe, which goes round the Company one after another. *Frezier*.

Beſide all the Virtues which the Eaſtern People aſcribe to their Tea; as to be good in Diſeaſes of the Head, Breaſt, Stomach, againſt Phlegm, and to reſtore Sleep; the *Americans* attribute to theirs this further of purifying all Kinds of Water, how foul and corrupted ſoever, by only infuſing it therein, either hot or cold. Thus, having always ſome of it with 'em, if they meet with none but the worſt Waters in the vaſt Deſarts to be croſs'd in going from *Buenos Aires* to *Peru* and *Chilly*, they are not afraid to drink it, after ſteeping ſome of the Plant a little while therein. It is alſo held ſovereign againſt the Scurvy, and putrid Fevers.

PARALEPSIS, in Rhetoric, a Feint, or Pretence of omitting or paſſing over a Thing, and yet expreſſing it. See FIGURE.

When the Imagination is warm'd, and Reaſons and Arguments preſent themſelves in abundance; the Orator wou'd willingly lay 'em all down, in Form; but, for Fear of wearying his Audience, only produces ſome of 'em *en paſſant*, and without dwelling on them: and this is call'd a *Paralepſis*; for Inſtance, *I paſs over in Silence the many Injuries I have receiv'd*, &c. *I wont inſiſt on his laſt Outrage*.

PARALIPOMENA, a Supplement of Things omitted, or forgot in ſome preceding Work, or Treatiſe.

In the Canon of Scripture, there are two Books of *Paralipomena*, call'd alſo *Chronicles*; being a Supplement to the four Books of Kings, the two firſt whereof are alſo called Books of *Samuel*.

Quintus Calaber has a Work entituled, the *Paralipomena of Homer*.

The Word is form'd from the *Greek* παραλείπω, *prætermitto*, I paſs by.

Some Authors uſe the Word *Subrelictorum* inſtead of *Paralipomenon*.

PARALLAX, in Aſtronomy, an Arch of the Heavens intercepted between the true Place of a Star, and its apparent Place. See PLACE.

The true Place of a Star is that Point of the Heavens, B, *Tab. Aſtronomy Fig.* 27. wherein it wou'd be ſeen by an Eye placed in the Centre of the Earth, as at T. The apparent Place is that Point of the Heavens C, wherein the Star appears to an Eye on the Surface of the Earth, as at E.

Now, as in Effect, we view the Celeſtial Bodies not from the Centre but from the Surface of our Earth, which is a Semi-diameter diſtant from the Centre; we ſee it by a viſual Ray, which paſſing thro' the Centre of the Star, and proceeding thence to the Surface of the Mundane Sphere, marks out another Point C, which is its apparent Place.

This Difference of Places, is what we call abſolutely the *Parallax*, παράλλαξις, or the *Parallax of Altitude*; by *Copernicus* call'd the *Commutation*; which, therefore, is an Angle form'd by two viſual Rays, drawn, the one from the Centre, the other from the Circumference of the Earth, and traverſing the Body of the Star; and is meaſured by an Arch of a great Circle intercepted between the two Points of true and apparent Place C and B.

PARALLAX is alſo uſed for the Angle made in the Centre of the Star, by two right Lines, drawn, the one from the Centre, the other from the Surface of the Earth.

The Angle is alſo call'd *Parallactic Angle*. See PARALLACTIC *Angle*.

Hence the *Parallax* diminiſhes the Altitude of a Star, or increaſes its Diſtance from the Zenith, and has, therefore, a contrary Effect to the Refraction. See REFRACTION.

The *Parallax* of the Altitude, C B is, ſtrictly, the Difference between the true Diſtance from the Zenith C A, and the apparent Diſtance B A. See PARALLACTIC *Angle*.

The *Parallax* is greateſt in the Horizon; in the Zenith, or Meridian, a Star has no *Parallax* at all, the true and apparent Places, then co-inciding.

The Horizontal *Parallax* is the ſame, whether the Star be in the true or apparent Horizon.

The fix'd Stars have no ſenſible *Parallax*, by reaſon of their immenſe Diſtance to which the Semi-diameter of the Earth is but a mere Point. See STAR.

Hence alſo the nearer a Star is to the Earth, the greater is its *Parallax*, at an equal Elevation above the Horizon; *Saturn* is ſo high, that we have much ado to obſerve any *Parallax* at all.

The *Parallax* increaſes the right and oblique Aſcenſion, diminiſhes the Deſcenſion, diminiſhes the Northern Declination, and Latitude in the Eaſtern Part, increaſes it in the Weſtern; increaſes the Southern in the Eaſtern and Weſtern Part; diminiſhes the Longitude in the Weſtern Part, increaſes it in the Eaſtern. The *Parallax*, therefore, has juſt oppoſite Effects to the Refraction. See REFRACTION.

PARALLAX *of Declination*, is an Arch of a Circle of Declination S I. *Fig.* 28. whereby the *Parallax* of the Altitude increaſes or diminiſhes the Declination of a Star. See DECLINATION.

PARALLAX *of Aſcenſion* and *Deſcenſion*, is an Arch of the Equator D *d*, *Fig.* 29. whereby the *Parallax* of the Altitude increaſes the Aſcenſion, and diminiſhes the Deſcenſion. See ASCENSION and DESCENSION.

PARALLAX *of Longitude*, is an Arch of the Ecliptic T t, *Fig.* 28. whereby the *Parallax* of the Altitude increaſes or diminiſhes the Longitude. See LONGITUDE.

PARALLAX *of Latitude*, is an Arch of a Circle of Latitude S I, whereby the *Parallax* of Altitude increaſes or diminiſhes the Latitude. See LATITUDE.

PARALLACTIC *Angle*, called alſo ſimply *Parallax*, is the Angle made in the Centre of the Star by two right Lines, drawn, the one from the Centre of the Earth T B, *Tab. Aſtronomy*, *Fig.* 27. the other from its Surface E B.

Or, which amounts to the ſame, the *Parallactic* Angle is the Difference of the Angles C E A, and B T A, under which the real and apparent Diſtances from the Zenith are ſeen. See PARALLAX.

The Sines of the *Parallactic* Angles A L T and A S T, *Tab. Aſtron. Fig.* 30. at the ſame or equal Diſtances from the Zenith S Z; are in a reciprocal Ratio of the Diſtances of the Stars from the Centre of Earth T L and T S. Hence the *Parallax* of the remoter Star S, is leſs than the *Parallax* of the nearer L, at the ſame Diſtance from the Zenith; as before obſerv'd.

The Sines of the *Parallactic* Angles M and S, of Stars equally diſtant from the Centre of the Earth T, are as the Sines of the Diſtances ſeen from the Vertex Z M and Z S.

Hence, as the Diſtances from the Vertex decreaſe, *i. e.* as the Altitudes decreaſe, the *Parallax* decreaſes; and hence, alſo, the *Parallax* affects the Altitude of the Star, from the Horizon to the Zenith.

The

The Doctrine of *Parallaxes* is of the utmoſt Importance in Aſtronomy; both for the determining of the Diſtances of the Planets, Comets, and other *Phænomena* of the Heavens; for the Calculation of Eclipſes; and for determining the Longitude. See PLANET, DISTANCE, LONGITUDE, and ECLIPSE.

Methods of finding the *Parallaxes* of the Celeſtial *Phenomena* are various: Some of the principal and eaſier follow.

To obſerve the Parallax *of a Celeſtial* Phænomenon.

Obſerve when the *Phænomenon* is in the ſame Vertical with a fix'd Star which is near it; and meaſure its apparent Diſtance from this Star. Obſerve, again, when the *Phænomenon* and *fix'd Star* are in equal Altitudes from the Horizon; and again meaſure their Diſtance: the Difference of thoſe Diſtances will be, very nearly, the *Parallax* of the Star.

The *Parallax* of a *Phænomenon* may be likewiſe found by obſerving its Azimuth and Altitude; and by marking the Time, between the Obſervation and its Arrival at the Meridian.

All, requir'd to find the *Parallax* of the Moon, is the *Parallax* of right Aſcenſion: *i. e.* to find the Effect of the Magnitude of the Semi-diameter of the Earth, with regard to the *Phænomena* of its Motion, 'tis ſufficient to know how far the Meridian, to which the Eye refers it, deviates from the true Meridian. This is what M. *Caſſini* found and practiſed, with regard to *Mars*; and which M. *Maraldi* has ſince practiſed, with regard to the Moon. The whole Myſtery here conſiſts in having the Moon's true Motion, which refers to the Centre of the Earth; and its apparent Motion, which refers to the Place of Obſervation. The Difference of theſe, which is greateſt in the Horizon, or Horary Circle of 6 o' Clock, gives the Horizontal *Parallax*, for that Latitude whence the general *Parallax*, or that under the Equator is eaſily found: The *Parallax* of any Parallel being to that of the Equator, as the Semi-diameter of this Parallel is to that of the Equator. See *the Practice of this Method exemplify'd in finding the* Parallax *of* Mars.

The popular Method for that *of the Moon*, *Wolfius* gives us as follows:

To obſerve the Moon's Parallax.

Obſerve the Moon's Meridian Altitude, with the greateſt Accuracy, (*See* ALTITUDE) and mark the Moment of Time: This Time being equated; (*See* EQUATION) compute her true Longitude and Latitude; and from theſe find her Declination, (*See* DECLINATION) and from her Declination and the Elevation of the Equator find her true Meridian Altitude. If the obſerv'd Altitude be not meridian, reduce it to the true Altitude for the Time of Obſervation. Take the Refraction from the obſerv'd Altitude, and ſubtract the Remainder from the true Altitude: the Remainder is the Moon's Parallax.

By this means *Tycho* in 1583. *Oct.* 12. *Hor.* 5'. 19''. from the Moon's Meridian Altitude obſerv'd, 13°. 38'. her *Parallax* 54 Minutes. See MOON.

To obſerve the Moon's Parallax *in an Eclipſe.*

In an Eclipſe of the Moon, obſerve when both Horns are in the ſame Vertical Circle; in that Moment take the Altitudes of both Horns; the Difference of the two being halved and added to the leaſt, or ſubtracted from the greateſt, gives nearly the viſible Altitude of the Moon's Centre. But the true Altitude is nearly equal to the Altitude of the Centre of the Shadow at that Time. Now we know the Altitude of the Centre of the Shadow; becauſe we know the Sun's Place in the Ecliptic, and its Depreſſion under the Horizon, which is equal to the Altitude of the oppoſite Point of the Ecliptic in which the Centre of the Shadow is. Thus have we both the true and apparent Altitude; the Difference whereof is the *Parallax*.

From the Moon's Parallax *A S T Fig.* 30. *and Altitude S R, to find her Diſtance from the Earth.*

By her apparent Altitude given, we have her apparent Diſtance from the Zenith, *i. e.* the Angle Z A S; or by her true Altitude the Angle A T S. Wherefore, ſince, at the ſame Time, we have the *Parallactic* Angle S; and the Semi-diameter of the Earth is reputed. By plain Trigonometry we ſhall have the Moon's Diſtance in Semi-diameters of the Earth; thus: as the Sine of the Angle S is to the oppoſite Side given, ſo is the Sine the other Angle T, to the Side required T S.

Hence, according to *Tycho*'s Obſervation, the Moon's Diſtance at that Time from the Earth was 62 Semi-diameters of the Earth. Hence alſo, ſince, from the Moon's Theory, we have the Ratio of her Diſtances from the Earth in the ſeveral Degrees of her Anomaly; thoſe Diſtances being found by the Rule of Three in Semi-diameters of the Earth, the *Parallax* is thence determined to the ſeveral Degrees of the true Anomaly.

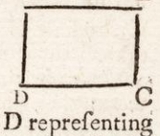
De le Hire makes the greateſt Horizontal *Parallax* 1°. 1'. 25''. the ſmalleſt 54' 5''. The Moon's Diſtance, therefore, when in her Perigee is $55\frac{97}{100}$ that is, almoſt 56 Semi-diameters; in her Apogee $63\frac{17}{100}$, that is, $63\frac{1}{2}$ Semi-diameters.

To obſerve the Parallax *of* Mars.

1. Suppoſe *Mars* in the Meridian and Equator, in H. *Tab. Aſtronomy Fig.* 31. and that the Obſerver under the Equator in A, obſerves him culminating with ſome fix'd Star. 2. If now the Obſerver were in the Centre of the Earth, he wou'd ſee *Mars* conſtantly in the ſame Point of the Heaven with the Star; and therefore, together with it in the Plane of the Horizon, or of the ſixth Horary. But ſince *Mars*, here, has ſome ſenſible *Parallax*, and the fix'd Star none, *Mars* will be ſeen in the Horizon, when in P, the Plane of the ſenſible Horizon; and the Star, when in the Plane of the true Horizon: obſerve, therefore, the Time between the Tranſits of *Mars* and of the Star thro' the Plane of the ſixth Hour. 3. Convert this Time into Minutes of the Equator; by this means we ſhall have the Arch P M, to which the Angle P A M, and conſequently the Angle A M D is nearly equal, which is the Horizontal *Parallax* of *Mars*.

If the Obſerver were not under the Equator, but in a Parallel, I Q, that Difference will be a leſs Arch Q M. Wherefore, ſince the little Arches, Q M and P M, are as their Sines A D and I D; and ſince A D G is equal to the Diſtance of the Place from the Equator, *i. e.* to the Elevation of the Pole; and therefore, A D to I D, as the whole Sine to the Co-ſine of the Elevation of the Pole; ſay, as the Co-ſine of the Elevation of the Pole I D is to the whole Sine A D; ſo is the *Parallax* obſerv'd in I, to the *Parallax* to be obſerv'd under the Equator.

Since *Mars* and the fix'd Star cannot be commodiouſly obſerv'd in the Horizon; let 'em be obſerv'd in the Circle of the third Hour: And ſince the *Parallax* there obſerv'd, T O, is to the Horizontal one, P M, as I S to I D; Say, as the Sine of the Angle I D S, or 45° (ſince the Plane D O is in the Middle between the Meridian D H and the true Horizon D M) to the whole Sine, ſo is the *Parallax* T O to the Horizontal *Parallax* P M.



If *Mars* be likewiſe out of the Plane of the Equator; the *Parallax* found will be an Arch of a Parallel; which muſt, therefore, be reduced, as above, to an Arch of the Equator.

Laſtly, if *Mars* be not ſtationary, but either direct, or retrograde; by Obſervations for ſeveral Days, find out what his Motion is every Hour, that his true Place from the Centre may be aſſign'd for any given Time.

By this Method, *Caſſini*, to whom we owe this noble Invention, obſerv'd the greateſt Horizontal *Parallax* of *Mars* to be 25 Seconds, or a little leſs. By the ſame Method Mr. *Flamſtead* found it near thirty Seconds.

By the ſame Method the ſame Author *Caſſini* obſerv'd the *Parallax* of *Venus*.

It muſt be here noted, that the Obſervation is to be made with a Teleſcope, in whoſe *Focus* are ſtrain'd four Threads cutting each other at right Angles A, B, C, D. The Teleſcope to be turn'd about, till ſome Star near *Mars* be ſeen to paſs over ſome of the Threads; A B and C D being parallel to the Equator; and therefore, A C and B D repreſenting Circles of Declination. Thus, by means of the perpendicular Threads, the Situations of the Star, and of *Mars* in the Meridian, will be determined.

To find the Sun's Parallax.

The great Diſtance of the Sun renders its *Parallax* too ſmall to fall under even the niceſt immediate Obſervation: Indeed, many Attempts have been made both by the Antients and Moderns; and many Methods invented for that Purpoſe. The firſt, that of *Hipparchus*, follow'd by *Ptolomy*, *&c.* was founded on the Obſervation of Lunar Eclipſes; the ſecond, was that of *Ariſtarchus*, whereby the Angle ſubtended by the Semi-diameter of the Moon's Orbit, ſeen from the Sun, was ſought from the Lunar Phaſes: But, theſe both proving deficient, Aſtronomers are forced to have Recourſe to the *Parallaxes* of the Planets nearer us, as *Mars* and *Venus*; for from their *Parallaxes* known that of the Sun, which is inacceſſible by any direct Obſervation, is eaſily deduced.

For from the Theory of the Motions of the Earth and Planets, we know at any Time the Proportion of the Diſtances of the Sun and Planets from us; and the Horizontal *Parallaxes* are in a reciprocal Proportion to thoſe Diſtances: Knowing, therefore, the *Parallax* of a Planet, that of the Sun may be found from it.

Thus, *Mars*, when oppoſite to the Sun, is twice as near as the Sun is, his *Parallax*; therefore, will be twice as great as that of the Sun: and *Venus*, when in her inferior Conjunction with the Sun; is ſometimes nearer us than he is; her *Parallax*, therefore, is greater in the ſame Proportion.

Thus, from the *Parallaxes* of *Mars* and *Venus*, the ſame *Caſſini* found the Sun's *Parallax* to be ten Seconds, which implies his Diſtance to be 223062 Semi-diameters.

In an Obſervation of the Tranſit of *Venus* over the Sun, which will be ſeen in *May*, 1761. Dr. *Halley* has ſhewn a Method of finding the Sun's *Parallax* and Diſtance to a great Nicety, *viz.* to a five hundredth Part of the Whole. See SUN.

The Parallax *of the Stars, with regard to the Earth's annual Orbit.*

The Stars have no *Parallax*, with regard to the Earths Semi-diameter; yet, with regard to the Earth's annual Orbit, 'tis juſtly expected that ſome *Parallax* be found. See ORBIT.

The Axis of the Earth in its annual Morion deſcribes a Kind of Cylinder, which being prolong'd to the Heaven of the fix'd Stars, there forms a circular Circumference; each Point whereof is the Pole of the World for its reſpective Day: ſo that the Situation of the apparent Pole, with regard to any of the fix'd Stars changes very conſiderably in the Courſe of a Year.

Could this be found by Obſervation, it wou'd irrefragably evince the annual Motion of the Earth round the Sun, and remove that only Objection which lies againſt it, urg'd by *Riccioli*, from no ſuch *Parallax* being obſerv'd. See EARTH.

Accordingly Dr. *Hook* attempted to find it by obſerving the various Diſtance of a fix'd Star from the Zenith, in different Parts of the Earth's Orbit; and Mr. *Flamſtead*, from the Acceſs and Receſs of a fix'd Star from the Equator at different Times of the Year, and with Succeſs: The Reſult of his Obſervations being, that the Diſtance of a fix'd Star, near the Pole, was found 40 or 45 Seconds nearer it at the Winter Solſtice than at the Summer one, for ſeven Years ſucceſſively.

M. *Caſſini* the Younger allows the Obſervations of *Flamſtead* to agree with thoſe made at the Royal Obſervatory; but he denies the Conſequences: he ſays the Variations in the Diſtance of the Pole Star are not ſuch as they ſhou'd be, ſuppoſing the Motion of the Earth; and accounts for them from a Suppoſition that the Stars, like the Sun, turn or revolve on their Centres, and that ſome of 'em have their Hemiſpheres unequally luminous: Whence, when the more ſhining Hemiſphere is turn'd towards us, the Stars appears bigger, conſequently more remote than when the darker is towards us. See STAR.

PARALLAX is alſo uſed in levelling, for the Angle contain'd between the Line of true Level, and that of apparent Level. See LEVELLING.

PARALLEL, in Geometry, from the *Greek* παραλλελος, equidiſtant; is a Term applied to Lines, Figures and Bodies, which, being prolong'd, are ſtill at equal Diſtance from one another.

PARALLEL *Right Lines*, are thoſe which, tho' infinitely produced, would never meet.

Thus, the Line O P, *Tab. Geometry*, *Fig.* 36. is parallel to Q R. See LINE.

Parallel Line is uſed in Oppoſition to Lines converging and diverging. See CONVERGING.

Some define an *inclining* or *converging Line*, that which will meet another at a finite Diſtance; and a *Parallel* that which wou'd only meet at an *infinite Diſtance*.

Others define a Perpendicular the ſhorteſt of all Lines that can be drawn to another; and a *Parallel* the longeſt. For the Orthodoxy of theſe Definitions of Paralleliſm we don't undertake.

Geometricians demonſtrate, that two Lines, *parallel* to the ſame third Line, are alſo *parallel* to one another; and that if two *Parallels* O P and Q R, *Tab. Geometry Fig.* 36. be cut by a tranſverſe Line S T. in A and B, 1. The alternate Angles *x* and *y* are equal. 2. The external Angle *u* is equal to the internal oppoſite one *y*; and thirdly, That the two internal oppoſite ones *z* and *y* are alſo equal to two right ones.

It is ſhewn on the Principles of Opticks, that if the Eye be placed between two *Parallel* Lines, they will appear to converge towards a Point oppoſite to the Eye. And if they run to ſuch a Length, as that the Diſtance between them be but as a Point thereto, they will there appear to co-incide.

Parallel Lines are deſcribed by letting fall equal Perpendiculars, and drawing Lines through their Extremes, by ſliding the Compaſſes open to the deſir'd Width along a Line, *&c.* or by a

PARALLEL *Ruler*, call'd alſo *Paralleliſm*, an Inſtrument conſiſting of two wooden, braſs, or ſteel Rulers A B, and C D; *Fig.* 37. equally broad every-where, and ſo join'd together by the Croſs-blades E F and G H, as to open to different Intervals, accede and recede, yet ſtill retain their *Paralleliſm*.

The Uſe of this Inſtrument is obvious; for one of the Rulers being applied to P S, and the other drawn to a given Point V; a right Line A B, drawn by its Edge, thro' V, is a *parallel* to R S.

PARALLEL *Rays*, in Opticks, are thoſe which keep at an equal Diſtance to each other, from the viſible Object to the Eye, which is ſuppoſed to be infinitely remote from the Object. See RAY.

PARALLEL *Planes* are thoſe Planes, which have all the Perpendiculars drawn betwixt them equal to each other. See PLANE.

PARALLELS, or PARALLEL *Circles*, in Geography, call'd alſo *Parallels* of Latitude, and Circles of Latitude, are leſſer Circles of the Sphere, conceived to be drawn from Weſt to Eaſt thro' all the the Points of Meridian; commencing from the Equator, to which they are *parallel*, and ending with the Poles. See CIRCLE.

They are call'd *Parallels of Latitude*, *&c.* becauſe all Places lying under the ſame *Parallel*, have the ſame Latitude. See LATITUDE.

PARALLELS *of Latitude*, in Aſtronomy, are leſſer Circles of the Sphere *parallel* to the Ecliptic, imagined to paſs thro' every Degree and Minute of the Colures. See LATITUDE.

They are repreſented on the Globe by the Diviſions of the Quadrant of Altitude, in its Motion round the Globe, when ſcrew'd over the Poles of the Ecliptic. See GLOBE.

PARALLELS *of Altitude* or *Almacanters*, are Circles *parallel* to the Horizon, imagined to paſs thro' every Degree and Minute of the Meridian between the Horizon, and Zenith; having their Poles in the Zenith. See ALTITUDE.

On the Globes they are repreſented by the Diviſions on the Quadrant of Altitude, in its Motion about the Body of the Globe, when ſcrew'd to the Zenith. See GLOBE.

PARALLELS *of Declination*, in Aſtronomy, are the ſame with *Parallels* of Latitude in Aſtronomy. See DECLINATION.

PARALLEL *Sphere*, that Situation of the Sphere, wherein the Equator co-incides with the Horizon, and the Poles with the Zenith and Nadir. See SPHERE.

In this Sphere all the *Parallels* of the Equator become *Parallels* of the Horizon, conſequently no Stars ever riſe or ſet; but all turn round in Circles *parallel* to the Horizon; and the Sun, when in the Equinoctial, wheels round the Horizon the whole Day. After his riſing to the elevated Pole, he never ſets for ſix Months; and, after his retiring again to the other Side of the Line, never riſes for ſix Months longer.

This Poſition of the Sphere is theirs who live under the Poles; if any ſuch there be. Their Sun is never above 23°. 30′. high.

PARALLEL *Sailing*, in Navigation, is the Sailing under a Parallel of Latitude. See SAILING.

Of this there are but three Caſes. 1. Given, the Departure, and Diſtance; required the Latitude. The Canon is, As Difference of Longitude is to Radius : : So is Diſtance, to Co-ſine of the Latitude.

2. Given Diff. of Longitude between two Places under the ſame *Parallel*, required their Diſtance. The Canon is, As Rad. to Diff. of Longitude : : So is Co-ſine of Latitude to Diſtance.

3. Given the Diſtance between two Places in the ſame Latitude; required their Difference of Longitude. The Canon is, As the Co-ſine of Lat. to Diſtance : : So is Rad. to Diff. of Longitude.

PARALLELOPIPED, in Geometry, one of the regular Bodies, or Solids, comprehended under ſix Rectangular and Parallel Surfaces, the oppoſite ones whereof are equal: As in the Figure *Tab. Geometry Fig.* 38. See REGULAR.

Two Cubes, laid together, Side by Side, conſtitute a *Parallelopiped*: And the ſame may be ſaid of a ſquare Beam, whoſe two Extremes are ſquare, and Sides long Squares.

Properties of the PARALLELIPIPED.

All *Parallelopipeds*, Priſms, and Cylinders, whoſe Baſes and Heights are equal, are, themſelves, equal.

A diagonal Plane divides the *Parallelopiped* into two equal Priſms: A Triangular Priſm, therefore, is half a *Parallelopiped* upon the ſame Baſe and of the ſame Altitude. See PRISM.

All *Parallelopipeds*, Priſms, Cylinders, *&c.* are in a Ratio compounded of their Baſes and Altitudes: Wherefore, if their Baſes be equal, they are in Proportion to their Altitudes; and converſly.

All *Parallelopipeds*, Cylinders, Cones, *&c.* are in a triplicate Ratio of their homologous Sides; and alſo of their Altitudes.

Equal *Parallelopipeds*, Priſms, Cones, Cylinders, *&c.* reciprocate their Baſes and Altitudes.

To meaſure the Surface and Solidity of a Parallelopiped.

Find the Areas of the Parallelograms I L M K, L M O N. See PARALLELOGRAM. Add theſe into one Sum, and multiply that Sum by 2: The *factum* will be the Surface of the *Parallelopiped*. If then the Baſe I L M K be multiplied by the Altitude L N, the Product will be the Solidity.

Suppoſe *v. g.* L M = 36 M K = 15 M O = 12. Then,

L M = 36	L M = 36	M K = 15
M K = 15	M O = 12	M O = 12
180	72	30
36	36	15

L I K M 540 L M O N 432 M O K P 180

L I K M 540

M O K P 180

2304	1152
M O 12	2
4608	2304 Superficies.
2304	

27648 Solidity.

PARALLELISM, the Quality of a *Parallel*; or that which denominates it ſuch: Or it is that whereby two Things, *v. g.* Lines, or Rays become equi-diſtant from one another. See PARALLEL.

Thus, we ſay remote Objects are ſcarce perceptible, by reaſon of the *Paralleliſm* of the Rays.

PARALLELISM *of the Earth's Axis*, in Aſtronomy, or, *Motion of Paralleliſm*; is that Situation or Motion of the Earth's

Axis, in its Progreſs thro' its Orbit, whereby it ſtill looks to the ſame Point of the Heavens, *viz.* towards the Pole Star; ſo that if a Line be drawn parallel to its Axis, while in any one Poſition; the Axis, in all other Poſitions or Parts of the Orbit, will always be parallel to the ſame Line. See AXIS.

This *Parallelism* is the neceſſary Reſult of the Earth's double Motion; the one round the Sun, the other round its own Axis. Nor is there any Neceſſity to imagine a third Motion, as ſome have done, to account for this *Parallelism*. See EARTH.

'Tis to this *Parallelism* that we owe the Viciſſitude of Seaſons, and the Inequality of Day and Night. See SEASON. See alſo DAY, &c.

PARALLELISM *of Rows of Trees*. The Eye placed at the End of an Alley of two Rows of Trees, planted in parallel Lines, never ſees 'em parallel, but always inclining to each other, towards the further Extreme.

Hence the Mathematicians have taken Occaſion to enquire in what Lines, the Trees muſt be diſpoſed, to correct this Effect of the Perſpective, and make the Rows ſtill appear parallel; parallel they muſt not be, but diverging; but according to what Law muſt they diverge: The two Rows muſt be ſuch, as that the unequal Intervals of any two oppoſite or correſponding Trees may be ſeen under equal viſual Angles.

On this Principle, *F. Fabry* has aſſerted, without any Demonſtration, and *F. Tacquet*, after him, demonſtrated by a long and intricate Syntheſis, that the two Rows of Trees muſt be two oppoſite Semi-Hyperbola's.

M. *Varignon* has ſince, in the Memoirs of the *French* Academy, *Anno* 1717, found the ſame Solution by an eaſy and ſimple Analyſis. But he renders the Problem much more general, and requires not only that the viſual Angles be equal, but to have them increaſe or decreaſe in any given Ratio; provided the greateſt do not exceed a right Angle. The Eye, he requires to be placed in any Point, either juſt at the Beginning of the Ranges, or beyond, or on this Side.

All this laid down, he ſuppoſes the firſt Row to be a right Line, and ſeeks what Line the other muſt be, which he calls the Curve of the Range. This he finds muſt be an Hyperbola, to have the viſual Angles equal. The ſtraight and hyperbolical Rows will be ſeen parallel to Infinity; and if the oppoſite Semi-hyperbola be added, we ſhall have three Rows of Trees, (the ſtraight one in the Middle) and all three parallel.

Nor is it required this ſecond Hyperbola be the Oppoſite of the firſt, *i. e.* of the ſame Kind, or have the ſame tranſverſe Axis: 'Tis enough if it have the ſame Centre, its Vertex in the ſame right Line, and the ſame conjugate Axis. Thus the two Hyperbola's may be of all the different Kinds poſſible; yet all have the ſame Effect.

Again, the ſtraight Row being laid down as before; if it be required to have the Trees appear under decreaſing Angles; M. *Varignon* ſhews, that if the Decreaſe be in a certain Ratio, which he determines; the other Line muſt be a parallel ſtraight Line. But he goes yet farther; and ſuppoſing the firſt Row any Curve whatever, he ſeeks for another that ſhall make the Rows have any Effect deſired, *i. e.* be ſeen under any Angles equal, increaſing, or decreaſing.

PARALLELOGRAM, in Geometry, a Quadrilateral Figure, whoſe oppoſite Sides are *parallel*, and conſequently equal to each other. See QUADRILATERAL.

A *Parallelogram* is generated by the equable Motion of a right Line always parallel to itſelf. See FIGURE.

When the *Parallelogram* has all its four Angles right, and only its oppoſite Sides equal, it is call'd a *Rectangle* or oblong. See RECTANGLE.

When the Angles are all right, and the Sides equal, it is called a *Square*. See SQUARE. If all the Sides be equal, and the Angles unequal, it is call'd a *Rhombus* or *Lozange*. See RHOMBUS.

If both the Sides, and Angles be unequal, it is call'd a *Rhomboides*. See RHOMBOIDES.

Properties of the PARALLELOGRAM.

In every *Parallelogram*, what Kind ſoever it be of, *E. gr.* that A B C D *Tab. Geometry Fig.* 39. A Diagonal D A divides it into two equal Parts; the Angles diagonally oppoſite B C, and A D, are equal, the oppoſite Angles of the ſame Side C D, and A B, &c. are, together, equal to two right Angles; and each two Sides, together, greater than the Diagonal.

Two *Parallelograms* A B C D, and E C D F on the ſame or equal Baſe C D, and of the ſame Height A C, or between the ſame Parallels A F, C H are equal. Hence two Triangles C D A and C D F on the ſame Baſe, and of the ſame Height, are alſo equal. Hence, alſo, every Triangle C F D is half a *Parallelogram* A C D B, upon the ſame or an equal Baſe C D, and of the ſame Altitude, or between the ſame Parallels. Hence alſo a Triangle is equal to a *Parallelogram*, having the ſame Baſe, and half the Altitude, or half the Baſe and the ſame Altitude. See TRIANGLE.

Parallelograms, therefore, are in a given Ratio, compounded of their Baſes and Altitudes. If then the Altitudes be equal, they are as the Baſes, and converſly.

In ſimilar *Parallelograms* and Triangles, the Altitudes are proportional to the homologous Sides; and the Baſes are cut proportionably thereby. Hence, ſimilar *Parallelograms* and Triangles are in a duplicate Ratio of their homologous Sides, as alſo of their Altitudes, and the Segments of their Baſes: They are, therefore, as the Squares of the Sides, Altitudes, and homologous Segments of the Baſes.

In every Parallelogram, *the Sum of the Squares of the two Diagonals, is equal to the Sum of the Square of the four Sides.*

This Propoſition, M. *de Lagny*, takes to be one of the moſt important in all Geometry; he even ranks it with the celebrated 47th of *Euclid*, and with that of the Similitude of Triangles; and adds, that the whole firſt Book of *Euclid* is only a particular Caſe hereof. For, if the *Parallelogram* be not rectangular, it follows that the two Diagonals are equal; and, of conſequence, the Square of a Diagonal, or which comes to the ſame Thing, the Square of the Hypothenuſe of a right Angle, is equal to the Squares of the two Sides. If the *Parallelogram* be not rectangular, and, of conſequence, the two Diagonals be not equal; which is the moſt general Caſe; the Propoſition becomes of vaſt Extent. It may ſerve, for Inſtance, in the whole Theory of compound Motions, &c.

There are three Manners of demonſtrating this Problem; The firſt by Trigonometry, which requires 21 Operations; the ſecond Geometrical and Analytical; which requires 15. M. *de Lagny* gives a more conciſe one, in the *Memoirs, de l' Acad.* which only requires 7. See DIAGONAL.

To find the Area of a rectangled Parallelogram, A B C D.

Find the Length of the Sides A B, and A C; multiply A B into A C; the Produce will be the Area of the *Parallelogram*. Suppoſe *E. gr.* A B to be 345; A C 123. The Area will be 42435.

Hence 1. Rectangles are in a Ratio compounded of their Sides A B and A C. 2. If, therefore, there be three Lines continually proportional; the Square of the middle one is equal to the Rectangle of the two Extremes: and if there be four proportional Lines; the Rectangle under the two Extremes is equal to that under the two middle Terms. See RECTANGLE.

Other *Parallelograms*, not rectangular, have their Areas found by reſolving them, by Diagonals, into two Triangles; and adding the Areas of the ſeparate Triangles into one Sum. See TRIANGLE,

Centre of Gravity of a *Parallelogram*. See CENTRE OF GRAVITY. See alſo CENTROBARYC *Method*.

PARALLELOGRAM, or PARALLELISM, or PARALLELOGRAMIC *Protractor*, is a Machine uſed for the ready and exact Reduction or Copying of Deſigns, Schemes, Prints, &c. in any Proportion; which is done hereby without any any Knowledge or Habit of Deſigning.

The *Parallelogram* is alſo called *Pentagraph*. See its Deſcription and Uſe under the Article PENTAGRAPH.

PARALOGISM, in Logic, a falſe Reaſoning; or a Fault committed in a Demonſtration, when a Conſequence is drawn from Principles that are falſe, or not proved; or when a Propoſition is paſs'd over, which ſhou'd have been proved by the Way.

A *Paralogiſm* differs from a *Sophiſm*, in this, that the *Sophiſm* is made out of Deſign and Subtlety; and the *Paralogiſm* out of Miſtake, and for Want of a ſufficient Light and Application. See SOPHISM.

Yet the Meſſieurs *de Port-Royal* don't ſeem to make any Difference between them. None of the Pretenders to the Quadrature of the Circle but have made *Paralogiſms*. See QUADRATURE.

PARALYSIS, in Medicine, a Diſeaſe popularly call'd *Palſy*. See PALSY.

The *Paralyſis* only differs from the *Pareſis* as the greater from the leſs. See PARESIS.

Authors diſtinguiſh the *Paralyſis* into a *Paraplegia*, or *Paraplexia*, *Hemiplegia*, and, *particular Paralyſis*.

The firſt is a Palſy of the whole Body. See PARAPLEGIA. The ſecond, of one Side of the Body. See HEMIPLEGIA. The third of ſome particular Member, which is the proper *Palſy*.

The Word *Paralyſis* is form'd from the *Greek* παραλύω, I unbind; This Diſeaſe being ſuppoſed to unbend the Nerves, and Muſcles. Hence

PARALYTIC, a Perſon affected with the *Paralyſis* or *Palſy*. See PALSY, &c.

PARAMETER, in Geometry, a conſtant right Line, in ſeveral of the Conic Sections; call'd alſo *Latus rectum*. See LATUS RECTUM.

In a *Parabola* V B V *Tab. Conics Fig.* 9. the Rectangle of the *Parameter* A B, and any Abſciſſe, *E. gr.* B 3, and Semi-ordinate 3 III. See PARABOLA.

If all the Sides, and Angles of a Quadrilateral Figure be equal, it is called a Square; which ſome make a Species of *Parallelogram*, others not. See SQUARE.

In an Ellipſis and Hyperbola, the *Parameter* is a third Proportional to to the conjugate and tranſverſe Axis. See ELLIPSIS, &c. HYPERBOLA.

PARAMOUNT, in our Law, ſignifies the ſupreme Lord of the Fee. See LORD and FEE.

There may be a Tenant to a Lord, that holdeth himſelf of another Lord; the former Lord is called Lord *Meſne*; and the other, Lord *Paramount*. But even the Term Lord *Paramount*, is only comparative: for as one Man may be great, compared to a leſs, and little, being compared with a greater; So none ſimply ſeems to be Lord *Paramount* but the King, who is Patron *Paramount* to all the Benefices in *England*. See KING. PATRON, &c.

PARAMESE, in the antient Muſic, the ninth Chord or Sound in the *Diagramma* or Scale of Muſic. See DIAGRAMMA.

The Word is *Greek*, and ſignifies *juxta mediam*, next to the Middle; its Situation in the firſt State of the Scales, being next the Meſe or middle Chord. See CHORD.

PARANYMPH, PARANYMPHUS, among the Antients, the Perſon who waited on the Bride, and directed the Nuptial Solemnities; called alſo *Auſpex*, becauſe the Ceremony begun with taking *Auſpices*.

In ſtrictneſs, however, the *Paranymph* only officiated on the Part of the Bridegroom; on the Part of the Bride, 'twas a Woman officiated, call'd the *Pronuba*.

The *Jews* had likewiſe a Kind of *Paranymphs*, which the *Talmud* and the *Rabbins* call שושבים *Schuſchebim*, *q. d.* Companions of the Spouſe. The IVth Council of *Carthage* appoints, that, when the married Couple come to ask the Prieſt's Bleſſing, they be preſented, either by their Fathers and Mothers, or by the *Paranymphs*.

PARAPET, in Fortification, a Defence or Skreen, on the Outſide of a Rampart, raiſed ſix or ſeven Foot high, to cover the Soldiers and the Cannon from the Enemy's Fire. See DEFENCE.

Parapets are raiſed on all Works, both within and without the Place; and even on the Approaches. See WORK.

The *Parapet Royal*, or that of the Rampart, is to be of Earth, Cannon-proof, from 18 to 20 Foot thick. See RAMPART. Before the *Parapet* is a *Banquette*, or little Eminence, a Foot and half high, for the Soldiers to ſtand on. See BANQUETTE.

The *Parapet* of the Wall is of Stone. The *Parapet* of the Trenches is either made of the Earth dug up, Gabions, Faſcines, Sacks of Earth, or the like.

The *Parapet* of the Corridor is the *Glacis* or *Eſplanade*. See ESPLANADE.

PARAPET, is alſo a little Wall, breaſt-high, rais'd on the Brinks of Bridges, Keys, or high Buildings; to ſerve as a Stay; and prevent People's tumbling over.

Borel gives us, from *Joſ. Maria Subreſius*, a curious Collection of Names, which the Antients and Moderns have given to this Kind of *Parapets*: The *Latins* called them *Subarræ*, and *Baſtiæ*, whence the Names *Baſtion* and *Baſtile*. They alſo called them *Pagineumata Loricæ*, and *Antemuralia*. The *Spaniards* called them *Barbacanes*; the *Italians*, *Parapetti*, becauſe of their defending the Breaſt, *petto*; whence our *Parapet*.

PARAPH, a particular Character, Knot, or Flouriſh, which People habituate themſelves to make always in the ſame Manner at the End of their Name, to prevent their Signature from being counterfeited. See CYPHER.

The *Paraph* of the Kings of *France* is a Grate, which the Secretaries always place before their own, in all Letters, &c. *Menage* derives the Word from *Paragraphus*.

PARAPHERNALIA, or PARAPHERNA, in the Civil Law, thoſe Goods which a Wife brought her Husband, beſides her Dower, and which were ſtill to remain at her Diſpoſal, excluſive of her Husband; unleſs there were ſome particular Proviſion made to the contrary, in the Marriage Contract. See DOWER.

In his *Rebus quas extra Dotem Mulier habet & quas Græci παραφέρνα vocant, nullam, Uxore prohibente, Vir habeat communionem.* Cod. *de pactis.*

The grand Cuſtomary of *Normandy*, gives a different Senſe to the Word: It calls *Paraphernalia* the Moveables, Linnen, and other Female Neceſſaries, which are adjudged to the Wife, in prejudice of the Creditors, when ſhe renounces the Succeſſion of her Husband.

The Word is form'd from the *Greek* παρὰ beyond, or over, and φερνὴ *Dos*, Dower.

PARAPHIMOSIS, in Medicine, a Diſorder of the *Penis*, wherein the Prepuce is ſhrunk, and withdrawn behind the Glans, ſo as not to be capable of being brought to cover the ſame. See PREPUCE and GLANS.

This happens oftenеſt in venereal Diſorders, where the Humours of a Gleet frequently prove ſo ſharp, as to cauſe this Retraction. There ſometimes ariſes a Neceſſity in this Caſe to ſnip or cut the Prepuce open, otherwiſe the Humours will be pent up under it, and do a great deal of Miſchief. See PHIMOSIS.

PARAPHRASE, an Explication of ſome Text in clearer and more ample Terms, whereby we ſupply what the Author might have ſaid or thought on the Subject.

Colometius looks on *Eraſmus*'s *Paraphraſes* on the New Teſtament, as ſuch extraordinary Works, that he makes no ſcruple to declare, he thinks the Author to have been divinely inſpired, when he penn'd 'em.

Chaldee PARAPHRASE, is a Phraſe frequent among the Critics and Divines. There are three *Chaldee Paraphraſes* on the *Pentateuch*. That of *Onkelos*, which ſome take to be the ſame with *Aquila*: And which others take to have been that *Onkelos* which the Talmudiſts, in the Treatiſe *Gittin*, make a Nephew of the Emperor *Titus*. See PENTATEUCH.

The ſecond is a *Paraphraſe* of *Jonathan*; the third is called the *Targum* of *Jeruſalem*. See TARGUM.

The *Chaldee Paraphraſe* on the Prophets is of *Jonathan* Son of *Uziel*, whom ſome confound with *Theodotion*.

The Author of the *Chaldee Paraphraſe* on the Hagiographic Books is unknown. Some attribute it to one *Joſeph*, ſurnamed the *Squinter*; others to *Rabbi Akilas*. Others ſay, there is ſo much Difference in the Style, that no one Perſon can have been the Author.

PARAPHRENESIS, or PARAPHRENETIS, or PARAPHRENITIS, in Medicine, a Kind of Phrenzy, the Cauſe whereof was attributed, by the Antients, to an Inflammation of the Ventricle, the Liver, and eſpecially the Diaphragm. See PHRENZY.

They alſo called it a *Pſeudo Phreneſis*, falſe Phrenzy, to diſtinguiſh it from the true one, which they made to conſiſt in an Inflammation of the Brain and its *Meninges*.

The Moderns don't make any ſuch Diſtinction in Phrenzies: They all come from the ſame Cauſe; but that Cauſe is neither an Inflammation of the Brain, nor of the Diaphragm. See MANIA, MELANCHOLLY, &c.

Paraphrenitis, among the modern Phyſicians, is an Inflammation of the *Mediaſtinum*, or *Pleura*, about the Diaphragm, attended with a continual Fever, and exquiſite Pain in the Parts affected, on contracting the abdominal Veſſels, as alſo a *Delirium* and ariſing of the *Hypochondria*.

PARAPLEGIA, or PARAPLEXIA, in Medicine, a Species of *Paralyſis*, or Palſy, uſually ſucceeding an Apoplexy. See PALSY and APOPLEXY.

The *Paraplegia* is a general Palſy, affecting the whole Body, the Head alone excepted. *Boerhaave* defines it an Immobility of all the Muſcles below the Head, that have Nerves from the *Cerebrum* and *Cerebellum*.

Sometimes, Senſation as well as Motion are deſtroyed hereby; ſometimes only one of them.

Its Original is uſually ſuppoſed to be ſome Diſorder, or Obſtruction in the fourth Ventricle of the Brain, or in the Beginning of the ſpinal Marrow.

Etmuller diſtinguiſhes the *Paraplegia* from the *Paralyſis*. The *Paralyſis*, according to him, is a Relaxation and Reſolution of the Ligaments and Members miniſtring to Motion; not from any Obſtruction of the Nerves, but from a Reſolution of the nervous Parts: Whereas the *Paraplegia* ariſes from ſome Obſtruction of the Nerves.

The latter uſually ſucceeds an Apoplexy, Epilepſy, Convulſions, Vertigo's; the former, the *Scorbutus*, Hypochondrical Diſeaſe, Colic, &c.

The Word comes from the *Greek* παρὰ much, and πλήττειν to ſtrike.

PARAPLEXIA, in Medicine. See PARAPLEGIA.

PARASANG, an antient *Perſian* Meaſure, different at different Times, and in different Places; ſometimes it is 30, ſometimes 40, and ſometimes 50 *Stadia* or Furlongs. See MEASURE and STADIUM.

The Word, according to *Littleton*, has its Riſe from *Paraſch Angarius*, *q. d.* the Space a Poſt-man rides from one Station, *Angaria*, to another.

PARASCENIUM, or *Poſtſcenium*, among the *Romans*, was a Place behind the Theatre, whither the Actors withdrew to dreſs, undreſs, &c. See THEATRE.

PARASCEVE, the ſixth Day of the laſt Week of *Lent*, popularly, *Good-Friday*.

St. *John* ſays our Saviour was crucified on the *Paraſceve* of the Paſſover, *i. e.* on the Eve or *Day of Preparation* of the Paſſover: For *Iſidore* and *Papias* obſerve, that the Word in the original *Greek* ſignifies *Preparation*, and was applied among the *Jews* to *Friday*, becauſe on that Day they uſed to prepare what was neceſſary for the Celebration of the *Sabbath*. See PASSOVER.

Hence what our Tranſlation of the new Teſtament renders Preparation of the Sabbath, M. *Simon*, and ſome others call *Paraſceve*. See PREPARATION.

PARASELENE, in Phyſiology, *Mock-Moon*, a Meteor, or Phænomenon, encompaſſing the Moon, in form of a luminous Ring; wherein is ſometimes obſerv'd one, ſometimes two apparent Images of the Mooon.

The *Paraſelenes* are form'd after the ſame Manner as the *Parhelia*, or Mock-Suns. See PARHELION.

The Word is form'd from the *Greek* παρὰ near, and σελήνη Moon.

PARASITE, PARASITUS, among the *Greeks*, was originally a very reputable Title; the *Paraſites* being a King of Prieſts, or at leaſt Miniſters of the Gods; in the ſame manner, as at *Rome* were the *Epulones*. See EPULONES.

They took care of the *ſacred Corn*; or the Corn deſtined for the Service of the Temples and the Gods, *viz.* Sacrifices,

Feasts, &c. They had even the Intendance over Sacrifices, and took care they were duly performed.

At *Athens* there was a Kind of College of twelve *Parasites*; each People of *Attica* furnishing one; who was always chosen out of the best Families.

Polybius adds, that *Parasite* was also an honourable Name among the antient *Gauls*; and was given to their Poets.

PARASITES, or PARASITAICAL Plants, in Botany, a Kind of diminutive Plants, growing on Trees, and so called from their Manner of living and feeding, which is altogether on others. See PLANT.

Such is Moss, which was antiently supposed the Effect of a Derangement of the Texture of the Bark; or a Kind of Rust; or, at most, little Filaments arising from the Bark: But from many Observations of the Moderns, it appears, that Mosses are real Plants, whose Seed is exceedingly fine, and inclosed in very little *Capsulæ*; which bursting of themselves, the Seed is driven by the Wind, and, at length, detained in the Inequalities of the Barks of Trees; where it takes Root and is fed at the Expence thereof. See Moss.

Of these Mosses M. *Vaillant* reckons no less than 137 Species, all in the Neighbourhood of *Paris*; which, with the Lichens and Misleto's, make the *Genus* of the *Parasite* Plants. See MISLETO, &c.

The most pernicious of these *Parasites*, to the Trees that support 'em, are the Lichens; which appear on the Barks of Trees, in Form of a Crust, mix'd with Yellow and a dirty White. See DISEASE *of Plants*.

M. *de Ressons* gives us a Remedy for this Disease, in the *French* Memoirs of the *Acad. Roy.* It consists in making an Incision thro' the Bark to the very Wood, from the first Branches to the Earth; the Bark closes again in a little Time; and always preserves itself clean and free from Mosses for the future.

This Aperture renders the Course of the Sap more free, and prevents the Forming of those Inequalities so favourable to the Production of Mosses. The Incision, he adds, is to be made from *March* to the End of *April*; and on that Side turn'd most from the Sun.

PARASOL, a little Moveable, in manner of a Canopy, bore in the Hand to screen the Head from the Sun, Rain, &c. more usually called *Umbrella*.

'Tis made of Leather, Taffety, Oil-Cloth, &c. mounted on a Stick, and open'd or shut at Pleasure, by Means of Pieces of Whale-bone that sustain it.

The *East Indians* never stir out without a *Parasol*.

The Word is *French*: that used against Rains is sometimes called *Parapluie*.

PARASTATA, in the antient Architecture, an Impost, or Kind of Anta or Pilaster, built for the Support of an Arch. See ANTA.

Mr. *Evelyn* makes the *Parastata* expresly the same with Pilaster. See PILASTER. *Daviler*, the same with *Impost*. See IMPOST.

PARASTATÆ, or *Epididymidæ*, in Anatomy, are two tuberous, varicose Bodies, lying upon, and adhering to, the upper Part of the Testicles; whereof they properly appear to be a Part; tho' different from the rest, in Form and Consistence. See TESTICLE.

The *Parastatæ* consist, like the Testicles, of a Convolution of seminal *Tubuli*, mix'd with Blood-Vessels; the Difference between 'em lying only in this, that, in the *Parastatæ*, the *Tubuli* are united into one; the various Convolutions of which, being more firmly bound together by a strong Membrane, arising from the *Tunica Albuginea*, it feels more compact than the Testicles. See SEED, SPERMATIC, &c.

The *Parastatæ* and Testicles are said to be enclosed in three proper Membranes; the first *Musculous*, derived from the Cremaster Muscle; the second, called the *Vaginalis*; the third, the *Albuginea*. See each under its proper Article.

PARASYNANCHE, in Medicine, a Kind of Angina or Squinancy, wherein the exterior Muscles of the Throat are inflamed. See SQUINANCY.

The Word comes from παρὰ, συν ἄγχειν to suffocate.

PARATHESIS, in the *Greek* Church, the Prayer which the Bishop rehearses over the Catechumens, stretching his Hands over 'em to give 'em Benediction; which they receive, bowing the Head under his Hands.

PARATHESIS, in Grammar, a Figure whereby two or more Substantives are put in the same Case. See FIGURE.

PARATILMUS, in the antient *Greek* Jurisprudence, a Name given to the Punishment imposed on Adulterers who were poor and unable to stand the common Penalty.

It consisted either in making 'em run a Horse-Radish up the *Anus*; which they called ἀποῤῥαφανίδωσις; or in tearing up the by Roots, the Hair about the Fundament, &c. which they called παρατιλμος of παρατιλλᾶν, to tear, pluck up.

PARATITLES, PARATITLA, in Jurisprudence, short Notes, or Summaries of the Titles of the Digest, and Code; which have been made by several Lawyers, in order to compare, and examine the Connection of the several Parts with one another.

We have *Paratitles* of *Cujas*, of *Maran*, &c. *Chassaneus* has a second Comment on the *Paratitles* of *Cujas*.

PARAVAIL, in Law, the lowest Tenant; or he that is immediate Tenant to the Land. See TENANT.

He is called *Tenant Paravail*; because it is presumed he hath Profit and *Avail* by the Land.

PARAZONIUM, or *Scipio*, among Medallists, a Scepter, rounded at the two Ends in Manner of a Truncheon or Commander's Staff; or a Kind of Poniard or short Sword; represented as wore at the Girdle, on several antient Medals.

Antiquaries are much divided on the Explication of the *Parazonium*; as, indeed, the Form and Manner of bearing it are very different. It is sometimes thrown a-cross the Shoulders in Manner of a Quiver.

PARBOILING, in Pharmacy, &c. a Term applied to Fruits, Herbs, &c. which are boiled a little while, to draw out the first Juices, to be afterwards inspissated or thickened. See BOILING.

PARCÆ, *Destinies*, Goddesses, who, according to the antient *Pagan* Theology, preside over the Lives of Men.

These the Antients frequently confounded with the *Fates*, or *Destinies*; and, in effect, the *Parcæ*, according to *Plato*, were the Daughters of *Necessity*, and *Destiny*. See FATE and DESTINY.

The *Parcæ* were three, *Clotho*, *Lachesis*, and *Atropos*; because, forsooth, all Things have their Beginning, Progress, and End.

Hence the Poets tell us, the *Parcæ* spun Men's Lives; that *Clotho* held the Distaff, and spun the Thread; *Lachesis* turned the Wheel; and *Atropos* cut it.

The Antients represent the Destinies divers Ways: *Lucian*, in the Shape of three poor old Women, having large Locks of Wool, mix'd with Daffodils on their Heads; one of which holds a Distaff, the other a Wheel, and the third a Pair of Scissars, wherewith to cut off the Thread of Life. Others represent them otherwise; *Clotho* appearing in a long Robe of divers Colours, wearing a Crown upon her Head, adorned with seven Stars, and holding a Distaff in her Hand; *Lachesis* in a Robe full of Stars, with several Spindles in her Hands; and *Atropos* clad in black, cutting the Thread with large Scissars.

The Antients imagined that the *Parcæ* used white Wool for a long and happy Life; and black, for a short and unfortunate one.

PARCEL-MAKERS, two Officers in the Exchequer, that make the Parcels of the Escheator's Accounts, wherein, they charge them with every Thing they have levied for the King's Use, within the Time of their Office, and deliver the same to one of their Auditors of the Court to make an Accompt with the Escheator thereof. See ESCHEATOR.

PARCENERS, *quasi Parcellers*. See CO-PARCENERS.

PARCHMENT, in Commerce, &c. Sheep's or Goat's Skin prepared after a peculiar Manner, which renders it proper for several Uses; particularly for writing on and covering of Books, &c.

The Word comes from the *Latin Pergamenum*, the antient Title of this Manufacture; which 'tis said to have took from the City *Pergamos*, to one of the Kings whereof its Invention is ascribed.

Parchment is begun by the Skinner, and ended by the *Parchment*-Maker. It makes a very considerable Article in the *French* Commerce: 'Tis made in most of their Cities; and, besides the Consumption at Home, they send vast Quantities abroad; particularly to *England*, *Flanders*, *Holland*, *Spain*, and *Portugal*.

That call'd *Virgin Parchment*, and which superstitious People believe to be made of a Kind of Caul, wherein some Children are inclosed in the Womb; is nothing but a somewhat thinner and finer Sort than the rest, proper for certain Purposes, as Fans, &c. and made of the Skin of an abortive Lamb, or Kid.

Manufacture of PARCHMENT.

The Skin having been stripp'd of its Wool, and pass'd the Lime-Pit; (*after the Manner described under the Article* CHAMOIS.) The Skinner stretches it on a Kind of Frame, consisting of four Pieces of Wood, mortais'd into each other at the four Angles, and perforated lengthways from Distance to Distance, with Holes, furnished with wooden Pins that may be turned at Pleasure, like those of a Violin.

To stretch the Skin on this Frame, they make little Holes all around it, and thro' every two Holes draw a little Skewer; to this Skewer they tie a Piece of small Packthread, and tie that over the Pins; so that coming to turn the Pins equally, the Skin is strained tight every Way, like that of a Drum.

The Skin being thus sufficiently stretch'd on the Frame; the Flesh is par'd off with a sharp Instrument for the Purpose; this done, 'tis moistened with a Rag, and a Kind of white Stone or Chalk, reduced to a fine Dust, strew'd over it; then with a large Pumice-Stone, flat at Bottom, much after the Manner of a Mullet for grinding Colours, they rub over the Skin as if about to grind the Chalk; and thus scower off the Remains of the Flesh. They then go over it again with the iron Instrument; again moisten it as before, and again rub it with

the Pumice-Stone without any Chalk underneath; this ſmooths and ſoftens the Fleſh-Side very conſiderably. They drain it again, by paſſing over it the iron Inſtrument as before.

The Fleſh-Side thus drain'd, they paſs the Iron on the Wool, or Hair-Side; then, ſtretch it tight on the Frame by means of the Pins, and go over the Fleſh-Side again with the Iron; this finiſhes its draining; and the more the Skin is drained, the whiter it ever becomes.

They now throw on more Chalk, ſweeping it over with a a Piece of Lamb-ſkin that has the Wool on; this ſmooths it ſtill further, and gives it a white Down or Nap. 'Tis now left to dry, and when dried, taken off the Frame, by cutting it all round.

The Skin, thus far prepared by the Skinner, is taken out of his Hands by the Parchment-Maker; who firſt ſcrapes or pares it dry on the Summer, with an iron Inſtrument like that above-mentioned, only finer and ſharper; with this, work'd with the Arm from Top to Bottom of the Skin, he takes away about one Half of its Thickneſs. The Skin, thus, equally pared, on both Sides, they paſs the Pumice-Stone over both Sides, to ſmooth it. This laſt Preparation is perform'd on a Kind of Form or Bench cover'd with a Sack ſtuffed with Flocks, and leaves the Parchment in a Condition for writing on.

The paring of the Skin dry on the Summer, is the moſt difficult Preparation in the whole Proceſs of *Parchment*-making, for which Reaſon the Skinners ſeldom dare meddle with it; but uſually leave it to thoſe more experienced in it: The Summer, whereon it is performed, is a Calf-Skin well ſtretch'd on a Frame, ſerving as a Support to the Skin which is faſten'd a-top of it with a wooden Inſtrument, that has a Notch cut in it. Laſtly, that the iron Knife may paſs the eaſier, between the Summer and the Skin to be pared, they put another Skin which they call the Counter-Summer. The Parings thus taken off the Leather, are uſed in making Glue, Size, &c. See GLUE, &c.

What we call *Vellom* is only *Parchment* made of the Skins of abortive Calves, or at leaſt of ſucking Calves; 'tis finer, whiter, and ſmoother than the common *Parchment*; but is prepared in the ſame manner as that, abating that 'tis not paſs'd thro' the Lime-Pit.

PARCO *fracto*, in Law, a Writ that lies againſt him who violently breaks open a Pound, and takes out Beaſts thence, which, for ſome Treſpaſs done, were lawfully impounded. See POUND.

PARDON, in Law, a Remiſſion, or Forgiveneſs of a felonious, or other Offence againſt the King.

This our Lawyers make twofold; the one, *ex Gratia Regis*, the other, *per Cours de Ley*. The firſt is that, which the King out of ſome ſpecial Regard to the Perſon, or ſome other Circumſtance, grants by his abſolute Perogative or Power. The other is that he grants, as the Law and Equity perſuades, for a ſlight Offence; as Homicide Caſual, &c.

PARDON, in the Canon Law, is an Indulgence which the Pope grants to ſuppoſed Penitents, for Remiſſion of the Pains of Purgatory, which they have merited for the Satisfaction of their Sins. See INDULGENCE.

The grand Time for the Diſpenſation of *Pardons* is the *Jubilee*. See JUBILEE.

In this Senſe, *Pardon* is properly the Angelic Salutation, ſaid to the Virgin at the Sound of three little Strokes of a Bell, rung in the Morning, Noon, and Night, in order for the Perſon to be entitled to Indulgences.

PARDONERS, in our antient Cuſtoms, were Perſons who carried about the Pope's Indulgences, and ſold 'em to the higheſt Bidders. See INDULGENCE.

PAREGORICKS, in Medicine, Remedies which aſſwage Pain; the ſame with what we otherwiſe call *Anodynes*, and *Opiates*. See ANODYNE and OPIATE.

The Word is *Greek* παρηγορικα.

PARELCON, in Grammar, a Figure, whereby a Word, or Syllable, is added to the End of another.

PARELIA, or *Parhelia*, in Phyſiology. See PARHELIA.

PAREIRA BRAVA, the Root of a Plant growing in the *Weſt-Indies*; chiefly *Mexico* and *Brazil*; eſteem'd a Specific for the Cure of the Stone and Gravel.

The Name, which in the original *Portugueze*, ſignifies *Wild-Vine*, or *Baſtard Vine*, bears a good deal of Analogy to the Plant, which bears Branches loaden with Leaves perfectly like thoſe of the Vine; and which, like them, creep along Walls and Trees.

The *Portugueze* value this Root on an equal footing with the *Ipecacuanha*. Some Druggiſts call it, by Corruption, *Parada Brava*.

M. *Geoffroy* attributes the Efficacy of this Root, in Nephritic Caſes, to its diſſolving the viſcid Matters, whereby the Particles of the Sand, &c. were cemented together: And hence, he gives it with the ſame Intention in Jaundices, Aſthma's, &c. It is given in Decoction.

The *Portugueze* hold it alſo a Remedy for Dyſenteries, Quinzies, Bites of venomous Beaſts, &c.

PARENCHYMA, or PARENCHYMOUS *Fleſh*, in Anatomy, a Term uſed for the peculiar Subſtance of ſeveral Parts of the Bodies of Animals, as the Heart, Lungs, Liver, Spleen, Kidnies, &c. thus called from the *Greek* παρεγχυμα, Effuſion, *q. d.* generated by a Collection and Condenſation of Juice. See FLESH.

Eraſiſtratus firſt gave the Name; as imagining the Subſtance of theſe Parts not to be Vaſcular like the reſt, but to conſiſt of a Maſs or *Coagulum* of Blood, ſtagnated in the Veſſels of the Parts: But the Moderns reject this Opinion: The Obſervations made by Microſcopes, Injections, &c. clearly ſhewing, that the Heart is a true Muſcle, (*See* HEART) the Lungs and Spleen, Cluſters of membranous Veſicles, and Veſſels (*See* LUNGS *and* SPLEEN) and the Liver and Kidnies, Compoſitions of Glands, thro' which the Bile and Urine are filtrated. See LIVER and KIDNIES.

PARENCHYMA *of a Plant*. Dr. *Grew* gives the Name *Parenchyma* to the *Pith* or *Pulp*; or that inner Part of the Plant, thro' which the Juice is ſuppoſed to be diſtributed. See PLANT, PITH, &c.

This, when view'd with a Microſcope, appears to reſemble Marrow; or rather a Spunge; being a porous flexible dilatable Subſtance. See MEDULLA.

Its Pores are innumerable, and exceedingly ſmall; receiving as much Humour as is requiſite to fill and extend them; which Diſpoſition of Pores it is, that is ſuppoſed to fit the Plant for Vegetation and Growth. See VEGETATION.

The *Parenchyma* is white, at firſt, but changes its Colour, in Proportion as the Root grows thicker. Thus it becomes yellow in the Root of the Baſtard Rhubarb, and red in that of the Snake-weed. See PLANT.

PARENT, a Term of Relation, applicable to thoſe from whom we immediately receive our Being. See FATHER and MOTHER.

PARENTALE, *de Parentale ſe tollere*, in the antient Cuſtoms, ſignified a Renunciation of one's Kindred, and Family.

This was done in open Court, before the Judge, and in the Preſence of twelve Men, who made Oath, they believed it was done for a juſt Cauſe.

We read of it in the Laws of *Hen.* I. after ſuch Abjuration, the Perſon was incapable of inheriting any Thing from any of his Relations, &c.

PARENTALIA, in Antiquity, funeral Obſequies; or the laſt Duties paid by Children to their deceaſed Parents. See OBSEQUIES.

PARENTHESIS, in Grammar, a Number of Intercalary Words, inſerted in a Diſcourſe; which interrupt the Senſe, or Thread, but which ſeem neceſſary for the fuller underſtanding of the Subject.

The Word is form'd of the *Greek* παρὰ *inter*, between, and ἐνθέσις Poſition, *q. d. put between*.

The politeſt of our modern Writers avoid all *Parentheſes*; as keeping the Mind in ſuſpence, embarraſſing it, and rendering the Diſcourſe leſs clean, uniform and agreeable: Long and frequent *Parentheſes* are intolerable; eſpecially in Verſe, which they ever render dull, and languid, and like to Proſe.

The proper Characteriſtic of a *Parentheſis*, is that it may be either taken in, or left out, the Senſe and Grammar remaining entire.

In Speaking, *Parentheſes* are to be pronounced with a different Tone; and in writing, are incloſed between ( ); to diſtinguiſh them from the reſt of the Diſcourſe.

The Character itſelf is alſo called a *Parentheſis*. See CHARACTER.

PARERE, in Commerce, an *Italian* Term which begins to be naturalized. It ſignifies the *Advice* or *Counſel* of a Merchant or Negotiant; for that ſuch a Perſon, being conſulted on any Point, introduces his Anſwer, in *Italian*, with *Mi pare*, i. e. *I think*, *it ſeems to me*.

The Method of Negotiating, eſpecially, that of Bills of Exchange, being borrowed from the *Italians*, moſt trading Cities, eſpecially *Lyons*, retain the Uſe of *Pareres*; which are the Advices or Opinions of Merchants and Negotiants; and which ſerve as Acts before Notaries, when given by Authority of a Judge-Converſator, or at a particular Conſultation, for maintaining the Right of the Conſulter.

M. *Savary* has an excellent Treatiſe, intitled, *Parere, ou Avis & Conſeils ſur les plus Importantes Matieres du Commerce*; Containing the Reſolution of the moſt difficult Queſtions relating to Bankrupts and Failures, Bills of Exchange, Orders without Dates or Expreſſion of Value, Blank-ſignings, Renewing of Bills of Exchange, thoſe drawn or accepted by Women in Behalf of their Husbands, or during the Minority of the Drawer, &c.

PARERGA, a Term ſometimes uſed in Architecture, for Additions, or Appendages, made, by way of Ornament, to a principal Work.

It is ſometimes alſo uſed in Painting for little Pieces, or Compartiments on the Sides, or in the Corners of the principal Piece.

PARESIS, in Medicine, a Diſeaſe call'd alſo *Paralyſis* and *Palſy*. See PARALYSIS, &c.

PARGETING, in Building, is uſed for the Plaiſtering of Walls; ſometimes for the Plaiſter itſelf. See PLAISTER.

Pargeting is of various Kinds; as, 1. White Lime and Hair Mortar laid on bare Walls. 2. On bare Laths, as in partitioning and plain Cieling. 3. Rendring the Infides of Walls or double Partition-Walls. 4. Rough-caſting on Hearth-Laths. 5. Plaiſtering on Brick-work, in Imitation of Stone-work; and the like upon Hearth-Laths.

PARHELIUM, PARHELION, or PARELION, in Phyſiology, *Mock-Sun*, a Meteor, in Form of a very bright Light, appearing a-ſide of the Sun; form'd by the Reflexion of his Beams in a Cloud properly poſited. See METEOR.

The *Parhelia* uſually accompany the *Coronæ*, or large Crowns; are placed in the ſame Circumference, and at the ſame Height. Their Colours reſemble thoſe of the Rain-bow; the Red and Yellow on the Side towards the Sun; and the Blue and Violet on the other. See RAINBOW.

Tho' there are *Coronæ* ſometimes ſeen entire, without any *Parhelia*; and *Parhelia* without *Corona*. See CORONA.

In the Year 1629. was ſeen at *Rome* a *Parhelion* of five Suns; and in 1666. another at *Arles* of ſix.

The Word is form'd from the *Greek* παρὰ *juxta*, near, and ἥλιος *Sol*, Sun.

M. *Mariotte* accounts for the Appearance of *Parhelia*, from an Infinity of little Parcels of Ice floating in the Air, which multiply the Image of the Sun, either by refracting and breaking his Rays, and thus making him appear where he is not; or by reflecting 'em, and ſerving as Mirrors. See MIRROR, &c.

The known Laws of Reflexion and Refraction have given a Handle for Geometrizing on theſe *Phænomena*; and M. *Mariotte* has determined the preciſe Figure of the little Icicles, and their Situation in the Air, the Size of the *Coronæ* or Circles which accompany the *Parhelia*, and the Colours wherewith they are painted, by a Geometrical *Calculus*.

Mr. *Huygens* accounts for the Formation of a *Parhelion*, in the ſame Manner, as for thoſe of the *Halo*, *viz.* by ſuppoſing a Number of ſmall icy Cylinders, with opaque Kirnels, carried in the Air, neither in a perpendicular nor parallel Direction, but inclined to the Horizon in a certain Angle, nearly half a right one.

To make the Effect of theſe Cylinders manifeſt, M. *Huygens* produced to the Academy of *Paris*, a glaſs Cylinder a Foot long, with an opaque Cylinder of Wood in the Middle, and the ambient Space fill'd with Water and tranſparent Ice; which Cylinder being expoſed to the Sun, and the Eye put in the requiſite Situation, there were ſucceſſively ſeen all the Refractions and Reflections, neceſſary for the *Phænomena* of the *Parhelia*. See HALO.

PARIETALIA *Oſſa*, in Anatomy, the third, and fourth Bones of the *Cranium*; ſo called, becauſe they form the *Parietes*, or Sides of the Head. See CRANIUM.

Their Subſtance is finer and thinner than that of the *Coronal* and *Occipital*. Their Figure is ſquare; their Size ſurpaſſes that of the other Bones of the Head; and their Situation, in the lateral Parts, which they poſſeſs entirely.

The *Sagittal Suture* connects them at the upper Part; the *Coronal* joins their Fore-part to the *Os Frontis*; the *Lambdoidal* joins them by the Hind-part to the *Occipital* Bone; and, laſtly, the ſquammous *Suture* joins them by the Lower-part to the *Oſſa Petroſa*.

The outer Surface of theſe Bones is very ſmooth and poliſh'd; the inner, rough and uneven; full of Impreſſions, which the Arteries of the *Dura Mater* have made by their continual Pulſation before they were oſſified.

PARIETES, *Sides*, in Anatomy, a Term uſed for the *Incloſures*, or Membranes, that ſtop up or cloſe the hollow Parts of Bodies, eſpecially thoſe, of the Heart, the *Thorax*, and the *rus*. See HEART, THORAX, &c.

The *Parietes* of the two Ventricles of the Heart are of unequal Strength and Thickneſs, the left exceeding the right, becauſe of its Office, which is to force the Blood thro' all Parts of the Body; whereas the right only drives it thro' the Lungs. See VENTRICLE, &c.

PARISH, the Precinct or Territory of a *Pariſh* Church. See CHURCH. See alſo PAROCHIAL.

In the antient Church, there was one large Building in each City, for the People to meet in; and this they call'd *Pariſh*. But the Signification of the Word was afterwards enlarged, and by *Pariſh* was meant a Dioceſe, or the Juriſdiction of a Biſhop, conſiſting of ſeveral Churches; unleſs we will ſuppoſe, as ſome do, that thoſe Biſhops were only Paſtors of ſingle Churches. See DIOCESE and BISHOP.

At leaſt, the Word now retains its original Meaning.

Du-pin obſerves, that Country *Pariſhes* had not their Origin before the IVth Century; but thoſe of Cities are more antient. The City of *Alexandria* is ſaid to have been the firſt that was divided into *Pariſhes*. *Baronius* ſays, that in the Time of Pope *Cornelius*, there were 46 *Pariſhes* in *Rome*.

The Diviſion of *England* into *Pariſhes*, is attributed to *Honorius* Archbiſhop of *Canterbury*, in 636. *Cambden* reckons 9284 *Pariſhes* in *England*. *Chamberlayn* makes, at preſent, 9913.

The Word comes from the Latin *Parochia*, of the *Greek* παροικία.

Du Cange obſerves, that the Name παροικία was antiently given to the whole Territory of a Biſhop, and derives it from Neighbourhood; becauſe the Primitive Chriſtians, not daring to aſſemble openly in Cities, were forced to meet ſecretly in Neighbour-houſes.

PARISH-*Prieſt*; the Parſon, or Miniſter who holds a *Pariſh* as a Benefice. See PARSON.

If the predial Tythes be appropriated, the Parſon is called *Rector*. See RECTOR. If they be impropriated, he is call'd *Vicar*. See VICAR.

PARISIS, a Money of Account; formerly a real Money; ſtruck at *Paris*; at the ſame Time with the *Tournois*, ſtruck at *Tours*. See MONEY and COIN.

The *Pariſis* exceeded the *Tournois* by one Fourth; ſo that the *Livre* or Pound *Pariſis* was 25 *Sols*; and the *Livre Tournois* 20. The *Sols* and *Deniers*, *Pariſis*, &c. in Proportion. See LIVRE, SOL, &c.

PARK, an Incloſure ſtock'd with wild Beaſts, *tam Sylveſtres*, *quam Campeſtres*; ſay our old Lawyers.

Crompton obſerves, that a Subject may hold a *Park* by Preſcription, or the King's Grant, which he can't do a Foreſt. See FOREST.

A *Park* differs from a *Chaſe* or *Warren*; for that a *Park* muſt be encloſed; if it lie open, it is a good Cauſe of ſeizing it into the King's Hand; as a free Chaſe may be, if it be encloſed. Nor can the Owner have any Action againſt ſuch as hunt in his *Park*, if it lie open. See CHASE.

Du Cange refers the Invention of *Parks* to King *Henry* I. of *England*: But *Spelman* ſhews, 'tis much more antient; and was in uſe among the *Anglo Saxons*.

Zozimus aſſures us, the antient Kings of *Perſia* had *Parks*.

The Word is originally *Celtic*, where it ſignifies an Incloſure, or Place ſhut up with Walls.

PARK is alſo uſed for a moveable Paliſſade ſet up in the Fields to incloſe Sheep in to feed, during the Night.

The Shepherds ſhift their *Park*, from Time to Time, to dung the Ground, one Part after another.

PARK is alſo uſed for a very large Net, diſpoſed on the Brink of the Sea, with only one Hole which looks towards the Shore; and which becomes dry, after the Flood is gone off; ſo that the Fiſh has no Way left to eſcape.

PARK, in War, or *Park of the Artillery*, a Poſt in a Camp, out of Cannon Shot; where the Cannon, artificial Fires, Powder, and other warlike Ammunition are kept, and guarded, by Pike-men only, to avoid all Caſualties that might happen by Fire. Every Attack, at a Siege, hath its *Park* of Artillery.

PARK of Proviſions, is another Place in a Camp, on the Rear of every Regiment, which is taken up by the Sutlers, who follow the Army with all Sorts of Proviſions, and ſell them to the Soldiers.

PARLEY, a Conference with an Enemy, &c. of the *French Parler* to ſpeak, talk.

Hence to *beat* or *ſound a Parley*, is to give a Signal for the holding of ſuch a Conference by Beat of Drum, or Sound of Trumpet.

PARLIAMENT, a Grand Aſſembly, or Convocation, of the Three Eſtates of the Kingdom, *viz.* *Lords Spiritual*, *Lords Temporal*, and *Commons*, ſummoned to meet the King, to conſult of Matters relating to the Common-weal; and particularly to enact and repeal Laws. See ESTATE.

The two Houſes of *Parliament* are the King's Grand Council. See COUNCIL.

'Till the Conqueſt, the great Council, conſiſting only of the great Men of the Kingdom, was call'd *Magnatum Conventus*, and *Prelatorum procerumque Concilium*. The *Saxons*, in their own Tongue, call'd it *Wittenagemote*, *i. e.* Aſſembly of the Wiſe.

After the Conqueſt, about the Beginning of the Reign of K. *Edw.* I. Some ſay, in the Time of *Hen.* I. it was called *Parlementum*, q. d. *Speeckment*, from the *French*, *Parler*, to ſpeak; tho' it ſtill only conſiſted of the great Men of the Nation: Till in the Reign of *Hen.* III. the Commons were alſo called to ſit in *Parliament*: The firſt Writs ſent out to ſummon them bore Date 49 *Hen.* III. *Anno* 1217.

Parliaments are to be ſummoned, prorogued, and diſſolved by the King alone: Nor can a *Parliament* begin without the King's Preſence. See KING.

At firſt new *Parliaments* were call'd every Year: By degrees their Term grew longer. In the Time of King *Charles* II. they were held a long Time with long Interruptions between. Both which were found of ſo ill Conſequence, that in the Beginning of the Reign of K. *William*, an Act was paſſed, whereby the Term of all *Parliaments* was reſtrained to three Seſſions, or three Years; hence call'd the *Triennial Act*. Since that, from other Views, the Period of *Parliaments* is again, 3 *Georgii*, lengthen'd to ſeven Years.

A *Parliament* is call'd by the King's Writ, or Letter, directed to each *Lord*, commanding them to appear; and, by other Writs, directed to the Sheriffs of each County, to ſummon the People to elect two *Knights* for each County, and one or two *Burgeſſes* for each Borough, &c.

Antiently, all the People had Votes in the Elections; till it was enacted by *Hen.* VI. That none but Freeholders, reſiding in the County, and who had a yearly Revenue of 40 *s.* ſhould

be admitted to vote; nor were any to be elected that were under 21 Years of Age.

That the Members might attend in *Parliament* with more Freedom, they, and all their menial Servants, were privileged from all Arrests, Attachments, Imprisonments, &c. for Debts, Trespasses, &c. *eundo, morando ad propria Redeundo*; but not from Arrests for Treason, Felony, and Breach of Peace.

The Place where the *Parliament* meets, is wherever the King pleases; of late, it has been in the Palace of *Westminster*; the Lords and Commons each in distinct Apartments. In the Lord's House the Princes of the Blood are placed in distinct Seats; the great Officers of State, Dukes, Marquisses, and Bishops on Forms; and the Viscounts and Barons on others across the House; all according to their Order of Creation, Place, &c. See PRECEDENCY.

The Commons sit promiscuously; only the Speaker has a Chair at the upper End; and the Clerk and his Assistant a Table near him. Before any Matters be done, all the Members of the House of Commons take the Oaths, and subscribe their Opinions against Transubstantiation, &c. which Test, the Lords too, tho' they don't take the Oaths, are obliged to take.

The House of Lords is the sovereign Court of Justice of the Realm, and the Dernier Resort: The House of Commons the grand Inquest, but no Court of Justice. See PEERS and COMMONS.

As to the Manner of debating and passing Bills in Parliament; Any Member may move to have a Bill brought in for any thing, which, upon a Question put, being agreed to by a Majority, that Person with others are ordered to prepare and bring in the same. When ready, a Time is appointed for a Reading: after reading it by the Clerk, the Speaker reads the Abstract thereof, and puts the Question, whether or no it shall have a second Reading? after a second Reading, the Question is, whether or no it shall be *committed*? which is either to a Committee of the whole House, if it be of Importance; or to a private Committee, any Member naming the Persons. See COMMITTEE.

The Committee appointed, and a Chairman chosen, the Chairman reads the Bill, Paragraph by Paragraph, puts every Clause to the Question, fills up Blanks, and makes Amendments, according to the Opinion of the Majority. The Bill thus gone thro', the Chairman makes his Report at the Sidebar of the House, reads all the Additions and Amendments, &c. and moves for Leave to bring up the Report to the Table; which granted, he delivers it to the Clerk, who reads the Amendments, &c.

The Speaker then puts the Question, whether they shall be read a second Time; and, if agreed to, reads them himself. To so many as the House acquiesces in, the Question is now put, whether the Bill, thus amended, shall be engross'd and writ fair in Parchment, and read a third Time? The Bill engross'd, the Speaker holds it in his Hand; and asks if it shall pass? If the Majority be for it, the Clerk writes on it, *Soit baille aux Seigneurs*. Or, in the House of Lords, *Soit baille aux Communes*.

If a Bill be rejected, it cannot be any more more proposed during that Session. See BILL.

Forty Members constitute a *House of Commons*, and eight a *Committee*. A Member of the Commons, to speak, stands up, uncovers, and directs his Speech to the Speaker only. If what he says be answered by another, he is not allowed to reply the same Day, unless personally reflected on. Nor may any Person speak more than once to the same Bill in the same Day.

In the Lord's House they vote, beginning at the Puisn or lowest Baron, and so up orderly to the highest, every one answering a-part, *Content* or *Not Content*. In the House of Commons, they vote by *Yea*'s and *Nay*'s; and if it be dubious, which is the greater Number, the House divides. If the Question be about bringing any Thing into the House, the *Ay*'s go out; if it be about any the House already has, the *No*'s go out. In all Divisions, the Speaker appoints four Tellers, two of each Opinion. In a Committee of the whole House, they divide by changing Sides, the *Ay*'s taking the right, the *No*'s the left of the Chair, and then there are but two Tellers.

If a Bill pass one House, and the other demur at it, a Conference is demanded in the Painted Chamber, where certain Members are deputed from each House; and here the Lords sitting cover'd, the Commons standing bare, the Case is debated. If they disagree, the Affair is null; if they agree, this, with the other Bills that have passed both Houses, is brought down to the King, in the House of Lords, who comes thither cloath'd in the Royal Robes and with the Crown on, before whom the Clerk of the *Parliament* reads the Title of each Bill, and as he reads, the Clerk of the Crown pronounces the Royal Assent or Dissent.

If it be a public Bill, the Royal Assent is given by these Words, *Le Roy le veut*. If a private one, by *Soit fait comme il est desire*. If the King refuses the Bill, the Answer is, *Le Roy s' avisera*. If it be a Money Bill, the Answer is, *Le Roy remercie ses Loyaux Sujets, accepte leur Benevolence & aussi le Veut*.

The Bill for the King's general Pardon has but one Reading. The Number of Members in the House of Lords is uncertain; as increasing at the King's Pleasure. The Members of the House of Commons, when full, are 552, *viz.* 92 Knights of Shires; 52 Deputies for the 25 Cities, *London* having 4; 16 for the 8 Cinque Ports; 2 for each University; and, finally, 332 for 180 Boroughs, beside 12 Boroughs for *Wales*, and 45 Members for *Scotland*.

PARLIAMENT is sometimes also used for other Assemblies beside those of the States of the Realm. Thus we read that the Abbot of *Creyland* was used to call *Parliaments* of his Monks, to consult of the Affairs of the Monastery: And, at this Day, an Assembly of the two Temples, called to consult of their common Affairs, is called a *Parliament*. See TEMPLE.

PARDIAMENTS *of France*, are Courts or Assemblies establish'd by the King, to judge of the Differences between particular Persons, and to pronounce on Appeals from Sentences given by inferior Judges. See COURT.

There are ten of these Parliaments in *France*. That of *Tholouse*, establish'd in 1303: That of *Dison*, in 1476: That of *Grenoble*, in 1453: That of *Rouen*, in 1499: That of *Rennes* in *Bretagne*, in 1553: That of *Bourdeaux*, in 1502: That of *Aix*, in 1501: That of *Metz*, in 1633: That of *Pau* in *Bearn*, in 1519: And that of *Paris*.

The *Parliament* of *Paris* is the Principal, and that whose Jurisdiction is of the greatest Extent. This is the chief Court of Justice throughout the Realm. It consists of six Chambers: the grand Chamber, where Causes of Audience are pleaded; and five Chambers of Inquests, where Processes are adjudged in Writing. See CHAMBER.

Under their second Race of Kings, the *Parliament*, like that of *England*, was the King's Council; gave Audience to Ambassadors, and consulted of the Affairs of War and Government.

The Kings, like ours, presided in 'em, without being, at all, Masters of their Resolution. But, in after Times, their Authority has been abridg'd, the Kings having reserv'd the Decision of the grand Affairs of the Public to their own Councils; leaving none but private ones to the *Parliaments*.

PARLIAMENTUM *Indoctorum*, a Denomination given to a *Parliament* held at *Coventry*, 6 *Hen.* IV. whereunto, by special Precept to the Sheriffs of the several Counties, no Person skill'd in the Law was to be called.

PARLIAMENTUM *Insanum*, was a *Parliament* held at *Oxford*, *An.* 41 *Hen.* III. thus call'd, say our Chronicles, because the Lords came with great Retinues of armed Men to it; and many Things were violently transacted therein, against the King's Prerogative.

PARLIAMENTUM *Diabolicum*, was a *Parliamentum* held at *Coventry*, 38 *Hen.* VI. wherein *Edward* Earl of *March* afterwards King, and several others, were attainted. The Acts pass'd herein were annull'd by the succeeding *Parliament*.

PARLIAMENTUM *de la Bonde*, was a *Parliament* in *Edward* II'ds Time, whereto the Barons came armed against the two *Spencers*, with colour'd Bands on their Sleeves for Distinction.

PARLOIR, PARLOUR, in Nunneries, a little Room, or Closet, where People talk to the Nuns, thro' a Kind of grated Window.

The Word is formed from the *French Parler*, to talk; and hence also our *Parlour*.

Antiently, there were also *Parlours* in the Convents of Monks, where the Novices used to converse together, at the Hours of Recreation; but there were listening Places over, from whence the Superiors cou'd hear what they said; such a one there still subsists in the Abbey St. *Germain de Prez*.

In the Order of *Feuillans*, the *Parlour* is a little Room open on all Sides, placed at each End of the Dormitory, where the Monks talk together, it not being allow'd them to speak in the Dormitory.

PARMA, among Antiquaries, a Kind of antient Buckler. See BUCKLER.

Polybius describes the *Parma* as very strong, round, three Foot in Diameter, and big enough to cover the whole Body; Yet *Servius*, on the *Æneid*, and even *Virgil* himself mention it as a light Piece of Armour, in Comparison of the *Clypeus*. See SHIELD.

PARMESAN. See PADUAN.

PAROCHIAL, something belonging to a *Parish*. See PARISH.

Every Church is either Cathedral, Collegiate, or *Parochial*. See CHURCH.

Cathedral is where there is a Bishop's See, or Seat, call'd *Cathedra*. *Collegiate*, consists either of regular Clerks, professing some religious Order; or of Dean and Chapter. See CATHEDRAL, COLLEGIATE, &c.

Parochial Church is that instituted for the performing of divine Service to the People who dwell within a certain Compass of Ground.

PARODY, a popular Maxim, Adage or Proverb. See PROVERB.

The Word is form'd from the *Greek* παρὰ and ὁδὸς, *Via*, Way, as being trite, or passing among the People.

PARODY, is also a poetical Pleasantry, consisting in applying the Verses of some Person, by Way of Ridicule, to another; or

in

in turning a ſerious Work into Burleſque, by affecting to obſerve, as nearly as poſſible, the ſame Rhimes, Words, and Cadences. See BURLESQUE.

The *Parody* was firſt ſet on foot by the *Greeks*; from whom we borrow the Name. It comes near to what ſome of our late Writers call *Traveſty*. See TRAVESTY.

PARODICAL *Degrees*, in an Equation, the ſeveral regular Terms in a Quadratic, Cubic, or Biquadratic Equation, &c. The Indices of whoſe Powers aſcend or deſcend orderly in an arithmetical Progreſſion. See EQUATION.

Thus, $Z+^3 Z^2 M+Zr=S$ is a Cubic Equation where no Term is wanting, but having all its *Parodic* Degrees; the Indices of the Terms regularly deſcending thus 3, 2, 1, 0. *Harris.*

PAROL, in Law, is ſometimes uſed in antient Writers for a *Plea* in Court. See PLEA.

Leaſe-PAROL, or *per Parol*, is a Leaſe by Word of Mouth; thus call'd to diſtinguiſh it from one in Writing. See LEASE.

PAROLE, in War, &c. when a Priſoner of War is allow'd to go into his own Country, or to his own Party, upon his *Word* and Promiſe to return at a Time appointed, if not exchang'd, he is ſaid to be out upon *Parole*, *i. e.* upon his *Word*.

PAROLI, in Gaming, the double of what was laid at Stake before; hence, *to offer the Paroli*, &c.

PAROEMIA, a Proverb. See PROVERB.

The Word is form'd from the *Greek* οἶμος Way; *quaſi* παρὰ οἰμὸν *juxta viam*, i. e. *tritam*; or from οἶμη Word.

PARONOMASIA, in Rhetoric, a Figure whereby Words nearly alike in Sound, but of very different Senſes are affectedly uſed.

As, not *Friends* but *Fiends* were here: So *Tully* to *Anthony*, *cum in Gremio Mimarum* mentem & mentum *deponeres*: And to *Atticus*, *Conſul ipſe* parvo *Animo* & pravo, facie *magis quam* facetiis *ridiculus*. And that of *P. Chryſologus*; *Monachorum Cellulæ jam non* Eremeticæ *ſed* Aromaticæ. And in another Place, *Hoc agant in* Cellis *quod Angeli in* Cœlis.

Among the *Greeks* the *Paronomaſia* was very familiar. Thus *Herodotus* παθήματα, μαθήματα, *quæ nocent, docent.*

And thus that Inſcription of *Apollodorus* a celebrated Painter, on one of his Pieces.

Μωμήσεται τίς μᾶλλον ἢ μιμήσεται

'Twill be eaſier to deride, than to imitate.

The Word is form'd from the *Greek* παρὰ near, and ὄνομα Name, *q. d. Proximity* or Reſemblance of two *Names*.

PARONYCHIA, *Whitloe*, in Medicine, a painful Kind of Tumor, or Inflammation, ariſing on the Ends of the Fingers, and the Roots of the Nails; otherwiſe called *Panaris*. See PANARIS.

The Humour or Matter of the *Paronychia* is ſometimes ſo ſharp as to corrode the Tendons, Nerves, *Periоſteum*, and even the Bone itſelf.

It is lodged either between the Integuments, or between the *Periоſteum* and Bone. The deeper the more dangerous.

The Word is derived from the *Greek* παρὰ and ὀνύξ *Unguis*, Nail.

PAROTIDES, in Anatomy, two big Glands, ſituate behind the two Ears; and filling all the Space between the poſterior Angle of the under Jaw, and the maſtoidal *Apophyſis*. See GLAND and EAR.

They are of the Conglomerate Kind, and by divers excretory Ducts, which, at laſt, coaleſce into one Trunk, diſcharge a Humour ſeparated in 'em from the arterious Blood, called *Saliva*, into the Mouth, by two Veſſels formed of ſeveral Branches uniting at the Iſſue of theſe Glands, and which run along the Cheek to the third Grinder. See SALIVA & SALIVAL.

The Word is form'd from the *Greek* παρὰ near, and οὖς Ear.

PAROTIDES, in Medicine, Tumors or Inflammations ariſing behind the Ears, on the *Parotid* Glands.

Parotides are very frequent after malignant and peſtilential Fevers: Children are particularly liable to 'em. They are to be treated like *Bubo*'s. See BUBO.

PAROXYSM, in Medicine, the ſevere Fit of a Diſeaſe which grows higher, or exaſperates as the Gout, &c.

It is ſometimes alſo uſed for the Acceſs or Return of a Diſeaſe that intermits, as an Ague. See ACCESS.

The Word is form'd from the *Greek* παρὰ much, and ὀξὺς acute.

PARRICIDE, in Strictneſs, is the Murther, or the Murtherer of a Father; as *Matricide* is of a Mother.

The Word *Parricide* is alſo ordinarily extended to both. See MURTHER.

The *Romans*, for a long Time, had no Law againſt *Parricides*; from an Opinion, nobody could be ſo wicked as to kill his Parents. *L. Oſtius* was the firſt, who killed his Father, 500 Years after *Numa*'s Death; and then the *Pompeian* Law was made, which ordain'd, that the Perſon, convicted of this Crime, after he had been firſt whipp'd till the Blood came, ſhould be tied up in a leathern Sack, together with a Dog, an Ape, a Cock, and a Viper, and ſo thrown into the Sea, or the next River.

PARRICIDE is alſo uſed in the General for the Murther of any near Relation, as a Husband, Wife, Brother, Siſter, Child, Grandchild, &c. and even to that of great ſacred Perſons, tho' no Way allied in Blood, as a King, &c. See TREASON.

PARRYING in Fencing, the Action of defending a Man's ſelf, or of ſtaving off the Strokes, &c. offer'd him by another. See FENCING.

Good Fencers puſh and parry at the ſame Time. See GUARD.

The *Spaniards* parry with the Poniard. The Antients parried with their Bucklers. See PARADE.

PARSON, the Incumbent of a Pariſh Church. See PARISH.

He is ſaid, by ſome, to be thus called by Way of Eminence; the Revenues of a Church being deſtined to maintain *magnam Perſonam*; or, as ſome will have it, becauſe he is bound by Virtue of his Office, *in propria Perſona ſervire Deo*, whence *imperſonare*, in old Charters, is to put in Poſſeſſion of a Parſonage, &c.

Or as others, becauſe the original *Parſons*, *Perſonæ*, were, in reality, only Dignitaries, and poſſeſs'd Benefices which gave them ſome *Perſonal* Pre-eminence in the Church or Chapter, but no Power. See PARSONAGE.

Or, laſtly, as others, becauſe the *Parſon*, for his Time, repreſents his Church, and ſuſtaineth the *Perſon* thereof, as well in ſuing, as being ſued in any Action touching the ſame.

Some diſtinguiſh between a *Rector* and a *Parſon*: The *Rector*, ſay they, is where the Vicaridge is endow'd; and the *Parſon*, *Perſona*, where the Parſonage is without a Vicaridge: But the Diſtinction ſeems newand ſubtle; *Bracton* apparently uſes Rector and *Parſon*, as ſynonymous. See RECTOR.

Formerly he who had a Church by Inſtitution and Induction, only for his own Life, was call'd *Parſon Mortal*: But any Collegiate, or Conventual Body, to whom the Church was for ever appropriated, was call'd *Parſon Immortal*.

Some again make a Diſtinction between *Perſona*, *Parſon*, ſimply, and *Parſon*, *Imparſonee*, *imperſonated*: The *Parſon Imperſonee* is the Rector in Poſſeſſion of a PariſhChurch, whether Preſentative or Impropriate, and with whom the Church is full. *Parſon*, *Perſona*, ſimply, they contend, is properly the Patron, or he that has the Right of Preſentation; call'd *Parſon*, by reaſon, before the *Lateran* Council, he had a Right to the Tithes, in reſpect of his Liberality, in erecting or endowing the Church, *quaſi ſuſtineret Perſonam Eccleſiæ*.

But 'tis certain, that in the *Regiſter of Writs*, *Perſona imperſonate* is uſed for the Rector of a Benefice Preſentative: And in *Dyer*, a Dean and Chapter are ſaid to be *Parſons imperſonee's* of a Benefice appropriated to them. So that *Perſonata* ſeems only chang'd into *Imperſonata*, in reſpect of the Poſſeſſion of the Benefice. See *Coke on Litt. fol.* 300.

PARSONAGE, in its Original, among us, and at this Day, in other Countries, is a Benefice which gives ſome Prerogative or Pre-eminence in a Church or Chapter, but without any Juriſdiction. See BENEFICE.

The ancient *Parſonages* gave a little Honour and Dignity as to the Perſon, but no Power: Whence, apparently, the Name, intimating the Effect of the Dignity to be reſtrain'd to the Perſon, *Perſona*, *Parſon*. Such are ſtill the Chanteries in ſeveral Churches, and the Sub-Chanteries in others.

Some as *Olrade*, &c. extend the Word *Parſonage* to *Dignity*, and comprehend under it the Archdeacons, Deans, &c. in Cathedrals; but this ſeems ſtraining the Senſe of the Word.

In effect, the Doctors uſe the Term very differently: Some applying it to all who have any Prerogative in the Choir, or the Chapter, over theother Canons, either in Options, Suffrages, Elections, or barely in Place and Proceſſion; thus confounding it with Dignity; while others apply it to ſimple Rectors, &c. See DIGNITY.

PART, a Portion of ſome Whole, conſidered as divided, or as diviſible. See WHOLE and DIVISION.

Quantity is diviſible into an infinite Number of *Parts*: Not equal *Parts*, but proportional ones. See DIVISIBILITY.

Philoſophy is divided into four *Parts*, *viz.* Logicks, Ethicks, Phyſicks and Metaphyſicks. See PHILOSOPHY, &c.

The Schoolmen uſually diſtinguiſh *Parts* into *Logical* and *Phyſical*.

A *Logical Part*, is that referring to ſome univerſal as its Whole; in which Senſe the Species are the *Parts* of a *Genus*; and Individuals, or Singulars, *Parts* of the Species. See GENUS, &c.

A *Phyſical Part* is that, which, tho' it enter the Compoſition of a Whole, may yet be conſider'd a-part, and under its own diſtinct Idea: And, in this Senſe, a *Continuum* is ſaid to conſiſt of *Parts*.

'Tis controverted in the Schools, whether the *Parts* of a *Continuum* or PhyſicalWhole, *E. gr.* Water, do exiſt actually before the Diviſion be made, or only potentially.

Phyſical Parts, again, are of two Kinds; *Homogeneous*, and *Heterogeneous*; the firſt are thoſe of the ſame Denomination with ſome other; the ſecond of a different one. See HOMOGENEOUS, &c.

Parts, again, are diſtinguiſh'd into *Subjective*, *Eſſential*, and *Integrant*.

A *Subjective* or *Potential Part*, is the ſame with a *Logical* one, *viz.* that contain'd in ſome univerſal Whole, not in Act, but only in Power; as Man and Horſe are in Animal; *Peter* and *Paul* in Man.

An *eſſential Part* is that, whereby, with the Concurrence of ſome other, an eſſential Whole is conſtituted. Thus Body and Soul are eſſential *Parts* of Man.

An *integrant* or *integral Part* is that which is neceſſary to the Integrity of the Whole; as a Head is of a Man, &c.

In Anatomy, we divide the *Parts* of the human Body into *Containing* and *Contained*; into *Similar* and *Diſſimilar*; the *Similar*, again, into *Spermatic* and *Sanguin*, &c. See SIMILAR, &c.

They alſo call *Noble* or *Eſſential Parts*, thoſe abſolutely neceſſary to Life, as the Heart, Lungs, Liver, Brain, &c.

The *Natural* or *Genital Parts*, popularly call'd *Privy Parts*, are thoſe miniſtring to Generation. See GENERATION.

The fineſt Books of Phyſicians are thoſe treating of the *Uſe of the Parts*. Nature, we ſay, always diſcharges itſelf on the *weak Part*, the *diſeaſed Part*, the *Part affected*, &c.

In Chymiſtry, Bodies are ſaid to be reſolved into their *minute Parts*, their *Component Parts*, &c. See CHYMISRTY, ANALYSIS, ELEMENT, &c.

That Art is ſaid to ſeparate the *Homogeneous Parts* from the *Heterogeneous*; Volatile, ſubtile, ſulphureous, mercurial &c. *Parts*, from the fix'd, craſs, earthy, viſcid &c. *Parts*. See VOLATILE, FIX'D.

In *Geometry* and *Aſtronomy*, *Part* is applied to the Diviſions of Lines, and Circles: The Semi-diameter of the Circle, call'd alſo the Radius and whole Sine is divided into an hundred thouſand *Parts*; the Circumference of the Circle into 360 *Parts*, or *Degrees*; on which two Diviſions all the Celeſtial Computations are made. See DEGREE, &c.

Aliquot PART, is a Quantity which, being repeated any Number of Times, becomes equal to an Integer; thus 6 is an *aliquot Part* of 24; and 5 an *aliquot Part* of 30, &c. See ALIQUOT. See alſo a Table of *Aliquot* and *Aliquant Parts*, under the Article MULTIPLICATION.

Aliquant PART, is a Quantity which, being repeated any Number of Times becomes always either greater or leſs, than the Whole. Thus 5 is an aliquant *Part* of 17; and 9 an aliquant *Part* of 10, &c. See ALIQUANT.

The aliquant *Part* is reſolvable into aliquot *Parts*. Thus 15, an aliquant *Part* of 20, is reſolvable into 10 a half and 5 a fourth *Part* of the ſame. See a Table of the *aliquant Parts* of a Pound under MULTIPLICATION.

Proportional PART is a *Part* or Number agreeable and analogous to ſome other *Part* or Number; or a *Medium* to find out ſome Number or *Part* unknown by Proportion and Equality of Reaſon. See PROPORTION.

Similar PARTS are thoſe which are to one another, as their Wholes are to one another. See SIMILITUDE.

PART, in Muſic, a Piece of the Score or Partition, wrote by itſelf, for the Convenience of the Muſician; or it is one or more of the Succeſſions of Sounds which make the Harmony, wrote *a-part*. See PARTITION.

Or, the *Parts* are the Sounds made by ſeveral Perſons ſinging, or playing in Concert. See CONCERT.

Muſic in *Parts* was unknown to the Antients; they had but one *Part*; all their Harmony conſiſted in the Succeſſion of Notes; none in the Conſonance. See MUSIC and SYMPHONY.

There are four principal *Parts*; the *Treble*, *Baſs*, *Tenor*, and *Counter-tenor*. See TREBLE, BASS, TENOR, &c.

Some compare the four *Parts* in Muſic, to the four Elements: The *Baſs* repreſents the Earth; the *Tenor*, Water; *Counter tenor*, Air; and the *Treble*, Fire.

PART, in Trigonometry. In a rectangular ſpherical Triangle ABC. *Tab. Trigonometry Fig.* 22. that *Part* lying between two others, conſidered as Extremes, is call'd by ſome Authors, the *middle Part*.

Thus, if AB and BC be the extreme *Parts*, the Angle B will be the *middle Part*.

If the *Parts*, conſidered as Extremes, be contiguous to the middle *Part* and one of the Extremes; thoſe are call'd *conjunct Parts*.

Thus, if B be the middle *Part*, AB and BC will be the *conjunct Parts*.

If between the Extremes, and the middle *Part*, there lie another, beſide a Right Angle; then the *Parts* are ſaid to be *ſeparate* or a-part, *E. gr.* If B be the middle Term, AC and C will be *ſeparate Parts*; becauſe, between the middle *Part* B and the extreme C, there lies the Hypothenuſe BC; and between the middle *Part* B, and the other Extreme AC, beſide the Right Angle, there lies the Leg AB. See TRIANGLE.

Thoſe *Parts*, either join'd to the middle *Part* or ſeparated from it, are call'd *Lateral Parts*.

PARTS *of Speech*, in Grammar, are all the Sorts of Words which enter the Compoſition of a Diſcourſe. See WORD and SPEECH.

The Grammarians uſually admit of eight *Parts* of Speech, *viz. Noun*, *Pronoun*, *Verb*, *Participle*, *Adverb*, *Conjunction*, *Prepoſition* and *Interjection*. *See each in its proper Place*, NOUN, PRONOUN, &c.

PART *of Fortune*, in judiciary Aſtrology, is the Lunar Horoſcope; or the Point wherein the Moon is, at the Time when the Sun is in the aſcending Point of the Eaſt.

The Sun in the Aſcendant is ſuppoſed to give Life; and the Moon diſpoſes the radical Moiſture, and is one of the Cauſes of Fortune. In Horoſcopes, the *Part of Fortune* is repreſented by a Circle divided by a Croſs.

PARTERRE, in Gardening, that open Part of a Garden into which we enter, coming out of the Houſe; uſually, ſet with Flowers, or divided into Beds, incompaſſed with Platbands, &c. See GARDEN.

The *Parterre* is a level Diviſion of Ground, which, for the moſt Part, faces the South and beſt Front of a Houſe, and is generally furniſhed with Greens, Flowers, &c.

There are divers Kinds of *Parterres*, as *Bowling-Green* or *plain Parterres*; *Parterres of Embroidery*; *cut in Shell*, and *Scroll-work*, &c. with Sand-Allies between them.

An oblong, or long Square is accounted the moſt proper Figure for a *Parterre*; the Sides whereof, to be as two, or two and a half to one.

PARTI, PARTIE or PARTY or PARTED in Heraldry, is applied to a Shield, or Eſcutcheon, denoting it *divided*, or marked out into *Partitions*. See SHIELD.

The *French* Heralds, from whom we borrow the Word, have but one Kind of *Parti*, the ſame with our *Parti per Pale*, which they call ſimply *Parti*; but, with us, the Word is applied to all the Sorts of Partitioning; and is never uſed without ſome Addition to ſpecify the particular one intended.

Thus we have *Parti* or *Parted per Croſs*, *per Chief*, *per Pale*, *per Feſs*, *per Bend Dexter*, *per Bend Siniſter*, *per Chevron*, &c. See QUARTERING.

The Humour of our Anceſtors, *Colombiere* obſerves, turning much upon Exploits of Arms and Chivalry; they uſed to preſerve their batter'd and hack'd Armour as honourable Symbols of their hardy Deeds; and thoſe who, had been in the hotteſt Service, were diſtinguiſh'd by the many Cuts and Bruiſes that appear'd on their Shields. To perpetuate the Memory hereof, ſays the ſame Author, they cauſed them to be painted on their Shields, and thus handed down to Poſterity. And when Heraldry grew into an Art, and Officers were appointed to direct the Manner of Bearing, and Blazoning; they gave Names to thoſe Cuts, anſwerable to the Nature thereof; appointing four, from which all the others proceed: Theſe are *Parti* (in *Engliſh*, *Parti per Pale*) *Couppe* (in *Engliſh*, *Parti per Feſſe*) *Tranche* (in *Engliſh*, *Party per Bend Dexter*) and *Taille* (in *Engliſh Party per Bend Sinister*). See COUPE, TRANCHE, &c.

PARTY *per Pale*, is when the Shield has received a perpendicular Cut in the Middle, from Top to Bottom. See PALE, &c.

PARTY *per Feſſe* is when the Cut is a-croſs the Middle, from Side to Side. See FESSE.

PARTY *per bend Dexter*, is when the Cut falls on the upper Corner of the Shield on the right Hand, and deſcends a-thwart to the oppoſite lower Corner. See BEND.

PARTY *per bend Sinister*, is when the Cut, falling on the upper left Corner, deſcends a-croſs to the oppoſite lower one.

From theſe four Partitions have proceeded an infinite Number of others of various and extravagant Forms.

Spelman in his Aſpilogia obſerves, that the preſent Diviſions of Eſcutcheons were unknown in the Reign of the Emperor *Theodoſius*; were brought up in the Time of *Charlemaign*, or later; little uſed among the *Engliſh* in the Days of K. *Henry* II. but more frequently under *Edw.* III.

The erect or upright Section, he obſerves, is called, in Latin, *Palaris*, from its Reſemblance to a *Palus*, or Stake; and two Coats are often entire on the Sides, the Husbands on the Right, and the Wives on the Left. The direct Section a-croſs, being in the Place of a Belt, is call'd *Baltica*, &c.

When the Shield is *Parti*, and *Coupe*, it is ſaid to be *Ecartele*. See ECARTELE.

It is ſaid to be *Parti from the one to the other*, when the whole Shield is charg'd with ſome honourable Bearing divided by the ſame Line that parts the Shield; here, 'tis a Rule, that one Side be of Metal, and the other of Colour. Thus he bears *Sable Parti d' Argent*, *Spread Eagle Parti* from one to the other.

PARTICIPATION, that which gives us a Part, or Share in any thing, either of Right or of Grace.

In *Italy* they diſtinguiſh *Participation* Officers, as Prothonataries, &c. which have a real Function; from *honorary* ones; which have only a Title, without any Duty or Employ.

PARTICIPLE, in Grammar, an Adjective form'd of a Verb; ſo called, becauſe it participates of ſome of the Properties of the Verb; ſtill retaining the Regimen and Signification thereof: Whence moſt Authors confound 'em with *Verbs*. See VERB.

There are two Kinds of *Participles*, the one call'd *Active*, becauſe expreſſing the Subject which makes the Action of the Verb; as *legens*, *audiens*, reading, hearing: The other call'd *Paſſive*, becauſe expreſſing the Subject that receives the Action of the Verb, as *lectum*, *auditum*, read, heard.

As our Adjectives are not declined, the *Participles*, being real Adjectives, are not declined neither: In the *Latin*, &c. where the Adjectives are declined, the Pronouns Active are

declined likewiſe; thus they ſay *audiens*, *audientis*, *audienti*, &c. and in the *French* the Pronouns Paſſive are declinable like their other Adjectives, as *J'ay lu*, *elle a lue*, *nous avons lus*, &c.

We take this Occaſion to obſerve, that Declenſion is a Thing perfectly accidental to the ſeveral Kinds of Words, *i. e.* the changing or not changing the Termination: The *Latins*, *E. gr.* have indeclinable Nouns, as *Cornu* and *Nequam*, yet both *Latins* and *Italians* decline their Adverbs as *fortiter*, *fortiſſime*; *bene*, *beniſſimo*, &c. and ſome Nations ſcarce conjugate their Verbs at all. Indeed the *Engliſh* do it very littlein Compariſon with the *Latins*, *Greeks*, *French*, &c.

In our Language the *Participle* and Gerunds, are not at all diſtinguiſhable. See GERUND.

PARTICLE, in Phyſicks, the minute Part of a Body; of an Aſſemblage or Coalition of ſeveral whereof Natural Bodies are compos'd. See BODY.

Particle in the new Philoſophy, is frequently uſed in the ſame Senſe with *Atom* in the antient *Epicurean* Philoſophy; and *Corpuſcle* in the later. See ATOM and CORPUSCLE.

Some of the more accurate Writers, however, diſtinguiſh 'em; making *Particle* an Aſſemblage or Compoſition, of two or more primitive, and phyſically indiviſible Corpuſcles or Atoms; and *Body*, an Aſſemblage or Maſs of ſeveral *Particles* or ſecondary Corpuſcles. See ELEMENT.

Indeed, the Diſtinction is of no great Moment; and, as to moſt Purpoſes of Phyſicks, *Particle* may be underſtood as ſynonymous with *Corpuſcle*. *Particles*, then, are, as it were, the Elements of Bodies: 'Tis the various Arrangement, and Texture of theſe, with the Difference of the Coheſion, &c. that conſtitute the various Kinds of Bodies, *hard*, *ſoft*, *liquid*, *dry*, *heavy*, *light*, &c.

The ſmalleſt *Particles* or Corpuſcles cohere with the ſtrongeſt Attractions, and compoſe bigger *Particles* of weaker Coheſion; and many of theſe cohering compoſe bigger *Particles* whoſe Vigour is ſtill weaker; and thus on for divers Succeſſions till the Progreſſion end in the biggeſt *Particles*, whereon the Operation in Chymiſtry, and the Colours of natural Bodies depend, and which, by cohering compoſe Bodies of ſenſible Bulks. See MATTER.

The Coheſion of the Particles *of Matter*, the *Epicureans* imagined was effected by Means of hooked Atoms; the *Ariſtotelians* by Reſt, that is, by nothing at all. But Sir *Iſaac Newton* ſhews it is done by means of a certain Power whereby the *Particles* mutually attract or tend to each other. See COHESION.

By this Attraction of the *Particles* he ſhews that moſt of the *Phænomena* of the leſſer Bodies are effected; as thoſe of the heavenly Bodies are by the Attraction of Gravity.

For the Laws of this Attraction of the Particles. See ATTRACTION.

All Bodies, the ſame great Author ſhews, conſiſt of the ſame ſolid perfectly hard *Particles* or Corpuſcles.

PARTICLE, in Grammar, a little indeclinable Word, conſiſting of one or two Syllables at the moſt. See WORD, &c.

Thoſe alone are properly *Particles* which are not declined nor conjugated. *Brightland* calls *Particles*, *Manners of Words*, becauſe rather ſerving to expreſs the Circumſtances and Manners, of other Ideas and Objects of the Mind, than to repreſent any diſtinct Objects of their own.

Particles may be reduced under three Heads: The firſt ſhew the Manners or Qualities of Words, by being added to them; call'd *Adverbs*. See ADVERB.

The ſecond denote ſome Circumſtances of Actions and join Words to Words, Sentence to Sentence, &c. See CONJUNCTION.

The third expreſs the Emotions of the Soul. See INTERJECTION.

'Tis in the right Uſe of *Particles*, Mr. *Locke* obſerves, that more particularly conſiſts the Clearneſs and Beauty of a good Style. To expreſs the Dependance of his Thoughts and Reaſonings one upon anothor, a Man muſt have Words to ſhew what Connection, Reſtriction, Diſtinction, Oppoſition, Emphaſis, &c. he gives to each reſpective Part of his Diſcourſe. This cannot be rightly underſtood, without a clear View of the Poſtures, Stands, Turns, Limitations, Exceptions, and ſeveral other Thoughts of the Mind. Of theſe there are a great Variety much exceeding the Number of *Particles*, that moſt Languages have to expreſs them by; for which Reaſon it happens that moſt of theſe *Particles* have divers, and ſometimes almoſt oppoſite Significations.

Thus the *Particle But* in *Engliſh*, has ſeveral very different Significations; as in, *But* to ſay no more; where it intimates a Stop of the Mind in the Courſe it was going, before it came to the End of it. I ſaw *but* two Planets: Here it ſhews that the Mind limits the Senſe to what is expreſs'd with a Negation of all other. You pray, *but* it is not that God would bring you to the true Religion, *but* that he would confirm you in your own. The former of theſe intimates a Suppoſition in the Mind, of ſomething otherwiſe, than it ſhould be; the latter ſhews that the Mind makes a direct Oppoſition between that and what goes before. All Animals have Senſe, *but* a Dog is an Animal: Here it ſignifies the Connection of the latter Propoſition with the former.

PARTICLES is alſo a Term uſed in Theology, and particularly in the *Greek* Church, where 'tis call'd μεριδες. In the *Latin* Church the Name *Particles* is given to the Crums or little Pieces of Conſecrated Bread. In the *Greek* Church they have a particular Ceremony, call'd τῶν μερίδων, *of the Particles*, wherein certain Crums of Bread not conſecrated, are offer'd up in Honour of the Virgin, St. *John Baptiſt*, and ſeveral other Saints. They alſo give the Name προσφορὰ, *Oblation*, to theſe *Particles*. *Gabriel*, Archbiſhop of *Philadelphia*, has a little Treatiſe expreſs περὶ τῶν μερίδων, wherein he endeavours to ſhew the Antiquity of this Ceremony, in that it is mentioned in the Liturgies of St. *Chryſoſtom*, and *Baſil*.

There has been a conſiderable Diſpute on this Head, between the Reformed and the Catholick Divines. *Aubertin* and *Blondel* explain a Paſſage in the Theory of *Germain*, Patriarch of *Conſtantinople*, where he mentions the Ceremony of the *Particles* as in uſe in his Time; in Favour of the former: Meſſieurs *de port Royale* conteſt the Explanation: But M. *Simon* in his Notes on *Gabriel* of *Philadelphia*, endeavours to ſhew, that the Paſſage is an Interpolation; not being found in the antient Copies of *Germain*: And conſequently that the Diſpute is from the Purpoſe.

PARTICLE, *out of Share*, in Aſtronomy. See PARTICULA *exſors*.

PARTICULA *exſors*, in Aſtronomy, the Difference between the Æquatorial Triangle L A C, (*Tab. Aſtronom. Fig.* 32. and its Fellow, B L Z. See EQUATION.

To find the *Particula exſors*, the Menſtrual Eccentricity A C, and the Annual Augment of Longitude H A D, being given; from the *Data* in the Triangle B C A, find the Hypothenuſe A B to the Angle C; and to the Angle C A B and C B. Multiply C B into half the Menſtrual Eccentricity A C; the Product is the Area of the Triangle A C B. Find likewiſe the Area of a Circle deſcribed by the Radius of the Eccentric B L. Then as the Area of the Circle is to 360° or 1296000″; ſo is the Area of the Triangle A C B to its Value in thoſe Seconds: which Value is the *Particula exſors*.

PARTICULAR, a relative Term, referring to Species, or Individual; and oppoſed to General, or Univerſal. See GENERAL, &c.

In the Schools, *Particular* is defined to be ſomething included under an Univerſal; as Man under Animal. Sometimes it is taken for an Individual, as *Peter*. See INDIVIDUAL.

There is this Difference between *Particular*, and *Singular*, that *Particular* denotes a Thing taken as a *Part*; as *Peter* in reſpect of Mankind: Whereas *Singular* denotes the Part taken after the Manner of a *Whole*; as *Peter* conſidered in himſelf.

PARTICULARIST, among Polemical Divines, a Perſon who holds for Particular Grace, *i. e.* who teaches or believes that *Chriſt* died for the Elect only, and not for Mankind in general. See GRACE.

PARTIES, in Law, are thoſe who are named in a Deed, or Fine, as *Parties* to it; as thoſe that levy the Fine, and to whom the Fine is levied. See FINE.

So thoſe that make any Deed, and they to whom it is made, are called *Parties in the Deed*. See DEED.

PARTILE *Aſpect*, in Aſtrology, the moſt exact and full Aſpect that can be. See ASPECT.

PARTING, or DEPARTING, a Method of ſeparating Gold and Silver by Means of *Aqua fortis*. See GOLD and SILVER.

The Method hereof, ſee under the Articles DEPART and REFINING.

PARTITION, the Act of parting, or dividing, or diſtributing a Thing. See DIVISION and DISTRIBUTION.

The Name *Partitiones Oratoriæ*, is alſo given to a Dialogue of *Cicero*'s between him and his Son; in regard the Diſcourſe is, as it were, parted or divided betweeen 'em.

PARTITION, in Law, a dividing of Lands, deſcended by the Common-Law, or Cuſtom, among Co-heirs, where there are two at leaſt.

This *Partition* is made four Ways, whereof three are by *Agreement*, the fourth by *Compulſion*.

The firſt *Partition* by Agreement is, when they divide the Land equally themſelves into ſo many Parts as there are Co-heirs; the ſecond, when each chuſes ſome of their Friends to make Diviſion for them.

The third is by drawing Lots, thus: Having firſt divided the Land into as many Parts, as there are Perſons, they write every Part ſeverally in a diſtinct Scroll, and wrapping it up, throw each into a Hat, or ſuch like Thing; out of which each one draws according to his Superiority; and ſo the Land is ſeverally allotted.

The fourth *Partition*, which is by Compulſion is, when one or more of the Heirs, by Reaſon of the Refuſal of ſome other, ſues out a Writ of *Partitione facienda*; by Force whereof they ſhall be compelled to divide.

In *Kent*, where Land is of Gavel-kind Nature, they call their *Partition*, *Shifting*.

Partition alſo may be made by Joint-Tenants in common, by Aſſent, by Deed, or by Writ.

PARTITION, in Muſic, the Diſpoſition of the ſeveral Parts of a Song, ſet on the ſame Leaf; ſo as upon the uppermoſt Ranges of Lines are found the *Treble*; in another the *Baſs*; in another the *Tenor*, &c. that they may be all ſung or play'd jointly or ſeparately. See PART, MUSIC, *&c.*

PARTITION, in Architecture, that which divides or ſeparates one Room or Apartment from another.

PARTITION, in Heraldry. See QUARTERING.

PARTNER, and PARTNERSHIP. See PARCENER, and CO-PARTNER.

PARTURITION, the Act of bringing forth, or being delivered of Young. See DELIVERY.

PARTUS, in Medicine and Law, the *Delivery* of a Woman, or the Birth of a Child. See DELIVERY and BIRTH.

Cæſareus PARTUS, is that where the Mother is cut open, and the Child taken out at one Side. See CÆSAREUS.

PARTY or PARTIE, a Faction, Intereſt, or Power, conſidered as oppoſite to another. See FACTION.

The *French*, and *Spaniards* are always of oppoſite *Parties*: *England* has, for upwards of a Century, been divided into two *Parties*. See WHIG and TORY.

PARTY, in Law. See PARTIE.

PARTY, in the military Senſe, is uſed for a Body of Men, whether Cavalry, Infantry, or both, commanded out on any Expedition. A *Party* of Cavalry carried off a great Number of Cattle. Thoſe who go out on *Parties* ſhould have an Order in writing from the commanding Officer, and be at leaſt twenty in Number, if Foot, or fifteen, if Horſe; otherwiſe they are reputed as Brigands.

PARTY *Jury*, in Law. See MEDIETAS *Linguæ*.

PARTY, in Heraldry. See PARTI.

PARULIS, in Medicine, an Inflammation of the Gums, attended with a violent Pain, and an Apoſthume; ſometimes ending in an Ulcer, and ſometimes in a Cancer, Fiſtula, Gangrene, *&c.*

Sennertus orders it to be cured by Revulſion, Derivation, and proper Gargariſms. Care is to be taken in the Beginning to prevent the Apoſthume.

The Word is *Greek*, form'd of παρὰ near, and οὖλον *Gingiva*, Gum.

PASCHAL, ſomething belonging to the *Jewiſh* Paſſover, or the Chriſtian *Eaſter*. See PASSOVER. See alſo EASTER.

The *Paſchal* Lamb is a Lamb the *Jews* eat with a deal of Ceremony, in Memory of their having been brought out of Slavery in *Egypt*. It ſhou'd be eaten ſtanding, their Loins girt, the Staff in the Hand, *&c.*

PASCHAL *Rents*, are Rents or annual Duties paid by the inferior Clergy to the Biſhop, or Arch-deacon, at their *Eaſter* Viſitations: They are alſo called *Synodals*. See SYNODALS.

PASCHAL *Letter*, in Church-Hiſtory, a Circular Letter, which the Patriarch of *Alexandria*, firſt, then the Pope, anciently wrote to all the Metropolitans, to inform 'em of the Day whereon the Feaſt of *Eaſter* was to be celebrated. See EASTER.

PASQUIN, a mutilated Statue, ſeen at *Rome*, in a Corner of the Palace of the *Urſines*.

It takes its Name from a Cobler of that City, called *Paſquin*, famous for his Sneers and his Gibes; and whoſe Shop was the Reſort of a Number of idle People, who diverted themſelves with bantering Folks as they paſs'd by.

After *Paſquin*'s Death, as they were digging up the Pavement before his Shop, they found a Statue of an antient Gladiator, well cut, but maim'd and half ſpoil'd. This they ſet up, in the Place where 'twas found, at the Corner of the deceas'd Maſter *Paſquin*'s Shop; and, by common Conſent, call'd it by the Name of the Defunct.

From that Time all Satires, and Lampoons are aſcribed to this Figure, are put in its Mouth, or paſted againſt it; as if they came from *Paſquin redivivus*.

Paſquin uſually addreſſes himſelf to *Marforio*, another Statue in *Rome*; or *Marforio* to *Paſquin*, whom they make reply.

The Anſwers are uſually very ſhort, poignant, and unlucky: When *Marforio* is attack'd, *Paſquin* comes to his Aſſiſtance; and *Paſquin* is aſſiſted by *Marforio* in his Turn, *i. e.* the People make the two Statues ſpeak juſt what they pleaſe. See MARFORIO.

PASQUINADE, or PASQUIL, is, properly, a ſatyrical Libel faſtened to the Statue of *Paſquin*. See PASQUIN.

Hence, by Extenſion, the Term becomes uſed for any Satire, Lampoon, or Sneer upon the Public, or the ruling Powers.

There is this Difference between a *Paſquinade* and a *Satire*; that the End of the latter is to correct and reform; whereas that of the former is only to ſcoff and expoſe.

The *Italians* have publiſh'd ſeveral Books which they call *Paſquino in eſtaſi*.

PASS, PASSADE, in Fencing, a Leap or Advance upon the Enemy.

Of theſe there are ſeveral Kinds; as *voluntary Paſſes*, commencing from the left Foot out of Meaſure of the firm Foot; as when the Enemy is not expected. Others *neceſſary*, made after a Puſh from the right Foot; where being ſo preſs'd by the Enemy, as not to have Time to retire, you endeavour to ſeize the Guard of his Sword.

The Meaſure of the *Paſs* is, when the two Smalls of the Swords are ſo near, as that they may touch one another. There are *Paſſes*, *within*, *above*, *beneath*, *to the right*, *the left*, *Paſſes* under the Sword, over the Line, *&c.*

PASS *of Arms*, in Chivalry, a Place which the antient Knights undertook to defend, *E. gr.* a Bridge Road, *&c.* not to be paſſed without fighting the Perſons who kept them.

The Knights who held the *Paſs* hung up their Arms on Trees, Pales, Columns, *&c.* erected for the Purpoſe; ſuch as were diſpoſed to diſpute the *Paſs*, touched one of theſe Armories with his Sword; which was a Challenge the other was obliged to accept. The Vanquiſh'd gave the Victor ſuch Prize as was before agreed on.

PASS-*Port*, a Licence, or Letter from a Prince, or Governor, granting Liberty and Safe-Conduct to travel, enter, and go out of his Territories, freely and without Moleſtation.

The *Paſs-Port* is, properly, given to Friends, and the Safe-Conduct to Enemies. See SAFE-CONDUCT.

Paſquier takes *Paſſe-Port* to be uſed for *Paſſe-par-tout*. *Balſac* mentions a very honourable *Paſs-Port* given by an Emperor to a Philoſopher; in theſe Terms: *If there be any one on Land, or on Sea, hardy enough to moleſt* Artamon; *let him conſider whether he be ſtrong enough to wage War with* Cæſar.

PASS-*Port* is alſo uſed for a Licence granted by a Prince for the importing or exporting Merchandizes, Moveables, *&c.* without paying the Duties.

Merchants ſometimes procure ſuch *Paſs-Ports* for certain Kinds of Commodities; and they are always given to Embaſſadors and Miniſters, for their Baggage, Equipage, *&c.*

PASS-*Port* is alſo a Licence obtain'd for the importing or exporting of Merchandizes deem'd Contraband, and declared ſuch by Tariffs, *&c.* as Gold, Silver, pretious Stones, Ammunition of War, Horſes, Corn, Wool, *&c.* upon paying Duties.

PASS-*Parole*, a Command given in the Head of an Army, and thence communicated to the Rear; by paſſing it from Mouth to Mouth.

PASS-*par-tout*, a Maſter-key; or Key that opens indifferently ſeveral Locks belonging to the ſame Lodge or Apartment. See KEY.

PASS-*Volant*, a Fagot, or a pretended Soldier, not enroll'd, whom the Captain or Colonel makes paſs in Review, or Muſter, to ſhew that his Company is compleat, or to receive the Pay thereof to his own Profit. See FAGOT, *&c.*

In *France* the *Paſſe-volants* are condemn'd to be mark'd on the Cheek with a *Flour-de-lis*.

PASSA, or *Paſſa Uva*, in Pharmacy, a Term applied to thoſe dried Grapes, which we call *Raiſins*. See RAISIN.

Uvæ Paſſæ is ſometimes alſo uſed, with leſs Propriety, for *Figs*. See FIG.

PASSADE, or PASSADO, in Fencing, a Thruſt or Paſs. See PASS.

PASSADE, is alſo a Benevolence or Alms given to poor Paſſengers.

In the Manage, it ſignifies a Turn, or Courſe of a Horſe backwards and forwards on the ſame Plot of Ground.

PASSAGE, in Commerce, *Right of Paſſage* is an Impoſition which ſome Princes exact by their Officers or Farmers, in certain narrow cloſe Places of their Territories, either at Land or Sea; on all Veſſels, Vehicles, and Carriages of all Kinds; and even ſometimes on Perſons, and Paſſengers coming in or going out of Ports, *&c.*

The *Paſſage* of the Sound, (that famous Streight which carries us out of the *German* into the *Baltic* Sea) is the moſt celebrated *Paſſage* in *Europe*. The Rights belong to the King of *Denmark*, and are paid at *Elſenore* or *Cronembourg*.

All Nations who traffic into this Part of the North, are ſubject to this Right; the *Swedes*, indeed, were exempted from it by the Treaty of 1658, by their ſeizing the other Side of the Streight; but by the Treaty of 1720, they are excluded the Privilege; and put on the ſame Footing with their Neighbours. *Cromwell* was bent on extorting this *Paſſage* from the *Danes*; and had, doubtleſs, effected it, but that 'ere the Fleet he ſent for the Purpoſe arriv'd there, he died.

Birds of PASSAGE, are ſuch as only come at certain Seaſons, and then diſappear again; being ſuppoſed to *paſs* the Sea to ſome other Climate. See MIGRATION.

The Birds of Paſſage are the Stork, Swallow, Nightingale, Martin, Woodcock, Quail, *&c.* There are alſo *Fiſhes of Paſſage*, as Herrings, Mackerel, *&c.*

Mr. *Derham* produces it as a remarkable Inſtance of Inſtinct, that, — *the ſtork in the heavens knoweth her appointed times, and the turtle, and the crane, and the ſwallow obſerve the time of their coming* — Jer. viii. 7. No doubt, the Temperature of the Air, and their natural Propenſity to breed their Young, are the great Incentives to this Migration: But how theſe untaught, unthinking Creatures, ſhould ſo exactly know the beſt and only

ly proper Seaſons to go and come from a Place that would obſtruct their Generation, or not afford convenient Food for them and their Young; or how they ſhou'd know which Way to ſteer their Courſe, and whither to go; is a difficult Conſideration. *Phyſ. Theol.* L. VII. c. 3.

PASSAGE, or *Paſſege*, in the Manage, an Action wherein the Horſe raiſes two Legs together, a hind and a fore Leg, in Form of St. *Andrew*'s Croſs; when, ſetting thoſe two on the Ground again, he raiſes the other two; and thus alternately; never gaining above a Foot of Ground at a Time.

The Beauty of the *Paſſage* conſiſts in keeping the Legs a good while in the Air; ſetting that aſide, the Motion of the Legs in the *Paſſage* is the ſame as in pacing and trotting.

PASSAGE, in Muſic, a Portion of an Air, or Tune, conſiſting of ſeveral little Notes, as Quavers, Demi-quavers, *&c.* laſting one, two, or at moſt, three Meaſures.

Thus what the *Italians* call *contra punto d'un ſol paſſo*, is a Portion in the Beginning of the Song, conſiſting of one, two, or three Meaſures, which is to be imitated in other Notes; not with the ſame Strings or Tones, but only obſerving the ſame Motion, Number, and Figure as in the Notes of the firſt *Paſſage*; which is one of the Kinds of *contra punto perfidiato*.

PASSALORHYNCHITES, a Sect of Montaniſts in the ſecond Century; who made Profeſſion of perpetual Silence, and, the better to maintain it, kept the Thumb continually on their Lips; founding their Practice on that of the *Pſalmiſt*, *Set a guard, O Lord, on my Mouth.* St. *Jerom* mentions his having met with ſome of 'em in his Time. See MONTANISTS.

PASSANT, in Heraldry, a Term applied to an Animal in a Shield, appearing to *walk*; or, to the ordinary Poſture of terreſtrial Animals.

Thus we ſay, he bears *Gules* two *Lions Paſſants* over one another.

In moſt Beaſts, except *Lions*, they frequently uſe *Tripping*, inſtead of *Paſſant*.

PASSION, a Term underſtood of the different Motions, and Agitations of the Soul, according to the different Objects that preſent themſelves to the Senſes. See SOUL.

In Propriety, all thoſe Motions whereby the Soul is carried towards any Thing; as Love, Ambition, Revenge, *&c.* are rather Actions than *Paſſions*; and on the contrary, thoſe Motions whereby the Soul finds itſelf interrupted in its Action, as Grief, *&c.* are the only real *Paſſions*. See ACTION.

We find various Modifications and Impreſſions of Pleaſure and Pain, inſeparably annex'd by an eſtabliſh'd Law of Nature, to the ſeveral Judgments we form concerning Good and Evil: Theſe Judgments, with their reſpective Modifications of Pleaſure or Pain annex'd, according to the various Appearances and Relations of the Object conſidered, either as good or evil, preſent or abſent, certain or uncertain, probable or improbable, poſſible or impoſſible, and affecting the Machine in a certain Manner peculiar to the Modifications; make what we call the *Paſſions*.

How, or by what Means, this mutual Action and Communication between Soul and Body is effected, we are, in a great Meaſure, ignorant: We have but very obſcure and faint Notions of any Thing prior, or more ſimple to reſolve it into; except the immediate Will and Agency of the firſt Cauſe itſelf. See COMMUNICATION, CAUSE, *&c.*

Malebranch defines the *Paſſions* to be all thoſe Emotions naturally ariſing in the Soul, on occaſion of extraordinary Motions of the animal Spirits, and the Blood: In Oppoſition to thoſe Motions of the Soul which are common to us with pure Intelligences, and which he calls *Natural Inclinations*. See NATURAL *Inclination*.

Tho' the *Paſſions* be inſeparable from Inclinations; and tho' a Man be only capable of ſenſible Love or Hatred, becauſe he is capable of ſpiritual Ones; yet does it appear juſt in that Author to diſtinguiſh between them. *Paſſions* are much ſtronger and warmer than Inclinations; their Objects are different, and ſo are their Cauſes: *Paſſions* and Inclinations differ juſt as much as Senſe and Imagination.

In Effect, the *Paſſions* of the Soul are Impreſſions of the Author of Nature, which incline us to our Bodies, and all Things that may be of Uſe to their Preſervation: Natural Inclinations are Impreſſions of the Author of Nature, which determine us primarily to love him, as our ſupreme Good.

The Philoſophers are not agreed about the Number and Diviſion of the *Paſſions*: The ordinary Diviſion is thus; the *Paſſions* of the Concupiſcible Appetite, are *Pleaſure* and *Pain*, *Deſire* and *Averſion*, *Love* and *Hatred*: Thoſe of the Iraſcible Appetite, are *Anger*, *Courage*, *Fear*, *Hope*, and *Deſpair*. See the Authors on the Subject of the Paſſions; *Des Cartes*, who conſiders them phyſically; *Coeffeteau* who gives us the *Tableau*, Pictury of the *Paſſions*; *La Chambre*, the Characters of the *Paſſions*; and *Fath. Senault*, the Uſe of the *Paſſions*.

Dr. *Cheyne* conſiders the *Paſſions* as either *Spiritual* or *Animal*: The *Spiritnal Paſſions* he defines to be thoſe Sentiments produced in the Soul by external Objects, either ſpiritual Ones immediately, or material Ones, by the Mediation of the Organs of the Body.

The *animal Paſſions* he defines by thoſe Effects produced by Spirits or Bodies, immediately on the Body.

Hence as outward Objects may be conſider'd either as Goods or Evils; the moſt natural Diviſion of the *Paſſions*, whether Spiritual, or Animal, as they regard thoſe Objects, is into *Pleaſurable* and *Painful*. And in this Senſe all the *Paſſions* may be reduced to *Love* and *Hatred*; of which *Joy*, and *Sorrow*, *Hope* and *Fear*, are only ſo many Modifications, or Complexions, according to the various Appearances, Poſitions, *&c.* of the Object.

In Effect, all the *Paſſions* may not only be reduced to two, *viz. Love* and *Hatred*; but, perhaps, to one, *Love*; and even that may be all reſolved into *Self-love*; and that into a Principle of *Self-preſervation*, or neceſſary invincible Deſire of Pleaſure or Happineſs. The Reſt are only Rivulets from this Source; or ſpecial Applications of this Principle to particular Occaſions.

Thus the Deſire of any Thing under the Appearance of its Goodneſs, Suitableneſs, or Neceſſity to our Happineſs conſtitutes the *Paſſion of Love*; the Deſire of eſchewing or avoiding any Thing apprehended to be miſchievous, hurtful, or deſtructive, conſtitutes *Hatred* or *Averſion*: The Deſire of a Good, which appears at the ſame Time probable, and in our Power conſtitutes *Hope*; but if the Good appear improbable, difficult, or impoſſible, it conſtitutes *Fear* or *Deſpair*: The unexpected Gratification of *Deſire* is *Joy*: The Deſire of Happineſs to another under Pain, or Suffering, is *Compaſſion*; and the Deſire of another's Puniſhment, *Revenge* or *Malice*, &c.

The ſingle Deſire of Happineſs, then, is the Spring or Motive of all our *Paſſions*; as thoſe are of all our Actions. Some wiſe and reaſonable Motive, or End of Action, ſays Dr. *Morgan*, is certainly neceſſary to all wiſe and reaſonable Action; to act without a Motive, wou'd be the ſame Thing as not to act at all, that is, ſuch an Action cou'd anſwer no farther or better End than not acting; and conſequently the Action, as well as the Agent, wou'd be ſo far inſignificant and uſeleſs. He who ſhou'd have no Object at all of his Love or Averſion, Hope or Fear, Joy or Grief, muſt be ſimply and purely indifferent to all Action; and conſequently muſt either be in a State of perfect Reſt and Inaction, or in a State, equivalent thereto; wherein the Actions of ſuch a Being cou'd be of no more Significancy, than the uncertain Fluctuation of an Atom, or the Whivering of a Feather in the Air.

The natural, or occaſional Cauſe of all the *Paſſions*, *Malebranch* makes to be the Motion of the animal Spirits, which are diffuſed thro' the Body to produce, and preſerve a Diſpoſition therein, ſuitable to the Object perceiv'd; to the End, the Body and Mind may mutually aſſiſt each other on this Occaſion; it being the Order of the Creator, that our Wills be followed by Motions of the Body proper to execute them; and that the Motions of the Body mechanically excited in us by the View of external Objects, be accompanied with a *Paſſion* of the Soul which inclines us to will or nill what appears ſerviceable or noxious to the Body.

'Tis a continual Impreſſion of the Will of the Creator, that unites us thus intimately to a Piece of Matter, and occaſions this Reciprocation of Motions and Senſations: Were this Impreſſion of the Creator's Will ſuſpended a Moment, we ſhould be delivered from all Dependance, all *Paſſions*, *&c.* For, what People uſually imagine of a neceſſary Connection between the Motions of the Spirits and Blood, and the Emotions of the Soul, is inconceivable.

Some little Parts of the Bile, ſay they, move with ſome Violence among the Fibres of the Brain: Therefore the Soul muſt neceſſarily be agitated with ſome *Paſſion*; and this *Paſſion* be Anger, rather than Love. What Relation can we conceive between the Faults of an Enemy, a *Paſſion* of Contempt or Hatred, and a bodily Motion of the Parts of the Blood, ſtriking againſt certain Parts of the Brain? How can the Union or Alliance of two Things ſo different as Spirit or Matter be effected, but by the omnipotent Will of the Author of Nature?

'Tis a Point, about which the Divines and Philoſophers can never agree; whether this Relation and Connection of Thoughts of the Mind, and Motions of the Body, be the Gift of Nature, or the Puniſhment of the firſt Sin? And whether the *Paſſions* be the Inſtitution of Nature, or the Corruption thereof. Indeed, conſidering the good and wiſe Purpoſes the *Paſſions* ſerve, and that abſolute Neceſſity they are of; 'tis ſurprizing it ſhou'd ever be doubted, that they are eſſential to human Nature.

This Union or Relation is found in all Men; but in different Degrees, and of different Extent, according to the different Temperaments, Conditions, Ages, Sexes, Occaſions, Objects, *&c. E. gr.* Thus, our Union or Relation to ſenſible Objects we have ſeen, is ſtronger than that to Things we have only heard talk of. And thus the Great have a Relation to many more Things, than others, their Slavery is more extenſive. A General, *E. gr.* retains or has a Relation to all his Soldiers, as they all reſpect him; and 'tis this Slavery that uſually

ſually occaſions his Generoſity: The Deſire of being eſteem'd by all in whoſe Sight he is frequently, obliges him to ſacrifice more reaſonable Pleaſures.

'Tis thus throughout the World: Vanity animates Virtue, otherwiſe we ſhould never have ſuch Lengths gone. Again, Children don't mind the ſame Things with grown People. Women look no farther than their Families and Neighbourhood: But Men retain to their whole Country; 'tis for them to defend it; they mind Honours, Offices, &c. Nor is there a leſs Variety reſulting from the different Circumſtances and Employments of People.

The Diſpoſition of Mind in a married Man differs much from that of a Batchelor. The People in Monaſteries have both the Mind and Heart turn'd very differently from People who live in the World. They are united to much fewer Things; but then the Attachment is much cloſer and ſtronger. Their *Paſſions* move in a little Sphere; and like the Sun's Rays, in a convex Lens, are aſſembled, as it were, in a *Focus*.

In every *Paſſion* there may ſeven Things be diſtinguiſh'd: The *firſt*, the Judgement the Mind makes of an Object; or the View of the Relation the Objects bears to us. The *ſecond*, a new Determination of the Motion of the Will towards that Object; ſuppoſing it to appear a good. The *third*, the peculiar Senſations or Modifications which accompany them; as the Senſation of Love, Hatred, Deſire, or Joy; which Senſations are always different in the different Paſſions, and, as it were, the Characteriſticks thereof. The *fourth*, a new Determination of the Courſe of the Blood and Spirits, towards the ſeveral Parts of the Body: Before the Sight of the Object of the *Paſſion*, the animal Spirits were pretty equally diffuſed throughout the Body; but the Preſence of the new Object diſturbs the whole OEconomy; and the greateſt Part of the Spirits are ſent into the Muſcles of the Arms, Legs, Face, &c. The *fifth* is the ſenſible Emotion of the Soul, which finds itſelf ſhaken by this ſudden Over-flowing of Spirits. The *ſixth*, is the different Senſations of Love, Hatred, &c. caus'd, not by the intellectual View of Good or Evil, but by the different Shakes or Pulſes, the animal Spirits occaſion in the Brain. The laſt is a certain Senſation of Joy, or inward Satisfaction, which detains the Soul in its *Paſſion*, and atteſts its being in the State it ought to be with Regard to that Object.

Passions, in a View to Medicine, make one of the ſix *Non-naturals*, of the utmoſt Conſequence, with reſpect to Health or Diſeaſe. See Non-natural.

In Conſequence of the ſeveral Judgements we form concerning Objects, as either Good or Evil, the Organs of Senſation and Motion, *viz.* the *nervous Fibres*, are variouſly impreſs'd or ſtimulated; whence ariſe certain Senſations, and certain Modifications of Motion, which, 'tis apparent, are reciprocal, and follow mutually from each other, whether the Impreſſion be ſuppoſed firſt made on the Body, or on the Mind: that is, any ſtrong violent Motion made on the Organs, will excite a painful Senſation in the Mind; or any ſuch painful Senſation firſt excited in the Mind from the bare Conſideration of an Object will impreſs a violent Motion on the Organs. And, on the contrary, an eaſy and placid Undulation, impreſs'd originally by the actual Impulſe of Objects, will excite a pleaſurable Senſation in the Mind; or a pleaſurable Senſation excited in the Mind, from the mere Contemplation of an Object, will be follow'd with a like eaſy, placid Undulation of the Organs.

The painful *Paſſions*, then, as well as bodily Pain, impreſs the nervous Fibres with a violent Motion which brings 'em alternately into forcible Contractions, and Dilatations, or ſtrengthens and increaſes their muſcular Force, and Action. While then this Pain or Uneaſineſs of Deſire, annex'd to the Paſſions, and impreſs'd on the Nerves, is moderate and reſtrain'd within the Bounds of Nature; Such ſtimulating Deſires have a good Effect; as they ſtrengthen muſcular Motion, keep up the Circulation of the Blood, promote the natural Secretions, and excite a Man to ſuch Actions and Exerciſes, wherein animal Life, Health, and Vigour conſiſt. But where the Uneaſineſs annex'd to the Paſſion is too violent, ſuch a continual *Stimulus* will gradually derive a too great Proportion of Blood to the ſtimulated Organs, by which the Veſſels will be over-ſtretch'd, and diſtended, their muſcular Force gradually impair'd, and the *Equilibrium* of the Blood and Juices be interrupted. And hence, from a mere painful Senſation, will ariſe a complicated Train of bodily Illneſſes and Pains, in Conſequence of the eſtabliſh'd Laws of the Union and Communication of Soul and Body.

Again, while we are wearing off the Uneaſineſs of Deſire, annex'd to any *Paſſion*, we feel a ſenſible Pleaſure, or agreeable Emotion; and the Organs, hereupon falling into eaſy, uniform, placid Undulations, the too great Current of the Blood toward them is diverted, and the *Equilibrium* reſtored. As ſoon as the Uneaſineſs is all gone, the Pleaſure ceaſes, and terminates in meer Indolence, which diſpoſes the Perſon to Reſt and Inaction; till the Return of ſome freſh Deſire, ſtimulating to farther Action, renew the ſame Succeſſion, and interchangeable Series of Pains and Pleaſure.

And this is the Circle of animal Life: as the *Stimulus* of Deſire throws off the Indolence of Reſt, and excites to Action; So the Gratification moderates the Pain of Deſire, creates a Pleaſure at firſt, and then terminates in the former Indolence and Inaction; till freſh Deſires returning, ſtimulate to farther Action, and continue the ſame *Round*.

Dr. *Cheyne* divides the Paſſion, into *Acute* and *Chronical*; after the ſame Manner, and for the ſame Reaſon as Diſeaſes are ſo divided.

The *Acute Paſſions*, whether pleaſureable or painful, he obſerves, have much the ſame Effect, and operate after the ſame Manner as *Acute Diſeaſes* do. They effect a brisk Circulation of the Fluids, and conſtringe the Solids for ſome ſhort Time. Thus, ſudden guſts of Joy or Grief ſtimulate the Nervous Fibres, and the Coats of the Animal Tubes, and thereby give a greater Celerity to their included Fluids; and the Functions of the Heart and Lungs being involuntary, they have their more neceſſary and immediate Effects on them. Thus, both ſudden Joy and Grief make us Breath ſhort and quick, and render the Pulſe ſmall and frequent. Tho' retaining our Breath ſomtime to reflect more intenſely on any painful Object, forces at length a ſtrong Expiration, which becomes a *Sigh*. Thus a ſudden painful Idea, making a quick Circulation, and thereby throwing a great quantity of Blood upward, makes it appear in the ſuperficial Veſſels of the Face, Neck, and Breaſt, and ſo produces a *Bluſh*. The ſame Principles will account for the effects of Fear and Anger, which make us change Colour, and look *Red* or *Pale* as the Blood is accelerated or retarded in its Courſe. Sudden, and great Fear do ſo convulſe the Nervous Syſtem, that they ſometimes alter the Poſition of the Parts: Thus the Hair ſhall ſtand an end in a Fright, and the Nerves be render'd ſo ſtiff and rigid, as to ſtop at once the Animal Functions, whence Fainting, and ſometimes Death.

Chronical Paſſions, waſte the Nervous Syſtem gradually. Thoſe Nerves employ'd in conſidering, brooding over, and fixing ſuch a Set of Ideas in the Imagination, muſt be worn out and impair'd; and the reſt, by diſuſe, render'd reſty and unactive, lifeleſs and deſtitute of a ſufficient Flux of warm Blood and due Nouriſhment. Thus does long Grief, dark Melancholly, hopeleſs Love, over Weening, Pride, &c. impair the Habit; and ſometimes when long indulged, terminate in Madneſs; the Reaſon is, that a conſtant Habit of fixing one Thing in the Imagination, begets a ready Diſpoſition in the Nerves, to produce again the ſame Image, till the Thought of it become Spontaneous and Natural, like Breathing, or the Motion of the Heart. Thus the *Faquirs* in *India* fix one or both Hands by long holding 'em up, ſo as that they cannot bring them down again. *Eſſay of Health*, &c.

But Dr. *Morgan* ſeems to have gone almoſt beyond any Body in explaining the Orgin, and effects of the Paſſions.

From a Courſe of actual Obſervations of the ſeveral *Phænomena* in the Body, which attend the ſeveral *Paſſions*, *viz.* The State of the Pulſe, Reſpiration, Warmth, Digeſtion, &c. that ingenious Author theſe general Concluſions:

I. That all the grateful, or pleaſurable *Paſſions* raiſe the vital Tide, ſtrengthen and quicken the Pulſe, diffuſe the natural Heat, and take off any antecedent *Stimulus*, or Preſſure upon the Abdomen and inferior Organs: And, on the contrary, the painful *Paſſions* ſink and depreſs the Blood, weaken the Pulſe, recall and concenter the natural Heat, and fix a *Stimulus* or Compreſſion on the inferior Organs.

II. All the *Paſſions* impreſs their characteriſtick Senſations, or Modifications of Pleaſure and Pain, eſpecially upon the *Oeſophagus*, and upper Orifice of the Stomach.

III. That they impreſs their different Modifications on the Muſcles of the Larynx, and thus diſcover themſelves by the different Modulation and Tone of the Voice.

And hence he infers, that the Nerves of the eighth Conjugation, or *Par Vagum*, are the principal Inſtruments of the *Paſſions*; by means whereof, they are variouſly impreſs'd, modified, and organized: Theſe, therefore, which are diſperſed to all Parts of the Breaſt and Abdomen, particularly the Heart, Lungs, Stomach, Liver, *Oeſophagus*, Diaphragm, Inteſtines, the Organs of Generation, &c. he conſiders as *Patheticks of the firſt Order*; the *Intercoſtal*, which accompanies all the Diviſions of the *Par Vagum*, he calls *Patheticks of the ſecond Order*: The Nerves which ſerve the Muſcles employ'd in Reſpiration, and have the neareſt Communication with thoſe of the *Par Vagum*, by means of the Intercoſtal, he calls *Patheticks of the third Order*; and, the Nerves which immediately diſpenſe Senſe and Motion to the ſeveral Parts of the Head, and have a remoter Communication with the *Par Vagum*, the *Patheticks of the fourth Order*. See Nerve.

According to this Gradation, then, the Organs which are immediately ſupplied with Nerves from the *Par Vagum*, or *Patheticks of the firſt Order* will be firſt affected in the *Paſſions*, and with the ſmalleſt Degree of impreſs'd Motion, with which the Parts communicating immediately with the intercoſtal, or *ſecond Order of Patheticks*, keep Pace and are affected

fected almoſt at the ſame Time, and with the ſame Motion: Then the Organs ſupplied with the *third Order of Pathericks*, or the Nerves employ'd in the Muſcles of Reſpiration, are affected. And laſtly, the Organs of Senſe and Motion in the Brain itſelf, by which Senſation and Imagination are performed, are put in a forcible Emotion; by which the ordinary Operations of Senſe, Judgement, *&c.* are much diſturbed.

This gradual Riſe and Progreſs of the *Paſſions* is confirm'd by Fact; Obſervation and Experience; but how they are generated, and by what Steps they make theſe Advances, requires ſome farther Conſideration.

It may be obſerv'd, then, that the Quantity of Motion impreſs'd on the pathetic Nerves in any *Paſſion*, is always proportional to the Strength of the Deſire; but ſuch impreſs'd Motion is not always uniform or equably diffuſed thro' the whole pathetic Syſtem; for as the largeſt and moſt numerous Branches of the Pathetick Nerves are ſpent on thoſe Parts which derive their Blood from the deſcending Trunk of the *Aorta*, *viz.* the Stomach, Spleen, Kidneys, *&c.* upon any Motion too forcibly impreſs'd or too long continued, theſe inferior Organs are the firſt and greateſt Sufferers; whence the Blood flowing impetuouſly and irregularly to the Parts thus ſtimulated, they become over-ſtretch'd; and hence a Senſe of Pain, Weight and Oppreſſion.

By this means the Head and ſuperior Parts being deprived of their due Share of Blood, the Pulſe muſt ſink, the natural Heat diminiſh and retire, and a Senſe of Cold and Conſtriction be felt about the *Oeſophagus*, where the Branches of the *Par Vagum* are very numerous: And hence the Patient will be excited to ſigh, groan, moan, cry out, and complain, and diſcover in the Tone of the Voice, and Modulation of the Muſcles of the Larynx, the Characteriſticks of the prevailing *Paſſion*.

Such is the State of Nature under the painful *Paſſions*, where the ſtrong Deſire of Good is attended with an Appearance of Difficulty, or Improbability: where the ſame Deſire is attended with a ſeeming Probability of obtaining, or effecting it; this Appearance, by moderating the Intenſeneſs of the Pain of the Deſire, and taking off the too violent Action of the pathetic Nerves on the inferior Organs, puts the pathetic Syſtem in an eaſy, natural, uniform Undulation; by which the *Equilibrium* of the Blood being reſtored, the pleaſurable *Paſſions* of Love, Joy, Hope, *&c.* will be rais'd: And in this Caſe the Pulſe will riſe, and the natural Heat be diffuſed, and by the Action of the Pathetic Nerves on their proper Organs the ſeveral Symptoms be produced which diſcover their placid Emotions. Where the Deſire is very Keen, and Intenſe, we ſee what a prodigious Force it will impreſs on the Nerves, by the Actions of Mad-men, and Men in a Fright. In this Caſe, the Stimulus of Deſire being exceeding ſtrong, and the impreſſed Motion univerſal; the pathetic Nerves of the fourth or laſt Order come to be affected; that is, the Organs of Senſation and Imagination in the Brain are brought into ſuch violent Vibrations, as to diſturb the Operations of Reaſon.

And from this violent Perturbation of the pathetic Nerves in the Brain, Mad-men have their Imagination as ſtrong and vivid as Senſation itſelf. See IMAGINATION.

Hence, alſo, we may obſerve the Heights, or Extremes of the two contrary painful and pleaſureable *Paſſions*; the one riſing at length into a Mania or raving Madneſs, and the other ſinking into a hypocondriacal Melancholy. The principal Seat of the one is the Brain; and of the other, the Viſcera of the Abdomen, eſpecially the Spleen and Meſentery. The one inflames and over-heats, the other chills and freezes the Imagination: The one hangs over the Underſtanding like a glaring, dazling Light, which animates and leads us on with Zeal and Vehemence; the other like a thick, black, and diſmal Cloud, that ſinks all the Powers of Nature unto the Depths of Miſery and Diſpair. See MANIA and MELANCHOLLY.

PASSIONS in Poetry, the *paſſionate* Sentiments, Geſtures, Actions, *&c.* which the Poet gives his Perſons.

The *Paſſions* are, as it were, the Life and Spirit of the longer Poems. Their Neceſſity in Tragedy and Comedy is obvious; nor can the *Epopea* ſubſiſt without 'em. See TRAGEDY, COMEDY, *&c.*

'Tis not enough, the Epic Narration be ſurprizing; it muſt likewiſe be moving, and paſſionate; hurrying away the Reader's Mind, and filling it with Anxiety, Joy, Terror, or ſome other violent *Paſſion*, and this for Subjects it knows are feign'd. See NARRATION.

Tho' *Paſſions* be always neceſſary, yet, all are not equally neceſſary, or ſuitable to all. Comedy has Joy, and agreeable Surprizes for its part: Tragedy on the contrary, has Terror, and Compaſſion. The proper *Paſſion* of the Epopea is Admiration; tho' the Epopea, as a Medium between the two others, takes in both their Kinds of *Paſſions*; as we ſee in the Greſs of the fourth Book of the *Æneid*, and the Games and Diverſions of the fifth. Admiration in effect, is conſiſtent with each, we admire with Joy the Things that ſurprize us agreeably, and with Terror and Grief thoſe that amaze and afflict us.

Beſides the general *Paſſion*, which diſtinguiſhes the Epic from Dramatic Poems; each Epopea has its peculiar *Paſſion*, which diſtinguiſhes it from other Epic Poems. This peculiar *Paſſion* ſtill follows the Character of the Hero. Thus Wrath and Terror reign in the Iliad, becauſe *Achilles* is wrathful, and πάντων ἐκπαγλότατ' ἀνδρῶν the moſt terrible of Men. The *Æneid* is all in the tender, ſofter *Paſſions*; ſuch being the Character of *Eneas*. The Prudence of *Ulyſſes*, not allowing theſe Exceſſes, we find none of 'em reign in the Odyſſee.

As to the conducting of the Paſſions, to make 'em have their Effect, there are two Things required, *viz.* that the Audience be prepared or diſpoſed to receive 'em; and that ſeveral incompatible *Paſſions* be not mix'd together.

The Neceſſity of diſpoſing the Audience, is founded on the natural Neceſſity of taking up Things where they are, in order to remove 'em elſewhere. The Application of this Maxim is eaſy; a Man is calm, and at Eaſe, and you wou'd put him in a *Paſſion* by a Diſcourſe made on purpoſe. You muſt begin, then, in a calm Manner; by this Means you join your ſelf to him; and afterwards, walking together, he wont fail to follow you in all the *Paſſions* to which you lead him inſenſibly.

If you ſhew your Anger at firſt, you'll be as ridiculous, and will have as little Effect, as *Ajax* in the Metamorphoſes; in whom the ingenious *Ovid* gives a fine Example of this failing. He begins his Harangue in the Height of *Paſſion*, and with the moſt violent Figures, before his Judges, in the deepeſt Tranquillity.

——————————— *Sigeia torvo,*
Littora proſpexit, claſſemque in Littore, vultu;
Protendenſq manus, Agimus proh Jupiter! inquit
Ante rates cauſam, & mecum conſertur Ulyſſes.

The neceſſary Diſpoſitions ariſe from ſome preceeding Diſcourſe; or, at leaſt from ſome Action, which has already begun to raiſe the *Paſſions* 'ere they are mention'd. The Orators themſelves, ſometimes uſe this laſt Means: For tho', ordinarily, they don't raiſe the *Paſſions* till the End of their Diſcourſe; yet, when they find their Audience already moved, 'twou'd be ridiculous in 'em, by an unſeaſonable Tranquillity, to lay 'em again.

Thus, the laſt time *Catiline* came to the Senate, the Fathers were ſo ſhock'd at his Preſence, that thoſe near the Place where he ſat down, roſe up, retired, and left him alone. On this Occaſion, *Cicero* had too much Senſe to begin his Oration with the uſual Tranquillity and Coolneſs of Exordiums. By this Means he'd have palled and abated the Indignation of the Senators againſt *Catiline*; which it was his Buſineſs to ſpirit up, and inflame; and wou'd have eas'd the Parricide of that Conſternation, the Behaviour of the Senators had given him; and which it was his Deſign to aggravate. Omitting therefore, the firſt Part of his Oration, he takes his Auditors in the Condition he finds 'em; continues and augments their Paſſions. *Quouſque tandem abutere*, Catilina, *patientia noſtra? Quamdiu nos etiam furor iſte tuus eludet? Quem ad finem ſeſe effrenata jactabit audacia? Nihilnete nocturnum præſidium palatii, nihil urbis Vigiliæ, nihil timor populi, nihil, &c.*

The Poets are full of Inſtances of this Kind; where the *Paſſion* is prepar'd or kept up by Actions. *Dido* in *Virgil* begins a Diſcourſe like *Ajax*: *proh* Jupiter! *ibit hic, ait, &c.* But then the Motions are here well diſpoſed; *Dido* is before repreſented under terrible apprehenſions of *Æneas*'s quitting her, *&c.*

Seneca's Conduct, indeed, is quite oppoſite to this Rule. If he has a *Paſſion* to raiſe, he is ſure firſt to take from his Audience any Diſpoſition they might have to be affected. If they be in Grief, Fear, or the Expectation of ſomething horrible, *&c.* He'll begin with ſome fine Deſcription of the Place, *&c.* In the *Troades*, *Hecuba* and *Andromache*, being prepared to hear the violent and barbarous Death of their Son *Aſtyanax*, whom the *Greeks* precipitated from the Top of a Tower; what booted it to tell them, that of the Spectators who crouded from all Quarters to ſee the Execution, ſome placed themſelves on Stones, which the Ruins of the Walls occaſion'd to Project; that others ſhook their Legs, as being placed too high, *&c. Alta Rupes, cujus é Cacumine erecta ſummos turba libravit pedes.* &c.

The ſecond Thing required in the Management of the Paſſions, is, that they be found pure and diſengaged from any Thing that might prevent their Effect.

Polymythy, therefore, *i. e.* a Multiplicity of Fables, Actions, or Hiſtories, muſt be avoided: All Adventures much broken, and hard to be retain'd; and all Intrigues intricate and difficult to conceive, are at once excluded. Theſe embarraſs the Mind, and require ſo much Attention, that there is none to ſpare for the *Paſſions*. The Soul muſt be free and diſengaged to feel; and we divert our ſelves even from our real Sorrows, by an Application to other Things.

But of all others, the greateſt Enemies to the *Paſſions*, are the *Paſſions* them ſelves: They oppoſe and deſtroy one another; and if two oppoſite ones *E. gr.* Joy and Sorrow meet in the ſame Object; they will neither of 'em ſtand it. 'Tis the Nature of theſe Habitudes that impoſes this Law: The Blood and Spirits cannot move gently and equally, as in a State of Tranquillity, and at the ſame Time be ſtopp'd, and

ſuſpended with ſome Violence, occaſioned by Admiration. Nor can they be in either of thoſe Situations, while Fear calls 'em from the outer Parts of the Body, to aſſemble 'em about the Heart; or Rage ſends 'em into the Muſcles, and makes 'em act there with Violences very oppoſite to the Operations of Fear.

The Cauſes and Effects, therefore, of the Paſſions in the Soul, are to be ſtudied, to be able to manage 'em with all their Force. *Virgil* furniſhes two Examples, of what we have ſaid about the Simplicity and Diſengagement of each Paſſion, in the Deaths of *Camilla* and *Pallas*. See the ÆNEID.

PASSION in Heraldry, or the *Croſs of Paſſion*, a Croſs thus called, becauſe, in Shape of that wherein our Saviour ſuffer'd, *i. e.* not croſs'd in the Middle, but nearer the Top; with Arms ſhort in proprotion to the Length of the Shaft. See CROSS.

PASSION-WEEK, the Week next preceeding *Eaſter*. See EASTER.

It is thus call'd from our Saviour's *Paſſion*, *i. e.* his Crucifixion, which happen'd on the *Friday* of this Week, now call'd *Good-Friday*.

Iliac PASSION. See ILIAC *Paſſion*.

PASSIVE, a term of Relation, implying a Thing to ſuffer, or undergo the Action of ſome other; which in reſpect hereof is denominated *Active*. See ACTIVE.

In all Generations, the School Philoſophers conceive an active Power and a *Paſſive*. See POWER.

In civil Life, we ſay ſuch a Perſon in ſuch an Election, has both an active Voice, and a *Paſsive*, i. e. he is both capable of Electing and being Elected. See VOICE.

Some alſo uſe the term *Paſſive Debt*, for a Debt which we owe another; in contradiſtinction to an Active Debt, which is owing us. See DEBT.

The Chymiſts divide their Principles or Elements into Active and *Paſsive*. The *Paſsive* are ſuch as have no active Force inherent in themſelves; and only act by being join'd with ſome of the other. See PRINCIPLE.

Such are Phlegm, and Earth; ſome ſay alſo, Salt, and, in effect, all but Sulphur, or Fire, which they will have the only principle of Action and Motion in the Univerſe. See EARTH, SULPHUR, FIRE, &c.

Paſsive Prayer, in the Language of the Myſtick Divines, is a total Suſpenſion or Ligature of the intellectual Faculties, in virtue whereof the Soul remains, of it ſelf and its own Power, impotent as to the producing of any Effects. The *Paſsive* State, ſays, *Fenelon*, is only *Paſsive* in the ſame Senſe as Contemplation is ſo, *i. e.* It does not exclude peaceable, diſintereſted Acts, but only unquiet ones, or ſuch as tend to our own Intereſt. In the *Paſsive* State, the Soul has not properly any Activity, any Situation of its own: 'Tis a mere infinite flexibility of the Soul, which the feebleſt impulſe of Grace gives Motion to. *Id.*

PASSIVE in Grammar, is a ſecond Voice, or Inflexion of Verbs; which of Active become *Paſsive*, by aſſuming, in the modern Languages, new auxiliary Verbs; in the Ancient, by new Terminations. See VERB, VOICE, &c.

The *Engliſh* Verbs become *Paſsive*, by taking the auxiliary Verb *I am*, in lieu of *I have*, wherewith the Active are conjugated: The *French* by *Je ſuis*, in lieu of *J'ay*; the *Italian*, by *Jo ſo*, for *Jo ho*, &c.

The *Latin* Verbs become *Paſſive*, by changing their Terminations; as *Amor* for *Amo*, &c. *Amari* for *Amare*, &c.

The *Engliſh Verbs Paſsive* are nothing elſe, in effect, but the Verb *I am*, in all its Inflections join'd to the Participle *Paſsive*; as, *I am prais'd*; in Latin *laudor*, in French *Je ſuis loué*; I have been prais'd, *J'ay été loué*, *laudatus ſum*, &c.

Neuter PASSIVE, is a Verb that has a *Paſsive* Conjugation, but a Neuter Signification. See NEUTER.

Of theſe, there are a very ſmall Number in *Latin*, more in *French*, fewer in *Engliſh*: As, I am enter'd, *ingreſſus ſum*, *je ſuis entré*, &c. But Grammarians are frequently Miſtaken here; taking Verbs for Neuters *Paſsives*, which in effect are Actives, and only differ in that they act on themſelves, by adding the Pronoun Perſonal; and which on that footing ſhou'd rather be Neuters-Active, than Neuters-*Paſsive*.

Some admit of no genuine *Paſsive* Verbs in the modern Tongues; ſuch we mean as anſwer to the Notion of *Paſsives* in the Ancient, where all is done by different Terminations. On which footing, there ſhou'd be none but Actives *Paſſive* and Neuters *Paſſive*.

PASSOVER, a ſolemn Feaſt, celebrated among the *Jews*, on the fourteenth Day of the Moon next after the vernal Equinox. See FEAST.

This Feaſt was call'd by the Ancient *Latins* and *Greeks* *Paſcha*; not from πάσχω I ſuffer, as *Lactantius* weakly imagines; but from the *Hebrew* פֶּסַח Peſahh, Paſſage, Leap; the Deſign of the Feaſt being to commemorate the deſtroying Angels *paſsing over* the Houſes of the *Iſraelites*, when he enter'd in, and deſtroy'd the firſt born in thoſe of the *Egyptians*.

Yet, many weakly imagine that it was in Memory of their *paſsing* the Red Sea, that this *Paſſover* was inſtituted; tho' 'tis certain the Feaſt was held, and had its Name before the *Iſralites* took a Step of their Way out of *Egypt*; and conſequently ſeveral Days before their paſſing the Red Sea.

Beſide the *Paſſover* celebrated on the fourteenth of the firſt Month; there was a ſecond *Paſſover* held on the fourteenth of the ſecond Month after the Equinox, inſtituted by God in favour of Travellers and Sick Perſons who cou'd not attend at the firſt; nor be at *Jeruſalem* on the Day.

The *Greeks*, and even ſome of the Catholic Doctors, from the XVIII Chapter of St. *John*, take occaſion to conclude that *Jeſus* anticipated the Day mark'd for the *Paſſover* in the Law; but the Authority of three Evangeliſts ſeems to evince the contrary.

F. Lamy, is of Opinion, he did not attend at the *Paſſover* the laſt Year of his Life; which Sentiment has drawn upon him Abundance of Oppoſers.

F. Hardouin maintains, that the *Galileans* celebrated the *Paſſover* on one Day, and the *Jews* on another. See SAMARITAN.

PAST-BOARD, a kind of thick Paper, form'd of ſeveral Sheets paſted together. See PAPER.

There is alſo a coarſe kind of *Paſt-board*, made of old Paper and old *Paſt-board*, beaten in a Mortar with Water, and reduced into a kind of Pulp; to which is added a little Paſte, to give the Maſs a Conſiſtence; after which it is form'd in a Mould; and to finiſh it, laid in a Preſs, to ſqueeze out all the Water, and reduce it to its proper Thickneſs.

Each Kind is diſtinguiſh'd by Numero's, which expreſs its Fineneſs and Value: The fineſt is cover'd on both Sides with a very white ſmooth Paper, others only on one Side; and others on both Sides with common Paper.

The chief Uſe of *Paſt-board* is in the Binding of Books, Letter-Caſes, Hat-Caſes, Gloves, &c. See BOOK-BINDING.

PASTE, in Cookery, a ſoft Compoſition of Flower, wrought up with proper Fluids, as Water, Milk, or the like, to ſerve as a Caſe or Coffin, therein to bake Meats, Fruits, &c.

Paſte, is the Baſis, or Foundation of Pyes, Tarts, Patties, Paſties, and other Works of Paſtry. See PASTRY, &c.

PASTE, is alſo us'd in Confectionry, &c. for a Preparation of ſome Fruit, made by beating the Pulp thereof, with ſome Fluid or other admixture, into a ſoft pappy Conſiſtence, ſpreading it into a Diſh, and drying it with Sugar, till it become as plyable as an ordinary Paſte. See CONFECT.

It is us'd occaſionally for making the Cruſts, and Bottoms of Pyes, &c.

Thus they make Almond Paſtes, Apple *Paſtes*, Apricock *Paſtes*, Cherry, Curran, Lemon, Plum, Peach, Pear *Paſtes*.

PASTE, is alſo us'd for a Preparation of Wheaten Flower, boil'd up, and incorporated with Water; us'd by various Artificers, as Upholſterers, Sadlers, Bookbinders, &c. inſtead of Glue or Size, to faſten or cement their Cloths, Leathers, Papers, &c.

PASTERN of a Horſe, the Diſtance between the Joint next the Foot, and the *Coronet* of the Hoof.

This Part ſhould be ſhort, eſpecially in middle ſiz'd Horſes; becauſe long *Paſterns* are weak, and cannot ſo well endure Travel.

The *Paſtern*-Joint, after travelling, is apt to be crowned, *i. e.* to have a Swelling round it beneath the Skin, in form of a Circle ¼ an Inch broad.

PASTIL, among Painters, &c. a Sort of Paſte, made of ſeveral Colours, ground up with Gum-Water, either together or ſeparately; in order to make Crayons to paint with on Paper or Parchment. See CRAYON.

PASTIL, is alſo us'd for a dry Compoſition, yielding a fragrant Smell when burnt in a perfuming Pan, to clear and ſcent the Air of a Chamber.

It is compoſed of odorous Reſins, mixt with Aromatic Woods, or Drugs pulveriz'd, and incorporated with Mucilages of Gum Tragacanth.

Some call 'em *Oſſelets of Cyprus*.

There are alſo *Paſtils* for the Mouth, eaten to procure a ſweat Breath.

Theſe have ſeveral Names, and conſiſt of ſeveral Preparations, as Muſcadines, Conſerves, &c.

PASTIL, is ſometimes alſo us'd for the Plant otherwiſe call'd Woad or Glaſs-wort. See WOAD.

PASTIL in Confectionry, is a Preparation of Sugar with Lemon-Water, &c, boil'd up with Gum-Water, ſtrain'd, beat up, and by the Addition of more dry Sugar, work'd into a plyable Paſte, and thus form'd into round or oblong Figures, and dry'd in the Stove.

PASTINATION, a Term ſometimes us'd in Agriculture, for the Act of opening, looſening, and preparing the Earth for planting. See EARTH and PLANTING.

PASTORAL, ſomething that relates to Shepherds, *Paſtores*. The Poets repreſent the *paſtoral* Life, and *paſtoral* Manners in the moſt agreeable Light. We muſt not imagne 'em ſo agreeable in Nature as in their Deſcriptions.

PASTORAL, in Poetry, a poetical Piece, the Subect whereof is ſomething in the *Paſtoral*, at leaſt the rural Life, and the Perſons Shepherds, at leaſt Ruſticks. See POEM.

Moſt Authors, except the *Engliſh*, eſteem *Paſtoral* of the Dramatic Kind; and define it a Dramatic Piece, the Perſons whereof are clad like Nymphs and Shepherds, and act their own Amours.

The Scene is always in the Fields or the Woods; whence *Taſſo* calls Paſtoral, *Fable Bocagere*.

Such are the *Paſtor Fido* of *Guarini*, the *Aminta* of *Taſſo*, the *Sylvia* of *Maizet* the *French* Poet; the *Comus* of *Milton*, &c.

Taſſo aſſumes to himſelf the Honour of having invented *Paſtoral*; but the firſt Idea of this kind of *Drama* ſeems to be *Beccari*'s Due, who made the firſt Attempt of this Kind in 1552. But *Taſſo*'s *Aminto*, which did not appear till the Year 1573, effacing what had been done by *Beccari*; the firſt Author was forgot, and *Taſſo* left the Inventor.

'Tis certain this Kind of *Paſtoral* Fable, compoſed according to the Rules of the Stage, was unknown among the Ancients. The *Greeks* and *Latins* have indeed introduced Shepherds in their Eclogues; but theſe Eclogues had nothing Theatrical in 'em; nor were the Shepherds ever brought upon the Stage. See ECLOGUE.

This Kind of Dramatic *Paſtoral* is ſtill but little known among us; nor have we any Thing conſiderable under the Title of *Paſtorals*, but Country-pieces after the manner of the Eclogues or Idyllions of the Ancients. See IDYLLION.

Every *Paſtoral*, however, even in this laſt View, ſhou'd have a little Plot, or Fable, which may deſerve the Title of a *Paſtoral Scene*. It muſt be Simple, and but one; yet, not ſo as to refuſe all Digreſſions, provided they be but ſmall. This Rule of the Plot is every where obſerv'd by *Virgil*.

PASTORAL-STAFF. See CROSIER.

PASTRY, the Branch of Cookery, which teaches the Preparation of *Paſte* with ſeveral ſavoury Ingredients of Fleſh, Fruits, Spices, Sugar, Butter, &c. See PASTE.

PASTRY, is chiefly converſant in the making of Pies, Paſties, Patties, Cakes, Biſcuits, &c. See PYE, PASTY.

PASTURA, in our Law-Books, is any Place where Cattle are occaſionally fed; by which it differs from *Paſcua*, which is a Place ſet wholly a-part for feeding, and never plough'd.

Paſtura, ſays *Lindewode*, *Omne Genus paſcendi ſignificat, ſive in pratis, ſive inſtipula, ſive in Agris, ſive in Campis: ſed* Paſcua *eſt locus principaliter deputatus pecoribus paſcendis ut puta in Montibus, Moris, Mariſcis & planis non cultis nec aratis.*

PASTURE *Ground* is that not cultivated; that is, neither Meadow, nor Arable; but reſerved for the feeding of Cattle.

The beſt Domains are thoſe conſiſting in *Paſture*, they need no Tilling. *Holland* is a Country abounding much in *Paſture*.

PASTUS, the Procuration, or Proviſion which the King's, or Lords Tenants, are bound to make for 'em at certain Days, or Seaſons, or as often as they make a Progreſs to their Lands.

This, in many Places, has been converted into a pecuniary Fee; as in the Procurations of the Clergy. See PROCURATION.

PASTY, in Cookery, a Work of Paſtry; being a Preparation of ſome proper Meat, as Beef, Veniſon, Lamb, or the like, well boned, beaten up to a Pulp, and highly ſeaſon'd; put up in a Paſte, and then baked in an Oven.

They alſo make Veal-*paſties*, Umble-*paſties*, Kidney-*paſties*, Marrow-*paſties*, &c.

PATAVINITY, PATIVINITAS, among Criticks and Philoſophers, a Fault objected to *Titus Livy*, which he derived from his Country *Padua*, *Patavium*.

Aſinius Pollio, as we are inform'd by *Quintillian*, tax'd *Livy* of *Patavinity*: What this *Patavinity* conſiſted in, has given the Criticks a World of Pain.

Paolo Beni, Profeſſor of Eloquence in the Univerſity of *Padua*, is of Opinion, it muſt be underſtood of the Inclination of that Hiſtorian to *Pompey*'s Party: But wou'd *Pollio* have reproach'd him with an Inclination from which he himſelf was not exempt?

Pignorius will have the *Patavinity* to conſiſt in *Livy*'s retaining the vicious Orthography of his Country-men of *Padua*; who wrote *ſibe* and *quaſe*, for *ſibi* and *quaſi*; which he proves from ſeveral ancient Inſcriptions.

Fa. Rapin, takes the *Patavinity* to be only a faulty Pronunciation, which ſhock'd the delicate Ears of the People in the Court of *Auguſtus*; and ſavour'd a little of that Country.

Morhofius believes it to be a certain Turn of Expreſſion, and ſome Phraſes peculiar to the *Paduaſe*.

All we know for certain, is, that it was a Fault in the Language of *Livy*, not in the Sentiments or Manners. In all probability, 'tis one of the Delicacies that are loſt in a dead Language. *M. Balzac* cou'd not ridicule his Dotard better than by ſuppoſing he valued himſelf on having diſcover'd the *Patavinity* objected by *Pollio* to *Livy*.

Dan. Georg. Morhofius, has an expreſs Treatiſe, *De patavinitate Liviana*, Printed at *Kiel* in 1685; where he explains, very learnedly, the Urbanity and Peregrinity of the *Latin Tongue*.

PATE in Fortification, a kind of Platform, like what they call an Horſe-ſhoe; not always regular, but generally Oval, encompaſſed only with a Parapet, and having nothing to flank it. See HORSE-SHOE.

It is uſually erected in Marſhy Grounds, to cover a Gate of a Town.

PATEE, or PATTEE, a Term in Heraldry for a Croſs, ſmall in the Centre, and widening towards the Extremes; as in the Figure adjoining. The Field is Sable, a Croſs *Pattee* Argent, by the Name of Croſs.

This Form of a Croſs is called alſo *Formee*. See FORMEE.

PATELLA, in Anatomy, a Bone which covers the Fore-part of the Joynt of the Knee; call'd alſo *Mola*, *Rotula*, and popularly, the *Knee-Pan*. See MOLA.

The Patella is roundiſh on the Out-ſide, ſomewhat of the Figure of a Shield, cover'd with a ſmooth Cartilage, and about two Inches in Diameter; over it ſlide the Tendons of the Muſcles which extend the Leg, as on a Trochlea, or Pulley.

But its more immediate Uſe is to hinder the Leg from being bent forwards in Extenſion; which wou'd of neceſſity be the Caſe in this Articulation, did not this Bone, like a Bolſter, check its rolling forwards; as the Olecranum does the ſwing of the Cubitus backwards. See OLECRANUM.

In an erect Poſture, when one Foot is ſet forwards, the whole Weight of the Body bears on the *Patella*; which in this Situation, hinders the Knee from bending backwards, and ſtraining the Muſcles that inflect it behind.

Hence it was that *Galens* Wreſtler, who had diſlocated his *Patella*, found ſo much Pain in going down Hill.

PATENA, in the *Romiſh* Church, the Cover or Lid of the Chalice, made of the ſame Metal therewith, ſerving to hold the Particles of the Hoſt; and given the People to kiſs when they make an Offering. It has its Name *Patena*, *a Patendo*; and is a general Name in *Columella* for any broad flat Veſſel.

PATENT, or *Letters Patent*, in Law, the King's Letters, ſeal'd with the Great-Seal; ſerving to convey the Title or Property of ſome Grant, Favour, Privilege of a new Eſtabliſhment, or the like. See LETTERS *Patents*.

They have their Name in oppoſition to Letters *de Cachet*; becauſe deliver'd open, *ut pateant omnibus*; whereas the other are ſeal'd. It is to be noted, that *Patents* differ from Writs; and that a Coroner is made by *Writ*, not by *Patent*. See WRIT.

PATENTEE, is he, to whom the King grants his Letters *Patent*.

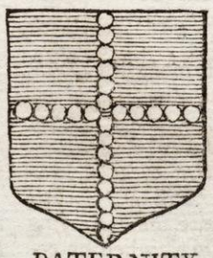
PATERA, among Antiquaries a *Goblet*, or Veſſel, uſed by the *Romans* in their Sacrifices; wherein they offer'd their conſecrated Meats to the Gods; and wherewith they made Libations. See SACRIFICE and LIBATION.

On Medals, the *Patera* is ſeen in the Hands of ſeveral Deities; and frequently in the Hands of Princes, to mark the Sacerdotal Authority, join'd with the Imperial, &c.

Hence, *F. Joubert* obſerves, that beſide the *Patera*, there is frequently an Altar upon which the *Patera* ſeems to be a pouring.

The *Patera* was of Gold, Silver, Marble, Braſs, Glaſs, or Earth; and they us'd to encloſe it in Urns with the Aſhes of the Deceas'd, after it had ſerv'd for the Libations of Wine and other Liquors at the Funeral.

The *Patera* is an Ornament in Architecture, frequently ſeen in the *Dorick Freeze*; and the Tympans of Arches.



The Word is form'd from the *Latin Patera*, of *Pateo* I am open; *quod pateat*, becauſe it has a great Aperture; in contradiſtinction to Bottles, &c. which have only narrow Necks, or whoſe Aperture is leſs than the Body of the Veſſel.

PATER-NOSTER, the *Lord's Prayer*; a Form ſo call'd from the two Initial Words thereof.

PATER-NOSTER is alſo us'd for a Chapelet or ſtring of Beads; becauſe, ſerving to Number the Rehearſals of that Prayer. See CHAPLET.

PATER-NOSTERS, in Architecture, are certain Ornaments placed underneath Ovolos, cut in form of Beads, round, or Oval. See BEAD.

PATER-NOSTREE in Heraldry. *A Croſs Pater-noſtree*, is a Croſs, made up of Beads, as in the Figure adjoining. See CROSS.

Note, This Croſs is to be ſo ſhadowed in drawing, as that the, Sphericity of the Beads may appear; to diſtinguiſh 'em from Beſants, &c.

PATERNITY, the Quality of a *Father*. See FATHER.

There is an immediate Relation between the Paternity of the Father, and the Filiation of the Son, in the Myſtery of the Trinity, See TRINITY.

The

The Divines have a long Time disputed, whether *Paternity* be a real and specific Character, which absolutely distinguishes the Father from the Son; or whether it be a mere Relation of Oeconomy and Subordination. On the one Hand, if *ternity* be supposed incommunicable to the Son, and if it constitute a real and positive Distinction; this amounts to *Tritheism*. See TRITHEISM.

On the other Hand, if *Paternity* be only regarded as a Mode, or a term of Order and Oeconomy; there is no essential and intrinsic Difference between the Father and Son; which is nothing less than Sabellianism. See SABELLIAN.

PATH *of the Vertex*, a Term frequently us'd by Mr. *Flamstead*; signifying a Circle, described by any Point of the Earth's Surface, as the Earth turns round its Axis.

This Point is consider'd as Vertical to the Earth's Centre; and is the same with what is call'd the *Vertex or Zenith* in the Ptolemaick Projection.

The Semi-Diameter of this Path of the *Vertex*, is always equal to the Complement of the Latitude of the Point or Place that describes it; that is, to that Place's Distance from the Pole of the World.

PATHETIC, something that relates to the *Passions*; and particularly, that is proper to awake, or excite them. See PASSION.

The *Pathetic*, and the *Sublime* have a near Affinity. See SUBLIME. See also STYLE.

The Word comes from the *Greek* πάθος *Passion*.

PATHETIC, in Music, something very moving, expressive, passionate, capable of exciting Pity, Compassion, Anger, or the like Passion.

In this Sense, we say a *Pathetic Fugue*, *Pathetic Song*, &c.

The Chromatic Genus, with its major and minor Semi-tones, either ascending or descending is very proper for the *Pathetic*; as is also an artful Management of Discords; Variety of Motions, now brisk, now languishing, now swift, now slow.

Niewentiit, tells us of a Musician at *Genoa*, who excell'd in the *Pathetic*; to that Degree, that he was able to play any of his Auditors into Distraction; he adds, that the great Means he made Use of, was the Variety of Motions, &c.

PATHETICI, in Anatomy, the fourth of the ten pair of Nerves, which arise out of the Medulla Oblongata. See NERVE.

The *Pathetici* are the smallest Nerves of the Brain; they have their Origin in the lower part of the Medulla Oblongata, behind the Nates and Testes.

They have their Name *Pathetici*, from their serving to move the Eyes in the various Passions; and are by some call'd *Amatorii*, from the great Use made thereof by Lovers, in Ogling, &c.

PATHOGNOMONIC, in Medicine, an Essential Sign or Characteristic; or a Symptom peculiar to, and inseparable from some Disease; and every Stage thereof, See SYMPTOMS.

Thus *Blanchard*, and after him *Harris*, &c. But the Truth is, there is nothing in all Medicine that Answers to the Idea of a *Pathognomonic*; Disease and Symptoms are too complicated. See DIAGNOSTIC.

PATHOLOGY, that part of Medicine which considers *Diseases*; both those of the Body, and the Mind; their Natures, Causes, Symptoms, &c. See DISEASE.

The Word is form'd from the *Greek* πάθος Passion, Suffering, and λόγος, Discourse.

PATHOS, a *Greek* Word, πάθος, signifying *Passion*; us'd in speaking of the Movements, which the Orator excites in his Audience.

There is a World of *Pathos* in his Discourse.

We sometimes also Use the Word for Energy or Stress.

PATIENT, among Physicians, a Person under the Direction of a Physician, or Surgeon, to be cured of some Disease.

PATIENTIÆ *Musculus*, in Anatomy. See LEVATOR SCAPULÆ.

PATONCE, in Heraldry, a *Cross Patonce*, a Cross of the Figure adjoining. He bears Gules, a Cross *Patonce*, Argent, by the Name of *Latimer*. It comes near to the Cross Flory, and only differs in some Circumstances of the Ends. See FLORY.

PATRES *Conscripti*, in Antiquity, a Denomination given the Senators of *Rome*. See SENATOR, PATRICIAN.

The first hundred Senators appointed by *Romulus*, were call'd simply *Patres*, Fathers; another hundred being added by *Romulus* and *Tatius*, upon the Union of the two People; these latter were call'd *Patres minorum Gentium*, and the former *Majorum Gentium*.

At length, *Tarquinius Priscus* making up the Number 300, the two latter Classes were call'd *Patres Conscripti*; because, *Adscripti* wrote down to the former.

Those afterwards chosen from among the Knights, were call'd *Patres Allecti*.

PATRIARCH, one of those first Fathers who liv'd towards the Beginning of the World; and who became famous by their long Lines of Descendants.

Abraham, *Isaac*, *Jacob*, and his twelve Sons are the *Patriarchs* of the Old Testament: The Number of Children is the Benediction, and the Character of a *Patriarch*.

PATRIARCH, is also us'd in Christendom for the Bishops in Possession of some of the grand Sees, independant of the papal Jurisdiction. See BISHOP.

The *Patriarchate* has been always esteem'd the supreme Dignity in the Church: So that to rise by Degrees, the Bishop had only under him the Territory of the City, whereof he was Bishop; the *Metropolitan* commanded a Province, and had for Suffragans the Bishops of his Province; the Primate was the Chief of a Dioceses, and had several *Metropolitans* under him; and the *Patriarch* had under him several Dioceses, and Primates 'emselves were under him. See METROPOLITAN.

But this Order was not always observ'd. See PRIMATE.

Usher, *Pagi*, *de Marca* and *Morin*, attribute the Establishment of the Grand *Patriarchs* to three Apostles. They suppose that the Apostles, acccording to the Description of the World then given by Geographers, pitch'd on the three principal Cities in the three Parts of the known World, *viz. Rome* in *Europe*; *Antioch* in *Asia*; and *Alexandria* in *Africa*; and thus form'd a Trinity of *Patriarchs*.

Others, far from attributing this Institution to St. *Peter*, maintain that the Name *Patriarch* was unknown at the Time of the Council of *Nice*; and that for a long Time afterwards, *Patriarchs* and *Primates* were confounded together: as being all equally Chiefs of Dioceses; and equally superior to Metropolitans, who were only Chiefs of Provinces.

Hence it is that *Socrates* gave the Title *Patriarch* to all the Chiefs of Dioceses, and reckons ten of 'em.

In Effect, it does not appear that the Dignity of *Patriarch* was attach'd, and affected to the five grand Sees of *Rome*, *Constantinople*, *Alexandria*, *Antioch*, and *Jerusalem*, till after the Council of *Calcedon* in 451. For when the Council of *Nice* regulated the Limits and Prerogatives of the three *Patriarchs* of *Rome*, *Antioch*, and *Alexandria*, it did not give 'em the Title of *Patriarchs*, tho' it allow'd 'em the Preeminence and Privileges thereof. Thus, when the Council of *Constantinople* adjudg'd the second Place to the Bishop of *Constantinople*, who, till then, was only a Suffragan of *Heraclea*; it said nothing of his *Patriarchate*.

Nor is the Term *Patriarch* found in the Decree of the Council of *Calcedon* whereby the fifth Place is assign'd to the Bishop of *Jerusalem*; nor did these five *Patriarchs* govern all the Churches.

There were still many Independant Chiefs of Dioceses, who, far from owning the Jurisdiction of the grand *Patriarchs*, call'd 'emselves *Patriarchs*; such as that of *Aquilea*; nor was *Carthage* ever subject to the *Patriarch* of *Alexandria*.

The Authority of the *Patriarchs* grew by insensible Degrees, till at length all Affairs of Moment, within the Compass of their *Patriarchate*, came before them; either at first hand, or by Appeal from the *Metropolitans*.

They consecrated Bishops, appointed the Time of *Easter*, &c. Nothing in short was done without consulting 'em; and their Decrees were executed with the same Respect as those of Princes.

The *Latin* Church was unacquainted with *Patriarchs* till the VI. Century; and the Churches of *Gaul*, *Britain*, &c. were never subject to the Authority of the *Patriarch* of *Rome*, whose Authority only extended to the suburbicary Provinces.

There was no Primalty, no Exarch, or *Patriarch* own'd here; but the Bishops, with the *Metropolitans*, governed the Church in Common.

Indeed, after the name *Patriarch* became popular in the West; it was attributed to the Bishops of *Bourges* and *Lions*; but it was only in the first signification: *viz.* as Chiefs of Dioceses.

Du Cange adds, that there have been some Abbots, who have bore the Title of *Patriarchs*. See ABBOT.

PATRIARCH, is also us'd for the chiefs of several Churches in the East, who live out of Communion with the *Roman* Church: as the *Patriarch* of the *Armenians*, residing in a Monastery of St. *Gregory*; The *Patriarch* of the *Abyssinians*, called *Abuna*; the *Patriarch* of the *Cophti*, the *Jacobin*, &c. See ARMENIANS, COPHTI, JACOBINS, &c.

PATRIARCHAL, in Heraldry. A *Cross Patriarchal* is so call'd, because the Shaft is twice cross'd; the lower Arms being longer, and the Upper shorter.

Such a Cross is said to belong to *Patriarchs*, as the Triple Cross does to the Pope.

PATRICIAN, in ancient *Rome*, a Title given to the Descendants of the Hundred, or according to others, of the two Hundred first Senators, chosen by *Romulus*, and by him call'd *Patres*, Fathers. See SENATOR, PATRES, &c.

Patricians, therefore, were then the ancient Nobility; in Opposition to the *Plebeians*. See PLEBEIAN.

But the Cognizance and Character of these ancient Families being almost lost and extinguish'd, by a long Course of Years, and frequent changes in the Empire; a new Kind of

Patricians

Patricians were ſet on Foot; who had no pretenſions from Birth; but their Title depended wholly on the Emperor's Favour.

This new *Patriciate*, *Zozimus* tells us, was erected by *Conſtantine*; who attributed the Quality to his Councellors; calling 'em *Patricii*, not becauſe deſcended from the ancient Fathers of the Senate, but becauſe they were the Fathers of the Republic, or of the Prince.

This Dignity in time, became the higheſt of the Empire. *Juſtinian* calls it *Summam dignitatem*, in effect, the *Patricians* had the Precedence of *Conſularii*, and took Place before 'em in the Senate.

This Dignity was only conferr'd on thoſe who had gone thro' the firſt Offices of the Empire; or had been Conſuls.

We frequently read of *Patricians* among the *Engliſh Saxons*.

Pope *Adrian* made *Charlemaign* take the Title of *Patrician* 'ere he took the Quality of Emperor; other Popes have given the Title to other Kings and Princes, by reaſon of its Eminence.

PATRICIANS, or PATERNIANS ancient Sectaries, who diſturbed the Church in the Beginning of the third Century.

They had their Name from their Founder *Patricius*, Preceptor of a Marcionite, call'd *Symmachus*.

His diſtinguiſhing Tenet, was that the Subſtance of the Fleſh is not the Work of God, but that of the Devil; on which Account, his Adherents bore an implacable Hatred to their own Fleſh; which ſometimes carried 'em ſo far as to kill 'emſelves.

They were alſo called *Tatiani*. See TATIAN.

PATRIMONY, a Right, or Eſtate, which a Perſon inherits from his Anceſtors.

The Name was alſo antiently given to the Effects, or Revenues wherewith a Church or religious Houſe was endowed. In this Senſe, we ſay the *Patrimony* of the Church of *Rimini*, of *Milan*, &c.

The Dutchies of *Urbino* and *Spoleto*, are called St. *Peter*'s *Patrimony*. The Church of *Rome* had *Patrimonies* in ſeveral Countries, in *France*, *Africa*, the *Alps*, *Sicily*, &c.

To make what belong'd to the Churches the more reſpected, they uſually gave their *Patrimonies* the Name of the Saints they held in the higheſt Veneration.

Thus the Church of *Ravenna*, called its Inheritance the *Patrimony* of St. *Apollinarius*; that of *Milan* the *Patrimony* of St. *Ambroſe*, &c. as is obſerved by *Fra. Paolo*.

PATRIPASSIANS, a Name given to the *Sabellians*; becauſe they did not believe 'twas the Son, but the Father himſelf that was Crucified. See SABELLIAN.

The Council of *Antioch* held by the *Euſebians* in 345, ſays, that thoſe whom the *Romans* call *Patripaſſians*, the *Eaſtern* People call'd *Sabellians*; it adds the Reaſon of the Name *Patripaſſians* in their Condemnation; *viz.* ſuppoſing that by the Incarnation of the Father, they render'd him Comprehenſible and *Paſſible*.

PATROLL, or PATROUL, antiently *Patoul*, in War, a Round, or March made by the Guards, or Watch in the Night-time; to obſerve what paſſes in the Streets, and to ſecure the Peace and Tranquillity of the City or Camp.

The *Patroll* conſiſts of a Body of five or ſix Men detach'd from a *Corps de Guard*, and commanded by a Serjeant.

PATRON, a Term us'd in various Acceptations, tho' all reducible to the Relation of a Protector and Guardian.

Particularly, in the Church of *Rome*, a Saint, whoſe Name a Perſon bears, or under whoſe Protection he is put, and whom he takes particular Care to invoke; or a Saint in whoſe Name a Church or Order is founded; or a Perſon who firſt eſtabliſh'd it, and who is choſen Protector, are call'd *Patrons* thereof.

St. *Peter* and St. *Paul* are the Patrons of the Church of St. *Genevieve*, St. *Denis* the Patron of the City *Paris*, St. *George* of *England*, St. *Benidict* the Patron of the *Benedictines*, St. *Michael* of the *Armorers*, St. *Ignatius* of the *Jeſuits*, &c.

PATRON, PATRONUS, among the *Romans*, was uſed for two different Perſons.

They call'd *Patron* the Maſter, who had freed his Slave. And hence, as the Right, and Relation of Maſter expir'd, that of *Patron* commenc'd.

For the *Romans*, in giving their Slaves their Freedom, did not deſpoil 'emſelves of all Rights and Privileges in 'em: The Law ſtill ſubjected the freed Men to conſiderable Services and Devoirs to their Patrons, the Neglect whereof was ſeverely puniſh'd. See SLAVE.

The principal Right which *Patrons* had, was that of being the legal Heirs of theeir freed Men, if they died without law ful Iſſue born after their Enfranchiſement and Inteſtate.

By the Papian Law it was further provided, that if the Eſtate of the freed Men were 100000 Seſterces, and he had three Children, the *Patron* ſhou'd have a Child's Portion. See FREED-MAN, LIBERTUS, ENFRANCHISEMENT, &c.

PATRON, was alſo a Name which the People of *Rome* gave to the Perſon, under whoſe Protection they put themſelves.

The common People uſually choſe ſome Perſon of Eminence and Authority to whom they paid all Kinds of Honour and Reſpect; denominating 'emſelves his *Clients*: And the *Patron* on his Side owed them his Credit and Protection.

By this reciprocal Relation was the *Patron* bound to his Client, and the Client to his *Patron*. See CLIENT.

PATRON, in Navigation, a Name given in the *Mediteranean*, to the Perſon who commands the Veſſel and Seamen; ſometimes to the Perſon who ſteers it; the former in other Places call'd *Maſter*, the ſecond *Pilot*. See MASTER and PILOT.

PATRON, in the Canon and Common Law, a Perſon who founds, or endows a Church or Benefice, and reſerves to himſelf the Right of Patronage. See PATRONAGE.

The King is *Patron Paramount* of all Eccleſiaſtical Benefices in *England*. See KING, PARAMOUNT, &c.

PATRONAGE, the Right belonging to the Founder of a Church or Benefice. This Right conſiſts in having the Nomination or Preſentation to the Benefice by him founded or endow'd; in having the honourable Rights of the Church, in being enterr'd in the Chancel, &c. See BENEFICE.

Of *Patronages*, ſome are *Lay*, others *Eccleſiaſtical*.

Lay-patronage is a Right attach'd to the Perſon, either as Founder, or as Heir of the Founder; or as Poſſeſſor of a Fee to which the *Patronage* is annex'd.

Eccleſiaſtical Patronage is that a Perſon is entitled to by Virtue of ſome Benefice which he holds.

If an Eccleſiaſtic have a Right of *Patronage* on his own Bottom, independant of his Eccleſiaſtic Capacity; this is ſtill *Lay-Patronage*.

Lay-Patronage is either *real* or *perſonal*: *Real* is that attach'd to the Glebe, or to a certain Inheritance.

Perſonal is that belonging immediately to the Founder of the Church, and tranſmittible to his Children and Family, without being annex'd to any Fee.

Perſonal *Patronage* cannot be alienated or ſold; *Real* may, together with the Glebe to which it is annex'd. There muſt ever be ſome Body or Matter to fix it to, in order to its being transfer'd to another.

The Origin of the Right of *Patronage*, we find in the 10th Canon of the Council of *Orange*; where it is expreſs'd that a Founder may preſent to the Dioceſan the Clerks he thinks proper for his Church. By a Law of *Juſtinian* it is ordain'd, that the Founders of Churches may not put Clerks in 'em on their own Authority; but only preſent them to the Biſhop.

Some Canoniſts look on the Right of *Patronage*, as a Kind of Eccleſiaſtic Servitude. See SERVICE.

The Right of *Patronage* ſleeps, but is not loſt, while a Perſon is out of the Communion of the Church.

Arms of Patronage, in Heraldry, are thoſe, a Top whereof are ſome Marks of Subjection and Dependance: Thus the City of *Paris* bears three *Flower-de-lis* in chief, to ſhew her Subjection to the King.

The Cardinals on the Top of their Arms bear thoſe of the Pope, who gave 'em the Hat, to ſhew that they are his Creatures.

PATTES, in Heraldry, the Paws of a Beaſt. See PAW.

PAVAGE, in our old Law-Books, Money pay'd towards the paving of Streets or High-ways. See PAVEMENT.

PATRONYMIC, a Term which Grammarians uſe; for thoſe Names, which the *Greeks* gave to the Race, or Lineage; and which were form'd from him who was Chief, or Founder thereof. See NAME.

Thus the Deſcendants of *Æacus*, were called *Æacides*; and thoſe of *Hercules*, *Heraclides*.

Theſe *Patronymic-Names* the *Romans* call'd *Gentilitia*, which amounts to our Sur-names. See SUR-NAME.

Thus, thoſe of the preſent reigning Family in *France*, we call the *Bourbons*; thoſe of the late in *England*, the *Stewarts*, &c. The Word is form'd from the *Greek* πατὴρ Father, and ὄνομα, Name.

PAVAN, or PAVANE, a Grave Dance, derived from the *Spaniards*; wherein the Dancers make a kind of Wheel, or Tail before each other, like that of a Peacock, whence the Name. See DANCE.

The *Pavane* was antiently in great repute; and was danced by Gentlemen with Cap and Sword; by thoſe of the Long Robe, with their Gowns; by Princes with their Mantles, and by the Ladies with their Gown-tails trailing on the Ground.

It was called the *Grand Ball*; from the Solemnity, wherewith it was perform'd.

To moderate its Gravity, 'twas uſual to introduce ſeveral Flouriſhes, Paſſades, Capers, &c. by way of *Epiſodes*.

Its Tablature or Score is given at large by *Thoinot Arbeau* in his *Orcheſigraphia*.

PAVEMENT, a Lay of Stone, or other Matter, ſerving to cover and ſtrengthen the Ground of divers Places, for the more commodious walking on, or the Paſſage of Carriages.

The Word is form'd from the *Latin Pavimentum*, of *Pa-*

vire, to beat down the Earth, in order to make it firm and ſtrong.

In *England*, the *Pavements* of the Grand Streets, &c. are uſually Flint, or Pebble; Courts, Equeries, Kitchins, Halls, Churches, &c. Tiles, Bricks, Flags, or Fire-Stone; ſometimes a Kind of Free-Stone, and Rag-Stone. See STONE.

In ſome Cities, *E. gr. Venice*, the Streets, &c. are paved with Brick; Churches ſometimes with Marble, and ſometimes with Moſaic-Work, as the Churches of St. *Mark* at *Venice*.

In *France*, the public Roads, Streets, Courts, &c. are paved with *Gres*, a Kind of Free-Stone.

In *Amſterdam*, and the chief Cities of *Holland*, they call their Brick *Pavement* the *Bourguer Maſters Pavement*, to diſtinguiſh it from the Stone or Flint *Pavement*, which uſually takes up the Middle of the Street, and which ſerves for Carriages; the Brick which borders it being deſtined for the Paſſage of People on Foot.

Pavements of Free-Stone, Flint, and Flags, in Streets, &c. are laid dry, *i. e.* are retained in a Bed of Sand; thoſe of Courts, Equeries, Ground Rooms, &c. are laid in a Mortar of Lime and Sand; or in Lime and Ciment, eſpecially if there be Vaults or Cellars underneath.

Some Maſons, after laying a Floor dry, eſpecially of Brick, ſpread a thin Mortar over it; ſweeping it backwards and forwards to fill up the Joints.

Thirty two Statute Bricks laid flat pave a Yard ſquare; 64 of Edge wiſe.

The Square Tiles us'd in Paving, call'd Paving-bricks, are of various Sizes, from 6 to 12 Inches Square. See BRICKS.

Pavements of Churches, &c. frequently conſiſt of Stones of ſeveral Colours; chiefly black and white, and in ſeveral forms, chiefly Square, and Lozange, artfully diſpoſed.

Indeed, there needs no great variety of Colours to make a ſurprizing variety of Figures and Arrangements. *M. Truchet*, in the Memoirs of the *French* Academy, has ſhewn by the Rules of Combination, that two Square-Stones divided diagonally into two Colours, may be join'd together Checquerwiſe 64 different Ways; which appears ſurpriſing enough; ſince two Letters or Figures are only combined two Ways.

The Reaſon is, that Letters only change their Situation with regard to firſt and ſecond; the Top and Bottom remaining the ſame: But in the Arrangement of theſe Stones, each admits of four ſeveral Situations, in each whereof the other Square may be chang'd 16 Times, which gives 64 Combinations.

Indeed, from a further Examination of theſe 64 Combinations, he found there were only 32 different Figures; each Figure being repeated twice in the ſame Situation, tho' in a different Combination; ſo that the two only differ'd from each other by the Tranſpoſition of the darker or higher Squares. See COMBINATION.

Pavement of a Terraſs, is that which ſerves for the covering of a Plat-form; whether it be over a Vault, or on a Wooden Floor. See TERRASS.

Thoſe over Vaults are uſually Stones ſquared, and bedded in Lead.

Thoſe on Wood, call'd by the *Latins Pavimenta contignata*, are either Stones with Beds for Bridges; Tiles for Ceilings in Rooms, or Lays of Mortar, made of Ciment and Lime, with Flints or Bricks laid flat, as is ſtill practis'd by the Eaſtern and Southern People a Top of their Houſes. See PLAT-FORM.

All thoſe *Pavements* which lye open, are call'd by the *Latins Pavimenta ſubdialia*.

Moſaic PAVEMENT. See MOSAIC *Work*.

Projection, or *Perſpective of a* PAVEMENT, See PERSPECTIVE.

PAVILLION, in Architecture, from the *Italian Padiglione*, Tent, of the *Latin Papilio*; ſignifies a Turret, or Building uſually inſulated, and under a ſingle Roof; ſometimes Square; and ſometimes in form of a Dome.

Pavillions are ſometimes alſo projecting Pieces, in the Facade of a Building, marking the Middle thereof; ſometimes the *Pavillion* flanks a Corner, in which Caſe 'tis call'd *Angular Pavillion*. The *Louvre* is flank'd with four *Pavillions*. *Pavillions* are uſually higher than the reſt of the Building.

There are *Pavillions* built in Gardens; popularly call'd Summer-houſes, Pleaſure-houſes, &c.

There are Caſtles or Forts which only conſiſt in a ſingle *Pavillion*.

PAVILLION, in War, a Tent, rais'd on Poſts, to lodge under in the Summer-time. See TENT.

PAVILLION, is alſo us'd in the General, for Flags, Colours, Enſigns, Standards, Banners, &c. all which, Authors uſually confound with one another. See FLAG, ENSIGN, STANDARD, BANNER.

The Cuſtom of bearing pointed *Pavillions*, as at preſent, firſt came from the *Mahometan Arabs*, at the Time they firſt ſeiz'd on *Spain*.

Till then, all Colours were ſtretch'd on croſs Pieces like Thurch Banners; whence they were call'd in *Latin*, *Vexilla quaſi Velilla*, a Diminutive of *Vela*, *Sails*.

The Pirates all along the Coaſt of the *Atlantic* and *Barbary*, bear Hexagonal *Pavillions*. 'Tis Gules, charg'd with a little *Turk*, dreſs'd in his *Turban*; tho' contrary to their Law, which prohibits the making any Image of a Man; from an Opinion that thoſe who make the Figure here, will be oblig'd to furniſh a Soul to the Figure at the Day of Judgement, or in Default thereof be damn'd.

But this Portrait it ſeems is that of *Hali Sulficar*, *Mahomet's* Son in-law, to whoſe Party the *Africans* adhere; and who appointed his Picture to be repreſented on their Banners; imagining himſelf ſo terrible to the Chriſtians, that a mere View of his Image wou'd put 'em to flight; as we are told by *Leunclavius*.

PAVILLION, in Heraldry, a Covering in form of a Tent, which inveſts, or wraps up the Armories of divers Kings and Soveraigns, depending only on God and their Sword. The *French* Heralds hold, that none but Soveraign Monarchs may bear the *Pavillion* intire, and in all its parts.

It conſiſts of two Parts, the Top, which is the Chapeau, or Coronet, and the Curtain which makes the Cloak. Thoſe who are Elective, or have any Dependance, ſay the Heralds, muſt take off the Head, and retain nothing but the Curtains.

The Uſe of *Pavillions* and Cloaks in Armories is derived from the ancient *Lambrequins*, which are ſometimes found ſtretch'd out in form of Coverings; and tuck'd back on either Side.

Others will have it derived from the ancient Tournaments, wherein were expoſed the Arms of the Knight in rich Tapeſtry Work, on Tents and *Pavillions*, which the Chiefs of the Quadrils rais'd to ſhelter 'emſelves, till the Time of entring the Liſts.

PAULIANISTS, a Sect of Hereticks, ſo call'd from their Founder *Paulus Samoſatenus*, a Native of *Samoſata*, elected Biſhop of *Antioch* in 262.

This Hereſiarch denied the Diſtinction of Perſons in the Trinity, with *Sabellius*; and taught with *Artemon* that the Word deſcended into Jeſus; and that after having perform'd by him what he deſir'd to do, he re-aſcended to his Father.

He deſtinguiſh'd two Perſons in *J. C.* the Word and the Chriſt: The latter, according to him, was only God in regard of his Holineſs; accordingly he did not baptize in the Name of the Father and Son, &c. For which Reaſon the Council of *Nice* order'd thoſe baptized by him to be rebaptized.

Being condemn'd by *Dionyſius Alexandrinus*, in a Council; he abjured his Errors to avoid Depoſition; but ſoon after reſum'd 'em, and was actually depos'd by another Council in 270.

PAULICIANS, a Branch of the ancient *Manichees*; ſo call'd from their Chieftain, one *Paulus* an *Armenian*, in the VIIth Century. See MANICHEE.

The *Paulicians* by their Number, and the Countenance of the Emperor *Nicephorus*, became formidable to all the Eaſt.

To the other Opinions of the *Manichees*, they are ſaid to have added an Abhorrence of the Croſs; and to have employ'd it in the moſt ſervile Offices, out of deſpight.

The Empreſs *Theodora*, Tutreſs of the Emperor *Michael* in 845, wou'd oblige 'em either to be converted, or to quit the Empire: Upon which ſeveral of 'em were put to Death, and more retired among the *Sarazens*; but they were not all exterminated.

Towards the End of the ninth Century, they were able to maintain War againſt the Emperor *Baſil*; and even preach'd long after this in *Bulgaria*; whence they ſpread into ſeveral other Parts of *Europe*.

The *Paulicians* were alſo call'd *Publicans*, and *Poplicans*. See PUBLICAN. &c.

PAVO, in Aſtronomy. See PEACOCK.

PAUPER, in Law, See FORMA *Pauperis*

PAUSARY, PAUSARIUS, in ancient *Rome*, an Officer, who in the ſolemn Pomps or Proceſſions of the Goddeſs *Iſis*, directed the Stops or *Pauſes*.

In theſe Ceremonies, there were frequent Stands at Places prepared for the Purpoſe; wherein the Statues of *Iſis* and *Anubis* were ſet down, much after the Manner of the reſting Places in the Proceſſion of the Holy Sacrament in the *Romiſh* Church.

Theſe Reſts were call'd *Manſiones*; the Regulation whereof was the Office of the *Pauſarii*.

From an Inſcription quoted by *Salmaſius*, it appears that the *Romans* had a kind of College or Corporation of *Pauſaries*. See COLLEGE.

The Name *Pauſary* was alſo given to an Officer in the *Roman* Gallies, who gave the Signal to the Rowers, and mark'd the Times and Pauſes; to the End they might act in concert, and row all together.

This was done with a Muſical Inſtrument. *Hyginus* ſays, that in the Ship *Argo*, *Orpheus* did the Office with his Lute.

PAUSE, a Stop, or Ceſſation of ſpeaking, ſinging, playing, &c.

The Uſe of Pointing in *Grammar*, is to make proper Pauſes in certain Places. See POINTING.

There is a Pauſe in the Middle of each Verſe; in a Hemiſtic, 'tis call'd the *Reſt* or *Repoſe*.

The

The Word is form'd from the *Latin Pauſa*, which we find in *Lucretius* and *Plautus* in the ſame Senſe.

PAUSE, in Muſic, a Character of Silence and Repoſe; call'd alſo by ſome, a *Mute figure*; becauſe it ſhews that ſome of the Parts are to be Silent, while the others continue the Song; either for the ſake of ſome Fugure or Imitation, or to give a breathing Time, or to give room for another Voice, &c. to anſwer what this Part ſung, as in Dialogues, Echoes, &c.

The Ancients had two kinds of Pauſes; the one call'd by the *Italians*, *Initial Pauſes*; becauſe, firſt placed at the Beginning of the Piece, tho' ſometimes after, and regularly before the Circle O, or the Semi-circle C.

They had alſo Pauſes after the Characters of the Meaſure, and in the Courſe of the Piece.

A *general Pauſe* is a general Ceſſation or Silence of all the Parts.

Demi-pauſe is a Ceſſation for the Time of half a Meaſure.

We alſo ſay *Pauſe of a Minim*, *Pauſe of a Semibreve*, *long Pauſe*, *Pauſes of Croma*, and *Semi-Croma*; which are Names given by the *Italians*, to expreſs the different values of Pauſes. For the Signs or Characters of Pauſes. See CHARACTER.

PAW, *Patte*, in Heraldry, the Fore-foot of a Beaſt cut of ſhort. If the whole Leg be retain'd, it is call'd *Gambe*.

Lyons-paws are much us'd in Armoury.

PAWN-*broker*. See BROKER.

PAWNAGE. See PANNAGE.

PAX *Dei*. See PEACE of GOD.

PAX *Eccleſiæ*. See SANCTUARY.

PAX *Regis*, See PEACE *of the King*. *Longe debet eſſe* Pax Regis *à parte ſua, ubi reſidens fuerit, à quatuor partibus loci illius, hoc eſt quatuor milliaria & tres Quarentenæ, & Novem acræ Latitudine, & novem pedes, & novem palmæ, & novem Grana hordei*, &c. See EDU. CONFESS.

Ad Pacem redire, to reſtore to the Peace, is to reverſe an Out-lawry; whereby a Perſon is reſtored to the Benefit of the King's Peace. See OUT-LAWRY.

Rex poteſt dare quod ſuum eſt, hoc eſt pacem ſuam, quam utlegatus ami ſit. Bracton. Lib. 3.

PAYMENT, the Diſcharge of a Debt, either by Money really told, or by Bills of Exchange, &c. See DEBT, &c.

Prompt PAYMENT, a popular Term in *England* and *Amſterdam*, is, when a Debtor acquits what he owes before the Expiration of the Term granted by the Creditor.

The Diſcount for *Prompt Payment* on moſt Merchandices is uſually 1 *per Cent*. See DISCOUNT.

PAY, in the Sea Language. The Seamen, ſay, *pay more Cable*, *i. e.* let out more Cable; and *pay cheap* that is, at the turning the Anchor out of the Boat, to turn it out faſter.

PEACE, in its general Signification, ſtands in oppoſition to War. See WAR.

In our Law-Books, &c. *Peace* is reſtrain'd to a quiet, and inoffenſive Carriage towards the King, and his People. *Lamb. Eirenarch.*

Where any Man ſtands in danger of Harm from another, and makes Oath thereof before a Juſtice of the Peace; he muſt be ſecur'd by good Bond, which is call'd *binding to the Peace*, &c. See FRANK-PLEDGE, See alſo CONSERVATOR, and JUSTICE *of the Peace*.

Time of Peace is when the Courts of Juſtice are open, and the Judge and Miniſters of the ſame may by Law protect Men from Wrong and Violence, and diſtribute Juſtice to all. See *Coke* on *Little*. See alſo TERM.

PEACE *of the King*, mention'd in the Stat. 6. *Rich.* 2d. &c. is that Security that the King promiſes his Subjects, and others taken into Protection; both for Life and Goods. See SUIT *of the King's Peace*.

PEACE *of God* and the Church, mention'd in our ancient Law Books, is that Reſt and Ceſſation which the King's Subjects had from Trouble and Suit of Law, between the Terms. See VACATION.

PEACE of the Plough, that whereby the Plough, Plough-Tackle, and Plough-Cattle are ſecured from Diſtreſſes. See *Fitzh. Nat. Brev.*

Thus Fairs may be ſaid to have their *Peace*, becauſe no Man may be troubled in them, for any Debt contracted elſewhere.

Clerk of the PEACE. See CLERK *of the Peace*.

PEACOCK, *Pavo*, in Aſtronomy, a Conſtellation of the *Southern* Hemiſphere; unknown to the Ancients; not viſible in our *Northern* Parts of the World. See CONSTELLATION.

PEAN, in Heraldry, is when the Field of a Coat of Arms is Sable, and the Powderings, Or

PEARL, in natural Hiſtory, a hard, white, clear Subſtance, uſually roundiſh, found in a teſtaceous Fiſh, reſembling an Oiſter; and rank'd in the Number of *precious Stones*.

The Fiſh wherein the *Pearls* are found, is three or four times the Size of the common Oiſters; and is uſually call'd *Pearl*, or *Mother of Pearl*, by the Naturaliſts, *Pinna Mariua*.

Each *Mother-Pearl* ordinarily yields ten or twelve of 'em; tho' an Author, who treats of their Production, pretends to have ſeen an hundred and fifty in the ſame Fiſh; but thoſe in different Degrees of Perfection. The moſt perfect ſtill drop firſt; the reſt remaining at the Bottom of the Shell. The Formation of *Pearls* has puzzled both the ancient and modern Naturaliſts; and given Occaſion to a great Number of Hypotheſes, many of 'em wild and extravagent enough: The Ancients, *Pliny*, *Solinus*, &c. will have 'em to be form'd of Dew. The Fiſh, ſay they, riſe every Morning to the Surface of the Water, and there open their Shells, to imbibe the Dew of Heaven; which, like a Liquid Pearl, inſinuating into the Body of the Oiſter, fixes its Salts, and their aſſumes the Colour Hardneſs and Form of *Pearl*; as ſome Liquors are converted into Cryſtals in the Earth; or the Juice of Flowers into Honey and Wax in the Bee-hive.

But this, how plauſible ſoever, is apparently falſe: For the Oiſters grow faſt to the Rocks, and no Body ever yet ſaw any of 'em appear on the Surface of the Water.

Others will have *Pearls* to be the Eggs of the Fiſhes they are found in: But neither does this conſiſt with the Phænomena. For *Pearls* are found throughout the whole Subſtance of the Oiſter, in the Head, the Coat that covers it, the circular Muſcles that terminate in it, the Ventricle, and in general in all the fleſhy and muſculous Parts; ſo that there is no Appearance that *Pearls* ſhou'd be in the Oiſters what the Eggs and Sperm are in Fowls and Fiſhes. For, beſide that there is no particular Place deſtined for their Formation; the Anatomiſts have not been able to find any Thing that bears any Relation to what paſſes in this Reſpect in other Animals.

This, indeed may be ſaid, that as in a Hen there is an Infinity of little Eggs, in form of Seed; ſome whereof grow and ripen, whilſt the Reſt continue nearly in the ſame State; ſo in each Oiſter is uſually found one *Pearl* much larger, and that ripens much faſter, than the Reſt. This *Pearl* ſometimes grows big enough to hinder the Oiſter from ſhutting, in which caſe the Fiſh rots and dies.

Others, with M. *Geoffroy* the younger, rank *Pearls* among the Bezoards; as comprehending under that Claſs all Stones form'd in Lays or Strata in the Bodies of Animals. See BEZOARD.

M. *Reaumur*, has a very curious Piece on the Subject of the Formation both of the Shells and *Pearls*, in the Memoirs of the *French* Academy, *An.* 1717. He obſerves that *Pearls* are form'd like other Stones in Animals, as thoſe *E. gr.* in the Bladder, Kidneys, &c. and that they are apparently the Effects of a Diſeaſe of the Fiſh.

In Effect, they are all form'd of a Juice extravaſated out of ſome broken Veſſels, detain'd, and fix'd among the Membranes.

To evince the poſibility of this, he ſhews that the Shells of Sea-Fiſhes, as well as thoſe of Snails, &c. are wholly form'd of a glutinous, ſtony Matter, ouzing out of the Body of the Animal. (See SHELL.) Now 'tis no wonder that an Animal which has Veſſels wherein circulates a ſufficient Quantity of ſtony Juice to build, thicken, and extend a Shell; ſhou'd have enough to form Stones, in caſe the Juice deſtined for the Growth of the Shell ſhall chance to overflow, and burſt forth in any Cavity of the Body, or among the Membranes.

To confirm this Syſtem, he obſerves, that the inner Surface of the common *Pearl*-Muſcle, found on the Coaſts of Provence, is of a *Pearl, or Mother of Pearl* Colour, from one part of its Extent, which he determines, to another; after which it becomes reddiſh: Now there are *Pearls* of two Colours found in the Shell; and the Colours of the *Pearls* are preciſely the ſame with thoſe of the Shell; nay, more, each Kind of colour'd *Pearl* is found in the correſponding colour'd Part of the Shell, which ſhews, that in the ſame Place wherein the Tranſpiration of a certain Juice had form'd, and wou'd have continu'd to form a Couch, or Lay of Shell of a certain Colour; the Veſſels which convey'd that Juice being broke, there is made a little Maſs or Collection of the Juice, which hardening, becomes a *Pearl* of the ſame Colour with the part of the Shell to which it correſponds.

Add to this, that the Silver, or *Pearl*-colour'd part of the Shell is form'd of Strata or Lays over one another, like an Onion; and the reddiſh Part of little cylindrical, ſhort Fibres applied againſt one another. The *Pearls* of the two Colours have this Difference of Texture; not but they are both compos'd of concentric Couches; but thoſe of the reddiſh *Pearls* are much leſs ſenſible; and, beſides, have Threads, which like *Radii*, proceed from their Centre to their Circumference.

Theſe Circumſtances ſeem effectually to determine the Formation of *Pearls*, and to eſtabliſh the new Syſtem beyond Contradiction.

As to the Formation of the *Pearl*-Fiſh; tho' 'tis the moſt natural Opinion, that this Fiſh, like all others, produces Eggs or Spawn, whoſe exterior Surface at firſt is ſoft and viſcous, but changes and hardens by degrees into Shell; yet, we muſt

not

not leave unmention'd the popular Hypotheſis of the *Paravas*, *viz.* that in rainy Weather the Brooks of the neighbouring Lands that empty 'emſelves all along the Coaſts, run near two Leagues on the Surface of the Sea without mixing therewith. For a While, the ſuſpended Water retains its natural Colour and Sweetneſs; but at length, the Heat of the Sun condenſing it, forms it into a Kind of light tranſparent Froth; this done, it preſently divides into an infinity of Parts, each whereof appears as if animated; moving this way and that, like little Inſects. The Fiſhes ſometimes catch at 'em as they paſs by: but ſoon abandon 'em. By degrees their Skin thickening and hardening, they at length become heavy enough to ſink to the Bottom, and aſſume the Figure of Oyſters.

The Perfection of *Pearls*, whether round, in form of Pears, or Olives, or irregular, conſiſts chiefly in the Luſtre and Clearneſs of the Colour; which they call the *Water*. There are ſome whoſe Water is white; which are thoſe moſt eſteem'd, in *Europe*. The Water of others borders on the Yellow, which ſome *Indians* and *Arabs* prefer to the White. Others are of a Lead-colour, others border on Black; and others are quite Black.

They are all liable to change with wearing; in 80 or 100 Years they uſually become of little value; eſpecially the white Ones, which turn Yellow, and ſpoil in 40 or 50 Years time.

The Difference of Colours doubtleſs ariſes from the different Parts of the Oiſter wherein they are form'd When the Seed happens to be thrown into the Meſentery or Liver, or the Parts correſponding thereto, 'tis no wonder if the Impurities of the Blood change the Natural White.

In *Europe*, *Pearls* are ſold by the *Carat*-weight, the *Carat* containing four Grains.

In *Aſia*, the Weights us'd for *Pearls* are different, in different States. See CARAT.

The Term *Pearl* is only properly applied to what grows independant of the Shell. The Shell itſelf is call'd *Mother of Pearl*. See MOTHER *of Pearl*.

Thoſe Pieces which have grown thereto, and have been ſince ſeparated by the Addreſs of the Workman, are call'd *Wens of Pearls*; which are in effect nothing but roundiſh Excreſcencies, or Pieces of the Shell; tho' frequently us'd for real Shell. See WEN *of Pearl*.

Pearls, *F. Bouhours* obſerves, have this Advantage over precious Stones dug out of Rocks, &c. that the Latter owe their Luſtre to the Induſtry of Men; Nature only, as it were hews 'em out, and leaves the finiſhing of 'em to Art: But the Former are born with that beautiful Water which gives 'em their Value. They are found perfectly poliſh'd in the Abyſſes of the Sea; and Nature has put the laſt Hand to 'em 'ere they are ſeparated from the Mother.

Pearls of unuſual Figures, *i. e.* neither round, nor in the Pear-form, are call'd *Baroguas*, or *Scotch-Pearls*: Thoſe of unuſual Sizes, are call'd *Parangons*; as that of *Cleopatra* valued by *Pliny* at five hundred thouſand Crowns; that brought in 1574 to *Philip* II. of the Size of a Pigeons Egg, valued at 14400 Ducats; that of the Emperor *Rudolph*, mention'd by *Boethius*, called *La peregrina*, or the incomparable, of the Size of a Muſcade Pear, and weighing 30 *Carats*; and that mention'd by *Tavernier*, in the Hands of the Emperor of *Perſia*, in 1633, bought of an *Arab* for 32000 Tomans, which at 3 *l.* 9*s.* the Toman, amounts to 110400 *l. Sterling*.

Pearls, are of ſome Uſe in Medicine; but 'tis only the ſmalleſt Sort, call'd *Seed of Pearls* that is there uſed. The Quality required, is, that they be white, clear, and tranſparent; and truly oriental. They ſerve to make Cordial Potions, formerly much valued, but now fall'n much from their ancient Reputation; and ſcarce own'd by any but *Charletans*.

The Ladies alſo uſe certain Preparations of *Pearls*, as they are made to believe, for their Complexion; ſuch as the Whites of *Pearls*, Flowers, Eſſences, Spirits, Tinctures, &c. of *Pearl*; but they are all apparently Deceits.

PEARL *Fiſheries*.

Pearl is fiſh'd in the Seas of the *Eaſt-Indies*; in thoſe of *America*; and in ſome parts of *Europe*.

PEARL-*Fiſheries of the Eaſt*, are

I. The Iſland of *Bahren*, or *Baharem*, in the *Perſian* Gulph. This the *Portugueze* were Maſters of while they held *Ormus* and *Maſcata*; but it has been returned to the *Sophi* of *Perſia*, ſince the Time that Prince, with the Aſſiſtance of the *Engliſh*, took from 'em *Ormus*, and the *Arabs*, Maſcata.

II. The Fiſhery of *Catifa*, on the Coaſt of *Arabia Felix*, over-againſt *Bahren*.

III. That of *Manar*, a Sea-port in the Iſle of *Ceylon*. The *Pearls* here fiſh'd, are the fineſt in all the Eaſt for their Water and Roundneſs; but they ſeldom exceed four *Carats*.

Laſtly, there are *Pearls* fiſh'd on the Coaſt of *Japan*; but they are coarſe and irregular, and little minded.

The *Pearls* of *Bahren* and *Catifa* are thoſe commonly ſold in the *Indies*; they border a little on the Yellow, but the *Eaſtern* People don't value 'em the leſs for it; they eſteem it a Sign of their being Ripe and Mature, and are perſuaded, that thoſe which have this yellowiſh Tincture naturally, never change their Colour; and that on the contrary, the white Water does not hold above thirty Years, 'ere the *Pearl* aſſumes a filthy yellow Colour; by reaſon of the Heat of the Climate, and the Sweat of the Perſons who wear 'em.

American PEARL *Fiſheries*, are all in the great Gulph of *Mexico*, along the Coaſt of the *Terra-Firma*. There are five of 'em.

I. The Fiſhery of *Cubagna*, an Iſland five Leagues from new *Andaluſia*, in 10 *Deg.* ½ N. *Lat.*

II. That of the Iſland *Marguerites*, or *Pearl* Iſland.

III. That of *Comogote* near the *Terra-Firma*.

IV. That of the River *de la Hach*, called *la Rencheria*.

V. That of St. *Martha* ſixty Leagues from the River *de Cattache*.

The *Pearls* of theſe three laſt Fiſheries are uſually of a good Weight; but ill form'd, and of a Livid-Water. Thoſe of *Cabagna* ſeldom exceed 5 *Carats*; but are found in abundance. But the greateſt Quantity, and the fineſt, both with regard to Weight and Water, are thoſe of the Iſland *Marguerite*.

PEARL *Fiſhery in Chineſe Tartary*, is near the City *Nipetroa*, ſituate on a Lake of the ſame Name: The *Pearls* here are leſs beautiful than thoſe of *Baharem*; and the Fiſhery leſs plentiful. 'Twas this Fiſhery that occaſioned the War between the *Chineſe* and *Muſcovites*, terminated towards the End of the laſt Century, by the *Jeſuites Pereira* and *Gerbillon*; and the Lake, which is of great Extent, divided between the two Nations; each whereof had pretended to the whole.

There are ſome *Pearl* Fiſheries in the *South-Sea*, but they are very inconſiderable.

PEARL *Fiſheries of Europe*, are in ſome Places on the Coaſts of *Scotland*, and in a River of *Bavaria*: But the *Pearls* found here are no ways comparable to thoſe of the *Eaſt-Indies*, or of *America*; tho' they ſerve for Necklaces, ſold ſometimes for a thouſand Crowns and upwards.

Manner of Fiſhing for PEARLS *in the* Eaſt-Indies.

There are two Seaſons of *Pearl*-Fiſhing in the Year; the firſt in *March* and *April*, the ſecond in *Auguſt* and *September*; the more Rain falls in the Year, the more plentiful are the Fiſheries.

In the Opening of the Seaſon, there are found ſometimes two hundred and fifty Barks on the Banks. In the larger Barks are two Divers, in the ſmaller, one. Each Bark puts off from Shore 'ere Sun-riſe, by a Land-breeze, which never fails; and returns again by a Sea-breeze, which ſucceeds it about Noon.

Aſſoon as the Barks are arrived, and have caſt Anchor; each Diver binds a Stone ſix Inches thick, and a Foot long under his Belly; which is to ſerve him as Ballaſt, and prevent his being driven away by the Motion of the Water; and to enable him to walk more ſteadily a-croſs the Waves.

Beſide this, they tye another very heavy Stone to one Foot, whereby they are ſunk to the Bottom of the Sea in a Moment. And as the Oyſters are uſually ſtrongly faſten'd to the Rocks, they arm their Fingers with Leathern Mittons, to prevent their being wounded in ſcraping 'em violently off; and ſome even carry an Iron Rake for the Purpoſe.

Laſtly, each Diver carries down with him a large Net, in manner of a Sack, tied to his Neck by a long Cord the other End whereof is faſten'd to the Side of the Bark. The Sack is deſtined for the Reception of the Oyſters gather'd from the Rock, and the Cord to pull up the Diver when his Bag is full, or he wants Air.

In this Equipage he precipitates himſelf, ſometimes above 60 Foot under Water. As he has no Time to loſe there, he has no ſooner arrived at the Bottom, than he begins to run from Side to Side, ſometimes on a Sand, ſometimes on a Clayey Earth, and ſometimes among the Points of Rocks; tearing off the Oyſters he meets withal, and cramming 'em into his Budget.

At whatever Depth they be, the Light is ſo great, that they eaſily ſee whatever paſſes in the Sea, with the ſame Clearneſs as on Land. And to their Conſternation, they ſometimes ſee monſtrous Fiſhes, from which, all their Addreſs in mudding the Water, &c. won't ſave 'em; but they become their Prey; and of all the Perils of the Fiſhery, this is one of the greateſt and muſt uſual.

The beſt Divers keep under Water for half an Hour, the reſt don't ſtay leſs than a Quarter. During which Time, they hold their Breath without the Uſe of Oils, or any other Liquors. See DIVING.

When they find 'emſelves ſtraiten'd, they pull the Roap to which the Bag is faſtened, and hold faſt by it with both Hands

Hands, when the People in the Bark, taking the Signal, heave 'em up into Air and unload 'em of their Fiſh, which is ſometimes five hundred Oyſters, ſometimes not above fifty.

Some of the Divers need a Moment's Reſpite to recover Breath; others jump in again inſtantly, continuing this violent Exerciſe without intermiſſion, for many Hours.

On the Shore they unload their Barks, and lay their Oyſters in an infinite Number of little Pitts, dug four or five Foot ſquare in the Sand; raiſing heaps of Sand over 'em to the Height of a Man, which, at a Diſtance, look like an Army rang'd in Battle.

In this Condition they are left, till the Rain, Wind, and Sun have oblig'd 'em to open, which ſoon kills 'em. Upon this the Fleſh rots and drys, and the *Pearls*, thus diſengaged, tumble into the Pit upon taking the Oyſters out.

The Fleſh of the Fiſh is excellent, and if what ſome Naturaliſts maintain be true, *viz.* that the *Pearls* are Stones, form'd there by the ill Conſtitution of the Body, as ſometimes happens in Men, and in the *Bezoard*; this Diſeaſe does not alter the Humours; at leaſt, the *Paravas*, who eat 'em, don't find any Difference between thoſe that have *Pearls* and thoſe that have none.

After clearing the Pitts of the groſſer Filth, they ſift the Sand ſeveral times, to ſeparate the *Pearls*. But what Care ſoever they take herein, they always loſe a great many. After cleaning and drying the *Pearls*, they are paſs'd thro' a Kind of Sieves, according to their Sizes. The ſmalleſt are ſold for Seed of *Pearls*; the reſt are put up by Auction, and ſold to the higheſt Bidder.

Manner of Fiſhing for Pearl *in the* Weſt-Indies.

The Seaſon for Fiſhing is uſually from *October* to *March*. In this Time there ſet out from *Carthagena* ten or twelve Barks, under the Convoy of a Man of War, call'd *Larmadella*. Each Bark has two or three Slaves, Divers.

Among the Barks, there is one call'd *Capitana*; to which all the reſt are oblig'd to bring at Night what they have caught in the Day, to prevent Frauds. The Divers never laſt long, by reaſon of the great Hardſhips they ſuſtain; continuing ſometimes under Water above a Quarter of an Hour.

The reſt is the ſame, as in the *Eaſt-India* Fiſheries.

The *Indians* knew the Value of their *Pearls* before the Diſcovery of *America*; and when the *Spaniards* arriv'd there, they found great Quantities ſtor'd up, which the *Americans* ſet great Value on. But they were almoſt all imperfect, and their Water yellow and ſmoaky; by reaſon they us'd Fire in opening the Fiſhes.

In the *Dictionaire de Commerce*, is a Table of the Value of *Pearls*, communicated to the Author by an able Hand. As *Pearls* make a very curious Article in Commerce, and as their Value is a Thing little known among us; we ſhall here give the Reader an Abridgement of the ſame, reduced to our Money, on the Foot of 1 *s.* 6 *d. Sterling* the *French* Livre, or 4 *s.* 6 *d.* the *French* Crown.

Value of all kinds of Pearls, with regard to their different Weight.

Seeds of PEARLS.

	l.	*s.*	*d. per Oz.*
Seeds of *Pearls* not perforated, fit for grinding, are worth	00	09	
Fine Seed of *Pearls* perforated for ſmall Necklace or Embroidery,	01	01	
Ditto a little larger,	01	16	

Ragged, or Irregular PEARLS.

Of 500 to the Ounce are worth	03	00	
300	06	00	
150	11	02	
100	18	00	
60	33	15	
30	75	00	

Regular ROUND PEARLS.

One of ½ a Grain is worth	00	00	2½
Of a Grain	00	00	4½
Of a Grain and half	00	01	0
Of two Grains	00	02	0
Of 2 Grains and half	00	04	6
Of 3 Grains	00	07	6
Of 4 Grains, or 1 *Caract*	00	18	0
Of 5 Grains	01	10	0
Of 6 Grains	02	05	0
Of 7 Grains	03	01	0
Of 8 Grains, or two *Carats*	04	10	0
Of 9 Grains	06	00	0
Of 10 Grains	08	05	0
Of 11 Grains	09	15	00
Of 13 Grains	13	05	00
Of 15 Grains	21	00	00
Of 17 Grains	27	10	00
Of 20 Grains, or 5 *Carats*	37	10	00
Of 22 Grains	52	10	00
Of 24 Grains, or 6 *Carats*	82	10	00
Of 26 Grains	99	00	00
Of 28 Grains, or 7 *Carats*	150	00	00
Of 32 Grains, or 8 *Carats*	225	00	00
Of 36 Grains, or 9 *Carats*	262	10	00
Of 40 Grains, or 10 *Carats*	300	00	00

As to *Pearls* in form of Pears, tho' equally perfect, and of equal Weight with the round Ones, their Value is much inferior: However, when two are found that match well, their Value is but leſs by one third.

Falſe PEARLS, are counterfeit, or factitious *Pearls*, reſembling the true Ones in Water or Colour. Theſe anciently were only made of Glaſs; with a Kind of Tincture of Quickſilver Withinſide, afterwards they us'd Wax, cover'd over with a fine Brillant Fiſh Glue.

There has ſince been invented in *France*, another manner of making 'em, ſo near the natural Ones in Luſtre and Water, that they deceive a good Eye. Theſe are what the Ladies now generally wear in defect of true *Pearl*; little Necklaces whereof they deſpiſe; and the great ones being generally too dear.

Method of making Falſe Pearls.

This curious Invention is owing to the *Sieur Janin*, and is the more to be valued, in that, 'tis not only very ſimple, but prevents the ill Effects of falſe *Pearls*, made with Quickſilver within, or Fiſh Glue without.

That ingenious Artiſt having obſerv'd, that the Shell of a little Fiſh call'd *Able*, found plentifully in the River *Marne*, had not only all the Luſtre of the real *Pearl*; but that after diſſolving it in Water, it return'd to its former Brilliant upon drying; he bethought himſelf of ſetting a Piece thereof in the Cavity of a Bead, or Grain of *Giraſol*, which is a kind of Opal or Glaſs, bordering much on the Colour of *Pearl*. The Difficulty was to get it in there, and when in, to ſpread it equally throughout the Bead.

A little Glaſs Tube ſix or ſeven Inches long, and a Line and half in Diameter, but very ſharp at one End, and a little crooked, ſerv'd for the introducing of the Matter, by blowing it with the Mouth, after having taken up a Drop with the pointed Extremity of the *Tube*; and to ſpread it throughout the inner Circumference, he contented himſelf to ſhake it gently a long Time, in a little Oſier-Basket lined with Paper.

The diſſolved Shell, faſten'd by this Motion in the Inſide of the Cryſtallin, reſumes 'its Luſtre as it dries. To increaſe this Luſtre, in Winter, they lay the Beads in a Hair Sieve, or a Bolting-cloath, which they ſuſpend to the Ceiling, and under it, at 6 Foot Diſtance, lay heaps of hot Aſhes. In Summer they ſuſpend 'em in the ſame Manner, but without any Fire.

The *Pearls*, thus well dried, become very Brilliant; and nothing remains but to ſtop up the Aperture, which is done by melted Wax, convey'd into it with a *Tube* like that us'd in introuducing the diſſolved Shell.

After clearing off the ſuperfluous Wax, they perforate the *Pearls* with a Needle, and ſtring 'em; and thus they commence *Necklace*.

Mother of PEARL, is the Shell of the *Pearl*-Oyſter, or Fiſh wherein the *Pearls* are form'd. See PEARL.

The Shell within-ſide is very ſmooth, and poliſh'd, and of the Whiteneſs and Water of *Pearl* itſelf; and it has the ſame Luſtre without-ſide, after the firſt *Laminæ*, or Leaves which make the outer Coat of this rich Shell Fiſh, have been cleared off with *Aqua fortis* and the Lapidaries Drill.

Mother of Pearl is us'd in inlay'd Works, in *China* Verniſh, and in ſeveral Toys, as Snuff-boxes, &c.

Wens of PEARL, are certain Excrecenſces, or prominent Places, in form of half *Pearls*; ſometimes found in the Bottom of the *Pearl* Shells.

The *Lapidaries* have the Addreſs to Saw off theſe Protuberances, to join 'em together, and to Uſe 'em in ſeveral Works of *Jewelry*, as if they were really *Pearls*.

PEARL, in Heraldry, is us'd by ſuch as *blazon* with precious Stones, inſtead of Colour and Metals, for *Argent*, or White. See ARGENT.

PEARL, *Pin*, or *Web* in Medicine, an unnatural Speck, or thick Film over the Eye. See PANNUS. See alſo UNGUIS.

PECCANT in Medicine, an Epithet given to the Humours of the Body, when they offend either in Quantity or Quality, *i. e.* when they are either Morbid, or in too great Abundance. See HUMOUR.

Moſt Diſeaſes ariſe from *Peccant* Humours, which are either

either to be corrected by Alteratives and Specificks, or evacuated. See DISEASE, &c.

PECK, a Measure, or Vessel us'd in measuring Grains, Pulse, and the like dry Matters. See MEASURE.

The Standard, or Winchester *Peck*, contains two Gallons; each Gallon weighing about eight Pound *Troy*. See GALLON.

Four *Pecks* make a Bushel; four Bushels a Comb or Carnock, &c. See BUSHEL.

Besides the general, or Winchester *Peck*, there are *Local Pecks*, containing some more, some less, as the *Lancaster Peck* containing six Gallons, &c.

PECQUETS *Duct*, in Anatomy, the *Thoracic Duct*; thus call'd from its Discoverer *Pecquet*. See THORACIC DUCT.

PECTEN *Arboris*, in Botany, is the Grain of the Wood of any Tree. See WOOD.

PECTEN, in Anatomy, is us'd by some authors for the *Regio pubis*, or lower Part of the *Hypogastrium*. See HYPOGASTRIUM.

PECTINIS *Os* in Anatomy, the same with *Os Pubis*. See Os PUBIS.

PECTINEUS, in Anatomy, the third of the fifteen Muscles of the Thigh; so call'd, because it has its Origin in the Fore-part of the *Os Pectinis*.

'Its Insertion is in the Thigh, under the left *Trochanter*: the *Pectineus*, with the *Psoas* and *Iliacus*, draw the Thigh forwards, and of Consequence bend it.

PECTORAL, something ralating to the *Breast*, *Pectus*. See BREAST,

In the *Romish* Church, Bishops and regular Abbots wear a *Pectoral* Cross, *i. e.* a little Cross of Gold, hanging from the Neck down the Breast.

PECTORAL *Medicines*, or simply *Pectorals*, are Remedies proper to strengthen and relieve the Breast and Stomach; or against Diseases of the Breast and Stomach.

Their ordinary Intentions are either to attenuate, or thicken the Humours of those Parts, which cause Coughing, &c. and render 'em fit to be expectorated, or spit out.

PECTORALE, or PECTORAL, in the *Jewish* Law. See RATIONALE.

PECTORALIS, in Anatomy, a Muscle which moves the Arm forwards. It arises by a fleshy and semicircular Beginning, from the *Clavicula*, *Sternum*, and Cartilages of the six superior Ribs; and covereth a great Part of the Breast, and is inserted by a short, but strong and broad Tendon into the upper and inner Part of the *Humerus*, between the *Biceps* and *Deltoides*.

Its Fibres, near their Insertion, decussate one another. Those which come from the *Clavicle*, or first Ribs, are on the Lower-side of the Tendon, and those from the inferior Ribs on the Upper-side of the Tendon.

Naturalists observe a special Mark of Providence in the Size and Strength of the *Pectoral* Muscle in different Animals. 'Tis by the Action of this Muscle, that the flying of Birds is chiefly perform'd: Accordingly it is much larger and stronger in Birds than in any Animals not made for flight.

Borelli observes, that in Men the *Pectoral* Muscles are small; scarce the 50th or 70th Part of all the other Muscles: But in Birds they are vastly large, equalling, nay, exceeding in Bulk and Weight all the other Muscles of the Birds together. See FLYING.

PECTORALIS *internus*. See TRIANGULARIS.

PECTORIS *os*, the same as *Sternum*. See STERNUM.

PECULATE, PECULATUS, in the Civil Law, the Crime of pilfering the Public Money, by a Person who is the Manager, Depositary, or Receiver thereof; so call'd, *quasi pecuniæ ablatio*.

The Civil Lawyers use *Peculate* for any Theft of a Thing Sacred, Religious, Public, or Fiscal. *Peculate* is prosecuted even on the Criminals Heir.

PECULIUM, the Stock which a Person in the Power of another, as a Slave, a Minor, &c. may acquire by his own Industry, without any Advance or Assistance from his Father or Master; but merely by their Permission.

The *Romans* had a Civil and a Military *Peculium*.

The Word is usually derived a *Pecunia* & *Pecoribus*, because the whole Estate antiently consisted in Money and Cattle.

Hence *Peculium* comes to be us'd among the *Romanists*, for what each Monk or Religious reserves and possesses to himself.

Some say that the *Peculium* of a Religious, when prefer'd to a Cure, does not cease to belong to the Monastery; and that the Property thereof never absolutely resides in the Religious.

PECULIAR in the Canon Law, a particular Parish or Church, that hath Jurisdiction within it self, for Probate of Wills, &c. Exempt from the Ordinary, and the Bishops Courts, and *peculiarly* belonging to the Archbishop. See ARCH-BISHOP.

In the Province of *Canterbury* are 57 such *Peculiars*.

The King's Chapel is a *Royal Peculiar*, exempt from all spiritual Jurisdiction, and reserved to the Visitation and immediate Government of the King himself, who is supreme Ordinary. See CHAPEL.

It is an ancient Privilege of the See of *Canterbury*, that wheresoever any Mannors or Advowsons do belong to it, they forthwith become exempt from the Ordinary, and are reputed *Peculiars*.

Court of PECULIARS, is a Court where the Affairs of *Peculiars* are transacted. See COURT.

PECUNIA, *Money*, in our old Law Books, &c. is sometimes us'd for Cattle, and sometimes for other Goods, as well as Money. See MONEY, &c.

In the Emendat. of the Laws of *Edward* the Confessor, by *Will.* the 1st, 'tis ordered that no *Viva Pecunia*, living *Pecunia*, *i. e. Chattle* be bought or sold, except within Cities; and that before three sufficient Witnesses. See CHATTEL.

Again, *Qui habet* 30 *Denariatus vivæ Pecuniæ*, &c. *In Domesday*, *pecunia* is frequently us'd, *pro pecude*; as, Pasture *ad pecuniam Villæ*; & *pecunia Ecclesiæ*, was antiently us'd for the Estate of the Church.

Pecunia Sepulchralis, was Money antiently paid to the Priest at the opening of the Grave, for the Good and Behoof of the deceased's Soul, and which our *Saxon* Ancestors call'd *Soul-Scot*, and *Animæ Symbolum*.

PEDAGE, *Toll*, or a Local Right exacted on Persons, Goods, and Carriages passing thro' certain Places. See TOLL.

Pedage is usually levied for the Repairing of Roads, Bridges, Causeways, the Paving of Streets, &c.

Antiently, those who had the Right of *Pedage*, were to keep the Roads secure, and Answer for all Robberies committed on Passengers between Sun and Sun; which is still observed in some Parts of *England*, and in *Italy*, where there are Guards call'd *Stationaries*, established for the Security of Merchants, particularly at *Terracina*, on the Road between *Rome* and *Naples*.

PEDAGOGUE, a Term of Reproach, us'd for a Tutor, or Master, to whom is committed the Discipline and Direction of a Scholar; to be instructed in *Grammar* and other Arts.

The Word is form'd from the *Greek* παιδῶν ἀγωγὸς, *puerorum ductor*, leader of Boys. M. *Fleury* observes, that the *Greeks* gave the Name *Pedagogue* to their Slaves, appointed to attend their Children, lead 'em, and teach 'em to walk, &c.

PEDAGOGUES, among the *Romans* were likewise Slaves, to whom was committed the Care and Instruction of Children.

PEDALS, the large Pipes of an Organ, so call'd, because play'd and stop'd with the Foot. See ORGAN.

The *Pedals* are the largest Pipes in the Machine, they are made Square, of Wood; usually thirteen in Number.

They are of modern Invention, and serve to carry the Sounds an *Octave* deeper than the rest.

PEDANEUS, in the Civil Law, a petty Judge; who has no formal Seat of justice, but hears Causes standing, and without any Tribunal.

The Word is form'd from *Stans* in *Pedibus*; and is us'd among the Ancients in opposition to the *Roman* Magistrates, who were seated on Chariots, in *Sella Curuli*, or had a Tribunal or Bench rais'd on high.

The *Roman Pedanei*, therefore, were such as had no Tribunal, nor *Pretorium*, but render'd Justice *de Plano*, or *Plano pede*.

From the 82 Novel, it appears that the Emperor *Zeno* established these *Pedanei*, in the See of every Province; and that *Justinian* erected seven of 'em at *Constantinople*, in manner of an Office; granting 'em Power to judge in any Sum as high as 300 Crowns.

PEDANT, a School-Master, or *Pedagogue*, who professes to instruct and govern Youth, teach 'em the Humanities and the Arts. See PEDAGOGUE.

PEDANT is also us'd for a coarse, unpolish'd, stiff, Man of Learning, who makes an impertinent Use of the Sciences, and abounds in vile, unseasonable Criticisms and Observations. *Dacier* defines a *Pedant*, a Person who has more Reading than good Sense.

Pedants, are People ever arm'd with Points and Syllogisms; breathe nothing but Dispute and Chicanery, and pursue a Proposition to the last Limits of Logic: *Malbranche* describes a *Pedant* as a Man full of false Erudition, who makes a Parade of his Knowledge, and is ever quoting some *Greek* or *Latin* Author, or hunting back to a remote Etymology.

St *Evremont* says, that to paint the Folly of a *Pedant*, we must represent him turning all Conversations to some one Science he is best acquainted withal.

There are *Pedants* of all Conditions, and of all Robes: and *Wicquefort* says, an Embassador always attentive to Formalities and Decorums, is nothing else but a *Political Pedant*.

PEDANTRY, or PEDANTISM, the Quality or Manner of a *Pedant*.

To ſwell up little and low Things, to make a vain Show of Science, to heap up *Greek* and *Latin* without Judgement, to pull and tear thoſe who differ from us about a Paſſage in *Suetonius*, or the Etymology of a Word, to ſtir up all the World againſt a Man for not admiring *Cicero* enough, to be intereſted for the Reputation of an Ancient as if he were our next of Kin, is what we properly call *Pedantry*.

PEDESTAL, in Architecture, the loweſt Part of an order of Columns; being that which ſuſtains the Column; and ſerves it as a Foot or Stand. See COLUMN.

The Word is form'd from the *Latin Pes Pedis*, Foot and *ϛυλ& Column*.

The *Pedeſtal*, call'd by the *Greeks*, *Stylobates* and *Stereobates*, conſiſts of three principal Parts; *viz.* a ſquare Trunk or *Dye*, which makes the Body; a *Corniche*, the Head; and a *Baſe* the Foot of the Pedeſtal. See DYE, CORNICHE, and BASE.

The *Pedeſtal* is properly an Appendage to a Column; not an eſſential Part thereof; tho' *M. le Clerc* thinks 'tis Eſſential to a compleat Order. See ORDER.

The Proportions and Ornaments of the *Pedeſtal*, are different in the different Orders: *Vignola*, indeed, and moſt of the Moderns make the *Pedeſtal* and its Ornaments in all the Orders, one third of the Height of the Column, including the Baſe and Capital; but ſome deviate from this Rule.

M. *Perrault* makes the Proportions of the three conſtituent Parts of *Pedeſtals* the ſame in all the Orders, *viz.* the Baſe or Socle one fourth of the *Pedeſtal*; the Corniche an eighth Part; and the Socle or Plinth of the Baſe two thirds of the Baſe it ſelf. The Height of the Dye is what remains of the whole Height of the *Pedeſtal*.

Tuſcan PEDESTAL, is the ſimpleſt, and the loweſt.

Palladio and *Scamozzi*, make it three Modules high; *Vignola* 5. See PROPORTION.

Its Members in *Vignola*, are only a *Plinth* for a Baſe, the *Dye*, and a *Talon* crowned, for a Corniche.

The *Tuſcan* Column has rarely any Baſe. See TUSCAN.

Doric PEDESTAL, *Palladio* makes four Modules, five Minutes high, *Vignola* Modules four Minutes.

In the Antique, we not only don't meet with any *Pedeſtals*; but even, not with any Baſe in the *Doric* Order.

The Members in *Vignola*'s *Doric Pedeſtal*, are the ſame with thoſe in the *Tuſcan*, with the Addition of a Mouchette in its Corniche. See DORIC.

Jonic PEDESTAL, in *Vignola* and *Serlio*, is 6 Modules high; in *Scamozzi* 5; in the Temple of *Fortuna Virilis* 'tis 7 Mod. 12 Min.

Its Members and Ornaments are moſtly the ſame with thoſe of the *Doric*, only a little richer.

The *Pedeſtal* now uſually follow'd, is that of *Vitruvius*; tho' we don't find it in any Work of the Antique.

Some in lieu hereof Uſe the *Attic* Baſe, in imitation of the Ancients. See ATTIC.

Corinthian PEDESTAL is the richeſt and moſt delicate. In *Vignola* 'tis 7 Mod. high; in *Palladio* 5 Mod. 1 Min. in *Serlio* 6 Mod. 15 Min. in the *Coliſeum* 4 Mod. 2 Min.

Its Members in *Vignola* are as follows: in the Baſe are a *Plinth* for a Socle, over that a *Tore* carved; than a *Reglet*, a *Gula* inverted and inrich'd, and an *Aſtragal*.

In the *Dye* are a *Reglet*, with the *Conge* over it, and near the Corniche a *Reglet* with a *Conge* underneath.

In the Corniche is an *Aſtragal* a *Frieze*, *Fillet*, *Aſtragal*, *Gorge*, *Talon*, and a *Fillet*. *See each under its proper Article.*

Compoſite PEDESTAL, in *Vignola*, is of the ſame Height with the *Corinthan*, *viz.* 7 Mod. in *Scamozzi* 6 Mod. 2 Min. in *Palladio* 6 Mod. 7 Min. in the *Goldſmiths* Arch 7 Mod. 8 Min.

Its Members in *Vignola*, are the ſame with thoſe of the *Corinthian*; with this Difference, that whereas theſe are moſt of 'em enrich'd with Carvings in the *Corinthian*, they are all plain in the *Compoſite*.

Nor muſt it be omitted, that there is a Difference in the Profiles of the Baſe and Corniche in the two Orders.

The Generality of Architects, *Daviler* obſerves, uſe Tables or Pannels, either in *Relievo* or *Creux*, in the Dyes of *Pedeſtals*; without any regard to the Character of the Order. Thoſe in *Relievo*, he obſerves, only fit the *Tuſcan* and *Doric*; the three others muſt be indented; which he adds, is a Thing the Ancients never practis'd, as being contrary to the Rules of Solidity.

Square PEDESTAL, is that whoſe Height and Width are equal; as that of the Arch of the Lyons at *Verona*, of the *Corinthian* Order; and ſuch, ſome Followers of *Vitruvius*, as *Serlio*, *Philander*, &c. have given to their *Tuſcan* Orders.

Double PEDESTAL, is that which ſupports two Columns, and is more in Width than Height.

Continued PEDESTAL, that which ſupports a Row of Columns without any Break or Intterruption; ſuch is that which ſuſtains the fluted Ionic Columns of the Palace of the *Tuillieres* on the Side of the Garden.

PEDESTALS *of Statues*, are thoſe ſerving to ſupport Figures or Statues. See STATUE.

Vignola obſerves, there is no Part of Architecture more Arbitrary, and wherein more Liberty may be taken than in the *Pedeſtals* of Statues; there being no Laws preſcribed by Antiquity; nor any even ſettled by the Moderns.

There is no ſettled Proportion for theſe *Pedeſtals*; but the Height depends on the Situation, and the Figure they ſuſtain. Yet, when on the Ground, the *Pedeſtal* is uſually two thirds, or two fifths of that of the Statue: But the more Maſſive the Statue, the ſtronger the *Pedeſtal*.

Their Form, Character, &c. are to be Extraordinary and Ingenious, far from the Regularity and Simplicity of the *Pedeſtals* of Columns. The ſame Author gives us a great Variety of Forms, Oval, Triangular, Multangular, &c.

PEDICLE, in Botany, the little Stalk or Tail, whereby the Leaf, Fruit, or Flower is connected to its Branch or Stem. See FLOWER, LEAF, &c.

Flowers will keep freſh a long Time after gathering, by immerging their *Pedicles* in Water.

The great Secret of preſerving Fruits for the Winter, is to ſeal up their *Pedicles* with Wax.

Cherries with the ſhorteſt *Pedicles*, are eſteem'd the beſt.

The Piſtil of the Flower frequently becomes the *Pedicle* of the Fruit. See PISTIL.

The Word is a Dimmutive of the *Latin*, *Pes* Foot.

PEDIMENT, in Architecture, a Kind of low Pinnacle; ſerving to crown an Ordinance, or finiſh a Frontiſpiece; and placed as an Ornament over Gates, Doors, Windows, Niches, Altars, &c. See CROWNING, &c.

The Pinnacles of the plaineſt Houſes, *Vitruvius* obſerves, gave Architects the firſt Idea of this noble Part; which ſtill retains the Appearance of its Original. See PINNACLE.

The Parts of the *Pediment* are, the *Tympanum*, and its *Corniche*.

The firſt is the Pannel naked, or Area of the *Pediment*, enclos'd between the Corniche, which crowns it, and the Entablature, which ſerves it as a Baſe or Socle. See TYMPANUM, &c.

Architects have taken a deal of Liberty in the Form of this Member: Nor do they vary leſs as to the Proportion of the *Pediment*.

The moſt beautiful, according to *Daviler*, is that where its Height is about one fifth of the Length of its Baſe.

It is deſcribed thus: divide the Line *a b*, (Tab. Architecture Fig. II.) which is the Length of the Baſe, into two equal Parts, in the Point *c*, by means of the Perpendicular *f d*; in this Perpendicular, take the Part *e d*, equal to *a c*; and from the Point *d*, as a Centre, deſcribe the Arch *a e b*. The Point of the Perpendicular cut in *e*, will be the Top of the *Pediment a e b*; and the Corniche, and the Triangular Space included therein, the *Tympanum*.

Vitruvius calls the *Pediments*, *Faſtigia*; a Word which ſignifies a Roof rais'd, or pointed in the Middle, which Form among the *Romans* was peculiar to Temples. All their Dwelling-houſes are cover'd in the Plat-form manner; and *Salmaſius* on *Solin* obſerves, that *Cæſar* was the firſt who obtain'd leave to Roof his Houſe with a Ridge or Deſcent, after the manner of Temples. See PLAT-FORM.

Pliny tells us, that *Pediments* were Firſt made to place Statues upon, whence they were call'd *Plaſtæ*.

The *Pediment* is uſually Triangular, and ſometimes an equilateral Triangle, call'd alſo a *pointed Pediment*; ſometimes it is *Circular*; tho' *Felibien* obſerves, that we have no Inſtance of round *Pediments* in the Antique, beſide thoſe in the Chapels of the *Rotondo*.

Sometimes its upper Corniche is divided into three or four Sides, or right Lines. Sometimes the Corniche is cut, or open a Top; which is an Abuſe introduced by the Moderns, particularly *Michael Angelo*; for the Deſign of this Part, at leaſt over Doors, Windows, &c. being chiefly to ſhelter thoſe underneath from the Rain; to leave it open in the Middle, is to fruſtrate its End.

Sometimes the *Pediment* is form'd of a couple of Rolls, or Wreathes, like two Conſoles join'd together. See CONSOLE.

Sometimes the *Pediment* is without Baſe, or its lower Corniche is cut out, all but what is beſtow'd on two Columns, or Pilaſters, and on theſe an Arch or Sweep rais'd, in lieu of an Entablature; of which *Serlio* gives an Inſtance in the Antique, in a *Corinthian* Gate at *Foligny*, in *Umbria*; and *Daviler*, a more Modern one, in the Church of St *Peter* at *Rome*.

Under this kind of *Pediments*, come thoſe little arch'd Corniches, which form *Pediments* over Doors and Windows, ſupported by two Conſoles, in lieu either of Entablature or Columns.

Sometimes the *Pediment* is made double, *i.e.* a leſs *Pediment* is made in the *Tympanum* of a larger, on account of ſome Projecture in the Middle; as in the Frontiſpiece of the Church of the Great *Jeſus* at *Rome*; but this Repetition is

an abuſe in Architecture; tho' authoriz'd by very good Buildings; as the large Pavillion of the *Louvre*, where the *Caryatides* ſupport three *Pediments* one in another.

Sometimes the *Tympanum* of the *Pediment* is cut out, or left open, to let in light; as we ſee under the Portico of the Capitol at *Rome*.

Laſtly, this open *Pediment* is ſometimes triangular, and enrich'd with Sculpture, as Roſes, Leaves, &c. as we find it in moſt of the *Gothic* Churches.

M. le Clerc obſerves, that the Modillions in the Corniche of the *Pediment* ſhou'd always anſwer exactly over thoſe of the Entablature. Indeed, *Vitruvius* ſays, the Ancients did not allow any Modillions at all in *Pediments*. See MODILLION.

The ſame *M. le Clerc* obſerves, that the Corniche which ſerves the *Pediment* as a Baſe, ſhou'd have no *Cymatium*; by reaſon the *Cymatium* of the reſt of the Entablature, when it meets the *Pediment*, paſſes over it.

This Change of Determination occaſions a conſiderable Difficulty; the *Cymatium*, in this Caſe, appearing too broad in the Turn of the Angle. To remedy which, the Architects have recourſe to ſeveral Expedients.

A pointed Pediment may crown three Arches; but a *circular Pediment* can only crown one agreeably.

One wou'd never uſe above two *Tympana* over each other in the ſame Frontiſpiece; and even where there are two, 'twou'd be proper to have the lower Circular, the upper pointed.

The Word is form'd of the *French Pere* and *Degree*, *q. d.* Degree of Fathers or Anceſtors.

PEDIGREE, *Deſcent* or *Genealogy*. See DESCENT and GENEALOGY.

PEDICULARIS *Morbus*, in Medicine, the *louſy Diſtemper*; a Diſeaſe ariſing from ſome uncommon Corruption in the Body, which generates infinite Quantities of Lice on the Skin.

Herod died of the *pedicular* Diſeaſe

The Word comes from the *Latin Pediculus*, Louſe.

PEDIÆAN, in Antiquity. The City of *Athens* was antiently divided into three different Quarters; one on the Deſcent of a Hill; another on the Sea-ſhore; and a third in a Plain between the two.

The Inhabitants of the middle Region were call'd Πεδιεῖς *Pediæans*; or according to *Ariſtotle*, *Pediaci*; thoſe of the Hill, *Diacrians*; and thoſe of the ſhore, *Paralians*.

Theſe Quarters uſually compoſed ſo many different Factions: *Piſiſtratus* made uſe of the *Pediæans* againſt the *Diacrians*.

In the time of *Solon*, when a Form of Government was to be choſen, the *Diacrians* wou'd have it *Democratic*; the *Pediæans* demanded an *Ariſtocracy*; and the *Paralians* a mixt Government.

The Word is form'd from the *Greek* πεδίον plain, flat.

PEDIÆUS, in Anatomy, is the ſecond of the Extenſor Muſcles of the Foot, *Pes*; whence its Name. See FOOT.

It has its Origin in the lower Part of the *Peronæum*, and annular Ligament; and is divided into four Tendons, which are inſerted into the external Part of the firſt Articulation of the four Toes.

Its Uſe is to extend the Foot together with the firſt of the *Extenſors*, call'd *Extenſor Communis*. See EXTENSOR.

Pedo BAPTISM. See PÆDO *Baptiſm*.

PEDUNCULI, in Anatomy, two medullary Proceſſes of the *Cerebellum*, whereby that Part is join'd to the *Medulla oblongata*. See CEREBELLUM and MEDULLA.

Willis, who firſt gave 'em the Name, obſerved in 'em three diſtinct Proceſſes on either Side, the two firſt whereof go to the *Teſtes*, the ſecond directly from the *Cerebellum* to the *Medulla oblongata*, decuſſating the former, and faſtning the *Proceſſus Annularis*. And the third, ſpringing from the hind Proceſs of the *Cerebellum*, is inſerted into the *Medulla oblongata*; looking like an additional Chord to it.

PEDIS *Abſciſſio*, Cutting off a Foot; a Puniſhment antiently inflicted among us: as appears by the Laws of *William* the Conqueror, by *Ingulphus* and other Authors.

Interdicimus ne quis occidatur, vel ſuſpendatur, pro aliqua Culpa, ſed eruantur Oculi, Abſcindantur Pedes, *vel Teſticuli, vel manus*, &c. *Leg.* Will. *Cap.* 1.

So *Ingulphus*, *ſub pœna perditionis dextri ſui pedis*, &c.

PEDOMETER, or PODOMETER, or *Way-wiſer*, a Mechanical Inſtrument, in form of a Watch; conſiſting of various Wheels with Teeth, catching in one another; all diſpoſed in the ſame Plane; which by means of a Chain or String faſtned to a Man's Foot, or the Wheel of a Chariot, advance a Notch each Step, or each Revolution of the Wheel; ſo that the Number being mark'd on the Edge of each Wheel, one may number the Paces, or Meaſure exactly the Diſtance from one Place to another. See WAY-WISER.

The Word is form'd from the *Greek* πούς, *Pes*, Foot; and μέτρον, Meaſure.

POMERETER, is ſometimes, alſo, us'd for a *Surveying Wheel*, an Inſtrument chiefly us'd in meaſuring Roads; popularly call'd the *Way-wiſer*. Which ſee

PEDRERO, or PETTERERO, a ſmall Piece of Ordnance, chiefly us'd on board Ships; for the diſcharging of Nails, broken Iron, or Partridge Shot on an Enemy attempting to board. See ORDNANCE and MORTAR.

They are generally open at the Breech, and their Chamber made to take out, to be loaded that Way, in lieu of the Muzzle. See CHAMBER.

PEEK, in the Sea Language, a Term us'd in various Senſes.

E. gr. an Anchor is ſaid to be *a-peek*, when the Ship being about to weigh, comes over her Anchor, ſo as the Cable hangs perpendicularly between the Hawſe and the Anchor; the bringing of a Ship into which Poſition they call *heaving a-peek*.

A Ship is ſaid to *ride a-peek* when ſhe lies with her Main and Fore-yards hoiſed up; having one End of her Yards brought down to the Shrouds, and the other rais'd up an End; which is chiefly done when ſhe lies at reſt in Rivers, leſt other Ships falling foul on her, ſhou'd break her Yards.

To ride a broad Peek, denotes the ſame, excepting that the Yards here are only rais'd to half the Height.

To Peek the Miſſen, is to put the Miſſen-yard perpendicular by the Maſt.

The Room in the Hold, from the Bitts forward to the Stern, where Men of War keep their Powder, and Merchant Men their Victuals, is alſo call'd *the Peek*.

PEER, *Par*, denotes an equal, or one of the ſame Rank and Condition.

Hence, in ſome Councils or Aſſemblies, we find, *with the Conſent of our Peers, Biſhops, Abbots*, &c.

Afterwards, *Peer* was applied to the Vaſſals or Tenants of the ſame Lord, who were oblig'd to ſerve and aſſiſt him in his Courts: They were call'd *Pares*, becauſe equal in Function, and *Peers in Fiefs* or *Fees*; becauſe, holding Fees of the Lord; or becauſe their Buſineſs in Court was to ſit and judge under their Lord of Diſputes ariſing on Fees. See VASSAL.

The Number of Peers required to ſit in Court, was at leaſt four; and when there happen'd to be too many Peers in the ſame Lordſhip, the Lord uſually choſe out 12 who had the Title of *Peers* by way of Diſtinction and Eminence. See VASSAL.

There are Inſtances of Women, who have aſſiſted at Judgements, on account of their Tenements, not of their being Wives of *Peers*.

The Origin of theſe *Peers* of Fees is as ancient as that of the Fees they were appointed to judge of; from theſe we derive our common *Juries*, and our Peers of the Realm. See JURY *and Peer of the Realm*.

PEER of the *Realm*, a noble Lord, or a Perſon who has a Seat, and Vote in the Upper-houſe of Parliament; hence call'd the *Houſe of Peers*. See NOBLE and PARLIAMENT.

There are five Degrees of Peerage, or Nobility, *viz.* That of a *Duke*, *Marqueſs*, *Earl*, *Viſcount*, and *Baron*. See each under its proper Article DUKE, MARQUESS, EARL, &c.

'Tis the King confers the *Peerage*, by honouring the Perſon with ſome of theſe Titles by Patent. See NOBILITY.

PEERS, PAIRS *of France*, are the twelve grand Lords of *France*

The Inſtitution of theſe *Peers* is very uncertain; ſome refer it to *Hugo Capet*, at the Time when the Dukes and Counts chang'd the Offices they then held of the King into perpetual Fiefs. But this is impoſſible; *Champagne* not being then erected into a County. Indeed *Paſquier* obſerves, that 'tis an old Tradition there has been 12 *Peers* in all Ages.

Of theſe *Peers*, ſix are Dukes, and ſix Counts, Comptes; of theſe again, ſix are Eccleſiaſticks, and ſix Lay-men. The Archbiſhops of *Rheims*, Biſhops of *Laon*, and *Langres* are *Dukes* and *Peers*; the Biſhops of *Noyons*, *Chalon* on the *Marn*, and *Beauvais*, are *Counts* and *Peers*.

The Dukes of *Burgundy*, *Normandy*, and *Aquitain* were Lay-peers and Dukes; and the Counts of *Flanders*, *Champaegn*, and *Tholouſe* Lay-peers and Counts.

Theſe Lay-peers ſtill aſſiſt at the Coronation of the Kings in Ceremony, and by way of Repreſentatives; where each performs the Functions attach'd to his reſpective Dignity: tho' the Peerſhips be in reality all, except *Flanders*, reunited to the Crown. Six Lords of the firſt Quality are choſe to repreſent 'em.

The Eccleſiaſtic *Peers* uſually aſſiſt in Perſon.

At preſent, the Title *Peer* in *France* is beſtowed as, in *England*, on every Lord or Perſon, whoſe Fee is erected into a Lordſhip or Peerſhip.

The Word according to *Paſquier*, is derived from *Patricius*, the firſt Dignity in the *Eaſtern* Empire, on the Model whereof he ſuppoſes theſe *Peers* to have been inſtituted.

But others with more probability derive the Title from the *Pares Curiæ*, or *of Fees*, becauſe of their being equal to each other.

Theſe *Pares Curiæ*, on whoſe Model they ſuppoſe 'em to have been erected, were a Kind of Vaſſals depending on the all ſame Lord, whom they were obliged to attend and aſſiſt in Court.

All

All Feodal Matters or Diſputes among Vaſſals relating to their Fees or Dependances, were terminated by the ſuperior Lord of the two contending Parties, and by their *Peers in Fee*.

If the Proceſs were between the Lord and the Vaſſal, the Lord took no Cognizance of it, and the *Peers* alone judg'd it. See PEER.

Hence, all Lords or Nobles being *Pares Nobilitate*, *i. e.* all equally entitled to the Privileges of Nobility, are denominated *Pares Regni*, *Peers of the Realm*.

Some Authors attribute the firſt Inſtitution of *Peers* of the Realm to *Charlemaign*; but with little probability; ſince moſt of the Fiefs which bear the Names of Dutchies, *&c.* or give Titles to the *Peers*, were not erected into Dutchies, *&c.* till long after. The Dukes, *&c.* in thoſe Days being no more than ſimple Governors of Provinces, without any other Title or Privileges. See DUKE.

The more probable Opinion is, that *Peers* were firſt inſtituted by *Philip* the young, of *France*, about the Year 1719; and that they firſt acted in Capacity of *Peers* at the Coronation of his Son.

PEERAGE, the Dignity of a *Peer*, attach'd to a Dutchy, Earldom, or the like. See PEER.

The Kings of *England* and *France* confer *Peerage* at Pleaſure. His preſent Majeſty of *England* offer'd his Parliament to reſign that Branch of his Prerogative, and to have the Number of *Peers* ſtinted.

The Reaſon inſiſted on, was the Inconveniences accruing to the State from an Arbitrary and immoderate Uſe thereof. The Prince having it hereby in his Power to throw what Number of his Creatures he pleaſes into the Upper-houſe of Parliament.

The twelve *Peers* created at once in the late Reign, was a main Argument in behalf of the *Peerage Bill*.

'Tis recorded as a popular Saying of King *Charles*, that if his Friends cou'd but ſecure him a Houſe of Commons, he'd throw his whole Troop of Guards into the Upper-houſe, but he'd have the *Peers*.

To hold Land in Peerage, in the ancient Cuſtoms, was a Tenure which obliged the Perſon to aſſiſt the Lord's Bailiff in his Judgements; as all the ancient Vaſſals, call'd *Peers* did. See PEER and VASSAL. See alſo TENURE.

PEER, or PIER, in Building, a Maſſive of Stone, *&c.* oppoſed, by way of Fortreſs, againſt the Force of the Sea, or a great River; for the Security of Ships, that lye at Harbour in any Haven.

Such is the *Peer of Dover* deſcribed by *Cambden*, *Brit.* The *Haven* and *Peer* of great *Yarmouth*, mention'd 22d. *Car.* II.

The Word in this Senſe, is form'd from the *French Pierre*, Stone. See PIEDROIT.

PEERS are alſo uſed in Architecture for a Kind of Pilaſters or Buttreſſes, raiſed for ſupport, ſtrength, and ſomething for Ornament.

PEGASUS, among the Poets, a Horſe imagin'd to have Wings; being that whereon *Bellerophon* was fabled to be mounted when he engaged the *Chimera*. See CHIMERA.

The opening of the Fountain *Hippocrene*, on Mount *Helicon*, is aſcribed to a blow of *Pegaſus*'s Hoof.

It was feign'd to have flown away to Heaven; where it became a Conſtellation. Hence

PEGASUS, in Aſtronomy, a Conſtellation of the Northern Hemiſphere, in form of a flying Horſe. See CONSTELLATION.

The Stars in this Conſtellation in *Ptolemy*'s Catalogue are 20, in *Tycho's* 19, in the *Britannic* Catalogue 93. The Longitudes, Latitudes, Magnitudes, *&c.* whereof are as follow.

Stars in the Conſtellation PEGASUS.

PEGMATES, or PEGMARES, in Antiquity, a Name given to certain *Gladiators*, as well as Artificers, among the *Romans*.

The Ancients ſometimes exhibited Shews of certain Machines, call'd *Pegmata*. Theſe were a Kind of Scaffolds, variouſly adorn'd, ſomewhat after the Manner of thoſe now rais'd for Fire-works.

Theſe Scaffolds being made to play, either threw up into the Air the Matters wherewith they were charg'd; and among the reſt, Men, who were thus ſacrificed to afford the People Diverſion; or they precipitated 'em into Holes dug in the Ground, where they lighted their Funeral Piles; or into the Dens of wild Beaſts.

Now, both the miſerable People thus ſacrificed, and the Workmen that made and play'd the Machines, were call'd *Pegmates*,

According to *Caſaubon*, Fire was ſet to the Scaffold, and the *Pegmates* were to ſave 'emſelves thro' the Flames, and the Wrack of the Machine.

Lipſius ſays ſimply, that the *Pegmates* were ſuch *Gladiators* as fought on Scaffolds erected for that purpoſe.

They were alſo call'd *Petauriſtes*. See GLADIATOR.

PEIRCED, in Heraldry; when an ordinary, or Charge in Heraldry hath a Hole in it, ſo that the Field appears through; they ſay that ordinary, or charge, is *Peirced*. See PIERCED.

PELAGIANS, ancient Hereticks, well known in the Church by the Writings of St. *Auguſtin*. See HERETIC.

The Author of this Sect, *Pelagius*, properly call'd *Morgan*, was an *Iriſh* Monk, Cotemporary with St. *Jerom*, and St. *Auguſtin*. He quitted his Country to go and live in the Eaſt; according to the Cuſtom of the Monks of thoſe Days, who were not attach'd to particular Houſes like thoſe of our Days.

He abſolutely denied all original Sin, which he held to be the mere Invention of St. *Auguſtin*; and taught that Men are entire Maſters of their Actions, perfectly free Creatures, in oppoſition to all Predeſtination, Reprobation, Election, &c. See ORIGINAL *Sin*, PREDESTINATION.

He own'd indeed that the natural Power of Man needed to be aſſiſted by the Grace of God, to enable him to work out his own Salvation; but by this Grace, he only meant outward Aſſiſtance, *viz.* the Doctrines of the Law and of the Goſpel. See GRACE.

Tho', when preſs'd by thoſe Words of St. *Paul*, *Deus eſt enim qui operatur in nobis*, &c. he own'd that 'tis God, in effect, that makes us will what is good, when he warns and excites us by the Greatneſs of the Glory we are to obtain, and by the Promiſes of Rewards; when he makes us love him, by revealing his Wiſdom, &c.

Theſe are *Pelagius*'s own Words, as cited by St. *Auguſtin*; who confutes him, and ſhews that beſide theſe exterior Graces, there are required other real and interior ones.

Pelagius own'd further, that the Will of Man is indeed aided by a real Grace; but added that this Grace is not abſolutely neceſſary in order to live well; but only helps us to do well with the more eaſe.

Julian, one of his Adherents went further yet; and own'd that the Aſſiſtance of Grace was abſolutely neceſſary to enable us to do perfect Works.

In effect, the grand Doctrine of the *Pelagians*, was, that a Man might accompliſh all the Commands of God by the mere force of Nature; and that the Gifts of Grace were only neceſſary to enable him to act more eaſily, and more perfectly.

PELAGIÆ, in natural Hiſtory, a Term uſed to expreſs ſuch *Sea-Shells* and *Fiſhes*, as never, or very rarely, are found near the Shores; but always reſide in the Deep, or in thoſe parts of the Bottom of the Sea, which are moſt remote from Land. See SHELL.

The Word is form'd of the *Greek* πελαγὸς, *Marine*, belonging to the Sea.

PELLS, *Clerk of the* PELLS. See CLERK *of the Pells*.

PELLICAN, among Chymiſts, a Kind of double Veſſel; ordinarily of Glaſs; uſed in diſtilling Liquors by Circulation. See DOUBLE *Veſſel*, and CIRCULATION.

PELLICAN, is alſo an Inſtrument uſed by Chirurgeons, &c. to draw Teeth.

PELLICAN, again, is the Name of an ancient Piece of Ordinance, equal to a Quarter-Culverin, and carrying a Ball of ſix Pounds. See CULVERIN.

PELLICLE, PELLICULA, a Diminutive of *Pellis*, Skin; a thin Film, or Fragment of a Membrane or Skin.

The *Epiderma* or *Cuticula*, is a little *Pellicle* covering the *Derma*, *Cutis*, or Skin. See CUTICLE.

The Valves of the Veins and Arteries are inſenſible *Pellicles*, which open and ſhut to promote the Circulation. See VALVE.

When any Chymical Solution is evaporated in a gentle Heat till a thin Skin or Film ariſe a Top, 'tis call'd an *Evaporation to a Pellicle*, wherein there is but juſt Liquor enough left to keep the Salts in fuſion. See EVAPORATION.

PELLETS, in Heraldry, a Name given thoſe Roundles which are Black; call'd alſo *Ogreſſes* and *Gun-ſtones*.

PELICOIDES, in Geometry, a Figure, in form of a *Hatchet*; whence its Name; from the *Greek* πέλεκυς Hatchet and εἶδος form.

Such is the Figure *BCDA*, Tab. Geometry Fig 45. contained under the two inverted Quadrantal Arks *AB* and *AD*, and the Semi-circle *BCD*.

The Area of the *Pelicoides* is demonſtrated to be equal to the Square *AC*; and that, again, to the Rectangle *EB*: It is equal to the Square *AC* becauſe it wants of the Square on the left-hand, the two Segments *AB* and *AC*, which are equal to the two Segments *BC* and *CD*, by which it exceeds on the Right-hand.

PELLUCID, a Term of the ſame Import as *Diaphanous* or *Tranſparent*, See TRANSPARENT, &c.

Pellucid, ſtands oppoſed to *Opake*. See OPAKE.

The Word is form'd of the *Latin Pelluceo* or *Perluceo*, I *ſhine thro'*.

PELLUCIDITY, *Diaphaneity* or *Tranſparency*. See TRANSPARENCY, &c.

PELTA, in Antiquity, a kind of Buckler, uſed among the Ancients. See BUCKLER.

The *Pelta* was ſmall, light, and more manageable than the *Parma*. See PARMA.

It appears from *Virgil*, and other Authors, that the *Pelta* was the Buckler uſed by the *Amazons*: And *Xenophon* obſerves that the *Pelta* of the *Amazons* was like a Leaf of Ivy.

Pliny ſpeaking of the *Indian* Fig-tree, ſays its Leaves are the Width of the *Amazonian Pelta*. *Servius* on the *Æneid* ſays, the *Pelta* reſembled the Moon in her firſt Quarter.

PELVIS, in Anatomy, the lower-part of the Cavity of the *Abdomen*; thus call'd from its reſemblance to a Baſon or Ewer, call'd in *Latin*, *Pelvis*. See ABDOMEN.

The *Pelvis* is always much larger in Women than Men, to give Room for the Growth, &c. of the *Fœtus*.

'Tis well fortified with Bones, to skreen the Contents from external Injuries

PELVIS, *of the Kidneys*, a large Membranous Sinus, or Cell, in the concave Part of the Kidneys. See KIDNEY.

From the twelve *Papillæ* of the Kidneys, ariſe twelve Canals, call'd *Fiſtulæ Membranaceæ*. Theſe at length are collected into three large Branches, which being at laſt united into one, form the *Pelvis*; and this again, contracting it ſelf, terminates in a Membranaceous Pipe, call'd the *Ureter*. See PAPILLÆ and URETER.

The Urine, then, ſeparated from the Blood by the Urinary Pipes; conveyed by them into the *Papillæ*, and taken up by the *Fiſtulæ Membranaceæ*; is brought into the *Pelvis*, and thence diſcharg'd into the Ureter, thence into the Bladder, &c. See URINE.

PEN, according to *Cambden*, originally ſignifies a high Mountain; which was thus call'd among the ancient *Britains*, and even *Gauls*.

And hence that tall Range, which parts *Italy* and *France*, is call'd *Apennines*. See MOUNTAIN.

PEN, is alſo a little Inſtrument, uſually form'd of a Quill, and ſerving to write withal. See WRITING.

Dutch PENS, are thoſe made of Quills which have been paſſed thro' hot Aſhes, to take off the groſſer Fat and Moiſture thereof. See QUILL.

Fountain-PEN. See FOUNTAIN-*Pen*.

PEN-*Stock*, a ſort of *Sluice* or Flood-gate, placed in the Water of a Mill-pond, or the like, to retain or let go the Water at Pleaſure. See SLUICE.

PENANCE, is properly the Exerciſe of *Penitence*; and may be defined a Puniſhment, either voluntary, or impoſed by a legal Authority, for the Faults a Perſon has committed. See PUNISHMENT.

In this Senſe the *Romaniſts* define it a Sacrament, wherein a Perſon, who has the requiſite Diſpoſitions, receives Abſolution at the Hand of the Prieſt, of all Sins committed ſince Baptiſm. See SACRAMENT.

To a Legitimate *Penance* they require three Things, Contrition, Abſolution, and Satisfaction.

Their Prieſts receive a Power of adminiſtring the Sacrament of *Penance*, when they receive the Prieſthood; but to exerciſe this Power, 'tis required they have the Juriſdiction of an Ordinary, *i. e.* that they have a Benefice, either Original or Delegated; with the Approbation of the Biſhop to hear Confeſſions.

PENANCE, is particularly uſed in the *Romiſh* Church, for the Penalty which a Confeſſor impoſes, for the Satisfaction of the Sins whereof a Perſon is abſolved. See CONFESSION and ABSOLUTION.

The ancient Diſcipline, *Du-pin* obſerves, was very ſevere on the Head of *Penance*. For great Crimes People were excluded the Communion of the Church, expell'd the Aſſemblies of the Faithful, obliged to faſt, and to mortify 'emſelves publickly, even at the Church Door, cut their Hair, go always on Foot, &c.

He adds, that thoſe who had done publick *Penance*, were never admitted into the Clergy; and that public *Penance* was never

never granted more than once. Thoſe who fell a ſecond Time were never to be reconciled to the Church, and were to look for Pardon only at the Hands of God.

PENANCE, in our Canon-Law, is an Eccleſiaſtical Puniſhment, chiefly adjudg'd to the Sin of Fornication. The Puniſhment is thus preſcribed by the Canons: The Delinquent to ſtand in the Church Porch on ſome Sunday bare Head and bare Foot, in a white Sheet, with a white Wand in the Hand; here bewailing himſelf, and begging every one to pray for him. Then to enter the Church, falling down, and kiſſing the Ground; and at laſt, placed on an Eminence in the Middle of the Church, againſt the Miniſter, to declare the Foulneſs of the Crime, odious to God, and ſcandalous to the Congregation.

If the Crime be not notorious, the Canons allow the Puniſhment to be commuted at the Parties Requeſt, for a pecuniary Mulct, for the Benefit of the Poor, &c.

PENATES, in the ancient Mythology, a Term applied to all the Domeſtic Gods, whom the Ancients adored in their Houſes; whence they are ordinarily confounded with the *Lares*. See LARES.

Authors are not at all agreed about the Origin of the *Dii penates*, who were properly the Tutelary Gods of the *Trojans*, and were only adopted by the *Romans*, who gave 'em the Title of *Penates*.

De Meziriac, in his Notes on *Dido*'s Epiſtle to *Æneas*, relates at large what he has met withal in the ancient Writers on this Subject: *Dionyſius Halicarnaſſæus* tells us that *Æneas* firſt lodg'd theſe Gods in the City *Lavinium*; and that his Son *Aſcanius*, afterwards, upon building the City *Alba*, tranſlated 'em thither; but that they return'd twice miraculouſly to *Lavinium*. The ſame Author adds, that in *Rome* is ſtill ſeen a dark Temple, ſhaded by the adjacent Buildings, wherein are the Images of the *Trojan* Gods, with the Inſcription *Denas*, which ſignifies *Penates*. See DENATES.

Theſe Images repreſent two young Men ſitting, each of which holds a Lance. I have ſeen, adds *Dionyſius*, ſeveral other Statues of the ſame Gods in ancient Temples; who all appear like young Men dreſs'd in a Habit of War.

Varro fetches theſe *Penates* from *Samothrace* to *Phrygia*, to be afterwards tranſported by *Æneas* into *Italy*.

Macrobius, who relates this from *Varro*, adds, that they were call'd *Penates* from the *Latin* Words *Per quos penitus ſpiramus*, which ſeems a mere Subtilty. The real Etymology muſt be ſought in the *Phrygian*, not the *Latin* Tongue.

Roſinus diſtinguiſhes among the *Penates:* He makes an Order of *Penates of the Heavens*; ſuch as *Pallas* in the Etherial Region, *Jupiter* in the middle Region, and *Juno* in the loweſt; *Penates of Cities*, *Penates of private Families*, &c.

So that in effect, the *Dii penates* were the Guardian or tutelary Gods of every Thing. See GOD.

Cicero, in *Aulus Gellius*, derives the Word hence, *quod penes nos nati ſunt*. Yet, in his Book *de Nat. Deor.* he ſays 'tis form'd from *Penus*, Proviſion; or, perhaps, adds he, *quod penitus inſident*. Others ſay, *quia coluntur in penetralibus*.

'Tis a popular Queſtion among the Learned, who were the *Penates* of *Rome*? Some ſay *Veſta*, others *Neptune* and *Apollo*; *Vives* ſays *Caſtor* and *Pollux*, with whom agrees *Voſſius*, who adds that the Reaſon of their chuſing *Caſtor* and *Pollux* in quality of *Penates*, might be the important Service they did the *Romans* in the War againſt the *Latins*.

Nor are Authors more unanimous on the Subject of the *Penates*, which *Æneas* brought into *Italy*. Some ſay they were *Neptune* and *Apollo* who built the Walls of *Troy*; others *Jupiter*, *Juno*, and *Minerva*; others *Cœlus* and *Terra*,

PENCIL, an Inſtrument uſed by Painters, for the Application of their Colours. See COLOUR.

There are *Pencils* of various kinds, and made of various Matters: The moſt uſual are of Badgers and Squirrels Hair, thoſe of Swans-down, and thoſe of Boars Briſtles; which laſt are bound on to a Stick bigger, or leſs, according to the Uſes they are deſtined for; and when large are call'd *Bruſhes*.

The others are incloſ'd in the Barrel of a Quill.

The Word comes from the *Latin*, *Penicillum*, which ſignifies the ſame Thing. The Ancients, M. *Felibien* obſerves, had *Pencils* made of little Pieces of Spunge; whence doubtleſs, the Story of the Painter, who not able to expreſs the Foam of a Dog, ſucceeded by throwing his *Spunge* at the Picture.

PENCIL-*Caſe*. See PORTE-*Craion*.

PENCIL *of Rays*, in Opticks, is a double Cone of Rays, joined together at the Baſe; one of which hath its Vertex in ſome point of the Object, and has the Glaſs *G L S*. (Tab Opticks Fig. 39) for its Baſe; and the other has its Baſe on the ſame Glaſs, but its Vertex in the point of Convergence; as at C. See RAY, &c.

Thus *B G S C* is a *Pencil of Rays*; and the Line *B L C* is call'd the *Axis of that Pencil*.

PENDANT, an *Ear-ring*, or Ornament, of ſome precious Matter, wore by the Ladies; hung by a Hole made for that purpoſe thro' the Ear; and frequently enriched with Diamonds, Pearls, and other precious Stones.

The *Pendants* of the *European* Ladies are nothing in compariſon with thoſe wore by the *E. Indians*, both Men and Women; among whom 'tis the Faſhion to lengthen out the Ears, and to enlarge the Hole, by putting in *Pendants* of the Size of Saucers, ſet with Stones.

The Queen of *Calicut*, *Pyrard* tells us, and other Ladies of her Court, have their Ears, by this Means, weigh'd down as low as their Breaſts, and even lower; imagining this a main point of Beauty; and the Holes large enough to paſs the Fiſt thro'.

The *Moncois*, who are the common People, are not allowed to wear their Ears ſo long as the *Naires*, who are the Nobleſſe; three Fingers length are the utmoſt ſtretch allow'd the Former.

In the *W. Indies*, *Columbus* named a certain Coaſt *Oreja*, by reaſon he found People with Holes in their Ears big enough to paſs an Egg thro'.

They make Holes, too, in their Lips and Noſtrils, and hang *Pendants* at 'em; which is alſo practis'd by the *Mexicans* and other Nations.

PENDANT, in Heraldry, a Term applied to the Parts hanging down from the Label, to the Number of 3, 4, 5, or 6 at moſt: Theſe muſt be ſpecified in Blazoning, when there are more than three. See LABEL.

They reſemble the Drops at the Bottom of the Triglyphs in the Doric Freeze.

PENDANT *Feathers*, in Falconry, are thoſe Feathers, which grow behind the Thighs of an Hawk. See FEATHER.

PENDANTS, among Floriſts, a Kind of Seeds, growing on Stamina, or Chives; ſuch are thoſe in the middle of Tulips, Lillies, &c.

PENDANTS *of a Ship*, are of two Kinds.

I. Thoſe long Colours or Streamers, cut pointing out towards the End, and there divided into two Parts, and hung out at the Heads of the Maſts, or at the Yard-arm Ends, are called *Pendants*; and uſed for ſhew, and ſometimes for diſtinction of Squadrons. See COLOUR, FLAG, &c.

II. That ſhort Rope is called a *Pendant*, which at one End is faſtened to the Head of the Maſt, or to the Yard, or to the Clew of the Sail, and at the other End, hath a Block and Shiver, to reeve ſome running Rope into.

Thus, the *Pendant* of the Tackle is made faſt to the Head of the Maſt; and the *Pendants* of the Back-ſtays are faſtened to, and hang down on the inſide of the Shrouds.

All the Yard-arms, except the Miſſen have of theſe *Pendants*, into which the Braces are reev'd.

PENDENTIVE, in Architecture, the whole Body of a Vault, ſuſpended out of the Perpendicular of the Walls, and bearing againſt the Arc-boutants. See VAULT.

Daviler deſcribes it as a Portion of a Vault between the Arches of a Dome, uſually enrich'd with Sculpture: And *Felibien*, as the Plain of the Vault, contain'd between the double Arches, the forming Arches and the Ogives. See OGIVE.

The *Pendentives* are uſually of Brick, or ſoft Stone; but Care muſt be taken that the Couches or Beds of Maſonry be always laid level, and in right Lines proceeding from the Sweep whence the Riſe is taken.

The Joints too muſt be made as ſmall as poſſible, to ſave the Neceſſity of filling 'em up with Wood, or of uſing much Mortar.

PENDULOUS, *hanging down*; a Name Botaniſts give to thoſe Flowers which hang downwards; the Stalk not being able to ſuſtain 'em upright. See FLOWER.

PENDULUM, in Mechanicks, any heavy Body ſo ſuſpended as that it may vibrate, or ſwing backwards and forwards, about ſome fix'd Point, by the force of Gravity. See VIBRATION.

The Vibrations, or alternate Aſcent and Deſcent, of the *Pendulum*, are call'd its *Oſcillations*. See OSCILLATION.

The Point on which it vibrates, is call'd the Centre of *Suſpenſion* or *Motion*. See CENTRE and SUSPENSION.

And a right Line paſſing thro' the Centre, parallel to the apparent Horizon, is call'd the *Axis of Oſcillation*. See AXIS.

The Vibrations of a *Pendulum*, are all *Iſochronal*, or effected in ſpaces of Time perfectly equal. See ISOCHRONAL.

And hence the *Pendulum* becomes the moſt accurate Chronometer, or Inſtrument for meaſuring Time, in the World. See TIME and CHRONOMETER.

And hence alſo its Vibrations are propoſed as an invariable and univerſal Meaſure of Lengths for the moſt diſtant Countries and Ages. See MEASURE.

For a Vibration being once found preciſely equal to a ſecond of Time of the Suns mean Motion; if *v. g.* the Horary Foot (as M. *Huygens* calls the third Part of his ſecond *Pendulum*) compared to the *Engliſh* Standard Foot, be as 392 to 360; 'twill be eaſy, by Calculation, to reduce all the other Meaſures of the World to theſe Feet; the Lengths of *Pendulums*, reckon'd from the Point of Suſpenſion, to the Centre of the Ball, being to each other, as the Squares of the Times

wherein

wherein the ſeveral Oſcillations are perform'd; and therefore reciprocally as the Squares of the Numbers of Oſcillations preform'd in the ſame Time.

On this ſame Principle, M. *Mouton*, Canon of *Lyons*, has a pretty Treatiſe, *de menſura poſteris tranſmittenda.*

Mr. *Huygens* lays down the Length of a *Pendulum* that ſhall ſwing Seconds, to be 3 Feet, 3 Inches, and 2 Tenths of an Inch; according to Sir *J. Moor's* Reduction; which agrees perfectly with M. *Mouton's Pendulum* 8 Inches 1 Tenth long, to Vibrate 132 times in a Minute: ſo that this may be relied on as a ſure Meaſure.

Note, the Lengths of *Pendulums* are uſually meaſur'd from the Centre of Motion.

The Firſt who obſerv'd this noble Property, the *Iſochroniſm* of *Pendulums*, and made Uſe thereof in meaſuring Time, *Sturmius* tells us, was *Ricciolus*; after him *Tycho*, *Langrenus*, *Wendeline*, *Merſenne*, *Kircher* and others hit on the ſame Thing; tho' without any Intimation of what *Ricciolus* had done.

Huygens firſt applied the *Pendulum* to Clocks. See *Pendulum* CLOCK.

Pendulums are either *Simple* or *Compound*.

Simple PENDULUM, is that conſiſting of a ſingle Weight, as *A*, conſider'd as a Point; and an inflexible right Line, as *AC*, conſider'd as void of Gravity, ſuſpended on a Centre *C*, and voluble about it. (Tab. Mechanicks Fig. 36)

Compound PENDULUM, is that which conſiſts of ſeveral Weights, ſo fix'd as to retain the ſame Diſtance both from one another, and from the Centre about which they vibrate.

The Doctrine and Laws of PENDULUMS.

A Pendulum rais'd to B, thro' the Arch of the Circle B A; will fall, and again riſe, thro' an equal Arch, to a Point equally high, D; and thence fall to A, and again riſe to B; and thus continue riſing and falling reciprocally, for ever.

For ſuppoſe *H I* a horizontal Line, and *B D* parallel thereto; if the Ball *A*, which we here conſider as a Point, be rais'd to *B*; the Line of Direction *B H*, being Perpendicular from the Centre of Gravity *B* to the Horizontal Line *H I*, falls without the *Baſe*, which is in the Point *C*.

The Ball therefore cannot reſt, but muſt deſcend. See DESCENT.

But being retain'd by the Thread *B C*, from falling perpendicularly thro' *B H*; it will fall thro' the Arch *B A*. Conſequently, when the Centre of Gravity arrives at the Bottom; *A* has the ſame force, it wou'd have acquired in falling from *K*; and will therefore be able to riſe equally high as if it had, *i.e.* in deſcending thro' the firſt half of its Vibration, it acquires a Velocity by the continual Acceleration of its Fall; and as this Velocity is always proportionable to the Height whence it falls, as being in ſome meaſure the Effect thereof; it is ſtill able to make it remount to the ſame Height, ſuppoſing according to the Syſtem of *Galileo*, that the Velocities are always the ſquare Roots of the Heights. See ACCELERATION.

Since then the Thread prevents the *Pendulum* going off in the Tangent *A I*, it muſt aſcend thro' the Arch *A D*, equal to that *A B*.

All the Force therefore which it had acquired by falling, being exhauſted; it will return by the force of Gravity thro' the ſame Arch *A D*, and again riſe from *A* to *B*; and thus for ever. *Q. E. D.* See GRAVITY.

Experience confirms this Theorm, in any finite Number of Oſcillations; but if they be ſuppoſed infinitely continued, there will ariſe a Difference. For the Reſiſtence of the Air, and the Friction about the Centre *C*, will take off part of the Force acquired in falling; whence it will not riſe preciſely to the ſame Point whence it fell.

Thus the Aſcent continually diminiſhing; the Oſcillation will be at laſt ſtopp'd, and the *Pendulum* hang at reſt. See RESISTANCE and FRICTION.

II. *If a ſimple Pendulum be ſuſpended between two Semi-cycloids* C B *and* C D. (Tab Mechanicks Fig. 37) *Whoſe generating Circles have their Diameters* C F *equal to half the length of the Thread* C A; *ſo as the Thread in Oſcillating be wound about 'em; all the Oſcillations, however unequal in Space, will be Iſochronal, or perform'd in equal Times; even in a reſiſting Medium.*

For ſince the Thread of the *Pendulum C E*, is wound about the Semi-cycloid *B C*; the Centre of Gravity of the Ball *E*, which is here conſider'd as a Point, by its Evolution, will deſcribe a Cycloid *B E A D*; as is ſhewn from the Doctrine of Infinites; but all Aſcents and Deſcents in a Cycloid are Iſochronal, or equal in Time: Therefore the Oſcillations of the *Pendulum* are alſo equal in Time *Q. E. D.* See CYCLOID.

Hence, if with the length of the *Pendulum C A*, a Circle be deſcribed from the Centre C; ſince a Portion of the Cycloid near the Vertex *A*, is almoſt deſcribed by the ſame Motion; a ſmall Arch of the Circle will almoſt coincide with the Cycloid.

In little Arches of a Circle, therefore, the Oſcillations of *Pendulums* will be Iſochronal as to Senſe; however, unequal in 'emſelves; and their Ratio to the Time of perpendicular Deſcent thro' half the length of the *Pendulum*, is the ſame with that of the Circumference of a Circle to its Diameter.

Hence alſo, the longer the *Pendulums* are, that oſcillate in Arches of a Circle; the more Oſcillations are Iſochronal; which agrees with Experiment; for in two *Pendulums* of equal lengths, but oſcillating in unequal Arches, provided neither Arch be very great, you'll ſcarce diſcern any inequality in an hundred Oſcillations.

Hence alſo, we have a Method of determining the Space which a heavy Body, falling perpendicularly, paſſes over in a given Time. For the Ratio which the Time of one Oſcillation has to the Time of the Fall thro' half the Length of the *Pendulum*, being thus had; and the Time wherein the ſeveral Vibrations of any given *Pendulum* being found; we have the Time of the Fall thro' half the length of the *Pendulum*. And hence may collect the Space it will paſs over in any other Time.

The whole Doctrine of *Pendulums* oſcillating between two Semi-cycloids, both Theory and Practice, we owe to the great *Huygens*; who firſt publiſh'd the ſame in his *Horol. Oſcillator. ſive demonſtrationes de Motu Pendulorum*, &c.

III. *The Action of Gravity is leſs in thoſe Parts of the Earth where the Oſcillations of the ſame Pendulum are ſlower, and greater where they are ſwifter.*

For the Time of Oſcillation in a Cycloid, is to the Time of Perpendicular Deſcent thro' the Diameter of the generating Circle, as the Periphery of the Circle to the Diameter.

If then, the Oſcillation of the ſame *Pendulum* be ſlower; the Perpendicular Deſcent of heavy Bodies is likewiſe ſlower; *i. e.* the Motion is leſs accelerated, or the Force of Gravity is leſs: and converſely. See GRAVITY.

Hence, as 'tis found by Experiment, that the Oſcillations of the ſame *Pendulum* are ſlower near the Equator, than in Places leſs remote from the Pole; the force of Gravity is leſs towards the Equator than towards the Poles. And conſequently the Figure of the Earth is not a juſt Sphere, but a Spheroid. See EARTH and SPHEROID.

This M. *Richier* found by an Experiment made in the Iſland *Cayenna*, about four Degrees from the Equator; where a *Pendulum* 3 Foot, 8 Lines $\frac{3}{4}$ long, which at *Paris* Vibrates ſeconds, was to be ſhorten'd a Line and a Quarter to reduce its Vibrations to Seconds.

M. des Hayes, in a Voyage to *America*, confirms the Obſervation of *Richier*; but adds, that the Diminution eſtabliſh'd by that Author, appears too little.

M. *Couplet* the younger, upon his return from a Voyage to *Braſil* and *Portugal*, falls in with *M. des Hayes*, as to the Neceſſity of ſhortening the *Pendulum* towards the Equator more than *Richier* has done. He obſerv'd, that even at *Liſbon* the *Pendulum* which beats Seconds, muſt be two Lines $\frac{1}{2}$ ſhorter than that of *Paris*; which is ſhorter than that of *Cayenna*, as fix'd by *Richier*; tho' *Cayenna* be in 24 Degrees leſs Latitude than *Liſbon*.

The Truth is, this Diminution does not proceed regularly: Meſs. *Picart* and *de la Hire*, found the Length of the *Pendulum* which beats Seconds exactly the ſame at *Bayonne*, at *Paris*, and at *Uranisbourg* in *Denmark*; tho' the firſt be in 43° $\frac{1}{2}$ of Latitude, and the laſt in the Latitude 55° 3'.

Hence *M. de la Hire* takes occaſion to ſuſpect that the Diminution is only Apparent; and that *E. gr.* the Iron Yard, wherewith *M. Richier* meaſur'd his *Pendulum*, might be lengthen'd by the great Heats of the Iſle of *Cayenna*; not the *Pendulum* ſhorten'd by the approach towards the Line.

To confirm this, he tells us he found, by very careful Experiments, that an Iron Bar, which expoſed to the Froſt was 6 Foot long; was lengthen'd $\frac{1}{3}$ of a Line by the Summer's Sun. See DILATATION, HEAT, THERMOMETER.

IV. *If two Pendulums vibrate in ſimilar Arches, the Times of the Oſcillations are in the Subduplicate Ratio of their Lengths.*

Hence the Lengths of *Pendulums* vibrating in ſimilar Arches, are in a Duplicate Ratio of the Times wherein the Oſcillations are perform'd.

V. *The Numbers of Iſochronal Oſcillations perform'd in the ſame Time by two Pendulums, are reciprocally as the Times wherein the ſeveral Oſcillations are perform'd.*

Hence, the Lengths of *Pendulums* vibrating in ſimilar and ſmall Arches, are in the Duplicate Ratio of the Numbers of Oſcillations perform'd in the ſame Time, but reciprocally taken.

VI. *The Lengths of Pendulums ſuſpended between Cycloids, are in a Duplicate Ratio of the Times wherein the ſeveral Oſcillations are perform'd.*

And hence they are in a Duplicate Ratio of the Numbers of Oſcillations perform'd in the ſame Time, but reciprocally taken: and the Times of Oſcillations in different Cycloids are in a Subduplicate Ratio of the Lengths of the *Pendulums*.

VII. *To*

VII. *To find the Length of a Pendulum, which shall make any assign'd Number of Vibrations in any given Time.*

Let the Number of Vibrations requir'd, be 50 in a Min. and the Length of the String, counted from the Point of Suspension, to the Centre of Oscillation, or round Ball at the End of it be requir'd: 'Tis a fix'd Rule that *the Lengths of Pendulums are to each other, as the Squares of their Vibrations and Contrarywise*: Now 'tis agreed that a *Pendulum* vibrating Seconds (or 60 times in a Minute) is 39 Inches, and $\frac{2}{10}$ of an Inch; say therefore as the Square of 50 (which is 2500) to the Square of 60, (which is 3600) so is 39, 2. to the Length of the *Pendulum* requir'd: which will be found to be 56 Inches $\frac{4}{10}$.

Note, In Practice, since the Product of the mean Time, will always be 1411200 (that is the Product of the Square of 60, multiplied by 39, 2.) that is 3600 + 39, 2. you need only divide that Number by the Square of the Number of Vibartions assign'd; and the Quotient will give the Length of a *Pendulum*, that shall vibrate just so many times in a Min.

VII. *The Length of a Pendulum being known, to find the Number of Vibrations it will make in a given Time.*

This being the Reverse of the Former; say, As the Length given, suppose 56, 4, is to the Length of the Standard *Pendulum* swinging Seconds, *viz.* 39, 2; so is the Square of the Vibrations of the Standard *Pendulum* in the given Time, *v. gr.* a Minute, to the Square of the Vibrations sought: that is, as 56: 4: 39: 2, 3600: 2500.

And the Square Root of 2500, will be 50, the Number of Vibrations sought.

But for Use, here, (as in the former Problem) you need only divide 1411200 by the Length; and it gives the Square of the Vibrations; as there you divided by the Square of the Vibrations, to find the Length.

On these Principles, Mr. *Derham* has constructed a Table of the Vibrations of *Pendulums* of different Lengths in the Space of a Minute.

Pend. length in inches	Vibrat. in a Minute	Pend. length in inches	Vibrat. in a Minute
1	375.7	30	68.6
2	265.6		
3	216.9	39.2	68.0
4	187.8		
5	168.0	40	59.5
6	153.3	50	53.1
7	142.0	60	48.5
8	132.8	70	44.9
9	125.2	80	42.0
10	118.8	90	39.6
20	84.0	100	37.5

Note, These Laws, *&c.* of the Motion of *Pendulums*, will scarce hold strictly, unless the Thread that sustains the Ball, be void of Weight, and the Gravity of the whole Weight be collected in a Point.

In practice, therefore, a very fine Thread, and a small Ball, but of a very heavy Matter, are to be used. A thick Thread, and a bulky Ball disturb the Motion strangely; for in that Case, the *Pendulum*, of Simple, becomes compound; it being much the same as if several Weights were applied to the same inflexible Rod in several Places.

The Use of *Pendulums* in measuring Time in Astronomical Observations, and on other Occasions where a great Degree of Preciseness is requir'd; is too obvious to need a Description. Either the Length of the *Pendulum* may be adjusted before its Application, and made to vibrate the desired Time, *v. g.* Seconds, half Seconds, *&c.* by Article VI. or it may be taken at Random, and the Times of the Vibrations afterwards determined from Article VIII.

For the Use of the *Pendulum* in measuring remote inaccessible Distances, *&c.* by means of Sound, *&c.* See SOUND.

PENDULUM *Clock*, a Clock, which derives its Motion from the Vibration of a *Pendulum*.

'Tis controverted between *Galileo* and *Huygens*, which of the the two first applied the *Pendulum* to a Clock; *for the Pretensions of each.* See CLOCK.

After *Huygens* had discover'd that the Vibrations made in Arches of a Cycloid, however, unequal they were in extent, were all equal in Time; he soon perceiv'd that a *Pendulum* applied to a Clock, so as to make it describe Arches of a Cycloid, would rectify the otherwise unavoidable Irregularities of the Motion of the Clock; since, tho' the several Causes of those Irregularities shou'd occasion the *Pendulum* to make greater or less Vibrations; yet, in virtue of the Cycloid, it wou'd still make 'em perfectly equal; and thus the Motion of the Clock govern'd thereby, wou'd be preserved perfectly equable. See CYCLOID.

But the Difficulty was to make the *Pendulum* describe Arches of a Cycloid; for, naturally, the *Pendulum* being tied to a fix'd Point, can only describe Arches of Circles about the same.

Here *M. Huygens* hit on a Secret which all the World is now ter of: The Iron Rod or Wiar which bears the Bob at Bottom, he tied a Top to a Silken Thread, placed between two Cycloidal Cheeks, or two little Arches of a Cycloid, made of Metal. Hence the Motion of Vibration, applying incessantly from one to t'other of those Arches, the Thread, which is extremely flexible, easily assumes the Figure thereof; and by Means hereof tis demonstrated, that the Weight suspended at the other End of the Rod, will describe a just Arch of a Cycloid.

This is doubtless one of the most useful and ingenious Inventions many Ages have produced: By means whereof, we have Clocks which won't err a single Second in several Days.

'Tis true, the *Pendulum* is lyable to its Irregularities; how minute soever they may be; *M. de la Hire* thinks there is still room to improve it.

The Silk Thread by which it is suspended, he observes shortens in moist Weather, and lengthens in dry; by which means the Length of the whole *Pendulum*, and consequently the times of the Vibrations are varied.

To obviate this Inconvenience, *M. de la Hire*, in lieu of a Silk Thread, used a little fine Spring; which was not indeed subject to shorten and lengthen; but which he found grew stiffer in cold Weather, and made its Vibrations faster than in warm.

He had therefore recourse to a stiff Wiar or Rod, Firm from one End to t'other. Indeed, by this means he renounced the Advantages of the Cycloid; but he found, as he says, by Experience, that the Vibrations in Arches of Circles are performed in Times as equal, provided they ben't of too great Extent, as those in Cycloids. But the Experiments of Sir *J. Moor* and others, have demonstrated of the contrary.

The ordinary Causes of the Irregularities of *Pendulums*, Mr. *Derham* ascribes to the Alterations in the Gravity, and Temperature of the Air; which increase and diminish the Weight of the Ball, and by that means make the Vibrations greater and less: An Accession of Weight in the Ball being found by Experiment to accelerate the Motion of the *Pendulum*.

A Weight of Six Pound added to the Ball, Mr. *Derham* found, made his Clock gain 13 Seconds every Day.

A general Remedy against these Inconveniences of *Pendulums*, is to make 'em long, the Bob heavy, and to vibrate but a little way: this is the usual means in *England*; the Cycloidel Cheeks being generally overlook'd.

To correct the Motion of Pendulum-*Clocks*; the usual Method is to screw and let down the Ball; but a very small Alteration here having a very great Effect; Mr. *Derham* prefers *Huygens*'s Method, which is to have a small Weight or Bob to slide up and down the Rod above the Ball, which is to be immoveable: tho' he improves on the Method, and recommends having the Ball to screw up and down, to bring the *Pendulum* near its Gage; and the little Bob to serve for the nicer Corrections, as the Alteration of a Second, *&c.*

Mr. *Huygens* orders rhe Weight of this little Corrector to be equal to that of the Wiar, or $\frac{1}{50}$ of that of the great Ball: He adds a Table of the Alterations, the several shiftings thereof will occasion in the Motion of the *Pendulum*; Wherein it is observable, that a small Alteration towards the lower End of the *Pendulum*, makes as great an Alteration in Time, as a greater rising or falling does when higher.

PENDULUM *Royal*, a Name given among us to a Clock, whose *Pendulum* swings Seconds, and goes eight Days; shewing the Hour, Minutes, and Seconds. See CLOCK.

The Numbers of such a Piece are thus calculated; first cast up the Seconds in 12 Hours, and you will find them to be $43200 = 12 \times 60 \times 60$. The swing Wheel must be 30 to swing 60 Seconds in one of its Revolutions: Now let $\frac{1}{2}$ 43200 = 21600, be divided by 30, and you will have 720 in the Quotient, which must be broken into Quotients; the first of them must be 12 for the great Wheel which moves round once in 12 Hours. 720 divided by 12, gives 60, which may also be conveniently broken into two Quotients, as 10 and 6, or 5 and 12, or 8 and 7 $\frac{1}{2}$; which last is most convenient: and if you take all your Pinnions 8, the Work will stand thus.

8) 96 (12
8) 64 (8
8) 60 (7 $\frac{1}{2}$

30

According to this Computation, the great Wheel will go about once in 12 Hours, to shew the Hour; the second Wheel once in an Hour, to shew the Minutes; and the swing Wheel once in a Minute, to shew the Seconds. See MOVEMENT and CLOCK-WORK.

PENECILLA, in Pharmacy, a *Lozenge*, made round by rolling; the same as *Turundula*; thus call'd from *Penecillus* a Pencil, which it resembles in shape.

PENECILLUS, among Chirurgeons, is used for a Tent, to be put in Wounds or Ulcers. See TENT.

PENETRATION, the Action whereby one Thing enters another, or takes up the ſame Place. See PLACE.

The School-men define *Penetration*, the Co-exiſtence of two or more Bodies; ſo, as one is preſent, or has its Extenſion in the ſame Place as the other. See EXISTENCE and BODY. See alſo MATTER, SOLIDITY, &c.

In Phyſicks, the real *Penetration of Bodies* is held abſurd, *i. e.* that two Bodies ſhou'd be at the Time in the ſame Place: accordingly *Impenetrability* is laid down as one of the eſſential Properties of Matter. See IMPENETRABILITY.

What we popularly call *Penetration*, only amounts to the Matter of one Body's being admitted into the Vacuity of another. See VACUITY, DIMENSION.

Such is the *Penetration* of Water thro' the Subſtance of Gold. See WATER, GOLD, &c. See alſo HARDNESS.

PENIDIUM, in Pharmacy, *Barly-Sugar*; a Preparation of Sugar, made by boiling it up with a Decoction of Barley, till it become Brittle; which done, it is turn'd out upon a Marble, anointed with Oil of Sweet Almonds, kneaded with the Hands like paſt; and while yet hot, drawn out into Sticks twiſted like Cords. See SUGAR.

Penidia are very good againſt Colds, to moderate the Acrimonies of the Breaſt, promote Expectoration, &c.

Dr. *Quincy* uſes the term *Penidium*, for a kind of clarified Sugar, with a Mixture of Starch, made up into Bolus's.

PENINSULA, in Geography, a Portion, or Extent of Land, joining to the Continent by a narrow Neck, or *Iſthmus*; the reſt encompaſſed with Water. See ISTHMUS.

Such is *Peloponeſus*, or the *Morea*, *Africa*, &c.

Peninſula is the ſame with *Cherſoneſus*. See CHERSONESUS.

The Word is compounded of the *Latin*, *Pene*, and *Inſula*; *q. d.* almoſt Iſland, which the *French* pertinently enough render *preſque Iſle*.

PENIS, in Anatomy, a part of the Body, from its form, call'd alſo the *Yard*; and by way of Eminence the *Member*, or *virile Member* as being one of the principal Organs of Generation in the Male Kind. See GENERATION, and MALE.

It is faſten'd to the lower Part of the *Os Pubis*, and the upper Part of the *Iſchion*: Its Body conſiſts of the two *Corpora Cavernoſa*, the *Corpus Cavernoſum Urethræ*, and the *Urethra* it ſelf.

The *Corpora Cavernoſa* of the *Penis*, call'd alſo *Corpora, Nervoſa & Spongioſa*, &c. have two diſtinct Origins in the *Os Pubis*; whence they proceed, growing both in bulk and thickneſs, till they meet the *Corpus cavernoſum* of the *Urethra*; where they join; leaving an Interſtice or Channel for its Paſſage along 'em; and thus continue their Progreſs, connected together by a membranous Body call'd the *Septum*, and terminating at length in the Glans. See CAVERNOSA *Corpora Penis*.

The Cavernous Body of the Urethra, includes the *Urethra* or Urinary Paſſage. Its form contrary to that of the other Cavernous Bodies, is largeſt at the two Extremes, and ſmalleſt in the Middle.

That Part included between the two Origins of the Cavernous Bodies of the *Penis*, Mr. *Cowper* calls the *Bulb of the Urethra*: Its other Extremity being dilated, forms the Body call'd the *Glans*. See URETHRA, BULB and GLANS.

The *Penis* receives Arteries from the internal Iliac Branches, and Umbilical Arteries; and theſe at Length ſubdividing into innumerable Branches, from the capillary Extremities thereof ariſe ſo many Veins; in whoſe Chanels are Apertures correſponding to ſo many Cells, which communicating with each other, empty 'emſelves into larger Venous ducts, running on the ſuperior Surface of the *Penis*; ſome whereof join the Veins of the Prepuce; others make one large Trunk, call'd *Vena Penis*, which marching on the *Dorſum Penis* to the *Proſtatæ*, there divides and enters the internal Iliac on either Side.

The *Penis* has Nerves from a Trunk compoſed of a Coaleſcence of the third of the *Os Sacrum*, and a Branch of the great Crural: Theſe aſcending the Cavernous Bodies, expand 'emſelves o'er the upper Surface thereof, and are thence diſtributed to all Parts of the *Penis*.

It has Lymphæducts very numerous on its Surface under the Skin, which diſcharge 'emſelves into the Glandulæ Inguinales. See SEED and URINE.

The *Penis* has two pair of Muſcles, and an odd one; the odd Muſcle is call'd *Accelerator Urinæ*: its upper Part, which covers the Bulb, ſerves to ſtreighten the Veins paſſing thro' it from the *Corpus Cavernoſum* of the *Urethra*, and thus hinders the Reflux of the Blood in Erection; and by repeated Contractions, drives the Blood into the Bulb towards the Glans. Its Elongation ſerves to compreſs the Channel of the *Urethra*, and to force out the contain'd Seed or Urine. See ACCELERATOR UINE.

The firſt pair of Muſcles is call'd the *Erectores Penis*. By their Action the *Penis* is ſuſtain'd, and drawn towards the *Pubes*; and by the Aſſiſtance of the ſuſpenſory Ligament of the *Penis*, this *Vena Penis* is applied to the tranſverſe Legiment of the *Oſſa Pubis*, and the refluent Blood hinder'd from paſſing that way; whereby the *Copora Cavernoſa* become diſtended. See ERECTORES *Penis*.

The laſt pair of Muſcles are the *Tranſverſales Penis*, which vary in various Subjects, and are ſometimes wanting: Their Uſe is to dilate that Part of the Cavernous Body of the Urethra, to which they are faſten'd. See TRANSVERSALES *Penis*.

The *Penis* has alſo three Glands, firſt diſcover'd by Mr. *Cowper*; theſe all empty 'emſelves into the *Urethra*, and from the Tenacity of the Liquor they ſeperate, are call'd the *Mucous Glands*. See MUCOUS *Gland*.

The whole Compages of the *Penis* is inveſted with a Celluloſe Membrane, of admirable Texture; which again is cover'd with a firm nervous Coat; and that with a *Cuticula* and *Cutis*: The Duplicature of the *Cutis* on the Glans, makes the Prepuce. See PREPUTIUM.

It is tyed to the lower Part of the Glans by a Ligament, call'd the *Frænum*. See FRÆNUM.

By another Ligament, call'd *Suſpenſorium*, the *Penis* is held up to the *Oſſa Pubis*. See LIGAMENTUM *ſuſpenſorium Penis*.

The Uſe of the *Penis* is for the Evacuating of the Seed and Urine. See SEED and URINE.

Indeed, Dr. *Drake*, from a View of its Structure, thinks it originally intended for the former only; and that the Conveyance of the Urine was not conſider'd by Nature in the Mechaniſm of this Part.

He adds another Uſe, *viz.* the Incitement to the Propagation of the Species.

In Effect, without ſuch an Inſtrument, the Seed of the moſt perfect Animals cou'd not be convey'd to the Place of Prolification: Add to this, that an Alternation of Erection and Flaccidity is abſolutely neceſſary; the firſt for the Performance of its Office, the ſecond for the Security of the Part.

Without an Erection, it were impoſſible to emit and lodge the Seed where it ought to be; and with a conſtant one, almoſt as impoſſible to ſecure the Part from Injuries; not to mention the Loſs of Inſtigation, which wou'd be the Conſequence of conſtant Erection. See SATYRIASIS, &c.

The *Cauſe of the Erection of the Penis* is the Blood diſtending the *Copora Cavernoſa*; as is evident from many Experiments; among the reſt, from tying the *Penis* of a Dog *in Coitu*, in which nothing is found but Blood. And hence, in the Bodies of Criminals that hang long after death, the *Penis* becomes erected, by the Blood's falling to the inferior Parts, and ſtopping there.

The Cavernous Body of the Urethra is erected by the *Muſculi Acceleratores*, embracing the Veins of its Bulb. See ERECTION.

PENITENCE, *Pœnitentia*, is ſometimes uſed for a State of Repentance, and ſometimes for the Act of Repenting. See REPENTANCE.

PENITENCE is alſo uſed for a Diſcipline or Puniſhment attending Repentance, more uſually call'd *Penance*. See PENANCE.

PENITENCE, is alſo the Title of ſeveral religious Orders, conſiſting of converted Debauchees, and reform'd Proſtitutes; or of Perſons who devote 'emſelves to the Office of reclaiming 'em.

Of this latter Kind is the Order of *Penitence* of St. *Magdalen*, eſtabliſh'd about the Year 1272, by one *Bernard*, a Cittizen of *Marſeilles*; who devoted himſelf to the work of converting the Courtezans of that City.

Bernard was ſeconded by ſeveral others; who making a kind of Society, were at length erected into a religious Order by Pope *Nicholas* III. under the Rule of St. *Auguſtin*.

F. Geſnay adds, that they alſo made a religious Order of the *Penitents*, or Women they converted, giving 'em the ſame Rules and Obſervances which they themſelves kept.

The Congregation of *Penitence of the Magdalen* at *Paris*, owed its Riſe to the preaching of *F. Tiſſeran*, a *Franciſcan*; who converted a great Number of Courtezans about the Year 1492.

Louis, Duke of *Orleans*, gave 'em his Houſe for a Monaſtery; or rather, as appears by their Conſtitutions, *Charles* VIII. gave 'em the Hotel, call'd *Bochaigne*, whence they were removed to St. *George*'s Chapel in 1572. By Virtue of a Brief of Pope *Alexander*; *Simon*, Biſhop of *Paris*, in 1497, drew 'em up a Body of Statutes, and gave 'em the Rule of St. *Auguſtin*.

To qualify a Woman for Admiſſion, it was required that ſhe had committed the Sin of the Fleſh: None were admitted above 35 Years of Age.

Till the Beginning of the laſt Century, none but *Penitents* were admitted; but ſince its Reformation by *Mary Alvequin*, in 1616, none have been admitted but Maids; who, however, ſtill retain the ancient Name *Penitents*. See PENITENTS.

PENITENTS, are certain peculiar Friaries, or Societies of Perſons who aſſemble together for Prayers, make Proceſſions bare footed their Faces cover'd with Linnen, and give 'emſelves Diſcipline.

There

There are *white Penitents* in *Italy*, at *Avignon*, and at *Lyons*: There are alſo *blue Penitents*, and *black Penitents*, which laſt aſſiſt Criminals at their Death, and give 'em Burial.

Mabillon tells us, that at *Turin* there are a Set of *Penitents* kept in pay, to walk thro' the Streets in Proceſſion, cut their Shoulders with Whips, &c.

PENITENTS, *or Converts of the Name of Jeſus*, a Congregation of Religious in *Sevil*; conſiſting of Women, who have led a licentious Life; founded in 1550.

This Monaſtery is divided into three Quarters: one for profeſs'd Religious; another for Novices; a third for thoſe under Correction.

When theſe laſt give Signs of a real Repentance, they are removed into the Quarter of the Novices; where, if they don't behave 'emſelves well, they are remanded to their Correction. They obſerve the Rule of St. *Auguſtin*.

PENITENTS of *Orvieta*, are an Order of Nuns, inſtituted by *Anthony Simoncelli*, a Gentleman of *Orvieta*.

The Monaſtery he built, was at firſt deſtined for the Reception of poor Girls, abandoned by their Parents, and in danger of loſing their Virtue.

In 1662, it was erected into a Monaſtery, for the Reception of ſuch as having abandoned 'emſelves to the Fleſh, were willing to take up and conſecrate 'emſelves to God by ſolemn Vows. Their Rule is that of the *Carmelites*.

Theſe Religious have this in peculiar, that they undergo no Noviciate. All they require is, that they continue a few Months in the Monaſtery in a ſecular Habit; after which they are admitted to the Vows.

PENITENTIAL, PENITENTIALE, an Eccleſiaſtical Book, retain'd among the *Romaniſts*; wherein is preſcribed what relates to the Impoſition of *Penance*, and the Reconciliation of *Penitents*. See PENANCE and PENITENT.

In the Capitularies of *Charlemaign*, the Prieſts are enjoin'd to ſtudy well their *Penitential*.

There are various *Penitentials*; the *Roman Penitential*; that of *Venerable Bede*, that of *Pope Gregory* III. &c.

PENITENCIARY, an Office, or Tribunal in the Court of *Rome*; wherein are examined and deliver'd out the ſecret Bulls, Graces, or Diſpenſations relating to Conſcience, Confeſſion, &c. See BULL, &c.

The Expeditions of the *Penitentiary* are ſeal'd up with red Wax; and ſent cloſe; directed to the Confeſſors.

PENNATA *Folia*, *winged Leaves*; amongſt *Botaniſts*, are ſuch Leaves of Plants, as grow directly one againſt another, on the ſame Rib, or Stalk as: thoſe of Aſh, Walnut-Trees, &c. See LEAVES, PLANT. &c.

PENITENTIARY, is alſo an Officer, or Dignitary in ſome Cathedrals, veſted with Power from the Biſhop to abſolve Caſes reſerv'd to him; on which Account he is call'd the *Biſhop's Ear*.

In ſome Places there is a *Grand Penſionary*, and a *Sub-Penitentiary*. *Anaſtaſius* ſays, that Pope *Simplicius* choſe ſome among rhe *Roman* Prieſts to preſide over *Penances*. At preſent the Pope has his *Grand Penitentiary*; who is a Cardinal, and the Chief of the other *Penitentiary* Prieſts eſtabliſh'd in the Patriarchal Churches of *Rome*, who conſult him in difficult Caſes.

He preſides in the *Penitentiary*, diſpatches Diſpenſations, Abſolutions, &c. and has under him a Regent, and twenty four Proctors or Advocates of the *ſacred Penitentiary*.

PENNON, a Standard with a long Tail; antiently belonging to a ſimple Gentleman; properly us'd as a Guidon to place over a Tent. See GUIDON, &c.

It is oppos'd to the *Banner*, which was ſquare; and hence, when any one was to be made a Banneret, the Ceremony conſiſted in Cutting off rhe Tail of his *Pennon*, and thus converting it into a *Banner*, See BANNER, or BANNERET.

The word comes from the *Latin*, *Pannus*, Cloath.

PENNY, or PENY, in Commerce, an ancient *Engliſh* Coin, which had formerly conſiderable Courſe; but is now generally dwindled into an imaginary Money, or Mony of Account. See MONY and COIN.

The ancient *Engliſh Penny*, *Penig* or *Pening*, is the firſt Silver Coin ſtruck in *England*; nay, and the only one Current among our *Saxon* Anceſtors, as is agreed by *Cambden Spelman*, Dr. *Hicks*, &c.

Hence, *Peny*, in ancient Statutes, &c. is uſed for all Silver Money. *Cambden* derives the Word from the *Latin*, *Pecunia*, Money, in the general; and hence the *Ward-Peny*, *Aver-peny*, *Hundred-peny*, *Tithing-peny*, and *Brothal-peny*.

The *Penny* was equal in Weight to our Three-*pence*; five of 'em made one *Shilling*, or *Scilling Saxon*; thirty a *Mark* or *Mancuſe*, equal to our 7 *s.* 6*d.*. See MARK, MANCUSE &c.

Till the Time of King *Edward* I. The *Penny* was ſtruck with a Croſs ſo deeply indented in it, that it might be eaſily broke, and parted, on occaſion, into two parts; thence call'd *Half-pennys*; or into four, thence call'd *Fourthings*, or *Farthings*. See FARTHING.

But that Prince coin'd it without Indenture; in lieu of which he firſt ſtruck round *Half-pence* and *Farthings*.

He alſo reduc'd the Weight of the *Penny* to a Standard; ordering that it ſhou'd weigh 32 Grains of Wheat, taken out of the Middle of the Ear.

This *Penny* was call'd the *Penny Sterling*. See STERLING.

Twenty of theſe Pence were to weigh an Ounce; whence the *Penny* become a Weight, as well as a Coin. See PENNY *Weight*.

The *Penny Sterling*, is now nigh diſuſed as a Coin, and ſcarce ſubſiſts, but as a Money of Account; containing the 12th Part of a Shilling. See SHILLING. Or the two hundred and fortieth Part of a Pound. See POUND.

The Courſe of Exchange between *England* and *France*, is ſettled on the Foot of ſo many Pence *Sterling*, for a *French* Crown of three Livres. See EXCHANGE.

The *French* PENNY, or *Denier*, is of two Kinds; the *Paris Penny*, call'd *Denier Pariſis*; and the *Penny of Tours*, *Denier Tournois*. See DENIER.

The *Dutch Penny*, call'd *Pening*, is a real Money, worth about one fifth more than the *French Penny Tournois*.

The *Penin* is alſo uſed as a Money of Account, in keeping Books by Pounds, *Florins* and *Patards*; twelve *Penins* make the *Patard*; and twenty *Patards* the *Florin*. See FLORIN.

At *Hambourg*, *Nuremberg*, &c. the *Penin of Account*, is put equal to the *French Penny Tournois*. Eight of 'em make the *Kreux*; and 60 the *Florin* of thoſe Cities; and 90 the *French* Crown, or 4 *s.* 6*d. Sterling*.

PENNY-*Weight*, a *Troy* Weight, containing 24 Grains; each Grain weighing a Grain of Wheat gather'd out of the Middle of the Ear, well dried. See WEIGHT and GRAIN.

Twenty of theſe *Penny-weights* make an Ounce *Troy*. See OUNCE.

A *Penny-weight* of Gold Bullion Standard, is worth four Shillings; and of Silver Bullion, Three-pence. See GOLD and SILVER.

The Name took its riſe hence, that this was actually the Weight of one of our ancient Silver *Pennies*. See PENNY.

PENNY-*Poſt*. See *Penny*-POST.

PENSA *Libra*, in our ancient Cuſtoms, a Pound of Money paid by Weight, not by Tale. See POUND and LIBRA.

PENSION, a yearly Appointment, or Sum of Money paid any one for Services, or Conſiderations already paſt. See PENSIONARY.

That which in the two Temples is call'd a *Parliament*, and *Lincoln's-Inn* a *Council*, is in *Gray's-Inn* termed a *Penſion*; that is, an Aſſembly of the Members of the Society, to conſult of the Affairs of the Houſe. See PARLIAMENT, &c.

Penſions, are alſo certain annual Payments of each Member to the Houſe, for certain Occaſions.

When a *Penſion-Writ* is iſſued, none ſued thereby in the Inns of Court, ſhall be diſcharged, or permitted to come into Commons, till all Duties be paid.

Hence a *Penſion-Order* in the ſame Inn, is a peremptory Order againſt ſuch of the Society as are in Arrear for *Penſions*, and other Duties.

PENSIONARY, or PENSIONER, a Perſon who has a *Penſion*, Appointment, or yearly Sum, payable during Life, by way of Acknowledgement; charg'd on the Eſtate of a Prince, Company, particular Perſon, &c.

In the *Romiſh* Countries, 'tis frequent to have *Penſions on Benifices*: Theſe were antiently granted with a great deal of Eaſe, under pretence of Infirmities, Poverty, &c. But ſince the XII. Century, theſe Pretences were carried ſo far, that the Incumbents, or Titularies of Benefices were little more than Farmers.

This oblig'd the ſpiritual Powers to fix the Cauſes, and the quantities of *Penſions*. *Penſions* are now only creatable by the Pope; and are never to exceed one third of the Revenue; two thirds being ſtill to remain to the Incumbent.

PENSIONARY, is alſo the firſt Miniſter of the States of the Province of *Holland*. See STATES.

The *Penſionary* is Chairman in Aſſemblies of the States of that Province; he propoſes the Matters to be conſulted on, collects the Votes, forms and pronounces the Reſolutions of the States, opens Letters, confers with foreign Miniſters, &c.

He is charg'd with inſpecting the Finances, preſerving the Rights of the Province, maintaining the Authority of the States, and ſeeing to the Obſervation of Laws, &c. for the good of the State.

He aſſiſts in the College of Deputy-Councellors of the Province, who repreſent the Soveraignty in the Abſence of the States; and is perpetual Deputy of the States General of the United Provinces.

His Commiſſion is only given for five Years; after which 'tis deliberated whether or no it ſhall be renew'd. Indeed, there is no Inſtance of its having been revoked. Death only puts a Period to the Functions of this important Miniſter.

Formerly, he was call'd the *Advocate of the Province*: The Title *Penſionary* was only given at the Time *Barnveld* had the Office.

Grotius

Grotius calls him in *Latin*, *Adſeſſor Juriſperitus*; *Merula*, *Advocatus Generalis*; *Mathæus*, Profeſſor at *Leiden*, *Conſiliarius Penſionarius*; which is the Quality the States give him in their Inſtruments.

PENSIONARY, is alſo the firſt Miniſter of the Regency of each City, in the Province of *Holland*. See PROVINCE.

His Office is to give his Advice in Matters relating to the Government, either of the City in particular, or of the State in General; and in Aſſemblies of the States of the Province is Speaker in behalf of his City.

Yet, the Functions of theſe *Penſionaries* is not alike every where: In ſome Cities they only give their Advice; and are never found in Aſſemblies of the Magiſtrates, except when expreſly call'd thither: In others they attend conſtantly; and in others they even make the Propoſitions on the Part of the Bourguer Maſters, draw up their Concluſions, &c.

They are call'd *Penſionaries*, becauſe they receive an Appointment or *Penſion*.

Gentlemen-PENSIONERS, a Band of Gentlemen, whoſe Buſineſs is to Guard the King's Perſon in his own Houſe; and who for that End wait in the preſence Chamber.

They were firſt ſet on Foot by K. *Henry* VII. The Number is Forty; and each obliged to keep three double Horſes and a Servant, who is to be arm'd: ſo that they properly make a Troop of Guards; and have accordingly been muſter'd by their own Officers: but this part of Duty, to which they are ſwore, the King uſually diſpenſes with.

Their Officers are a Captain, Lieutenant, Standard-bearer, and Clerk of the Cheque.

Their ordinary Arms are guilt Pole-Axes, with which they attend the King to and from the Chapel Royal; receiving him in the Preſence Chamber, or coming out of his private Lodging; as alſo at all great Solemnities. Their *Penſion* 100 *l. per Annum*.

PENTACHORD, an ancient muſical Inſtrument, with five Strings; whence the Name, of πέντε, five, and χορδὰ Chord, String.

The Invention of the *Pentachord* is referr'd to the *Scythians*: The Strings were of Bullocks Leather, and were ſtruck with a *Plectrum* made of Goats Horn.

PENTACROSTICK, a Set or Series of Verſes ſo diſpos'd, as that there are always found five Acroſticks of the ſame Name, in five Diviſions of each Verſe. See ACROSTIC.

PENTAGON, in Geometry, a Figure with five Sides, and five Angles; whence its Name; from the *Greek* πενταγωνος *Quinquangulus*. See POLYGON.

If the five Sides be equal, the Angles are ſo too; and the Figure is call'd a *regular Pentagon*: As Fig. 47. Tab. Geometry.

Moſt Cittadels are regular *Pentagons*. See CITTADEL.

The moſt conſiderable Property of a *Pentagon* is, that one of its Sides, *v. g. D E*, is equal in Power to the Sides of a *Hexagon*, and a *Decagon* inſcribed in the ſame Circle *A B C D E*: that is, the Square of the Side *D E* is equal to the Sum of the Squares of the Sides *D a* and *D b*.

Pappus has alſo demonſtrated that twelve regular *Pentagons* contain more than twenty Triangles inſcribed in the ſame Circle, Lib. 5. prob. 45.

The *Dodecahedron*, which is the fourth regular Body, conſiſts of twelve *Pentagons*. See DODECAHEDRON.

Projection or Perſpective of a PENTAGON. See PERSPECTIVE.

PENTAGRAPH, an Inſtrument whereby Deſigns, Prints, &c. of any Kind, may be copied in any Proportion; without a Perſon's being skill'd in drawing. See DESION, REDUCTION, &c.

The Inſtrument is otherwiſe call'd a *Parallelogram*. See PARALLELOGRAM.

The common *Pentagraph* (repreſented Tab. *Miſcellany* Fig. 6.) conſiſts of four Braſs or Wooden Rulers, two of 'em from 15 to 18 Inches long, the other two half that length. At the Ends, and in the Middle of the longer Rulers, as alſo at the Ends of the ſhorter are Holes; upon the exact fixing whereof the Perfection of the Inſtrument chiefly depends. Thoſe in the Middle of the long Rulers are to be at the ſame diſtance from thoſe at the ends of the long ones, and thoſe of the ſhort ones; ſo that when put together they may always make a *Parallelogram*.

The Inſtrument is fitted together for uſe, by ſeveral little Pieces, particularly a little Pillar, Fig. 1. having at one End a Screw and Nut, whereby the two long Rulers are joined; and at the other a little Knot for the Inſtrument to ſlide on. The Piece 2 is a Rivet with a Screw and Nut, wherewith each ſhort Ruler is faſten'd to the Middle of each long one. The Piece 3 is a Pillar, one End whereof being hollow'd into a Screw, has a Nut to fit it.

At the other End is a Worm to ſcrew into the Table: when the Inſtrument is to be uſed, it joins the Ends of the two ſhort Rulers. The Piece 4 is a Pen, Portecraion, or Pencil, ſcrew'd into a little Pillar. *Laſtly*, the Piece 5 is a Braſs-point, moderately blunt, ſcrew'd likewiſe into a little Pillar.

Uſe of the PENTAGRAPH or Parallelogram.

1. To Copy a Deſign in the ſame Scale or Bigneſs as the Original: Screw the Worm 3 into the Table; lay a Paper under the Pencil 4, and the Deſign under the Point 5. This done, conducting the Point over the ſeveral Lines and Parts of the Deſign, the Pencil will draw or repeat the ſame on the Paper.

2. If the Deſign be to be reduced *E. gr.* into half the Space; the Worm muſt be placed at the End of the long Ruler 4; and the Paper and Pencil in the Middle. In this Situation conduct the Braſs-point over the ſeveral Lines of the Deſign as before; and the Pencil at the ſame Time will draw its Copy in the Proportion required; the Pencil here only moving half the Lengths that the Point moves.

Hence, on the contrary, if the Deſign be to be enlarged by one half: The Braſs-point, with the Deſign, muſt be placed in the Middle, at Fig. 3. the Pencil and Paper at the End of the long Ruler, and the Worm at the other.

3. To enlarge or reduce in other Proportions, there are Holes drill'd at equal Diſtances on each Ruler, *viz.* all along the ſhort ones, and half way the long ones; in order for placing the Braſs Point, Pencil, and Worm in a right Line therein; *i. e.* if the Piece carrying the Point be put in the third Hole, the two other Pieces muſt be put each in its third Hole.

If then, the Point and Deſign be placed at any Hole of the great Rulers, and the Pencil with the Paper at any Hole of the ſhort Ruler, which forms the Angle therewith; the Copy will be leſs than half the Original. On the contrary, if it be placed at one of the Holes of that ſhort Ruler, which is parallel to the long Ruler, the Copy will be greater than half the Original.

The Conſtruction of this Inſtrument requires a Degree of Accuracy, which moſt of our Inſtrument Makers are Strangers to; for which reaſon there are very few of the Inſtruments that ſucceed. Few will do any Thing tolerably but ſtraight Lines; and many of 'em not thoſe.

PENTAMETER, in Poetry, a kind of Verſe, conſiſting of five Feet. See VERSE and FOOT.

The two firſt Feet of a *Pentameter*, may be either Dactyls, or Spondees; the third always a Spondee; and the two laſt Anapeſts.

It is uſually join'd to Hexameters, in Elegies, Epiſtles, Epigrams, and other little Pieces. There is no work of *Pentameters* alone. See HEXAMETER.

The Word is form'd from the πεντάμετρος, *q. d. five Meaſures*.

PENTAPETALOUS *Plants*, are ſuch whoſe Flower conſiſts of five Leaves. See PLANT.

PENTAPOLIS, in Geography, &c. a Country wherein are five Cities.

The Name has been given to ſeveral Countries, particularly the Valley wherein ſtood the five infamous Cities deſtroy'd by the Shower of Fire and Brimſtone, in ths Time of *Abraham*.

'Tis commonly ſuppoſed, this Country was the Place where now ſtands the Lake *Aſphaltites*, or dead Sea: *Sanſon* places it in the Neighbourhood of this Lake, but without any Proof. *D' Herbelot* calls this the *Pentapolis of the Sodomites*.

The Pentapolis of Egypt was in the *Cyrenaica*, on the Sea of *Libya*; its five Cities were *Berenice*, *Arſinoe*, *Ptolemais*, *Cyrene*, and *Apollonia*.

Among the ancient Geographers and Hiſtorians, we likewiſe read of the *Pentepolis* of *Libya*, now call'd *Meſtrata*;

The *Pentapolis* of *Italy*; and the *Pentapolis* of *Aſia Minor*.

PENTAPTOTON, in Grammar, a Noun which has only five Caſes. See *Aptote* and CASE.

PENTASTICH, in Poetry, a Stanza, or Diviſion of a Poem, conſiſting of five Verſes. See STANZA.

PENTASTYLE, in Architecture, a Work wherein are five Rows of Columns.

Such was the *Portico* begun by the Emperor *Gallian*, and which was to have been continued from the *Flaminian-Gate* to the Bridge *Milvius*, *i. e.* from the *Porto del Populo*, to the *Ponte-mole*.

PENTATEUCH, in the ſacred Learning, the five Books of *Moſes*, at the Head of the Old Teſtament; *viz. Geneſis*, *Exodus*, *Leviticus*, *Numbers*, and *Deuteronomy*. See BIBLE.

The Word is form'd from the *Greek* πενταteυχος.

Pere Simon, in his *Hiſt. Crit. du V. Teſt.* produces a good Number of Paſſages to prove that *Moſes* was not wholly the Author of the *Pentateuch*, as we now have it. Indeed, thoſe apparent Interpolations at the End, are ſufficient to determine the Point; it being abſur'd to ſuppoſe *Moſes* the Author of the Account of his own Death and Burial, and of the Compariſon between him and the ſucceeding Prophets in *Iſrael*.

Theſe interpolated Paſſages are uſually attributed to *Eſdras*; who, on his Return from the *Babyloniſh* Captivity, is ſup-

ſuppoſed to have publiſh'd the Old Teſtament, or at leaſt a Part of it corrected and enlarg'd. See CANON.

There are two famous *Pentateuchs*, or Editions of the *Pentateuch*, which have a long Time diſputed the Preference, both as to Antiquity, and as to Character, *viz.* that of the *Jews*, call'd the *Jewiſh or Hebrew Pentateuch*, wrote in *Chaldean* or *Aſſyrian* Characters; and that of the *Samaritans* wrote in the *Samaritan* or *Phœnician* Character.

Each is maintain'd to be the ancient *Hebrew*; tho' the Generality of the Criticks give it in behalf of the latter. See HEBREW.

Indeed, as to the Point of *Matter*, they are generally pretty conformable to each other; each has all the interpolated Paſſages above-mention'd, tho' the *Samaritan* has one or two more, not in the *Hebrew*. The firſt a Paſſage in *Deut.* 27. 4 where an Altar is enjoin'd to be built, and Sacrifices to be offer'd at Mount *Ebal*, or rather Mount *Gerizzim*, which Paſſage was doubtleſs foiſted in to countenance the *Samaritan* Worſhip, and repreſent it of equal Antiquity with that of the Temple of *Jeruſalem*. See SAMARITANS.

Indeed, Mr. *Whiſton* declares he ſees no Reaſon to accuſe the *Samaritan* of Corruption, in theſe Points, but rather the *Jewiſh*; and earneſtly concludes that the Former is an uncorrupted Copy of the Books of *Moſes*, originally derived from the firſt Separation of the ten Tribes 'emſelves, in the Days of *Jeroboam*; the contrary whereof is apparent from the mere confeſſed Interpolations aſcribed to *Eſdras*, who lived ſeveral hundred Years after the time of *Jeroboam*.

But the grand Difference is in the Character: The *Jewiſh* being in the *Chaldean* or *Aſſyrian* Character, and the *Samaritan* in the *Phœnician*, *i. e.* the *Canaanitiſh* Character; this latter ſeems to have an Advantage over the vulgar *Jewiſh Pentateuch*; yet is *Prideaux* of Opinion, the Latter is only a Tranſcript from the Former, out of the *Chaldean* into the old *Hebrew* Character. One great Reaſon he gives, is, that there are many Variations in the *Samaritan*, manifeſtly occaſioned by miſtaking the ſimilar Letters in the *Hebrew* Alphabet; which Letters having no Similitude in the *Samaritan* Character, 'tis evident the Variations muſt have a-riſen in tranſcribing from the vulgar *Hebrew* into the *Samaritan*; not the contrary way.

Add to this, that *Simon*, *Allix*, and many other learned Men take the *Chaldean* or *Aſſyrian* Character to have been the Character always in uſe among the *Jews*; and the *Samaritan* or *Canaanitiſh*, or as it is alſo call'd the *old Hebrew* Character, to have never been uſed by the *Jews* before the Captivity, in any manner, either in Books or on Medals. See CHARACTER.

Hence the *Pentateuch* muſt have been tranſcribed into that Character; and that, probably, to render it legible to the Inhabitants of *Samaria*, who upon the firſt Introduction of the *Pentateuch* might probably be verſed in no other Character.

Uſher takes the *Samaritan Pentateuch* to have been compiled by *Doſitheus* a *Samaritan*, mention'd by *Origen* to have adulterated the *Pentateuch*. *Du-pin* ſuppoſes it the Work of ſome modern *Samaritan*, whom he imagines to have compiled it chiefly out of the different Copies of the *Paleſtinian* and *Babylonian Jews*, and the *Septuagint*; becauſe it ſometimes agrees with one, and ſometimes with another.

PENTATHLON, in Antiquity, the five Exerciſes performed in the *Grecian* Games, and for which Prizes were propoſed. See EXERCISES, GAME, *&c.*

Theſe Exerciſes were Wreſtling, Boxing, Leaping, Running and Quoit-playing.

He who bore away the Prize in 'em all, was call'd *Pentathlus*; by the *Latins*, *Quincurtio*; as the five Exerciſes themſelves were by thoſe latter People call'd *Quinquertium*.

PENTATONON, in the ancient Muſic, a Concord, by us call'd the greater Sixth. See SIXTH.

It conſiſts of four Tones, and a major and minor Semitone; whence the Name *Pentatonon*, *q. d.* five Tones.

PENTECOST, *Whitſuntide*, a ſolemn Feaſt of the Church, held in Commemoration of the Deſcent of the Holy Ghoſt on the Apoſtles; as deſcribed in the Acts. See FEAST.

It has its Name from the *Greek* πεντηκοστὴ, *Quinquageſimus* 50th, becauſe held on the fiftieth Day after Eaſter. See EASTER.

In the ancient Church, *Pentecoſt* finiſh'd the Paſchal Time, or *Eaſter*-Seaſon; wherein, as *Tertullian*, St. *Jerom*, *&c.* obſerve, *Hallelujah* was ſung every where, the Office celebrated ſtanding, no Faſting allowed, *&c.*

The *Jews* likewiſe had a Feaſt, they call'd *Pentecoſt*, or *Quinquageſimus*; ſolemnized in Memory of the Laws being given to *Moſes* 50 Days after their Departure out of *Egypt*.

PENTECOSTALS, antiently, were pious Oblations made at the Feaſt of *Pentecoſt*, by the Pariſhioners, to their Pariſh Prieſt; and ſometimes by inferior Churches or Pariſhes, to the principal Mother Church. See OBLATION.

Theſe Pariſh *Pentecoſtals* were alſo call'd *Whitſon-Farthings*; and their Sum was divided into four Parts, of which one went to the Prieſt, one to the Poor, one towards the Repair of the Pariſh Church, and one to the Biſhop. See WHITSON-FARTHINGS.

PENTECONTORE, a Veſſel with fifty Oars.

PENTESYRINGUS, in Antiquity, a Sort of Pillory, with five Holes; wherein were faſtened the Legs, Arms, and Heads of Criminals, to prevent their ſtirring.

PENTHEMIMERIS, in the *Greek* and *Latin* Poetry, part of a Verſe conſiſting of two Feet, and a long Syllable.

The Word is *Greek* πενθημιμέρις,

PENULTIMA, or PENULTIMATE, in Grammar, *&c.* a Syllable, or Foot, immediately before the laſt.

Hence *Antepenultimate* is that before the *Penultimate*, or the laſt but two.

The Word is form'd from the *Latin*, *Pene* & *ultimus*, almoſt laſt.

PENULTIMATE, in Muſic. *M. Broſſard* will have it the ſame with what the *Greeks* call'd *Paranete*; tho' others won't allow the *Paranete* to be the *Penultimate* Chord, but the next thereto.

The *Penultimate of the ſeparate*, *Paranete Diezeugmenon*, is a Name the Ancients gave to one of the Chords of their Lyre or Syſtem; correſponding to the *D*, *la*, *re*, of the third Octave of the modern Syſtem.

Penultimate of the Acute, Or *paranete Hyperboleon*, a Chord of the ancient Syſtem, anſwering to the *G*, *re*, *ſol*, of the third Octave of the modern Syſtem.

PENUMBRA, in Aſtronomy, a faint or partial Shade, obſerv'd between the perfect Shadow and the full Light, in an Eclipſe. See SHADOW.

The *Penumbra* ariſes from the Magnitude of the Sun's Body: were he only a luminous Point, the Shadow wou'd be all perfect; but by reaſon of the Diameter of the Sun, it happens that a Place which is not illuminated by the whole Body of the Sun, does yet receive Rays from a Part thereof.

Thus ſuppoſe *S* the Sun (Tab Aſtronomy Fig. 47.) and *T* the Moon, and the Shadow of the latter to be projected on a Plane as *G H*. The true proper Shadow of *T*, *viz.* *G H*, will be incompaſs'd with an imperfect Shadow or *Penumbra H L* and *G E*, each Portion whereof is illuminated by an entire Hemiſphere of the Sun.

The Degree of Light or Shadow of the *Penumbra* will be different in different Parts, as thoſe Parts lye open to the Rays of a greater or leſſer Part of the Sun's Body: Thus from *L* to *H*, and from *E* to *G* the Light continually diminiſhes; and in the Confines of *G* and *H*, the *Penumbra* becomes loſt and confounded with the total Shade; as, near *E* and *L*, it is confounded with the total Light.

The *Penumbra* muſt be found in all Eclipſes, whether of the Sun, the Moon, or the other Planets, primary, or ſecundary; but it is moſt conſiderable with us in Eclipſes of the Sun; as in the Caſe here referr'd to.

In Eclipſes of the Moon, the Earth is incompaſs'd indeed with a *Penumbra*; but 'tis only ſenſible to us on the Earth near the total Shadow: An Obſerver placed on a Plane, whereon the Shadow falls, might obſerve the whole *Penumbra*, as in Eclipſes of the Sun. Thus an Eye placed at *I* or *F*, will only ſee the Semi-diameter of the Sun; the reſt being hid behind the Moon. Going from *I* towards *H*, the more and more of the Sun is hid, till it be loſt in the Shadow itſelf, *&c.*

Hence we have Eclipſes of the Sun when the Shadow never touches the Earth, provided the *Penumbra* doth but reach it; and hence there is a Difference obſerv'd in Eclipſes of the Sun, as the Shadow itſelf, or a greater or leſs Degree of the *Penumbra*, paſſes over a Place. See SUN.

But Eclipſes of the Moon appear the ſame in all Places where they are viſible. See MOON.

When the Shadow itſelf falls on the Earth, the Eclipſe is ſaid to be *Total or Central*; when only the *Penumbra* falls on it, the Eclipſe is ſaid to be *partial*. See ECLIPSE.

The *Penumbra* extends infinitely in length, inaſmuch as to each point of the Diameter of the Sun, there anſwers a ſpace infinite in length into which no Rays enter from that Point, tho' there do from others. Two Rays drawn from the two Extremities of the Earth's Diameter, and which proceed ſtill diverging, make the two Edges of the *Penumbra*; which, of Conſequence, is continually growing in Width, and is infinite, alſo in this Senſe.

All that infinite Space is the *Penumbra*, except the Triangle of the Shadow included in it.

The Figure of this Space comprehending the Shadow, is a Trapezium, one of whoſe Sides is the Diameter of the Earth; the oppoſite Side parallel thereto is an infinite Line, *i. e.* the Width of the *Penumbra* projected to infinity, and the two other Sides the two Rays drawn from the two Extremities of the Diameter of the Sun, by thoſe of the Diameter of the Earth, and which prolong'd back beyond the Sun, will interſect in a certain Point, making an Angle equal to the apparent Diameter of the Sun; which Angle may be call'd the *Angle of the Penumbra*.

Now the *Penumbra* will be the greater as this Angle, or, which is the ſame Thing, as the Star is greater, the Planet remaining

maining the ſame: And if the Diameter of the Planet be increas'd, the Star remaining the ſame, 'twill be the ſame as if the Diameter ſtill receeded from the Angle of the *Penumbra*.

M. de le Hire examins the different Degrees of the *Penumbra*, and repreſents 'em Geometrically by the Ordinates of a Curve, which ſhall be among 'emſelves, as the different Parts of the Sun's Diſk, wherewith a Body placed in the *Penumbra* is enlighten'd.

PEPPER, an Aromatic Fruit, or Grain of a hot, dry Quality; chiefly uſed in the ſeaſoning of Meats. See SPICE.

It is the Product of a Shrub growing in ſeveral Parts of the *Eaſt-Indies*, chiefly *Java*, *Sumatra*, *Malacca*, and the Coaſts of *Malabar*. The Plant is very weak and of the reptile Kind, and for that Reaſon uſually planted at the Foot of the larger Trees, as the *Areca*, *Cacoa*, &c.

The *Pepper* grows in Grapes or Cluſters; at firſt green, as they ripen they grow red; and at laſt, after being expoſed a While to the Sun, become black, in the Condition we ſee 'em.

The Fruit is gather'd in *November*. It muſt be choſen large, well fed, not wrinkled, without Duſt, with a good many white Grains in it; and Care be taken the largeſt Grains han't been pick'd out to make white *Pepper*.

White PEPPER is the Fruit of the ſame Plant with the Black, and is prepared from it by moiſtening it with Sea-Water, and then expoſing it to the Sun, and caſting away the outer Bark, which abandoning the Grain, leaves it white.

Indeed, *M. Dellon*, a late Traveller, ſays, they ſtrip off the Skin, by beating it before it be quite dry; or by ſoaking it in Water after it has dried, and then beating it.

Many Authors, and among the reſt *Pomet*, will have the white *Pepper* to be natural, and the Fruit of a different Plant from the Black; but *M. Dellon*, who expreſsly declares the contrary from his own long Experience, ſeems to put the Matter paſt doubt.

White *Pepper* muſt be choſen after the ſame manner as black; with this further Care, that it han't been whiten'd.

Pepper that is ſold ground, is very apt to be ſophiſticated; the Black with burnt Cruſt of Bread, &c. the White with beaten Rice.

Long PEPPER is a kind of *Pepper* denominated from its form, which in Length and Thickneſs equals a Child's Finger; it conſiſts of an aſſemblage of Grains join'd cloſe to one another, of a browniſh Colour, bordering without on red, and within on black; and grows by a long Pedicle to a Plant, like that of the black *Pepper*, but lower, and its Leaves ſmaller and greener.

Its Taſte reſembles that of the former, but leſs ſharp.

There are three kinds of this *Pepper*, that of the *Eaſt-Indies*, that of *America*, and that of *Ethiopia*, call'd alſo Grain of *Zeilon*: Tho' the firſt alone is the proper long *Pepper*; the reſt reſembling it but little.

It muſt be choſen new, large, heavy, well fed, hard to break, without Duſt or Mixture; its chief Uſe is in Medicine, where it enters ſeveral Galenical Compoſitions, among the reſt Treacle.

Guinea PEPPER, is a red *Pepper*, of a Coral Colour, much eſteem'd by the *Americans*, from among whom 'tis brought, and by them call'd Chile, by the *Spaniards* Pimenta, and the *French*, Garden Coral.

'Tis now cultivated pretty commonly in *France*, eſpecially in *Languedoc*; uſed in making Vinegar, and likewiſe confected with Sugar. It muſt be choſen new, in large Pods, dry, entire, and red.

There are four Kinds, the firſt call'd by the *Americans* Chilchotes; the ſecond very ſmall Chilterpin, both of a very pungent Taſte; the third Tonalchiles, moderatly hot, and eaten by the Natives like other Fruit with Bread; the fourth Chilpelagua, moderately pungent, much uſed by the *Spaniards* in the Preparation of Chocolate; there is alſo a fifth Kind call'd Agy, growing in *Peru*.

Jamaica PEPPER, call'd by the *Dutch Amomi*, is the Fruit of the Tree that yields the *Indian* Wood, growing plentifully in *Jamaica* and other *American* Iſlands.

It is a real *Aromatic*, and may ſupply the Defect both of Cloves, Nutmeg, and Cinnamon; the *French* call it the *round Clove*, from its Taſte reſembling that Spice.

PERACUTUM *Menſtruum*. See MENSTRUUM.

PENY. See PENNY.

PEPASMUS, in Medicine, the digeſting and ripening of morbid Humours. See MATURATION, DIGESTION.

The Word is *Greek* πεπασμος.

PEPASTIC, or PEPTIC, in Medicine, a kind of Medicament, of the Conſiſtence of an Emplaſter; proper to bring vitious and corrupt Humours to a Head, and diſpoſe 'em for Suppuration. See RIPENER and DIGESTIVE.

Butter, Roots of Mallows, of Flowers-de-lis, Onions and Leaves of Oxylapathum are eſteem'd good *Pepaſticks*, or Maturatives.

The Word is form'd from the *Greek* πεπαινειν to digeſt or ripen.

PEPIA, popularly PEP or PIP, a Diſeaſe of Fowls; conſiſting in a little white dry Pellicle, ariſing on the Tongue, from their having thirſted much.

Among Falconers, the *Pepia* is a Diſeaſe ariſing in the Tongues of their Birds, from eating Salt and ſtinking Fleſh.

PEPSIS, in Medicine, the Coction, or digeſting of Foods, or Humours in the Body. See COCTION and DIGESTION.

The Word is *Greek*, πεψις, boiling.

PEPTIC, in Medicine. See PEPASTIC.

PEPUZIANS, a Sect of ancient Hereticks, otherwiſe call'd *Phrygians*, or *Cataphrygians*.

They had their Name *Pepuzians* from a Pretence that *J. C.* appear'd to one of their Propheteſſes in the City *Pepuza* in *Phrygia*, which was their holy City. See QUINTILIANS.

PER *Deſcenſum*, by *Deſcent*, in Chymiſtry, a particular manner of Diſtillation. See DESCENT.

PER *Deliquium*. See DELIQUIUM.

Salt of Tartar, diſſolved by the coldneſs or moiſture of the Air, is call'd Oil of Tartar *per Deliquium*, &c. See TARTAR.

PER *Arſin*, PER *Theſin*. Terms in Muſic. *Per* is a *Latin* Prepoſition, ſignifying *by*, *during*; *Arſis* and *Theſis* are *Greek* Words, the firſt whereof ſignifies *Elevation*; the ſecond *Poſition*.

Per Theſin, ſignifies *in beating* or during the firſt time of the Meaſure; *Per Arſin*, *in riſing*, or in the laſt Time of the Meaſure.

A Song, Counter-point, Fugue, &c. are ſaid to be *per Theſin*, when the Notes deſcend from the Acute to the Grave; and on the contrary, that they are *per Arſin*, when the Notes aſcend from Grave to Acute.

PERAMBULATION *of the Foreſt*, the Surveying or Walking about the Foreſt, or the Limits of it, by Juſtices or other Officers thereto appointed, to ſet down the Metes and Bounds thereof, and what is within the Foreſt, and what without. See PURLIEU *and* FOREST.

PERAMBULATIONE *facienda*, is a Writ comanding the Sheriffs to make *Perambulation*, and ſet down the Bounds of two or more Manours, whoſe Limits are not ſo well known.

PERAMBULATOR, in Surveying, an Inſtrument for the meaſuring of Diſtances, call'd alſo *Pedometer*, *Way-wiſer*, and *Surveying Wheel*. See PEDOMETER and SURVEYING-*Wheel*.

Its Advantages are its Handineſs, and Expedition; its contrivance is ſuch, as that it may be fitted to the Wheel of a Coach; in which it preforms its Office, and meaſures the Road without any Trouble at all.

There is ſome Difference in its make: That now moſt uſual, as moſt Convenient, is as follows.

Conſtruction of the PERAMBULATOR *or Way-wiſer.*

The *Perambulator* (repreſented Tab. *Surveying* Fig. 23.) conſiſts of a Wheel 2 Foot 7 Inches and an half in Diameter; conſequently half a Pole, or eight Foot and 3 Inches in Circumference. On one End of the Axis is a Nut $\frac{3}{4}$ of an Inch in Diameter, divided into 8 Teeth, which upon moving the Wheel round, fall into the 8 Teeth of another Nut *c*, fix'd on one End of an Iron Rod *Q*, and thus turn the Rod once round, in the Time the Wheel makes one Revolution. This Rod lying along a Groove in the Side of the Carriage of the Inſtrument, has at its other End a ſquare Hole, into which fits the End *6* of the little Cylinder *P*. This Cylinder is diſpoſed under the Dial-plate of a Movement, at the End of the Carriage *B*, in ſuch manner as to be moveable about its Axis. Its End *a* is cut into a perpetual Screw, which falling into the 32 Teeth of a Wheel perpendicular thereto; upon driving the Inſtrument forward, that Wheel makes a Revolution, each 16 Pole. On the Axis of this Wheel is a Pinion with ſix Teeth, which falling into the Teeth of another Wheel of 60 Teeth, carries it round every 160th Pole, or half Mile.

This laſt Wheel then carrying a Hand or Index round with it, over the Diviſions of the Dial-plate whoſe outer Limb is divided into 160 Parts, correſponding to the 160 Poles; points out the Numbers of Poles paſs'd over.

Again, on the Axis of this laſt Wheel, is a Pinion containing 20 Teeth, which falling into the Teeth of a third Wheel that has 40 Teeth, drives it once round in 320 Poles, or a Mile. On the Axis of this Wheel is a Pinion of 12 Teeth, which falling into the Teeth of a fourth Wheel that has 72 Teeth, drives it once round in 12 Miles.

This fourth Wheel carrying another Index, over the inner Limb of the Dial-plate, divided into 12, for Miles, and each Mile ſubdivided into Halves, Quarters, and Furlongs, ſerves to Regiſter the Revolutions of the other Hand, and to keep Account of the half Miles and Miles paſs'd over as far as 12 Miles.

Uſe of the PERAMBULATOR *or Way-wiſer.*

The Application of this Inſtrument is obvious from its Conſtruction. Its proper Office is in the Surveying of Roads,

and

and large Diſtances, where a great deal of Expedition, and not over much Accuracy is required. 'Tis evident the driving it along, and obſerving the Hands; has the ſame Effect as dragging the Chain, and taking account of the Chains and Links. See therefore the Article CHAIN.

PERCEPTION, in Philoſophy, a ſimple Comprehenſion; or that ſimple Idea of a Thing, which we conceive without making any Affirmation or Negation. See IDEA.

If that Idea exhibit any Image to the Mind, it is call'd Imagination; if it exhibit none, it retains the general Name of *Perception*. See IMAGINATION.

Thus when we hear the Word *Tree*; the Idea we then form in the Mind, is call'd an *Imagination*. But when we hear of a Thing, whereof no Image can be framed as of *doubting*, the Idea we then have is a mere *Perception*. See SENSATION.

It may be obſerv'd, that the Idea's we receive by *Perception*, are often alter'd by the Judgement, without our taking notice of it; thus a Globe being ſet before our Eyes, the Idea thereby imprinted, is a flat Circle, variouſly ſhadow'd: But being accuſtom'd to perceive what kind of Appearances convex Bodies are wont to make in us; the Judgement alters the Appearances into their Cauſes; and from that Variety of Shadow or Colour frames to itſelf the *Perception* of a convex Figure of one uniform Colour. See JUDGEMENT.

This in many Caſes, by a ſettled Habit, is perform'd ſo readily, that we take that for the *Perception* of our Senſation, which is but an Idea form'd by the Judgement; ſo that one ſerves only to excite the other, and is ſcarce taken notice of itſelf: as a Man who reads or hears with Attention, takes little notice of the Characters or Sounds; but of the Idea's which are excited in him thereby.

The Faculty of *Perception*, ſeems to be that which puts the Diſtinction between the animate and inanimate Parts of the Creation. *Vegetables*, ſome of them, have ſome degree of Motion, and upon different Application of other Bodies, alter their Figures and Motions; and have hence obtained the Name of *ſenſitive Plants:* Which, however, is the Reſult of mere Mechaniſm, and no otherwiſe produced, than the ſhortening of a Rope by the Affuſion of Water. But *Perception* is a Metaphyſical Principle, and found in ſome Degree in all Animals; and in them alone.

PER *Minima*, in Pharmacy, an intimate and perfect Mixture of natural Bodies; wherein their very *Minima*, *i. e.* their Atoms, or firſt component Particles are ſuppoſed to be accurately blended together. See MIXTION.

If Silver and Lead be melted together, they will mingle together *Per minima*.

PER-SE, in Chymiſtry. When a Body is diſtill'd ſingly, and without the uſual addition of any other Matter to raiſe it; it is ſaid to be *diſtill'd Per-ſe*. See DISTILLATION.

The genuine Spirits of Harts-horn, are thoſe rais'd *Per-ſe*, in oppoſition to thoſe diſtill'd by the addition of Chalk.

PER-SE, in Logic. A Thing is ſaid to be conſidered *Per-ſe*, when it is taken in the Abſtract. See ABSTRACT.

PERCH, Pole or *Rod*, a long Meaſure, much uſed in ſurveying and meaſuring of Land. See MEASURE.

Among the old *Romans*, and ſtill among Geometricians, the Pertica, *Perch*, is ten foot; and they otherwiſe call it the *Catena*, *funis*, and *Decempeda*. See DECEMPEDA.

In *England*, the *Statute Perch* contains 16 Foot and $\frac{1}{2}$, and for Coppice-woods, &c. 18 Foot: 40 ſquare Perches make a *Rood*, and 160 an *Acre*. See ROOD and ACRE.

The *Cuſtomary Perch* is various in various Counties: In *Staffordſhire* 'tis 24 Foot; in the Foreſt of *Sherwood* 21, the Foot there being 8 Inches, the Meaſure whereof was mark'd on the Chancel Wall of *Edonſtow*, and in the Church of St. *Mary* in *Nottingham*. See FOOT.

In *Herefordſhire*, a *Perch of walling* is 16 $\frac{1}{2}$ Foot; a *Perch of Ditching* 21 Foot, &c.

In *France*, the *Perch* is from 18 to 23, and even 27 of their Feet.

PERCHANT, among Fowlers a Decoy-bird, which the Fowler has faſten'd by the Foot, and which flutters about the Place where 'tis tied, to draw other Birds to it, and give the Fowler an Occaſion of catching 'em.

PERCOLATION, in Medicine, &c. the Action of Filtrating. See FILTRATION.

PERCUSSION, in Phyſicks, the Impreſſion a Body makes in falling or ſtriking upon another; or the Shock or Colliſion of two Bodies, which concurring, alter each others Motion. See MOTION and COLLISION.

Percuſſion is either direct or oblique.

Direct Percuſſion, is where the Impulſe is given in the Direction of a right Line perpendicular to the point of Contact.

In Spheres, therefore, the *Percuſſion* is *direct*, when the Line of Direction paſſes thro' both their Centres. See DIRECT.

Oblique Percuſſion, is where the Impulſe is given in the Direction of a Line *Oblique* to the Point of Contact. See OBLIQUE.

Doctrine of PERCUSSION, *or the Laws of Motion, reſulting from the* PERCUSSION *of Bodies.*

In Bodies either perfectly hard, or perfectly ſoft, and ſo void of all Elaſticity; the Laws of *Percuſſion* are eaſily determin'd: but ſince, even the hardeſt Bodies have their ſhare of Elaſticity; and in Elaſtic Bodies, the Laws are very different, and much more intricate; having been firſt aſcertain'd in the Philoſoph. Tranſact. by Sir *Ch. Wren*, Dr. *Wallis*, and Mr. *Huygens*; we ſhall lay down each a-part.

Laws of PERCUSSION *in Bodies not Elaſtic.*

I. If a Body in Motion as *A*, (Tab. Mechanicks Fig. 40.) ſtrike directly againſt another at reſt *B*: the firſt will loſe juſt as much of its Motion as it communicates to the 2d; ſo that the two will proceed thence with an equal Velocity, as if collected into one Maſs.

If *A* therefore be triple of *B*, it will loſe one fourth of its Motion; ſo, that if before, it moved thro' a Line of 24 Foot in a Minute, it will now only move 18.

II. If a moving Body, *A*, ſtrike againſt another already in Motion, *B*; the firſt will increaſe the Velocity of the latter; but will loſe leſs of its own Motion than if the latter had been at reſt: Since all here requir'd, is that ſome Degrees of Motion be added to thoſe it already has, to make 'em both proceed with an equal Velocity.

Suppoſe *E. gr.* the Body *A* with 12 Degrees of Motion, to ſtrike againſt the other *B*, leſs by half, and at reſt: The firſt will transfer 4 Degrees of its Motion to the latter, and retain 8 to itſelf: But if it ſtrike with 12 Degrees of Motion on the other already moving with three Degrees, it will communicate two Degrees; for *A* being double of *B*, this need only half the Motion to make it proceed with the ſame Velocity.

III. If a moving Body *A*, ſtrike on another *B*, either at reſt, or moving more ſlowly, and either in the ſame Direction, or in a contrary one; the Sum of the Momenta, if the Bodies move in the ſame Direction; or their Difference, if they move in a contrary one, will be the ſame after the *Percuſſion* as before.

IV. If two equal Bodies *A* and *B* meet each other with equal Velocities; after the Congreſs, they well both remain at reſt.

V. If a Body *A*, ſtrike directly on another at reſt *B*, its Celerity after the Stroke, is to its Celerity before it; as the Weight *A* is to the Sum of the Weights *A* and *B*: if therefore the Weights were equal, the Celerity after the Shock will be half of that before it.

VI. If a Body in Motion, *A* ſtrike directly on another moving more ſlowly, but in the ſame Direction; the Velocity after the Shock, will be equal to the Sum of the Momenta, divided by the Sum of the Weights.

VII. If two equal Bodies moving with different Velocities, ſtrike directly againſt each other; after the Conflict, they will proceed with the Semi-difference of the Velocities, wherewith they were moved before it.

VIII. If two Bodies *A* and *B* meet directly with Velocities that are reciprocally as their Weights; after the Conflict, they will both remain at reſt.

IX. If two Bodies *A* and *B* meet directly with the ſame Velocity, the Celerity after the Impulſe will be to that before it, as the Difference of the Weights to their Sum.

X. If two Bodies meet directly with any Velocity whatever, the Celerity after the Stroak will be equal to the Semi-difference of the Momenta, divided by the Sum of the Weights.

To determine the Momentum loſt by the Conflict: multiply the Celerity which the Body had before the Conflict, into its Maſs: Thus have you the Momentum before the Conflict. In like manner, multiply the Celerity after the Conflict into the Maſs: Thus have you the Momentum after the Conflict. The latter Moment therefore being ſubtracted from the former Leaves the Loſs. Hence may the Magnitudes of the Strokes be eſtimated.

XI. A direct or perpendicular Stroke is to an Oblique one; as the whole Sine is to the Sine of the Angle of Incidence.

Laws of PERCUSSION *in Elaſtic Bodies.*

In Bodies perfectly Elaſtic, the Force of Elaſticity is equal to the force wherewith they are compreſs'd, *i. e.* the Colliſon of two ſuch Bodies on each other, is equivalent to the Motion which either of 'em wou'd acquire, or loſe, by mere ſimple Impulſe. This Force exerting itſelf contrary ways; a Motion equivalent thereto muſt be ſubtracted from the Motion in the impelling Body, and added to that in the Body impell'd by mere Impulſe, to find their Velocities after *Percuſſion*. See ELASTICITY.

XII. If a Body ſtrike directly on an immoveable Obſtacle, either one, or both of 'em being Elaſtic; the Body will be reflected with the ſame Velocity wherewith it ſtruck, and in the ſame Line.

For if the Elaſticity were away, the whole force of the Body wou'd be ſpent in breaking the Obſtacle, and its Motion wou'd be ſtopp'd: The whole Force therefore is ſpent in compreſſing the Elaſtic Body; by which means it acquires an Elaſtic Force equal thereto: ſince then, the Elaſticity, when the compreſſing Force is ſpent, reduces the Body into its former ſtate; it repells the other with the ſame Force wherewith it ſtruck; conſequently it will rebound with the ſame Velocity. And becauſe an Elaſtic Body reſtores itſelf in the ſame Direction wherein it was compreſs'd; (there being no reaſon why it ſhou'd change its Direction) the Body will rebound in the ſame right Line.

XIII. If an Elaſtic Body ſtrike obliquely on an inmoveable Obſtacle, it will rebound in ſuch manner as to make the Angle of Reflexion equal to the Angle of Incidence. See REFLEXION.

XIV. If an Elaſtic Body *A*, ſtrike directly againſt another at reſt *B*; after *Percuſſion*, *A* will remain at reſt, and *B* proceed with the ſame Velocity which *A* had before the Shock, and in the ſame Direction.

For if the Bodies were not Elaſtic, each wou'd proceed after the Stroke in the ſame Direction, and with half the Velocity; but ſince the Elaſtic Force acts in the ſame Direction wherein the Compreſſion is made, and is equal to the compreſſing Force; it repells *A* with half its Velocity, and therefore ſtops its Motion; but it drives *B* further, with half its Velocity, and therefore accelerates its Motion. Tis therefore carried after the Shock with the whole Celerity wherewith *A* was carried before it, and *A* remains at reſt.

Hence, ſince *A* (Tab Mechanicks Fig. 41.) transfers all its force to *B*; *B* in like manner will transfer it to *C*; *C* again to *D*, and *D* to *E*. Wherefore, if there be ſeveral equal Elaſtic Bodies, mutually touching each other; and *A* be ſtruck againſt *B*; all the intermediate ones remaining at reſt, the laſt alone, *E* will be mov'd; and that with the Velocity wherewith *A* ſtruck againſt *B*.

XV. If two equal Elaſtic Bodies *A* and *B* meet directly, and with equal Velocity; each will rebound with the ſame Velocity wherewith it ſtruck, and in the ſame Direction.

For ſetting aſide the Elaſticity, both wou'd remain at reſt: Their whole Force therefore is ſpent in the Compreſſion; but their Elaſtic Force whereby they rebound in the former Direction, is equal thereto: This Force therefore acting equally on each Body *A* and *B* will produce the ſame Celerity in each; and that, equal to the former. So that they will rebound with the Celerity wherewith they ſtruck.

XVI. If two equal Elaſtic Bodies *A* and *B* ſtrike directly againſt each other with unequal Velocities; after the Shock they will rebound with interchanged Velocities.

For ſuppoſe the Bodies to concur with the Velocities $C + c$ and C: If they meet with the ſame Velocity C; after the Shock, they wou'd both move with the Velocity C. If *B* were at reſt, and *A* ſhou'd ſtrike upon it with the Celerity c; after the Shock, *A* wou'd remain at reſt, and *B* be mov'd with the Celerity c. Therefore the Exceſs of Celerity c, wherewith *A* is carried, is transferr'd wholly by the Conflict to *B*: *A* therefore is mov'd with the Celerity C, and *B* with the Celerity $C + c$.

Hence, after *Percuſſion*, they recede from each other with the ſame Velocity as, before, they concurr'd.

XVII. If an Elaſtic Body *A*, ſtrike on another equal one, indued with a leſs Degree of Motion, *B*; after *Percuſſion*, both will proceed in the ſame, *viz.* the former, Direction, and with interchanged Velocities.

For ſuppoſe *A* to ſtrike with the Velocity $C + c$, upon *B* moving with the Velocity C. Since by reaſon of the equal Velocities C and C, there ariſes no Impulſe; 'tis the ſame thing as if *A* ſtruck on *B* with the ſole Celerity c, on *B* at reſt. But in that caſe *A* wou'd remain at reſt, and *B* move with the Velocity c: Therefore, after *Percuſſion*, *A* will move with the ſole Celerity C; and *B* with the Celerity $C + c$, both according to the former Direction, there being nothing to change that Direction.

XVIII. If a Body *A* ſtrike on another *B*, the Stroke is the ſame as wou'd be made by the Body *A* ſtriking on *B* at reſt, with the Difference of their Velocities.

Hence, ſince the Elaſtic Force is equal to the *Percuſſion*; it acts on the Bodies *A* and *B* with the Difference of the Velocities they had before the Congreſs.

XIX. *To determine the Velocities of any two Elaſtic Bodies* A *and* B, *ſtriking directly on each other with any Velocities.*

If the Elaſtic Body *A* ſtrike on *B*, either at reſt, or moving ſlower than *A*; the Velocity *v. g.* of *A* after *Percuſſion*, is found thus: as the Sum of the Weights is to double of either of 'em, ſuppoſe, in this Caſe, of *B*; ſo is the Difference of the Velocities before the Congreſs, to a Velocity, which ſubtracted from the Velocity of *A* before the Impulſe (in the other Caſe added to it) leaves the Velocity of *A* after the Congreſs.

If the two Elaſtic Bodies *A* and *B* meet each other; the Velocity of *A* after the Impulſe is found thus: As the Sum of the Weights, is to the double of either of 'em, ſuppoſe of *B*; ſo is the Sum of the Velocities before Colliſion, to a Velocity which ſubtracted from the Velocity of *A* before Colliſion, leaves its Celerity after Colliſion.

XX. If an Elaſtic Body *A* ſtrike directly on another at reſt *B*; its Velocity after *Percuſſion* will be to its Velocity before it, as the Difference of Weights is to their Sum: But the Velocity it communicates to *B* is the ſame, as double the Weight of *A* to the Sum of the Weights.

After *Percuſſion*, therefore, the Velocity of *A* is to the Velocity of *B*, as the difference of Weights, to the double of *A*.

XXI. If two Elaſtic Bodies, *A* and *B*, ſtrike directly on each other with Velocities that are reciprocally proportional to their Weights; after Colliſion, they will rebound with the ſame Velocity wherewith they met.

XXII. In the direct Colliſion of Bodies, the ſame reſpective Velocity is preſerv'd, *i. e.* in a direct Concurrence, the Difference of Velocities is the ſame before and after the Shock; and in a direct mutual Encounter, the difference of Velocities after the Shock is the ſame with their Sum before it.

Hence they retire from each other after the Impulſe, with the ſame Velocity wherewith they met.

XXIII. In the Colliſion of Elaſtic Bodies, there is not always preſerv'd the ſame Momentum, or as the *Carteſians* expreſs it, the ſame Quantity of Motion; but it is ſometimes increas'd, and ſometimes diminiſh'd.

'Tis a Miſtake, therefore of *Cartes* and his Followers, that the ſame Quantity of Motion is ſtill preſerv'd in the World. See CARTESIAN.

XXIV. If two Elaſtic Bodies, *A* and *B*, meet, or overtake each other directly; the Sum of the Factums of the Maſſes into the Squares of the Velocities, remains the ſame before and after the Congreſs.

Hence the ſame Quantity of Force is likewiſe preſerv'd in the Congreſs.

XXV. *To determine the Motion of two Bodies* A *and* B, (Fig. 42.) *ſtriking obliquely againſt each other, whether they be Elaſtic, or not Elaſtic.*

The Motion of the Body *A*, along *AC*, is reſoluble into two others, in the Directions *AE* and *AD*; and the Motion of *B* along *BC* into two others according to *BF* and *BG*; and the Velocities thro' *AD* and *BF* are to the Velocities thro' *AC* and *BC* as the right Lines *AD*, *BF*, *AC*, *BC*; now, ſince the right Lines *AE* and *BG* are parallel, the Forces acting according to theſe Directions are not mutually oppoſite, and muſt ther efore be conſider'd in the Congreſs. But ſince the Lines *AD* and *BF*, or which is the ſame, *EC* and *GC* conſtitute the ſame right Line perpendicular to *DC*; 'tis the ſame as if the Bodies *A* and *B* ſhou'd meet directly with Velocities that are as *EC* and *GC*. Find therefore the Velocity of *A* and *B* according to the Rules above laid down.

Suppoſe *E. gr.* the Velocity of the rebounding Body *A* to be as *CH*; ſince the Motion along *AE* is not chang'd by the Congreſs, make $CK = AE$, and compleat the Parallelogram *HCKI*; the Diagonal *CI* will repreſent the Motion of *A* after Congreſs: for after *Percuſſion*, the Body will move according to the Direction *CI*, and with a Velocity as *CI*. In the ſame manner it will be found that the rebounding Body *B* will move along the Diagonal of the Parellelogram *CM*; in which $LM = BG$. The Velocities therefore after *Percuſſion* are as *CI* to *CM*.

Centre of PERCUSSION that Point wherein the Shock or Impulſe of the percutient Bodies is the greateſt. See CENTRE.

The *Centre of Percuſſion* is the ſame with the Centre of Oſcillation, if the percutient Body revolve round a fix'd Axis. See OSCILLATION.

If all the Parts of the percutient Body be carried with a parallel Motion, or with the ſame Velocity; the Centre of *Percuſſion* is the ſame with the Centre of Gravity. See GRAVITY.

PERDONATIO *Utlegariæ*, in Law, a Pardon for one who is out-law'd. See PARDON and OUT-LAWRY.

PERDUE, a Soldier placed in a dangerous, and almoſt deſperate Poſt.

The Word is *French*, and litterally ſignifies *loſt*.

Thus we ſay *Enfans Perdues*, for the Forlorn Hope of an Army. See FORLORN.

To lie *Perdue*, is to lie flat on the Belly, to lie cloſely in wait.

PEREMPTORY, in Law, an Epithet applied to an Action, Exception, &c. ſignifying 'em to be abſolute, final, and determinate; not to be alter'd, renew'd, or reſtrain'd

Thus in our Law-Books we find *Peremptory Action*, *Peremptory Nonſuit*, *Peremptory Exemption*, &c.

PERENNIAL, in Botany, is applied to *Ever-greens*, or Plants, which preſerve their Leaves and Verdure all the Year. See EVER-*green*.

PEREGRINE, *foreign, outlandiſh*; a Term applied among Aſtrologers, to a Planet, when found in a Sign where it has none of its Eſſential Dignities.

PERFECT, ſomething to which nothing is wanting; or that has all the Requiſites. See PERFECTION.

PERFECT, in Arithmetic. *Perfect Number* is that, all whoſe aliquot Parts added together, make the ſame Number with the Number whereof they are ſuch Parts. See NUMBER.

PERFECT in Grammar. *Preter-* or *Preterit-perfect Tenſe*, is an Inflection, marking a Time perfectly paſt; as I have heard. *Pluſquam perfect*, is an Inflection, expreſſing a Time more than perfectly paſt, as *I had heard*, &c. See TENSE.

PERFECT in Muſic, ſomething that fills and ſatisfies the Mind and the Ear.

In this Senſe we ſay, *Perfect Cadence*, *Perfect Concord*, &c. See CONCORD, CADENCE, &c.

The Ancients had two kindes of Modes, the Major and Minor; and each of theſe again was either *Perfect* or *Imperfect*. See MODE.

The Word *Perfect* when join'd with the Words *Mode* and *Time*, uſually expreſs triple Time or Meaſure; in oppoſition to double Time, which they call'd imperfect. See TIME, TRIPLE, &c.

PERFECT, in Phyſiology. A *perfect* Animal, is uſed by ſome Writers for that which is born by univocal Generation, in oppoſition to Inſects, which they pretend to be born by equivocal Generation. See GENERATION, UNIVOCAL, EQUIVOCAL, &c.

PERFECT *Flowers*, are ſuch as have Petala, Piſtil, Stamina and Apices. See FLOWER.

PERFECTION is divided into *Phyſical*, *Moral* and *Metaphyſical*.

Phyſical, or *natural Perfection*, is that whereby a Thing has all its Powers or Faculties, and thoſe too, in, their full Vigour; all its Parts both Principal and Secundary, and thoſe in their due Proportion, Conſtitution, &c.

In this Senſe a Man is ſaid to be *Perfect* when he has a ſound Mind in a ſound Body.

This *Perfection* is by the Schoolmen, frequently call'd ἐνεργητικὴ, by reaſon a Thing is hereby enabled to perform all its Operations.

Moral Perfection, is an eminent Degree of Virtue, or moral Goodneſs; to which Men arrive by often repeated acts of Piety, Beneficence, &c.

This, ſome ſubdivide into *Abſolute* or *Inherent*, which is actually in him to whom we attribute it; and *Imputative* which exiſts in ſome other, and not in him it is attributed to.

Metaphyſical, or *Tranſcendental* or *Eſſential Perfection* is the Poſſeſſion of all the eſſential Attributes, or of all the Parts neceſſary to the Integrity of a Subſtance: Or it is that whereby a Thing has, or is provided of every thing belonging to its Nature. See ESSENCE.

This is either *Abſolute*, where all Imperfection is excluded; ſuch is the *Perfection* of God: Or *Secundum quid*, and in *its kind*. See GOOD.

PERFECTISSIMATE, a Quality or Dignity whereof we find mention made in the Code.

Perfectiſſimi were thoſe with whom the Emperors intruſted any Office, Adminiſtration or Government. *Alciat* imagin'd the Name had been only given to the Governors of *Hiſpania Tarragonenſis*, and *Norica*; but *Calvin* has ſhewn the contrary in his *Lexicon Juridicum*. The *Perfectiſſimi* were inferior to the *Clariſſimi*, tho' that Word imply *moſt perfect*. See CLARISSIMI.

PERFIDIA, in Muſic, a Term borrowed from the *Italian*; ſignifying an Affectation of doing always the ſame Thing, of following the ſame Deſign, continuing the ſame Motion, the ſame Song, the ſame Paſſage, and the ſame Figures of Notes.

Such are the ſtiff Baſſes of Chacones, &c. becauſe depending wholly on the Caprice of the Compoſer.

PERFORANS *Manus*, in Anatomy, a Muſcle of the Hand; call'd alſo, from its Action, *Flexor 3tii Internodii digitorum Manus*.

It ariſes fleſhy from the fore and upper Part of the Ulna, and the Ligament which joins that and the Radius; and after forming a pretty thick fleſhy Body, is ſplit into four round Tendons; which paſſing under the annular Ligament, and thro' the Slits in the Tendons of the former, are inſerted into the third Bone of each Finger. See FINGERS.

PERFORANS *Pedis*, in Anatomy, a Muſcle of the Foot, call'd alſo *Profundus*; and from its Action, *Flexor 3tii Internodii digitorum pedis*, & *Flexor Magnus*.

It riſes from the Upper and Back-part of the Tibia, and paſſing under the inner Ancle and Ligament, that ties the *Tibia* and *Os Calcis* together, divides into four Tendons, which paſſing the Holes of the Perforatus, are inſerted into the third Phalanx of the leſſer Toes.

There is a *Maſſa Carnea*, or fleſhy Subſtance that ariſes from the *Os Calcis*, and which joins the Tendons of this Muſcle where the Lumbricales begin.

PERFORATUS *Manus*, in Anatomy, a Muſcle of the Fingers, thus call'd from the *Perforations* of its Tendons by thoſe of the *Perforans*; ſometimes *Flexor Secundi Internodii*, from its Action; and ſometimes *Sublimis*.

It ariſes tendinous from the internal Protuberance of the Humerus, and the Upper-part of the Radius before; and being parted into four, paſſes under the annular Ligament; whence it ſends ſeveral Tendons into the Upper-part of the Phalanx of each Finger: Every Tendon having at the firſt Internode, a Slit or *Perforation* for the Admiſſion of the Tendons of the Perforans.

PERFORATUS *Pedis*, in Anatomy, a Muſcle of the Foot, call'd alſo *Flexor pedis*, & *ſublimis*.

It ariſes from the inner and lower Part of the Calcaneum; and ſends a Tendon to evey Bone of the ſecond Phalanx of each of the four leſs Toes. In this, as the *Perforatus* of the Hand, there is a Slit in each Tendon about the firſt Joint, which lets thro' the Tendon of the *Perforans*.

PERFUME, an agreeable Odour, ſtriking the Senſe of Smelling. See ODOUR and SMELL.

The generality of *Perfumes* are made or compos'd with Muſk, Amber-greece, Civet, Roſe, and Cedar-woods, Iris, Orange-Flowers, Jaſſemin, Jonquills, Tuberoſes, and other odoriferous Flowers.

Therein alſo enter Storax, Frankincenſe, Benjoin, Cloves, Mace, and other like Drugs, commonly call'd Aromatics. See AROMATIC.

Some perfumes are alſo compoſed with Aromatic Herbs, as Lavender, Marjoram, Sage, Thyme, Hyſſop, &c.

Perfumes were anciently much in Uſe; particularly thoſe wherein Muſk, Ambergreeſe, and Civet, enter; they are now generally diſuſed, ſince People have become ſenſible of the Harm they do the Head. In *Spain* and *Italy* they are ſtill Alamode.

PERFUMES, *Suffitus*, in Pharmacy, &c. are Topic, or external Medicines, compoſed of certain Powders and Gums, which being mix'd together, and thrown on the Coals, produce a Vapour or Smoak, Salutary in ſeveral Diſeaſes. See SUFFITUS and SUFFIMENTUM.

Fits of the Mother are cured by a *Perfume* of Partridge Feathers, old Leather, &c. burnt. Mercury is ſometimes applied by way of *Perfume*, call'd *Perfume* of Cinnabar.

For thoſe whoſe Brain is too humid, Tobacco is preſcribed by way of *Perfume*.

There are dry *Perfumes* made up in Troches, Pills, &c. of Olibanum, Maſtic, Aloes, &c. and moiſt viſcous ones of the Juices of Herbs, &c.

PERIANTHEUM, in Botany the little green Leaves which compaſs the Bottom of a Flower; call'd by Dr. *Grew* the *Empalement*, and by others the *Calyx*. See CALYX. See alſo FLOWER.

The Uſe of the *Perianthem* is to be a Support, Security, and as it were Bands, to the other Parts of the Flower.

Mr. *Ray* obſerves, that Flowers, whoſe Leaves or Petala are ſtrong, as Tulips, have no *Perianthium*, as needing none. Carnations, &c. whoſe Petala are long and ſlender, have their *Perianthium* of one piece; others, as the Knap-weed, &c. have it of ſeveral Pieces, and in divers rounds, and all with a counterchangeable Reſpect to each other, for the greater Strength and Security of 'emſelves, and the Petala, &c. they include.

The Word is form'd from the *Greek* περὶ about and ἄνθος Flower.

PERIAPTA, a kind of Medicines, otherwiſe call'd PERIAMMA, *Appenſa* and *Amulets*; which being tied about the Neck, are ſuppoſed to prevent, or cure Diſeaſes. See AMULET. See alſo PHYLACTERY.

PERICARDIARY, an Epithet given to Worms generated in the Pericardium, or Capſula of the Heart. See WORMS and PERICARDIUM.

M. *Andry* makes theſe one of the twelve Kinds of Worms engender'd in the human Body: They ſometimes occaſion Convulſions; the Paroxyſms whereof laſt but a little while, but return inceſſantly.

Theſe Worms are accompanied with a frightful Paleneſs of the Face, a low Pulſe, violent Pains of the Stomach and Breaſt.

They ſometimes occaſion a Palpitation of the Heart. See PALPITATION. M. *Andry* adds, that they have been known to occaſion ſudden Death.

PERICARDIUM, in Anatomy, a Capſula, or Pouch, which includes the Heart. See HEART.

It conſiſts of a double Membrane; the Inner ariſing from the Coats of the Veſſels of the Heart, and the Outer from the Mediaſtinum. Its Figure reſembles that of the Heart, Conoidal; and it embraces the Heart laxly, allowing Room for its Pulſation.

'Tis connected either immediately, or by Veſiculæ emitted from it, to the Sternum, Back, Jugulum, and in human Bodies to the tendinous Part, or Centre of the Diaphragm; whereas in Brutes it is looſe.

Its Uſe is ſuppoſed to be to defend the Heart; as likewiſe to contain a ſoft ſerous Humour, which ſerves to lubri-

cate and moiſten the Heart, and prevent any Inflammation that might probably ariſe from the dry Friction of the Heart and its Capſula. But this latter Uſe is controverted; for ſome take the Humour found in it to be unnatural, and will have it forcibly ſeparated by the convulſive Agonies ſupervening in the Article of Death. In effect, Anatomiſts are puzzled to find whence it ſhou'd come, or from what Veſſels it is ſecreted.

The word *Pericardium* is form'd from the *Greek* περὶ about and καρδία Heart.

Dr. *Keil*, in his Treatiſe of *Anim. Secretion* ſhews that the Liquor in the *Pericardium* muſt be the moſt Fluid of any ſeparated from the Blood, becauſe its Particles unite firſt, and are ſecreted firſt. For thoſe Particles which unite firſt, will have the greateſt attractive Force, conſequently their Particles muſt be the moſt Spherical and moſt Solid; and therefore their Contact the leaſt of any, therefore the moſt Fluid. See FLUIDITY.

In the Memoirs of the *French* Academy, *M. de Mortal* gives an Inſtance of a *Pericardium*, which being open'd, the Liquor contain'd therein, was found congeal'd into a Conſiſtence fit to be cut with a Knife, and two ſquare Fingers thick about the Heart.

PERICARPIA, from περὶ, circum, about, and *Carpus* the Wriſt, are Medicines that are applied to the Wriſt.

PERICARPUS, in Botany, a Pellicle, or thin Membrane, incompaſſing the Fruit or Grain of a Plant. See FRUIT, SEED, &c.

The Wordis form'd of the *Greek* περὶ about and καρπὸς Fruit.

PERICHORUS, in Antiquity, a Name given by the *Greeks*, to their profane Games and Combats; *i. e.* to ſuch as were not conſecrated to any of the Gods. See GAMES.

The Word in the Original, ſignifies *near* or *neighbouring*; apparently, becauſe none but the People of the Neighbourhood attended at theſe obſcure Exerciſes.

The Champions did not fight in Honour of any God or Heroe, as in the others; but only for the prize Sake.

The Word is form'd from the *Greek* περὶ about and χώρα Country.

PERICRANIUM, in Anatomy, a thick ſolid Coat or Membrane, covering the out Side of the *Cranium* or Skull. See CRANIUM.

Some call it by the general Name of *Perioſteum*, becauſe of its adhering to the Bone: others divide it into two Membranes, the under whereof immediately inveſting the Skull, they call Perioſteum; and the upper the *Pericranium*. But in effect, 'tis but one double Membrane, conſiſting, as moſt others do of two Coats. 'Tis ſuppoſed to have its Origin from the dura Mater; which paſſing thro' the Sutures of the Skull, by means of ſeveral Filaments forms this thick Membrane: At leaſt, 'tis ſtill found connected to the dura Mater by Fibres tranſmitted from it to the Membrane, thro' the Sutures.

About the Origin of the temporal Muſcles, the two Coats of the *Pericranium* part; the Outer paſſing over thoſe Muſcles, and the Inner ſtill adhering cloſe to the *Cranium*. See PERIOSTEUM.

The Word is form'd from the *Greek* περὶ about and κρανίον Head.

PERIDROME, PERIDROMUS, in the ancient Architecture, the Space, Gallery, Alley, or the like, in a Peripetere, between the Columns and the Wall. *Salmaſius* obſerves that the *Peridromes* ſerved for Walks among the *Greeks*.

PERIOECI, in Geography, ſuch Inhabitants of the Globe as have the ſame Latitudes, but oppoſite Longitudes; or live under the ſame Parallel, and the ſame Meridian, but in different Semi-circles of that Meridian. See GLOBE.

Theſe have the ſame common Seaſons throughout the Year; and the ſame Phænomena of the heavenly Bodies; but their Hours, or times of the Day, are oppoſite to each other. When *v. g.* with the one 'tis Mid-day; with the other 'tis Mid-night. See DAY and SEASON.

The Word is form'd from the *Greek* περὶ about and οἰκέω I inhabit.

PERIEGETES, a *Greek* Term, ſignifying a Perſon who conducts another about a Thing, to ſhow it him, &c.

It is applied in Antiquity to Geographers; eſpecially to thoſe who deſcribed the Sea-Coaſts: Thus *Dionyſius* is ſtiled *Periegetes*, for publiſhing a Geography in Hexameter Verſes; which *Euſtathius* has commented on, both, in *Greek*.

The Name *Periegetes* was alſo given to thoſe who conducted Strangers about in Cities, to ſhew 'em the Antiquities, Monuments, Curioſities, &c. thereof.

Theſe *Periegetes* were the ſame with what they now call Antiquaries in *Italy*. See ANTIQUARY.

PERIGÆUM, PERIGEE, in Aſtronomy, that point of the Heavens, wherein the Sun and Planets are at their leaſt Diſtance from the Earth. See EXCENTRIC.

The Moon in her *Perigee* is 53 or 54 Semi-dameters of the Earth diſtant from us. See MOON.

The Term is but little uſed, except in the Ptolomaic Syſtem; where the Earth is placed in the Centre of the World, and the Diſtances of the Planets chiefly conſider'd with regard thereto; being form'd of the *Greek* περὶ, about and γῆ *Terra*, Earth.

The *Copernicans* uſe the Word *Perihelium* in lieu of *Perigeum*; becauſe they place the Sun in the Centre. See PERIHELIUM.

PERIHELIUM, in Aſtronomy, that point of the Orbit of a Planet, or Comet, wherein it is at its leaſt Diſtance from the Sun. See PLANET, COMET, SUN, &c.

The Word is form'd from the *Greek* περὶ, and ἥλιος, *Sol*, Sun.

The ancient Aſtronomers, in lieu hereof uſed *Perigæum*; becauſe they placed the Earth in the Centre. See PERIGÆUM.

PEREGRINARY, PEREGRINARIUS, in the ancient Monaſteries, a Monk to whom was committed the Care of receiving, and entertaining Strangers, or Viſitors.

PERIMETER, in Geometry, the Ambit, or extent, that bounds a Figure or Body. See FIGURE.

The Perimeters of Surfaces, or Figures, are Lines; thoſe of Bodies are Surfaces. See SUPERFICIES.

In circular Figures, &c. inſtead of Perimeter we ſay *Circumference* or *Periphery*. See PERIPHERY.

The Word is form'd from the *Greek* περὶ and μέτρον Meaſure.

PERINÆUM, in Anatomy, the Space between the *Penis* or *Scrotum*, and the Fundament; properly the Ligamentous Seam; call'd by the *Latins*, Femen, and Interefemineum.

The Word *Perinæum* is form'd from the *Greek* περὶ and ναίειν to inhabit.

PERINDE *Valere*, in the Canon Law, a Diſpenſation granted a Clerk, who being legally incapable of a Benefice, or other eccleſiaſtical Function, is, *de facto*, admitted to it. See DISPENSATION.

The *Perinde Valere*, is a kind of Writ; thus call'd from two Words therein, ſignifying the Diſpenſation to be equivalent or tantamount to a legal Capacity.

PERIOCHA, an Argument containing the Sum of a Diſcourſe.

PERIOD, in Aſtronomy, the Time taken up by a Star or Planet, in making a Revolution; or the Duration of its Courſe, till it return to the ſame Point of the Heavens. See REVOLUTION.

The Sun's, or rather the Earth's *Period*, is 365 Days, five Hours, 49 Min. That of the Moon 27 Days, 13 Hours, 9 Min. &c. See SUN, MOON, &c.

The *Periods* of the Comets are now many of 'em pretty well aſcertain'd. See COMET.

There is a wonderful Harmony between the Diſtances of the Planets from the Sun, and their *Periods* round him; the great Law whereof is, *that the Squares of the Periodic Times are ever proportional to the Cubes of their mean Diſtances from the Sun.* See PLANET.

The ſeveral *Periods* and mean Diſtances of the ſeveral Planets are as follow.

PERIODS.

	Days	h.	′	″	mean Diſt.
Saturn	10579	6	36	26	953800
Jupiter	4332	12	20	35	520110
Mars	686	23	27	30	152369
Earth	365	6	9	30	100000
Venus	224	16	49	24	72333
Mercury	87	23	15	53	38710

PERIOD, in Chronology, an Epocha or interval of Time, by which the Years are accounted; or a Series of Years, whereby, in different Nations, and on different Occaſions Time is meaſur'd. See TIME.

Such are the *Callipic*, and *Metonic Periods*, two different Corrections of the *Greek* Calendar; the *Julian Period*, invented by *Joſ. Scaliger*; the *Victorian Period*, &c.

Metonic PERIOD, or *Cycle*, call'd alſo the *Cycle of the Moon*, is a Series of 19 Years, which elaps'd the new and full Moons, are ſuppoſed to return to the ſame Day of the ſolar Year: It was thus call'd from its Inventor *Meton*. See METONIC. See alſo CYCLE.

Callipic PERIOD, is a Series of 76 Years, returning in a perpetual Circle; which elaps'd the new and full Moons, are ſuppoſed to return to the ſame Day of the ſolar Year. The *Callipic Period* is an improvement on the *Metonic* of 19 Years, which proving inaccurate, *Calippus* the *Athenian* multiplied it by 4, and thus aroſe the *Calippic Period*. See CALIPPIC.

Hipparchus's PERIOD, is a Series of 304 ſolar Years, returning in a conſtant round; and reſtoring the new and full Moons to the ſame Day of the ſolar Year; according to the Sentiment of *Hipparchus*.

This *Period* ariſes by multiplying the *Calippic Period* by 4. *Hipparchus* aſſumed the Quantity of the ſolar Year to be 365 Days, 5 Hours, 55′ 12″. And hence concluded that in 104 Years, *Callippus*'s *Period* wou'd Err a whole Day. He therefore multiplied the *Period* by 4, and from the Product, caſt away an entire Day. But even this does not reſtore the new and full Moons to the ſame Day throughout the whole

Period

Period: But they are ſometimes anticipated 1 Day 8 Hours, 23′ 29″ 20‴.

Victorian PERIOD, an Interval of 532 *Julian* Years, which elaps'd, the new and full Moons, return on the ſame Day of the *Julian* Year; according to the Sentiment of *Victorinus* or *Victorius*, who lived in the Time of Pope *Hilary*.

Some aſcribe this *Period* to *Dionyſius exiguus*; and hence call it the *Dionyſian Period:* others call it the *great Paſchal Cycle*; becauſe invented for computing the Time of *Eaſter*.

The *Victorian Period*, is produced by multiplying the Lunar Cycle 19, by the ſolar Cycle 18; the Product of which is 532. But neither does this reſtore the new and full Moons to the ſame Day throughout its whole Duration; by 1 Day, 16 Hours, 58′ 59″ 40‴.

Dionyſian PERIOD. See *Victorian* PERIOD.

Julian PERIOD, a Series of 7980 *Julian* Years; ariſing by the Multiplication of the Cycles of the Moon, the Sun, and Indictions into one another; commencing from the firſt Day of *January*, in the *Julian* Year. See JULIAN.

The *Julian Period* is alſo produced by multiplying the *Victorian Period* by 15. Since every Year in the *Julian Period* has its particular Cycles of the Moon, Sun, and Indictions; *E. gr.* only the firſt has the Moon's Cycle 1, the Sun's Cycle 1, and the Cycle of Indictions 1; all the Years of this *Period* are accurately diſtinguiſh'd from each other.

This *Period* was invented by *Scaliger*, as a common receptacle of Epocha's, to facilitate the reduction of Years of a given Epocha, to thoſe of another Epocha likewiſe given. It agrees with the *Conſtantinopolitan* Epocha, or *Period*, uſed by the *Greeks*, except in this that the Cycles of the Sun, Moon, and Indictions, are reckon'd differently; and in that the firſt Year of the *Conſtantinopolitan Period* differs from that of the *Julian Period*.

Conſtantinopolitan PERIOD. See *Julian* PERIOD.

PERIOD, in Grammar, a little Compaſs of Diſcourſe, containing a perfect Senſe; diſtinguiſh'd at the End by a Point or full Stop (.) and its Members or Diviſions mark'd by Comma's, Colons, &c. See SENTENCE, POINT, &c.

De Cologne defines *Period* a ſhort, but perfect Sentence, conſiſting of certain Parts or Members, depending one on another, and connected together by ſome common Vinculum.

That celebrated Diſinition of *Ariſtotle* is; a *Period* is a Diſcourſe which has a Beginning, a Middle, and an End, all viſible at one View.

A *Period* of two Members, *Cicero* ſupplies us with: *Ergo & mihi meæ priſtinæ vitæ Conſuetudinem, C. Cæſar, intercluſam aperuiſti; & his omnibus ad bene de republica ſperandum quaſi ſignum aliquod ſuſtuliſti.*

A *Period* of three Members, the ſame *Cicero* gives us in the Exordium of his *Manilian Oration*: *Nam cum antea per ætatem hujus Auctoritatem loci contingere non auderem; ſtatueremque nihil huc niſi perfectum ingenio, elaboratum Induſtria afferri oportere: Omne meum tempus amicorum temporibus tranſmittendum putavi.*

A *Period* of four Members he gives us in that admirable Deſcription of the Puniſhment of Parricides. *Ita vivunt ut ducere animam de Cœlo non queant: Ita Moriuntur ut eorum oſſa terra non tangat: Ita jactantur fluctibus ut nunquam abluantur: Ita poſtremo ejiciuntur ut ne ad Saxa quidem mortui conquieſcant.*

The Laws and Meaſures of *Periods* are pretty ſtrictly regarded by Orators; at leaſt by the ancient ones: In ordinary Diſcourſe, and in the modern Tongues, Authors are much leſs ſevere.

In Oratory, the Members of *Periods* are to be equal or nearly equal; that the Pauſes or Reſts of the Voice at the cloſe of each Member may be nearly equal; but in Writing no ways intended for rehearſal, this is diſreguarded. Common Diſcourſe allows of *Periods* both longer and ſhorter than Oratory; which admits of none leſs than two Members, nor greater than four. Short, mutilated Periods break the Stream, and check the Courſe of the Sublime; and long ones embarraſs and keep the Mind too long in Suſpenſe; and even ſtrain the Voice which is never to ſtop but at the Ends of *Periods*.

The *Periods* allow'd in Oratory are three: A *Period* of two Members, call'd by the *Greeks*, *Diccolos*, and the *Latins*, *Bimembris*: A *Period* of three Members, *Tricolos*, *trimembris*; and a *Period* of four, *Quadrimembris*, *Tetracolos*. See MEMBER.

A ſtrict Oratorial *Period* does not allow of either more or fewer than theſe: 'Tis poſſible indeed to introduce a *Period* of one Member, call'd by *Ariſtotle Monocolos*, or ſimple *Period*; but 'twill be reputed a Flaw; and is a Thing never to be practis'd by the Maſters. The *Period* may be likewiſe prolonged to five or ſix Members, but then it changes its Name; and inſtead of *Period* commences what they call a *periodical Speech*.

Phalareus, *Hermogenes*, *Terence*, &c. confine the juſt *Period* (call'd by the *Latins*, *Ambitus* and *Circuitus*,) to four Members; agreeably to the Diſtich

Quatuor e membris plenum formare videbis
Rhetora Circuitum, *ſive* Ambitus *ille vocetur.*

Of which Sentiment is *Cicero*, who in his Orator, ſays, *Conſtat ille Ambitus & plena comprehenſio e quatuor fere partibus quæ membra dicuntur, ut & aures impleat, & ne brevior ſit quam ſatis ſit, neque longior:* An Inſtance of a periodical Oration he gives us in the Opening of his Oration for *Architas* the Poet. *Si quid in me ſit Ingenii, Judices, quod ſentio quam ſit exiguum; aut ſi qua exercitatio dicendi, in qua me non Inficior mediocriter eſſe verſatum; aut ſi hujuſce rei ratio aliqua ab optimarum artium ſtudiis & diſciplina profecta, a qua ego confiteor nullum Ætatis meæ tempus abhorruiſſe; earum rerum omnium vel in primis hic A. Licinius fructum a me repetere prope ſuo jure debet.*

Periods are ſaid to be either *rotundi*, round, or *quadrati*, Square, according to their different Oeconomy and Cadences. *A ſquare Period* is that conſiſting of 3 or 4 equal Members, formally diſtinguiſh'd from each other; as that of *Cicero* on the Puniſhment of Parricides. *A round Period* is that whoſe Members or Parts are ſo connected, and fitted into each other, as that the Junctures or Commiſſures are ſcarce ſeen; but the whole ſlides equally round; without any notable Stops or Inequalities. Such are the Dicolos and Tricolos of *Cicero* abovemention'd.

PERIOD is alſo uſed for the Character (.) wherewith the *Periods* of Diſcourſe are terminated and expreſs'd; popularly call'd a *Full-ſtop* or *Point*. See POINTING.

Father *Buffier* obſerves two Difficulties in the Uſe of the *Period* or Point, *i. e.* in the diſtinguiſhing it from the Colon, or double Point; and in determining juſtly the End of a *Period*, or perfect Sentence.

'Tis obſerv'd that the Supernumerary Members of a *Period*, ſeparated from the reſt by Colons and Semicolons, uſually commence with a Conjunction. (See COLON.) Yet 'tis certain theſe ſame Conjunctions ſometimes rather begin new *Periods*, than ſupernumerary Members of old ones. 'Tis the Senſe of Things, and the Authors own Diſcretion that muſt make the proper Diſtinction which of the two in effect it is. No Rules will here be of any Service, unleſs this be admitted as one; that when what follows the Conjunction is of as much extent as what precedes it, 'tis uſually a new *Period*; otherwiſe not.

The ſecond Difficulty ariſes hence, that the Senſe appears perfect in ſeveral ſhort detached Phraſes, wherein it does not ſeem there ſhou'd be *Periods*: A Thing frequent in free Diſcourſe; as, *we are all in Suſpence; make your Propoſals immediately; you'll be to blame for detaining us longer.* Where 'tis evident that ſimple Phraſes have perfect Senſes like *Periods*; and ought to be mark'd accordingly; but that the Shortneſs of the Diſcourſe making 'em eaſily comprehended, the Pointing is neglected.

The Word *Period* in the original *Greek* περιοδος ſignifies *ambit*, *circuit*.

PERIOD, in Numbers, is a Diſtinction made by a Point or Comma, after every ſixth Place, or Figure; and is uſed in Numeration, for the readier diſtinguiſhing and naming the ſeveral Figures or Places: which ſee under NUMERATION.

PERIOD, in Medicine, the Space of Time a Diſtemper continues, from its Beginning to its Declenſion. See DISEASE.

Hence, ſuch as return after a certain Space, with like Symptoms, are call'd *periodical Diſtempers*; ſuch are Agues, intermitting Fevers, &c. See FEVER.

In the Phil. Tranſact. Dr. *Muſgrave* gives us an Inſtance of a *periodic* Palſy; Dr. *Cole* an Inſtance of a *periodic* Convulſion. See CONVULSION, PALSY, &c.

PERIODIC, ſomething that terminates and comprehends a Period. See PERIOD.

A periodic Month, is the Space of Time wherein the Moon diſpatches her Period, or *periodic* Motion, *viz.* 27 Days, 7 Hours, 43 Minutes; in which Time ſhe returns to the ſame Point of the Zodiac, wherein ſhe was when ſhe left the Sun. See MONTH.

Periodic Diſeaſes, are ſuch as decline and riſe again with ſimilar Symptoms alternately.

Periodic, in Grammar, is applied to a Stile or Diſcourſe that has Numbers; or which conſiſts of juſt, and artful *Periods*. See NUMBERS.

PERIODUS *Sanguinis*, the Circle of the Blood, or the Tour it makes round the Body, for the Support of Life. See CIRCULATION.

PERIODEUTA, a Church Officer among the *Greeks*; eſtabliſh'd by the Council of *Laodicea*, in Towns, &c. where there were no Biſhops.

The *Periodeutæ* were a Kind of rural Deans, ſo call'd, according to *Zonaras*, becauſe always on the Road, going from one Quarter to another to keep the People in their Duty. See RURAL.

Hence, *Gregory* of *Theſſalonica* calls 'em *Ambulantes*, *Walkers*. *Balſamon* calls 'em *Exarchæ*, by which Name they are ſtill known among the *Greeks* at this Day. See EXARCHA.

PERIOPHTHALMIUM, in natural Hiſtory, a thin Skin, which Birds can draw over their Eyes, to defend 'em without ſhutting their Eye-lids: The ſame with the *Nictitating* Membrane. See NICTITATING *Membrane*.

The

The Word is compounded of the *Greek* περὶ about, and ὀφθαλμὸς Eye.

PERIOSTEUM, in Anatomy, a Membrane, pretty tough, and extremely ſenſible, covering the whole exterior Surface of all the Bones of the Body; the Teeth alone excepted. See BONE.

It is derived from the Dura Mater, and conſiſts principally of Fibres detach'd thence; beſides which it receives other Fibres from the Membrana Communis of the Muſcles, or as Dr. *Havers* imagines, from the fleſhy Fibres of the Belly of the Muſcles, which interſect the Former.

That Part of it which covers the Cranium or Skull, is by a peculiar Name call'd the *Pericranium*. See PERICRANIUM.

The *Perioſteum* is very thin every where; tho' not every where alike. It adheres cloſely to the Bone; and in ſome Places is obſerv'd to ſend Fibres into the very Subſtance thereof.

Its principal Uſe is to defend the Muſcles and Tendons from being fretted in their Action by the attrition of the hard Subſtance of the Bones; and to give Notice, by its ſenſibility, of any Thing that might annoy the Bones.

Indeed, this laſt Uſe is controverted; ſome of the lateſt Anatomiſts maintaining that the *Perioſteum* is inſenſible.

The Word is form'd from the *Greek* περὶ about and ὀστέον.

PERIPATETICKS, a Sect of Philoſophers, the Followers of *Ariſtotle*; or the Maintainers of the *Peripatetic* Philoſophy; call'd alſo *Ariſtotelians*. See ARISTOTELIAN.

Cicero tells us that *Plato* left two excellent Diſciples, *Xenocrates* and *Ariſtotle*, who founded two Sects, which only differ'd in Name; The Former taking the Appellation of *Academicks*, who were thoſe that continued to hold their Conferences in the Academy, as *Plato* had done before; the other who follow'd *Ariſtotle* were call'd *Peripateticks*; from περιπατέω, I walk, becauſe they diſputed walking in the *Lyceum*. See LYCEUM.

Ammonius fetches the Name *Peripatetic* from *Plato* himſelf, who only taught walking; and adds that the Diſciples of *Ariſtotle*, and thoſe of *Xenocrates* were equally call'd *Peripateticks*; the one *Peripateticks* of the Academy, the other *Peripateticks* of the *Lyceum*; but that at length, the Former quitted the Title *Peripatetic* for that of Academic, on occaſion of the Place where they aſſembled; and the Latter retain'd ſimply that of *Peripatetic*. See ACADEMIC.

The greateſt and beſt Part of *Ariſtotles* Philoſophy, he borrow'd from his Maſter *Plato*: *Serranus* affirms confidently, and ſays he is able to demonſtrate it, that there is nothing exquiſite in any part of *Ariſtotles* Philoſophy, Dialectics, Ethics, Politics, Phyſics, or Metaphyſics, but is found in *Plato*. And of this Opinion are many of the ancient Authors, *Clemens Alexandrinus*, &c. See PLATONISM.

Gale endeavours to ſhew that *Ariſtotle* borrow'd a good deal of his Philoſophy both Phyſical about the *firſt Matter*; and Metaphyſical about the *firſt Being*, his Affections, Truth, Unity, Goodneſs, &c. from the ſacred Books; and adds from *Clearchus*, one of his (*Ariſtotle*'s) Scholars, that he made uſe of a certain *Jew*, who aſſiſted him therein.

Ariſtotle's Philoſophy preſerv'd itſelf in *puris naturalibus*, a long Time; none of his Followers or Commentators having dared to make any Innovations therein: Till the Beginning of the XIIIth Century; when it began to be new model'd. A reform'd Syſtem of *Peripateticiſm* was firſt introduc'd into the Schools, in the Univerſity of *Paris*; from whence it ſoon ſpread throughout *Europe*; aud has ſubſiſted in the Schools to this Day, under the Name of *School Philoſophy*. See SCHOOL, &c.

The Foundation hereof is *Ariſtotle*'s Doctrine, frequently miſunderſtood; oftener miſapplied: Whence the Retainers thereto may be denominated *reformed Peripateticks*.

Out of theſe have ſprung at ſeveral times ſeveral Branches, the chief are the *Thomiſts*, *Scotiſts*, and *Nominaliſts*; See each under its proper Article, THOMIST, SCOTIST, and NOMINAL.

PERIPATETIC *Philoſophy*, the Syſtem of Philoſophy, taught and eſtabliſh'd by *Ariſtotle*, and maintain'd by his Followers the *Peripateticks*. See PERIPATETICKS and PHILOSOPHY.

A Specimen of the *Peripatetic* Philoſophy, See under ARISTOTELIAN.

PERIPETIA, in the Drama, that part of a Tragedy wherein the Action is turn'd, the Plot unravel'd, and the whole concludes. See TRAGEDY.

The *Peripetia* is properly the Change of Condition whether happy or unhappy, which the principal Perſon or Perſons undergo; ariſing from ſome Diſcovery or Incident, which gives a new turn to the Action.

The *Peripetia* therefore coincides with the Cataſtrophe, or Unravelling; unleſs we make the *Peripetia* to depend on the Cataſtrophe, &c. as an effect on its Cauſe. See CATASTROPHE and UNRAVELLING.

The *Peripetia* is ſometimes induced by Remembrance or Diſcovery, as in the *Oedipus*, where the Meſſenger ſent from *Corinth* to invite *Oedipus* to the Crown, informs him that *Polybus* and *Merope* were not his Father and Mother; which begins a Diſcovery, that *Laius*, whom he had kill'd, and *Jocaſta* whom he had then to Wife, were his Father and Mother; and throws him into the deepeſt Diſtreſs. See DISCOVERY.

This Inſtance *Ariſtotle* calls a *double Peripetia*.

The Qualities of the *Peripetia* are, that it be probable and neceſſary; in order to which it muſt be the natural Reſult, at leaſt the Effect, of the foregoing Actions, or of the Subject itſelf; not ſtart out from any foreign, or collateral Cauſe.

Sometimes the *Peripetia* is occaſion'd without any Diſcovery; as in the *Antigone* of *Sophocles*, where the Change in *Creon's* Fortune is produced by the Effect of his own Obſtinacy; and ſometimes by a mere Change of the Will, which, tho' the leaſt artful, yet, Mr. *Dryden* obſerves, may be ſo manag'd as to become exceedingly beautiful.

Theſe two Caſes *Ariſtotle* calls *ſimple Peripetias*; in theſe, the Change only conſiſts in a Paſſage out of Trouble and Action, into Tranquillity and Reſt. See FABLE, ACTION, &c.

The Word *Peripetia* is form'd from the *Greek* περιπετὴς, *ſomething falling into a different State*.

PERIPHERY, in Geometry, the Circumference, or Bounding-Line of a Circle, Ellipſis, Parabola, and other ſimilar Figures. See CIRCUMFERENCE, CIRCLE, &c.

The *Periphery* of every Circle is ſuppoſed to be divided into 360 Degrees, which are again ſubdivided, each into 60 Minutes, the Minutes into Seconds, &c. See DEGREE, MINUTE, &c.

The Diviſions of Degrees, therefore, are Fractions, whoſe Denominators proceed in a ſexacuple Ratio: As, the Minute $\frac{1}{60}$, Second $\frac{1}{3600}$, Third $\frac{1}{216000}$. See SEXAGESIMAL.

But theſe Denominators being troubleſome; in their ſtead are uſed the Indices of their *Logaritkms*; hence the Degree, being the Integer, or Unit, is mark'd by o, the Minute by ', Second by " &c. See MINUTE, SECOND, &c.

Geometricians demonſtrate that a Circle is equal to a Triangle, whoſe Baſe is equal to the *Periphery*, and Altitude to the Radius. See TRIANGLE.

Hence it follows that Circles are in a Ratio compounded of their Peripheries and Radii. But they are alſo in a duplicate Ratio of the Radii; therefore the *Peripheries* of Circles are to each other as their Radii: and ſince the *Pheripheries* of one Circle is to its Radius, as the *Periphery* of any other to its Radius; The Ratio of the *Periphery* to the Diameter is the ſame in all Circles.

The Word is form'd from the *Greek* περιφέρω *Circumfero*, I ſurround.

PERIPHRASIS, in Rhetoric, *Circumlocution*, a Circuit or Tour of Words, much affected by Orators, to avoid common and trite manners of Expreſſion. See CIRCUMLOCUTION, FIGURE.

The *Periphraſis* is of good uſe on many occaſions; and we are frequently forced to have recourſe to it, to make Things be conceiv'd, which it is not proper to name.

'Tis a Piece of Politeneſs to ſuppreſs the Names, and only intimate, or deſign 'em. Theſe Turns of Expreſſion are particularly ſerviceable in Oratory; for the Sublime admitting of no direct Citations, there muſt be a Compaſs taken to inſinuate the Authors, whoſe Authority is borrowed. A *Periphraſis* by turning round a proper Name to make it underſtood, amplifies and raiſes the Diſcourſe; but Care muſt be taken it be not too much ſwell'd, nor extended mal a propos, in which Caſe it becomes flat and languid.

The Word in the original *Greek* περίφρασις, ſignifies *Circumlocution*.

PERIPLUS, a Voyage or Navigation round a certain Sea, or Sea Coaſts.

Arrian has deſcribed all the Coaſts of the black Sea, after having inſpected 'em in Quality of General of the Emperor *Adrian*, to whom he dedicates the Deſcription under the Title of *Periplus of the Euxine Sea*.

PERIPNEUMONIA, in Medicine, an Inflammation of ſome Part of the Thorax, properly of the Lungs; attended with an acute Fever, and a Difficulty of breathing. See LUNGS, &c.

The *Peripneumonia* is diſtinguiſh'd into *vera*, *true*; and *notha*, *ſpurious*.

The *firſt* is a real Inflammation of the Lungs, attended with a ſymptomatical Fever, and a Cough; by the Former of which it is diſtinguiſh'd from an Aſthma; and by the latter from a Pleuriſy. See ASTHMA and PLEURISY.

Its uſual Cauſes are, want of Exerciſe, hard Study, Suppreſſion of natural Evacuations, a moiſt Air, or the like.

When it ariſes from a Phlegmon, the Patient ſpits pure Blood; when it is Ereſipelatous, the Sputum is yellow, and not much tinged with red. In this laſt, the Breaſt is not ſo much contracted, but the Fever more violent.

The *Peripneumonia* is more dangerous, tho' leſs painful than a Pleuriſy: Its uſual way of going off is by Expectoration of well concocted reddiſh, yellow, or white Matter. The flowing of the Menſes, or any Hæmorrhage, a Diarrhæa, Abſceſſes about the Ears, or other Parts, are alſo good Prognoſticks.

The Medicines preſcribed are moſtly the ſame that obtain in Aſthmatick and Pleuritick Caſes.

The

The Word is form'd from the *Greek* περὶ about, and πνεύμων, Lungs.

PERIPNEUMONIA *Notha* or *Spuria* is a Diſeaſe of the Lungs, ariſing from a heavy pituitous Matter generated throughout the whole Maſs of Blood, and diſcharged upon the Lungs.

'Tis known by the Viſcidity, Paleneſs, and Slowneſs of the Blood, Ropineſs of the Saliva, Paleneſs and Want of Scent of the Urine, Swellings and Obſtructions in the minuter Veſſels, ſhort Breath, Oppreſſion in the Thorax, &c. worn out, phlegmatic, cold, phthiſical, catarrhous, Conſtitutions, are moſt liable to it. It begins with a Feebleneſs, Indolence, Wearineſs, Difficulty of Breathing, Oppreſſion of the Breaſt, Feveriſhneſs; and goes on without any great Appearance of danger to Death itſelf, without any Prognoſtic thereof in the Urine, Pulſe, &c. It is cured by Blood-letting, Clyſters, thin Diet, Diluents, Abſtergents and Aperients.

PERIPTERE, in the ancient Architecture, a Building encompaſs'd without-ſide by a Series of inſulated Columns, forming a kind of Iſle all around.

Such were the Baſilic of *Antonine*, the Septizon of *Severus*, the Portico of *Pompey*, &c. The *Peripteres* were properly Temples, which had Columns on all the four Sides; by which they were diſtinguiſh'd from the *Proſtyles* and *Amphiproſtyles*, the one of which had no Columns before, and the other none on the Sides. See PROSTYLE, &c.

M. *Perrault* obſerves, that *Periptere* in its general Senſe, is the Name of a Genus, including all the Species of Temples which have Portico's of Columns all around; whether the Columns be Diptere, or Pſeudo-diptere, or ſimply *Periptere*, which is a Species that bears the Name of the Genus, and which has its Columns diſtant from the Wall by the Breadth of an Intercolumniation. See TEMPLE.

For the Difference between Periptere and Periſtyle. See PERISTYLE.

The Word is form'd of the *Greek* περὶ, *circum*, about and πτερὸν, *Ala*, Wing.

PERISCII, in Geography, thoſe Inhabitants of the Earth, whoſe Shadows do, in one and the ſame Day, ſucceſſively turn to all the Points of the Horizon. See SHADOW.

Such are the Inhabitants of the frozen Zones, or thoſe who live within the compaſs of the Arctic and Antarctic Circles for, as the Sun never goes down to them after he is once up, but always round about, ſo do their Shadows; in ſo much, that in the ſame Day they have their Shadows on all Sides. See ZONE.

And hence the Name, from the *Greek* περισκίοι, *Circum umbres.*

PERISKYTISM, in Chirurgery, an Operation perform'd by the Ancients on the Cranium. See CRANIUM.

The *Periskytiſm* is an Inciſion which they made under the Coronal Suture, reaching from one Temple a-croſs to the other, and penetrating to the Bone of the Cranium: its Intention was to ſeparate the Pericranium from the Skull. See PERICRANIUM.

The Word is form'd from the *Greek* περὶ and σκύτιζειν to flea.

PERISSACHOREGIA, a Term found in the Code, about the Meaning whereof Authors are much divided.

Alciat, and ſome others will have it to be the Name of an Office *viz.* that of Curator of the *Annona* or Proviſions; from περίσσεια Abundance and χορηγέω to bring. Others take it to be the Office of a Magiſtrate who was to look to the Augmentation of the *Annona*, and the Diſtribution of the ſame.

Dom. Macri will have it to ſignify a Donative or Diſtribution made to the Soldiers over and above their Pay. See DONATIVE.

PERISTALTIC, in Medicine, a Motion proper to the Inteſtines, wherein the ſeveral Parts are ſucceſſively contracted from above downwards, in a manner reſembling the creeping of a Worm; whence it is alſo call'd the *Vermicular Motion.* See INTESTINES.

The *Periſtaltic* Motion is perform'd by the Contraction of the circular and longitudinal Fibres, whereof the fleſhy Coat of the Inteſtines is compoſed. 'Tis by Means hereof, that the Chyle is driven into the Orifices of the lacteal Veins, and the Excrements preſs'd downwards, and at laſt expell'd. See CHYLE and EXCREMENT.

When this Motion comes to be depraved, and its Direction changed, ſo as to proceed from below upwards, it produces what we call the *Iliac Paſſion.* See ILIAC *Paſſion.*

M. *Perrault*, in an expreſs Treatiſe on the *Periſtaltic Motion*, obſerves, that tho' 'tis ordinarily, only attributed to the Inteſtines; yet, it is really an Action common to all the Parts of the Body which alter, prepare, concoct the ſeveral Humours and Spirits, which are the Matter and Inſtruments of animal Action. In effect, he gives the Name to all the Motions whereby the Cavities of the Body are preſs'd and compreſs'd.

The Word is form'd from the *Greek* περισέλλω; and literally implies ſomething *ſent all a-round.*

PERISTAPHILINUS, in Anatomy, a Name ſome give to the Muſcle of the Uvula, more properly denominated *Pterygoſtaphilinus.* See UVULA and PTERYGOSTAPHILINUS.

PERISTYLE, in the ancient Architecture, a Place, or Building, incompaſs'd with a Row of Columns on the Inſide; by which it is diſtinguiſh'd from the *Periptere*, where the Columns are diſpoſed without-ſide. See PERIPTERE.

Such was the Hypetre Temple of *Vitruvius*; and ſuch are now ſome Baſiliques in *Rome*, ſeveral Palaces in *Italy*, and moſt Cloiſters of Religious.

Yet, the Word *Periſtyle* is ſtill uſed indifferently for a Range of Columns, either within or without a Building: As the Corinthian *Periſtyle* of the Portail of the *Louvre*, &c.

The Word is form'd from the *Greek* περὶ about and στύλος, Column.

PERISYSTOLE, in Medicine, the Pauſe or Interval between the two Motions of the Heart, or Pulſe; *viz.* that of the Syſtole or Contraction, and that of the Diaſtole or Dilatation. See SYSTOLE and DIASTOLE. See alſo PULSE and HEART.

PERITONÆUM, in Anatomy, a thin, ſoft Membrane, covering and containing all the Viſcera of the lower Belly. See VISCERA and ABDOMEN.

Its Figure and Size anſwer to thoſe of the lower Belly, which it lines throughout; its internal Surface is ſmooth, and lin'd with an unctuous Humour, ſerving to prevent its wounding the Inteſtines, and other Parts it touches, as well as to lubricate and facilitate their Motion; when the Glands which furniſh it are obſtructed, the *Peritonæum* grows thick, as 'tis frequently found in Dropſies.

The external Surface is fibrous and unequal, that it may adhere more firmly to the Muſcles of the Abdomen, Linea Alba, Oſſa pubis, Iſchium, Ilium, Sacrum, and the Vertebræ Lumbares, to which it is faſten'd; and from the laſt whereof, many ſuppoſe it to have its Origin.

It is alſo connected to the inferior or convex Surface of the Liver, which it ſuſpends; and the Part employ'd in this Action, is call'd the *Ligamentum Suſpenſorium Hepatis.*

The *Peritonæum* is double every where, but moſt apparently ſo from the Navel to the Os pubis, and near the Lumbar Vertebræ, as appears not only from its extraordinary Thickneſs in both, but from its Spontaneous parting in the latter, to receive the Kidnies.

It is perforated in the upper Part to give Paſſage to the Oeſophagus, Aorta and Cava; in the under, for the Fundament, the Neck of the Matrix, and the Veſſels that go to the Thighs; and in the Fore-part to give Paſſage to the Umbilical Veſſels.

Its exterior Coat has two Proceſſes; which in Men fall down into the Scrotum, wrap up the Spermatick Veſſels, and dilating make the Tunica Vaginalis of the Teſticles; in Women they form a Cover for the round Ligament of the Womb.

The *Peritonæum* receives Veins and Artries from the Mammariæ, Diaphragmaticæ, Epigaſtricæ, Sacræ, and Lumbares: Nerves from the Os Sacrum and Loins. *Ol. Rudbeckius* pretends to have likewiſe diſcover'd Lymphaticks, which being ſcarce viſible, except in Hydropic Caſes, an't much taken notice of.

In morbid Caſes, great Quantities of Serum have been found between the Duplicatures of this Membrane, when there was none in the Cavity of the Abdomen; which conſtitutes the true *Tympany.* See TYMPANY.

The Uſe of the *Peritonæum* is to contain, and keep in their Place the Viſcera of the Abdomen: This is ſo manifeſt, that when ever this Membrane happens to be broke, or extraordinarily dilated, ſome of the Parts are apt to fall down, and to form thoſe Tumors call'd *Hernia's* or *Ruptures.* See HERNIA.

The Term *Peritonæum* is *Greek*, and is derived from the Verb περιτείνω circumtendo, I ſtretch all a-round.

PERITROCHIUM, in Mechanicks, a Wheel or Circle, as *A B*, (Tab. Mechanicks, Fig. 44.) concentric with the Baſe of a Cylinder, and moveable together with it, about an Axis *E F.*

The Axis, with the Wheel, and Levers fix'd therein to move it, make that mechanical Power, call'd *Axis in Peritrochio.* See *Axis in* PERITROCHIO.

Axis in PERITROCHIO, in Mechanicks, one of the ſix mechanical Powers, or ſimple Machines, contriv'd for the raiſing of Weights. See its Structure, Doctrine, Application, &c. under the Article AXIS *in Peritrochio.*

PERJURY, in Law, the Crime of ſwearing falſely in a lawful Oath, adminiſter'd by one who has Authority, in any Matter relating to an Iſſue, or Cauſe in Queſtion; whether it be of the Perſons own accord, or by Subornation of another. See OATH.

If a Man call me *perjur'd*, I have my Action upon the Caſe. If he calls me *foreſworn* no Action lies, becauſe the Forſwearing may be extra-judicial.

Perjury is uſually excepted out of general Acts of Grace.

The Puniſhment of *Perjury* is *Colliſtrigium*, the Pillory, or burning the Criminal in the Forehead with a *P*, rooting up his Trees, and confiſcating his Goods. See PILLORY, &c.

PERMEABLE, denotes a Body conſider'd as its Pores are capable of letting ſomewhat paſs thro' 'em. See PORE.

PER MINIMA, in Medicine, denotes a perfect Mixture of the ſmalleſt Particles of ſeveral Bodies, or Ingredients. See MIXTURE and MINIMA.

PERMUTATION, the Truck, or Exchange of one Thing for another. See EXCHANGE.

The Commerce of the Ancients, was perform'd wholly by way of Permutation. See COMMERCE.

PERMUTATION, in the Canon Law, a real and active Exchange of two Benefices. See BENEFICES.

Permutation, is a Means of bringing Benefices into Commerce without Simony. See SIMONY.

The Conditions requir'd to a canonical *Permutation* are; 1°. That there be Benefices *permuted* on either Side; tho' the Revenues be unequal; and in Caſe of Inequality, no Compenſation to be made in Money; but only a Penſion charged on the bigger. 2° That each of the Permutants quit his Benefice, and make a Procuration *ad reſignandum*. 3° That the *Permutation* be followed by a Collation of the Ordinary. 4° That the Ordinary be inform'd of the Cauſe of the *Permutation*. 5° That thoſe to whom the Preſentation or Election to the Benefices belongs, give their Conſent; or in Caſeof their Refuſal, that the Conſent of the *Dioceſan* behad.

The chief Rules of *Permutation* are, that if one of the Compermutants cannot enjoy, he re-enters with full right into the Benefice he has quitted; and that if he die 'ere he have accompliſh'd the *Permutation* on his Part by the taking of Poſſeſſion, the Compermutant who has accompliſh'd, retains both Benefices, unleſs they fall into the Regale.

PERMUTATIONS *of Quantities*, in Algebra, the Changes, Alternations, or different Combinations of any Number of Quantities. See COMBINATION and CHANGE.

PERMUTATIONE Archidiaconatus & Eccleſiæ eidem annexæ cum Eccleſia & prebenda, is a Writ iſſued to an Ordinary, commanding him to admit a Clerk to a Benefice upon Exchange made with another. Reg. of Writs.

PER MY & PER TOUT, a joint Tenant is ſaid to be ſeiz'd of the Land he holds jointly *Per my & Per tout*, *i. e.* he is ſeiz'd by every Parcel, and by the whole, *Totum tenet, & nihil tenet, ſc. totum conjunctim & nihil ſeparatim. Bracton.*

PERNANCY, in Law, the taking or receiving any Thing; from the *French Prendre*, to take.

Tithes in *Pernancy* are Tithes taken in kind. See TITHES.

PERNIO, in Medicine, a Diſeaſe afflicting the Hands and Feet in Winter-time, popularly call'd a *Kibe* or *Chilblain*. See CHILBLAIN.

The Parts affected ſwell, inclining from a white to a blueiſh Colour, itch and ake; yet, the Tumour vaniſhes without any Exulceration, upon anointing the Part with Petrol.

PERNOR *of Profits*, he who takes, or receives the Profits of any Thing; from the *French Preneur*, Taker.

PERONE, in Anatomy, a Bone of the Leg, more uſually call'd *Fibula*. See FIBULA. Hence

PERONÆUS *Anticus*, *longus* or *primus*, a Muſcle of the Leg, ariſing fleſhy and tendinous from the Head to the Middle of the Perone; whence running as in a Pulley, thro' the Channel on the hind Part of the outer Ankle Bone, it is inſerted into the Upper-end of the Bone of the Metatarſus, which joins the great Toe: The Office of this Muſcle is to draw the Foot upwards.

PERONÆUS *Poſticus*, *brevis*, or *ſecundus*, a Muſcle ſometimes alſo call'd *Semifibulæus*, ariſing fleſhy and ſharp in the Back-part of the Perone; whence, continuing down the Outerſide of the Bone till below the Middle, it forms a ſmooth, ſtrong, flat Tendon, which runs thro' the ſame Channel at he Bottom of the Malleolus externus, with the Longus, to he Out-ſide of the Os Metatarſi of the little Toe: Its Office is to pull the Foot upwards.

PERORATION, in Rhetoric, the *Epilogue*, or laſt Part of an Oration; wherein, what the Orator had inſiſted on thro' his whole Diſcourſe is urg'd a-freſh, with greater Vehemence and Paſſion: Thus *Quintilian*. See ORATION.

The *Peroration* conſiſts of two Parts, 1. *Recapitulation*, wherein the Subſtance of what is diffuſed throughout the whole Speech, is collected briefly, and curſorily; and ſum'd up with new Force and Weight. See RECAPITULATION.

And, 2. The *Moving of the Paſſions*; which is ſo peculiar to the *Peroration*, that the Maſters of the Art call this Part *ſedes affectuum*. See PASSIONS.

The Paſſions to be rais'd in the *Peroration* are various, according to the various Kinds of Orations: In a Panegyric, Love, Admiration, Emulation, Joy, &c. In an Invective, Hatred, Contempt, &c: In a Deliberation, Hope, Confidence or Fear.

The Qualities required in the *Peroration* are, that it be vehement and paſſionate; and that it be ſhort: Becauſe, as *Cicero* obſerves, Tears ſoon dry up.

The *Peroration* was *Cicero*'s Maſter-piece: Here that great Orator not only ſet his Judges and Auditors on Fire, but even ſeem'd to burn himſelf; eſpecially when he was to raiſe Pity and Commiſeration towards the accuſed; where, as he himſelf tells us, he frequently fill'd the Forum with Weeping and Lamentation. He adds, that where there were ſeveral Orators to ſpeak for the ſame Perſon, the *Peroration* was always reſerv'd to *Cicero*; and ſubjoins, that if he excell'd herein, 'twas not owing to Genius, but to the Grief he himſelf ſhew'd. This is abundantly evident in his Milonian *Peroration*; where he ſays *ſed finis ſit: neque enim præ Lachrymis jam loqui poſſum; & hic ſe Lacrymis defendi vetat*---and in that for *Rabirius Poſthumus*: *ſed jam, quoniam, ut ſpero, fidem quam potui, tibi præſtiti, Poſthume, reddam etiam Lacrymas quas debeo -- Jam indicat tot hominum fletus quam ſis carus tuis, & me dolor debilitat, includitque vocem.*

PERPENDICULAR, in Geometry, a Line falling directly on another Line, or ſo as to make equal Angles on each Side; call'd alſo a *normal* Line. See LINE.

Thus the Line *I G*. (Tab. Geometry Fig. 57.) is *Perpendicular* to the Line *K H. i. e.* makes right and equal Angles therewith:

From the very Notion of *Perpendiculars*, it follows; 1. That the *Perpendicularity* is mutual, *i. e.* if a Line as *I G* be *Perpendicular* to another, *A B*; that other, is alſo *Perpendicular* to the firſt.

2. That only one *Perpendicular* can be drawn from one Point in the ſame Place.

3. That if a *Perpendicular* be continu'd thro' the Line it was drawn *Perpendicularly* to; the Continuation will alſo be *Perpendicular* to the ſame.

4. That if there be two Points of a right Line, each of which is at an equal Diſtance from two Points of another right Line; that Line is *Perpendicular* to the other.

5. That a Line which is *Perpendicular* to another, is alſo *Perpendicular* to all the Parallels of the other. See PARALLEL.

6. That a *Perpendicular* Line is the ſhorteſt of all thoſe which can be drawn from the ſame Point to the ſame right Line.

Hence the Diſtance of a Point from a Line, is a right Line drawn from the Point *Perpendicular* to the Line or Plane; and hence the Altitude of a Figure is a *Perpendicular* let fall from the Vertex to the Baſe. See DISTANCE.

To erect a Perpendicular G I on any given Point *G*, in a right Line *M L*; one Foot of the Compaſſes being in *G*, with any Interval at Pleaſure, cut off equal Parts on each Side *G H* and *G K*; from the Points *K* and *H*, with an Interval greater by half than *K H* ſtrike two Arches interſecting in *I*; the right Line *G I* is *Perpendicular* to *M L*.

Perpendiculars are beſt deſcrib'd in Practice by means of a Square; one of whoſe Legs is applied along that Line to, or from which the *Perpendicular* is to be let fall or rais'd. See SQUARE.

To erect a Perpendicular on the End of a given Line, ſuppoſe at *P*; open your Compaſſes to any convenient Diſtance, and ſetting one Foot in *C*, deſcribe the Arch *R P S*; lay a Ruler from *S* through *C*, it will find the Point *R* in the Arch, whence draw *P R*, which is *Perpendicular* to *P M*.

To let fall a Perpendicular on a given Line *M P*, from a given Point L; ſet one Foot of the Compaſſes in *L*, and with the other croſs the given Line in the Points *M* and *G*. Then ſetting the Compaſſes in *G* and *M*, ſtrike two Arches interſecting each other below in 8: Then lay a Ruler from *L* to 8, and the Line *K L* deſcrib'd thereby is the *Perpendicular* requir'd.

PERPENDICULAR to *a Parabola*, is a right Line cutting the Parabola in the Point in which any other right Line touches it, and is alſo itſelf *Perpendicular* to that Tangent. See PARABOLA.

A Line is ſaid to be *Perpendicular* to a Plane, when it is *Perpendicular* to all the Lines it meets with in that Plane; and a Plane is *Perpendicular* to another Plane, when a Line in one Plane is *Perpendicular* to the other Plane. See PLANE.

PERPENDICULARITY *of Plants*, is a curious *Phænomenon*, in Nat. Hiſtory, firſt obſerv'd by M. *Dodart*, and publiſh'd in an expreſs Eſſay on the *Affectation of* Perpendicularity, *obſervable in the Stems or Stalks of all Plants; of the Roots of many, and even of the Branches as much as poſſible.*

The Matter of Fact is, that tho' almoſt all Plants riſe a little crooked; yet, the Stems ſhoot up perpendicularly, and the Roots ſink down *Perpendicularly*: Even ſuch as by the Declivity of the Soil come out inclin'd, or ſuch as are diverted out of the Perpendicular by any violent Means; again ſtreighten themſelves, and recover their *Perpendicularity*, by making a ſecond and contrary Bend or Elbow, without rectifying the firſt.

A common Eye looks on this Affectation without any Surprize; but a Man that knows what a Plant is, and how form'd, finds it a Subject of Aſtoniſhment.

In effect, each Seed contains a little Plant, already form'd, and needing nothing but to be unfolded: The little Plant has its little Root; and the Pulp, which is uſually ſeparated into two Lobes, is the Foundation of the firſt Food the Plantule draws, by its Root, when it begins to germinate. See SEED, RADICLE, &c.

Now, if a Seed in the Earth, be ſo diſpoſed, as that the Root

Root of the little Plant be turn'd downwards, and the Stem upwards, and even *Perpendicularly* upwards; 'tis eaſy to conceive that the little Plant coming to unfold itſelf, 'its Stalk and Root need only follow the Direction they have, to grow *Perpendicularly*. But 'tis known the Seeds of Plants whether ſown of themſelves, or by the Help of Man, fall in the Ground at random; and among an infinite Number of Situations with regard to the Stalk of their Plant, the *Perpendicular* one upwards is but one. See SEMINATION.

In all the reſt therefore, 'tis neceſſary the Stalk redreſs or rectify itſelf, in order to get out of the Ground: But what Force is it, that effects this change, which is certainly a violent Action? Is it that the Stalk finding a leſs Load of Earth above it, goes naturally that way where it finds the leaſt Obſtacle? Were this ſo, the little Root when it happens to be uppermoſt, muſt for the ſame Reaſon follow the ſame Direction, and mount on high.

M. *Dodart*, therefore, to account for two ſuch different Actions; has recourſe to another Syſtem: He ſuppoſes that the Fibres of the Stalks are of ſuch a Nature, as that they contract and ſhorten by the Heat of the Sun, and lengthen out by the Moiſture of the Earth: And on the contrary, that the Fibres of the Roots contract by the Moiſture of the Earth, and lengthen by the Heat of the Sun.

When, then, the Plantule is inverted, and the Root a-Top; the Fibres which compoſe one of the Branches of the Root are not equally expoſed to the Moiſture of the Earth; the lower Part is more expoſed than the Upper. The Lower therefore muſt contract the moſt; which Contraction is again promoted by the lengthening of the Upper, whereon the Sun acts with the greateſt Force. Of Conſequence, therefore, this Branch of the Root muſt recoil towards the Earth, and inſinuating thro' the Pores thereof get underneath the Bulb, &c.

By inverting this reaſoning, 'tis eaſy to ſhew how the Stalk comes to get uppermoſt.

In a Word, we may imagine that the Earth attracts the Root to itſelf, and that the Sun contributes to its Deſcent; and on the contrary, that the Sun attracts the Stem, and the Earth, in ſome meaſure, ſends it towards the ſame.

As to the ſecond Streightning, *viz.* that of the Stalks in the open Air; he takes it to ariſe from the Impreſſion of external Cauſes, particularly the Sun and Rain. For the upper Part of a Stalk that is bent, is more expoſed to the Rain, Dew, and even Sun, &c. than the under. Now both theſe Cauſes, in a certain Structure of the Fibres, tend equally to ſtreighten the Part moſt expoſed, by the Shortening they ſucceſſively occaſion it; for Moiſture ſhortens by ſwelling, and Heat by Diſſipating. Indeed, what that Structure is which gives the Fibres ſuch different Qualities; or whereon it depends, is ſtill a Myſtery.

M. de la Hire Accounts for the *Perpendicularity* of the Stems or Stalks of Plants thus: He imagines that in Plants, the Root draws a coarſer and heavier Juice; and the Stem and its Branches a finer and more volatile one. And, in effect, moſt Naturaliſts conceive the Root as the Stomach of the Plant, where the Juices of the Earth are ſubtiliz'd, ſo as to become able to riſe thro' the Stem to the Extremity of the Branches. This Difference of Juices ſuppoſes larger Pores in the Roots than the Stalk, &c. and in a Word, a different Contexture; which Difference muſt be found even in the little inviſible Plant incloſed in the Seed: In this Plantule, therefore, we may conceive a point of Separation; ſuch, as that all on one Side *E. gr.* the Root, ſhall be unfolded by the groſſer Juices, and all on the other Side by the more ſubtile Juices.

Suppoſe, now, the Plantule when its Parts begin to unfold, to be entirely over-turn'd; the Root a Top, and the Stalk below: the Juices which enter the Root will ſtill be coarſeſt, and when they have open'd and enlarg'd the Pores, ſo as to admit Juices of a determinate Weight, thoſe Juices ſtill preſſing the Root more and more, will drive it downwards, and this the more, as the Root more extended or enlarged: For the Point of Separation being conceived as the fixed Point of a Lever, they will act by the longer Arm. At the ſame Time the volatile Juices having penetrated the Stalk, will tend to give it a Direction from below upwards; and by reaſon of the Lever, will give it more and more every Day. Thus is the little Plant turn'd on its fix'd Point of Separation; till it be perfectly erect.

The Plant thus erected; the Stalk, we know, ſhou'd continue to riſe *Perpendicularly*, to give it the more firm Biding and enable it to withſtand the Effort of Wind and Weather.

The Manner wherein this is effected, M. *Parent* lays down thus: The nutritious Juice being arriv'd at the Extremity of a riſing Stalk; if it evaporate, the Weight of the Air which encompaſſes it on all Sides, will make it aſcend vertically; and if it do not evaporate, but congeal, and remain fix'd to that Extremity whence it was ready to go off; the Weight of the Air will give it the ſame Direction: ſo that the Stalk will have acquir'd a very little new Part, vertically laid over it: Juſt as in a Candle held any how obliquely to the Horizon, the Flame ſtill continues Vertical, by the Preſſure of the Atmoſphere. The new Drops of Juice that ſucceed, will follow the ſame Direction; and as all together form the Stalk; that muſt of courſe be Vertical, unleſs ſome particular Circumſtance intervene.

As to the Branches, which are at firſt ſuppoſed to proceed laterally out of the Stalk in the firſt Embryo of the Plant; tho' they ſhou'd even come out in a horizontal Direction, yet, muſt they raiſe 'emſelves upwards by the conſtant Direction of the nutritious Juice; which at firſt ſcarce meets any Reſiſtance in a tender, ſupple Branch; and even afterwards, tho' the Branch grow more firm, yet will it act with the more Advantage: ſince the Branch being become longer, furniſhes it with a longer Arm of a Lever. The ſlender Action of a little Drop becomes very conſiderable, by its Continuity; and by the Aſſiſtance of ſuch favorable Circumſtances. Hence may be accounted for, that regular Situation and Direction of the Branches, which all, and always, nearly, make the ſame conſtant Angle of 45° with the Stem and one another. See BRANCH.

M. *Aſtruc*, accounts for the *Perpendicularity* of the Stems, and their Redreſſing themſelves; on theſe two Principles. 1°. That the nutritious Juice ariſes from the Circumference of the Plant, and terminates in the Pith. 2°. That Fluids contained in Tubes either parallel or oblique to the Horizon, gravitate on the lower Part of the Tubes, and not at all on the Upper.

For hence it eaſily follows, that in a Plant poſited either obliquely or parallel to the Horizon, the nutritious Juice will act more on the lower Part of the Canals than the upper, and by this Means, inſinuate more into the Canals communicating therewith, and be collected more copiouſly therein; thus the Parts on the lower Side will receive more Accretion, and be more nouriſh'd than thoſe on the upper; the Conſequences whereof muſt be, that the Extremity of the Plant will be oblig'd to bend upwards.

The ſame Principle brings the Seed into its due Situation at firſt: In a Bean planted upſide down, the Plume and Radicle are eaſily perceiv'd with the naked Eye, to ſhoot, at firſt, directly for about an Inch; but thence forth they begin to bend, the one downward, and the other upward. The like is ſeen in a heap of Barley, to be made into Malt; in a Quantity of Acorns, laid to ſprout in a moiſt Place, &c. each Grain of Barley in the firſt Caſe, and each Acorn in the ſecond, has a different Situation; and yet, all the Sprouts tend directly upward, and the Roots downward, and the Curvity or Bend they make is greater or leſs as their Situation approaches more or leſs to the direction wherein no Curvature at all wou'd be neceſſary. Now, two ſuch oppoſite Motions cannot ariſe without ſuppoſing ſome conſiderable Difference between the two Parts: The only one we know of, is, that the Plume is fed by a Juice, imported to it by Tubes parallel to its Sides, whereas the Radicle imbibes its Nouriſhment at all the Pores in its Surface. As oft, therefore, as the Plume is either parallel, or inclin'd to the Horizon, the nutritious Juice feeding the lower Parts more than the upper, will determine its extremes to turn upward, for the Reaſons already aſſign'd. On the contrary, when the Radicle is in the like Situation, the nutritious Juice penetrating more copiouſly thro' the upper Part than the under; there will be a greater Accretion of the former, than the latter; and conſequently the Radicle will be bent downwards. And this mutual Curvity of the Plume and Radicle muſt continue, till ſuch Time as their Sides are nouriſh'd alike, which cannot be till they are Perpendicular. *Memoirs de l Acad. Royale des Scien.* An. 1708.

PERPETUAL, ſomething that endures always, that laſts for ever. See ETERNITY.

The Term is ſometimes alſo uſed for a Thing that laſts, or holds, during a Perſon's Life.

Thus Offices, &c. held *durante vita*, are ſometimes call'd *Perpetual* Offices: In this Senſe M. *Fontenelle* is ſaid to be *Perpetual* Secretary of the Royal Academy of Sciences. Hence the *French* call him abſolutely *M. le Perpetuel.*

PERPETUAL *Motion*, in Mechanicks, is a Motion which is ſupplied and renew'd from itſelf, without the Intervention of any external Cauſe; or it is an uninterrupted Communication of the ſame Degree of Motion from one Part of Matter to another, in a Circle, (or other Curve returning into itſelf) ſo as the ſame Momentum ſtill returns perpetually undiminiſhed upon the firſt mover. See MOTION.

To find a *perpetual* Motion, or to conſtruct an Engine, &c. which ſhall have ſuch a Motion, is a famous Problem that has employ'd the *Mathematicians* of two thouſand Years; tho' none perhaps have proſecuted it with Attention and Earneſtneſs equal to thoſe of the preſent Age.

Infinite are the Schemes, Deſigns, Plans, Engines, Wheels, &c. to which this long'd for *perpetual* Motion has given Birth: 'Twere as endleſs as impertinent to give a Detail of 'em all.

Nor does any of 'em deſerve particular Mention, ſince they have all equally prov'd Abortive. It wou'd rather be of the Nature of an Affront than a Complement, to diſtinguiſh the Pretenders hereto; when the very Thing they are commemorated for, carries with it ſo diſagreable an Idea.

In effect, there ſeems but little in Nature to countenance all this Aſſiduity and Expectation: Among all the Laws of Matter and Motion, we know of none yet, which ſeems to lay any Principle or Foundation for ſuch an Effect. See NATURE.

Action and Re-action are allow'd to be ever equal; and a Body which gives any Quantity of Motion to another, loſes juſt ſo much of its own: But under the preſent State of Things; the Reſiſtance of the Air, the Friction of the Parts of Machines, &c. do neceſſarily retard every Motion. See RESISTANCE.

To keep the Motion on foot, therefore, 1. Either there muſt be a Supply from ſome foreign Cauſe; which in a *perpetual* Motion is excluded.

Or, 2° all Reſiſtance from the Friction of the Parts of Matter, muſt be removed; which implies a Change in the Nature of Things. See MATTER.

For by the ſecond Law of Nature, the Changes made in the Motions of Bodies, are always proportional to the impreſs'd moving Force, and are produc'd in the ſame Direction with it; no Motion, then, can be communicated to any Engine, greater than that of the firſt Force impreſs'd. See COMMUNICATION and PERCUSSION.

But, on our Earth, all Motion is perform'd in a reſiſting Fluid; and muſt therefore of neceſſity be retarded; conſequently a conſiderable Quantity of its Motion will be ſpent on the Medium. See MEDIUM.

Nor is there any Engine or Machine wherein all Friction can be avoided; there being in Nature no ſuch Thing as exact Smoothneſs, or perfect Congruity; The Manner of the Coheſion of the Parts of Bodies, the ſmall Proportion the ſolid Matter bears to the Vacuities between them, and the Nature of thoſe conſtituent Particles not admitting it. See FRICTION.

This Friction, therefore, will alſo in Time ſenſibly diminiſh the impreſſed, or communicated Force; ſo that a *perpetual* Motion can never follow, unleſs the communicated Force be ſo much greater than the generating Force, as to recompenſe the Diminution made therein by all theſe Cauſes: but *nil dat quod non habet*, the generating Force cannot communicate a greater Degree of Motion than it hath itſelf.

The whole Buſineſs of finding a *perpetual* Motion, therefore, comes to this, *viz.* to make a Weight heavier than itſelf, or an elaſtic Force greater than itſelf. See MACHINE.

Or 3°. and *laſtly*, there muſt be ſome Method of gaining a Force equivalent to what is loſt, by the artful Diſpoſition and Combination of Mechanic Powers: To which laſt Point, then, all Endeavours are directed; but how, or by what Means ſuch Force ſhou'd be gain'd, is ſtill a Myſtery.

The Multiplication of Forces, 'tis certain avails nought; for what is gain'd in Force is ſtill loſt in Time, ſo that the Quantity of Motion ſtill remains the ſame.

All Mechanicks cannot really make a little Force equal, or ſuperior to a larger; and wherever a leſs Force is found *in Equilibrio* with a larger *v. g.* 25 Pounds with 100, 'tis a Kind of Deception of the Senſe; the Equilibrium is not ſtrictly between 100 Pounds and 25; but between 100 Pounds, and 25 moving, or diſpoſed to move four times as faſt as the 100.

To conſider the Weights 100 and 25 as fix'd, and immoveable; the 25 wou'd ſeem, ſome how, rais'd beyond 'emſelves; which is one of the Sham-miracles of Mechanicks, that has deceiv'd Millions; but which is eaſily diſſipated by conſidering the four Degrees of Velocity, which are to be given to the 25 Pounds, and which require a Force equal to the Exceſs of 100 above 25 Pounds.

A Force of 10 Pounds moved with ten times the Velocity of the 100 Pounds, wou'd have equal'd 'em in the like Manner; and the ſame may be ſaid of all the poſſible Products equal to 100. But in fine, there muſt ſtill be 100 Pounds of Force on each Side, what way ſoever they be taken; whether in the Matter, or in the Velocity.

This is an inviolable Law of Nature; by which nothing is left to Art, but the Choice of the ſeveral Combinations that may produce the ſame Effect. See *Law of* NATURE.

PERPETUAL, or *endleſs Screw*. See SCREW.

PERPETUAL *Pills*, *Pilulæ perpetuæ*, among Phyſicians, are Pills made of *Regulus* of *Antimony*; which being ſwallow'd, and voided 50 Times, will purge every Time, with undiminiſh'd Force. See ANTIMONY.

PERPETUAL *Glandules*, in Anatomy, are thoſe which are Natural; thus diſtinguiſh'd from the adventitious ones. See GLAND.

PERPETUITY, in the Canon Law, the Quality of a Benefice that is irrevocable, or whoſe Incumbent cannot be deprived; except in certain Caſes determin'd by Law. See BENEFICE.

'Tis aſſerted with Reaſon, that the *Perpetuity* of Benefices is eſtabliſh'd by the ancient Canons, and that the Prieſts are inſeparably attach'd to their Churches, as by a ſpiritual Marriage. 'Tis true, by the Corruption of the Times, the ſecular Prieſts being fallen into great diſorder, and even Contempt; the Biſhops antiently call'd the Religious to their Aſſiſtance, and committed to them the Cure of Souls, and the Adminiſtration of Pariſhes; ſtill remanding 'em back again to their Cloiſters, when they thought fit, and revoking them *ad Nutum*.

But this vague and uncertain Adminiſtration only laſted to the XII Century, when Benefices return'd to their eſſential *Perpetuity*.

PERQUISITE, any Thing gotten by a Man's own Induſtry, or purchaſed with his own Money; in contradiſtinction to that which deſcends to him from his Father, or Anceſtors.

PERQUISITES of Court are thoſe Profits which ariſe to a Lord of a Mannor, by Virtue of his Court-Baron, over and above the certain yearly Profits of his Land; as Fines of Copy-holds, Harriots, Amerciaments, Waifes, Strays, &c.

PER QUÆ *ſervitia*, is a Writ judicial, iſſuing from the Note of a Fine, and lies for the Cognizee of a Manor, Seignory, chief Rent, or other Services, to compel him that is Tenant of the Land at the Time of the Note of the Fine levied, to attorn to him.

PERRON, in Architecture, a Stair-Caſe lying open, or without-ſide the Building; properly, the Steps in the Front of a Building, which lead into the firſt Story when rais'd a little above the Level of the Ground. See STAIR-CASE.

Perrons are made of different Forms and Sizes, with regard to the Space and Height they are to lead to.

Sometimes the Steps are round, or Oval; more uſually Square.

PERRUKE, was anciently uſed for a long Head of natural Hair, ſuch, particularly, as there was care taken in the Adjuſting and Trimming of. The Latins call'd it *Coma*, whence part of *Gaul* took the Denomination of *Gallia Comata*; from the long Hair which the Natives wore as a Sign of Freedom. See HAIR.

An ancient Author ſays, that *Abſolom's Perruke* weigh'd 200 Shekels.

PERRUKE, is now uſed for a Set of falſe, or borrow'd Hair, curl'd, buckled, and ſew'd together on a Frame or Cawl; anciently call'd a *falſe Perruke*.

Menage derives the Word from the *Greek* πυρίχη which ſignifies the ſame Thing.

'Tis doubted whether or no the Uſe of *Perrukes* was known among the Ancients. 'Tis true, they uſed falſe Hair; *Martial* and *Juvenal* make merry with the Women of their Time, for making 'emſelves look young with their borrow'd Hair; with the Men who chang'd their Colours according to the Seaſons; and the Dotards who hoped to deceive the Deſtinies by their white Hair.

But theſe ſeem to have ſcarce had any Thing in common with our *Perrukes*; and were at beſt compoſed of Hair painted, and glu'd together: Nothing can be more ridiculous than the Deſcription *Lampridius* gives of the Emperor *Commodus's Perruke*: 'Twas powder'd with ſcrapings of Gold, and oil'd (if we may uſe the Expreſſion) with glutinous Perfumes for the Powder to hang by.

In effect, the uſe of *Perrukes*, at leaſt on their preſent footing, is not an hundred Years old: The Year 1629 is reckon'd the Epocha of long *Perrukes*; at which time they began to appear in *Paris*; whence they ſpread by degrees throughout the reſt of *Europe*.

At firſt it was reputed a Scandal for young People to wear 'em; by reaſon the Loſs of the Hair at that Age was attributed to a Diſeaſe, the very Name whereof is a Reproach; but at length the Mode prevail'd over the Scruple; and now all Ages and Conditions wear 'em; foregoing, without any Neceſſity, the Conveniences of their natural Hair.

'Twas ſometime, though, 'ere Eccleſiaſticks came into the Faſhion: The firſt who aſſum'd the *Perruke* were ſome of the *French* Clergy, in the Year 1660; nor is the Practice yet well authoriz'd. The Cardinal *Grimaldi* in 1684, and the Biſhop of *Lavaur* in 1688, prohibited the Uſe of the *Perruke* to all Prieſts without a Diſpenſation and Neceſſity. *M. Thiers* has a Treatiſe expreſs, to prove the *Perruke* indecent in an Eccleſiaſtic, and directly contrary to the Decrees and Canons of Councils. A Prieſts Head embelliſh'd with an artificial Hair curiouſly adjuſted, he eſteems a Monſter in the Church; nor can he conceive any Thing ſo ſcandalous as an Abbot with a florid Countenance, heighten'd with a jolly *Perruke*.

PERRY, a Drink made of Pears, after the like manner as Cyder from Apples.

The beſt Fruit for this Uſe are ſuch as are leaſt fit for eating; *E. gr.* the Borberry-Pear, Horſe-Pear, Boreland-Pear, and Choak-Pear; and ſtill the redder they are the better.

The Method of preparing *Perry* is perfectly the ſame with that of preparing Cyder. See CYDER. Only Note, that the Fruit muſt be perfectly ripe. Some mix Crabs with 'em to mend the Liquor.

PER SE, in the Schools, is ſometimes oppoſed to *per accidens*; in which Senſe a Thing is ſaid to agree with another *Per ſe*, when the Agreement is not owing to any accidental Event, but that is found in the intrinſic Principles of the Things themſelves.

Sometimes *Per ſe* is oppoſed to *Per aliud*; in which Senſe God alone is ſaid to have a Being *Per ſe*, as not deriving it from any other, but having it neceſſarily and of himſelf.

Sometimes again, *Per ſe* ſignifies as much as, of its own Nature, or in virtue of its own Entity: Thus the Sun is ſaid to give light *Per ſe*; and Quantity is extended *Per ſe*.

Among Logicians, a Thing is ſaid to be known *Per ſe*, *Per ſe notum*, when we immediately perceive it upon the firſt propoſing of the Terms: As that the Whole is greater than its Parts. See AXIOM.

The Philoſophers go ſo far as to conſider the Mode of a Thing exiſting *Per ſe*, or that which conſtitutes its Exiſtence ſuch; which they call *Perſeity*, *Perſeitas*. See EXISTENCE.

PERSECUTION, a Word which literally imports any Pain, Affliction, or Inconvenience, which a Perſon deſignedly inflicts on another.

But, as a Term, Perſecution is reſtrain'd to the Sufferings of Chriſtians, in Behalf of their Religion; particularly to thoſe of the primitive Chriſtians, under the Heathen Emperors *Nero*, *Decius*, *Diocletian*, &c.

They reckon ten of theſe Perſecutions; *Nero* lighted the Firſt. *Lactantius* has wrote the Hiſtory of the Deaths of *Perſecutors*; tho' ſome queſtion whether that Work be really his or not. Biſhop *Burnet*, who has turn'd it into *Engliſh*, makes no great doubt of it.

PERSEVERANCE, in Theology, a Chriſtian Virtue, whereby we are enabled to perſiſt in the way of Salvation to the End.

The final *Perſeverance* of the Saints is an Article much controverted between the *Arminians* and *Calviniſts*: The latter of whom maintain it impoſſible for Grace to be loſt; and therefore make *Perſeverance* to the End, a neceſſary Conſequence thereof; which the former deny; believing the moſt confirm'd Believers never out of a Poſſibility of falling See GRACE.

PERSEUS, in Aſtronomy, a Conſtellation of the Northern Hemiſphere. See CONSTELLATION.

The Stars in this Conſtellation, in *Ptolomy*'s Catalogue are 29; in *Tycho*'s as many; in the *Britannic* Catalogue 67. The Longitudes, Latitudes, Magnitudes, &c. whereof are as follow:

Stars in the Conſtellation PERSEUS.

PERSIAN, or the PERSIAN *Tongue*, one of the living oriential Languages; ſpoke in the Empire of *Perſia*. See LANGUAGE.

The *Perſian* has two Particularities not found in any of the other Eaſtern Tongues, The one that it has an auxiliary Verb, anſwering to the Verb εἰμι of the *Greeks*; the other, that it has an Aoriſtus: Both theſe it borrow'd from the *Macedonians*, after the Conqueſt of *Alexander*. See GREEK.

PERSIAN *Wheel*, in Agriculture, is a Machine for raiſing a Quantity of Water ſufficient to over-flow Lands bordering on the Banks of Rivers, &c. where the Stream is too low to do it alone. See WHEEL.

PERSIAN or PERSIC, in Architecture, a Name common to all Statues of Men, ſerving inſtead of Columns, to ſupport Entablatures. See STATUE.

They only differ from Caryatides, in that thoſe repreſent Statues of Women. See CARYATIDES.

The *Perſian* is a Kind of Order of Columns, firſt practiz'd among the *Athenians*; on occaſion of a Victory their General *Pauſanias* obtain'd over the *Perſians*. As a Trophy of this Victory, the Figures of Men dreſs'd in the *Perſian* Mode, with their Hands bound before them, and other Characters of Slavery, were charg'd with the Weight of Doric Entablatures; and made to do the Office of Doric Columns. See ORDER.

Perſian Columns, *M. le Clerc* obſerves, are not always made with the Marks of Slavery; but are frequently uſed as Symbols of Virtues, Vices, of Joy, Strength, Valour, &c. as when made in the Figure of *Hercules* to repreſent Strength, of *Mars*, *Mercury*, *Fauns*, *Satyres*, &c.

PERSIAN *Æra* and Year. See EPOCHA and YEAR.

PERSON, an individual Subſtance, of a rational or intelligent Nature. See SUBSTANCE, and INDIVIDUAL.

The Father and Son are reputed, in Law, as the ſame Perſon; an Embaſſador repreſents the Perſon of his Prince. See EMBASSADOR.

In Theology the Godhead is divided into three Perſons; but here the Word *Perſon* carries a peculiar Idea, very different from that attach'd to it every where elſe; being only uſed for want of a Term more pertinent and expreſſive. See TRINITY.

The Word *Perſon*, *Perſona* is ſaid to be borrow'd a *Perſonando*, from perſonating, or counterfeiting; and is ſuppoſed to have firſt ſignified a Mask: By Reaſon, ſays *Boethius*, *in Larva Concava ſonus volvatur*, and hence the Actors who appear'd mask'd on the Stage, were ſometimes call'd *Larvati*, and ſometimes *Perſonati*.

Hence, adds *Boethius*, as the ſeveral Actors repreſented each their ſingle individual Man, *viz. Oedipus*, or *Chremes*, or *Hecuba*, or *Medea*; for this Reaſon, other People, who were alſo diſtinguiſh'd by ſomething in their Form, Character, &c. whereby they might be known; came alſo to be call'd by the *Latins Perſonæ*, and by the *Greeks* πρόσωπα.

Again, as theſe Actors rarely repreſented any but great and illuſtrious Characters; the Word came at length to import the *Mind*, as being a Thing of the greateſt Regard and Dignity among human Matters. And thus Men, Angels, and even God himſelf were call'd *Perſons*.

Things merely corporeal, as a Stone, a Plant, or a Horſe, were call'd *Hypoſtaſes*, or *Suppoſita*; but never *Perſons*. See HYPOSTASIS, &c.

Hence alſo, the Learned imagine, the ſame Name *Perſon* came to be uſed to ſignify ſome Dignity, whereby a *Perſon* is diſtinguiſh'd from another; as a Father, Husband, Judge, Magiſtrate, &c. In which Senſe we are to underſtand that of *Cicero*: *Cæſar* never ſpeaks of *Pompey*, but in Terms of Honour and Reſpect; but he does many hard and injurious Things againſt his *Perſon*.

This for the Name: as for the Thing, we have already defin'd *Perſon*, *an individual Subſtance of a reaſonable Nature*; which is the ſame *Boethius*'s Definition.

Now a Thing may be *individual* two ways; 1. Logically, as it cannot be predicated of any other; as *Cicero*, *Plato*, &c. 2. Phyſically, in which Senſe a Drop of Water ſeparated from the Ocean may be call'd an individual. *Perſon* is an individual Nature in each of theſe Senſes: *Logically* ſays *Boethius*, ſince *Perſon* is not ſpoke of univerſals, but only of Singulars and Individuals; we don't ſay the *Perſon* of an Animal or a Man, but of *Cicero* and *Plato*: And phyſically, ſince *Socrates*'s Hand or Foot are never conſider'd as *Perſons*

This laſt Kind of Individual is denominated two ways; poſitively, as when the *Perſon* is ſaid to be the whole Principle of Acting; for, to whatever Thing Action is attributed, that do the Philoſophers call a *Perſon*: And negatively, as when we ſay, with the Thomiſts, &c. that a Perſon conſiſt s in this, that it does not exiſt in another as a more perfect Being.

Thus, a Man, tho' conſiſting of two very different Things, *viz.* Body and Spirit, is not two *Perſons*; ſince neither Part alone is a whole Principle of Action; but one *Perſon*, ſince the Manner of his conſiſting of Body and Spirit, is ſuch as conſtitutes one whole Principle of Action: nor does he exiſt in any other as a more perfect Being, as *E. gr. Socrates*'s Foot does in *Socrates*, or a Drop of Water in the Ocean.

So Chriſt, tho' conſiſting of two different Natures, *viz.* the Divine and Humane, is not two *Perſons*, but one Divine *Perſon*; the human Nature, in him, not being a whole Principle of Action; but exiſting in the other more perfect one. By the Union of the Divine and human Nature one Individual, or Whole is conſtituted; that is one Principle of acting: for whatever Chriſt's Humanity does, that does his Divinity join'd therewith: So that there is but one *Perſon* in Chriſt, and one Operation, which is call'd *Theandric*. See THEANDRIC.

PERSON, in Grammar, a Term applied to Verbs and Pronouns, which being conjugated, are applicable to three different *Perſons*. See VERB, &c.

I love is a Verb uſed in the firſt *Perſon*; *thou loveſt* deſigns the ſecond *Perſon*; *he loveth* marks the Third: And thus in the Plural Number. See NUMBER.

I, *thou*, *he*, are Pronouns of the firſt, ſecond, and third *Perſons*. See PRONOUN.

Verbs agree with their Nouns in Tenſe, Number, and *Perſon*. See CONSTRUCTION, and CONCORD.

PERSON, *Perſona*, in dramatic Poetry, the Name and Part of an Actor; or of him repreſented by the Comedian.

At the Head of dramatic Pieces come the *Dramatis Perſonæ*, the Liſt of Actors, and Characters that are to appear on the Stage.

The ancient Tragedy was only a ſimple Chorus: *Theſpis* was the firſt who introduced a *Perſon* to relieve the Chorus; *Æſchylus* added a ſecond. See TRAGEDY. See alſo CHORUS, &c.

F. Boſſu obſerves, that in the Epic and Dramatic Poem, the ſame *Perſon* muſt reign throughout, *i. e.* muſt ſuſtain the chief Part thro' the whole Piece, and the Characters of all the other *Perſons* be ſubordinate to him. See CHARACTER. See alſo HERO.

PERSONA, in Law. See PARSON.

PERSONABLE, in Law, implies the being able to hold, or maintain, a Plea in Court.

That is, as the Civilians wou'd expreſs it, *habere perſonam ſtandi in Judicio*.

Thus they ſay, the Defendant was judg'd *Perſonable* to maintain this Action: Old *Nat. Brev.* in *Kitchin* Fol. 124. The Tenant pleaded that the Wife was an *Alien*, born in *Portugal*, without the Ligeance of the King; and Judgement was ask'd whether ſhe ſhou'd be anſwer'd? The Plaintiff ſaid he was made *Perſonable* by Parliament.

PERSONABLE, is alſo uſed to ſignify a Capacity to take any Thing granted or given. See CAPACITY.

PERSONAL, ſomething that concerns, or is reſtrain'd to the *Perſon*. See PERSON.

In Diſputes among the Learned, there is ever ſomething *Perſonal* intermix'd; in Ethicks 'tis a Maxim that all Faults are *Perſonal*, *i. e.* don't paſs to our Deſcendants.

A PERSONAL *Action*, in Law, is that levied directly, and ſolely againſt the Perſon, in oppoſition to a real or mix'd Action. See ACTION.

PERSONAL *Goods*, or *Perſonal Eſtate*, is that conſiſting of Money, Moveables, &c. which every Perſon has in his own Diſpoſal; in oppoſition to Lands and Tenements, which are call'd *real Eſtate*. See ESTATE, and GOODS.

Theft is defin'd a felonious taking a way another Man's *moveable Perſonal Goods*. See THEFT.

PERSONAL *Tithes*, are Tithes paid of ſuch Profits as come by the Labour of a Man's Perſon; as by buying and ſelling; gains of Merchandize, Handicraft, &c. See TITHES.

Pronoun PERSONAL, or *Verb* PERSONAL, in Grammar, a Verb, or Pronoun, conjugated in all the three Perſons. See VERB and CONJUGATION.

In Oppoſition to Impersonals which have only the third Perſon. See IMPERSONAL.

PERSONALITY, in the Schools, the Quality of *Perſon*; or that which conſtitutes an Individual in the Quality of *Perſon*. See PERSON,

The Philoſophers being uſed to conſider Matter, and Form in every other Thing; do the ſame in *Perſon*. The *Matter* of Perſon, according to them, is a ſingular Subſtance, endued with Reaſon. For, Subſtance may, at the Pleaſure of God, either be, or not be a Perſon; in aſmuch as the human Nature in Chriſt is not a Perſon. The *Form* of Perſon which they call *Subſiſtency*, *Suppoſitality*, and *Perſonality*, is that by which the foreſaid Subſtance becomes individual.

The School Divines are divided about what it is that diſtinguiſhes the ſeveral *Perſonalities* in the Trinity: ſome will have it to be only the different Relations; others, as *Floraventius* contend for ſome incommunicable Subſtance: S. *Bonaventure*, and S. *Thomas*, take it to be the different Origins, that diſtinguiſh the *Perſonalities*; which Opinion is the moſt follow'd. See IDENTITY.

PERSONALITY, in Law. An Action is ſaid to be in *Perſonaltiy*, when it is brought againſt the right Perſon.

PERSONATI, among Botaniſts, are ſuch Flowers as expreſs the gaping Mouths of ſome living Creatures.

PERSONIFYING, or PERSONALISING, the feigning a Perſon; or attributing a Perſon to an inanimate Being; or giving it the Figure, Sentiments, and Language of a Perſon.

The Poets have *perſonified* all the Paſſions; and made Divinities of them, which were worſhip'd by the Heathens; as the Goddeſs Perſuaſion, the God Sleep, the Furies, Envy, Diſcord, Fame, Fortune, Victory, &c. See GOD, See alſo MACHINE.

Perſonifying is eſſential to Poetry, eſpecially the Epopea. See POETRY and EPIC.

PERSPECTIVE, the Art of Delineating viſible Objects on a plane Surface, ſuch as they appear at a given Diſtance or Height, upon a tranſparent Plane, placed perpendicular to the Horizon, between the Eye and the Object. See DELMEATING.

This, we particularly call *linear Perſpective*, as regarding the Poſition, Magnitude, Form, &c. of the ſeveral Lines, or Contours of Objects; and expreſſing their Diminution: In Oppoſition to the *Aerial Perſpective*, which regards the Colour, Luſtre, Strength, Boldneſs, &c. of diſtant Objects, conſider'd as ſeen thro' a Column of Air; and expreſſes the Diminutions thereof.

The former is a Branch of Mathematicks: Some make it a Member of Opticks; others a Rivulet therefrom; and its Operations, are all Geometrical. See OPTICKS.

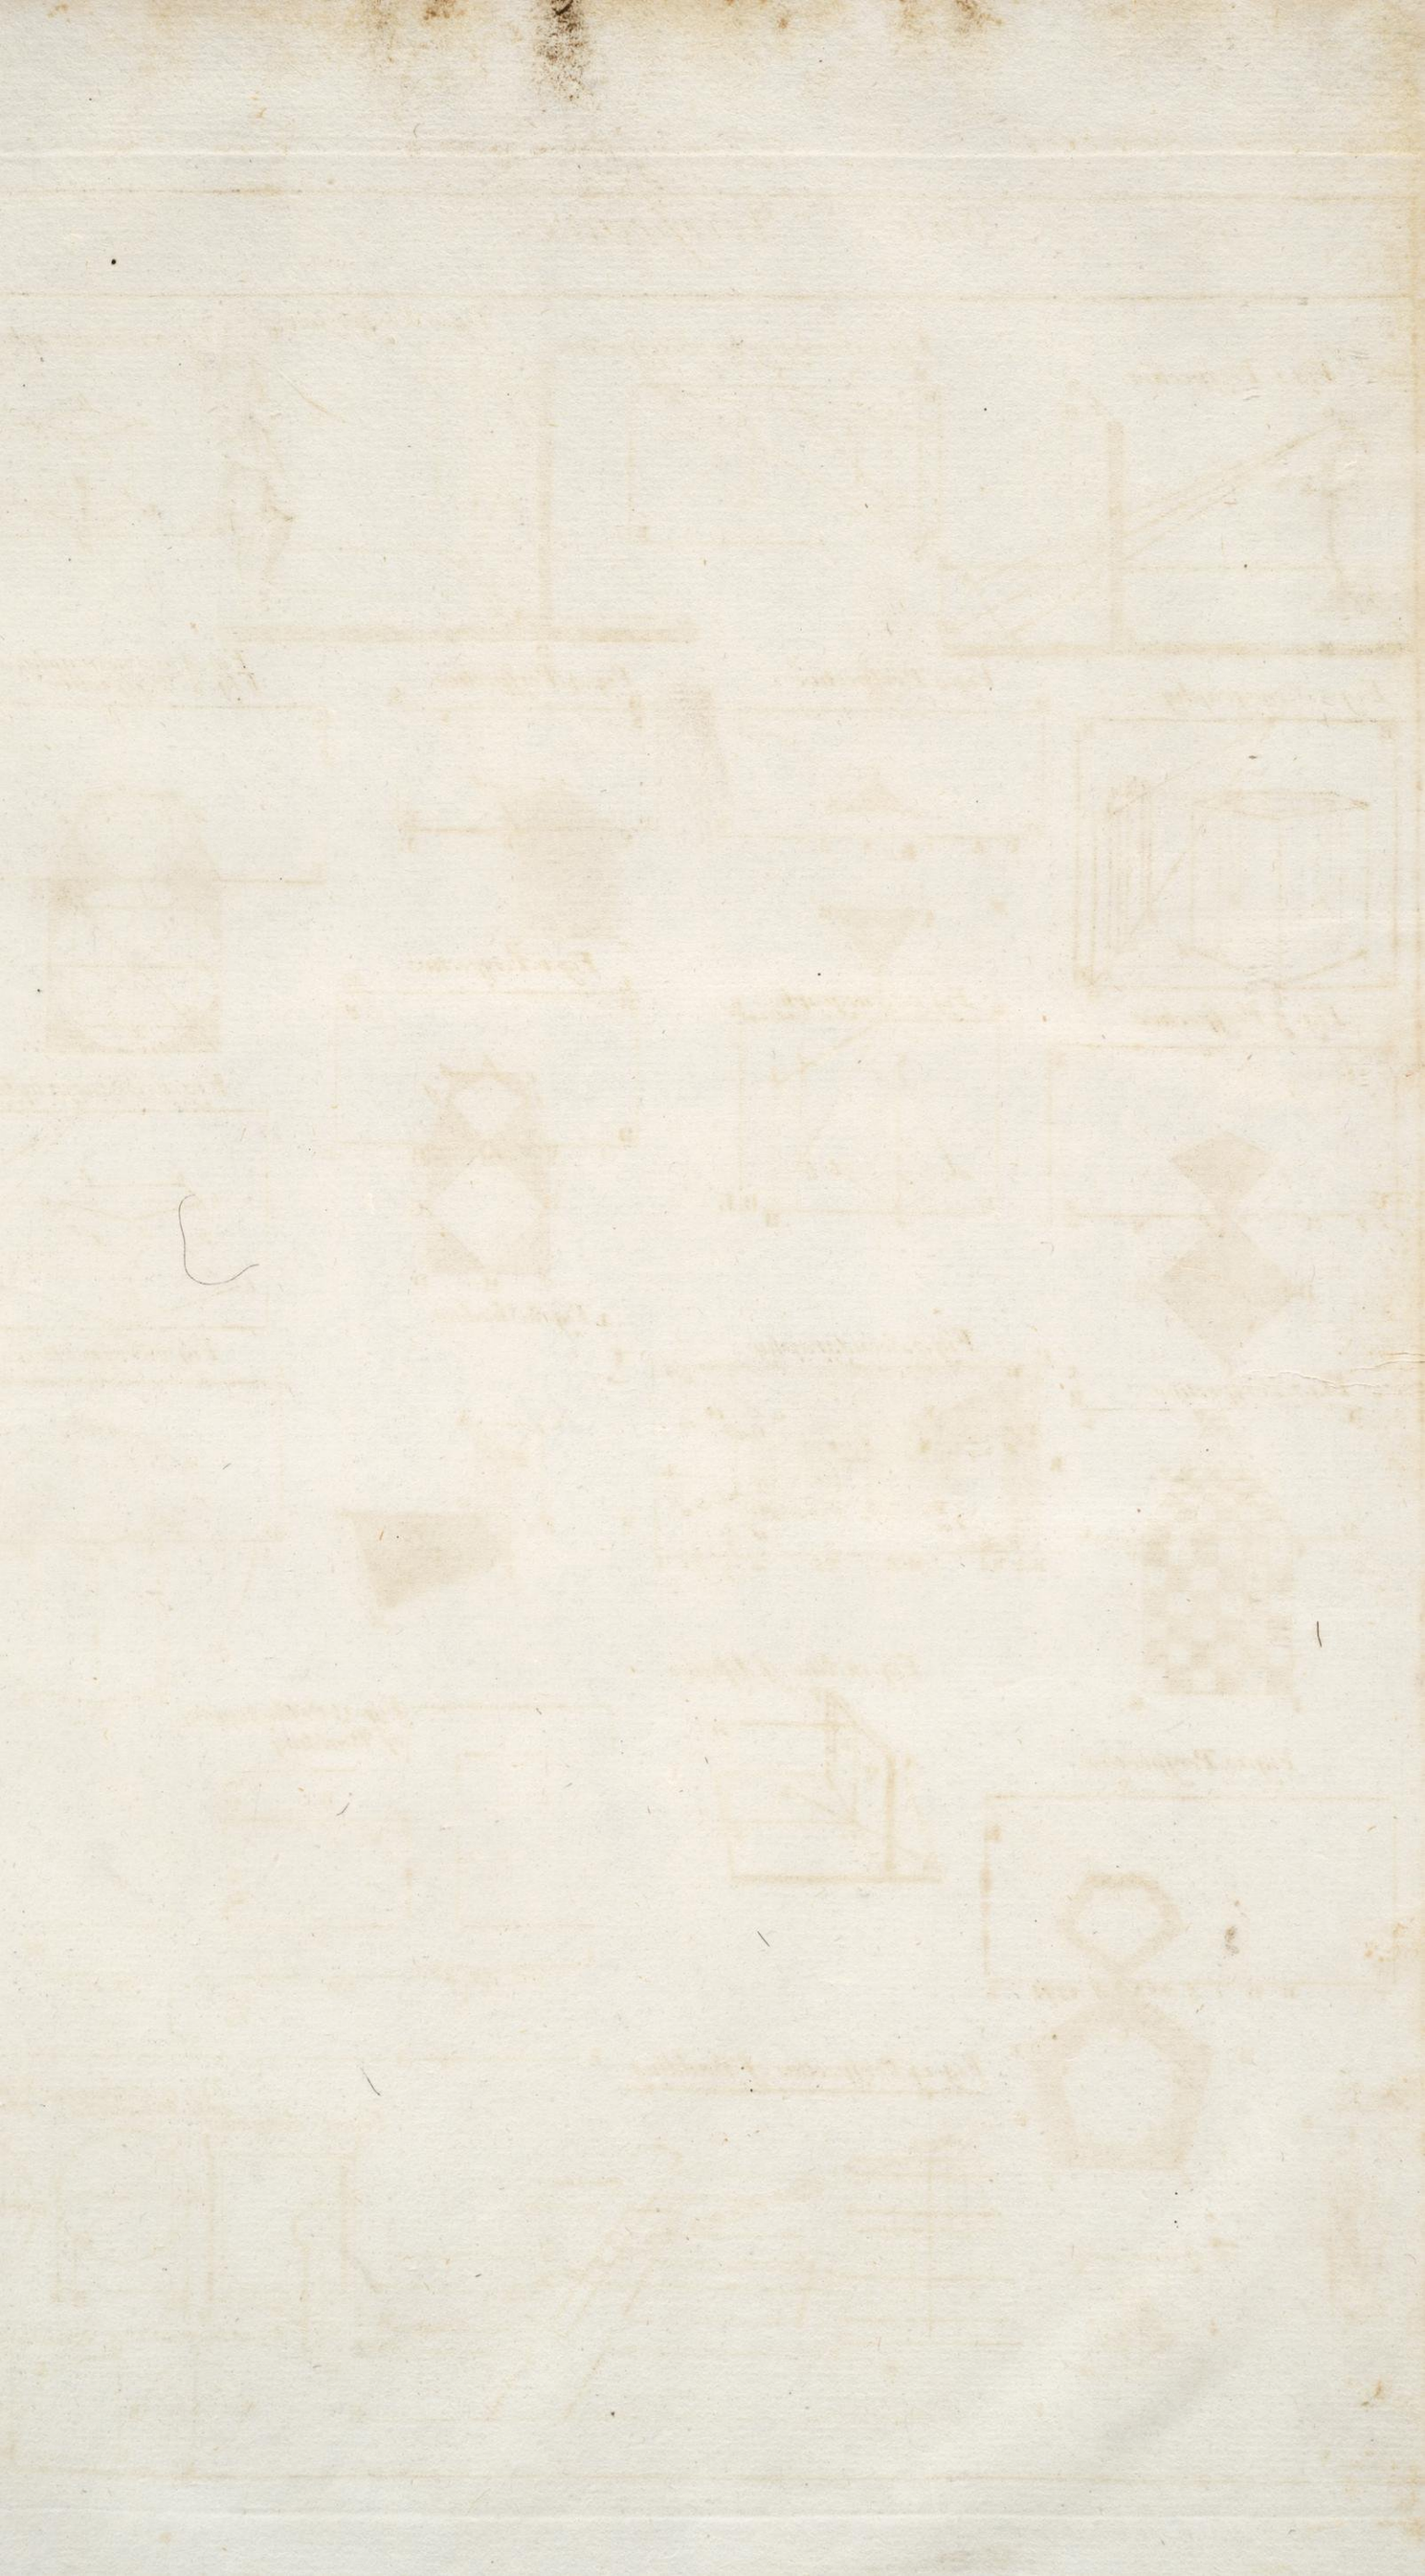
The latter is a Part of Painting, and conſiſts wholly in the Conduct of the Colours, their different Teints, or Degrees, Force, Weakneſs, &c. See COLOUR and COLOURING.

Some make a third Kind of *Perſpective*, *viz. Specular Perſpective*; which repreſents the Objects in Conical, Spherical, or other Mirrors, erect, and clear; whereas on Lawn and other Planes appear confuſed and irregular. See MIRROR.

To conceive the Nature of *Perſpective*; *i. e.* Linear *Perſpective*: Suppoſe a Glaſs-plane *H I*, (Tab. *Perſpective* Fig. 1.) rais'd perpendicularly on a horizontal Plane; and the Spectator *S*, directing his Eye *O*, to the Triangle *A B C*: If now we conceive the Rays *A O*, *O B*, *O C*, &c. in their Paſſage thro' the Plane, to leave their Traces or Veſtigia, in *a*, *b*, *c*, &c. On the Plane; there will appear the Triangle *a b c*; which, as it ſtrikes the Eye by the ſame Rays *a O*, *b O*, *c O*, by which the Species of the Triangle *A B C* is carried to the ſame; it will exhibit the true Appearance of the Triangle *A B C*, tho' the Object ſhou'd be remov'd; the ſame Diſtance and Height of the Eye being preſerv'd. See VISION, POINT, PLANE, LINE, &c.

The Buſineſs of *Perſpective* then, is to ſhew by what certain Rules the Points *a*, *b*, *c*, &c. may be found Geometrically: And hence alſo, we have a mechanical Method of delineating any Object very accurately; See DESIGNING.

Perſpective is either employ'd in repreſenting the Ichnographies, or Ground-plats of Objects, as projected on *Perſpective* Planes. See ICHNOGRAPHY.



Or in Scenographies, or Repreſentations of the Bodies themſelves. See SCENOGRAPHY.

The general Laws of each, are ſubjoin'd; in order to which it is neceſſary to premiſe the following Lemmas in *Perſpective*.

1. That the Appearance of a right Line is ever a right Line; whence, the two Extremes being given, the whole Line is given.

2. That if a Line be Perpendicular to any right Line drawn on a Plane, it will be Perpendicular to every other right Line drawn on the ſame Plane.

3. And

3. And that the Height of a Point appearing on the Plane, is to the Height of the Eye, as the Diſtance of the objective Point from the Plane, to the Aggregate of that Diſtance and the Diſtance of the Eye.

Ichnographic PERSPECTIVE; *or the Laws of the Projection of Plane Figures.*

Perſpective of a Point.

To exhibit the Appearance h *of an objective Point*, H. (Fig. 2.) From the given Point, draw a Perpendicular to the fundamental Line *D E*. From the fundamental *D E* cut off *I K* = *I H*; thro' the Point of Sight *F* draw a horizontal Line *E P*; and make *F P* equal to the Diſtance of the Eye *S L*: Laſtly from the Point *I* to the Point of Sight *F* draw *F I*; and from *K* to the Point of Diſtance *P*, the Line *P K*. The Interſection *h* is the Appearance of the objective Point. See POINT.

Hence, 1. Since, the Appearance of the extreme Points of a right Line being given, the Appearance of the whole Line is given; the Ichnographic Projection of any Rectilinear Figure may be had by this Method. See RECTILINEAR.

And, 2. Since any Number of Points of a Curve Line may by this means be projected on the *Perſpective* Plane; the Projection of Curve Lines may likewiſe be effected after the ſame manner. See CURVE.

3. Therefore, this Method will likewiſe ſuffice for Mixtilinear Figures; and is conſequently univerſal.

There are indeed other Methods deliver'd by other Authors, but this is the moſt uſual. To conceive its force and effect, it will be proper to illuſtrate it with ſome Examples.

Perſpective of a Triangle.

To find the Appearance of a Triangle, A B C, (Fig. 3.) whoſe Baſe *A B* is parallel to the fundamental Line *D E*. To the fundamental Line *D E* draw a Parallel at an Interval equal to the Altitude of the Eye. Aſſume a fundamental Point *V*, oppoſite to this either directly or obliquely, as the Caſe requires. Tranſfer the Diſtance of the Eye from *V* to *K*. From the ſeveral Angles of the Triangle *A C B*, let fall Perpendiculars *A* 1, *C* 2, *B* 3: ſet off theſe Perpendiculars upon the fundamental Line *D E* oppoſite to the Point of Diſtance *K*. From 1, 2, 3, draw right Lines to the fundamental or principal Point *V* 1, *V* 2, *V* 3. From the Points *A*, *B* and *C* of the fundamental Line *D E* draw other right Lines *A K*, *B K*, *C K*, to the Point of Diſtance *K*.

Since *a*, *b*, and are the Appearances of the Points *A*, *B* and *C c*; The right Lines *ca*, *ab* and *bc*, being drawn, *a c b* will be the Appearance of the Triangle *A C B*.

After the ſame Manner is a Triangle projected on a Plane, where the Vertex *C* is oppoſed to the Eye: All here requir'd, is, that its Situation on the Geometrical Plane be changed, and the Vertex *C* turn'd towards the fundamental Line *D*.

Perſpective of a Square.

To exhibit the Appearance of a Square, A B D C (Fig. 4.) *ſeen obliquely*, and having one of its Sides *A B* in the fundamental Line. The Square being view'd obliquely aſſume the principal Point *V* in the horizontal Line *H R*, in ſuch manner as that a Perpendicular to the fundamental Line may fall without the Side of the Square *A B*, at leaſt, may not biſſect it; and make *V K* the Diſtance of the Eye. Tranſfer the Perpendiculars *A C* and *B D* to the fundamental Line *D E*; and draw the right Lines *K B*, *K D*, as alſo *A V*, *V C*. Then will *A* and *B* be their own Appearances; and *c* and *d* the Appearances of the Points *C* and *D*. Conſequently *A c d B* is the Appearance of the Square *A B D C*.

If the Square *A C B D* ſhou'd be at a Diſtance from the fundamental Line *D E*; which yet rarely happens in Practice; the Diſtances of the Angles *A* and *B* muſt likewiſe be tranſfer'd to the fundamental Line: As is evident from the preceeding Problem. And ſince, even the oblique View is not very common; in what follows, we ſhall always ſuppoſe the Figure to be poſited directly oppoſite to the Eye; unleſs, where the contrary is expreſsly mention'd.

4. *To exhibit the Appearance of a Square* A B C D (Fig. 5.) *whoſe Diagonal* A C *is Perpendicular to the fundamental Line.* Continue the Sides *D C* and *C B* till they meet the fundamental Line in 1 and 2. From the principal Point *V*. ſet off the Diſtance of the Eye to *K* and *L*. From *K* to *A* and 1 draw right Lines *K A* and *K* 1; and from *L* to *A* and 2, the right Lines *L A*, *L* 2. The Interſections of theſe Lines will exhibit the Appearance of the Square *A B C D* view'd Angle-wiſe.

5. *To exhibit the Appearance of a Square* A B C D *Fig. 6. wherein another*, I M G H *is inſcribed*; the Side of the greater, *A B*, being in the fundamental Line; and the Diagonal of the leſs, Perpendicular to the Fundamental. From the principal Point *V*, ſet off, each way, on the horizontal Line *H R*, the Diſtances *V L* and *V K*; draw *V A* and *V B*; and *K A* and *L B*; then will *A c d B* be the Appearance of the Square *A C D B*. Produce the Side of the inſcrib'd Square *I H*, till it meet the fundamental Line in 1; and draw the right Lines *K* 1, and *K M*; then will *i h g M* be the Repreſentation of the inſcrib'd Square *I H G M*.

Hence is eaſily conceiv'd the Projection of any Figures inſcrib'd in others.

Perſpective of a Pavement.

5. *To project a Pavement conſiſting of ſquare Stones, view'd directly.* Divide the Side *A B* tranſfer'd to the fundamental Line Fig. 7. into as many equal Parts as there are ſquare Stones in one row. From the ſeveral points of Diviſion, draw right Lines to the principal Point *V*; and from *A* to the Point of Diſtance *K*, draw a right Line *A K*; and from B to the other Point of Diſtance *L*, draw another *L B*. Thro' the Points of the Interſections of the correſponding Lines, draw right Lines *V* on each Side, to be produced to the right Lines *A V*, and *B*. Then will *A f g B* be the Appearance of the *Pavement A F G B*.

Perſpective of a Circle.

6. *To exhibit the Appearance of a Circle.* 1. If the Circle be ſmall, circumſcribe a Square about it. Draw Diagonals and Diameters *ha* and *de* (Fig. 8.) interſecting each other at right Angles; and draw the right Lines *f g* and *b c* parallel to the Diameter *d e* thro' *b* and *f*; as alſo thro' *c* and *g* draw right Lines meeting the fundamental Line *D E* in the Points 3 and 4. To the principal Point *V* draw right Lines *V* 1, *V* 3, *V* 4, *V* 2; and to the Points of Diſtance *L* and *K*, draw the right Lines *L* 2 and *K* 1. Laſtly connect the Points of Interſection, *a*, *b*, *d*, *f*, *h*, *g*, *e*, *c*, with the Arches *a b*, *b d*, *d f*, &c. Thus will *a b d f h g e c a*, be the Appearance of the Circle.

If the Circle be large, on the Middle of the Fundamental *A B* (Fig. 9.) deſcribe a Semicircle; and from the ſeveral Points of the Periphery, *C*, *F*, *G*, *H*, *I*, &c. to the fundamental Line, let fall perpendiculars *C* 1, *F* 2, *G* 3. *H* 4, *I* 5, &c. From the Points 1, 2, 3, 4, 5, &c. of *A B* draw right Lines to the principal Point *V*, as alſo a right Line from *B* to the Point of Diſtance *L*; and another from *A* to the Point of Diſtance K. Thro' the common Interſections, draw right Lines as in the preceeding Problem; thus ſhall we have the Points *c*, *f*, *g*, *h*, *i*, which are the Repreſentations of theſe *A*. *C*, *F*, *G*, *H*, *I*, which being connected as before, give the Projection of the Circle.

Hence appears not only how any curvilinear Figure may be projected on a Plane; but alſo how any Pavement, conſiſting of any kind of Stones, may be delineated in *Perſpective*.

Hence alſo, appears what Uſe the Square is of in *Perſpective*, for even in the ſecond Caſe we uſe a Square divided into certain Areolæ, and circumſcribed about the Circle; tho' it be not delineated on the geometrical Plane in the Diagram.

Perſpective of a regular Pentagon.

7. *To repreſent a regular Pentagon, having a broad Limb, terminated by Lines parallel thereto*: 1°. From the ſeveral Angles of the exterior Pentagon *A*,*B*,*C*,*D*,*E*, Fig. 10. to the fundamental Line *T S*, let fall Perpendiculars *A* 0, *B* 1, *C* 2, *D* 3, *E* 4; which, as in the former, tranſfer to the fundamental Line. Connect the Points 1, 2, 3, 4 to the principal Point *V*; and the Points 1, 2, 3, 4 to the Point of Diſtance *K*. Thus will the common Interſections repreſent the Appearance of the exterior Pentagon. 2. If now, from the inner Angles *G H L I*, the Perpendiculars *G* 0, *H* 5, *K* 6, *I* 7, *L* 8, be in the like manner let fall; and the reſt be done as in the former; we ſhall have the Repreſentation of the inner Pentagon. The Pentagon *A B C D E*, therefore, with its Limb, is repreſented in *Perſpective*.

This Problem is added for the ſake of an Inſtance of the Projection of a Figure that has a broad Limb, or Edge.

It muſt be here obſerv'd, that if the Magnitudes of the ſeveral Parts of an Object, be given in Numbers, together with the Height and Diſtance of the Eye; its Figure is to be firſt conſtructed by a geometrical Scale; and the fundamental Point with the Point of Diſtance 1, to be determin'd by the ſame.

Nor is it always neceſſary, that the Object be delineated under the fundamental Line; in the Projection of Squares and Pavements 'tis beſt let alone. But where 'tis neceſſary, and Space is wanting; draw it a-part; find the Diviſions in it, and tranſfer 'em to the fundamental Line in the Plane.

Threads being hung in the principal Point, and the Point of Diſtance, and ſtretch'd to the Points of the Diviſions of the fundamental Line; the common Interſection of the Threads will give the Projection of the ſeveral Points without Confuſion; a Thing much to be fear'd from the Multiplicity of Lines to be drawn.

Scenographic Perſpective; or the Projection of Bodies on a Plane.

On the given Point C, (Fig. 11.) *to raiſe a* Perſpective *Altitude, anſwerable to the given objective Altitude* P Q. On the fundamental Line, raiſe a Perpendicular P Q, equal to the given objective Altitude. From P and Q to any Point, as T, draw right Lines P T and Q T. From the given Point C draw a right Line C K, parallel to the fundamental Line D E; and meeting the right Dine Q T, in K. In K, erect a Perpendicular to K C, *viz.* I K; this I K is the ſcenographic Altitude requir'd.

Perſpective of a Solid

To exhibit the Scenography of any Solid. Find the Projection of its Baſe in the Ichnographic *Preſpective*; and in the ſeveral Points thereof erect the *Preſpective* Altitude: Thus will the Scenography of the Solid be finiſh'd, except for what relates to the Shadow; which muſt be ſuperadded from the Laws of Shadows, deliver'd under the Article *Shadow*. For an Example.

To exhibit the ſcenographic Perſpective *of a Cube* view'd Angle-wiſe: Since the Baſe of a Cube view'd Angle-wiſe, and ſtanding on a geometrical Plane is a Square view'd Angle-wiſe; draw a Square on the *perſpective* Plane, after the manner laid down above, raiſe the Side of the Square H I (Fig. 12.) perpendicularly in ſome Point of the fundamental Line D E; and to any Point V, of the horizontal Line H R, draw right Lines V I and V H. From the Angles *d*, *b*, and *c*; draw *c* 1, *d* 2 parallel to the fundamental Line D E. From the Points 1 and 2 raiſe L 1 and M 2 Perpendicular to the ſame. Laſtly, Since H I is the Altitude to be rais'd in *a*, L 1 in *c* and *b* and M 2 in *d*; in *a* raiſe *fa*, Perpendicular to *a E*; and in *b* and *c*, raiſe *b g* and *c e* Perpendicular to *b c* 1; and laſtly raiſe *d h* Perpendicular to *d* 2; and let *a f* be equal to H I, *b g* and *e c* to L 1 and *h d* to M 2; If then the Points *g*, *h*, *e*, *f* be connected by right Lines, the Scenography will be finiſh'd.

This Method is general; but its Application is not equally obvious in every Caſe; ſee it further illuſtrated under the Article SCENOGRAPHY.

PERSPECTIVE *of Building*, &c.

In the Practice of the *Perſpective* of Building, &c. Great regard is had to the Height of the horizontal Line; all above the horizontal, being ſeen in the upper Part, and all above it in the under Part, whence *Perſpective* becomes divided into the *high* and *low* Sight; both which will be well illuſtrated by what follows.

To repreſent a Building (v. g. Palace, College, *&c.) in Perſpective.* 1. Take the Ichnography, or Ground-plat of the Building; its Lengths, Breadths, and Depths; by actual meaſuring. See ICHNOGRAPHY; and take its Altitude with a Quadrant. See ALTITUDE and QUADRANT.

2. Make a Scale divided into two or three hundred equal Parts, either actually, or ſo as that each diviſion ſignifie ten Parts: By this Scale lay down the *Ground-plot*, as in Figure 13.

This done, having a long Rule, and a Square, which by ſliding on the Rule helps you to draw your Perpendiculars eaſilier, reduce it into *Perſpective*, in its *Scenographick Appearance.*

Then having drawn a Line towards the Bottom of the Paper for the Front or Baſe Lineas; F L Fig. 14. divide it into as many equal Parts as you find the Building has in the Ichnography, or more if you pleaſe: This will ſerve for a Scale to determine the ſeveral Heights, *&c.* and to theſe Diviſions, with a black Lead Pencil draw Lines from the Centre, when you have choſen it; which Choice requires Judgement on two accounts.

For, if the Centre be too nigh the Front-line, then the Depth of the whole Building will fore-ſhorten too much; if too far off, it will not fore-ſhorten enough. This may be illuſtrated thus; ſet an open Tankard, or the like on a Stand, ſo as that it be a little lower than your Eye; if you be a great Diſtance from it, you can ſee very little or nothing into it; if you come nigher to it by degrees, you will perceive the farther Edge ſeem to be rais'd a little higher than that next you, ſo that you may ſee a little Way into it; if you come very nigh it, you ſee too deep into it more than can well be expreſt in Picture. We ſhall therefore find ſome one Place, which we muſt conclude the moſt convenient for the Draught, and which may be in general determin'd to be as far off the Front-line as the Front-line is long: This Rule, tho' it has juſt grounds, yet we ſometimes diſpence with it *pro re nata*; that we may expreſs Things with the better Appearance.

4. Conſider how to place this Centre with ſuch Advantage as that we may expreſs thoſe Things moſt, which we chiefly deſign to do; for as to the bottom and top Lines of the Sides of the Building that run from us in or nigh the direct Line to the Centre, tho' you ſee the upper Part very well, yet the Sides that fall between the Ground-line and Top, fall ſo very near one another, that 'twould be very difficult to expreſs Particulars in them; ſo that the Centre muſt be well choſen in reference to this.

Thoſe Buildings therefore, you would ſee moſt of, muſt be plac'd as far off as you think convenient from the direct Line that runs to the Centre; and the farther they are, the plainer they are.

Place then thoſe Things you would ſee leaſt of, nigheſt the direct Line; and ſee whether the others fall according to your Mind; but this muſt be done after you have drawn your Diagonal, which is the next Thing.

5. Having pitch'd on your Centre, and having from it drawn Lines to every Diviſion of the Front-line, you are to determine your Diagonal, *A R*, thus: Having with a pair of Compaſſes meaſur'd the Length of the Front-line, take your Compaſſes, and putting one Foot in the Centre, ſee where the other will reach in the Horizon: (on both Sides if you pleaſe) where it reſts, from that Point draw a thwart Line from it to the laſt Diviſion of the Front; and this will be truely drawn, or pretty nigh to the Truth. That this is ſo, you may conſider how it falls in reſpect of the two laſt Centre-lines: For if where the next Line from the laſt is interſected by the Diagonal, you draw a Parallel to the Front between them, as at *A* 10. you will have a *Rhombus*; if then all the Sides be pretty equal, you may be ſure you are nigh the right; but if the Sides that run toward the Centre be too long, then Things will not fore-ſhorten enough; if the Sides be not long enough, then they will fore-ſhorten too much.

6. After the Front-line is thus divided, the Centre fixt, and the Diagonal placed, take the Breadth of the Chappel *A. B.* which in the *Ichnography* is ſhewn to be twenty Parts; becauſe this Line is Perpendicular, it muſt run toward the Centre, therefore reckon twenty in the Diagonal, and the Rule laid parallel to the Front in that Point, will give you a Point in the Centre-line which will give the Breadth of the Chappel; Conſequently a Line drawn from *A.* to *B.* puts it into the Ichnographick *Perſpective.* The Length of the Chappel being ſeventy Diviſions in the Front-line; reckon ſeventy from *B.* parallel to the Front-line, and there you will have a Point at *C*,----

The Depth of the Building from the Chappel Northward, being 115 from the Chappel, I reckon from *D* (where it cuts the Diagonal at ten) onwards in the Diagonal; and at 115. in the Diagonal, with my Rule as before parallel in this Place in the Front, I have the Point Z. in the Central-line. Its Breadth being thirty, I reckon three Diviſions, and there is the juſt Breadth there; and ſo on in every particular Part.

Having placed the Ichnography into *Perſpective*, you may then give every Thing its proper Height thus:

7. The Height of the Chappel being 30, I reckon 30 on the Front-line, and with this Length by a Square clapt to the Front-line, I drop a Perpendicular to that Height, and ſo where the other Side of the Chappel is plac'd, having reckon'd the Height upon a ſuppoſed Parallel, there I draw another Line in that Height; then joining theſe ſeveral Heights by ſeveral Lines, you have the Profiles of each Building.

Now to diverſifie theſe ſeveral Lines, that they confound you not, make the Ichnography, when you lay it into *Perſpective*, in diſcontinued crooked Lines, the Heights in prick't Lines, and the Tops of each Building in continued Lines, as the Centre-lines are, in the Table. You will likewiſe find the Centre, tho' 'tis not here expreſt, as likewiſe the Point of Diſtance, by continuing the Diagonal up to the ſuppoſed Horizon where it and the Eye is placed.

Having done thus, your Art muſt be employ'd for the particular Expreſſions of Things, by drawing and ſhadowing, which is the Life of this half-form'd Figure, and which we leave to the Painter.

It remains that we ſpeak of the *Low-ſight*: Here we ſuppoſe the Horizontal juſt the Height of the Eye, about 5 Foot from the Baſis; tho' 'tis generally plac'd higher, even to a third Part of the Height of the Building, that the Side Buildings may be expreſs'd more gracefully.

The Diagonal is beſt determined by dividing the laſt Diviſion of the Baſis-line into 5 Parts at *G.* Fig. 14 taking 4 of theſe, ſometimes the whole 5, becauſe we determin'd before, that the Length of the Front-line was the Diſtance of the Eye in the Horizon to the Point of Diſtance: But here I take 4, and then make this the Diſtance in the Horizon between the Eye and the Point of Diſtance. You may then either graduate the Plan at the ſeveral Interſections of the Diagonal with the Centre-lines, or elſe ſuppoſe it ſo; and then raiſe the Building, as you will find by *Perſpectives* enough of this Sort every where to be met with.

PERSPECTIVE, is alſo uſed for a Kind of Picture or Painting, frequently ſeen in Gardens, and at the Ends of Galleries; deſign'd expreſsly to deceive the Sight by repreſenting the Continuation of an Alley, a Building, Landskip, or the like.

PERSPECTIVE *Plane*, is a Glaſs, or other tranſparent Surface, ſuppos'd to be placed between the Eye and the Object, Perpendicular to the Horizon, unleſs the contrary be expreſsly mention'd. See PLANE.

Such is the Plane, *H I* (Fig. 15.) between the Eye *O* and the Object *A B C*, cutting the optic Rays in *a*, *b*, *c*.

This, ſome call the *Section*; ſome the *Table*, and others the *Glaſs*. See SECTION.

PERSPIRATION, in Medicine, the Action of evacuating the Juices of the Body, through the Pores of the Skin. See EVACUATION, PORE, and SKIN.

When this Evacuation is copious enough to be perceiv'd by the Senſes, as in ſweat, the *Perſpiration* is ſaid to be *ſenſible*; where it eſcapes the Notice of the Senſes, as is the Caſe in the ordinary State of the Body, the *Perſpiration* is ſaid to be *inſenſible*. See SWEAT.

The Word *Perſpiration* uſed ſimply, and without any Adjective, is underſtood of inſenſible *Perſpiration*. *Sanctorius*, the great *Paduan* Phyſician, was the Firſt who took Notice of this Evacuation: To him we owe both the Invention and Perfection of the Doctrine of *inſenſible Perſpiration*.

The Veſſels thro' which the *Perſpiration* is perform'd, lye obliquely open under the Squamæ or Scales of the Cuticle or Scarf-skin. They are inconceivably ſmall: From a Calculation of *Leewenhoeck*, it appears that the Mouths of 125000 of 'em may be cover'd with a common Grain of Sand. See CUTICLE; MILIARY *Gland*.

Thro' theſe Veſſels is continually tranſuding a ſubtile Humour, from every Point of the Body, and throughout the whole Expanſe of the Cuticle.

The Matter evacuated this way, is found by ſure Experience to be more than equal to that evacuated all the other Ways, *i. e.* by Stool, Urine, &c. *Sanctorius* found in *Italy*, under the Circumſtances of a moderate Diet, middle Age, and eaſy Life, that the Matter inſenſibly perſpired was $\frac{5}{8}$ of that taken in for Food: ſo that there only remain'd $\frac{3}{8}$ for Nutrition, and the Excrements of the Noſe, Ears, Inteſtines, Bladder, &c. See EXCREMENT.

The ſame Author ſhews, that as much is evacuated by inſenſible *Perſpiration* in one Day, as by Stool in fourteen Days; particularly, that in a Night's Time, about ſixteen Ounces is ordinarily ſent out by Urine, four Ounces by Stool; and above forty Ounces by *inſenſible Perſpiration*.

He alſo obſerves, that if a Man eat and drink 8 *l.* in a Day, 5 *l.* of it is ſpent in inſenſible *Perſpiration*; and adds as to the Times, that within 5 Hours after eating there is perſpired about 1 *l.* from the 5th to the 12th Hour about 3 *l.* and from the 12th to the 16th ſcarce half a Pound.

The Benefits of inſenſible *Perſpiration* are ſo great, that without it, *Borelli* ſays, animal Life cou'd not be preſerv'd.

The great Subtility, Equability, and Plenty of the Matter thus perſpired, its Increaſe after Sleep, &c. conſtitute the grand Symptoms of a perfect State of Health; and the chief Means of preſerving the ſame. See HEALTH.

On the contrary, the departing from theſe is the firſt ſure Sign, and perhaps Cauſe, of Diſeaſes. See DISEASE.

Perſpiration is performed, preſerved, and encreaſed by the Viſcera, Veſſels, Fibres; by Motion or Exerciſe as far as the firſt Appearance of Sweat, by moderate Uſe of Venery; Sleep of 7 or 8 Hours, the Body well cover'd yet not loaden with Bed-cloaths, Chearfulneſs, light fermented yet ſolid Food, not Fat; pure, cold, heavy Air, &c.

The contraries of all theſe, as alſo the Increaſe of the other Excretions, diminiſh, prevent, deprave it.

Hence we ſee the Cauſe, Effect, &c. of this perſpirable Matter, its Uſe is preſerving the Parts ſoft and flexible, in ſupplying what's loſt, but chiefly in preſerving the nervous Papillæ moiſt, freſh, lively, fit to be affected by Objects, and to tranſmit their Impreſſions. See NERVE, SENSATION, &c.

Too much *Perſpiration* occaſions weakneſs, ſwoonings, ſudden Death; too little or none at all occaſions the Veſicles to dry, wither, and periſh. Hence alſo the larger Emunctories, come to be obſtructed; hence the Circulation is diſturb'd, ſharp Humours retain'd; hence Putridity, Crudity, Fevers, Inflammations, Impoſthumes. See DISEASE.

To determine the State and Conditions of the *Perſpiration*, ſo neceſſary for judging of thoſe of the Body, *Sanctorius* invented a *weighing* Chair, whereby he examin'd the Quantity, Degree, &c. of *Perſpiration* in ſeveral Circumſtances of the Body, under ſeveral Temperatures of the Air, in the ſeveral Intervals of eating, drinking, ſleeping, &c. See WEIGHING *Chair*.

Some of the more extraordinary Phænomena obſerv'd herewith, are; that for ſome time after eating the *Perſpiration* is leaſt of all. That between the 5th and 12th Hour after Meals *Perſpiration* is greateſt. That riding either on Horſeback, in a Coach, or Ship, &c. briſk Motion on the Ice, &c. but above all, a briſk Friction of the Skin; promote *Perſpiration* ſurpriſingly. That in ſweating the *Perſpiration* is much leſs than at other Times: And that *Perſpiration* is always much leſs in Women than Men.

PERTICA or PERTICATA *terræ*, in our old Law Books, is the fourth Part of an Acre. See ROOD.

Continet in integra ſuperficie 40 *perticas*. See PERCH.

PERVISE or PARVISE, a Term in our old Law Books. *Forteſcue* ſays, *Placitantes* (*ſcil poſt meridiem*) *ſe divertunt ad* perviſum *& alibi cum ſervientibus ad legem & aliis*. *Selden* in his Notes on *Forteſcue*, defines this to be an Afternoon's Exerciſe, or Moot, which the Pleaders held for the Inſtruction of the younger Students; bearing originally the ſame Name with the Parviſiæ in *Oxford*. See MOOT.

M. *Somner* ſays, that *Perviſe* ſignifies *palatii Atrium vel area illa a fronte aulæ Weſtmonaſterienſis, hodie* the *Palace-Yard*. See PARADISUS.

Spelman obſerves, that the Lawyers turn'd thither to meet their Clients not to hold Moots.

PERVIGILIUM, in Medecine. See VIGILIA.

PERUVIAN-Bark. See CORTEX *Peruvianus*.

PES, a long Meaſure, in *Engliſh*, better call'd a Foot. See FOOT.

PES *Foreſtæ*. *Notandum eſt quod* pes foreſtæ *uſitatus tempore Ric. Oyſell in Arrentatione vaſſallorum, factus eſt, ſignatus & ſculptus in pariete Cancellæ Eccleſiæ de Edwynſtone & in Eccleſia B. Mariæ de Nottingham, & dictus pes continet in longitudine octodecim pollices, & in arrentatione quorundam Vaſſallorum Pertica* 20, 21, & 24 *pedum uſa fuit*, &c.

PES *Monetæ*, in ancient Records, ſignifies a true and reaſonable Adjuſtment of the real Value of all current Coin. See STANDARD and COIN.

PESA, an old Law Term, for a Wey, or certain weight of Cheeſe, Wool, &c. See WEY.

PESADE, in the Manage, that Action taught a Horſe, wherein he riſes with his fore Feet, and bends 'em up to his Body, without ſtirring the hind Feet.

The *Peſade* is the firſt Leſſon taught a Horſe, in order to bring him to Curvetts, &c. unleſs he perform this well, he'll never go well in any Air, yet is he not to be taught it at the firſt Riding.

PESAGE, a Cuſtom or Duty paid in certain Markets, &c. for weighing of Merchandices, or Wares. See WEIGHING.

PESSARY, in Medicine, a ſolid Medicament, of the Length and Thickneſs of the Finger, but a Pyramidal Form; convey'd into the natural Parts of a Woman to provoke, or put a Stop to the Menſes, or to prevent a Deſcent of the Matrix, or on other Occaſions of thoſe Parts.

At one End 'tis faſten'd to a little Ribbon, by which it may be drawn out at pleaſure.

It conſiſts of Cork, or other light Wood, or of a little Linnen Bag, full of Pouders, incorporated with Wax, Oil, and Cotton; cram'd cloſe together to make it ſolid enough for intromiſſion.

The Word is form'd from *Greek* πεσσὸς, which ſignifies the the ſame Thing.

PESTILENCE, in Medicine, a contagious Diſeaſe, uſually mortal; popularly known under the Name of Plague. See PLAGUE.

The Word is form'd from the *Latin Peſtis*.

PEST-*houſe*, a Lazaretto or Infirmary, where Goods, Perſons, &c. infected, or ſuſpected to be infected with ſome contagious Diſeaſe, are diſpoſed and provided for. See LAZARETTO.

PESTILENTIAL *Fevers*, among Phyſicians, are ſuch as do not only afflict the Patient with a vehement Heat, but alſo a malignant and venomous Quality. See FEVER.

PESTIS. See PLAGUE.

PETALA, in Botany, the Leaves of a Flower; ſo call'd to diſtinguiſh 'em from the Leaves of the Plant. See LEAF.

By Flower is properly meant, That aſſemblage of Parts call'd *Stamina* and *Piſtil*, which ſerve for propagation of the Kind. See FLOWER.

The colour'd Leaves which incompaſs thoſe Parts, are in reality no more than Caſes or Covers to ſecure and ſcreen the generative Parts; unleſs, as Mr. *Bradley* conjectures, they may ſerve to ſecrete ſome fine Juice for the Nouriſhment of the Seed. See GENERATION *of Plants*.

The moſt eaſy Diviſion of Flowers is into ſimple Flowers, *i. e.* thoſe form'd of *Stamina* and *Piſtils* only; and compound Flowers, whoſe *Stamina* and *Piſtils* are incompaſs'd with *Petala*, call'd by Dr. *Grew* the *Foliation*, and by Mr. *Ray Folia*. See FOLIATION.

Compound Flowers again, are either incompaſs'd with a ſingle *Petalum*, or Piece; or with ſeveral Pieces; the firſt of which are call'd *Monopetalous*, the ſecond *Polypetalous* Flowers. See MONOPETALOUS, &c.

Again, from the regular or irregular Configuration of the *Petala*, M. *Juſſieu* makes another Diviſion of Flowers into Claſſes; as regular and irregular *Menopatalous*; regular and irregular *Polypetalous*, &c. See POLYPETALOUS.

Nature ſhews a World of Art in the folding up of the *Petala*, in the Perianthium, before they begin to blow or expand: Of theſe Foldings Dr. *Grew* notes the following Varieties, *viz.* the cloſe Couch as in Roſes; the concave Couch as in

Blattaria flore albo; the ſingle Plait as in Peaſe-bloſſoms; the double Plait as in Blue-bottles. The Couch and Plait together as in Marigolds, &c. The Rowl as in Ladies Bower; the Spire as in Mallows; and laſtly the Plait and Spire together as in *Convolvulus Doronici Folio.*

The Calyx or Perianthium ſometimes ſerves in lieu of *Petala.* See CALYX.

The Word is form'd from the *Greek* πέταλον a Leaf; And in that Language ſerves indifferently for the Leaves of the Plant and the Flower.

PETALISM, PETALISMUS in Antiquity, a Kind of Exile, or Baniſhment for the Term of five Years. See BANISHMENT.

The *Petaliſm* at *Syracuſe* was nearly the ſame Thing as the Oſtraciſm at *Athens*; except that the latter was for 10 Years, and the former only for five. See OSTRACISM.

The *Petaliſm* was perform'd by the Peoples writing the Name of the Perſon condemn'd, on a Leaf; whence the Name, from πέταλον, Leaf.

PETALOIDES, a Name ſometimes given to Urine, when it ſeems to have little Leaves or Scales in it. See URINE.

PETAMINARIUS, in Antiquity, a Name given to certain Perſons who perform'd extraordinary Feats of Activity; took perillous Leaps, Vaults, &c.

The Word is form'd from the *Greek* πέταμαι, *I fly.*

Some Authors write it *Petiminarius*, and derive it from *Petimen*, which according to *Servius* ſignifies the Bunch of a Camel, in Alluſion to the Manner wherein they bent the Body in exhibiting Poſtures, &c.

PETARD, in War, a Kind of Cannon, very ſhort, narrow at the Breech, and wide at the Muzzel; made of Copper mix'd with a little Braſs; or of Lead with Tin; uſually about 11 Inches long, and ſeven and an half Broad at the Mouth; weighing from 50 to 60 Pound. See CANNON and ORDINANCE.

Its Charge is from five to ſix Pounds of Powder, which reaches to within three Fingers of the Mouth: The Vacancy is fill'd with Tow, and ſtopp'd with a Wooden Tampion; the Mouth being ſtrongly bound up with Cloth tied very tight with Ropes.

'Tis ſitted into a Wooden Plank that has a Cavity cut into it to receive the Mouth of the Gun; after the manner expreſs'd in the Fig. 10. Tab. Fortification.

Its Uſe is in a clandeſtin Attack, to break down Gates, Bridges, Barriers, &c. to which it is hung, which it does by means of the Wooden Plank.

'Tis alſo uſed in Countermines to break thro' the Enemies Galleries, and give vent to their Mines.

Some, inſtead of Gun-powder for the Charge uſe one of the following Compoſitions, *viz.* Gun-powder 7 Pounds, Mercur. Sublimat. 1 Ounce, Champhor 8 Ounces; or Gun-powder 6 Pound, Mercur. Sublimat. 3 Ounces, and Sulphur 3; or Gun-powder 6, beaten Glaſs $\frac{1}{2}$ an Ounce, and Camphor $\frac{1}{4}$.

Petards are ſometimes alſo made of Wood, bound round with Iron Hoops.

The Invention of *Petards* is aſcribed to the *French Hugonots* in the Year 1579: their moſt ſignal Exploit was the taking the City *Cahors* by their Means, as we are told by *d'Aubigne.*

PETECHIÆ, are Spots in the Skin, like Flea-Bites, which come out in ſome Fevers.

Hence *Petechial* Fever is the ſpotted Fever, commonly ſo called. See FEVER.

PETER-*pence*, an ancient Levy, or Tax of a Penny on each Houſe throughout *England.* See TAX.

It was call'd *Peter-pence*, becauſe collected on the Day of St. *Peter ad vincula*; by the *Saxons* it was call'd Rome Feoh *i. e.* the Fee of *Rome*, and alſo *Rome-ſcot*, and *Rome-pennyng*, becauſe collected and ſent to *Rome*; and laſtly it was call'd *Hearth-Money*, becauſe every Dwelling-houſe was liable to it, provided there were 30 Pence *vivæ pecuniæ* belonging to it; nay, and every religious Houſe; the Abby of St. *Albans* alone excepted.

This *Peter-pence* was at firſt given as a Penſion, or Alms, by *Ina* King of the Weſt *Saxons*, in the Year 725, being then in Pilgrimage at *Rome*: And the like was done by *Offa* King of the *Mercians*, throughout his Dominions in 794.

It was not intended as a Tribute to the Pope, but chiefly for the Support of the *Engliſh* School or College at *Rome*: the Pope, however, went halves with the College; and at lenth ſwallow'd almoſt the Whole.

At firſt it was only an occaſional Contribution; but became at laſt a ſtanding Tax; being eſtabliſh'd by the Laws of King *Canute*, *Edward* the Confeſſor, the Conqueror, &c.

The Biſhops who were charg'd with the Collecting it, employ'd the rural Deans and Archdeacons therein. *Edward* the III. firſt forbad the Payment, but it ſoon return'd and continu'd till the Time of King *Henry* VIII, when *Polydore Virgil* reſided there as the Popes Receiver-General.

PETIT *Cape.* See CAPE.

PETIT *Serjeanty*, in Law. See SERJEANTY.

PETITIO *inducierum*, in the civil Law, the ſame as Imparlance in common Law. See IMPARLANCE.

PETITIO *Principii*, in Logic, a begging of Principles; or a precarious ſuppoſing a Thing to be true, or taking it for granted, when it really remains either dubious, or elſe is expreſsly denied.

This we popularly call *begging the Queſtion.*

PETITION, a Supplication in form, made by an Inferiour to his Superiour; eſpecially to one having Juriſdiction. See SUPPLICATION.

PETRA *lanæ*, in our ancient Cuſtoms, a Stone of Wool. See STONE.

PETRARIA, in ancient Writers, is ſometimes taken for a Quarry of Stones; and in other Places for a great Gun, call'd a *Petard*; 'tis often mention'd in old Records and Hiſtorians in both Senſes.

PETRE Oil, the ſame as Petroleum. See PETROLEUM.

PETRIFACTION, or PETRIFCATION, in Phyſiology, the Action of converting Fluids, Woods, and other Matters into Stone. See STONE.

The Faculty of *petrifying* Wood is aſcribed to ſeveral Springs, Lakes, &c. The ancient Naturaliſts mention a River whoſe Waters turn'd Bodies into Marble, by mere contact; nay, which being drunk *petrified* the Viſcera of the Drinker.

Flumen habent Cicones, quod potum ſaxea reddit
Viſcera, quod tactis inducit Marmora rebus.

Seneca relates, that the Mud of this Riveris of ſuch a Nature as to harden and glue together the Parts of Bodies. As, ſays he, the Duſt of Puzzuoli, by barely touching Water becomes Stone; ſo this Water, by touching any Solid, ſticks, and grows to it: Whence Things caſt into it, are immediately taken out Stones. *Pliny* adds very well, that Wood caſt into this River, is preſently found cover'd with a ſtony Bark or Rind; and ſubjoins the Names of ſeveral other Rivers which do the ſame; particularly the River *Silarus* near *Tarentum*, whoſe Waters are yet found very wholeſome.

To *Pliny*'s Liſt we might add many more among ourſelves; particularly the Lake *Lohmond* in *Scotland*, &c.

But, in effect, there does not ſeem any real Tranſmutation of the woody Nature into the Nature of Stone, in any of theſe Caſes; all that is done is this, the Stony Particles which before floated in the Liquor are now lodged, and depoſited in the Pores of theſe Subſtances, in ſuch manner, and in ſuch Plenty as to leave little elſe but the Appearance of a Stone.

Petrifactions too, are frequently nothing elſe but incruſtations of ſtony Particles, which ſurround the Bodies immerg'd, as Salts ſhoot upon and adhere to them. See INCRUSTATION.

Varenius has a Conjecture that Waters only petrify Woods by means of certain minute, ſharp, and pointed Particles lodg'd therein, which cut the longitudnal Fibres of the Wood in an infinite Number of Points, and thus deſtroy the Form they were diſtinguiſh'd from Stone.

Near *Nacſivan* is a little River, whoſe Water the People turn off into little Canals; where, in a little Time it *petrifies*; and of this *petrified* Water is built a large *Caravanſera* in the Neighbourhood.

Petrifications of Waters, or Juices of the Earthare inconteſtable. In the Place call'd *les Caves Goutières* in *France*, the Water falling from the Upper-parts of the Cave to the Ground, immediately hardens into little Stones, of ſuch Figures as the Drops falling either ſingly, or upon one another chance to exhibit.

Of this Kind of Caves we have ſeveral in *England*; Mr. *Derham* mentions one on the Top of *Bredon* hill in *Worceſterſhire*; to which we may add an other call'd the *Elvehole* in *Witherſlack* in *Weſtmoreland*; lin'd a-top with theſe ſtalactical Stones, hanging like Icicles; which are manifeſtly nothing elſe but Exſudations or Extillations of ſome *petrifying* Juices out of the rocky Earth there. See STALACTITES. See alſo LABYRINTH.

The Word is form'd from the *Greek* πέτρα Stone, and the *Latin fio* or *facio* to become, to do.

PETROBRUSSIANS, a religious Sect, which aroſe in *France*, and the *Netherlands*, about the Year 1126; ſo call'd from their Leader *Peter Bruys* a Provincial.

The chief of *Bruys*'s Adherents was a Monk, one *Henry*; from whom the *Petrobruſſians* were alſo call'd *Henricians.*

Peter the venerable Abbot of *Clugny*, has an expreſs Treatiſe againſt the *Petrobruſſians*; in the Preface to which he reduces their Opinions to five Heads. 1. They denied that Children before the Age of Reaſon can be juſtified by Baptiſm; In regard, 'tis our own Faith that ſaves by Baptiſm. 2. That no Churches are to be built, but thoſe that already are, to be pull'd down; an Inn being as proper for Prayer as a Temple, and a Stable as an Altar. 3. That the Croſs ought to be pull'd down and burnt, in regard we ought to abhor the Inſtruments of our Saviour's Paſſion. 4. That Jeſus Chriſt is not in the Euchariſt, and that this Sacrament is vain. 5. That Sacrifices, Alms, Prayers, &c. don't avail the Dead.

F. Langlois objects Manicheiſm to the *Petrobruſſians*; and ſays they maintain'd two Gods, the one Good, the other Evil; but this we rather eſteem an Effect of his Zeal for the

Catholick

Catholick Cauſe, which determin'd him to blacken the Adverſaries thereof, than any real Sentiment of the *Petrobruſſians*.

PETROJOANNITES, the Followers of *Peter John*, or *Peter Joannis*, *i. e. Peter* the Son of *John*, who liv'd in the XII. Century.

His Doctrine was not known till after his Death; when his Body was taken out of his Grave and burnt.

His Opinions were, that he alone had the Underſtanding of the true Senſe wherein the Apoſtles preached the Goſpel; that the reaſonable Soul is not the Form of the Man; that there is no Grace infuſed by Baptiſm; that Jeſus Chriſt was pierced with a Launce on the Croſs 'ere he expir'd.

PETROL, PETROLEUM, *q. d. Petræ-oleum*, Oil of Rock; an Oleaginous Juice, iſſuing out of the Clefts of Rocks. See OIL.

Beſide artificial and vegetable Oils, *i. e.* thoſe drawn from Plants, *&c.* by Expreſſion; there are alſo natural and mineral Oils iſſuing of themſelves from the Entrails of the Earth; call'd by a common Name *Petrols*, or *Petrolea*.

Theſe, according to all Appearance, muſt be the Work of ſubterraneous Fires, which raiſe, or ſublime the more ſubtile Parts of certain bituminous Matters that lie in their Way. Theſe Parts being condens'd into a Liquor by the Cold of the Vaults of Rocks, are there collected, and Ooze thence through Clefts and Apertures, which the Diſpoſition of the Ground furniſhes 'em withal.

PETROL, then is a Liquid Bitumen; only differing by its Liquidity from other Bitumens, as Aſphaltum, Jet, *&c.* See BITUMEN.

The Naphtha, which is either a Liquid, or at leaſt a very ſoft Bitumen, is much the ſame with the *Petrol*. See NAPHTHA.

Hitherto there has been little *Petrol* found, except in hot Countries. *Olearius* ſays he ſaw above 30 Springs of it near *Scamachia* in *Perſia*: There are *Petrols* in the Southern Provinces of *France*; but the beſt are thoſe in the Dutchy of *Modena*, firſt diſcover'd by *Arioſto* a Phyſician, in 1640, in a very barren Valley, 12 Leagues from the City of *Modena*.

There are three Canals dug with great Expence in the Rock; by which three different Kinds of *Petrol* are diſcharg'd into little Baſons or Reſervoirs: The firſt, as white, clear, and fluid as Water, of a brisk penetrating Smell, and not diſagreeable; the ſecond of a clear Yellow, leſs fluid, and a leſs brisk Smell than the White; the third a blackiſh Red of thicker Conſiſtence, and a Smell more approaching that of Bitumen.

M. *Boulduc* has made ſeveral Experiments on the *Petrol*, deſcrib'd in the Hiſt. of Acad. of Sciences M. DCC. XV. He obſerves, that he cou'd not raiſe any Phlegm or ſaline Spirit by any Diſtillation, either in *Balneo Mariæ*, or in a Sand heat: All that wou'd riſe was Oil; at the Bottom of the Pellican remain'd an exceeding ſmall Quantity of a thickiſh, browniſh Matter.

Hence, to uſe *Petroleum* in Medicine, it muſt be preſcrib'd juſt as it is. 'Tis a Remedy Nature has prepar'd to our Hands; it is found very warm and penetrating; and commended in many outward Complaints, Rheumatick and Arthritick Pains, and paralytick Limbs.

PETRONEL, a Sort of Harquebuſs or Hand-gun. See HARQUEBUSS.

PETROSA *Oſſa*, in Anatomy, two Bones of the Cranium. See CRANIUM.

The fifth and ſixth Bones of the Skull are thoſe of the Temples; ſo call'd a *Temporibus*, becauſe they ſhew the Age of Man; the Hairs hereon turning grey before any of the reſt. See TEMPLES.

Their Upper-part is ſquamous or Scaly, the lower *Petrous*, *i. e.* hard or ſtony, and hence they come here to be denominated *Petroſa*.

The *Oſſa Petroſa* are the ſmalleſt proper Bones of the Cranium: Their Upper-part is Semi-circular, and their Lower of a Rocky Make. They are ſituated in the lateral and lower Parts of the Head; bounded a-top by the ſquammous Suture, which joins 'em to the Parietalia; behind by the Lambdoides, which joins them to the Occipital, and connects them to *Os Sphenoides*.

Each has two Sinus's before and behind the Sphenoidal: the Exterior lin'd with a Cartilage, receiving the Proceſs of the lower Jaw; the Interior receives the Lower-part of the *Sinus Lateralis* of the Dura Mater.

Each again has four Proceſſes; three External, and one Internal; of the External, the firſt is call'd *Zygomaticus* or *Os Jugale*; the ſecond *Maſtoides* or *Mammillaris*; the third *Styloides*, each whereof ſee under its proper Article. ZYGOMATICUS, &c.

The internal Proceſs is properly call'd the *Os petroſum*: This is pretty long and large, containing the whole *Meatus Auditorius* and Cavity of the *Tympanum*. See TYMPANUM and EAR.

PETTEIA or PETTIA, in the ancient Muſick, a *Greek* Term, to which we have no correſponding one in our Language.

The Melopœia, *i. e.* the Art of arranging Sounds in Succeſſion ſo as to make Melody, is divided into three Parts, which the *Greeks* call *Lepſis*, *Mixis*, and *Chreſis*, the *Latins Sumptio*, *Mixtio*, and *Uſus*; and the *Italians Preſa*, *Meſcolamento*, and *Uſo*.

The laſt is alſo call'd by the *Greeks* Πεττεία, *Petteia*, and by the *Italians Pettia*.

Petteia or *Pettia*, then is the Art of making a juſt Diſcernment of all the Manners of ranging, or combining Sounds among themſelves, ſo as they may produce their Effect, *i. e.* ſo as they may expreſs the ſeveral Paſſions intended to be rais'd; thus, *E. gr.* it ſhews what Sounds are to be us'd, and what not, how often any of 'em are to be repeated, with which to begin, and with which to end, whether with a grave Sound to riſe, or an Acute one to fall, *&c.*

'Tis the *Petteia* that makes the Manners of the Muſick; it being this that chuſes out this or that Paſſion, this that or Motion of the Soul to be awaken'd, and whether it be proper to excite it in this or that occaſion.

The *Petteia* therefore is in Muſick what the Manners are in Poetry. See MANNERS.

We don't ſee whence the Word ſhou'd have been taken by the *Greeks* unleſs from Πεττεία their Game of Cheſs; the muſical *Petteia* being a Combination and Arrangement of Sounds, as Cheſs is of Pieces call'd ψῆφοι, *Calculi*, Cheſs-Men.

PETTY-*Bag*, an Office in Chancery, the three Clerks whereof Record the Return of all Inquiſitions out of every Shire, make all Patents of Cuſtomers, Gaugers, Controllers, *&c.* See CHANCERY.

PETTY-*Fogger*, from the *French Petite*, little, and the *Saxon* ꝓoȝepe Wooer, Suiter, *&c.* A little, Stickling, Solicitor, or Jobber in Law-diſputes, without either Skill or Conſcience.

PETTY-*Larceny*, in Law, ſmall Theft; or the ſtealing of Things under the Value of 12*d.* See LARCENY.

The Puniſhment, antiently, was ſometimes the Loſs of an Ear; ſometimes Cudgelling: After *Edward* III. It was for along Time Whipping, but is now Tranſportation.

PETTY *Patees*, among Confectioners, a ſort of ſmall Pies, made of *March* Pane, and fill'd with ſweat Meats.

PETTY-*Singles*, among Faulconers, are the Toes of a Hawk. See HAWK.

PETTY-*Tally*, in the Sea Language, a competent Allowance of Victuals, according to the Number of the Ships Company.

PETTY-*Treaſon*, in Law, the Crime of a Servant's killing his Maſter, a Wife's killing her Husband, a Child's killing his Parent, or a Clergyman's killing his Prelate to whom he owes Obedience. See TREASON.

The Puniſhment of *Petty-Treaſon* is, that the Criminal ſhall be drawn on a Sledge, or Hurdle to the Gallows, and there hanged.

The Puniſhment of *Petty-Treaſon* in a Woman is the ſame with that of High-Treaſon, *viz.* drawing and burning alive. See PUNISHMENT.

PETUM. See NICOTIANA.

PEVETTS, the Ends of the Spindle of a Wheel in a Watch. The Holes into which they run, are call'd *Pevett*-Holes. See WATCH.

PEWTER, a factitious Metal, uſed in domeſtick Utenſils.

The Baſis of *Pewter* is Tin, which is converted into *Pewter* by the Mixture of ſix Pounds of Braſs, and fifteen Pounds of Lead, with an hundred Weight of Tin.

Beſide this Compoſition which makes the *common Pewter*, there are others for other Occaſions; compounded of Tin, mix'd with Regulus of Antimony, Tin-Glaſs and Copper, in ſeveral Proportions. See TIN.

Pewter has occaſionally ſerv'd for Money. In the Philoſoph. Tranſact. M. *Putland* informs us, that K. *James* II. turn'd all the *Pewter* Veſſels, *&c.* of the Proteſtants in *Ireland* he could ſeize, into Money; Half-Crowns were ſomewhat bigger than Half-pence, and other Pieces in proportion. See MONEY and COIN.

He order'd it to be Current in all Payments: Whence, our Author obſerves, People abſconded for fear of being paid their Debts: He mentions Crown-pieces of this Metal, with this Legend on the Rim, *MELIORIS TESSARA FATI*.

PHÆNOMENON, in Phyſicks, an extraordinary Effect, or Appearance in the Heavens, or on Earth; diſcover'd by Obſervation of the Cæleſtial Bodies, or by phyſical Experiments; and whoſe Cauſe is not obvious. See OBSERVATION, EXPERIMENT, *&c.*

Such are Meteors, Comets, uncommon Appearances of Stars, and Planets, Earthquakes; ſuch alſo are the Effects of the Magnet, Phoſphorus, *&c.* See METEORS, COMET, STAR, PLANET, EARTHQUAKE, MAGNET.

'Tis a Maxim, that Hypotheſis is beſt, which ſolves moſt *Phænomena*. See HYPOTHESIS.

The *Phænomena* of Comets are inconſiſtent with the Solidity of the Heavens, ſuppos'd in the Ptolomaic Hypotheſis

and with the Plenitude of the Heavens asserted by the Cartesians. See PTOLOMAIC, PLENITUDE, &c.

The Word is form'd from the *Greek* φαίνω, *I appear.*

Sir *Is. Newton* shews, that all the *Phænomena* of the heavenly Bodies, follow from the Attraction of Gravity, which intercedes those Bodies; and almost all the *Phænomena* of the lesser Bodies from the Attraction and Repulsion between their Particles: So simple is Nature. See GRAVITATION, ATTRACTION, COHESION, PARTICLE, &c.

PHAGEDÆNA, in Chirurgery, &c. a deep, bloated Ulcer, which eats and corrodes the neighbouring Parts; so call'd from the *Greek* Φαγεδαίνα of φάγομαι I eat. See ULCER.

Hence, *Phagedænic* Medicines; such as are used to eat off fungous, or proud Flesh. particularly,

PHAGEDÆNIC *Water*, in Chymistry, a Water drawn from quick Lime; so call'd from its Efficacy in the Cure of *Phagedænic* Ulcers. See LIME.

To prepare this Water; they put two Pounds of fresh quick-Lime in a large Earthern-pan, and pour upon it about ten Pounds of rain Water; these they let stand together two Days, stirring 'em frequently: At last, leaving the Lime to settle well, they pour off the Water by Inclination, filtrate it and put it up in a Glass Bottle, adding to it an Ounce of Corrosive Sublimate in Powder; which, of white becomes yellow, and sinks to the Bottom of the Vessel.

The Water being settled, is fit for Use, in the cleansing of Wounds and Ulcers, and to eat off superfluous Flesh: Especially in Gangrenes; in which Case may be added a third or fourth Part of Spirit of Wine. See GANGRENE.

The Ephemerides of the Academy of the *Curiosi Naturæ*, relate that *Phagedænic* Ulcers have been frequently cured with Sheeps Dung.

PHALANX, in Antiquity, a huge, square, compact Battalion, form'd of Infantry set close to one another, with their Shields join'd, and Pikes turn'd cross ways; insomuch that it was almost impossible to break them.

It consisted of 8000 Men: *Livy* says, that this sort of Battalion was invented by the *Macedonians*, and that it was peculiar to them; whence, among Writers, it is sometimes call'd the *Macedonian Phalanx*.

St. *Evremond* observes, that the *Macedonian Phalanx* had the Advantage of Valour and Strength over the *Roman* Legion. See LEGION.

PHALANX, is also applied by Anatomists, to the Rows of the small Bones of the Fingers, as if rang'd in order of Battle. See FINGER.

PHALEUCUS, in Poetry, a kind of Verse, in Use among the *Greeks* and *Latins*; consisting, like the Sapphic, of five Feet, the first a Spondee, the second a Dactyl, the three last Trochees. See VERSE, FOOT, SPONDEE.

The *Phaleucus* is very proper for Epigrams. *Catullus* excell'd in it. See EPIGRAM.

PHALLOPHORI, in Antiquity, a Name given at *Sicyon* to certain *Mimes*, who ran about the Streets smutted with black, cloathed in Sheeps Skins, bearing Baskets full of various Herbs, as Chervil, Branca Ursina, Violet, Ivy, &c.

They danced in Cadence and were crown'd with Ivy, in honour of *Bacchus*.

The Word is form'd from the *Greek* φαλλὸς Skin and φέρω *I bear.*

PHALLICA, in Antiquity, Feasts, or Sacrifices celebrated at *Athens*, in honour of *Bacchus*. See FEAST.

The *Phallica* were instituted on the following Occasion: One *Pegasus*, a Citizen of *Eluthers*, having carried some Statues of *Bacchus* to *Athens*; drew the Laughter and Contempt of the *Athenians*. Soon after this they were seiz'd with an Epidemic Disease, and upon consulting the Oracle how to get free of it, they were answer'd that there was no Way but to receive *Bacchus* in Pomp: They did it, and thus instituted the *Phallica*; wherein, besides the Statues and Trophies of the God, they bore Figures of the Parts affected tied to *Thyrsi*.

PHANATIC, PHANATICUS, a *Visionary*; one who *fancies*, or thinks, he sees Spectres, Spirits, Apparitions, or other imaginary Objects, even when awake; and takes 'em to be real. See PHANTASY.

Such are Phrenetics, Necromancer, Hypocondriac Persons, and Lycanthropi. See PHRENETIC, HYPOCHONDRIAC, LYCANTHROPOS &c. See also WITCHCRAFT, IMAGINATION, &c.

Hence the Word is also applied to Enthusiasts, Pretenders to Revelation, new Lights, Prophecies, &c.

PHANTASM, PHANTASMA, PHANTOM, a Species of an Object perceiv'd by an external Sense, and retain'd in the Phantasy. See SPECIES and PHANTASY.

PHANTASY, or FANCY, the *Imagination*; the Second of the Powers, or Faculties of the sensitive or rational Soul, by which the Species of Objects receiv'd in by the common Sense, are retain'd, recall'd, further examin'd, and either compounded or divided. See IMAGINATION.

Others define the *Phantasy* to be that internal Sense or Power, whereby the Idea's of absent Things are form'd, and presented to the Mind, as if they were present. See SENSE.

The Organ of this Sense is vulgarly suppos'd to be the middle Part of the Brain; and its objects, all the Species communicated to it by the common Sense, by the comparing of which it frames infinite others to itself. See IMAGE.

In Melancholic, and mad Men this Faculty is very strong, representing many extravagant and monstrous Things; and framing its Images as lively as those of Sensation; whence the Visions and Deceptions those Persons are liable to. See PASSION, DELIRIUM, &c.

In Poets and Painters, that same Faculty is to be the Predominant one; to enable 'em to feign, and pursue and execute their Fictions or Fables with more Strength, Consistency, &c. See FABLE, POETRY, &c.

In Men it is suppos'd to be subject to Reason, but in Brutes it has no Superior; this being the *Ratio Brutorum*, or what we call Reason in Brutes. See REASON and BRUTE.

The *Phantasy* is free from the Ligature or Suspension of Sleep, witness our Dreams, &c. See SLEEP and DREAM.

Some Philosopers use the Word *Phantasy*, in a more general Signification, *viz.* for what we usually call *Sensus Communis*, the common Sense. See *Common* SENSE.

PHANTASTIC, in Musick. PHANTASTIC *Style*, is a Style proper for Instruments; or a free, easy manner of Composition. See STYLE.

PHANTASTICAL *Colours*, is a Denomination given by the Peripateticks to those Colours exhibited by the Rainbow, or a Prism; as supposing 'em not to be real Colours, but only *Phantoms* or Deceptions of the Sight. See COLOUR.

But many Experiments of the Moderns, and particularly those of Sir *Isaac Newton* demonstrate the contrary; and prove them as real as any other Colours in Nature. See PRISM, and RAIN-*bow*.

PHARISEES, a celebrated Sect among the ancient *Jews*; so call'd, say some, because *separated from the rest* by the Austerity of their Life, by their professing a greater Degree of Holiness, and a more religious Observation of the Law.

This is the Import of the Word *Pharis* in the *Hebrew*, or rather the *Chaldee* Tongue; whence is form'd the *Greek* Φαρισαῖοι and the *Latin Pharisæus*.

St. *Jerom*, and several of the *Rabbins* maintain this Etymology; which is very agreeable to the State and Character of the *Pharisees*; who were not only distinguish'd from the rest by their manner of Life, but by their Habit.

'Tis very difficult to fix the precise Origin of the *Pharisees*. The *Jesuite Serrarius* places their first Rise about the Time of *Esdras*; because 'twas then the *Jews* first began to have Interpreters of their Traditions. *Maldonat*, on the other Hand, will not have this Sect to have rose among the *Jews*, till a little before the Time of Christ. Others, perhaps with more probability, refer the Origin of the *Pharisees* to the Time of the *Maccabees*.

Be this as it will *Pharisaism* is still the prevailing Doctrine in the *Jewish* Religion; that huge Number of Traditions in the *Talmud* which bear so great a Sway among the *Jews*, coming all from the *Pharisees*. See TRADITION and TALMUD.

Josephus, who describes their Dogmata, says, that they attributed all to Destiny, and to God; so, however, as not to deprive Man of his free Agency; which *Sixtus* of *Sienna* thus explains: The *Pharisees* believ'd that all Things were done by Destiny, *i. e.* with Gods foreknowledge, and in Consequence of his immutable Decree; the Will of Man still remaining free and unaffected: *Fato, hoc est Dei prescientia & immobili decreto omnia geri; manente tamen libero humanæ libertatis assensu.*

They own'd the Immortality of the Soul, and a future State; but admitted at the same Time a kind of Metempsychosis, or Transmigration of Souls. See METEMPSYCHOSIS.

The *Pharisees* were great Sticklers for the allegorical or mystical Sense of the Scriptures; whence most of Converts made to Christianity among the *Jews* were of the *Pharisees*.

In effect, the *Pharisees* were in every Thing directly opposite to the *Saducees*. See SADUCEES.

PHARMACEUTICA, that part of Physick which directs the Use, Preparation, &c. of Medicines. See PHARMACY.

PHARMACOLOGY, a Treatise of Medicines; of the Art of preparing 'em, judging of 'em, &c. See PHARMACY.

PHARMACOPOEIA, a *Dispensary*; or a Treatise containing the Preparations of the several Kinds of Medicines, with their Uses, manner of Application, &c. See DISPENSARY.

We have various *Pharmacopœia's*; as those of *Bauderon, Quercetan, Zwelfer, Charras, Bates, Salmon, Lemery*, &c.

The latest and most rational, and that in most Esteem, is *Quincy's Pharmacopœia officinalis & extemporanea.*

The Word is form'd from the *Greek* φάρμακον, Remedy, and ποιεῖν *facere*, to make.

PHARMACOPOLA, an *Apothecary*; or a Person who prepares and sells Medicines. See APOTHECARY.

The Word is seldom used but by way of ridicule. It is form'd from the *Greek* φάρμακον and πωλεῖν *vendere*, to sell.

PHAR-

PHARMACUM, a Medicament, or Medicine. See MEDICINE. Hence,

PHARMACY, that Branch of Medicine which teaches the Choice, Preparation, and Mixture of Medicines. See MEDICINE.

Pharmacy is divided into *Galenical* and *Chymical*.

Galenical PHARMACY, call'd alſo ſimply *Pharmacy*, is that deriv'd to us from the Ancients; conſiſting in the Knowledge and Management of the ſeveral Parts of the *Materia Medica*, now in the Hands of the Apothecaries. See GALENICAL.

The chief Obſtacle in the Way of the Improvement of Phyſic, is the Phyſicians neglecting of *Pharmacy*.

Chymical PHARMACY, call'd alſo *Spagyrical* and *Hermetical*, is that introduced by *Paracelſus*, who calls it *Ars diſtillatoria*; conſiſting in the reſolving of mixed Bodies, into their component Parts, in order to ſeparate the uſeleſs and Ill, and collect and exalt the Good. See CHYMISTRY.

The Word is deriv'd from the *Greek* φάρμακον *Remedy*.

----- Simples, vulgar, familiar, eaſily prepar'd, readily procur'd Simples, *Pliny* well obſerves, were the only Remedies intended by Nature: ſo ſoon as Fraud was got into the World, and Men began to live by their Witts; Shops were ſoon ſet up; and Life offer'd every Man to Sale. Straight, innumerable Compoſitions; endleſs, inexplicable Mixtures, are cri'd up; *Arabia* and *India* are crouded into a Draught; and a Plaiſter for a little Ulcer fetch'd from the red Sea. When as the proper Remedies are thoſe the Poor every Day feed on.

----- Hiſt. *Nat.* lib. 24. c. 1.

PHAROS, PHARE, or PHANAL, a *Light-houſe*; a Pile rais'd near a Port, where a Fire is kept burning in the Night to guide and direct Veſſels near at Hand.

The *Pharos* of *Alexandria* was antiently very famous, in ſo much as to communicate its Name to all the reſt; the *Coloſſus* of *Rhodes* ſerv'd as a *Pharos*.

Ozanam ſays, *Pharos* antiently ſignified a Streight, as the *Pharos* or *Pharo* of *Meſſina*. See STREIGHT.

PHARSANG, or PARASANG, a *Perſian* Meaſure of 40, 50, or 60 Furlongs. See PARASANG.

PHARYNX, in Anatomy, the upper Opening of the Oeſophagus or Gullet, ſituate at the Bottom of the Fauces. See OESOPHAGUS.

The *Pharynx* is that Part particularly call'd the *Gula* or the *Throat*. It being in this Part of the Gullet the Action of Deglutition commences, and where 'tis chiefly perform'd. It is aſſiſted by three Pair of Muſcles which compoſe the *Pharynx*. See DEGLUTITION.

The firſt call'd the *Stylopharyngæus* ſerves to draw up and dilate the *Pharynx*; the ſecond the *Pterygopharyngæus* ſerves to conſtringe it; the third, which is call'd the *Oeſophagæus* ſerves to cloſe it; ſee each under its proper Article. STYLOPHARYNGÆUS, &c.

The Word in the original *Greek* φάρυγξ ſignifies the ſame.

PHASES, in Aſtronomy, the ſeveral Appearances, or Quantities of Illumination of the Moon, Venus, Mercury and the other Planets; or the ſeveral manners wherein they appear illuminated by the Sun. See PLANET.

The Variety of *Phaſes* in the Moon is very remarkable. Sometimes ſhe Increaſes, ſometimes Wanes, ſometimes is bent into *Horns*, and again appears like a Semi-circle, at other Times is *Gibbous*, and preſently reſumes a full circular Face. See CRESCENT, FALCATED, GIBBOUS, &c.

For the Theory of the *Lunar-Phaſes*. See MOON.

As to the *Phaſes* of Venus, the naked Eye does not diſcover any; but the Teleſcope does. *Copernicus* antiently propheſied, that after Ages wou'd find that Venus underwent all the Changes of the Moon; which Prophecy was firſt fulfill'd by *Gallileo*, who directing his Teleſcope to Venus, obſerv'd her *Phaſes* to emulate thoſe of the Moon; being ſometimes full, ſometimes horn'd, ſometimes gibbous. See VENUS.

And Mercury does the ſame—— all the Difference between theſe, and thoſe of the Moon; is, that when theſe are full the Sun is between them and us; whereas, when the Moon is full, we are between her and the Sun. See MERCURY.

The Word is form'd from the *Greek* φαίνω, *appareo*, I appear.

Saturn puzzled the Aſtronomers a long Time with his ſtrange Variety of *Phaſes*. *Hevelius* and others found him. 1. *Monoſpherical*. 2. *Triſpherical*. 3. *Spherico-anſated*. 4. *Elliptico-anſated*. 5. *Spherico-cuſpidated*: But *Huygens* ſhews, that thoſe monſtrous *Phaſes* are all owing to the Imperfection of their Teleſcopes. That great Author aſſiſted by the beſt Teleſcopes noted three principal *Phaſes*; *viz.* *Jan.* 16, 1656. he was *round*, *Octob.* 13, *Brachiated*, and *Decemb.* 17, 1657. *Anſated*. See SATURN.

To determine the Phaſes *of an Eclipſe for any given Time.*

Find the Moon's Place in her viſible Way for that Moment; and thence, as a Centre, with the Interval of the Moons Semi-diameter, deſcribe a Circle. Find in like manner the Sun's Place in the Ecliptic, and thence, with the Semi-diameter of the Sun deſcribe another Circle: The Interſection of the two Circles ſhews the *Phaſes* of the Eclipſe, the Quantity of Obſcuration, and the Poſition of the Cuſps or Horns. See ECLIPSE.

PHEONS, in Heraldry, the Barbed Heads of Darts and Arrows; uſually repreſented of the adjoining Figure. Sable, a Feſſe Ermine between three *Pheons*, by the Name of *Egerton*.

PHIAL, PHIALA, a little Glaſs-bottle, popularly call'd a *Vial*.

The Word is form'd of the *Greek* φιαλη which ſignifies the ſame Thing.

PHIDITIA, or PHILITIA, in Antiquity, Feaſts celebrated with great Frugality at *Lacedemon*.

The *Phiditia* were held in public Places, and in the open Air; Rich and Poor aſſiſted at 'em a like; and on the ſame footing; their Deſign being to keep up Peace, Friendſhip, and a good Underſtanding, and Equality among all the Citizens great and ſmall.

Bernegger ſays, they who attended at this Feaſt, each brought a Buſhel of Flower, eight Meaſures of Wine, call'd Corus, and five Minæ of Cheeſe, and as much Figs.

The *Phiditia* of the *Greeks* were much the ſame with the Chariſtia at *Rome*. See CHARISTIA.

PHILADELPHUS, in Antiquity, a Title, or Sur-name, bore by ſeveral ancient Kings; form'd from the *Greek* Φίλος Friend, loving and ἀδελφὸς, Brother, *q. d.* who loves his Brother.

Ptolomy Philadelphus erected a Library at *Alexandria*, and furniſhed it with 50000 Volumes, by the Advice, and with the Care of *Demetrius Phalareus*. See LIBRARY.

It was the ſame *Philadelphus*, that procur'd the *Greek* Verſion of the Books of *Moſes*, call'd the *Septuagint*. See SEPTUAGINT.

Father *Chamillart* has a Medal of the Queen of *Comagenes*, which bears the Title of *Philadelpha*; without any other Name. M. *Vaillant* alſo tells us that *Philip* King of *Syria* had the Title of *Philadelphus*.

PHILANTHROPY, a Love of Mankind; a general Benevolence toward the Species. See BENEVOLENCE.

PHILAUTIA, PHILAUTY, in the Schools, *ſelf Love*; a vicious Complaiſance for a Man's ſelf. From the *Greek* φίλος, *amicus*, and αὐτὸς, *ipſe*.

PHILIPPICKS, in Literature, a Name given to the Orations of *Demoſthenes* againſt *Philip* King of *Macedon*. See ORATION.

The *Philippicks* are eſteem'd the Maſter-pieces of that great Orator: *Longinus* quotes Abundance of Inſtances of the Sublime from 'em; and points out a thouſand latent Beauties therein. In effect, that Pathetic wherein *Demoſthenes* excell'd, the frequent Interrogations and Apoſtrophe's wherewith he attack'd the Indolence of the *Athenians*, where cou'd they be better employ'd? How much Delicacy ſoever there be in the Oration againſt *Leptinus*, the *Philippicks* have yet the Advantage over it, were it only on account of the Subject, which gives *Demoſthenes* ſo fair a Field to diſplay his chief Talent, we mean with *Longinus*, that of moving and aſtoniſhing.

Dionyſius Halicarnaſſeus ranks the Oration on the *Haloneſe* among the *Philippicks*, and places it the 8th in Order; but tho' the Authority of that great Critic be of no ſmall Weight; yet, that Force and Majeſty whereby *Cicero* Characteriſes the *Philippicks* of *Demoſthenes* ſeems to exclude the Oration on the *Haloneſe* out of the Number; and authoriſe the almoſt univerſal Opinion of the Learned, who reject it as ſpurious.

Libanius, *Photius* and others; and above all the Languidneſs of the Style, and the Lowneſs of the Expreſſions which reign throughout the Whole, father it on *Hegeſippus*.

M. *Tourreil* has given an excellent *French* Tranſlation of the *Philippicks*.

'Tis an extraordinary Thing to ſee ſo much Spirit in a Tranſlation: ſo much of the Strength and Energy of *Demoſthenes*, in a modern Tongue; and that too ſo weak a one as the *French*.

PHILLIPICK is alſo applied to the fourteen Orations of *Cicero* againſt *Marc Anthony*.— 'Twas *Cicero* himſelf that gave 'em this Title in his Epiſtles to *Brutus*; and Poſterity have found it ſo juſt that it has been perpetuated to our Times.

Juvenal calls the Second the *Divine Philippick*, and witneſſes it to be of great Fame, *Conſpicuæ Divina Philippica Famæ*. That Orator's entitling his laſt and moſt valued Orations after the *Philippicks* of *Demoſthenes*, ſhews the high Opinion he had of 'em.

Cicero's Philippicks coſt him his Life; M. *Anthony* having been ſo irritated with 'em, that when he was arriv'd at the *Triumvirate*, he procur'd his Murther, cut off his Head, and ſtuck it up in the very Place whence the Orator had deliver'd the *Philippicks*.

PHILIPPISTS, the Followers of *Philip Melancthon*.

That Reformer having ſtrenuouſly oppos'd the *Ubiquiſts*, who aroſe in his Time; and the Diſpute growing ſtill hotter after his Death: The Univerſity of *Wirtemberg*, who eſpouſed *Melanchthon's* Opinion, were call'd by the *Flaccians*, who attacked it, *Philippiſts*. See UBIQUIST.

PHILIZERS, or FILAZERS, Officers in the *Niſi Prius* Office, who make out all Proceſs upon Original Writs, (which are made out by the Curſitors, ſuch as *Capias*, *alias*, & *plures*, &c.) and to whom the original Writs are brought after returned by the Sheriff, as well for their Warrants in ſuing out ſuch *Capias*, &c. on them, as for them to fill with the *Cuſtos Brevium*. See FILAZERS.

It is to be obſerved, that the Subject cannot bring any Action in this Court by original in Debt, but muſt proceed by Bill; and where an Action is brought in this Court by Original, if the Defendant for Delay, or thro' any Miſ-entry, or miſtake in the Proceedings or Return of Proceſs, is adviſ'd to bring a Writ of Error; the Writ of Error muſt be returnable in Parliament, and not in the Exchequer-chamber, as are other Writs of Error upon Actions which are brought in this Court by Bill.

PHILO, a Term originally *Greek*, form'd of φίλος, *amicus*, Friend, Lover; uſed in Compoſition in ſeveral Words in our Language. As,

PHILO-ELUTHERUS, a Lover of Liberty; of φίλος and ἐλεύθερος, *liber*, free.

PHILOLOGY, a Science, or rather Aſſemblage of ſeveral Sciences, conſiſting of Grammar, Rhetorick, Poetry, Antiquities, Hiſtory, and Criticiſm.

Philology, is a Kind of Univerſal Literature, converſant about all the Sciences, their Riſe, Progreſs, Authors, &c. See LITERATURE.

Philology, makes what the *French* call the *Belles lettres*. Antiently, *Philology* was only a part of Grammar. See GRAMMAR

Eratoſthenes, Library Keeper at *Alexandria*, was the firſt who bore the gay Title of *Philologus*, according to *Suetonius*; or that of *Critick*, according to *Clemens Alexandrinus*. He lived under *Ptolomy Philadelphus*, and died in the 146th *Olympiad*. See CRITICISM.

The Word is form'd from the *Greek* φίλος, and λόγος, Lover of Diſcourſe, or Words.

PHILOMATH, PHILOMATHES, a Lover of the Mathematicks, &c. See MATHEMATICKS.

PHILONIUM, in Pharmacy, an Opiate, whereof there are two Kinds; the *Roman* and the *Perſian Philonium*. See OPIATE.

The *Roman*, call'd alſo the great *Philonium*, took its Name from the Phyſician *Philo* who invented it. It conſiſts of the Seeds of Juſquiamus, Poppy, and other Ingredients. 'Tis uſed to promote Sleep, againſt Colds, Colicks, &c.

The *Perſian* PHILONIUM conſiſts of ſeveral Ingredients, among which are Opium, Terra ſigillata, Lapis Hematites, Caſtor, and Saffron. 'Tis uſed to ſtop Hemorrhages, Dyſenteries, &c.

PHILOPATOR, in Antiquity, a Title, or Sur-name, aſſumed by ſeveral of the Kings of *Egypt* and *Syria*.

Ptolomy Philopator ſucceeded *Ptolomy Evergetes*; and had for his Succeſſor *Ptolomy Philometer*. See EVERGETES.

The *Syrians* had their *Seleucus Philopator*, *Antiochus Philopator*, &c.

PHILOSOPHER, a Perſon well verſed in *Philoſophy*; or who makes Profeſſion of, or applies himſelf to the Study of Nature and Morality. See PHILOSOPHY.

The Sects of *Philoſophers* are very numerous; and their Dogmata, or Tenets very contradictory. See SECT.

Helmont and ſome of the Chymiſts denominate themſelves *Philoſophers by Fire*. See CHYMISTRY.

The Alchymiſts and Adepti are frequently denominated *the Philoſophers* by way of Eminence. See ALCHYMIST, &c.

PHILOSOPHERS STONE, the great Object of Alchymy, is a long ſought-for Preparation, which ſhall tranſmute impurer Metals, as Tin, Lead, and Copper into Gold and Silver. See TRANSMUTATION.

There are three ways whereby the Alchymiſts have attempted to arrive at the making of Gold: The firſt by *Separation*; for every Metal yet known, contains ſome Quantity of Gold: Only, in moſt, the Quantity is ſo little that it wont defray the Expence of getting it out.— The ſecond by *Maturation*; for the Alchymiſts hold Mercury to be the Baſis and Matter of all Metals; that Quickſilver purg'd from all heterogeneous Bodies wou'd be much heavier, denſer and ſimpler than the Native Quickſilver; And that by ſubtilizing, and purifying and digeſting it with much Labour, and long Operations, it may be converted into pure Gold. This Method of *Maturation* is only for Mercury. The other Metals it is ineffectual for, on two accounts: 1°, Becauſe their Matter is not pure Mercury, but has other heterogeneous Bodies adhering to it. And 2°. by reaſon the Digeſtion whereby Mercury is turn'd into Gold wou'd not ſucceed in other Metals, in regard they had not been long enough in the Mines. Weight is the individual and inimitable Character of Gold, &c. Now Mercury has ever ſome Impurities in it; and thoſe Impurities are lighter than Mercury. Cou'd thoſe be purged quite out, as it does not appear impoſſible but they might, Mercury wou'd be as heavy as Gold; and what is as heavy as Gold is Gold, or at leaſt is very eaſily made Gold. See GOLD.

The third Method is, that of Tranſmuting; or of turning of all Metals readily into pure Gold, by melting 'em in the Fire, and caſting a little Quantity of a certain Preparation into the fuſed Matter; upon which, the Fæces immediately retire, are volatiliz'd and burnt, and ſo carried off; and the reſt of the Maſs turn'd into pure Gold. Now, that which works this change in the Metals is call'd the *Philoſophers-ſtone*. See TRANSMUTATION.

Whether this third Method be poſſible or not is very hard to ſay. We have ſo many Teſtimonies of Perſons, who on all other Occaſions ſpeak perfect Truth, that 'tis ſomewhat hard to ſay they lye in this, that they have been Maſters of of the Secret. All required is to do that by Art which Nature does in many Years and Ages. For Lead and Gold do but differ little in Weight. Therefore there is not much in Lead beſide Mercury and Gold. Now, if I had any Body which wou'd ſo agitate all the Parts of Lead, as to burn all that is not Mercury therein; and had ſome Sulphur to fix the Mercury; wou'd not the Maſs remaining be converted into Gold? There is nothing in Nature ſo heavy as Lead; Gold and Mercury only excepted. 'Tis evident, therefore, there is ſomething in Lead that comes very near to Gold. But in Lead there is ſome heterogeneous Matter independent both of Mercury and Gold. If now 19 Ounces of Lead be diſſolved by the Fire, and 8 Ounces be thus deſtroyed; we ſhall have good Gold; the Ratio of Lead to Gold being as 11 to 19. If then the *Philoſophers-ſtone* can purify the mercurial Metal in Lead, ſo as nothing ſhall remain but the pure mercurial Body, and you can fix and coagulate this, by means of Sulphur; out of 19 Ounces of Lead you will have 11 of Gold. Or, if you reduce the Lead from 11 to 14, you will then have converted it into Mercury; and if you further purify this Mercury from 14 to 19 you will have Gold; provided you have but a Sulphur to fix and coagulate it withal. Such is the Foundation of the *Philoſophers-ſtone*; which the Alchymiſts contend to be a moſt ſubtile, fix'd, concentrated Fire, which aſſoon as it melts with any Metal, does by a magnetick Virtue immediately unite itſelf to the mercural Body of the Metal, volatilizes and cleanſes off all that is impure therein, and leaves nothing but a Maſs of pure Gold. See ELIXIR, METAL, MERCURY, &c.

PHILOSOPHERS *Tree*, a Chymical Preparation, call'd alſo *Arbor Dianæ*, *Diana's Tree*. See DIANA'S *Tree*.

PHILOSOPHICAL, ſomething that relates to *Philoſophy*, See PHILOSOPHY and PHILOSOPHER.

Thus we ſay a *Philoſophical* Theſis, a *Philoſophical* Principle, a *Philoſophical* Definition, &c.

PHILOSOPHICAL *Month*. } See { MENSTRUUM.
PHILOSOPHICAL *Tree*. } See { TREE.
PHILOSOPHICAL *Tranſactions*. } See { TRANSACTIONS.

PHILOSOPHICAL *Egg*, among the Chymiſts, is a thin Glaſs Veſſel, or Bubble, of the Shape of an Egg; with a long Neck or Stem; uſed in Digeſtions. See DIGESTION.

PHILOSOPHIZING, the Act of conſidering ſome Object of our Knowledge; examining its Properties, and the Phænomena it exhibits; enquiring into their Cauſes or Effects, and the Laws thereof: the whole conducted according to the Nature and Reaſon of Things; and directed to the Improvement of Knowledge.

The Rules of *Philoſophizing*, *Regulæ Philoſophandi*, as eſtabliſh'd by Sir *Iſaac Newton*, are; 1. That no more Cauſes of a natural Effect be admitted than are true, and ſuffice to account for the Phænomena thereof.— This agrees with the Sentiments of moſt Philoſophers, who hold that Nature does nothing in vain; and that it were vain to do that by many things which might be done by fewer.

2. Natural Effects, therefore, of the ſame Kind, proceed from the ſame Cauſes. Thus *E. gr.* the Cauſe of Reſpiration is one and the ſame in Man and Brute; the Cauſe of the Deſcent of a Stone, the ſame in *Europe* as in *America*; the Cauſe of Light the ſame in Culinary Fire, and in the Sun; the cauſe of Reflection the ſame in the Planets as the Earth.

3. Thoſe Qualities of Bodies which are not capable of being heighten'd, and remitted, and which are found in all Bodies where Experiments can be made; muſt be look'd on as univerſal Qualities of all Bodies. See QUALITY.

Thus the Extenſion of Body is only perceiv'd by our Senſes, nor is it perceiv'd in all Bodies: But ſince it is found in all that we have Perception of, it may be affirm'd of all. So we find that ſeveral Bodies are hard; and argue that the Hardneſs of the Whole only ariſes from the Hardneſs of the Parts: Whence we infer that the Particles, not only of thoſe Bodies which are ſenſible, but of all others, are likewiſe hard. Laſtly, If all the Bodies about the Earth gravitate towards the Earth, and this according to the Quantity of Matter in each; and the

Moon

Moon gravitates towards the Earth, alſo, according to its Quantity of Matter, and the Sea again gravitates towards the Moon; and all the Planets and Comets gravitate toward each other: It may be affirm'd univerſally, that all Bodies gravitate toward each other in the Creation. This Rule is the Foundation of all *Philoſophy*.

PHILOSOPHY, Philosophia, the Knowlege or Study of Nature and Morality, founded on Reaſon and Experience. See Knowlege.

Philoſophy owes its Name to the Modeſty of *Pythagoras*, who refuſed the Title σοφὸς, *wiſe*, given to his Predeceſſors *Thales*, *Pherecydes*, &c. as too aſſuming; and contented himſelf with the Apellation φιλόσοφος, *quaſi* φιλὸς τῆς σοφίας, a *Friend or Lover of Wiſdom*.

Chauvin rather derives the Name from φιλία, Study, and σοφία, *q. d. Studium ſapientiæ*. *Pythagoras*, ſays he, conceiving that the Application of the human Mind, ought rather to be call'd *Study* than *Science*; ſet aſide the Appellation *Wiſe*, and in lieu thereof took that of *Philoſopher*: For having diſcourſed with great Judgment and Learning before *Leontius* King of the *Phliaſii*; that Prince ask'd him what Art he profeſſed; or in what Points his Wiſdom chiefly lay? To which he anſwer'd, that he neither underſtood any Art, nor was he a σοφὸς, but a φιλόσοφος. Which Title St. *Auguſtin* obſerves, took ſo well with other Authors; that whoever excelled in any thing relating to Wiſdom or Knowledge had no other Appellation. Accordingly, *Socrates*, *Plato*, &c. ever refrain'd from the ſwelling Title of *Sophos*. See Sophist.

The Word *Philoſophy* is uſed in various Significations among ancient and modern Writers: In its laxer Senſe, it ſignifies the *Love of Truth*; thus *Plato* frequently calls it *Philaletheia*.— In other Places it ſignifies the *Knowledge of many Things*: Thus *Zeno* calls *Philoſophy* κατάληψις *Comprehenſion*; becauſe comprehending all Truth: Agreeable to which is *Cicero*'s Definition of *Philoſopher*, *viz.* He who ſtudies to know the Natures and Cauſes of all Things human and divine, and to attain to every good Rule and Method of Life.

In a ſtricter Senſe, *Philoſophy* is frequently confin'd to ſome Science, or Branch of Science, *v. g.* to *Logic*, as we find it in *Plato* and *Ariſtotle*; to *Phyſicks*, or the Knowledge of Nature, in which Senſe it was chiefly uſed in the *Jonic* School; and to *Ethicks*, or the Rules of Morality; Thus *Clemens Alexand.* relates, *that among the* Greeks *there are* Philoſophers *who hold Diſputes about Virtue.*

Agreeably hereto *Pythagoras* defines *Philoſophy*, *a Meditation of Death*; by which, according to *Plato* and *Clemens* is meant an Abſtraction or Retirement from the Body; which *Apuleius* thus explains: *A Philoſopher is to ſtudy nothing ſo much as to ſet his Soul at Liberty from its Correſpondence with the Body:* Thus *Cicero* calls *Philoſophy Ars vitæ, and* Seneca, *lex vitæ*; and thus *Plutarch — Conſtancy, Fidelity, and a ſound Mind, are the real Philoſophy; all the other Parts of Wiſdom, tending any other Way, are Prettineſſes and Curioſities*: And in this Senſe it was, that *Philoſophy* chiefly flouriſh'd in the School of *Socrates*, afterwards call'd the Academick School, and among the *Stoicks*. See Academick and Stoick.

Laſtly, *Philoſophy* is frequently uſed by *Pythagoras* and *Plato* for Metaphyſicks, or the Knowledge of God; which *Plato* calls the true *Philoſophy*, others the *Prima Philoſophia*; and in reſpect whereof, the *Platoniſts* call all other *Philoſophy*, *Nocturnal*, νυκτερινὴ φιλοσοφία.

Gale includes all the ſeveral Ideas hitherto deliver'd, under this one general Definition: *Philoſophy* is the Knowledge of things Notional, Natural, Moral, and Supernatural, firſt granted by God to our firſt Parents, and tranſmitted to us for the Honour of the Creator, and the Good of the Univerſe.

That Definition of *Epictetus* is pretty comprehenſive: *Philoſophy* conſiſts in three Things; the Practice of Precepts, the Reaſon of Precepts, aud the Proof of Precepts.

Some have given the following Epithets to the ancient *Philoſophy*, under its ſeveral Stages: *Philoſophy*, ſay they, became *Impious* under *Diagoras*; *Vicious* under *Epicurus*; *Hypocritical* under *Zeno*; *Impudent* under *Diogenes*; *Covetous* under *Demochares*; *Voluptuous* under *Metrodorus*; *Fantaſtical* under *Crates*; *Scurrilous* under *Menippus*; *Licentious* under *Pyrrho*; *Quarrelſome* under *Cleanthes*, &c.

The ſeveral Dogmata maintain'd by the ſeveral *Philoſophers*, are infinite: *Cicero* makes no ſcruple to aver, that There is nothing in the World, how abſurd ſoever, but has been maintain'd by one *Philoſopher* or other.— From the firſt Broachers of new Opinions, and the firſt Founders of Schools, *Philoſophy* is become divided into innumerable *Sects*; ſome Ancient, and others Modern; ſuch are the *Platoniſts*, *Peripateticks*, *Epicureans*, *Stoicks*, *Pyrrhonians* and *Academiſts*; and ſuch are the *Carteſians*, *Newtonians*, &c. See the Riſe, Doctrines; &c. of each Sect under its proper Article Platonist, Peripatetick, Epicurean, Stoick, Pyrrhonian, Academic, Cartesian, Newtonian, &c.

Philosophy may be divided into two Branches, or conſider'd under two Habitudes, *Theoretical and Practical.*

Theoretical, or *Speculative* Philosophy, is that employ'd in mere Contemplation, and which terminates therein. Such is *Phyſicks*, which is a bare Contemplation of Nature, and natural Things. See Physicks.

Theoretical Philoſophy, again, is uſually ſubdivided into three, *viz. Pneumaticks*; *Phyſicks*, or *Somaticks*; and *Metaphyſicks*, or *Ontologia*.

The Firſt conſiders Beings abſtracted from all Matter; its Object are Spirits; their Nature, Properties, Effects, &c. See Spirit and Pneumaticks.

The Second conſiders Matter and material Things; its Objects are Bodies, their Properties, Laws, &c. See Body and Physicks.

The Third extends to each indifferently; its Objects are either Body or Spirit. See Metaphysicks.

In the Order of our Diſcovery, or Arrival at the Knowledge of 'em, Phyſicks is firſt, then Metaphyſicks; the third ariſes from the two conſider'd together: After an Acquaintance with God, ourſelves, and natural Bodies, we come to conſider what is common to 'em all, the Attributes that agree to all, and thus form a Sort of univerſal *Philoſophy*, or Doctrine *de Ente* in general. See Ontosophy, Ens, Essence, &c.

But in teaching, or laying down theſe ſeveral Branches to others, we obſerve a contrary Order; beginning with the moſt Univerſal, and deſcending to the more Particular. And hence we ſee why *Perpateticks* call Metaphyſicks, and the *Carteſians* Pneumaticks, the *prima Philoſophia*.

Others prefer the Diſtribution of *Philoſophy* into four Parts, *viz.* 1. *Pneumaticks*, which conſiders, and treats of Spirits. 2. *Somaticks*, of Bodies. The third compounded of both, *Anthropology*, which conſiders Man, in whom both Body and Spirit are found. The 4. *Ontoſophy*, *i. e.* which treats of what is common to all the other three.

Practical Philosophy, is that which lays down the Rules of vertuous and happy Life; and excites us to the Practice thereof.

Practical Philoſophy, is properly *Ethicks* alone, or the Method of leading a virtuous and happy Life: Yet, moſt Authors divide it into two, anſwerably to the two Sorts of human Actions to be directed thereby, *viz. Logicks*, which govern the Operations of the Underſtanding. See Logicks and Understanding.

And *Ethicks* properly ſo call'd, which direct thoſe of the Will. See Ethicks and Will.

Natural Philosophy, *Moral* Philosophy } See { Natural. Moral.

Philosophy is alſo frequently uſed for the particular Doctrine, or Syſtem of Opinions, broach'd by ſome conſiderable Philoſopher, and eſpouſed and adhered to by his Followers. See System and Hypothesis.

In this Senſe we ſay the

Moſaic, *Epicurean*, *Ariſtotelian*, *Platonic*, *Carteſian*, *Newtonian*, *Hermetical* } Philosophy. See { Mosaic, Epicurean, Peripatetic, Platonic, Cartesian, Newtonian, Hermetical.

Philosophy is alſo uſed for a certain Manner of Philoſophizing; or certain Principles, upon which all the Enquiries thereby made, do turn.

In this Senſe we ſay

Corpuſcular or *Atomical* Philosophy. *Mechanical* Philosophy. *Experimental* Philosophy. } See { Corpuscular. Mechanical. Experimental.

Philosophy, again, is conſider'd with regard to the Age, or the Place wherein it was taught.

In this Senſe we ſay

Scholaſtick or *School* Philosophy. See Scholastick.
New Philosophy, &c.

PHILTRATION, or Filtration, the Separation of the finer Part of a Fluid, from the Coarſer; by paſſing it through a *Filtre*, *viz.* a Linnen Cloth, Shammy Skin, Brown Paper, or the like. See Filtration.

PHILTER, Philtre, Philtrum, in Pharmacy, &c. a Strainer, or Filtre. See Filtre.

Philter, or Filtre, is alſo uſed for a Drug, or Preparation, which 'tis pretended will excite Love. See Charm.

Philters, are diſtinguiſh'd into *true* and *ſpurious*: The Spurious are Spells or Charms, ſuppoſed to have an Effect beyond the ordinary Laws of Nature, by ſome magick Virtue; ſuch are thoſe ſaid to be given by old Women, Witches, &c. See Magick and Witchcraft.

The

The true *Philtres* are thoſe ſuppoſed to work their Effect by ſome natural and magnetical Power.

There are many grave Authors who believe the Reality of theſe *Philtres*; and alledge matter of Fact in Confirmation of their Sentiments: among the reſt, *Van-Helmont*, who ſays, that upon holding a certain Herb in his Hand for ſome time, and taking afterwards a little Dog by the Foot with the ſame Hand; the Dog follow'd him wherever he went, and quite deſerted his former Maſter.

He adds that *Philtres* only demand a Conformation of Mumia; and on this Principle accounts for the Phænomena of Love tranſplanted by the Touch of an Herb; for, ſays he, the Heat communicated to the Herb, not coming alone, but animated by the Emanations of the natural Spirits; determines the Herb towards the Man, and identifies it to him: Having, then received this Ferment, it attracts the Spirit of the other Object magnetically, and gives it an amorous Motion. See MUMIA and TRANSPLANTATION.

But this is mere Cant; and all *Philters*, whatever Facts may be alledg'd, are mere Chimera's.

Naturaliſts aſcribe an Effect ſomewhat of Kin to that of a *Philtre* to *Cantharides*, taken inwardly; theſe, 'tis true, tend to excite love, or rather Luſt: but 'tis Luſt in the General, not determin'd to any particular Object; and they do it no otherwiſe than by irritating the Fibres of the Nerves and Muſcles, by whoſe Action the *Emiſſio Seminis* is effected. See CANTHARIDES.

The Word *Philtre* is form'd from the *Greek* φιλεῖν to love.

PHIMOSIS, in Medicine, a Diſeaſe of the *Penis*, wherein the Preputium is glued, or ſtrongly conſtringed upon the Glans; ſo as not to be capable of being drawn back, to uncover the Glans. See GLANS and PREPUCE.

The Word is alſo uſed for a Diſeaſe of the Eyes, wherein the Eye-lids are ſo bound together by the Mediation of ſome glutinous Matter, as not to be open'd.

The Word is *Greek*, and properly ſignifies a Ligature with Packthread, φίμωσις, denoting Packthread.

Sometimes a *Phimoſis* conceals Shankers on, or about the Glans; and ſometimes is ſo violent as to prevent the flowing out of the Matter, whence it cauſes an Inflammation or Morfication of the Part.

The Cure of a Paraphimoſis in no ways differs from that of a *Phimoſis*, except in the Uſe of Injections; and in both Caſes, if they ſtill prove obſtinate, the Prepuce muſt be cut, in order to reduce it to its natural State or Situation.

PHLEBOTOMY, in Medicine and Chirurgery, *Bleeding*; or the Art or Operation of letting Blood. See BLOOD.

The Word is compounded of the *Greek* φλέψ, Vein, and τέμνειν, to cut.

Phlebotomy is a Manner of Evacuation of the utmoſt Importance in Medicine, an Idea of its Effects, with the Reaſon of its Uſe may be conceiv'd from what follows.

'Tis evident the Blood thrown out of the Heart, while it ſtrikes upon the antecedent Blood, and drives it forwards, transfers to it Part of its own Motion, and is therefore ſo much retarded in its own Motion. Hence, if Blood be drawn out of the Baſilic Vein of the right Arm; the ſucceeding Blood, or that carried by the axillary Artery, or right Subclavian, will be leſs hinder'd in its Motion, than it was before that Vein was open'd; for Part of the Blood being taken away by the opening of that Vein, there remains behind a leſſer Quantity in the axillary Vein, or leſs is contained between the farther Extremity of the axillary Artery and the Heart, than was before: therefore the Blood being let out by the Vein, the Remainder in the Artery will be leſs impeded in its Motion than before. See PULSE.

Hence the Blood of that Artery which communicates with the Vein that is opened, will flow with a greater Velocity after the Aperture is made than before. Conſequently, while the Blood is flowing out of the Vein in the Arm, that thrown out of the Heart into the Aorta, will find leſs Reſiſtance in the aſcending Trunk, than in the Deſcending; and will therefore flow faſter in the Aſcending, than in the deſcending Trunk: And thence too it will find leſs Reſiſtance in the right Subclavian Artery than in the left.

Laſtly, it hence appears, that the Blood being let out of a Vein in the right Arm, the remaining Blood in the right axillary Artery runs with a greater Velocity into the Artery of that Arm that is contiguous to it, than through the thoracic Artery, or the right Scapulary, which is likewiſe contiguous to it; becauſe, when the Blood is not ſuppoſed to be drawn out from any Vein correſponding to the thoracic Artery, or into which this diſcharges itſelf, there is proportionally a greater Impediment to the Motion of the Blood in the thoracic Artery, than in that of the Arm. But becauſe the Velocity of the Blood in the ſubclavian Artery, or the right Axillary, is greater than in the Left; the Velocity in the right Thoracic will alſo be greater than in the left thoracic Artery. Hence it is manifeſt, that the Blood being let out of a Vein in the right Arm; the greateſt Velocity of the remaining Blood will be in the Artery of that Arm, becauſe it immediately empties its Blood into the Vein that is opened; and the next greateſt Velocity will be in the thoracic Artery, or Scapulary of the ſame Side, going out from the axillary Artery. But the Velocity of the Blood will be far leſs in the brachial Axillary, and thoracic Artery on the left and oppoſite Side; and leaſt of all in the Arteries ariſing from the deſcending Trunk of the Aorta.

On this View it may eaſily be gathered, what is to be done in the ſeveral Circumſtances of *Blood-letting*: For inſtance, if we would prevent the Increaſe of any Humour from the Blood ſtagnating in the left Leg, or bring it about, that as little Blood as poſſible, ſhould flow to that Leg in any given ſpace of Time; firſt, Blood is to be taken from the Arm or Leg of the right Side, becauſe this is truly making what is call'd a *Revulſion*.

Again, if Blood be drawn away on the ſame Side, and from ſome Vein that receives the Blood from a Branch of that Trunk which tranſmits it to the ſwell'd Part; it will occaſion a greater Derivation of Blood to that Limb.

As to what relates to the whole Habit; in all Lentors and Viſcidities, if there be a due Strength and Elaſticity remaining in the Solids, *Phlebotomy* will make the remaining Blood circulate the faſter, and become thinner and warmer; but in a Plethora, from Debauch, and too large Quantities of ſpirituous Nouriſhment, or from a Diminution of Perſpiration, where the Blood yet retains its natural Fluxility, *Phlebotomy* will make the remaining Maſs circulate ſlower, and become cooler.

In the former Caſe, a Diminution of the Reſiſtance in the Blood-Veſſels, will increaſe the contractile Powers of thoſe Veſſels, and make them beat faſter, and circulate their Contents with greater Velocity; but in the latter Caſe a Diminution of the Quantity of a ſpirituous Blood will leſſen the Quantity of Spirit ſecreted in the Brain, the Conſequence of which will be that the Heart and Arteries will not contract ſo often nor ſo ſtrongly as before, and therefore the Blood will move ſlower, and become cooler. See HEART and ARTERY.

And on theſe Things depend the whole Doctrine of *Blood-letting*. See EVACUATION.

PHLEGM, in Chymiſtry, is an aqueous and inſipid Fluid, ſuppoſed to be found in all natural Bodies; coinciding with what the other Philoſophers call *Water*. See WATER.

Phlegm makes the 4th of the Chymical Elements, or Elementary Principles. See PRINCIPLE and ELEMENT.

In the Diſtillation of Vinegar, as alſo of all Minerals and inodorous Vegetables, *Phlegm* comes out firſt; in that of Wine laſt. See DISTILLATION.

This *Phlegm* is ſuppoſed to be the common Vehicle and Diluter of all ſolid Bodies; and in proportion to its Quantity in the Mixture, are the other Parts more languid and diſabled in their Attractions; yet, on the Chymiſts Principles, *Phlegm* ſhou'd be a Principle of Action; as being neceſſary to the Diſſolution of the Salt in Bodies, without which the Salt muſt remain inactive. See SALT.

It is much to be queſtion'd whether this *Phlegm* can ever be procured without any Mixture of other Matters; that which has the leaſt muſt come neareſt to the Nature of a Principle; and on that account Rain-water ſhou'd afford it moſt.

Phlegm, *Boerhaave* obſerves, drawn by Diſtillation from Vegetables, does always carry with it ſome what of the Smell of the Vegetable, which it derives partly from the Oil, and parrly from the Spirit reſiding therein. The ſame *Phlegm*, by frequently reiterated Diſtillations, lays aſide moſt of this Smell, and approaches nearer to pure Water, but never becomes perfectly ſuch. Add, that the pureſt diſtill'd Water, if expoſed a few Days to the Sun, is much changed, and render'd turbid.

That *Phlegm* is not an elementary Body, Mr. *Boyle* argues from its different Powers and Properties; the *Phlegm* of Wine, and moſt Liquors, have Qualities that make them differ from mere Water, and from one another; the *Phlegm* of Vitriol that Author obſerves is an effectual Remedy againſt Burns; and a valuable Noſtrum for diſcuſſing hard Tumours; that of Vinegar will extract a Saccharine Sweetneſs out of Lead, and even diſſolve Corals with long Digeſtion; and that of Sugar of Lead, is ſaid to diſſolve Pearls.

In Effect, the Characters which ſerve to denominate a Fluid, *Phlegm*, or Water, among the Chymiſts, are Inſipidity and Volatility; yet, Quick-ſilver has all theſe, which no Body pretends to be *Phlegm*. Add, that it appears from ſeveral Experiments, that Water itſelf, by repeated Diſtillations, may be converted into Earth. Yet Water, the ſame Author obſerves, has a much fairer Pretence to be an Element, than any of the *tria prima*.

Add, that as to the Qualities which occaſion that Name to be given any viſible Subſtance, *viz.* its being Fluid, Inſipid, and inodorous; we have never yet ſeen any of theſe ſeparated Subſtances, which the Chymiſts call *Phlegm*, perfectly deſtitute both of Taſte and Smell.

Common Salt, and ſeveral other ſaline Bodies diſtilled ever ſo dry, will each yield a large Quantity of *Phlegm*; which can no other way be accounted for, but from this, that among the various Operations of the Fire, on the Matter of a Concrete, ſeveral Particles of that Matter are reduc'd to a

Shape and Size, requiſite to compoſe ſuch a Liquor as the Chymiſts call *Phlegm*, or Water.

PHLEGM, in the Animal Oeconomy, is one of the four Humours, whereof the Ancients ſuppoſed the Maſs of Blood to conſiſt. See HUMOUR, and BLOOD.

Phlegm is the ſame that is otherwiſe called *Pituita*. See PITUITA.

PHLEGMAGOGUE, a Medicine proper to purge, *Phlegm* or Pituita. See PURGATIVE.

Agaric, Hermodactyls, Turbith, &c. are *Phlegmagogues*.

The Word is form'd from the *Greek* φλέγμα, *pituita*, and ἄγειν *to drive*.

PHLEGMATIC, a Temperament wherein *Phlegm*, or Pituita, is the prevailing Humour. See TEMPERAMENT and PHLEGM.

Phlegmatic Conſtitutions are ſubject to Rheums, Defluxions, *&c.* See CONSTITUTION.

PHLEGMON, in Medicine, a general Name for all Tumors form'd of the Blood. See TUMOR.

An Inflammation, attended with a conſiderable ſwelling of the Part, conſtitutes a *Phlegmon*. See INFLAMMATION.

If the Blood be good, and laudable, and only peccant in Quantity, 'tis call'd a *true Phlegmon*.

When corrupted and adulterated with Bile, or Pituita, 'tis call'd a *baſtard Phlegmon*; in which caſe it participates of the *Ereſypela*, *Oedema*, or *Schirrus*.

The Blood here extravaſated produces a Heat, Redneſs, Tenſion, Renitency, Pulſation, and great Pain.

The Bubo, Carbuncle, Furuncle, Puſtles, and other Tubercles ariſing from the Blood, are all reducible to the *Phlegmon*. See BUBO, CARBUNCLE, *&c.*

The Ophthalmia, Parotides, Squinancy, and even Pleuriſy and Peripneumony, are Species of the *Phlegmon*. *See each under its proper Article.*

The Word is form'd from the *Greek* φλέγειν, to cauſe an Inflammation.

PHLOGOSIS, in Medicine, a Degree of the *Ophthalmia*.

When the Inflammation of the Eye is light and gentle it is call'd a *Phlogoſis*; when very ſevere, *Chemoſis*. See OPHTHALMIA.

PHLYACOGRAPHIA, among the Ancients, a merry and burleſque Imitation of ſome grave and ſerious Piece; particularly a Tragedy traveſtied into a Comedy. See TRAVESTY.

The *Phlyacography* was the ſame thing with the *Hilarody*, or *Hilarotragedy*. See HILARODY.

There were ſeveral Kinds of *Phlyacography*; which had their ſeveral Names. See *Salmaſius* on *Solin*.

The Parodies which have been made of ſome Parts of the beſt Poets, as the *Virgil Traveſty* of *Scarron* and *Cotton*; the *Rival Queans* of *Cibber*, from the *Rival Queens* of *Lee*; ſome Pieces of Opera's, the Muſick whereof is applied to low and ridiculous Words, come under the Notion of *Phlyacographies*.

The Word is form'd from the *Greek* φλυάζειν, *nugari*, to triſle.

PHLYCTÆNÆ or PHLYCTENES, little white itching Veſiculæ, ariſing on the Skin, chiefly between the Fingers, and about the Wriſt, and full of a limpid Serum.

They ſometimes degenerate into the Itch, and ſometimes into Tetters. See ITCH, *&c.*

They are cured like other cutaneous Eruptions. See PSORA and PUSTLE.

PHLYCTÆNÆ are alſo little ulcerous Veſicles, ariſing ſometimes on the Adnata, ſometimes on the Cornea, of the Eye, like ſo many little Bladders full of Water; popularly call'd *Bliſters in the Eyes*.

They ſhew like Grains of Millet; and when produced by a ſharp corroding Humour, occaſion violent Pain: The Puſtles on the *Adnata* are red; thoſe on the *Cornea* blackiſh, if near to the Surface, but whiter if deeper.

They are cured by Excutients and Exſiccants.

PHLYSTENE or PHLYSTÆNA, in Medicine, a Diſeaſe which produces Bubo's, full of a ſerous Humour. See BUBO.

The *Phlyſtene* is a kind of Pox.—The Bubo's it occaſions are ſometimes big, livid, pale, black, or any Colour different from that of the natural Fleſh.—When pierc'd, the Fleſh frequently appears ulcerated under 'em.

They are uſually occaſion'd by a hot, ſharp Humour, and ariſe on all Parts of the Body; but are moſt dangerous on the *Cornea* of the Eye.

The Word is form'd from the *Greek* φλύω, φλύζω of φλύσσω, *ebullio*, I boil, bubble, *&c.*

PHOENIGMA, a Medicine which raiſes Redneſs, with Bliſters, on the Places it is applied to. See BLISTER, *&c.*

Such are Muſtard-Seed, Pepper, Veſicatories, *&c.* See VESICATORY, SINAPISM, *&c.*

Phœnigma's are applied to draw the Humour to the Part they are applied on, and divert it from the Part affected. See REVULSION.

The Word is form'd from the *Greek* φοινιξ, red.

PHOENIX, in Aſtronomy a Conſtellation of the Southern Hemiſphere; unknown to the Ancients, and inviſible in our Northern Parts. See CONSTELLATION.

The Conſtellation took its Name, and Form from that of a Bird famous among the Antients; but generally look'd upon the by Moderns as fabulous.

The Naturaliſts ſpeak of it as ſingle, or the only one of its Kind: They deſcribe it as of the Size of an Eagle; its Head finely creſted, with a beautiful Plumage; its Neck cover'd with Feathers of a Gold Colour, and the reſt of its Body Purple, only the Tail white intermix'd with Carnation; and its Eyes ſparkle like Stars.—They hold that it lives five or ſix hundred Years, in the Wilderneſs: That when thus advanced in Age, it raiſes itſelf a funeral Pile of Wood and Aromatic Gums; then it lights it with the wafting of its Wings, and thus burns itſelf; and from its Aſhes ariſes a Worm, which in time grows up to be a *Phœnix*.

Hence the *Phœnicians* gave the Name *Phœnix* to the Palm-Tree, by reaſon when burnt down to the very Root, it riſes again fairer than ever.

PHONASCIA, the Art of forming the human Voice. See VOICE.

In ancient *Greece*, there were Combats, or Conteſts, eſtabliſh'd for the Voice, as well as other Parts of the *Gymnaſtice*. See GYMNASTICK.

Theſe Combats were ſtill held in the Time of *Galen*; and it was theſe that brought the *Phonaſcia* into Vogue.

The Word is form'd from the *Greek* φωνὴ, Voice.

Hence the Maſters of this Art, or thoſe who taught the Art of managing the Voice, were call'd *Phonaſci*; under whoſe Tutorage were put all thoſe deſtin'd to be Orators, Singers, Comedians, *&c.*

PHONICKS, the Doctrine, or Science, of Sounds; otherwiſe call'd *Acouſticks*. See ACOUSTICKS.

The Word is deriv'd from the *Greek* φωνὴ, *Sound*.

Phonicks may be conſidered as an Art, analogous to Opticks; and may be divided, like that, into *direct*, *refracted* and *reflected*.

Theſe Branches the Biſhop of *Ferns*, in alluſion to the Parts of Opticks, denominates *Phonicks*, *Diaphonicks*, and *Cataphonicks*.

Phonicks is improvable both with regard to the Object; and with regard to the Medium or Organ.

As to the Object, *Sound*, it may be improved both with regard to the begetting, and the propagating of Sounds;

The firſt, in ſpeaking, or pronouncing, in whiſtling, or ſinging, or hollowing, or luring, which are all diſtinct Arts and all improvable.----The ſecond by the Poſition of the ſonorous Body.

With regard to the *Medium*, *Phonicks* may be improved by the Thinneſs and Quieſcency thereof, and by the ſonorous Body being placed near a ſmooth Wall, either plain or arch'd, eſpecially cycloidally or elliptically; hence the Theory of Whiſpering-Places. See WHISPERING.

Add to theſe, that by placing the ſonorous Body near Water, its Sound is mollified; that by placing it on a Plain, the Sound is convey'd to a greater Diſtance than on uneven Ground, *&c.* See SOUND.

As to the Organ, the *Ear*: It is help'd by placing it near a Wall, (eſpecially at one End of an Arch, the Sound beginning at the other;) or near the Surface of Water, or of the Earth.

And by Inſtruments, as the *Stentorophonicon*, or Speaking-Trumpet. See SPEAKING-TRUMPET.

By an Inſtrument to help weak Ears, as Spectacles do Eyes; by an Inſtrument to take in vaſtly remote Sounds, as Teleſcopes do Objects; by a Microphone, or magnifying Ear-Inſtrument; by a Polyphone or multiplying Ear-Inſtrument. See EAR, *&c.*

Cataphonicks, or Reflected Hearing, may be improved by ſeveral Kinds of artificial Ecchoes; for in general, any Sound falling either directly or obliquely, on any denſe Body, of a ſmooth Surface, whether plain or arch'd, is beat back again, or reflected, *i. e.* does eccho more or leſs. See ECCHO.

PHOSPHORUS, a Matter which ſhines, or even burns, ſpontaneouſly, and without the Application of any ſenſible Fire. See FIRE and LIGHT.

The Word is form'd from the *Greek* φῶς, Light, and φέρω, I carry.

Phoſphorus is either *Natural* or *Artificial*.

Natural PHOSPHORI are Matters which become luminous at certain Times, without the Aſſiſtance of any Art, or Preparation.

Such are the Glow-Worms, frequent in cold Countries; Flies, and other ſhining Inſects, in hot Countries; rotten Wood, the Eyes, Blood, Scales, Fleſh, Sweat, Feathers, *&c.* of ſeveral Animals; Diamonds when rubb'd after a certain manner; Sugar and Sulphur when pounded in a dark Place; Sea-Water, and ſome Mineral-Waters when briskly

briskly agitated; a Cat's or Horſe's Back, duly rubb'd with the Hand, *&c.* in the Dark; nay, Dr. *Croon* tells, that upon rubbing his own Body briskly with a well warm'd Shirt, he has frequently made both to ſhine; and Dr. *Sloane* adds, that he knows a *Briſtol* Gentleman and his Son, both whoſe Stockings will ſhine after much walking.

All Natural *Phoſphori* have this in common, that they don't ſhine always, and that they never give any Heat. See NOCTILUCA.

But that which of all Natural *Phoſphori* has occaſioned the moſt Speculation is the *Barometrical* or *Mercurial Phoſphorus.*

Barometrical or *Mercurial* PHOSPHORUS.---M. *Picard* firſt obſerved that the Mercury of his Barometer, when ſhaken in a dark Place, emitted Light; with this Circumſtance, that in ſhaking the Mercury with Rapidity, ſometimes above and ſometimes below its Equilibrium with the Air, the Light is only ſeen when below it, where it appears as if adhering to the upper Surface.

But this Light is not found in the Mercury of all Barometers, which occaſions a great Difficulty.

M. *Bernoulli*, upon examining the Circumſtances of this Phænomenon, invented a Solution of the ſame: He imagines that upon the Mercury's deſcending, the *Vacuum* in the Tube increaſing, there iſſues out of the Mercury to fill up this Exceſs of Vacuity, a very fine ſubtile Matter before diſpers'd throughout the Pores of this Mineral; and that at the ſame time there enters thro' the Pores of the Tube another finer Matter: Thus, the firſt Matter emitted out of the Mercury and collected over its Surface ſtriking impetuouſly againſt that received from without, has the ſame Effect with *Des-Cartes*'s firſt Element againſt the ſecond; that is, produces the Motion of Light. See LIGHT.

But why, then, is not the Phænomenon common to all Barometers? To this he anſwers, That the Motion of the ſubtile Matter out of the Mercury may be weaken'd, and prevented by any heterogeneous Matter collected on its upper Surface into a Kind of Pellicle; ſo that the Light ſhould never appear but when the Mercury was perfectly pure.

This Reaſoning was confirm'd from the Experiments of ſeveral Barometers which he made according to this Plan; but the *Royal Academy of Sciences*, who repeated the Experiments with Barometers made after the ſame manner, did not meet with the ſame Succeſs; the Light being found in ſome not in others.

M. *Homberg* therefore conjectured, that the Difference conſiſted in the different Qualities of the Quickſilver: In ſome, he obſerv'd, they uſed Quick-Lime to purify it; in others, Steel-Filings. The Mercury, then, raiſing in the Diſtillation, and paſſing thro' the Lime, might take away Parts thereof, capable, by their extreme Smallneſs, to lodge in its Interſtices. Hence, as Quick-Lime always retains ſome fiery Particles, 'tis poſſible, in a Place void of Air, where they ſwim at Liberty, they may produce this Luſtre.

Mr. *Hauksbee* has ſeveral Experiments of the Mercurial *Phoſphorus*—paſſing Air forcibly thro' the Body of Quickſilver placed in an Exhauſted Receiver, the Parts were violently driven againſt the Side of the Receiver, and gave all around the Appearance of Fire; continuing thus till the Receiver was half full again of Air.

From other Experiments he found, that tho' the Appearance of Light was not producible by agitating the Mercury in the ſame Manner in the common Air; yet that a very fine Medium nearly approaching to a *Vacuum* was not at all neceſſary.

And, laſtly, from other Experiments he found, that Mercury enclos'd in Water, which communicated with the open Air, by a violent ſhaking of the Veſſel wherein it was encloſed, emitted Particles of Light in great plenty, like little Stars.

By including the Veſſel of Mercury, *&c.* in a Receiver, and exhauſting the Air, the Phænomenon was chang'd; and, upon ſhaking the Veſſel, inſtead of Sparkles of Light the whole Maſs appear'd one continued Circle of Light.

Artificial PHOSPHORI are ſuch as owe their luminous Quality to ſome Art, or Preparation.

Of theſe there are three Kinds: The firſt burns and conſumes every combuſtible it touches; the other two have no ſenſible Heat.

The firſt, or *Burning Phoſporus*, may be made of Urine, Blood, Hairs, and generally of any Part of an Animal that yields an Oil by Diſtillation.----The Matter it is moſt eaſily drawn from is human Urine.

'Tis of a yellowiſh Colour, and of the Conſiſtence of hard Wax, in the Condition 'tis left by the Diſtillation; And in this State is call'd *Phoſphorus Fulgurans*, from its Corruſcations; and *Phoſphorus Smaragdinus*, becauſe its Light is frequently green or blue, eſpecially in Places that are not very dark; and *ſolid Phoſphorus* from its Conſiſtence.

It diſſolves in all Kinds of diſtill'd Oils; and in that ſtate is call'd *liquid Phoſphorus.*

It may be ground in all kinds of fat Pomatums; in which Caſe it makes a *luminous Unguent.*

So that the *Phoſphorus fulgurans*, *Smaragdinus*, *Solid* and *Liquid Phoſphorus*, and *Luminous Unguent*, are all the ſame Drug, under different Circumſtances.

It was invented by Mr. *Kunkel*, Chymiſt of the Elector of *Saxony*; brought into *France* by M. *Kraft*, a Phyſician of *Dreſden*; by whom it was communicated to Mr. *Boyle*.

In 1676, M. *Elzholz* publiſh'd a Treatiſe expreſsly on it, at *Berlin*; and in 1680, Mr. *Boyle* publiſh'd another in *Engliſh* under the Title of *Noctiluca.* See NOCTILUCA.

M. *Homberg* firſt made of it at *Paris* in 1679, and communicated the Method of Preparation to the Publick.

Preparation of the Solid Phoſphorus, or Phoſporus of Urine.

Evaporate a good Quantity of Urine of Beer-Drinkers to the Conſiſtence of Honey. Cover it up in an Earthen Veſſel, and ſet it three or four Months in a Cellar to ferment and putrify.-----Mix a double quantity of Sand, or Powder of Pot-ſhards with one Part of this Urine; put it into a Retort, fitted to a long-neck'd Receiver, with two or three quarts of Water.-----Diſtil it in a naked Fire in a reverberatory Furnace; at firſt gently; after two Hours, augment the Fire gradually, till all the black fetid Oil be drawn off.----- Raiſe the Fire to the higheſt degree; upon which white Clouds will come into the Receiver and fix by little and little on one ſide, in form of a yellowiſh Skin; and another part will precipitate to the Bottom in Powder.—Keep the Fire thus violent for three Hours till no more Fumes ariſe.—Let all cool, and unlooſe the Veſſels; and throwing more Water into the Receiver ſhake all well about to looſen what ſticks to the Sides.—Pour the whole into a Glaſs-Veſſel to ſettle.

The Volatile Salt will now diſſolve in the Water, and the *Phoſphorus* and Oil ſink to the Bottom; pour off the Water, and gathering the remaining Matter together, put it into a Glaſs-Veſſel with a little freſh Water; and digeſt it in a Sand-Heat ſtirring it from Time to Time with a wooden Spatula.

By this means the *Phoſphorus* will ſeparate from the Oil, and ſink to the Bottom: Pour off the Oil, and make up the *Phoſphorus*, while hot, into Sticks for Uſe.

Boerhaave gives us other Ways of preparing *Phoſphorus.* Recent Urine, he obſerves, digeſted three or four Days in a tall Glaſs, with a Heat no greater than that of a healthy Man, grows reddy, fetid, and cadaverous: This digeſted Urine being put to diſtil in a Retort, yields a clear fetid Liquor, then a yellow volatile Salt, which evaporated to the Conſiſtence of a *Sapa*, and mix'd with four times its Weight of dry Sand, and the Diſtillation continued in a cover'd Retort, there ſucceſſively comes over, by greater and greater degrees of Fire, a fetid brown Oil, bluiſh Fumes, and a groſs ſhining Matter which ſinks in Water, and is the *ſolid Phoſphorus.*

To make it more directly, and to the beſt Advantage, it may be proper to take a ſufficient Quantity of human Urine, afforded by a Perſon not much given to drink Wine, and exhale it away in an open Veſſel to a Rob, or the Conſiſtence of Honey; then ſet it to putrify for half a Year, and upon Diſtillation it will afford a large Proportion of Salt; after which, if ſix times its own Quantity of Sand, or Brick-Duſt, be added to the Remainder, and the Diſtillation be continued, as in the Caſe laſt mentioned, the *Phoſphorus* will fall into the Water.—Or it may commodiouſly be prepared, by ſuffering the Rob of Urine to digeſt for two Years in an open Veſſel in the open Air; during which time a ſlimy, fæculent, unctuous, earthy Matter will fall to the bottom; which being frequently waſh'd with pure Water, wherein it will not diſſolve, will leave a white Matter behind it, neither of an Alkaline, Acid, Saline, or Terreſtrial, nor ſcarce of an unctuous Nature; and this is of it ſelf a proper Matter for the making of *Phoſphorus* by Diſtillation with Sand.

Properties of the ſolid Phoſphorus.

1*ſt*, With this *Phoſphorus* one may write on Paper, as with a Pencil, and the Letters appear like Flame in the dark; yet in the Light nothing appears but a dim Smoak.

2*dly*, A little Piece rubb'd between two Papers, takes Fire inſtantaneouſly.—If Care be not taken in the Management of it, there is danger of burning the Fingers, the *Phoſphorus* being exceedingly inflammable. See FIRE.

3*dly*, Its burning is very vehement, and penetrates deeper into the Fleſh than common Fire; and 'tis very difficult to be extinguiſh'd.

M. *Caſſini* happening to preſs a Piece in a Cloth between his Fingers, the Cloth immediately took Fire; he endeavour'd to put it out with his Foot, but his Shoe caught the Flame, and he was obliged to extinguiſh it with a Braſs-Ruler, which caſt forth Rays in the Dark for two Months after.

The

The *ſolid Phoſphorus* never ſpoils, provided it be kept in a Phiol full of Water; that in form of an Unguent does not keep ſo well; and the *liquid Phoſphorus* worſt of all.

The *Liquid Phoſphorus* is made by digeſting in Horſe-Dung, a little Bit or ſome Scrapings of the *Solid*, for two Days, in Oil, or Eſſence, of Cloves, Oil of Turpentine, or the like.

After Diſſolution the Oil will be ſo impregnated with it, that upon opening the Bottle, the Matter will appear on a Flame.

Experiments with the Liquid Phoſphorus.

By waſhing the Face, Hands, or the like, with the *Liquid Phoſphorus*, Dr. *Slare* tells us, they will be made to ſhine very conſiderably in the Dark, and the Luſtre thereof be communicated to adjacent Objects, yet without any Offence to the Skin.

As ſoon as a Candle is brought in, the Shining diſappears, and no Change perceivable.

This *Phoſphorus* emits frequent Flaſhes like Lightning, even when cloſe ſtopp'd; eſpecially in warm Weather. Hence Mr. *Boyle* takes occaſion to draw a Parallel between Lightning and *Phoſphorus*.

The ſecond Kind of *Artificial Phoſphorus*, is a Preparation of a Stone call'd the *Bolonian* Stone, from a City of that Name in *Italy* nigh which it is found.

The firſt who undertook to make this Stone luminous, was a Chymiſt of that City call'd *Vincenzo Caſciarolo*.

Poterus, *Licetus*, &c. have deſcribed the Proceſs, but miſtakenly: M. *Homberg*, who made a Journey to *Italy* expreſsly to learn the Preparation, firſt communicated the ſame to M. *Lemery*, who publiſh'd it in the 7th Edition of his Chymiſtry. See the Method under the Article BOLONIAN *Stone*.

This *Phoſphorus* has not any ſenſible Heat; and only becomes luminous after being expos'd to the Sun, or the Day-light, when it reſembles a burning Coal, and preſerves its Light five or ſix Minutes in the dark, during which Time it dwindles; and to recover its Light muſt be expoſed afreſh to the Air.

The third Kind of *Phoſphorus* call'd the *Hermetic* PHOSPHORUS or PHOSPHORUS *Balduini*, is a Preparation of *Engliſh* Chalk, with *Aquafortis* or Spirit of Nitre by the Fire.

This makes a Body conſiderably ſofter than the *Bolonian* Stone; but it has all the Qualities thereof.

It has its Name from its Inventor *Balduin*, a *German* Chymiſt, call'd *Hermes*, in the Society of the *Naturæ Curioſorum*, whence its other Name *Hermetic*.

Some of the late Chymiſts have hit on other Sorts of *Phoſphori*.

Monſ. *Homberg*, in a Proceſs upon the Fecal Matter, happening to calcine it with Alum, accidentally produced a *new Phoſphorus*, in form of a Powder, the leaſt quantity of which taken out of a cloſe Veſſel, and expoſed to the Air upon a Piece of Paper, in a Moment's Time would take Fire, and ſet the Paper a ſmoaking, and preſently burn it or any combuſtible Matter it came near.

This it would do, equally by Night and Day; and without rubbing or heating, or mixing it with any other thing to promote the Inflammation; in which he obſerves, it differ'd from all the artificial *Phoſphori* hitherto known. For that *e. gr.* of Urine, requires a ſmall Degree of Warmth to enable it to ſhine, or take Fire; and the *Bolonian* Stone, and *Phoſphorus Balduini* only ſhine by Day-Light.

In Effect, M. *Lemery* the younger has at length diſcover'd that there is ſcarce any Animal or Vegetable Matter but will afford *Phoſphorus*.—This he experienced in the Seeds Farinæ, Honey, Sugar, Leaves, Flowers, Woods, Roots and Oils of divers Plants; the Blood and Fleſh of Calves, Sheep, Flies, Worms; the Yolks of Eggs, *&c.* The human Scull, Bones, Fat, Nails; and the Dung of all Animals.

The principal thing added to all theſe Matters to make *Phoſphorus* of them, is Alum, which is indiſpenſibly requiſite; nor can any other Salt how near a-kin ſoever hereto, even tho' it yield the very ſame Principles, be ſubſtituted hereto. As to the Means, or the Operation whereby it is to be made, Calcination appears to be the eſſential Part.

Phyſical Cauſe of the Phænomena of Phoſphorus.

As to the *Rationale* of the Effects, it may be obſerv'd, that in moſt of the *Natural Phoſphori*, there is a briſk Attrition or Friction concern'd; which we may ſuppoſe either to give the minute Parts of the Subſtance the proper Motion and Agitation neceſſary to convert them into Fire, if Fire be ſo producible, (as *Bacon*, *Boyle*, *Newton*, and the generality of the *Engliſh* Philoſophers have ſuppoſed it is) or to expel and emit the Particles of Fire naturally contained in them. See FIRE, FLAME, FRICTION, ATTRITION, *&c.*

In the *Factitious* Sorts, we may note, that a long Proceſs by Fire is uſually required, wherein the Matter undergoes divers Coctions, Torrefactions, Calcinations, Diſtillations, *&c.* in the Courſe whereof a conſiderable Quantity of Fire muſt neceſſarily be imbibed, and may poſſibly be retain'd therein.

In that *e. gr.* prepared of the Fecal Matter, M. *Homberg* obſerves, the aqueous Part of the Subſtance muſt neceſſarily have all been evaporated, with the greateſt Part of the Oil and volatile Salt, leaving Pores or Vacuities in the Places they poſſeſs'd; ſo that what remains, is a ſpongeous Tiſſue of Earth and fix'd Salt, having nothing in its Loculi, or Cavities, but ſome of the Matter of the Fire which has been arreſted and detain'd therein; much as in Quick-Lime.

This being ſuppoſed, we know that the fix'd Salt, which is here pretty copious, will readily abſorb the Moiſture of the contiguous Air; and the ſudden Introduction of ſuch Moiſture into the Pores of the Powder muſt produce a Friction, which may excite a ſmall Degree of Heat; and this join'd with what Fire was there already laid up, may make a Heat ſufficient to give Fire to the ſmall Remains of Oil too cloſely link'd with the Salt to have been carried off by the Calcining Fire: So that we have here every thing neceſſary to Heat and Light. See HEAT, *&c.*

What confirms this Doctrine is, that if the Powder be kept in a Veſſel not ſufficiently cloſe; the Air, inſinuating by Degrees, moiſtens and ſaturates the Powder, but ſo ſlowly, as not to produce Friction enough to ſet it on Fire; ſo that it is ſpoilt, and diſabled from taking Fire ever after: much as Quick-Lime, which after it has lain ſome time in the Air, ceaſes to grow hot even by the Affuſion of Water.

The Reaſon why Quick-Lime, which contains a deal of Particles of Fire, as well as our Powder, does not conceive Heat by the Acceſs of the Air, or the Ingreſs of its Moiſture into the Pores thereof, but that Water muſt be thrown thereon, is, that the Quick-Lime being more throughly calcined retains too little fix'd Salt to imbibe the Moiſture readily and copiouſly enough to excite the neceſſary Friction.

And the Reaſon why Quick-Lime does not produce a Flame, as the Powder does, even when Water is caſt on it, is, that it did not retain enough of the Oily Matter to afford Flame: For if Oil be mix'd with it, a Flame will readily enſue. *Mem. de l'Acad. An.* 1711.

PHOSPHORUS in Aſtronomy, is the Morning-Star, or the Planet *Venus*, when ſhe goes before the Sun. See VENUS.

The *Latins* call it *Lucifer*. The *French*, *Etoile de Berger*. The *Greeks*, *Phoſphorus*, from φῶς, Light, and φέρω I bear, bring.

PHOTASCIATERICA, a Term ſome Authors uſe for the Art of Dialling. See DIALLING.

The Names is derived hence, that the Art not only ſhews the Hours by the Shadows of a Gnomon, whence it is call'd *Sciaterica*, from σκιὰ, Shadow; But ſometimes alſo by means of the Sun's Light, as in Spot-Dials, Reflecting-Dials, *&c.* from φῶς, *Lux*, Light. See DIAL.

PHOTINIANS, a Sect of ancient Hereticks, who denied the Divinity of *Jeſus Chriſt*. See HERETICK.

They took their Name from *Photinus* their Chief, Biſhop of *Sirmium*, and Diſciple of *Marcellus*.

He maintained, as *Leo* tells us in one of his Sermons, that *Jeſus Chriſt* was true Man, but not true God, nor born before all Ages; that he only began to be *Chriſt* when the *Holy Ghoſt* deſcended upon him; and that he was call'd *only Son*, for no other Reaſon but becauſe the Virgin had no other.

He was convicted of his Error, and depoſed by a Synod of *Arians* held at *Sirmium* in 351.

PHRASE, PHRASIS, in Grammar, a certain elegant Faſhion or Manner of Speech, peculiarly belonging to this or that Occaſion, this or that Art, or this or that Language.

Thus we ſay an *Italian* Phraſe, an Eaſtern Phraſe; a Poetical Phraſe, or Rhetorical Phraſe. See IDIOM.

A few elegant Phraſes, pertinently applied, are an Ornament of Diſcourſe; but if they come too thick they have an ill Effect, and make the Style ſavour of Affectation. See STYLE.

The Word *Phraſe* is ſometimes alſo uſed for a ſhort Sentence, or ſmall Set or Circuit of Words conſtructed together. See SENTENCE.

In this Senſe Father *Buffier* divides Phraſes into *Compleat* and *Incompleat*.

Phraſes are *Compleat* where there is a Noun and a Verb, each in its proper Function, *i. e.* where the Noun expreſſes a Subject, and the Verb the thing affirm'd of it.

Incompleat Phraſes are thoſe where the Noun and Verb together only do the Office of a Noun; conſiſting of ſeveral Words without affirming any thing, and which might be expreſs'd in a ſingle Word.

Thus, *that which is true*, is an incompleat Phraſe, which might be expreſſed in one Word, *Truth*: as, that which

is

is true ſatisfies the Mind; or Truth ſatisfies the Mind.

PHRASEOLOGY, PHRASEOLOGIA, a Collection of the Phraſes, or elegant Expreſſions, in any Language. See PHRASE.

PHRENES, in Anatomy, the *Diaphragm*. See DIAPHRAGM.

It was thus call'd by the Ancients, from φρὴν, Mind; as imagining this the Seat of the rational Soul. Hence

PHRENESIS, PHRENSY, or *Diſtraction*. See PHRENITIS.

PHRENETIC *Nerves*, call'd alſo *Diaphragmatic* and *Stomachic Nerves*, are nervous Branches derived from the Cervical Nerves, which joyning in a Trunk, run through the Mediaſtinum undivided, till arriving near the Diaphragm, they again divide, and ſend off divers Branches, ſome into the muſcular, others into the tendinous Part thereof. See NERVE and DIAPHRAGM.

PHRENIC *Veſſels*, is a Term applied to a Vein, and ſome Arteries of the human Body; from their paſſing through the Diaphragm.

The *Phrenic Artery* ariſes out of the deſcending *Aorta*, and diſtributes itſelf into the Diaphragm and Pericardium. See ARTERY, AORTA, *&c.*

The *Phrenic Veins* are two Veins which the Deſcending *Cava* receives immediately after its piercing the Diaphragm. See *Vein* CAVA.

PHRENITIS, PHRENESIS, PHRENSY, in Medicine, a conſtant and vehement Delirium, or Diſtraction; accompanied with an acute Fever, raving, waking, *&c.* See DELIRIUM.

It differs from the *Mania*, and Melancholly, in that theſe are without Fevers. See MANIA, *&c.*

It has its Name from φρὴν, *Mens*, the Underſtanding; or as ſome will have it from φρὴν, the Diaphragm, in regard the Ancients ſuppoſed it to have its Seat in that Part. See DIAPHRAGM.

Phyſicians generally make the *Phrenitis* to conſiſt in an Inflammation of the Meninges of the Brain; and diſtinguiſh it from the *Paraphrenitis*, which they ſuppoſe to be an Inflammation of the Diaphragm. See PARAPHRENITIS.

Willis will have them the ſame Diſeaſe, and both to conſiſt in an Inflammation of the Animal Spirits. He only diſtinguiſhes them as the Inflammation ariſes from the *Cerebrum* alone, or from the *Cerebrum* and *Cerebellum* together; and concludes, that they both ariſe after a Fever, from the boiling Blood's throwing its aduſt Recrements into the Brain.

Boerhaave makes the *Phrenitis* either *true*, wherein the *Cerebrum*, or Meninges, or both, are inflamed; or *ſymptomatic*, where the Matter of a Fever is tranſlated into the *Cerebrum*.

The true one either kills on the third, fourth, or fifth, or ſeventh Day; or changes into a Mania, Lethargy, Comus, *&c.* Tremors, Gnaſhing of the Teeth, grumous Blood diſtilling from the Noſe, are Prognoſticks of Death.

The Diſeaſe is oftenеſt the Effect of Inflammatory or Malignant Fevers; tho' it ſometimes alſo ariſes from a Suppreſſion of the natural Evacuations, as the *Menſes*, &c.

The Cure is the ſame as of an Apoplexy; but where the Evacuations are concern'd, they muſt firſt be rectified. See APOPLEXY.

PHRYGIAN *Mode*, in Muſic. See MODE.

PHRYGIANS, PHRYGES, or PHRYGASTES, as S. *Epiphanius* calls 'em, were ancient Hereticks, a Branch of the *Montaniſts*; ſo call'd from *Phrygia* a Place where they abounded.—They eſteem'd *Montanus* their Prophet; and look'd on *Maximilla* and *Priſcilla* as great Propheteſſes. See MONTANISTS.

This Spirit of Prophecy, or rather Enthuſiaſm, was their diſtinguiſhing Character. In the Buſineſs of the Trinity they were orthodox.

PHTHIRIASIS, in Medicine, the *Morbus Pedicularis*, or Louzy Diſeaſe, wherewith Children, and even ſometimes Adults are afflicted. See PEDICULARIS.

Its Cauſe is in the Seeds of that Vermin laid in the Cuticle, which here happening to prove a proper *Nidus*, cheriſhes and foſters the Seed ſo as to hatch it. See WORMS.

The Linnen Cloths uſed by Goldſmiths to wipe their Veſſels with after gilding, are excellent againſt the *Phthiriaſis* by reaſon of the Mercury they contain, when applied by rubbing the Child's Head.

The Word is form'd from the *Greek* φθεὶρ, Louſe.

PHTHISIS, in Medicine, in its general Senſe, is any kind of Conſumption of the Body, in what part ſoever it be ſeated, or from what Cauſe ſoever it ariſe. See CONSUMPTION.

Thus we have a *Nervous Phthiſis*, *Renal Phthiſis*, *Dorſal Phthiſis*, *Pulmonary Phthiſis*, &c.

But in its proper Senſe, *Phthiſis* is reſtrain'd to a *Pulmonary Conſumption*, or a Conſumption ariſing from an Ulcer or other Diſorder of the Lungs, accompanied with a ſlow hectic Fever, which waſtes, extenuates, and conſumes the muſcular Fleſh. See LUNGS, *&c.*

Sydenham obſerves, that the hectic *Phthiſis* uſually has its Origin in the Winter's Cold; from a ſharp Humour trickling down upon the Lungs, where, like a Catarrh, it irritates them ſo as to raiſe a Cough. See COUGH.

This by degrees brings on other Symptoms; as a ſpitting, firſt of a viſcid *Pituita*, then a heavy fetid *Pus*, then of pure Blood, and ſometimes of the very Subſtance of the Lungs rotted by a long Exulceration; with Night-Sweats, falling of the Hair, and a colliquative Flux which is ſoon followed by Death.

The ſame Author adds, that *Phthiſis* kills two thirds of thoſe that die of Chronic Diſeaſes. See CHRONIC.

In the laſt Stage of the *Phthiſis* the Noſe appears ſharp, the Eyes hollow, the Temples fallen, the Ears cold and contracted, the Skin about the Forehead hard and dry, and the Complexion greeniſh, or livid, *&c.* which is call'd the *Facies Hippocratica*.

Among the Cauſes of the Diſeaſe may alſo be reckon'd Intemperance as it brings on a Plethora or Cacochymia, Peripneumonies, Aſthma's, Pleuriſies, *&c.* *Morton* adds, that the *Phthiſis* frequently ariſes from an ill Conformation of the Breaſt; which is either *Natural*, as when the Breaſt is too narrow, the Neck too long, *&c.* or *Accidental*, where there happens a Curvity or Diſtortion of the Breaſt;—among the Symptoms he reckons a *Nauſea*, or Reaching, with a Heat in the Palms of the Hands, and Redneſs in the Cheeks, all after Eating.

For the Cure;—*Sydenham* orders the Defluxion on the Lungs, in the firſt Stage, to be abated by Blood-letting, *&c.* and Pectorals to be uſed, accommodated to the various States of the Diſeaſes, *viz.* Incraſſatives, Attenuatives, to aſſwage the Hectic, *&c.* with Emulſions, Aſſes-Milk, *&c.* and Balſamicks, to cure the Ulcer.

But the chief Aſſiſtance in this Diſeaſe is from riding conſtantly on Horſeback, where the Patient need not confine himſelf to any Laws of Diet, *&c.* This alone, he adds, is almoſt as ſure a Cure for a *Phthiſis*, as the *Cortex* for an Intermitting Fever. See EXERCISE.

Dr. *Baynard* recommends Butter-Milk as an admirable Succedaneum to Aſſes-Milk.----*Sylvius* ſays, he knows of no Medicine, either internal or external, ſo good againſt freſh Ulcers of the Lungs, as Balm of Sulphur, eſpecially when prepared with Oil of Aniſe. See SULPHUR.

Etmuller obſerves, that the Cough of *Phthiſical* People is at firſt only Stomachal; at length it becomes Pulmonary. He adds, that Vomitaries are good in a beginning *Phthiſis*, Purgatives by all means to be avoided; and commends the Uſe of Medicines made of Tobacco, not only as they promote Expectoration; but as Vulnerary.

'Tis a common Obſervation, that in thoſe Countries where they burn Turf, People are rarely affected with the *Phthiſis*; which *Willis* aſcribes to the Sulphur abounding therein, and recommends Tincture of Sulphur as the beſt Remedy he knows of in any Cough without a Fever; adding, that a Suffumigation, or Smother, of Sulphur and Arſenic has frequently proved a Cure in the moſt deſperate *Phthiſis*.

Bonetus holds the *Phthiſis* to be contagious; and that there are frequently Inſtances of its being communicated by Cloaths, Linnen, Beds, *&c.*

Pitcairn recommends *Mercurius Dulcis*, in the Beginning of a *Phthiſis*. And *Barbette* and *Colbatch* aſſert, that, contrary to the Opinion of moſt Authors, they have frequently uſed Acids with Succeſs in *Phthiſics*. See HECTIC, *&c.*

The Word is form'd from the *Greek* φθίσις, Corruption, Attenuation, *&c.*

PHYGETHLON, in Medicine, is defined by *Celſus*, a hard flat Tumor, ſomewhat reſembling a Puſtle; occaſioning an intenſe Pain, and ſometimes a Fever. See TUMOR.

The *Phygethlon* only differs from the *Phyma*, in that it does not riſe ſo high; it ripens very ſlowly, and produces but little Pus. See PHYMA.

The *Latins* call it *Panis*, or *Panus*, and ſometimes *Panicula*.—*Gorræus* defines the *Phygethlon*, a *Phlegmon* ariſing on the glandulous Parts, eſpecially about the Neck, Armpits, and Inguen; which laſt is call'd a Bubo. See PHLEGMON, *&c.*

The *Phygethlon* has the ſame Cauſes, and the ſame Symptoms with the common Bubo. See BUBO.

It frequently ariſes after Fevers, and Pains of the Belly, and is cured like other Inflammations.

The Word is derived from the *Greek* φύω, I engender.

PHYLACTERY, in Church-Hiſtory, a Slip of Parchment, wherein was wrote ſome Text of Holy Scripture, particularly of the Decalogue; which the more devout People among the *Jews* wore on the Forehead, the Breaſt, or the Neck, as a Mark of their Religion.

In the general, the Ancients gave the Name *Phylactery* to all kinds of Charms, Spells, or Characters which they wore about them, as Amulets, to preſerve 'em from Dangers or Diſeaſes. See CHARM, AMULET, *&c.*

The Primitive Chriſtians alſo gave the Name *Phylacteries* to the Frames wherein they incloſed the Relicks of their dead.

PHYMA, or PHYMUS, in Medicine, a roundiſh pointed Tumor, ariſing on the Glandular Parts, eſpecially under the lower Jaw. See TUMOR.

The *Phyma* is ſmaller and ſmoother, leſs red and painful, than the Phygethlon. See PHYGETHLON.

It is eaſily cured in Children; more difficultly in Adults, but in thoſe it is more rare. It is remedied by aſſiſting Nature in the Work of Maturation; as, by a ſuppurating Cataplaſm, *&c.*----It is ſuppoſed to have its Riſe from a pituitous Blood; and is moſt common in Children, where it frequently ariſes from too tight Bandages.

Gorræus obſerves, that ſome make *Phyma* a general Name for all Tumors, or Apoſthumes, that maturate and ſuppurate readily, of what kind ſoever, or in whatſoever glandulous Part they ariſe. See APOSTHUME.

PHYSIC, or PHYSICK, the Art of Healing; properly called *Medicine*.

For the Riſe, Progreſs, Diviſion, *&c.* of *Phyſic*; See MEDICINE.

The Word is form'd from the *Greek* φύσις, Nature; in regard Medicine conſiſts principally in the Obſervation of Nature. See PHYSICKS.

PHYSICAL, ſomething belonging to, or really exiſting in Nature. See PHYSICKS.

In this Senſe we ſay a *Phyſical* Point, in oppoſition to a Mathematical one which only exiſts in the Imagination. See POINT.

A *Phyſical* Subſtance, or Body, in oppoſition to Spirit, or Metaphyſical Subſtance, *&c.* See SUBSTANCE, *&c.*

PHYSICAL, or *ſenſible* Horizon. See HORIZON.

PHYSICIAN, a Perſon who profeſſes Medicine, or the Art of Healing. See MEDICINE.

The Ancients diſtinguiſhed their *Phyſicians* into various Claſſes or Sects:——As, *Methodical Phyſicians*, thoſe who proceeded in a certain regular Method, founded upon Reaſon; deducing Conſequences therefrom, to particular Caſes. See METHODICAL.

Dogmatical Phyſicians, thoſe who laid down Principles, and reaſon'd from thoſe Principles, and from Experience. See DOGMATIC.

Empirical Phyſicians, thoſe who kept wholly to Experience, and excluded all Uſe of Reaſon in Medicine.——Such was *Serapim*, *Apollonius*, *Glaucus*, &c. See EMPERICAL.

Again, *Clinical Phyſicians* were thoſe who viſited their Patients a-bed, to examine their Caſes. See CLINIC.

In oppoſition to the Emperiſts, who ſold their Medicines in the Streets, *&c.*

They had alſo their Aſtrological *Phyſicians*, Botanic *Phyſicians*, Anatomical *Phyſicians*, Chirurgeons, Iatraliptes, or thoſe who applied external Unctions and Fricſtions, *&c.*

Coſmetick *Phyſicians* for the Complexions; Ophthalmic *Phyſicians* for the Eyes; Vulnerary *Phyſicians* for Wounds, *&c.*

Among the Moderns, a *general Phyſician* includes almoſt all theſe ſeveral Kinds: Regular *Phyſicians* are contra-diſtinguiſhed from *Emperical Phyſicians*, who preſcribe at random; having one or two Remedies which ſerve in all Diſeaſes. See EMPERICAL.

Galenical *Phyſicians* are thoſe who preſcribe gentle, natural and ordinary Medicines. See GALENICAL.

Spagyrical or Chymical *Phyſicians* are thoſe who preſcribe violent Medicines drawn from Minerals, *&c.* by Fire. See SPAGYRICAL and CHYMICAL.

PHYSICKS, by the *Latins* call'd PHYSICA, the *Greeks* φύσικη, and by us frequently PHYSIOLOGY, or *Natural Philoſophy*; is the Doctrine of Natural Bodies, their Phænomena, Cauſes, and Effects; their various Affections, Motions, Operations, *&c.* See PHILOSOPHY and NATURE.

Mr. *Locke* would likewiſe have GOD, Angels, and Spirits, come under *Phyſicks*, which more uſually are referr'd to *Metaphyſicks*. See METAPHYSICKS.

The Word is derived from φύσις, Nature. See PHYSIOLOGY.

The Origin of *Phyſicks* is referr'd by the *Greeks*, to the Barbarians, *viz.* the Brachmans, Magi, and the *Hebrew* and *Egyptian* Prieſts. See BRACHMANS, MAGI, *&c.*

From theſe it was derived to the *Greek* Sages or Sophi, particularly *Thales*, who is ſaid to have firſt profeſs'd the Study of Nature in *Greece*. See SOPHI.

Hence it deſcended into the Pythagoric, Platonic, and Peripatetic Schools; whence it was propagated into *Italy*, and thence thro' the reſt of *Europe*; tho' the Druids, Bards, *&c.* had *Phyſicks* of their own. See PYTHAGOREAN, PLATONIC, and PERIPATETIC; ſee alſo DRUID, BARD, *&c.*

Phyſicks may be divided, with regard to the manner wherein it has been handled, and the Perſons by whom, into

1° *Symbolical*, ſuch was that of the old *Egyptians*, *Pythagoreans* and *Platoniſts*, who delivered the Properties of Natural Bodies under Arithmetical and Geometrical Characters, and Hieroglyphics. See SYMBOL, GEOMETRY, HIEROGLYPHIC, *&c.*

2° *Peripatetical*, or that of the Ariſtotelians, who explain'd the Nature of things by Matter, Form, and Privation, Elementary and Occult Qualities, Sympathies, Antipathies, Attractions, *&c.* See ARISTOTELIAN, *&c.*

3° *Experimental*, which enquires into the Reaſons and Natures of Things from Experiments; ſuch as thoſe in Chymiſtry, Hydroſtaticks, Pneumaticks, Opticks, *&c.* See EXPERIMENT, *&c.*

This has been much cultivated ſince the Time of my Lord *Bacon*; and continues to be ſo, with good Succeſs.

The Experiments of the Academiſts of *Cimento*, of the Royal Society, of the Royal Academy, and even of private Perſons, particularly Mr. *Boyle*, Sir *Iſ. Newton*, Mr. *Hauksbee*, &c. have been of infinite Service in *Phyſicks*; and 'tis to theſe, in great meaſure, that the Advantage of the modern Philoſophy above the ancient is due.

4° The *Mechanical* or *Corpuſcular*, which explains the Appearances of Nature from the Matter, Motion, Structure, and Figure of the Bodies, and their Parts; all according to the ſettled Laws of Nature and Mechanicks. See CORPUSCULAR and MECHANICAL.

PHYSIOGNOMICKS, a Term uſed by ſome Phyſicians and Naturaliſts, for ſuch Signs as are taken from the Countenance to judge of the State, Diſpoſition, *&c.* of the Body and Mind. See SIGN and PHYSIOGNOMY.

PHYSIOGNOMY, the Art of knowing the Humour, Temperament, or Diſpoſition of a Perſon, from Obſervation of the Lines of the Face, and the Characters of its Members, or Features.

Baptiſta Porta and *Robert Fludd* are the top modern Authors on *Phyſiognomy*.——The ancient ones are the Sophiſt *Adamantius*, and *Ariſtotle*; the *Phyſiognomy* of which laſt we have tranſlated into *Latin* by *de Lacuna*.

The Word is form'd from the *Greek* φύσις, Nature, and γινώσκω, I know.

There ſeems to be ſomething in *Phyſiognomy*; and it may perhaps bear a much purer Philoſophy than what theſe Authors were acquainted withal.—This, at leaſt, we dare ſay, that of all the fanciful Arts of the Ancients, diſuſed among the Moderns, there is none has ſo much Foundation in Nature as this.

There is an apparent Correſpondence between the Face and the Mind; the Features and Lineaments of the one are directed by the Motions and Affections of the other: there is even a peculiar Arrangement of the Members of the Face, a peculiar Diſpoſition of the Countenance, to each particular Affection; perhaps to each particular Idea of the Mind. See PASSION.

In effect, the Language of the Face, *Phyſiognomy*, is as copious, nay, perhaps, as diſtinct and intelligible, as that of the Tongue, *Speech*.—Thanks to bounteous Nature, ſhe has not confined us to one only Method of converſing with each other, and of learning each other's Thoughts; we have ſeveral: We don't wholly depend on the Tongue, which may happen to be bound; and the Ear, which may be deaf; but in thoſe Caſes we have another Recourſe, the Countenance and the Eye; which afford us this further Advantage, that by comparing the Reports of the Tongue, (a Member exceedingly liable to deceive) with thoſe of the Face, the Prevarications of the former may be detected.

The Foundation of *Phyſiognomy* is this: The different Objects that preſent themſelves to the Senſes, nay, the different Ideas that ariſe in the Mind, do each make ſome Impreſſion on the Spirits; and each an Impreſſion correſpondent or adequate to it's Cauſe; therefore each a different Impreſſion.

If it be ask'd how ſuch an Impreſſion ſhould be effected; 'tis eaſy to anſwer, that it follows from the Oeconomy of the Creator, who has fix'd ſuch a Relation between the ſeveral Parts of the Creation; to the end we may be appriz'd of the Approach or Receſs of things uſeful or hurtful to us.

If this be'nt philoſophical enough, take the manner in the *Carteſian* Language, thus: The Animal Spirits moved in the Organ by an Object, continue their Motion to the Brain; whence that Motion is propagated to this, or that particular part of the Body, as is moſt ſuitable to the Deſign of Nature; having firſt made a proper Alteration in the Face, by means of its Nerves, eſpecially the Pathetici and *Oculorum Motorii*.

The Face, here, does the Office of a Dial-Plate; the Wheels and Springs within-ſide the Machine actuating its Muſcles, ſhew what is next to be expected from the ſtriking Part. Not that the Motion of the Spirits is continu'd all the Way by the Impreſſion of the Object; the Impreſſion pro-

bably terminates in the Medulla of the Brain; the common Fund of Spirits; the reſt Dr. *Gwither* imagines may be effected much after the ſame manner as the Air is convey'd into the Pipes of an Organ, which being uncover'd, the Air ruſhes in, and when the Keys are let go ſtopp'd again. See CONSENT *of Parts*.

Now if by repeated Acts, or the frequent entertaining of a favourite Paſſion, or Vice, which natural Temperament has hurried one to, or Cuſtom dragg'd; the Face is often put in that Poſture which attends ſuch Acts; the Animal Spirits will make ſuch patent Paſſages thro' the Nerves, (in which the Eſſence of a Habit conſiſts; ſee HABITUDE;) that the Face is ſometimes unalterably ſet in that Poſture; (as the *Indian* Religious are by a long continued ſitting in ſtrange Poſtures in their Pagods) or at leaſt falls inſenſibly and mechanically into that Poſture, unleſs ſome preſent Object diſtort it therefrom, or Diſſimulation hide it. See FAQUIR.

This Reaſoning is confirm'd by Obſervation: Thus we ſee great Drinkers, with Eyes generally ſet to the Noſe; the adducent Muſcles being oft employ'd to put 'em in that Poſture, to view their lov'd Liquor in the Glaſs in the time of Drinking; whence thoſe Muſcles are alſo denominated the *bibitory Muſcles*.

Thus alſo laſcivious Perſons are remarkable for the *Oculorum morbilis petulantia*, as *Petronius* calls it.

Hence we may account for the *Quakers* expecting Face, waiting the Spirit; the melancholly Face of moſt Sectaries; the ſtudious Face of Men of great Application of Mind, *&c.*

Were our Obſervation a little more ſtrict and delicate, we might doubtleſs not only diſtinguiſh Habits, and Tempers but even Profeſſions—In effect does there need much Penetration to diſtinguiſh the fierce Look of the veteran Soldier, the contentious Look of the practis'd Pleader, the ſolemn Look of the Miniſter of State, *&c.*

PHYSIOLOGY, the Doctrine of Nature, or Natural Bodies; call'd alſo *Phyſicks*, and *Natural Philoſophy*. See PHYSICKS, *&c.*

The Word is form'd of φύσις, Nature, and λόγος, Diſcourſe, Reaſon.

It is to be obſerv'd, that the Word *Phyſiology* properly denotes only an internal reaſoning or diſcourſing, which ſtops or terminates in the Speculation, or abſtract Contemplation of its Object, *viz.* Natural Appearances, their Cauſes, *&c.* and does not direct or preſcribe Rules for the making of natural things, *e. gr.* Stones, Plants, *&c.*

In this View Chymiſtry does not properly belong to *Phyſiology*, but is a kind of a counter-part thereto, as imitating or mimicking Nature, rather than conſidering and explaining her. See CHYMISTRY.

PHYSIOLOGY is particularly uſed for a Branch of Medicine, which conſiders Nature with Regard to the Cure of Diſeaſes; particularly the human Body, its Parts, Structure, Health, Life, Functions, Oeconomy, *&c.* See MEDICINE.

Phyſiology, in this Senſe, is the ſame with what we otherwiſe call the Doctrine of *Animal Oeconomy*. See OECONOMY.

PHYTOLOGY a Diſcourſe upon Plants; or a Deſcription of their Forms, Kinds, Properties, *&c.* See PLANT.

The Word is compounded of the *Greek* φυτὸν, Plant, and λόγος, Diſcourſe, or λέγω, *ſcribo*, I deſcribe, rehearſe.

PIA *Mater*, in Anatomy, call'd alſo *Mater tenuis*, and *Meninx tenuis*, a fine Coat, or Membrane, immediately inveſting the Brain. See MATER, MENINX and BRAIN.

PIACHE, PIAZZA, a cover'd arched Walk, or Portico. See PORTICO and PIAZZA.

PIASTER, a *Spaniſh* Money, more ordinarily call'd *Piece of Eight*. See PIECE *of Eight*.

PIAZZA, in Building popularly call'd *Piache*, an *Italian* Name for a Portico. See PORTICO.

The Word literally ſignifies a broad open Place, or Square; whence it became applied to the Walks, or Portico's around them.

PICA, in Medicine, call'd alſo *Malacia*, a Depravation of Appetite, which makes the Patient abſurdly covet things unfit for Food, or incapable of nouriſhing; as, Coals, Aſhes, Plaiſter, Salt, Lime, Chalk, Vinegar, Pepper, *&c.* See APPETITE.

The *Pica* is frequent in Girls, and Women with Child; Men are more rarely affected with it.—The Diſorder is ſeldom original; but uſually an Effect of an Hypochondraical Infirmity in Men; and a Chloroſis, Stoppage of the Menſes, or their Eruption about the ſecond Month of Pregnancy, in Women: Sometimes it is hereditary in Children, from ſome Cauſe affecting the Mother. See MONSTER.

The Diſeaſe is uſually ſuppoſed to have its Riſe from a vitious Ferment of the Stomach; to which may be added Diſorders of the Imagination, occaſioned by ill Examples and ridiculous Prejudices. See IMAGINATION.

In the *Philoſophical Tranſactions*, Dr. *Fairfax* gives us an Inſtance of a Woman in *Stow* Market, who was invited by her *Pica* to ſuck the Wind out of Bellows; which as often as ſhe cou'd ſhe took into her Body with open Mouth, forcing it in by blowing with both Hands, the Bellows inverted.—He adds, he knew another in the ſame Circumſtances whom nothing would ſatisfy but crackling Cinders under her Feet.

Something like this has alſo been found in Brutes.—The laſt mentioned Author mentions a Greyhound Bitch, who 5 or 6 Days before caſting her Whelps, long'd for another Bitch's Whelps, and eat them all up, and would have eat the Bitch herſelf. Thus it is that Sows are ſometimes known to eat up whole Litters of Pigs.

The uſual Remedies in the *Pica* are Bleeding, Purging, Vomiting, and Chalybeats.

PICA, in Printing. See PRINTING *Letter*.

PICARDS, a Religious Sect, who aroſe in *Bohemia*, in the XVIth Century; ſo call'd from their Author, one *Picard*.

He drew after him a great Number of Men and Women, pretending he would reſtore them to the primitive State of Innocence wherein *Adam* was created; and accordingly himſelf aſſumed the Title of the *New Adam*.

Under this Pretence he taught his Followers to abandon themſelves to all Impurity; making them believe that therein conſiſted the Liberty of the Sons of God; and that all thoſe not of their Sect were in Bondage.

He firſt began in *Germany*, and the *Low Countries*; perſuading many to go naked, and giving them the Name of *Adamites*.—After this, ſeizing an Iſland, he fix'd himſelf and his Followers therein; appointed his Women to be common, but allowed none to enjoy them without his Permiſſion. So that when any Man deſired a Woman he carried her to *Picard*, who gave him leave in theſe Words, *Go, increaſe, multiply and fill the Earth.*

At length, *Ziſca*, the Great General of the *Huſſites*, ſo famous for his Victories over the Emperor *Sigiſmund*, ſtruck with their Abominations, march'd againſt them; and making himſelf Maſter of their Iſland, put them all to Death, except two, whom he ſpared to inform himſelf of their Doctrine.

PICKAGE, or PICAGE, from the *Latin Pica*; an ancient Cuſtom, or Duty, paid at Fairs and Markets, for breaking the Ground and pitching up Stalls, or Standings.

This Profit of *Picage* was uſually given or granted in Charters for holding a Fair, or Market.

PICKET, or PICQUET, or PIQUET, in Fortification, a Stake ſharp at one End, and uſually ſhod with Iron; uſed in laying out the Ground, to mark the ſeveral Meaſures and Angles thereof.

There are alſo larger *Pickets*, drove into the Earth to hold together Faſcines, or Faggots, in any Work caſt up in haſte.

PICKETS are alſo Stakes drove into the Ground by the Tents of the Horſe, in a Camp, to tie their Horſes to; and before the Tents of the Foot, where they reſt their Muskets or Pikes round about them in a Ring.

When an Horſeman hath committed any conſiderable Offence, he is often ſentenced to *ſtand on the Picket*; which is to have one hand drawn up as high as it can be ſtretch'd, and thus to ſtand on the Point of a *Picket*, or Stake, only with the Toe of his oppoſite Foot; ſo that he can neither ſtand or hang well, nor eaſe himſelf by changing Feet.

PICKETS are alſo Stakes with Notches towards the Top, to which are faſtened the Cordages of Tents.—Thus, to *plant the Picket*, is to encamp.

PICKET in Gaming. See PICQUET.

PICKLE, a Brine, or Liquor, ordinarily compos'd of Salt, Vinegar, *&c.* ſometimes with the Addition of Spices, *&c.* wherein Meats, Fruits, *&c.* are preſerv'd and ſeaſon'd.

PICKLE is alſo uſed ſubſtantively for a Fruit, Root, Leaf, or other Vegetable Matter, prepared in *Pickle*, to be uſed by way of Sauce, *&c.*

They *pickle* Artichokes, Muſhrooms, Aſhen-Keys, Barberries, Aſparagus, Beans, Broom-Buds, *&c.*

PICQUEERING, PICKEERING, or PICKEROONING, a little flying War, or Skirmiſh, which the Soldiers make when detach'd from their Bodies, for Pillage, or before a main Battle begins.

PICQUET, or PICKET, a celebrated Game at Cards, in Uſe throughout the polite World. See GAME and CARDS.

It is play'd between two Perſons, with only thirty two Cards; all the Duces, Threes, Fours, Fives, and Sixes, being ſet aſide.

In reckoning at this Game every Card goes for the Number it bears, as a Ten for ten; only all Court-Cards go for eleven, and the Ace for ten: And the uſual Game is 100 up.——But in playing, the Ace wins the King, the King the Queen, and ſo down.

Twelve Cards are dealt around, uſually by two and two; which done, the Remainder are laid in the middle: If one of the Gameſters find he has not a Court-Card in his Hand, he is to declare he has *Carte blanche*, and tell how many Cards he will lay out, and deſire the other to diſcard, that he

he may ſhew his Game, and ſatisfy his Antagoniſt that the *Carte blanche* is real; for which he reckons ten.

Each Perſon diſcards *i. e.* lays aſide a certain Number of his Cards, and takes in a like Number from the Stock.—The firſt, of the 8 Cards, may take 5, 6, or 7; the Dealer, all the Remainder if he pleaſes.

After diſcarding, the eldeſt Hand examines what Suit he has moſt Cards of; and reckoning how many Points he has in that Suit; if the other have not ſo many in that or any other Suit he tells one for every Ten of that Suit.—He who thus reckons moſt is ſaid to win the *Point*.

The Point being over, each examines what Sequences he has of the ſame Suit, *viz.* how many *Tierces*, or Sequences of three, *Quartes* or fours, *Quintes* or fives, *Sixiemes* or ſixs, *&c.* For a Tierce they reckon three Points, for a Quart four, for a Quinte fifteen, and for a Sixieme ſixteen, *&c.* And the ſeveral Sequences are diſtinguiſhed in Dignity by the Cards they begin from: Thus; Ace, King, and Queen, are call'd Tierce major; King, Queen, and Knave, Tierce to a King; Knave, Ten, and Nine, Tierce to a Knave, *&c.* and the beſt Tierce, Quarte, or Quint, *i. e.* that which takes its Deſcent from the beſt Card, prevails; ſo as to make all the others in that hand good, and deſtroy all thoſe in the other hand.—In like manner a Quarte in one hand ſets aſide a Tierce in the other.

The Sequences over, they proceed to examine how many Aces, Kings, Queens, Knaves, and Tens, each holds; reckoning for every three of any ſort, three: But here, too, as in Sequences, he that with the ſame Number of Three's, has one that is higher than any the other has, *e.gr.* 3 Aces, has all his others made good hereby, and his Adverſary's all ſet aſide.—But four of any ſort always ſet aſide three.

All the Game in Hand being thus reckoned, the Eldeſt proceeds to play; reckoning one for every Card he plays above a Nine; and the other follows him in the Suit; and the higheſt Card of the Suit wins the Trick.—Note, unleſs a Trick be won with a Card above a Nine, (except the laſt Trick) nothing is reckon'd for it; tho' the Trick ſerves afterwards towards winning the Cards: And that he who plays laſt does not reckon for his Cards unleſs he wins the Trick.

The Cards being play'd out, he that has moſt Tricks reckons ten for winning the Cards.——If they have Tricks alike neither reckons any thing.—The Deal being finiſh'd, and each having mark'd up his Game, they proceed to deal again as before, cutting afreſh each time for the Deal.

If both Parties be within a few Points of being up, the *Carte blanche* is the firſt thing that reckons; then the Point; then the Sequences; then the Threes; then the tenth Cards.

He that can reckon 30 in hand, by Carte blanche, Points, Quintes, *&c.* without playing, e'er the other has reckon'd any thing; reckons ninety for them;—and this is call'd a *Repique*;—if he reckons above 30, he reckons ſo many above 90.

If he can make up 30, part in hand and part by play, e'er the other has told any thing, he reckons for them 60.—And this is call'd a *Picque*. Whence the Name of the Game.

He that wins all the Tricks, inſtead of 10, which is his Right for winning the Cards, reckons 40,—and this is call'd a *Capot*.

PICTS *Wall*, in Antiquity, a famed Piece of *Roman* Work, begun by *Adrian* the Emperor, on the Northern Bounds of *England*, to prevent the Incurſions of the *Picts* and *Scots*. See WALL.

At firſt it was made only of Turf, ſtrengthened with Paliſadoes; till the Emperor *Severus*, coming in Perſon into *Britain*, built it with ſolid Stone, reaching eighty Miles in Length, from the *Iriſh* to the *German* Sea, or from *Carliſle* to *Newcaſtle*; with Watch-Towers garriſon'd at the Diſtance of a Mile from each other.

It was ruined ſeveral Times by the *Picts*, and often repaired by the *Romans*.—At laſt *Aetius*, a *Roman* General, rebuilt it of Brick; and the *Picts* ruining it the Year following, it was no longer regarded, but as a Boundary between the two Nations.

The Wall was eight foot thick, and twelve high from the Ground; it run on the Northſide of the Rivers *Tyne* and *Irthing*, up and down ſeveral Hills; the Tract or Remains of it is to be ſeen this Day in many Places both in *Cumberland* and *Northumberland*.

PICTURE, a Piece of Painting; or a Subject, repreſented in Colours, on Canvas, Wood, or the like, and incloſed in a Frame. See PAINTING.

PIE-POUDER-*Court*, an ancient Court, mention'd in many of our Statutes, to be held in Fairs; for the rendering of Juſtice to Buyers and Sellers; and the Redreſs of Grievances ariſing therein. See FAIR.

It had its Name either becauſe moſt ordinarily held in Summer, and the that Suiters hereat were chiefly Country-Clowns, with *duſty Feet*, call'd by the *French*, *pieds poudreux*; or from the Expedition intended in the hearing of Cauſes proper thereto, e'er the *Duſt* went off the Plaintiff and Defendant's Feet.

The *Saxons* called it ceapung-ȝemot *i. e.* a Court of Merchandiſe; or for the Deciſion of Diſputes relating to buying and ſelling.—*Doctor* and *Student* obſerve that it is only held during the Continuance of the Fairs, *&c.*

PIECE, in Commerce, ſignifies, ſometimes, a whole; and ſometimes, only a Part of a whole.

In the firſt Senſe, we ſay, a *Piece of Cloth*, *of Velvet*, &c. meaning a certain Quantity of Yards, regulated by Cuſtom; being yet entire and not cut. See CLOTH.

In the other Signification we ſay, a *Piece of Tapeſtry*, meaning a diſtinct Member wrought a-part, which with ſeveral others make one Hanging. See TAPESTRY.

A *Piece of Wine*, of Cyder, *&c.* is a Cask full of thoſe Liquors.

PIECE, in matters of Money, ſignifies, ſometimes, the ſame thing with *Species*; as when we ſay this Piece is too light, *&c.* See SPECIES.

Sometimes, by adding the Value of the Species, 'tis uſed to expreſs ſuch as have no other particular Name; as, a *Piece of* 8 *Rials*, a *Piece of* 25 *Sols*, &c.

In *England* the *Piece* is ſometimes uſed for twenty Shillings Sterling; and ſometimes for a Guinea. See GUINEA, and POUND, and STERLING.

PIECE *of Eight*, or *Piaſter*, is a Silver Money, firſt ſtruck in *Spain*, afterwards in other Countries; and now current in moſt Parts of the World. See COIN.

It has its Name *Piece of Eight*, or *Rial of Eight*, becauſe equal to 8 Silver Rials. See RIAL.

Its Value is nearly on the ſame Foot with the *French* Crown; *viz.* 4*s.* 6*d. Sterling*.—In 1687, the Proportion of the ſimple Rial to the Piaſter was changed; and in lieu of 8 Rials they gave 10.——At preſent the Reduction is on its ancient Standard.

There are two kinds of Piaſters or *Spaniſh* Crowns; the one ſtruck at *Potoſi*, the other at *Mexico*: Theſe latter are a little Matter heavier than the former, but in return they are not quite ſo fine.

The *Piece of Eight* has its Diminutions; *viz.* the Demi-Piaſter, or *Piece* of 4 Rials; the Quarter, or *Piece* of 2; the half Quarter, and the Sixteenth.——The Exchange between *Spain* and *England* is made in *Pieces of Eight*. See EXCHANGE.

Piece, is alſo a kind of Money of Account, or rather a manner, of accounting uſed among the Negroes of the Coaſt of *Angola* in *Africa*. See MONEY.

The Price of Slaves, and other Commodities, here negotiated, as alſo the Duties paid the petty Kings, are eſtimated on both ſides in *Pieces*.

Thus, theſe Barbarians requiring 10 *Pieces* for a Slave; the *Europeans* in like manner value the Money, or Merchandize, to be given in Exchange, in *Pieces*. See COMMERCE.

Ten Anabaſtes, *e. g.* are 1 *Piece*; a Barrel of Powder of ten Pounds, 1 *Piece*; a Piece of blue Salempouris, 4 *Pieces*; ten braſs Baſons, 1 *Piece*.

PIECE, in Heraldry, is an Ordinary, or Charge. See ORDINARY.

The honourable *Pieces* of the Shield are the Chief, feſs, bend, pal, bar, Croſs, Saltier Chevron; and in general all thoſe which may take up one third of the Field, when alone, in what manner ſoever it be.

PIECES, in the Military Art, are Cannons, or great Guns, uſed at Sieges, *&c.* call'd *Pieces of Ordnance*, *battering Pieces*, &c. See ORDNANCE, CANNON, *&c.*

Field-Pieces are thoſe placed in the Front of an Army, *&c.* See FIELD-PIECES.

PIEDOUCH, in Architecture, a little Stand, or Pedeſtal, either long or ſquare, enrich'd with Mouldings, ſerving to ſupport a Buſt, or other little Figure. See PEDESTAL, BUST, *&c.*

The Word is *French*; form'd from the *Italian*, *peduccio*, *little foot*.

PIEDROIT, in Architecture, a *Peer*, or a kind of ſquare Pillar, part whereof is hid within a Wall. See PEER and PILLAR.

The only thing wherein it differs from a Pilaſter, is, that the latter has a regular Baſe and Capital, which the other wants. See PILASTER.

PIEDROIT is alſo uſed for a Peer, or Jaumb of a Door, or Window; comprehending the Chambranle, Chamfering, Leaf, *&c.* See DOOR, WINDOW, *&c.*

PIERCED, in Heraldry, is when an Ordinary is perforated, or ſtruck through, ſhewing, as it were, a Hole in it.

This *Piercing* is to be expreſſed in Blazon, as to its Shape: Thus if a Croſs have a ſquare Hole, or Perforation in the Center, it is blazon'd, *Square Pierced*, which is more proper than quarterly pierced, as *Leigh* expreſſes it; and accordingly the *French* call it *Percée en quarre*—When the Hole, or Perforation, is round, it muſt be expreſſed *Round Pierced*; which *Gibbon*, in *Latin* calls *Perforation*, becauſe all Holes made with Piercers, or Augers, are round.—If the Hole in the

Center

Center be in the Shape of a Lozenge, it is expreſſed *Pierced Lozenge ways.*

All Piercings muſt be of the Colour of the Field, becauſe the piercing implies the ſhowing of that which is under the Ordinary, or Bearing.—Tho' when ſuch Figures appear on the Center of a Croſs, *&c.* of another Colour, the Croſs is not to be ſuppoſed *pierced*, but that the Figure on it is a Charge, and muſt be accordingly blazoned. See CROSS, *&c.*

PIERCED, among Farriers, to *pierce a Horſe's Shoe lean*, is to pierce it too near the Edge of the Iron.—To *pierce it fat*, is to pierce it further in.

PIES, in our ancient Law Books. *Freres Pies*, were a ſort of Monks, ſo called becauſe they wore black and white Garments, like Magpies.—They are mentioned by *Walſingham*, *p.* 124. *In quodam veteri cœmeterio, quod fuerat quondam fratrum, quos* Freres pies *veteres appellabant.*

PIESTRUM, μίσγον, an Inſtrument wherewithal to beat in pieces the Bones of the Head, in drawing a Child out of the Womb.

PIETANTIA, a *Pittance*; or Portion of Victuals diſtributed to the Members of a College, upon ſome great Feſtivals. See PITANCE.

PIETISTS, a Religious Sect lately ſprung up among the Proteſtants of *Germany.*

The *Pietiſts* ſeem to be a kind of mean, between the Quakers of *England*, and the Quietiſts of the *Romiſh* Church. See QUIETIST and QUAKER.

Their Author was *Spenerus*, from whom they learnt to deſpiſe all Eccleſiaſtical Polity, all School Theology, all Forms and Ceremonies; and to give themſelves up to Contemplation and the myſtic Theology. See MYSTIC.

The *Pietiſts* are eſteemed Adiaphoriſts, or Indifferentiſts, *i. e.* in the *German* way of talking, they receive and allow of all Sects among Proteſtants, particularly the *Calviniſts*; contrary to the Practice of other *Lutherans.*—Hence a *Lutheran* of *Dantzick* defines *Pietiſm* an Aſſemblage of the Hypotheſes, or Syſtems, of *Anabaptiſts*, *Schwecnekfeldians*, *Weigelians*, *Rathmannians*, *Labadiſts*, *Quakers*, &c. who under Pretence of a new Reformation, and in hopes of better Times, ſet aſide the *Augsburg* Confeſſion.

The ſame Author charges them not only with Schiſm, but with Hereſy; in that they believe with the *Donatiſts*, that the Effect of the Sacraments depends on the Piety and Virtue of the Miniſter; that Creatures are Emanations from the Subſtance of God; that a State of Grace is a real Poſſeſſion of the Divine Attributes, and a true Deification; that one may be united to God, tho' he deny the Divinity of *Jeſus Chriſt*; that all Error is innocent, provided the Will be but ſincere; that Preventing-Grace is natural, and that the Will begins the Work of Salvation; that one may have Faith without any Supernatural Aſſiſtance; that all Love of the Creature is original; that a Chriſtian may avoid all Sin; that one may enjoy the Kingdom of God in this World.

Theſe things we find charg'd on the *Pietiſts*, in a Book intituled, *Manipuli Obſervationum Antipietiſticarum.*—Indeed this looks like polemical Exaggeration, at leaſt 'tis certainly ſo with regard to a good part of them.

In effect there are *Pietiſts* of ſeveral kinds; ſome are in groſs Illuſions, and carry their Errors to the overturning a good part of the Chriſtian Doctrine; others are only viſionaries; and others very honeſt good People, who diſguſted with the Coldneſs and Formality of other Churches, and charm'd with the fervent Piety of the *Pietiſts*, are attach'd to their Party, without giving into the groſſeſt of their Errors.

PIG *of Lead.* See FOTHER and LEAD.

PIGER *Henricus*, *Slothful Henry*, a ſlow diſtilling Chymical Furnace; call'd alſo *Athanor.* See ATHANOR and FURNACE.

PIGMENTS, PIGMENTA, Preparations uſed by Painters, Dyers, *&c.* to impart Colours to Bodies, or to imitate particular Colours. See COLOUR.

When Glaſs is ſtained, or coloured, as in Painting on Glaſs, or for the counterfeiting of Gems, or Precious Stones; the *Pigment* is uſually of a Metalline, or a Mineral Nature. See ENAMEL; ſee alſo PAINTING *on Glaſs.*

PIGMY, or PYGMY, πυγμὴ, the Length, or Extent, between the Elbow and the Extremity of the Hand; the Fiſt being ſhut; popularly call'd *Cubit.* See CUBIT.

Hence the Name has paſs'd to a diminutive People of *Thrace*, much talk'd of in old Authors; ſaid to have generated at five Years of Age, and to have been old at eight; famous for their War with the Cranes, which makes the Subject of a fine *Latin* Poem of Mr. *Addiſon.*

The Word is derived from the *Greek* πυγμὴ, Cubit.

PIKE, an offenſive Weapon, conſiſting of a Shaft of Wood, twelve or fourteen Foot long; headed with a flat, pointed Steel.

The *Pike* was a long time in uſe in the Infantry, to enable them to ſuſtain the Attack of the Cavalry; but is now taken from them, and the Bayonet, which ſcrews on at the End of the Carabine, ſubſtituted in its Place.

Yet the *Pike* ſtill continues the Weapon of Foot-Officers, who fight *Pike* in hand, ſalute with the *Pike*, &c.

Pliny ſays the *Lacedemonians* were the Inventors of the *Pike.*—The *Macedonian Phalanx* was a Battallion of *Pikemen.* See PHALANX.

The Name *Pike* is ſaid to be derived from a Bird call'd by the *French Pie*, by us Wood-Pecker, whoſe Bill is ſo ſharp as to pierce Wood like an Auger.—*Du Cange* derives it from the baſe *Latin Pica*, or *Picca*, which *Turnebius* ſuppoſes to have been ſo call'd *quaſi Spica*, becauſe reſembling a kind of Ear of Corn. *Octavius Ferrarienſis* derives it *à ſpiculo.*

M. *Fauchet* ſays, 'tis the *Pike* gave Name to the *Picards*, and *Picardy*, which he will have to be modern, and to have been given on occaſion of that People's renewing the uſe of the *Pike*, the Etymology whereof he fetches from the *French piquer*, to prick: others will have the Name *Picard* to have been given that People by reaſon of their Readineſs to pick Quarrels, call'd in *French Piques.*

PIKE, in Commerce——*To treat with the Pike, à la pique*, is a kind of Commerce which the *Europeans* hold with certain ſavage Nations, wherein they are to keep on their Guard, and as it were Sword in Hand.—Thus it is we treat with the Savages of *Canada*, &c. and ſome Negroe Nations on the Coaſt of *Africa.*

Treating with the Pike, is alſo a kind of prohibited Traffic which the *Engliſh* and *Dutch* maintain in ſeveral Parts of the *Spaniſh Weſt Indies*, near the Colonies which thoſe two Nations have in the *Caribbee* Iſlands.

Perhaps it ſhould be call'd *Treating at the Pike*, i. e. the Veſſel at Anchor; in regard this Commerce, which is prohibited on Pain of Death, is only practiſed in Roads where Veſſels lie at Anchor, waiting for the *Spaniſh* Merchants, who ſometimes by Stealth, more frequently with the Connivance of the Governors, *&c.* come to exchange their Gold Pieces of Eight, Cochineal, *&c.* for the *European* Merchandizes.

Some will have it treating at the Pike, *i. e.* at a *Pike*'s Length, or Diſtance; by reaſon of the Diſtance Strangers are obliged to keep at. See COMMERCE.

PILA or PILE, among our ancient Writers, denotes the Arms-ſide of a Piece of Money. The Denomination aroſe hence, that anciently this Side bore an Impreſſion of a Church built on Piles. *Fleta lib.* 1. *cap.* 39. *He who brings an Appeal of Robbery or Theft againſt another, muſt ſhew the certain Quantity, Quality, Price, Weight, Number, Meaſure,* Valorem & Pilum; where *Pilum* ſignifies *figuram Monetæ.*

PILA, *Peer*, in Building, a Maſſive of Maſons Work in manner of a Pillar; uſually hexagonal. See PEER.

Such are thoſe ſerving as Fulcra, to ſeparate and ſupport the Arches of a Stone Bridge, or the Beams of a wooden Bridge.

The *Peers* of a Stone Bridge are not to be leſs than one ſixth Part of the Arch, nor more than a fourth. See BRIDGE.

The Word comes from the *Latin*, *Pila*, uſed in the ſame Senſe by *Vitruvius*; and this, probably, from πίλω, *cogo, coarcto.*

Evelyn obſerves, that *Pilæ* and their Quadras, as we ſee them in ancient Altars and Monuments, were uſed for Inſcriptions; but the ſhorter and more maſſy ſerve for Arches and Buttreſſes to ſolid Work.—They were ſometimes made half circular: But the Ancients preferr'd thoſe pointed at right Angles, as beſt able to reſiſt the Current.

PILASTER, in Architecture, a ſquare Column, ſometimes inſulated, but more frequently let within a Wall, and only ſhewing a fourth or fifth Part of its Thickneſs. See COLUMN.

The *Pilaſter* is different in different Orders; it borrows the Name of each Order, and has the ſame Proportions and the ſame Capitals, Members, and Ornaments, with the Columns themſelves. See ORDER.

Pilaſters are uſually without either Swelling or Diminution, as broad at top as at the bottom; tho' ſome of the modern Architects, as M. *Manſard*, &c. diminiſh them at top, and even make them ſwell in the middle, like Columns; particularly when placed behind Columns. See DIMINUTION.

Pilaſters, M. *Perrault* obſerves, like Columns, become of different Kinds, according to the different Manner wherein they are applied to the Wall.——Some are wholly detach'd, call'd by *Vitruvius*, *Paraſtatæ*; others have three Faces clear out of the Wall; others two; and others only one; all call'd by *Vitruvius*, *Antæ.* See ANTA and PARASTATA.

Inſulate *Pilaſters* are but rarely found in the Antique—The chief Uſe they made of *Pilaſters* was at the Extremities of Portico's, to give the greater Strength to the Corners.

There are four principal Things to be regarded in *Pilaſters: viz.* their Projecture out of the Wall, their Diminution, the Diſpoſition of the Entablature when it happens to be common to them and to a Column, and their Flutings and Capitals.

1° Then, the Projecture of *Pilaſters* which have only one Face out of the Wall, is to be one eighth of their Breadth; at moſt not above one ſixth. When they receive Impoſts againſt

againſt their Sides, the Projecture may be a Quarter of their Diameter. See PROJECTURE.

2° *Pilaſters* are but ſeldom diminiſh'd, when they have only one Face out of the Wall.----Indeed where they ſtand in the ſame Line with Columns, and the Entablature is continued over both, without any Break, the *Pilaſters* are to have the ſame Diminution with the Columns; that is to ſay, on the Face reſpecting the Column; the Sides being left without any Diminution.

3° *Pilaſters* are ſometimes fluted, tho' the Columns they accompany be not; and, on the other hand, the Columns are ſometimes fluted, when the *Pilaſters* that accompany them are not.

The Flutings of *Pilaſters* are always odd in Number, except in half *Pilaſters*, meeting at inward Angles; where four Flutings are made for three, *&c.* See FLUTING.

4° The Proportions of the Capitals of *Pilaſters*, are the ſame as to Height with thoſe of Columns, but differ in Width, the Leaves of the former being much wider, becauſe *Pilaſters*, tho' of equal Extent, have only the ſame Number of Leaves for their Girt, *viz.* Eight.—Their uſual Diſpoſition is to have two in each Face, in the lower Row, and in the upper Row one in the middle, and two halves in the Angles, in the Turns whereof they meet.—Add to this, that the Rim of the Vaſe or Tambour is not ſtrait as the lower Part is, but a little circular and prominent in the middle. See CAPITAL, *&c.*

In *Pilaſters* that ſupport Arches, the Proportions, *Palladio* ſhews, muſt be regulated by the Light they let in; and at Angles, by the Weight they are to ſuſtain. For which Reaſon, ſays Sir *Henry Wotton*, a ruſtic Superficies beſt becomes them.

PILASTER-*Brick*. See BRICK.

PILCHARD *Fiſhing*. See *Pilchard* FISHING.

PILE, in Antiquity, a Pyramid built of Wood, whereon were laid the Bodies of the deceaſed, to be burnt. See BUSTUM; ſee alſo FUNERAL, BURNING, *&c.*

PILE is alſo uſed in Building, for great Stakes ramm'd into the Earth for a Foundation to build upon in marſhy Ground. See FOUNDATION; ſee alſo PALLIFICATION.

Amſterdam, and ſome other Cities are wholly built upon *Piles*. The Stoppage of *Dagenham*-Breach is effected by Dove-tail *Piles*, i. e. *Piles* mortais'd into one another, by a Dove-tail Joint. See DOVE-TAIL.

PILE is alſo uſed, among Architects, for a Maſs, or Body, of Building.

PILE, PILA, in Coinage, is the Punchion, or Matrice, which, in the old way of coining with the Hammer, contained the Arms, Croſs, or other Figures and Inſcriptions, to be ſtruck for the Reverſe of the Species. See COIN and SPECIES.

Accordingly we ſtill call the Arms Side of a Piece of Money, the *Pile*, and the Head the Croſs; becauſe in the ancient Monies, a Croſs uſually took the Place of the Head in ours. See COINING.

Hence the Game of *Croſs* and *Pile*.

Some will have it call'd *Pile*, *Pila*, becauſe on this ſide, in our ancient Coins, there was an Impreſſion of a Church built on *Piles*.——In ſome ancient Writings *Pila* is uſed to ſignify the particular Figure or Impreſſion of Money.—— Thus *Fleta*; *He who bring an Appeal of Robbery, or Theft, againſt another, muſt ſhew the certain Quantity, Quality, Price, Weight, Number, Meaſure, Value, and* Pile.

PILE, in Heraldry, an Ordinary, in form of a Point inverted, or a Stake ſharpen'd; contracting from the Chief, and terminating in a Point towards the Bottom of the Shield, ſomewhat in manner of a Wedge.

It is form'd probably in Imitation of the *Roman Pilum*, which was a tapering Dart about five Feet long, and ſharpened at the Point with Steel.

The *Pile* is born inverted, engrailed, *&c.* like other Ordinaries, and iſſues indifferently from any Point of the Verge of the Eſcutcheon.——*He beareth a* Pile Gules, *by the Name of* Chandois.

PILES, in Medicine, a Diſeaſe, by Phyſicians, call'd Hæmorrhoids. See HÆMORRHOIDS.

PILETTUS, in our ancient Foreſt Laws, *Et quod Foreſtarii ſui non portabunt ſagittas barbatas ſed* pilettos. *Charta Rogeri de Quincy:* where the Word imports ſuch Arrows as had a round Knob a little above the Head, to hinder them from going far into the Mark; from the *Latin Pila*, which ſignifies any round thing like a Ball.

PILGRIM, PELGRIM, of the *Teutonic Pilgram*, the *French Pelerin*, or the *Italian Pelerigno*, of the *Latin Peregrinus*, one who travels thro' foreign Countries to viſit holy Places, and to pay his Devotion to the Reliques of dead Saints.

The Humour of going on Pilgrimage anciently prevail'd exceedingly; particularly about the Time of the Croiſades. See CROISADE and CROISE.

Several of the principal Orders of Knighthood were eſtabliſh'd in Favour of *Pilgrims* going to the *Holy Land*, to ſecure them from the Violences and Inſults of the *Saracens* and *Arabs*, &c. ſuch as the Order of the Knights *Templars*, the Knights *Hoſpitallers*, Knights of *Malta*, &c. See ORDER, TEMPLAR, MALTA, *&c.*

PILLAGE, among Builders, is ſometimes uſed for a ſquare Pillar, ſtanding behind a Column to bear up the Arches; having a Baſe and Capital as a Pillar has. See PILLAR.

PILLAR, in Architecture, a kind of irregular Column, round and inſulated; deviating from the Proportions of a juſt Column. See COLUMN.

Pillars are always either too maſſive or too ſlender for a regular Architecture. In effect, *Pillars* are not reſtrained to any Rules; their Parts and Proportions are arbitrary.

Such *e. gr.* are the *Pillars* which ſupport *Gothic* Vaults and Buildings, *&c.*

A ſquare *Pillar* is a maſſive Work, call'd alſo a Peer or Piedroit, ſerving to ſupport Arches, *&c.* See PEER and PIEDROIT.

Butting Pillar is a Buttreſs, or Body of Maſonry, raiſed to prop or ſuſtain the Shooting of a Vault, Arch, or other Work. See BUTTRESS.

PILLAR, in the Manage, ſignifies the Centre of the Volta, Ring, or Manage-Ground, round which a Horſe turns; whether there be a wooden Pillar placed therein or not.

There are alſo other *Pillars* in Manages on the Circumference or Side; placed at certain Diſtances by two and two. ——To diſtinguiſh theſe from that of the Center, they are called the *two Pillars*.

When theſe latter are ſpoken of, it is uſual to ſay, *Work the Horſe between the two Pillars*.——When the former, it is call'd, *working round the Pillar*.

The Uſe of the *Pillar* in the Center, is for regulating the Extent of Ground, that the Manage upon the Volts may be perform'd with Method and Juſtneſs; and that they may work in a Square by Rule and meaſure upon the four Lines of the Volts; and alſo to break unruly high mettled Horſes, without endangering the Rider.

The *two Pillars* are placed at the Diſtance of 2 or 3 Paces the one from the other.——The Horſe is put between theſe, to teach him to raiſe before, and yerk out behind; and put himſelf upon rais'd Airs, *&c.* either by the Aids or Chaſtiſement.

PILLE *of Foddray*, or PILL *of Fouldrey*, in the County of *Lancaſter*, a Defence built on a Creek of the Sea, call'd *Pille*, by the Idiom of the County, for a Pile or Fort built for the Safe-Guard or Protection of any Place.

This *Pile* was erected there by the Abbot of *Forneſſe*, in the firſt Year of *Edw.* III. *Camb. Brit. Rex*----*Dedimus Henrico Comiti Northumb. Inſulam, Caſtrum*, Pelam *& Dominium de Man*, &c. Rot. Pat. 1 Hen. IV.

PILLORY was anciently a Poſt erected in a croſs Road, by the Lord, as a Mark of his Seigniory, with his Arms on it, and ſometimes a Collar to tie Criminals to.

At preſent, *Pillory* is a wooden Machine, whereon certain Criminals, as Perjurors, *&c.* are faſtened, and expoſed to the publick Deriſion. See PUNISHMENT, PERJURY, *&c.*

In the Laws of *Canutus* 'tis called *Healſehang*.——Sir *Henry Spelman* ſays 'tis *ſupplicii machina ad ludibrium, magis quam pœnam.*

'Twas peculiarly intended for the Puniſhment of Bakers who ſhould be caught tripping in the Weight or Fineneſs of their Bread.——In old Charters it is called *Colliſtrigium*. See COLLISTRIGIUM.

The *Pillory* in *Paris* is in the middle of a round Tower, with Openings on every ſide.——'Tis moveable on an Axis, or Arbor; round which the Executioner gives the Criminal the Number of Turns appointed in Court; ſtopping him at each Opening to ſhew him to the People.——'Twas intended for ſeveral Kinds of Criminals, particularly fraudulent Bankrupts; and all who made a Ceſſion, or Surrender of their Effects to their Creditors, were obliged to make ſome Turns round the Pillory on Foot with a green Cap on. See BANKRUPT, CESSION, *&c.*

PILLULA, PILL, in Pharmacy, a Form of Medicine, taken dry; reſembling a little Ball; invented in favour of ſuch as cannot a-way with Medicinal Draughts; as alſo to keep in Readineſs for occaſional Uſe without decayIng.

Pills are of various Kinds, Anodyne, Somniferous, Laxative, Aperitive, Hyſteric, Antinephritic, *&c.* but principally Cathartic.

The Baſis of *Pills* is uſually Aloes; with which are mix'd Agaric, Turbith, Hermodactyls, Senna, Rhubarb, Mercury, Storax, *&c.*

Perpetual Pills, *Pillulæ perpetuæ*, are Regulus of Antimony made up into *Pills*; thus call'd, becauſe being ſwallowed and voided 50 times, they will purge every Time with undiminiſh'd Force. See ANTIMONY.

The *Aloephangine* or *Aromatic Pills* of *Meſue*, are uſually call'd *Polychreſtes*, as being ſuppoſed to collect the Humours from all Parts, to enable Nature to caſt 'em out more eaſily.

Bechic Pills, are a ſort of *Pills* good againſt Coughs, ſo call'd from the *Greek* βηξ, Cough.—They are alſo call'd *Hypoglottides*, becauſe left to diſſolve under the Tongue.

Pills are uſually wrapp'd up in Leaf-Gold, in Sugar, or the like, to prevent the ill Taſts being perceived.

They take their Name from the *Latin*, *Pila*, Ball.

PILOT, PILOTE, by the *Dutch* call'd PILOOT, the *Italians* PILOTA, the *Spaniards* PILOTO, in Navigation, an Officer on board a Ship, who watches her Courſe, and directs it. See COURSE, SAILING, *&c.*

There are two kinds of *Pilots*; the one a *Coaſting Pilot*, well acquainted with the Coaſts, Ports, Roads, Bars, Sands, *&c.* and who commands in Sight thereof. See COASTING.

The other an Officer who makes Obſervations and takes Altitudes out at Sea, uſes the Quadrant, Fore-Staff, watches the Compaſs, *&c.* See OBSERVATION, ALTITUDE, *&c.*

There are alſo *Pilots* of Havens, Rivers, *&c.* call'd *Lochmans*. See LOCHMAN.

The *Pilot* is always the ſecond Perſon in the Ship; whether it be a Man of War, or a Merchant-Man.—In the former the Captain is the firſt, the *Pilot* the ſecond. In a Merchant-Ship, the Maſter is the firſt, the *Pilot* after him. The *Pilot* is alſo the Steerſman, who ſtands at the Helm, and manages the Rudder. See STEERAGE, HELM, and RUDDER.

Menage derives the Word *Pilot* from *Prorita*, *q. d.* he who governs the Prow, or Head. Others fetch it from the old *French*, *Pile*, Ship.

PIMENTO, PIMENTA, or *all-Spice*; an Aromatic Grain; call'd alſo *Guinea-Pepper*. See PEPPER.

PIN, in Commerce, a little neceſſary Utenſil, chiefly uſed by the Women in adjuſting of their Dreſs.

The Form and Application of this little Moveable need no Deſcription; but its Conſumption, and the Number of Hands it employs, are too conſiderable to be paſs'd by unnoted.

Pins are now altogether made of Braſs-Wiar blanch'd: Formerly they likewiſe made them of Iron-Wiar, which being blanch'd like the others paſs'd, for Braſs; but the ill Effects of thoſe *Pins* has quite diſcarded their Uſe.—The *French* however could not be driven off from 'em, without ſeveral Arrets of Parliament. By a Sentence of the Lieutenant de Police, *July* 1695, the Seizure of ſome Millions of thoſe *Pins* was confirm'd, and the *Pins* condemn'd to be burnt by the common Executioner.

The *Pins* moſt eſteemed in Commerce are thoſe of *England*; thoſe of *Bourdeaux* are next, then thoſe made at *Rugle*, *Naigle*, and ſome Places in *Normandy*.

The Perfection of *Pins* conſiſts in the Stiffneſs of the Wiar, and its blanching, in the Heads being well turn'd, and the Points filed.

The *London* pointing and blanching are the moſt eſteemed; becauſe after forming the Points on the Stone, they ſmooth them again on the Poliſher; and in blanchiug uſe fine Tin well calcin'd, and ſometimes Silver-Leaves prepared by the Gold-Beaters; whereas in other Parts they uſe a Mixture of Tin, Lead, and Quickſilver, which not only blanches worſe than the former, but is alſo dangerous, by reaſon of the ill Quality of that Mineral, which renders a Puncture with a *Pin* thus blanch'd very difficult to cure.

The Conſumption of *Pins*, and the Number of Artificers employ'd in the Manufacture thereof are incredible. In *Paris* alone there were anciently above 1000 People employ'd in it, at preſent there are none; yet is there every Year ſold above 50000 Crowns worth of the *Pin-Wiar*, to the *Pinmakers* of the neighbouring Places, all brought thither from *Stockholm*.—In the little Town of *Rugle* in *Normandy*, there are computed at leaſt 500 Workmen employ'd in the *Pin-Manufacture*; the whole City being peopled therewith.

Notwithſtanding that there is ſcarce any Commodity cheaper than *Pins*, there is none that paſſes thro' more Hands e'er they come to be ſold.——They reckon 25 Workmen ſucceſſively employ'd in each *Pin*, between the drawing of the Braſs-Wiar, and the ſticking of the *Pin* in the Paper.

Pins are diſtinguiſhed by *Numero*'s, the ſmalleſt call'd from N° 3, 4, 5. thence to the 14th; whence they are only accounted by two to two, *viz.* N° 16, 18, and 20, which is the largeſt Size.

Beſide the white *Pins*, there are alſo black ones made for Mourning, from N° 4, to N° 10.—Theſe are uſually of Iron-Wiar.

Laſtly, there are *Pins* with double Heads, of ſeveral *Numero*'s, uſed by the Ladies to fix the Buckles of their Hair for the Night, without Danger of being diſturb'd by their pricking, *&c.*

One of the Article of the Statutes of the ancient Pinmakers of *Paris*, was, That no Maſter ſhould open more than one Shop for the Sale of his Wares, *except on New-Year's-Day, and the Eve thereof:* This we mention in an Age of Luxury and Profuſion, to recollect the agreeable Simplicity of our Foreſathers, who contented themſelves with giving *Pins* for New-Years-Gifts.

Hence the Cuſtom of ſtill giving the Name *Pins*, or *Pin-Money*, to certain Preſents which accompany the moſt conſiderable Bargains; in which 'tis uſual to give ſomething towards the *Pins* of the Wife, or Children, of the Perſon with whom the Bargain is ſtruck.

Ad PINNAS *bibere*, is a Method of drinking, uſed among the *Danes* in *England*.——The Cuſtom was to fix a *Pin* in the Side of a wooden Cup or Bowl; which *Pin*, each Gueſt was to drink bare, upon Penalty of forfeiting.

PIN-*and-Web*, a horny Induration of the Membranes of the Eye, not greatly unlike a Cataract. See CATARACT.

The *Pin* and Web is the ſame with what we otherwiſe call *Pannus*, *Unguis*, *Pterygium*, &c. See PANNUS, PTERYGIUM, *&c.*

PIN-*Wheel*, of a Clock, the ſame with the ſtriking Wheel. See WHEEL and CLOCK.

PINDARIC, in Poetry, an Ode form'd in Imitation of the manner of *Pindar*. See ODE.

The *Pindaric* Manner is diſtinguiſh'd by the Boldneſs and Height of the Flights, the Suddenneſs and Surprizingneſs of the Tranſitions, and the ſeeming Irregularity, Wildneſs, and Enthuſiaſm of the whole.

Pindar, whence the manner takes its Name, was of *Thebes*. He flouriſh'd about 478 Years before *Chriſt*; and was cotemporary with *Æſchylus*: What we have remaining of his is a Book of Odes, all in Praiſe of the Victors at the *Olympian*, *Pythian*, *Nemæan*, and *Iſthmian* Games; whence the firſt is entitled the *Olympians*, the ſecond the *Pythians*, the third the *Nemæans*, and the fourth the *Iſthmians*.

Pindar is full of Force and Fire; his Thoughts ſententious, his Style impetuous; his Sallies daring, and frequently running as it were at random: he affects a beautiful Diſorder, which is the Effect of the greateſt Art.

The ſuppoſed Irregularity of his Numbers has made ſeveral of his Imitators imagine themſelves *Pindaric* Poets, by the meer Wildneſs and Irregularity of their Verſes.—None of our Writers ſeem to have ſucceeded in the *Pindaric* Character, but Mr. *Cowley*.

In a *Pindaric* Ode, the Plan of the whole is to be drawn firſt, and the Places mark'd out where the elegant Sallies and Wandrings may beſt be, and how the Returns may be juſtly made to the Subject.

PINCHING, in Gardening, a ſort of pruning; perform'd by nipping or breaking off the Branches, or Sprigs of a Plant, or Tree, between the Nails of two Fingers. See PRUNING.

Moſt Gardeners hold, that *pinching* contributes to the Abundance of the Fruit, as well as of the Branches; and ſay, that young Shoots, thus lopp'd, are leſs apt to grow black and die, than when cut with a pruning Knife.

The Seaſon for *pinching* is chiefly in *April* or *May*, ſometimes 'tis alſo practis'd in *June* and *July*.

Pinching is moſt uſual in Melons, Cucumbers, *&c.* *Quintinye* alſo preſcribes it for Fruit-Trees.

It is chiefly to be practiſed on the large Branches towards the Top of the Tree, which are uſeleſs and yet conſume a great Quantity of good Sap. It muſt rarely be practiſed on the large Branches below; which ought always to be preſerv'd for the Winter's pruning, that they may yield others, the following Year, fit to fill the empty Places.——Nor muſt the Operation of *pinching* be perform'd on the tender Shoots; becauſe having only juſt Sap enough for themſelves, when they come to put forth more Branches in the Place where they are *pinch'd*, the ſmall Stock of Sap allotted them being divided, will ſtarve them.—The Operation is perform'd within two or three Eyes of the Branch they grow out of.

The Effect of *pinching* is, that inſtead of one uſeleſs, perhaps hurtful, Wood-Branch, a vigorous Tree will put forth two or three at the Eyes remaining; and the Sap being thus divided, the Branches may be leſs, and fit for Wood and Fruit.

PINCHING, in the Manage, is when, the Horſe ſtanding, the Rider holds him faſt with the Bridle-hand, and applies the Spurs juſt to the Hairs of his Sides, without pricking him.

Pinching is accounted an Aid, ſpurring a Correction. See AID.

PINEA, or PIGNE, in Commerce, a Term uſed in *Peru* and *Chili*, for a kind of light, porous Maſſes, or Lumps, form'd of a Mixture of Mercury and Silver-Duſt from the Mines. See SILVER.

The Ore, or Mineral of Silver, being dug out of the Veins of the Mine, is firſt broke, then ground in Mills for the Purpoſe, driven by Water with Iron Peſtles of 200 Pound-Weight.—The Mineral thus pulveriz'd, is next ſifted, then work'd up with Water into a Paſte, which when half dry, is cut into Pieces, call'd *Cuerpo's*, a Foot long; weighing each about 2500 Pound.

Each Cuerpo is again kneaded up with Sea-Salt, which diſſolving incorporates with it.—They then add Mercury, from 10 to 20 Pound for each Cuerpo, kneading the Paſte a-freſh 'till the Mercury be incorporated therewith. This

Office

Office being exceedingly dangerous, by reaſon of the ill Qualities of the Mercury, is the Lot of the poor *Indians*. See MERCURY.

This Amalgamation is continued for 8 or 9 Days: Some add Lime, Lead, or Tin Ore, *&c.* to forward it; and in ſome Mines they are obliged to uſe Fire.—To try whether or no the Mixture and Amalgamation be ſufficient, they waſh a Piece in Water, and if the Mercury be white, it has had its Effect, if black it muſt be further work'd.

When enough, it is ſent to the Lavatories, which are large Baſons that empty ſucceſſively into one another.—The Paſte *&c.* being laid in the uppermoſt, the Earth is then waſh'd from it into the reſt by a Rivulet turn'd upon it; an *Indian* all the while ſtirring it up with his Feet, and two other *Indians* doing the like in the other Baſons. See LAVADERO.

When the Water runs quite clear out of the Baſons, they find the Mercury and Silver at Bottom, incorporated.—This Matter they call *Pella*, and of this they form the *Pinea's* by expreſſing as much of the Mercury as they can; firſt by putting it in woolen Bags and preſſing and beating it ſtrongly; then by ſtamping it in a kind of wooden Mould of an Octagonal Form at bottom whereof is a Braſs-Plate pierced full of little Holes.

The Matter being taken out of the Mould is laid on a Trivet, under which is a large Veſſel full of Water; and the whole being cover'd with an earthen Head, a Fire is made around it.

The Mercury ſtill remaining in the Maſs is thus reduc'd into Smoak, and at length condenſing is precipitated into the Water, leaving behind it a Maſs of Silver Grains of different Figures, which only joining or touching at the Extremes render the Matter very porous and light.

This, then, is the *Pinea's* or *Pigne's* which the Workmen endeavour to ſell ſecretly to the Veſſels trading to the *South Sea*; and from which thoſe who have ventur'd to engage in ſo dangerous a Commerce have made ſuch vaſt Gains.—Indeed the Traders herein muſt be very careful, for the *Spaniſh* Miners are errant Knaves, and to make the *Pignes* weigh the more, make a Practice of filling the middle with Sand or Iron. See COMMERCE, PIKE, *&c.*

PINEAL, PINEALIS, in Anatomy, a Name which *Des Cartes* gives to a Gland in the third Ventricle of the Brain; from its Reſemblance to a Pine-Apple. See GLAND and BRAIN.

This Gland he makes the *Senſorium*, or Seat of the reaſonable Soul. See SENSORIUM.

Other Authors call it *Conoides* and *Conarium*. See CONARIUM.

PINGUEDO, among Anatomiſts, that ſort of Fat of Animals lying next under the Skin. See FAT.

PINION, in Mechanicks, an Arbor, or Spindle, in the Body whereof are ſeveral or Notches, into which catch the Teeth of a Wheel that ſerves to turn it round. Or a *Pinion* is a leſſer Wheel, which plays in the Teeth of a larger. See WHEEL.

In a Watch, *&c.* its Notches (which are commonly 4, 5, 6, 8, *&c.*) are call'd *Leaves*, and not Teeth as in other Wheels. See WATCH.

Pinion of Report, is that *Pinion* in a Watch which is commonly fix'd on the Arbor of the great Wheel, and which in old Watches uſed to have but four *Leaves*; it drives the Dial-Wheel, and carries about the Hand. See WATCHWORK.

The Quotient, or Number of Turns to be laid upon the *Pinion* of Report, is found by this Proportion: As the Beats in one Turn of the great Wheel, are to the Beats in an Hour; ſo are the Hours of the Face of the Clock, (*viz.* 12, or 24) to the Quotient of the Hour-Wheel, or Dial-Wheel divided by the *Pinion* of Report, that is, by the Number of Turns which the *Pinion* of Report hath in one Turn of the Dial-Wheel: which in Numbers is 26928 : 20196 :: 12 : 9.

Or rather thus; as the Hours of the Watches going, are to the Numbers of the Turns of the Fuſy; ſo are the Hours of the Face, to the Quotient of the *Pinion* of Report.—If the Hours be 12, then 16 : 12 :: 12 : 9. But if 24, the Proportion is 16 : 12 :: 24 : 18.

This Rule may ſerve to lay the *Pinion* of Report on any other Wheel, thus: As the Beats in one Turn of any Wheel, are to the Beats in an Hour; So are the Hours of the Face, or Dial-Plate of the Watch, to the Quotient of the Dial-Wheel, divided by the *Pinion* of Report, fixed on the Spindle of the aforeſaid Wheel. See CALCULATION.

PINK, or *Flute*, a Veſſel uſed at Sea, maſted and rigged like other Ships; only that ſhe is built with a round Stern; the Bends and Ribs compaſſing ſo, as that her Sides bulge out very much. See VESSEL.

This Diſpoſition renders the *Pinks* difficult to be boarded; and alſo enables them to carry greater Burdens than others.

They are often uſed for Store-Ships and Hoſpital-Ships in the Fleet.

PINK among Painters, a ſort of yellow Colour. See YELLOW and PAINTING.

PINNA, a *Latin* Word ſignifying a *Feather*. See FEATHER.

It is alſo uſed figuratively in divers Arts, to expreſs things which bear ſome Reſemblance, in Form, to Feathers; as the Fins of Fiſhes, *&c.* See FIN.

PINNA *Auris*, in Anatomy. See EAR.

PINNA *Naſi*, the ſame as *Ala Naſi*. See NOSE.

PINNACE, a ſmall Veſſel, with a ſquare Stern, having Sails and Oars, and carrying three Maſts; chiefly uſed as a Scout for Intelligence, and for landing of Men. See VESSEL.

One of the Boats belonging to a great Man of War, ſerving to carry the Officers to and from the Shore, is alſo called the *Pinnace*. See BOAT.

PINNACLE, in Architecture, the Top, or Roof, of a Houſe, terminating in a Point. See ROOF.

The Word comes from the *Latin Pinna*, or *Pinnaculum*.—This kind of Roof among the Ancients was appropriated to Temples; their ordinary Roofs were all flat, or in the Platform Way. See PLATFORM.

'Twas from the *Pinnacle*, that the Pediment took its Riſe. See PEDIMENT.

PINNATA *Folia*, from *Pinna*, a Feather, in Botany, are ſuch Leaves of Plants, as are deeply jagged, cut, or indented, reſembling a Feather in Shape. See LEAVES.

PINNING, in Building, the faſtening of Tiles together, with Pins of Heart of Oak; for the Covering of a Houſe, *&c.* See TYLES and COVERING.

PINT, a Veſſel or Meaſure uſed in eſtimating the Quantity of Liquids, and even ſometimes of dry things. See MEASURE.

The *Engliſh Pint* is twofold; the one for Wine-Meaſure, the other for Beer and Ale-Meaſure.

The *Wine Pint* contains a full Pound, *Avoir-du-pois*, of common running Water; two *Pints* make a Quart, two Quarts a Pottle, two Pottles a Gallon, *&c.* See GALLON, QUART, *&c.*

The *Paris Pint* is eſtimated at one ſixth of the ancient *Congius*; and contains two Pounds of common Water; It is divided into Chopines, which ſome call Septiers; the Septier into two Demi-Septiers, the Demi-Septier into two Poiſſons, each Poiſſon containing 6 Cubic Inches.—Two *Pints* make a Quart, *Quarteau*, which ſome call a Pot: The *Pint* of *S. Denis* is almoſt double that of *Paris*.

Budæus derives the Word *Pint* from the *Greek* πίνδα, *Menage*, from the *German Pinte*, a little Meaſure of Wine; *Nicod* from the *Greek* πίνειν, to drink.

PINTLE, among Gunners, an Iron Pin which ſerves to keep the Cannon from recoiling. See CANNON, ORDNANCE, RECOIL, *&c.*

PINTLES, in a Ship, are Hooks by which the Rudder hangs to the Stern-Poſt. See RUDDER, *&c.*

PIONEER, in War, a Labourer employ'd in an Army, to ſmooth the Roads, paſs the Artillery a-long, dig Lines and Trenches, Mines, and the other Works.

Menage derives the Word from the *Latin Peditones*, and *Peonarii*; or from *Pœonibus*, a People of *Aſia*, whoſe principal Employment was to dig the Earth in Mines, *&c.*

PIP, PEP, or PEPIA, a Diſeaſe among Poultry; conſiſting of a white thin Skin or Film, that grows under the Tip of the Tongue, and hinders their feeding.

It uſually ariſes from want of Water, or from drinking Puddle-Water, or eating filthy Meat.—It is cured by pulling off the Film with the Fingers, and rubbing the Tongue with Salt.—Hawks are particularly liable to this Diſeaſe. See HAWK.

PIPE, in Building, *&c.* a Canal or Conduit for the Conveyance of Water, and other Liquids. See CANAL.

Pipes for Water, Water-Engines, *&c.* are uſually of Lead, Iron, Earth, or Wood.—Thoſe of Timber are uſually either Oak or Alder. See TIMBER.

Thoſe of Iron are caſt in the Forges; their Length about two Foot and a half; ſeveral of which are piec'd together, by means of four Screws at each End, with Leather, or old Hat between them to ſtop the Water.

Thoſe of Earth are made by the Potters.—Theſe are fitted into one another, one End being always made wider than the other.—To join them the cloſer, and prevent their leaking, they are cover'd with Pitch and Tow.——Their Length is uſually about the ſame with that of the Iron *Pipes*.

The Wooden *Pipes* are bored with large Iron Augers of different Sizes, ſucceeding one another from leſs to larger; the firſt pointed, the reſt form'd like Spoons, increaſing in Diameter from one Inch to ſix.—They are fitted into the Extremities of each other, and are ſold by the Foot.

Leaden *Pipes* are of two kinds the one ſolder'd, the other not ſolder'd: For the Conſtruction of each Kind whereof, ſee PLUMBERY.

For the PIPES *of Organs*: See ORGAN.

PIPE is alſo a popular Machine uſed in the ſmoaking of Tobacco; conſiſting of a long ſlender Tube, made of Earth or Clay; having at one End a little Vaſe, or Furnace, call'd the

the *Boul*, for the Reception of the Tobacco; the Fumes whereof are drawn by the Mouth thro' the other End. See TOBACCO.

Pipes are made of various Fashions, long, short, plain, work'd, white, varnish'd, unvarnish'd, of various Colours, *&c.*—The *Turks* use *Pipes* three or four Foot long, made of Rushes, or of Wood bor'd; at the End whereof they fix a kind Nut, of bak'd Earth, which serves as a Boul, and which they take off after smoaking.

The Word is borrowed from the *Latin Pipa*.

PIPE is also a Vessel, or Measure, for Wine, and Things measured by Wine-Measure. See MEASURE.

The *Pipe*, or Butt, contains two Hogsheads, four Barrels, or 126 Gallons; and is computed to weigh about 9 Hundred, 2 Quarters, and 17 Pound. See HOGSHEAD, *&c.*

The *Pipe* is little used in *France*, except in *Anjou* and *Poictou*, where it consists of two Boisseaux, equal to a Muid and half of *Paris*; the Muid consisting of 36 Septiers, and the Septier of 8 Pints.

PIPE, PIPA, in Law, is a Roll in the Exchequer, call'd also the *Great Roll*. See ROLL and EXCHEQUER.

PIPE-*Office*, is an Office wherein a Person call'd the *Clerk of the Pipe* makes out the Leases of Crown-Lands, by Warrant from the Lord-Treasurer, or Commissioners of the Treasury, or Chancellor of the Exchequer. See CLERK *of the Pipe*.

All Accounts of Sheriffs, *&c.* are made up by the Clerk of the *Pipe*, and he gives the Accomptants their *Quietus est*. To this Office are brought all Accompts which pass the Remembrancer's Office, and Remain there; that if any stated Debt be due from any Person, the same may be drawn down into the great Roll of the *Pipe*; upon which the Comptroller issues out a Writ, call'd, The *Summons of the Pipe* for Recovery thereof. See REMEMBRANCER.

All Tallies which vouch the Payment of any Sum contained in such Accompts, are examined, and allowed by the chief Secondary of the *Pipe*. See TALLY.

Besides the Clerk, in this Office are eight Attornies, or sworn Clerks, and a Comptroller.

PIRATE, a Person, or Vessel, that robs on the high Seas, or makes Descents on the Coasts, *&c.* without the Permission or Authority of any Prince or State. See PRIVATEER.

When *Pirates* are caught they are usually hang'd up without Remission, or any formal Trial; sometimes in the next Port; sometimes on board the Vessel that takes them.

In different Parts they are differently denominated; as in the *West Indies*, *Buccaneers*, *Free-booters*, &c.—In the *Mediterranean*, *Corsairs*, &c. See BUCCANEER, CORSAIR, *&c.*

Alexander reproaching a *Pirate* with his Condition; was answered, If I am a Pirate, 'tis because I have only a single Vessel; had I a Fleet I should be a mighty Conqueror.

The Word comes from the *Greek* πῦρ, Fire, because they use to burn the Ships, Houses, *&c.* of the Islands where they make Descents.

PIRATE was also anciently used for the Person to whose Care the Mole, or Peer, of a Haven, in *Latin Pera*, was intrusted. See PEER.

Sometimes, too, according to *Spelman*, it was used *pro milite maritimo*; for a Sea-Captain or Soldier.

Asser in the Life of King *Alfred*, tells us, *jussit naves longas fabricari, impositis quæ* piratis *in illis vias maris custodiendas commisit.*

PIRETHRA, or PYRETHRA, or PIRETTE, or PELLITORY, a Medicinal Root brought from *Tunis*, of a hot, discutient Quality, used as an Alexipharmic and Phlegmagogue; as also to assuage the Toothach; and in the Composition of Vinegar.

'Tis of a moderate Length, the Thickness of the little Finger, greyish without, whitish within, and of a sharp, burning Taste.

'Tis pretended it took its Name from *Pyrrhus* King of *Epirus*; but there is no great Occasion for having recourse to a Mystery; its burning Quality being sufficient to give it the Name *Pirethra*, from the *Greek* πῦρ, Fire. It must be chosen new, dry, hard to break, *&c.*

It is call'd a Salivary Root, because being held in the Mouth its Pungency promotes the Evacuation of Saliva.

PIROUETTE, or PIROET, in the Manage, a Turn or Circumvolution which a Horse makes, without changing his Ground.

Pirouettes are either of one Tread or *Piste*, or of two—The first is an entire short Turn which the Horse makes upon one Tread, and almost in one Time; in such manner as that his Head comes to the place where his Tail was, without putting out his Haunches.——In the *Pirouette* of two Treads, or Pistes, he takes a small Compass of Ground, almost his Length; and marks both with the fore-part and the hind. See PISTE.

The Word is *French*, and literally signifies *Whirligig*.

PIS-ASPHALTUM, a Compound of Bitumen and Pitch. See BITUMEN, *&c.*

There are two Kinds; the one Natural, the other Artificial.

The Natural is the same with what we otherwise call *Asphaltum*, or *Jewish Pitch*. See ASPHALTUM.

The Artificial is prepared with equal Parts of the *Jewish*-Pitch and common Black-Pitch melted together. See PITCH.

This latter Kind is what is usually sold in the Shops for the former.—The Coarseness of the black Colour, and the Fetidness of the Smell serves to distinguish it.

The Ancients used both kinds in embalming their Dead. See EMBALMING.

The Word is form'd from the *Greek* πίσσα, Pitch; and ἀσφαλτος, Bitumen.

PISCARY, in our ancient Statutes, the Liberty of Fishing in another Man's Waters. See FISHING.

PISCES, in Astronomy, the twelfth Sign, or Constellation of the Zodiac. See SIGN and CONSTELLATION.

The Stars in *Pisces*, in *Ptolomy*'s Catalogue, are 38. In *Tycho*'s, 33. In the *Britannic* Catalogue, 109.——The Longitudes, Latitudes, Magnitudes, *&c.* whereof are as follow.

Stars in the Sign PISCES.

PISCIS *Volans*, in Astronomy, is a Constellation of the Southern Hemisphere, unknown to the Ancients, and invisible to us in these Northern Regions. See CONSTELLATION.

PISCINA, in Antiquity, *Fish-Pond*; a large Bason, in an open publick Place, or Square; where the *Roman* Youth learnt to swim; and which was surrounded with a high Wall, to prevent the casting of Filth into it. See SWIMMING.

PISCINA was also the square Bason in the middle of a Bath. See BATH.

The Word is form'd from the *Latin Piscis*, Fish; because Men here imitated Fishes in swimming; and because Fishes were actually kept in some of them.

PISCINA *Probatica*, was a Pool, or Reservoir of Water, near the Court of *Solomon*'s Temple; so call'd from the *Greek* προβατον, Sheep, because they here wash'd the Beasts destin'd for Sacrifice. See SACRIFICE.

By this *Piscina* it was that our Saviour wrought the miraculous Cure of the Paralytic.

Daviler observes, there are still remaining five Arches of the Portico, and part of the Bason of this *Piscina*.

PISCINA, or *Lavatory*, among the *Turks*, is a large Bason in the middle of the Court of a Mosque, or under the Portico's that encompass it. See MOSQUE.

Its Form is usually a long Square, built of Stone or Marble, furnish'd with a great Number of Cocks; wherein the Mussulmen wash themselves before they make their Prayers; as being persuaded that Ablution effaces Sin. See ABLUTION.

PISSELÆUM *Indicum* seems to be what passes in the Shops for *Barbadoes* Tar.—It has a strong Smell not unlike the common Tar, and is not very pleasant to Sight or Taste. It is accounted a good Balsamick, and where the Stomach can dispense with it will do great Service in many Disorders of the Breast, which has also been experienced of common Tar. See TAR.

PISTACHO, or PISTACH *Nut*, a Fruit brought from several Parts of *Asia*, chiefly *Aleppo* and *Persia*.—When wrapt in all its Coats, 'tis of the Size of a green Almond; but when stript of all but its Shell it resembles a small-Nut. The Kernel is red without and green within, its Taste very agreeable.

The Tree that produces it is a kind of Turpentine-Tree: The Nuts are to be chosen new, heavy, and full; as to those that are broken, such as have kept their Colours best are to be preferr'd; for as to the Size 'tis a Fancy.

Pistachos are apertive, proper to give Vigour, and are used in Emulsions, *&c.* in Phthisical and Nephritical Cases. They also enter several Ragousts; are comfited, made into Conserves, *&c.*

The Word is form'd from the *Latin Pistacium*, of the *Greek* πιστάκιον; whence according to *Menage* the City *Pistacus* took its Name.

There is likewise a kind of false *Pistacho*, brought from the *Caribbee* Islands, which some confound with the real ones, tho' very different, both with regard to the Plant that produce them, and their Quality. The Plant does not grow above a Foot high. Nor does the Fruit grow on the Branches, but is found in Pods adhering to the Root.—The Pod sometimes only contains a single Nut, which it resembles an Olive; but usually, several; and in that Case they are irregular. The Substance is white, compact and heavy.

This Fruit is rarely eat raw, because of the ill Effects it produces; 'tis usually roasted or comfited; is used in Ragouts; and to make Ratifia's.

PISTE, in the Manage, the Track, or Tread, which a Horse makes upon the Ground he goes over; and which may be either single or double.

If the Rider makes him go but an ordinary Gallop, in a Circle, or rather Square, he will make but one; if he either makes him gallop with his Haunches in, or go *Terra à Terra*, he will make two *Pistes*, one with the fore-part, another with the hind.——And the same if the Rider makes him passage, or go side ways, either in a strait Line, or upon a Circle.

The Word is *French*, and literally signifies a Track.

PISTIL, in Botany, a little upright Part in the middle of the Calyx, or the Leaves of Flowers; call'd also the *Style*. See STYLE.

The *Pistil* is an essential Part of a Flower; and the principal female Organ of Generation; it being in this that the Seeds or young Plants are form'd. See FLOWER.

It arises from the Pedicle of the Flower, or the Center of the Calyx, and at length becomes the young Fruit, which is sometimes hid in the Calyx, and sometimes quite out. See FRUIT, CALYX, *&c.*

The Figure of the *Pistil* is very different in different Flowers: Sometimes 'tis a little Stalk, which enlarges at the two Ends like a Pestle; sometimes 'tis a mere Stamen or Thread: Sometimes 'tis round, sometimes square, triangular, oval, *&c.*

Almost all *Pistils* are furnish'd at top, either with fine Hairs, which make a kind of Velveting; or with little Filaments disposed in Plumes; or are be-set with little Vesicles full of a glutinous Juice.

Some Flowers have several *Pistils*; or rather the *Pistils* terminate in several Branches, or Horns, which have their Rise from as many young Fruits, or as many different Capsulæ, containing Seeds.

All these *Pistils*, or whatever Form they be in, have certain Apertures at their Tops, or certain Clefts continued the whole Length, to the Base or Embryo's of the Fruit.—This is very visible in the Lilly, Daffodil, and Melon, by cleaving the *Pistils* length-wise, or cutting them transversely.—If after cutting the *Pistil* of the Lilly, you immerge one Extremity in Water, and suck thro' the other End, the Water will rise thro' it, as through a Pipe.

By opening the *Pistils* in their different States or Growths, it appears evidently, that 'tis these form the young Fruits; and contain within them the Embryo's of the Seeds; whether those Seeds be diffused thro' the whole Length of the *Pistil*; or whether they be all inclosed in its Base: And that they are always open a-top, and perforated, either more or less sensibly, to the Bottom: Though this Cavity is frequently effaced as the young Fruit grows; and sometimes a Part of the *Pistil*, which *Malpighi* calls the *Style*, or Needle, drys and falls off.

The *Pistil*, we have observed, is the Female Organ of Generation; its Base does the Office of the *Uterus*, or Womb, in Women; and its Length that of the *Vagina*. See UTERUS and VAGINA.

It is encompassed with the Stamina, the Apices whereof are full of a fine Dust, call'd the *Farina Fœcundans*; which bursting its Vesiculæ, or Apices, when mature, is shed on the upper Part of the *Pistil*, and thence convey'd by the

Cavity thereof to the Baſe or Uterus; where being fed with a fine Juice, ſeparated by the Flowers, it grows, expands, and thus forms the Embryo of a young Fruit. See STAMINA, FARINA, &c.

For a more diſtinct Account of the Proceſs of Generation of Plants. See PLANT.

PISTOL, a little Fire-Arm, bore at the Saddle-Bow, the Girdle, or in the Pocket. See FIRE-ARM.

The *Piſtol* is ſaid to have taken its Name from *Piſtoya* a City in *Italy*; where, as *Fauchet* tells us, they were firſt made.—*Borel* derives the Word from *Fiſtula*, Pipe, the Barrel of this Piece bearing ſome Reſemblance to a Flute, &c.

PISTOLE, or *Doublon*, in Commerce, a Gold Coin, ſtruck in *Spain*, and ſeveral Parts of *Italy*, *Switzerland*, &c. See COIN.

It has its Augmentations, and Diminutions; which are *Quadruple Piſtoles*, *Double Piſtoles*, and *Half Piſtoles*.

The *Piſtole* is about the ſame Weight, Fineneſs, and Value, with the *French* Louis d'ors, *viz.* equal to Sixteen Shillings and Six Pence, Sterling.

In *Spain* the *Piſtole* is accounted equal to four Pieces of Eight, 32 Rials, 1088 Maravedis, old Money; 1360 Maravedis, new Money; and 2040 Maravedis of *Billon*, the old Money current at *Seville*, *Cadiz*, in *Andaluſia*, &c. being 25 *per Cent.* better than the imaginary Money they reckon by at *Madrid*, *Bilboa*, &c. which Augmentation was made by *Charles* II. in 1686. to prevent the Exportation of Money out of the Kingdom. See MONEY.

Moſt of the Exchanges in *Italy* are made on the Foot of the *Piſtole*. See EXCHANGE.

PISTON, a Part, or Member in ſeveral Machines, particularly Pumps, Air-Pumps, Syringes, &c. call'd alſo *Embolus*, and popularly the *Sucker*. See EMBOLUS.

The *Piſton* of a Pump is a ſhort Cylinder of Metal, fitted exactly to the Cavity of the Barrel or Body; and which being work'd up and down alternately therein, raiſes the Water; and when rais'd preſſes it again, ſo as to make it force up a Valve, wherewith it is furniſhed, and ſo eſcape thro' the Noſe of the Pump. See PUMP.

The *Piſtons* of Air-Pumps, Syringes, &c. See deſcribed under AIR-PUMP, and SYRINGE.

PIT and *Gallows*, in our ancient Cuſtoms. See FURCA & FOSSA.

PITANCIARIUS, an Officer in the ancient Monaſteries, whoſe Buſineſs it was to provide and diſtribute the Pitances of Herbs and Meat, amongſt the Monks. See PITTANCE.

PITCH, PIX, a kind of tenacious Juice, or Gum, drawn from fatty Woods, chiefly Pines and Firs; uſed in Shipping, in Medicine, and various other Arts.

Pitch is properly a Juice of the Bark; and is conceived to be no other than the Oil thereof inſpiſſated and turned black, farther than in the Balm. See BARK and BALM.

The Method of drawing, or procuring, it, is by cleaving the Tree into little Billets, which they lay in a Furnace having two Apertures, thro' one of which the Fire is put, and thro' the other the *Pitch* is gathered; which oozing from the Wood runs along the bottom of the Furnace into Baſons or Receptacles for the Purpoſe.——The Smoak which is here very thick, gives it the black Colour we find it withal.——Some will only have our common *Pitch* to be the laſt Running, and Tar to be the firſt. See TAR.

Wheeler gives us another Manner of drawing *Pitch*, uſed in the *Levant*.—A Pit is dug in the Ground two Ells in Diameter a-top, but contracting as it goes deeper: This they fill with Branches of Pine, cloven into Shivers.—The top of the Pit is then covered over with Fire, which burning down to the bottom, the *Pitch* diſtils and runs out at a Hole made therein.

Pitch acquires different Names according to its different Preparations, Colours, and Qualities. As it diſtils from the Wood it is called *Barras*, but afterwards aſſumes a double Name, the fineſt and cleareſt being called *Galipot*, and the coarſer, *marbled Barras*.

Of the Galipot is made what we call *white Pitch*, or *Burgundy Pitch*, which is nothing but the Galipot melted with Oil of Turpentine; tho' ſome will have it a native *Pitch*, diſtilling from a Reſinous Tree growing in the Mountains of the *Franche-Compte*.

Of the ſame Galipot is likewiſe prepared what we call *Roſin*; by boiling the *Pitch* to a certain Conſiſtence, and making it up in Cakes. See ROSIN.

The black *Pitch*, which is what we properly call *Pitch*, is the liquid Galipot burnt and reduced into the Form and Conſiſtence we ſee it in by mixing Tar with it while hot.

The beſt is that brought from *Sweden* and *Norway*.—Its Goodneſs conſiſts in its being of a ſhining black, dry, and brittle.

Naval Pitch, *Pix Navalis*, is that drawn from old Pines, rang'd and burnt like Charcoal.—This, with the Mixture of Tow or beaten Cables, ſerves for the pitching of Veſſels.

Naval Pitch is alſo that ſcraped from off the Sides of old Veſſels; and which is ſuppoſed to have acquired an aſtringent Virtue, by means of the Salt-Water.—It ſerves to make Plaſters; tho' 'tis certain the Apothecaries uſually ſubſtitute the common *black Pitch* in its ſtead.

Greek-Pitch, or *Spaniſh Pitch*, is that boil'd in Water till it have loſt its natural Smell; upon which it becomes dry and pliable.

The Ancients call'd it *Colophony*, from *Colophon* a City in *Greece*, whence great Quantities were brought. See COLOPHONY.

Oil of PITCH, *Oleum Picinum*, is an Oil procured from Pitch, by ſeparating the aqueous Matter that ſwims a-top of the melted Pitch.—This for the great Virtues attributed to it alſo call'd *Balm of Pitch*.

PITCH, in Building, is the *Angle*, a Gable End, and conſequently the whole Roof of a Building, is ſet to. See GABLE.

If the Length of each Rafter be $\frac{3}{4}$ of the Breadth of the Building; the Roof is ſaid to be *true pitch*.

If the Rafters are longer, 'tis ſaid to be a *high* or *ſharp pitch'd* Roof; if ſhorter, which ſeldom happens, it is ſaid to be a *low* or *flat pitch'd* Roof. See ROOF, RAFTER, &c.

PITCH is alſo a Sea-Term.——When a Ship falls with her Head too much into the Sea, or beats againſt it ſo as to endanger her Top-Maſts, they ſay, ſhe will *pitch her Maſts by the board*.

PITCHING-*Pence*, a Duty, commonly of one Penny, paid for pitching or ſetting down every Sack of Corn, or Pack of Merchandize, in a Fair or Market.

PITH, PIT, or PITTE, the inward, central Part of a Tree, or Plant; anſwering to the Medulla, or Marrow, of an Animal. See PLANT, TREE, &c.

Some will have the Circulation of the Sap to be effected by means of the *Pith*; others by the Bark; and others by the Wood. See SAP, CIRCULATION, &c.

PITHIA, and PITHIAN. See PYTHIA and PYTHIAN.

PITT, *Cavea*, of a Theatre, all that Space between the Amphitheatre, or Galleries, and Theatre or Stage; call'd by the Ancients *Orcheſtra*, and by the *French Parterre*. See THEATRE, &c.

This being the moſt commodious Part, it was here the *Roman* Senate was placed. See ORCHESTRA.

It has its Name *Pitt*, in *Latin Cavea*, from its being ſunk below the Level of the Stage. See STAGE.

PITTACIUM, πιττακιον, in Chirurgery, a Name which ſome Authors give to a little Cloth ſpread with a Salve, to be laid on a Part affected.

PITTANCE, or PITANCE, PIETANCE, PITANICA, the Commons, or Allowance of Meat, be it Fiſh, Fleſh, or the like, ſtatedly eaten at Meals, beſides Bread.

The Word is not much uſed except among Religious, and thoſe who live in College or Community.——*Du Cange* derives it from *Pinctantia*, uſed in the lower *Latin* for a Monachal Portion given to two Monks in the ſame Diſh, conſiſting of ſomething better than Pulſe.

Hence we ſometimes alſo find it denote a Meal, or Commons, better than ordinary; ſuch as is allowed in Communities on Feaſt Days.

Others derive the Word *à pietate*; and others, with *Salmaſius*, from *Pittacia*, a Meſs, or Portion, allowed the Soldiers, mentioned in ſeveral Laws of the *Theodoſian* Code.—'Tis added, that the Word *Pittacia* properly ſignified a Title, or written Label, added a-top of the Veſſels, to ſhew what was within-ſide, or how it was intended.

PITUITA, one of the four Humours found in the Bodies of Animals, on which their Temperament is commonly ſuppoſed to depend. See HUMOUR and TEMPERAMENT.

The *Pituita*, call'd alſo Phlegm, is properly the moſt viſcid, and glutinous Part of the Blood, ſeparated in the largeſt Glands, where the Contortions of the Arteries are greateſt, and give the greateſt Retardation to the Blood's Velocity; as in the Glands about the Mouth and Head. See SECRETION and PHLEGM.

The Claſs of Phlegmagogues, as Manna, &c. are ſuppoſed to purge *Pituita*. See PHLEGMAGOGUE, PURGATIVE, MANNA, &c.

The Phyſicians give ſeveral Epithets to the *Pituita*, according to its Condition or Qualities, as *Saline*, *Vitreous*, *Gypſous*, *Acid*, &c.

The *Pituita* is ſuppoſed to be the prevailing Humour in cold, heavy, ſlow People, inclined to Serioufneſs and Study; as the Bile in thoſe inclined to War, &c. See PHLEGMATIC.

The *Pituita* diſcharged at the Noſtrils, is ſeparated in the Membrane that lines the Cavities of the Noſe, Cheeks, &c. See NOSE.

Its Uſe is to keep the Membrane ſoft, and defend it from Injuries of extraneous Bodies, eſpecially thoſe of the Air, which paſſes this Way in Inſpiration when the Mouth is ſhut.

PITUITARY *Gland* is a Gland in the Brain, somewhat difficult to be seen without removing it out of its Place. See BRAIN.

It is of the Size of a very large Pea, in the Sella of the Os Sphenoides, under the Infundibulum, wherewith it communicates; receiving from it a Lympha, or Juice, which the Infundibulum derives from the Plexus Choroides and pineal Gland; and from this Lympha does the Gland take its Name. See INFUNDIBULUM, *&c.*

It also filtrates a Juice itself; separating from the Blood, a white Liquor very subtile, and apparently very spirituous. See SPIRITS.

M. *Littre* observes a Sinus, or Reservoir, of Blood, which touches this Gland; and which is open to it in the Place of Contact, so that the Gland lies partly in the Blood. —This, that Author takes to do the Office of a *Balneum Mariæ*, in keeping the Gland in the Degree of Warmth necessary for the Discharge of its Functions.

This Gland is found in all Quadrupeds, Fishes, and Fowls, as well as in Men.

M. *Littre* gives an Instance of a tedious Disease, and at length Death, arising from an Obstruction and Inflammation of this Gland.

PIVOT, a Foot, or Shoe of Iron, or other Metal, usually conical, or terminating in a Point; whereby a Body, intended to turn round, bears on another fix'd at Rest, and performs its Circumvolutions.

Large Gates, *&c.* usually turn on *Pivots*.—The Ancients tell us, they had Theatres in *Rome* that held Eighty thousand People; which yet turn'd on a single *Pivot*. See THEATRE and AMPHITHEATRE.

PLACARD, or PLACART, or PLACAERT, a foreign Term, frequent in Gazettes, tho' scarce yet naturaliz'd.

It signifies a Leaf, or Sheet of Paper, stretch'd and applied upon a Wall, or Post.——Edicts, Regulations, *&c.* are to be made publick in *Placards*.

The Word *Placard* is also used for a Libel, or Lampoon. —At *Rome*, *Placards* against the Pope are frequently fix'd in the Night-time, to the Statue of *Pasquin*. See PASQUINADE.

PLACARD, in Architecture, the Decoration of the Door of an Apartment; consisting of a Chambranle, crown'd with its Frieze or Gorge; and its Corniche sometimes supported by Consoles. See DOOR.

PLACARD, in our Customs, a Licence whereby a Person is permitred to shoot in a Gun, or to use unlawful Game. See GAME.

PLACE, *Locus*, in Philosophy, that Part of immovable Space which any Body possesses. See BODY and SPACE.

Aristotle and his Followers, divide *Place* into External and Internal.

Internal Place is that Space or Room which the Body fills or contains.——*External* is that which includes or contains the Body; call'd by *Aristotle*, the first or concave and immovable Surface of the ambient Body.

'Tis controverted in the Schools, whether *Internal Place* be a real Entity, or only an imaginary Being; *i. e.* whether it be any thing intrinsically; or only an Aptitude and Capacity of receiving Bodies.

Some maintain it a positive Being, Incorporeal, Eternal, Independant, and Infinite; and assert it to be no other than the Immensity of the Godhead.

The *Cartesians*, on the contrary, hold *Internal Place*, abstractly consider'd, to be no other than the very Extension of the Bodies contained therein; and therefore in no wise different from the Bodies themselves.

The Schoolmen likewise dispute whether *External Place* be movable or immovable. Its Immobility is argued from this Consideration, that what moves must necessarily leave its *Place*, which it cannot do if it go along with the movable. Others charge an Absurdity on this Opinion of *Aristotle*, *viz.* That hence it follows, that a Body really at rest is continually shifting *Place:* A Tower, for instance, on a Plain, or a Rock in the middle of the Sea, in regard the one and the other are continually inclosed with new Air or new Water, must be said to be in Motion, or to change *Place*.

To salve this Difficulty, and ward off the Absurdity which follows from *Aristotle*'s laying down External Space as immovable; infinite Expedients have been had recourse to.— The *Scotists* contend for *Place*'s being immovable, by Æquivalence.——Thus, when the Wind blows, the Air which invested the Surface of the Tower does indeed recede, but then other similar and equivalent Air takes place.—The *Thomists* chuse to deduce the Immobility of *External Place*, from keeping the same Distance from the Center, and the Cardinal Points of the World.——The *Nominalists*, from a Correspondence with certain virtual Parts of the Divine Immensity.

The *Cartesians* deny *External Place* to be either a surrounding Surface, or a Body surrounded, or a mean Term between the two; and conceive it to be the Situation of a Body among adjacent Bodies consider'd as at rest.——Thus the Tower shall be deemed to remain in the same *Place*, tho' the ambient Air be changed, since it retains the same Situation, with regard to the neighbouring Hills, Trees, and other Parts of the Earth.

Sir *Isaac Newton* better and more intelligibly distinguishes *Place* into *Absolute* and *Relative*.

Absolute and *Primary Place* is that Part of infinite and immovable Space which a Body possesses. See ABSOLUTE.

Relative or *Secundary Place* is the Space it possesses considered with regard to other adjacent Objects.——Dr. *Clarke* adds another kind of *relative Place*, which he calls *relatively common Place*, and defines it that part of any movable or measurable Space which a Body possesses, which *Place* moves together with the Body. See MOTION.

Place, Mr. *Locke* observes, is sometimes likewise taken for that Portion of infinite Space possess'd by the material World; tho' this, he adds, were more properly call'd Extension. See EXTENSION.

The proper Idea of *Place*, he says, is the relative Position of any thing, with regard to its Distance from certain fix'd Points; whence we say, a thing has or has not chang'd *Place*, when its Distance is not alter'd with respect to those Bodies.

For the *Vision of* PLACE. See VISION.

PLACE, in Opticks, or *Optic* PLACE, is the Point to which the Eye refers an Object. See OPTIC.

Thus the Points D and E (*Tab.* Optics, *fig.* 68.) to which two Spectators in D and E refer the Object C, are call'd *Optic Places*. See VISION.

Here, if a right Line joining the *Optic Places* D and E, be parallel to a right Line passing thro' the Eyes of the Spectators A, B; the Distance of the *Optic Places* D, E will be to the Distance of the Spectators A and B, as the Distance of one of the *Optic Places* from the *Place* of the Object E C, to the Distance of the other Spectator from the same Object A C.

Optic PLACE of a Star, is a Point in the Surface of the Mundane Sphere, as C or B, (*Tab. Astronomy Fig.* 27.) wherein a Spectator in E, or T, sees the Center of the Star S. See STAR and PLANET.

This is divided into *true* and *apparent*.

True or *real Optic* PLACE is that Point of the Surface of the Sphere, B, wherein a Spectator, placed in the Center of the Earth C, sees the Center of the Star or Phænomenon.——Or a Point among the fix'd Stars, determined by a Line drawn from the Center of the Earth, through that of the Star, and terminated in C among the Stars. See SPHERE.

Apparent or *visible Optic* PLACE is the Point of the Surface of the Sphere, wherein a Spectator, placed on the Surface of the Earth E, sees the Center of the Star S.——Or a Point found by a Line passing from the Spectator's Eye through the Star, and terminated in the Sphere of the Stars.

The Distance between the *two Optic Places* is what we call the *Parallax*. See PARALLAX.

PLACE *of the Sun*, a *Star*, or *Planet*, simply, denotes, the Sign and Degree of the Zodiack, which the Body is in. See SUN, STAR, *&c.*

Or, it is that Degree of the Ecliptic, reckoned from the Beginning of *Aries*, which the Planet's, or Star's Circle of Longitude cuts; and therefore coincides with the Longitude of the Sun, Planet, or Star. See LONGITUDE.

As the Sine of the Sun's greatest Declination, 23°. 30′: to the Sine of any present Declination given or observed, *v. g.* 23° 15′ :: so is Radius : 10. To the Sine of his Longitude 81° 52′; which if the Declination were North, would give 20° 52′ of *Gemini*, If South 20° 52′ of *Capricorn*, for the Sun's Place. See PLANET.

Moon's PLACE is that Point of her Orbit wherein she is found at any Time. See MOON and ORBIT.

This, by reason of the great Inequalities in the Lunar Motions, which render a Number of Equations and Reductions necessary e'er the just Point be found, is of various kinds; *viz.* her *fictitious Place*, which is the Moon's *Place* once equated; her *Place nearly true*, which is her *Place* twice equated; and the Moon's *true Place*, which is her *Place* thrice equated. See EQUATION.

Eccentric PLACE *of a Planet in its Orbit*, is the *Place*, or Point of its Orbit, wherein a Planet would appear if seen from the Sun.

Thus suppose N E O R the Ecliptic, N P O Q the Planet's Orbit, the Sun in S, the Earth in T, and the Planet in P: the right Line S P expresses the *Eccentric Place* in the Orbit.

Heliocentric PLACE, of a Planet, or its PLACE *reduced to the Ecliptic*, or the *Eccentric Place in the Ecliptic*, is that Point of the Ecliptic to which a Planet, view'd from the Sun, is referr'd. See HELIOCENTRIC.

This coincides with the Longitude of a Planet view'd from the Sun. See LONGITUDE.

Thus the right Line RS (*ſame Fig.*) deſigns the *Heliocentric Place*, or *Place* reduc'd to the Ecliptic.

Geocentric PLACE is that Point of the Ecliptic, to which a Planet view'd from the Earth is referr'd. See GEOCENTRIC.

Thus, NEOR (*ſame Fig.*) repreſenting the Ecliptic, *&c.* TR will repreſent the the *Geocentric Place*.

PLACE of Radiation, in Optics, is the Interval, or Space in a Medium or tranſparent Body, thro' which any viſible Object radiates. See RADIATION, *&c.*

PLACE, in Geometry, is a Line uſed in the Solution of Problems; more uſually call'd by the *Latin* Name *Locus*.

See the Doctrine of *Geometrical Places*, under the Article LOCUS.

PLACE, in War, is a general Name for all kinds of Fortreſſes, where a Party may defend themſelves; and may be defined to be a *Place* ſo diſpoſed, as that the Parts which encompaſs, it defend and flank one another. See FORT and FORTIFICATION.

A *ſtrong Place*, is a Place flank'd and cover'd with Baſtions. See BASTION.

Regular Place, is that whoſe Angles, Sides, Baſtions, and other Parts are equal; and is uſually denominated from the Number of its Angles, as a *Pentagon*, a *Hexagon*, &c. See PENTAGON, HEXAGON, *&c.*

Palma nova, built by the *Venetians*, is a Dodecagon. See DODECAGON.

Irregular Place is that whoſe Sides and Angles are unequal.

PLACE *of Arms*, in Fortification, is a ſtrong City, or Town, pitch'd upon for the chief Magazine of an Army. See ARMS.

PLACE *of Arms* in a City, is a large open Spot of Ground, where the Garriſon holds its Rendezvous at Reviews, and in Caſes of Alarm, to receive Orders from the Governor. See GARRISON.

PLACE *of Arms* in a Siege is a ſpatious Place cover'd from the Enemy, where the Soldiers are kept ready to ſuſtain thoſe at work in the Trenches, and to be commanded to the Places where they are wanted.

PLACE *of Arms particular*, in a Garriſon, is a Place near every Baſtion, where the Soldiers, ſent from the grand Place to the Quarters aſſigned them, relieve thoſe that are either upon the Guard, or in fight.

PLACE *of Arms without*, is a Place allowed to the Covert Way, for the planting of Cannon, to oblige thoſe who advance in their Approaches to retire.

PLACE *of Arms* in a Camp, is a large Space at the Head of the Camp, for the Army to be rang'd in and drawn up in Battalia.

There is alſo a *Place* for each particular Body to aſſemble in. See CAMP.

PLACE *of Arms* of a Troop, or Company, is the Spot of Ground on which the Troop, or Company, is drawn up. See TROOP, *&c.*

PLACE, among Logicians, Orators, *&c.* is the Seat of an Argument, or that from which it is taken. See ARGUMENT and TOPIC.

There are two ſorts of *Places*, viz. *Inartificial* and *Artificial*.—The firſt, the *Place* of Teſtimony, Authority, *&c.* The ſecond, that of Reaſon; as when we argue from Univerſals, *e. gr.* from Genus, Species; from Cauſes, as the End, Efficient, Matter, Form, *&c.*

Common PLACE. See COMMON *Place*.

PLACE *of Units*, Tens, *&c.* See UNIT and NUMERATION.

PLACENTA, in Anatomy, a ſoftiſh Maſs, found in the Womb of a pregnant Woman; wherein the Ancients ſuppoſed, the Blood was purified and prepared for the Nouriſhment of the Fœtus. See FOETUS.

Hence they alſo call'd it *Hepar Uterinum*, the Liver of the Womb; as if it did the Office of a Liver in preparing the Blood. See LIVER.

It is call'd by the Moderns *Placenta*, *q. d. Cake* or *Cheeſe-Cake*; becauſe in Form of a Cake.

The *Placenta* is ſuppoſed by ſome to be only a Maſs of coagulated Blood; for in the preſſing, or waſhing it, it diſſolves; and its real Uſe to be, to ſerve as a Pillow for the Umbilical Veſſels to reſt on. See UMBILICAL.

Its Figure is not unlike that of a Plate without Brims; three quarters of a Foot over, and ſometimes a Foot. It is round, generally Concave or Convex. The Concave Side adheres to the Uterus, and is uneven, having divers Protuberances and Pits, by which it makes Impreſſions upon, and receives them from, the Uterus.——Its Place in the Uterus, whatever ſome pretend, is not certain.

In Women, unleſs in caſe of Twins, *&c.* there is but one: However, the Number generally anſwers the Number of the Fœtus.——In ſome Brutes, eſpecially Oxen or Sheep, they are vere numerous, ſometimes near an hundred, even for one Fœtus, ſmall, and reſembling pretty large conglomerate Glands.

From the external or concave Side, which likewiſe has its Protuberances, tho' cover'd with a ſmooth Membrane, iſſue the Umbilical Veſſels, which are in great Plenty diſtributed thro' the whole Subſtance of it. See UMBILICAL.

Some even imagine this Part to be nothing elſe but a Plexus of the Vein and Arteries, by whoſe Extremities opening into the Sides of the Hypogaſtrick Veſſels, the Circulation is perform'd between the Mother and the Fœtus; for that ſide of the *Placenta*, which adheres to the Womb, appears to be nothing but the Extremities of an infinite Number of ſmall Threads, which, in Labour, dropping out of the Pores in the ſides of the Hypogaſtrick Blood-Veſſels, into which they had inſinuated themſelves, is the occaſion of the flowing of the Lochia, 'till the Uterus collapſes, or the Pores, by the natural Elaſticity of the Veſſels, contract by Degrees. See LOCHIA.

'Tis a great Diſpute among the Anatomiſts of the Royal Academy of *Paris*, whether the *Placenta* have any external Coat, whereby it is connected to the Womb.—M. *Mery* maintains it has none; and that nothing hinders the Blood of the Mother from paſſing out of the Womb into the *Placenta* and thence to the Fœtus: In which Opinion he is ſeconded by M. *Rohault*. Meſſ. *Vieuſſens* and *Winſlow* maintain the contrary; in a ſubſequent Memoir M. *Rohault* endeavours to ſhew, that the *Placenta* is no particular Part, but only a Portion of the Chorion condens'd or thicken'd. See CHORION.

PLACITA, *Pleas*, a Term frequent in our Laws and Cuſtoms. See PLEA.

Originally, *Placita* ſignified certain publick Aſſemblies, of all Degrees of Men, wherein the King preſided, and where the great Affairs of the Kingdom were conſulted upon.

Theſe Aſſemblies were call'd *Placita generalia*; becauſe *Generalitas univerſorum majorum tam Clericorum quam Laicorum ibidem conveniebat*.—And, hence, the Decrees, Ordinances, Sentences, *&c.* of the Aſſembly were alſo call'd *Placita*.

Sim. Dunelmenſis tells us they were held in the open Fields; for, ſays he, *Nullam oportet Regem in literis aſſignare curiam, quia ubi rex judicat in aperto, ibi eſt Curia ſua.* See COURT and CURIA.

Some will have theſe *Placita generalia*, and *Curiæ Regis*, to be much the ſame with what we now call a *Parliament*. See PARLIAMENT.

The Lords Courts came hence alſo to be call'd *Placita generalia*, tho' oftener *Curiæ generales*; becauſe all their Tenants and Vaſſals were obliged to appear in them. See LORD VASSAL, *&c.*

We alſo meet with *Placitum nominatum*, for the Day appointed a Criminal to appear in and make his Defence, *Leg. Hen.* I.——And *Placitum fractum*, *i. e.* when the Day is laps'd.

My Lord *Coke* derives the Word *a placendo*, *quia bene placitare ſuper omnia placet*. Indeed this ſeems a very fanciful Definition; and others have more Reaſon in deriving it from the *German Plats*, or the *Latin Plateis*, Fields, or Streets, where theſe Aſſemblies were originally held.

PLACITARE, in the old Law-Books, ſignifies to plead Cauſes. See PLEADING.

Mos placitandi *ante conqueſtum*, *fuit coram aldermanno, & proceribus, & eorum Hundredariis*, ſc. *Baronibus*, *Majoribus*, *Melioribus*, *Senioribus & Urbanis*. Mſ. in Bibl. Cott. ſub Tit. Vitellius.

Hence, *Placitator*, a Pleader.—*Ralph Flambard* is recorded to be *totius Regni Placitator*, in *William* the ſecond's Time.

PLACITUM, in Law, a Sentence of the Court; or an Opinion, Ordinance, or Decree. See SENTENCE, DECREE, CANON, *&c.*

PLAFOND, or PLATFOUND, in Architecture, the Ceiling of a Room, whether it be flat or arched; lin'd with Plaſter, or Joiners-Work, and frequently enriched with Paintings, *&c.* See CIELING.

PLAFOND is alſo more particularly uſed for the Bottom of the Projecture of the Larmier of the Corniche; call'd alſo *Sofit*. See SOFIT and LARMIER.

PLAGIARY, in Philology, *Author-Theft*; or the Practice of purloining other Peoples Works, and putting them off for a Man's own.

Among the *Romans*, *Plagiarius* was properly a Perſon who bought, ſold, or retain'd, a free Man for a Slave; ſo call'd, becauſe the *Flavian* Law condemned ſuch a Perſon to be whipp'd, *ad plagas*. See SLAVE.

Thomaſius has an expreſs Treatiſe *de plagio litterario*; wherein he lays down the Laws and Meaſures of the Right which Authors have to one anothers Commodities.—Dictionary-Writers, at leaſt ſuch as meddle with Arts and Sciences, ſeem exempted from the common Laws of *Meum* and *Tuum*; they don't pretend to ſet up on their own bottom, nor to treat you at their own Coſt.

Their Works are ſuppoſed, in great Meaſure, Aſſemblages of other Peoples; and what they take from others they do it avowedly, and in the open Sun.—In effect, their Quality

gives them a Title to every thing that may be for their purpose, wherever they find it; and if they rob, they don't do it any otherwise, than as the Bee does, for the publick Service. Their Occupation is not pillaging, but collecting Contributions; and if you ask them their Authority, they'll produce you the Practice of their Predeceſſors of all Ages and Nations. See DICTIONARY.

PLAGUE, PESTIS, PESTILENCE, a very acute, deſtructive, malignant, and contagious Diſeaſe; uſually proving mortal. See DISEASE.

The *Plague* is commonly defined by a malignant Fever; but *Diemerbroek* thinks the two ought to be diſtinguiſhed; the Fever not being the Eſſence, but only a Symptom, or Effect, of the *Plague*. See FEVER.

The *Plague* is reckoned by Dr. *Liſter*, and many others, as an Exotic Diſeaſe, never bred or propagated in *England*, but always imported from abroad, and particularly from the *Levant*, the Coaſts of *Aſia* the leſſer, *Egypt*, &c. where it is familiar.——*Sydenham* obſerves, that it rarely infeſts *England* oftener than once in 40 Years; but, thro' the Mercy of GOD, 'tis now 60 Years ſince we have been viſited.

The Origin, and Cauſe of the *Plague* has been a celebrated Subject of Controverſy among Phyſicians.——The Diſorder is generally ſuppoſed to be communicated by the Air; but how, and in what manner the Air becomes thus deadly, is the Queſtion. Some will have Inſects the Cauſe of *Plagues* as of Blights; which being brought in Swarms from other Parts by the Winds, are taken into the Lungs in Reſpiration, mix with the Blood and Juices, and attack and corrode the Viſcera. See BLIGHT.

Mr. *Boyle* attributes it principally to the Effluvia or Exhalations breathed into the Atmoſphere, from noxious Minerals. See EXHALATION, *&c.*

The Air, in effect, is depraved in far more Places than improved, by being impregnated with ſubterraneous Expirations.—Indeed among the Minerals known to us, there are many more noxious than wholeſome; and the Power of the former to do Miſchief, is more efficacious than of the latter to do good, as we gueſs by the ſmall Benefit Men receive in point of Health, by the Effluvia of any Mineral or other known Foſſil, in compariſon of the great and ſudden Damage often done by the Expirations of Orpiment, Sandarack, and white Arſenic. See POISON.

Amongſt the various ſorts of Particles wherewith the Atmoſphere is replete, ſome may be ſo ſmall, and ſolid, or ſo conveniently ſhaped, as to enter many of the numerous Orifices of the minute Glandules of the Skin, or at other Pores thereof. Thus, tho' neither Paper, nor Bladder, be pervious to the Elaſtic Parts of the Air; yet may either of them be eaſily penetrated by other Corpuſcles of the Atmoſphere; and Mr. *Boyle* has prepared a dry Body, which being incloſed in either, would, without wetting or diſcolouring or any ways ſenſibly altering them, paſs in a trice thro' the Pores thereof, in ſuch Plenty, as to exert a manifeſt Operation on Bodies placed at ſome Diſtance beyond them.

This is confirmed from the ſudden Check almoſt every Summer given to the *Plague* at *Grand Cairo*; for ſince morbific Cauſes operate more effectually than curative ones, it ſeems more than probable, that Exhalations aſcending from under Ground, may produce peſtilential Fevers, and the *Plague* itſelf; ſince the Corpuſcles which impregnate the *Egyptian* Air upon the ſwelling of the *Nile*, put a ſpeedy ſtop not only to the Contagion, but to the Malignity of the *Plague*, aſſiſted even by the Summer's Heat, which there is exceſſive. See INUNDATION.

'Tis poſſible there may be noxious Minerals in a Country, that are not often able to produce Peſtilences; they may be in Strata, or Beds, ſo deep, that even a ſmall Earthquake ſhall not affect them, tho' a more violent Shock may. See STRATA, EARTHQUAKE, *&c.*

And hence may we account for the *Plague*'s raging in ſome Parts of *Africa* once in thirty, or once in a hundred Years; ſince there may be periodical Paroxyſms, or grand and vehement Commotions in ſubterraneal Parts, tho' not yet obſerved in them.

'Tis probable peculiar kinds of venomous Exhalations may ſometimes be emitted, eſpecially after Earthquakes; and thus occaſion mortal Diſeaſes in Animals of one kind and not of another, and in this or that Place, and not elſewhere.——*Fernelius* gives us an Account of a *Plague*, or Murrain, in 1514, which invaded none but Cats. *Dionyſius Halicarnaſſeus* mentions a *Plague* which attacked none but Maids: And that which raged in the Time of *Gentilis* killed ſcarce any Women, and very few but luſty Men. *Boterus* mentions another *Plague*, which aſſaulted none but the younger ſort; and we have Inſtances of the ſame kind of a later ſtanding. *Cardan* ſpeaks of a *Plague* at *Baſil*, with which the *Switzers*, and not the *Italians*, *Germans*, or *French* were infected; and *Joh. Utenhovius* takes notice of a cruel *Plague* at *Copenhagen*, which, tho' it raged among the *Danes*, ſpared the *Germans*, *Dutch*, and *Engliſh*, who went with all Freedom, and without the leaſt Danger, to the Houſes of the infected.

The *Plague*, according to *Sydenham*, uſually begins with a Chilline's, and ſhivering, like the Acceſs of an intermitting Fever; then comes on a Nauſea, with vehement Vomitings, an intenſe Pain about the Region of the Heart, as if pinch'd in a Preſs, and a burning Fever, which continually preys on the Patient, 'till either Death, or the Eruption of ſome Bubo, Parotis, or other Tumor, in the Inguina or Axillæ, or behind the Ears, relieve him, and diſcharge the Matter of the Diſeaſe. Sometimes, indeed, it attacks without any Fever; purple Spots appearing all at once, the certain Signs of preſent Death; but this rarely happens except at the beginning of ſome terrible *Plague*. It has alſo been known to make its firſt Appearance in Tumors, without any Fever, or other violent Symptom.

Heavineſs, Pain in the Stomach Head and Back, Cardialgy, broken Sleep, Anxiety, Alteration in the Look, Difficulty of breathing, Hiccough, Syncope, Delirium, convulſive Twitchings, Diarrhœa, Eyes ſunk or inflamed, Tongue black and dry, vehement Drought, fetid Breath, Carbuncles, Spots livid purple green, *&c.* are alſo Symptoms uſually attending this Diſeaſe.

A great deal depends on the Circumſtances of the Tumors, or *Plague Sores:* as they appear, and increaſe, the Fever abates; and as they ſink, or diminiſh, renews again. When they happen about the Time of the Criſis, and ſuppurate kindly, they are good Prognoſticks of a happy Recovery. See CRISIS.

In Acute Diſeaſes, ſays *Hippocrates*, Prognoſticks are ever fallacious. However, in the terrible *Plague* at *Nimeguen*, *Diemerbroek*, who attended the Sick through the whole Progreſs thereof, relates, That thoſe taken ill about New and Full Moon rarely eſcaped; that Faintings, Swoonings, and Palpitations of the Heart, were uſually deadly Signs; an intermitting Pulſe always mortal; Drowſineſs, Sneezings, tremulous Motions, Doting, ſore Throat, *&c.* were ill Omens: Pleuriſies, always mortal; Coſtiveneſs a good Sign; a Diarrhœa almoſt conſtantly fatal: Bloody Stools or Urines always preſaged ill.

As to the Cure, Phyſicians are much divided. It is generally attempted with Alexipharmachicks and Cardiacs, with the Aſſiſtance either of Sudorifics, or Phlebotomy, or both. ——Many eminent Phyſicians, both ancient and modern, highly commend Blood-letting; *Sydenham*, particularly, ſays, that if uſed copiouſly, and in time, it never yet did harm; but that Sudorifics often prove pernicious: *Diemerbroek*, on the contrary, with other very experienced Writers, proteſt againſt Phlebotomy as very dangerous, and often deadly; The chief Hopes they build in Diaphoretics and Sudorifics; Emetics and Purgatives are abſolutely forbid: and yet Dr. *Sayer* uſed the former with good Succeſs, in the Beginning of the Diſeaſe in the *Plague* at *London*, *Ann.* 1640. See ALEXIPHARMIC, *&c.*

The Juice of Lemons is commended as of ſingular Efficacy in the *Plague*, and peſtilential Fevers. *Piſo* relates that it is the principal Remedy of the *Indians*, and proteſts he never knew any thing come up to it. Dr. *Harris* obſerves that the ſame is what the *Turks* have principally Recourſe to.——Camphor is alſo much extoll'd. This, *Etmuller* aſſures us, was the Baſis of *Heinſius*'s Antipeſtilential Oil, who had a Statue erected to him when dead, in the City of *Verona*, for the Service he had done hereby.—It was prepared of equal Quantities of Camphor, Citron Bark, and Amber. —The Viperine Salt and Rob of Elder-Berries are alſo commended.

For Preſervatives againſt this Diſeaſe, they are uſually ſumm'd up in the popular Diſtich;

Hæc tria labificam tollunt adverbia peſtem,
Mox, longe, tarde, cede, recede, redi.

Cauteries, and eſpecially Iſſues, and Setons in the Inguina, are found of great Service in preſerving from Infection. A Piece of Myrrh held in the Mouth in contagious Places, is alſo commended. But *Diemerbroek* aſſures, that there is nothing better in this Intention, than ſmoaking Tobacco; but he adds, that it was only ſo to ſuch as had not made the Practice familiar to them. The other Preſervatives uſed by that great Author, were the *Rad. Helenii*, Cardomums; White-Wine Vinegar, and Chearfulneſs; and when he found his Spirits low, as if the Diſeaſe were taking Poſſeſſion, a Cup of generous Wine, ſometimes to a Degree of Drunkenneſs.

PLAGUE *Water*, *Aqua Epidemica*, is one of the Compound Waters of the Shops. See WATER.

PLAIN, an Epithet applied to various Things, generally importing them to be *ſmooth*, *even*, *level*, or *ſuperficial*, or *ſimple*, or *obvious*, or the like.

In this Senſe the Words ſtand oppoſed to *rough*, *ſolid*, *labour'd*, *enrich'd*, &c.

It is a Maxim in Heraldry, that the *plainer* the Coat the nearer to Antiquity.——*Plain* Coats are ſuch as are leaſt encumber'd. See COAT, *&c.*

PLAIN *Figure*, in Geometry, is an uniform Surface, from every Point of whoſe Perunietera, right Lines may be drawn to every other Point in the ſame. See FIGURE; ſee alſo PLANE and SURFACE.

PLAIN *Angle* is an Angle contain'd under two Lines, or Surfaces. See ANGLE.

It is ſo call'd in contradiſtinction to a ſolid Angle. See SOLID.

PLAIN *Triangle* is a Triangle included under three right Lines, or Surfaces; in oppoſition to a ſpherical, and a mixt Triangle. See TRIANGLE.

PLAIN *Trigonometry* is the Doctrine of plain Triangles, their Meaſures, Proportions, *&c.* See TRIGONOMETRY.

PLAIN *Glaſs*, *Mirror*, &c. in Optics, is a Glaſs or Mirror, whoſe Surface is flat or even. See the Phænomena Laws of *plain Mirrors*, under the Article MIRROR.

Plain Mirrors are what we popularly call *Looking-Glaſſes*; ſee the manner of grinding, poliſhing, and preparing them, under the Article *Looking-Glaſs* GRINDING.

PLAIN *Tyle*. See TYLE.

PLAIN *Scale*, is a thin Ruler, whereon are graduated the Lines of Chords, Sines, Tangents, Secants, Leagues, Rhumbs, *&c.* of ready Uſe in moſt Parts of the Mathematicks, chiefly in Navigation. See LINE, *&c.*

See its Deſcription and Uſe under the Article SCALE.

PLAIN *Chart*, in Navigation, is a Sea-Chart, wherein the Meridians and Parallels are repreſented by parallel ſtrait Lines; and where, of Conſequence, the Degrees are the ſame in all the Parallels of Latitude.

See the *Properties*, *Conſtruction*, &c. of this *Chart* under the Article CHART.

PLAIN *Sailing*, in Navigation, is the Art of working the ſeveral Caſes and Varieties in a Ship's Motion, on a *plain Chart*. See *Plain* CHART.

Plain Sailing is founded on the Suppoſition of the Earth being a Plane or flat; which, tho' notoriouſly falſe, yet Places being laid down accordingly, and a long Voyage broke into many ſhort ones; the Voyage may be tolerably perform'd by it, near the ſame Meridian.

In *Plain Sailing* it is imagined, that by the Rhumb-Line, Meridian, and Parallel of Latitude, there always will be formed a Right-angled Triangle; and that ſo poſited, as that the Perpendicular may repreſent Part of the Meridian, or North and South Line, containing the Difference of Latitude: The Baſe of the Triangle, repreſents the Departure; and the Hypothenuſe the Diſtance ſailed.—The Angle at the Top is the Courſe, and the Angle at the Baſe the Complement of the Courſe; any two of which, with the Right-Angle being given, the Triangle may be protracted, and the other three Parts found. See TRIANGLE.

For *the Doctrine of* Plain Sailing, *ſee* SAILING.

PLAIN *Table*, in Geometry, *&c.* an Inſtrument uſed in the Surveying of Land; whereby the Draught, or Plan, is taken on the Spot, without any future Protraction or plotting. See SURVEYING, PLOTTING, *&c.*

The *Plain Table*, repreſented *Tab. Surveying*, *Fig.* 31. conſiſts of a Parallelogram of Wood, about 15 Inches long and 12 broad; round this goes a Boxen jointed Frame, by means whereof a Sheet of Paper is faſten'd tight to the Table, ſo as Lines may be conveniently drawn upon it.

On each ſide the Frame, which may be put on either ſide upwards, towards the inward Edge, are Scales of Inches, ſubdivided, for the ready drawing of Parallel Lines.—Beſide which, on one ſide are projected the 360 Degrees of a Circle, from a Braſs Center in the middle of the Table, (each Degree halved) with two Numbers to every 10th Degree, the one expreſſing the Degree, the other its Complement to 360, to ſave Subtraction: On the other ſide are projected the 180 Degrees of a Semicircle, from a Braſs Center in the middle of the Table's Length, and at $\frac{1}{4}$ of its Breadth; each Degree halv'd, and every Tenth noted with two Numbers, *viz.* the Degree and its Complement to 180°.

To one ſide of the Table is fitted a Compaſs, for placing the Inſtrument by; and the whole is fix'd by a Socket, upon a three legg'd Staff for a Stand, on which it is turn'd round, or faſten'd by a Screw, as occaſion requires.—Laſtly, to the Table belongs an Index, which is a Ruler at leaſt 16 Inches long, and 2 broad; and uſually graduated with Scales, *&c.* and having two Sights perpendicularly placed on its Extremities. See SIGHT, STAFF, BALL, and SOCKET, *&c.*

Uſe of the PLAIN-*Table.*

To take an Angle by the Plain Table: Or *to find the Diſtance of two Places acceſſible from the ſame third.*—Suppoſe D A, D S (*Tab. Surveying*, *fig.* 32.) the ſides of the Angle required; or A B the Diſtance required. Place the Inſtrument horizontally as near the Angle as poſſible; and aſſume a Point in the Paper on the Table, *v. g.* C. To this Point apply the Edge of the Index, turning it about this and that way, 'till thro' the Sights you ſee the Point B, and in this Situation of the Ruler, draw by its Edge the Line C E indefinitely. After the ſame manner turn about the Index on the ſame Point, 'till thro' the Sights you ſee the Point A; and draw the right Line *c d* indefinitely.——Thus have you the Quantity of the Angle laid down.

Meaſure the Lines *c* A, *c* B, with a Chain; (ſee CHAIN.) and from a Scale, ſet off the Meaſures thus found, (ſee SCALE) on the reſpective Lines; which ſuppoſe to reach from *c* to *b*, and from *c* to *a*.——Thus will *c b* and *c a* be proportional to *c* B and *c* A.

Transfer the Diſtance *ab* to the ſame Scale, and find its Length; the Length thus found, will be the Length, or Diſtance, of A B required.

2° *To find the Diſtance of two Places, one whereof is inacceſſible, by the* Plain Table.——Suppoſe the Diſtance required A B; (*Fig.* 33.) and A the acceſſible Point 1° Place the *Plain Table* in C; look thro' the Sights 'till you ſee A and B; and draw *a c* and *c b*. Meaſure the Diſtance from your Station to A; and ſet it off from the Scale, upon *c a*. 2° Remove the Table to A, where place it ſo, as that the Point *a* repreſenting A, and the Index laid along the Line *a c*, you ſee, backwards, the former Station C. (*Note*, in this fixing the Inſtrument, lies the Uſe of the Compaſs; for the Needle will hang over the ſame Degree of the Card in the firſt and the ſecond Caſe; ſo that ſome ſet the Inſtrument by the Needle alone; others only uſe it to ſhorten the Trouble, by bringing the Inſtrument nearly to its due Poſition by means thereof; and then fixing for good by the Back-Sight.) 3° The Inſtrument fix'd, turn the Sights to B; and draw the Line *a b*. 4° On the Scale, meaſure the Interval *a b*; which will be the Diſtance of A B required.

3° *To find the Diſtance of two inacceſſible Places by the Plain Table.*—Suppoſe the Diſtance of A B (*Tab. Surveying*, *Fig.* 34.) required. 1° Chuſing two Stations in C and D; in the firſt C, place the *Plain Table*; and thro' the Sights look to D, B and A; drawing by the Edge of the Index, the Lines *c d*, *c b*, *c a*.—2° Meaſure the Diſtance of the Stations C D; and ſet this off, from a Scale, on *c d*.—3° Removing the Table from C, fix it in D; ſo as the Point *d* hanging over the Place D, and the Index lying along the Line *c d*, thro' the Sights you ſee the former Station C. The Inſtrument thus fix'd, direct the Sights to A and B, and draw the right Lines *d a* and *d b*. Laſtly, find the Diſtance of *a b*, on the Scale; this will be the Diſtance of A B required.

After the ſame Manner, may the Diſtance of any Number of Places be found from two Stations; and thus may a Field, part of a Country, *&c.* be ſurvey'd.

4° *To take the Plot of a Field from one Station, whence all the Angles may be ſeen; with the Plain Table.*——Placing the Inſtrument in the Station, aſſume a Point in the Paper, to repreſent the ſame, *v. g.* C. (*Fig.* 21.) Laying the Edge of the Index to this Point; direct it to the ſeveral Angles of the Field, A B C D E F, *&c.* and draw indefinite Lines by its Edge, towards every Angle, *viz.* C *a*, C *b*, C *c*, &c. meaſure the Diſtance of each Angle from the Station, *viz.* C A, C B, C C, C D, *&c.* and from a Scale ſet it off from C on its correſponding Line; the Extremities hereof will give Points, which being connected by Lines will repreſent the Field.

5° *To take the Plot of a Field, Wood, or the like, by going round the ſame; with the Plain Table.*——Place the Inſtrument horizontally at the firſt Angle, *v. g.* A. The Needle on the Meridian of the Card; and aſſuming a Point on the Paper, to repreſent it, to that Point lay the Index, directing it 'till thro' the Sights you ſee a Mark in the Angle B. And draw an indefinite Line along it; meaſure the Diſtance of A and B, and from a Scale ſet it off on the Line thus drawn; the Extremity of this Diſtance will repreſent the Point B. Remove the Inſtrument to B, where ſet it ſo as that the Needle hang over the Meridian of the Card; and ſo as the Index lying along the Line laſt drawn, you ſee the former Station A thro' the Sights: here faſten it, lay the Index to the Point B, and turn it, 'till thro' the Sights you ſee the next Angle C; in this Situation draw a Line as before, meaſure the Diſtance B C, and ſet it off from a Scale on the Line.——Remove the Inſtrument to C, where, fixing it by the Needle, and the Back-Sight, as before, turn the Index on the Point C, 'till you ſee the next Angle D; draw the Line, meaſure, and ſet off the Diſtance C D as before, and remove the *Plain Table* to E; where fix it, as before, look to the next Angle F, draw the Line, meaſure, and ſet off the Diſtance, *&c.*

In this manner having compaſs'd the whole Field, you'll have its whole Perimeter plotted on the Table; which may be now caſt up and its Contents found, as in the Article of SURVEYING.

Manner of ſhifting Paper on the Plain Table.

When in large Parcels of Ground, the Plot is found to exceed the Dimenſions of the *Plain Table*, and to run off from the Paper; the Sheet muſt be taken off the Table, and a freſh one put on; The way of managing which ſhifting, is as follows.——Suppoſe H, K, M, Z, (*Fig.* 35.) the Limits of the

Plain

Plain Table; ſo that having laid down the Field from A to B, thence to C and D; you want room, the Line DE running off the Paper: Draw as much of the Line DE as the Paper will well hold, *viz.* DO. And by means of the Diviſions on the Edge of the Frame, draw the Line PQ thro' O, parallel to the Edge of the Table HM; and thro' the Point of Interſection O, draw ON parallel to MZ. This done, take off the Frame, remove the Sheet, and clap a freſh one (*Fig.* 36.) in its ſtead; drawing on it a Line RS near the other Edge parallel thereto. Then lay the firſt Sheet on the Table, ſo as the Line PQ lie exactly on the Line RS, to the beſt Advantage, as at O. Laſtly, draw as much of the Line OD, on the freſh Sheet, as the Table will hold; and from O continue the Remainder of the Line D, to E. From E proceed with the Work as before to F, G, and A.

Uſe of the Plain Table, *as a Theodolite, Semicircle, or Circumferentor.*

The great Inconveniency of the *Plain Table* is, that its Paper renders it impracticable in moiſt Weather. Even the Dew of the Morning and Evening is found to ſwell the Paper conſiderably, and of conſequence to ſtretch and diſtort the Work.——To avoid this Inconvenience, and render the Inſtrument uſeful in all Weathers; by leaving off the Paper, and ſetting up a Pin in the Centre, it becomes a *Theodolite*, a *Semicircle*, or a *Circumferentor*, and practicable like them.

The *Plain Table* ſtripp'd of its Paper, becomes either a *Theodolite*, or a Semicircle, or as that ſide of the Frame which has the Projection of the Degrees of a Circle, or a Semicircle, is turn'd upwards. If it be to ſerve for a *Theodolite*; the Index, which as a *Plain Table* turns on any Point as a Center, is conſtantly to turn about the Braſs Center Hole in the Middle of the Table.

If for a *Semicircle*, it muſt turn on the other Braſs Center Hole; in both Caſes 'tis done by means of a Pin rais'd in the Holes.

When the *Plain Table* is to ſerve as a *Circumferentor*; ſcrew the Compaſs to the Index, and both of them to the Head of the Staff, with a Braſs Screw-Pin fitted for the Purpoſe; ſo as the Staff and Table ſtanding fix'd, the Index, Sights, *&c.* may be turn'd about and *vice verſa*.

To take an Angle by the Plain Table, conſidered as a Theodolite.—— ſuppoſe the Quantity of the Angle EKG (*Fig.* 20.) required. Place the Inſtrument at K, the Theodolite Side of the Frame upwards, laying the Index on the Diameter. Turn the whole Inſtrument about, the Index remaining on the Diameter, 'till thro' the Sights you ſpy E. Screw the Inſtrument faſt there, and turn the Index on its Center, 'till thro' the Sights you ſpy G.

The Degree here cut on the Frame by the Index, is the Quantity of the Angle ſought; which may be laid down on Paper by the Rules of common Protraction. See PROTRACTION.

Thus may you proceed to do every thing with the *Plain Table*, as with the common Theodolite. See THEODOLITE.

To take an Angle with a Plain Table, conſidered as a Semicircle.——Proceed in the ſame manner with the Inſtrument conſider'd as a *Semicircle*, as when conſidered as a Theodolite; only laying the Semicircular Side upwards, and turning the Index on the other Center Hole in the middle of the Length, and at about ¼ of the Breadth of the Table. See SEMICIRCLE.

To take an Angle with the Plain Table, conſidered as a Circumferentor.——Suppoſe the former Angle EKG required. Place the Inſtrument at K, the Flower-de-luce towards you. Direct the Sights to E, and obſerve the Degree cut by the South End of the Needle which ſuppoſe 296. Turn the Inſtrument about, the Flower-de-luce ſtill towards you, and direct the Sight to G, noting the Degree cut by the other End of the Needle, which ſuppoſe 182. Subtract the leſs from the greater, the Remainder 114° is the Quantity of the Angle ſought. If the Remainder chance to be more than 180° then it muſt be again ſubtracted from 360. This ſecond Remainder will be the Angle required; which may be protracted, *&c.* as under the Article PROTRACTION.

Thus may you proceed to do every thing with the *Plain Table*, as with the common Circumferentor. See CIRCUMFERENTOR.

PLAIN *Number*, is a Number that may be produced by the Multiplication of two Numbers into one another.—— Thus 20 is a *plain Number*, produced by the Multiplication of 5 into 4. See NUMBER.

PLAIN *Problem*, in Mathematicks, is ſuch an one, as cannot be ſolved Geometrically, but by the Interſection either of a Right Line and a Circle; or of the Circumferences of two Circles. See PROBLEM.

Such is the Problem following——Given, the greateſt Side, and the Sum of the other two Sides, of a Right-angled Triangle; to find the Triangle.——Such alſo is this, To deſcribe a Trapezium that ſhall make a given Area of four given Lines. Such Problems can only have two Solutions, in regard a Right Line can only cut a Circle, or one Circle cut another in two Points.

PLAIN *Place*, in Geometry, *Locus planus*, or *Locus ad planum*, a Term which the ancient Geometricians uſed for a Geometrical Locus, when it was a right Line, or a Circle; in oppoſition to a ſolid Place, which was an Ellipſis, Parabola, or Hyperbola.

Theſe *plain Loci* the Moderns diſtinguiſh into *Loci ad rectam*, and *Loci ad Circulum*. See LOCUS.

PLAIN, in Heraldry, is ſometimes uſed for the Point of the Shield, when couped ſquare; a Part remaining under the Square, of a different Colour, or Metal, from the Shield.

This has been ſometimes uſed as a Mark of Baſtardy, and call'd *Champagne*: For when the legitimate Deſcendants of Baſtards have taken away the Barr, Fillet, or Traverſe bore by their Fathers, they are to cut the Point of the Shield, with a different Colour call'd *Plain*. See BASTARD, DIMINUTION.

PLAIN, or PLANE, in Perſpective, in Mechanics, Aſtronomy, *&c.* See PLANE.

PLAINT, in Law, is the propounding or exhibiting any Action, real or perſonal, in Writing. See ACTION.

Hence, the Party making this *Plaint*, is call'd Plaintiff. See PLAINTIFF.

PLAINTE, in the ancient Cuſtoms of *France*, was a Requeſt, or Petition, preſented to the King, againſt the Judges of the Provinces, and afterwards againſt Bailiffs and Seneſchals; for denying Juſtice, or for rendering Judgment contrary to the Laws of the Realm.

For in thoſe Days there was no Appeal from their Deciſions; but they all pronounced at the laſt hand: So that the *Plainte* was not directed againſt the Party, but againſt the Judge; who was ajourn'd to ſee his own Sentence declared null.

This was a kind of Supplement to the Way of Appeals, which was then ſhut up.—Theſe *Plaintes*, in the Capitularies of *Charlemaign*, are call'd *Blaſphemiæ*.

PLAINTIFF, in Law, he that ſues, or complains, in an Aſſize, or in an Action perſonal; as, in an Action of Debt, Treſpaſs, Deceit, Detinue, and the like. See ACTION.

PLAISTER, in Building. See PLASTER, MORTAR, *&c.*

PLAISTER, in Medicine. See EMPLASTER.

PLAIT. See FOLD.

PLAN, a Repreſentation of ſomething drawn on a Plane. See PLANE; ſee alſo MAP, CHART, *&c.*

Such are Maps, Charts, Ichnographies, *&c.* See PLANISPHERE.

PLAN, in Architecture, *&c.* is particularly uſed for a Draught of a Building, ſuch as it appears, or is intended to appear, on the Ground; ſhewing the Extent, Diviſion, and Diſtribution of its Area into Apartments, Rooms, Paſſages, *&c.* See BUILDING.

The *Plan* is the firſt Device or Sketch the Architect makes; it is alſo call'd the *Ground-Plot*, *Plat-Form*, and *Ichnography* of the Building. See ICHNOGRAPHY, *&c.*

The *Geometrical Plan* is that wherein the ſolid and vacant Parts are repreſented in their natural Proportion.

Rais'd Plan is that where the Elevation, or Upright, is ſhewn upon the *Geometrical Plan*, ſo as to hide the Diſtribution. See ELEVATION.

Perſpective Plan is that conducted and exhibited by Degradations, or Diminutions, according to the Rules of Perſpective. See PERSPECTIVE.

To render the *Plans* intelligible, 'tis uſual to diſtinguiſh the Maſſives with a black Waſh. The Projectures on the Ground are drawn in full Lines, and thoſe ſuppoſed over them in dotted Lines. The Augmentations or Alterations to be made, are diſtinguiſhed by a Colour different from what is already built; and the Feints of each *Plan* made lighter as the Stories are rais'd.

In large Buildings 'tis uſual to have ſo many ſeveral *Plans* for the firſt three Stories.

For the Perſpective of a PLAN. See PERSPECTIVE.

PLANCERE, in Architecture, the under Part of the Corona, or Drip; making the ſuperior Part of the Cornice, between two Cymatiums. See CORONA, CORNICE, *&c.*

PLANE, or PLAN, PLAIN, PLANUM, in Geometry, a *plain Figure*; or a Surface, lying evenly between its bounding Lines. See PLAIN.

Wolfius defines it a Surface, from every Point of whoſe Perimeter a Right Line may be drawn to every other Point in the ſame.

As the right Line is the ſhorteſt Extent from one Point to another; ſo is a *Plane* the ſhorteſt Extenſion between one Line and another. See LINE and SPACE.

PLANES are frequently uſed in Aſtronomy, *&c.* for imaginary Surfaces, ſuppoſed to cut, and paſs thro' ſolid Bodies; and on this Foundation it is that the whole Doctrine of Conic Sections and of the Sphere turn. See SECTION.

When

When a *Plane* cuts a Cone parallel to one of its ſides, it makes a Parabola; when it cuts the Cone parallel to its Baſe, it makes a Circle. See CONICKS.

The Sphere is wholly explained by *Planes*, imagin'd to cut the Celeſtial Luminaries, and to fill the Areas or Circumferences of their Orbits. See SPHERE.

Aſtronomers ſhew, that the *Plane* of the Moon's Orbit is inclined to the *Plane* of the Earth's Orbit, or the Ecliptic, by an Angle of about 5 Deg. and paſſes thro' the Center of the Earth. See ORBIT.

The Interſection of this *Plane* with that of the Ecliptic, has a proper Motion of 3′ 11″ each Day, from Eaſt to Weſt; ſo that the Nodes anſwer ſucceſſively to all the Degrees of the Ecliptic, and make a Revolution round the Earth in about 19 Years. See NODE.

The *Planes* of the Orbits of the other Planets, like that of the Ecliptic, paſs thro' the Center of the Sun.——The *Plane* of the Orbit of *Saturn*, is inclined to the Ecliptic by 2° 33′ 30″, and cuts it, at preſent, in the 22d Degree of *Cancer* and *Capricorn*. See INCLINATION; ſee alſo MOON and PLANET.

The Centre of the Earth, then, being in the *Plane* of the Moon's Orbit, the Circular Section of that Plan in the Moon's Disk, is repreſented to us in Form of a Right Line paſſing thro' the Center of the Moon.—This Line is inclined to the *Plane* of the Ecliptic by 5° when the Moon is in her Nodes: But this Inclination diminiſhes as that Planet recedes from the Nodes; and at three Degrees diſtance, the Section of the Moon's Orbit in its Disk. becomes parallel to the *Plane* of the Ecliptic. The ſame Appearances attend the primary Planets, with regard to the Sun.

But the Caſe is very different in the Planets ſeen from one another, eſpecially from the Earth.—The *Planes* of their Orbits only paſs thro' the Center of the Earth when they are in their Nodes: In every other Situation, the *Plane* is rais'd above the Orbit of the Planet, either to the North or the South. And the Circular Section of the *Plane* of the Orbit on its Disk, or in the Orbit of one of its Satellites, does not appear a Right Line, but an Ellipſis, broader or narrower as the Earth is more or leſs elevated above the *Plane* of the Orbit of the Planet.

PLANE, in Mechanicks.—A *Horizontal* PLANE, is a *Plane* level or parallel to the Horizon. See HORIZON.

The determining how far any given *Plane*, &c. deviates from a Horizontal one, makes the whole Buſineſs of Levelling. See LEVELLING.

Inclined PLANE, in Mechanicks, is a *Plane* which makes an oblique Angle with an Horizontal *Plane*. See OBLIQUE.

The Doctrine of the Motion of Bodies on *Inclined Planes* makes a very conſiderable Article in Mechanicks; the Subſtance whereof is as follows:

Laws of the Deſcent of Bodies on an INCLINED PLANE.

If a Body be placed on an *inclined Plane*, its relative Gravity will be to its abſolute Gravity, as the Length of the *Plane*, *e. gr.* AC (*Tab. Mechanicks*, *Fig.* 58.) to its Height AB. See GRAVITY.

Hence, 1° ſince the Ball D only gravitates on the *inclined Plane*, with its relative Gravity; the Weight L, applied in a Direction, parallel to the Length of the Plane, will retain or ſuſpend it, provided its Weight be to that of the Ball, as the Altitude of the *Plane* BA is to its Length AC.

2° If the Length of the *Plane* CA be taken for the whole Sine; AB will be the Sine of the Angle of Inclination ACB.—The abſolute Gravity of the Body, therefore, is to its reſpective Gravity applied on the *inclined Plane*; and therefore, alſo, the Weight D to the Weight L acting according to the Direction DA which ſuſtains it; as the whole Sine to the Sine of the Angle of Inclination.

3° Hence the reſpective Gravities of the ſame Body on different *inclined Planes*, are to each other as the Sines of the Angle of Inclination.

4° The greater therefore the reſpective Gravity is, the greater is the Angle of Inclination.

5° As, therefore, in a vertical *Plane*, where the Inclination is greateſt, *viz.* perpendicular, the reſpective Gravity degenerates into abſolute; ſo in a horizontal *Plane*, where there is no Inclination, the reſpective Gravity vaniſhes.

II. To find the Sine of the Angle of Inclination of a *Plane*, on which a given Power will be able to ſuſtain a given Weight.——Say, as the given Weight, is to the given Power, ſo is the whole Sine to the Sine of the Angle of Inclination of the *Plane*. Thus, ſuppoſe a Weight of 1000 be to be ſuſtained by a Force of 50; the Angle of Inclination will be found 2° 52′.

III. If the Weight L deſcend according to the perpendicular Direction AB, and raiſe up the Weight D in a Direction parallel to the *inclined Plane*; the Height of the Aſcent of D will be to that of the Deſcent of L, as the Sine of the Angle of Inclination C, to the whole Sine.

Hence, 1° The Height of the Deſcent CD of the Weight L is to the Height of Aſcent DH of the Weight D; reciprocally as the Weight D to the equivalent Weight L.

2° Since then CDL = DHD, and the Actions of the equiponderating Bodies D and L are equal; the Moments of the Weights D and L are in a Ratio compounded of their Maſſes, and Altitudes, thro' which they aſcend or deſcend in a *Plane*, either inclined or perpendicular.

3° The Powers that raiſe Weights thro' Altitudes reciprocally proportional to them, are equal.——This *Des Cartes* aſſumes as a Principle whereby to demonſtrate the Powers of Machines. Hence we ſee why a loaden Waggon is drawn with more Difficulty on an *inclined* than an horizontal *Plane*; as being preſs'd with a Part of the Weight which is to the whole Weight in a Ratio of the Altitude to the Length.

IV. Weights E and F, equiponderating upon *inclined Planes* AC and CB of the ſame Height CD, are to each other as the Lengths of the Planes AC and CB.

S. Stevinus gives a very pretty Demonſtration of this Theorem, which, for its Eaſineſs and Ingenuity, we ſhall here add.—Put a Chain, whoſe Parts do all exactly weigh in Proportion to their Length, over a Triangle, GIH: (*Fig.* 59.) 'Tis evident the Parts GK and KH do balance each other. If then IH did not balance GI, the præponderating Part would prevail; and there would ariſe a perpetual Motion of the Chain about GIH; but this being abſurd, it follows, that the Parts of the Chain IH and GI; and conſequently all other Bodies which are as the Lengths of the *Planes* IH and I, G will balance each other.

V. A heavy Body deſcends on an *inclined Plane*, with a Motion uniformly accelerated. See ACCELERATION.

Hence, 1° The Spaces of Deſcent are in a duplicate Ratio of the Sines, and likewiſe of the Velocities; and therefore in equal times increaſe according to the unequal Numbers 1, 3, 5, 7, 9, *&c.*

2° The Space paſs'd over by a heavy Body deſcending on an *inclined Plane*, is ſubduple of that which it would paſs over in the ſame Time, with the Velocity it has acquired at the End of its Fall.

3° Heavy Bodies, therefore, deſcend by the ſame Laws on *inclined Planes*, as in perpendicular *Planes*. Hence it was, that *Gallileo*, to find the Laws of perpendicular Deſcent, made his Experiments on *inclined Planes*, in regard of the Motions being ſlower in the latter than the former; as in the following Theorem.

VI. The Velocity of a heavy Body deſcending on an *inclined Plane*, at the End of any given Time; is to the Velocity which it would acquire in falling perpendicularly, in the ſame Time; as the Height of the *inclined Plane* is to its Length.

VII. The Space paſs'd over by a heavy Body on an *inclined Plane* AD, (*Fig.* 60.) Is to the Space AB, it would paſs over in the ſame time in a perpendicular *Plane*: As its Velocity on the *inclined Plane* is to its Velocity in the perpendicular Deſcent, at the End of any given time.

Hence, 1° The Space paſs'd over in the *inclined Plane*, is to the Space it would deſcend in the ſame time in the perpendicular *Plane*, as the Altitude of the *Plane* AB to its Length AC; and therefore as the Sine of the Angle of Inclination to the whole Sine.

2° If, then, from the Right Angle B, a Perpendicular be let fall to AC; AC : AB :: AB : AD. So that in the ſame time wherein the Body would fall perpendicularly from A to B; in an *inclined Plane* it will deſcend from A to D.

3° The Space, therefore, of perpendicular Deſcent being given in the Altitude of the *Plane* AB; by letting fall a Perpendicular from B to AC, we have the Space AD to be paſs'd over in the ſame time on the *inclined Plane*.

4° In like manner, the Space AD, paſs'd over on the *inclined Plane*, being given; we have the Space AB, thro' which it would deſcend perpendicularly in the ſame time, by raiſing a Perpendicular meeting the Side of the *Plane* in B.

5° Hence in the Semicircle ADEFB, the Body will deſcend thro' all the *Planes* AD, AE, AF, AC, in the ſame time; *viz.* in that time wherein it would fall thro' the Diameter AB, ſuppoſing that perpendicular to the horizontal *Plane* LM.

VIII. The Space AD, paſs'd over in an *inclined Plane* AC, being given; to determine the Space which would be paſs'd over in any other *inclined Plane* in the ſame time.

From the Point D erect a Perpendicular DB, meeting the Altitude AB in B; then will AB be the Space, thro' which the Body would fall perpendicularly in that time. Wherefore if from B a Perpendicular BE be let fall to the *Plane* AF; AE will be the Space in the *inclined Plane* which the Body will paſs over, in the ſame time wherein it falls perpendicularly from A to B; and conſequently AD will be the Space in the other *inclined Plane* AC, which it paſſes thro' in the ſame time.

Hence, ſince AB is to AD, as the whole Sine to the Sine of the Angle of Inclination C. And AB is to AE as the whole Sine to the Sine of the Angle of Inclination F; the Spaces AD and AE, which the Body will paſs over in the ſame Time on different *inclined Planes*, are as the Sines of the Angles of Inclination, C and F, and reciprocally as the reſpective Gravities on the ſame Planes. And conſequently, alſo, reciprocally as the Lengths of Planes equally high AC and AF.—Whence the Problem may be reſolved various Ways by Calculation.

IX. The Velocities acquired in the ſame time on different *inclined Planes*, are as the Spaces paſs'd over in the ſame Time.—Hence, alſo, they are as the Sines of the Angles of Inclination C and F; reciprocally as the reſpective Gravities on the ſame *Planes*; and reciprocally as the Lengths of equally high *Planes*, AC and AF.

X. A Body deſcending on an *inclined Plane* AC, when it arrives at the horizontal Line CB, has acquired the ſame Velocity which it would have acquired in a perpendicular Deſcent AB, to the ſame horizontal Line CF.

Hence, 1° A heavy Body deſcending thro' different *inclined Planes*, AC, AG, AF, has acquired the ſame Velocity when it arrives at the ſame horizontal Line CF.

Hence alſo a Body continuing its Deſcent thro' ſeveral contiguous *inclined Planes* acquires the ſame Velocity which it would acquire in deſcending perpendicularly to the ſame horizontal *Plane*.

XI. The Time of Deſcent along an *inclined Plane* AC, is to the Time of perpendicular Deſcent thro' AB, as the Length of the *Plane* AC, to its Altitude AB: But Times of Deſcents thro' different *inclined Planes* equally high AC and AG, are as the Lengths of the *Planes*.

XII. If the Diameter of a Circle AB, (*Fig.* 60.) be parallel to the horizontal Line LM; a Body will deſcend from any Point of the Periphery D, E, or C to B, along an *inclined Plane* DC, EB, and CB, in the ſame Time wherein it will deſcend thro' the Diameter AB. Hence,

XIII. The Deſcents of a Body thro' a Semicycloid DEF, (*Fig.* 61.) and thro' any Arch thereof BAK, are always equidiurnal, or perform'd in the ſame Time; on which Principle is built the Doctrine of Pendulums vibrating in a Cycloid. See CYCLOID and PENDULUM.

Laws of the Aſcent of Bodies on Inclined Planes.

I. If a Body aſcend in a Medium void of Reſiſtance, in any Direction, whether perpendicular, or along an *inclined Plane*; its Motion will be uniformly retarded. See RETARDATION.

Hence, 1° A Body aſcending either perpendicularly or obliquely, in ſuch a Medium paſſes over a Space which is ſubduple of that it would paſs over in the ſame Time on a horizontal Plane, with an uniform Celerity equal to that it has at the Beginning of its Motion.

2° Such Spaces, therefore, perform'd in equal Times, decreaſe in a retrograde Order, as the uneven Numbers 7, 5, 3, 1: and therefore the Aſcent is ſo much impeded; conſequently, when the impreſs'd Force is exhauſted, the Body will deſcend again by the Force of Gravity.

3° They are therefore, inverſely, as the Spaces deſcrib'd in the ſame Times by a Body deſcending thro' the ſame Altitude.—For, ſuppoſe the Time divided into four Parts; In the firſt Moment, the Body A deſcends thro' the Space 1, and B aſcends thro' 7; in the ſecond, A deſcends thro' 3, B aſcends thro' 5, *&c.*

4° Hence, a Body riſing with an impreſs'd Force, aſcends to that Altitude, from which it muſt fall to acquire that Velocity in falling, wherewith it aſcended.

5° Hence, by falling it acquires a Force to riſe again to the Height whence it fell. See PENDULUM.

II. The Time wherein a Body aſcends to a given Altitude, being given; to determine the Spaces paſs'd over each Moment.——Suppoſe the ſame Body to deſcend from the ſame Altitude in the ſame time; and find the Spaces paſs'd over each Moment. (See MOTION.) Theſe, taken inverſely, are the ſame with the Spaces of Aſcent required.

Suppoſe, *v. g.* a Body projected perpendicularly, to aſcend thro' a Space of 240 Feet in 4 Seconds; and the Spaces of Aſcent perform'd in the ſeveral Times required? If, now, the Body had deſcended, the Deſcent in the firſt Minute had been 15 Feet, in the ſecond 45, in the third 75, in the fourth 105, *&c.* The Deſcent therefore will be in the firſt Moment 105, in the ſecond 75, *&c.*

III. If a Body deſcend either perpendicularly thro' DA, (*Fig.* 61.) or in any other Surface FED, and with the Velocity it has there acquired, again aſcend along another Surface DC, at Points equally high, *e. gr.* at G and H, and Q and D, it will have the ſame Force and the ſame Velocity.

Hence, if a Body deſcend along any Surface, FED, and again aſcend along another ſimilar and equal Surface DGC; 'tis the ſame as if it paſs'd over the ſeveral Parts of the ſame Line twice.

Whence, the Times of Aſcent and Deſcent thro' equal Spaces are equal.

On this Principle is founded the Conſtruction and Uſe of Pendulums. See PENDULUM and OSCILLATION.

PLANE *of Gravity*, or *Gravitation*, is a *Plane* ſuppoſed to paſs thro' the Center of Gravity of the Body, and in the Direction of its Tendency; that is, perpendicular to the Horizon. See GRAVITY and GRAVITATION.

PLANE *of Reflection*, in Catoptrics, is a *Plane* which paſſes through the Point of Reflection; and is perpendicular to the *Plane* of the Glaſs, or reflecting Body. See REFLECTION.

PLANE *of Refraction* is a *Plane* drawn thro' the incident and refracted Ray. See REFRACTION.

Perſpective PLANE, is a plain pellucid Surface, ordinarily perpendicular to the Horizon, and placed between the Spectator's Eye and the Object he views; thro' which the optic Rays, emitted from the ſeveral Points of the Object, are ſuppoſed to paſs to the Eye, and in their Paſſage to leave Marks that repreſent them on the ſaid *Plane*. See PERSPECTIVE.

Such is the *Plane* HI; (*Tab. Perſpective Fig.* 1.) ſome call it the *Table*, becauſe the Draught, or Perſpective of the Object, is ſuppoſed to be thereon; others, the *Section*, from its cutting the viſual Rays; and others, the *Glaſs*, from its ſuppoſed Tranſparency.

Geometrical PLANE, in Perſpective, is a *Plane* parallel to the Horizon, whereon the Object to be delineated is ſuppoſed to be placed.

Such is the *Plane* LM. (*Fig.* 1. *Tab. Perſpective*)—This *Plane* is uſually at right Angles with the *Perſpective Plane*.

Horizontal PLANE, in Perſpective, is a *Plane* paſſing thro' the Spectator's Eye, parallel to the Horizon, cutting the Perſpective *Plane* when that is perpendicular to the Geometrical one, at right Angles.

Vertical PLANE, in Perſpective, a *Plane* paſſing thro' the Spectator's Eye, perpendicular to the Geometrical *Plane*; and uſually parallel to the Perſpective *Plane*. See VERTICAL.

Objective PLANE, in Perſpective, is any *Plane* ſituate in the horizontal *Plane*, whoſe Repreſentation in Perſpective is required. See OBJECT.

PLANE *of the Horopter*, in Optics, is a *Plane* that paſſes thro' the Horopter, AB, (*Tab. Optics Fig.* 67.) and is perpendicular to a *Plane* paſſing thro' the Optic Axes IGH. See HOROPTER.

PLANE *of the Projection*, in the Stereographic Projection of the Sphere, is the ſame with the perſpective *Plane*, which ſee. See alſo PROJECTION, *&c.*

PLANE *of a Dial*, or *Dial* PLANE, the Surface whereon a Dial is drawn. See DIAL.

We have Horizontal, Vertical, Inclining, Declining, Reclining, Deinclining, Direct, *&c. Dial Planes.* See INCLINING, DECLINING, RECLINING, DIRECT, *&c.*

PLANE *Glaſs*, *Mirror*, &c. See PLAIN *Glaſs*, *Mirror*, &c.

PLANE, in Joinery, *&c.* an Edge-Inſtrument, uſed to pare or ſhave Woods ſmooth, even, *&c.*

It conſiſts of a Piece of Wood, very ſmooth at bottom, ſerving as a Stock, or Shaft; in the middle whereof is an Aperture, thro' which paſſes a Steel Edge, or Chiſſel, obliquely placed, and very ſharp, which takes off the Inequalities of the Wood it is ſlid along.

The *Plane* acquires various Names according to its various Forms, Sizes and Uſes: as, 1° The *Fore-Plane*, which is very long, and is that commonly firſt uſed. The Edge of its Iron is not ground ſtreight, but riſes with a Convex-Arch in the middle, to bear being ſet the ranker; its Uſe being to take off the greater Irregularities of the Stuff, and to prepare it for the Smoothing *Plane*.

2° The *Smoothing Plane* is ſhort and ſmall, its Iron, fine; it takes off the greater Irregularities left by the Fore-Plane, and prepares the Wood for the Jointer.

3° The *Jointer* is the longeſt of all; its Edge very fine, not ſtanding out above a Hair's Breadth; it comes after the Smoothing-Plane, and is chiefly intended to ſhoot the Edge of a Board perfectly ſtreight for jointing ſmooth Tables, *&c.*

4° The *Strike-Block* is like the Jointer, but ſhorter; its Uſe, to ſhoot ſhort Joints, *&c.*

5° *Rabbet-Plane*, uſed to cut the upper Edge of a Board, ſtrait or ſquare, down into the Stuff; ſo as the Edge of another, cut after the ſame manner, may join in with it on the Square; it is alſo uſed to ſtrike Faſcia's in Mouldings. Its Iron is full as broad as its Stock, that the Angle may cut ſtrait; and it delivers its Shavings at the Sides, not, like the others, at the Top.

6° The *Plow*, a narrow Rabbet-Plane, with the Addition of two Staves, whereon are Shoulders, and on the Shoulders a Fence.—Its Uſe is to plow a narrow ſquare Groove on the Edge of a Board, *&c.*

7° *Moulding-Planes*; of theſe there are various Kinds,

accommodated to the various Forms and Profiles of the Mouldings; (See MOULDING) as the *Round Plane*, the *Hollow*, the *OG*, the *Snipe's Bill*, &c. which are all of ſeveral Sizes, from half an Inch to an Inch and half. See MOULDING, &c.

To uſe the *Moulding Planes* on ſoft Wood, as Deal, Pear-Tree, &c. they ſet the Iron to an Angle of 45° with the Baſe or Sole of the *Plane*. On hard Wood, *v. gr.* Ebony, Box, &c. they ſet to an Angle of 80°; ſometimes quite upright. To work on hard Wood, the Edge or Baſil is ground to an Angle of 18 or 20 Deg: on ſoft Wood, to an Angle of about 12°. For the more acute the Baſil, the ſmoother the Iron cuts; but the more obtuſe, the ſtronger.

PLANE, among Fowlers.—To *plane*, is to fly or hover as a Bird does, without moving its Wings. See FLYING, HAWK and HAWKING.

PLANET, PLANETA, in Aſtronomy, a Celeſtial Body, revolving round the Sun as a Centre, and continually changing its Poſition, with reſpect to the other Stars; whence its Name πλανήτης, Wanderer; in oppoſition to a fix'd Star. See STAR.

The *Planets* are uſually diſtinguiſhed into *Primary* and *Secundary*.

The *Primary* PLANETS, call'd alſo, ſimply, *Planets*, by way of Eminence, are thoſe which move round the Sun as their proper Center.—Such are *Saturn*, *Jupiter*, *Mars*, the *Earth*, *Venus*, and *Mercury*.

Secundary PLANETS are ſuch as move round ſome *Primary Planet*, as their reſpective Center, in the ſame manner as the *Planets* do round the Sun.—Such are the *Moon* moving round our Earth; and thoſe others moving round *Saturn* and *Jupiter*, properly call'd *Satellites*. *See the Doctrine of Secundary Planets, under the Article* SATELLITES.

The *Planets*, or *Primary Planets*, are in Number ſix; which are again diſtinguiſhed into *Superior* and *Inferior*.

The *Superior* PLANETS are thoſe further off the Sun than our Earth is.—Such are *Mars*, *Jupiter*, and *Saturn*.

The *Inferior* PLANETS are thoſe nearer the Sun than our Earth, and ſituate between the Earth and Sun.—Such are *Venus* and *Mercury*. See *the Order, Poſition*, &c. *of the Planets repreſented to the Eye*, *Tab. Aſtronomy*, *Fig* 44.

The *Planets* are repreſented by the ſame Characters as the Chymiſts uſe to repreſent their Metals by, on account of ſome ſuppoſed Analogy between thoſe celeſtial and ſubterraneous Bodies. See METAL and CHARACTER.

Saturn is repreſented by the Character ♄.—This *Planet*, by reaſon of its great Diſtance appears to the Eye with a feeble Light.—It performs its Revolution round the Sun in about 30 Years. See SATURN.

Jupiter, mark'd ♃, is a bright refulgent Star, finiſhing its Courſe round the Sun in about 12 Years. See JUPITER.

Mars, characteris'd ♂, is a ruddy fiery colour'd *Planet*, finiſhing its Courſe in about two Years. See MARS.

Venus, ♀, is the brighteſt of all the *Planets*, conſtantly attending the Sun, and never diſtant from him above 47 Degrees.—It finiſhes its Courſe in about ſeven Months. See VENUS.

When it goes before the Sun, 'tis call'd *Phoſphorus*, and *Lucifer*; and when it follows him *Heſperus*. See PHOSPHORUS, &c.

Mercury, ☿, a little bright *Planet*, the Sun's conſtant Companion, from whoſe ſide it never departs above 28°, and by that means uſually hid in his Splendor.—It performs its Courſe in about three Months. See MERCURY.

To which we now add, *Tellus*, the Earth, mark'd ⊕ or ♁, performing its Courſe about the Sun, between *Mars* and *Venus*, in the Space of a Year. See EARTH.

From theſe Definitions, a Perſon may eaſily diſtinguiſh all the *Planets*.—For if after Sun-ſet he ſee a *Planet* nearer the Eaſt than the Weſt, he may conclude 'tis neither *Mercury* nor *Venus*; and may determine whether 'tis *Saturn*, *Jupiter*, or *Mars*, by the Colour and Light: By which alſo he may diſtinguiſh between *Mercury* and *Venus*.

Nature of the PLANETS.

From the ſeveral Phaſes and Appearances of the *Planets*, they are found to be all perfectly like the Moon; which, we have ſhewn to be perfectly like our Earth; whence it follows, that the *Planets*, too, are dark, opake, ſpherical, &c. Bodies, like our Earth. See MOON.

This may be ſhewn almoſt a to Demonſtration.—1° *Venus*, obſerv'd with a Teleſcope, is rarely found full, but with variable Phaſes like thoſe of the Moon; her illumined Part ſtill turn'd towards the Sun, *viz.* toward the Eaſt when ſhe is the Morning-Star, and the Weſt when the Evening-Star. —And the like Phaſes are are obſerv'd in *Mercury* and *Mars*.

2° *Gaſſendus* firſt, and after him others, have obſerved *Mercury* on the Face of the Sun, a-croſs which he appeared to paſs like a black round Spot. See TRANSIT.—*Horrox* in 1639, alſo obſerv'd *Venus* in the Sun; where ſhe made the ſame Appearance.

3° *De la Hire*, in 1700, with a Teleſcope of 16 Foot, diſcover'd Mountains in *Venus*, larger than thoſe of the Moon. See MOUNTAIN.

4° *Caſſini* obſerv'd two Spots in *Venus*; four in *Mars*, likewiſe obſerv'd by *Campani*; and ſeveral, at ſeveral times, in *Jupiter*: and from his Obſervations of theſe Spots found that they had a Rotation round their Axes; and even determin'd the Velocity of that Rotation, or the Period wherein it was effected, *v. g.* That of *Jupiter*, 9 Hours 56'. That of *Mars* 24 Hours 40'. And that of *Venus*, 24 Hours. See SPOT.—And ſince the *Sun*, *Moon*, *Jupiter*, *Mars*, *Venus*, and the *Earth*, are found to revolve on their Axes, *i. e.* to have a diurnal Rotation; no doubt *Mercury* and *Saturn* have the ſame; tho' the great Nearneſs of the former to the Sun, and the great Diſtance of the latter, prevent any Spots from being obſerv'd on them, whence that Rotation might be demonſtrated.

5° In *Jupiter* are obſerv'd two Swaths, or Belts, brighter than the reſt of his Disk, and moveable; ſometimes found in one part ſometimes in another, ſometimes broader ſometimes narrower. See BELT.

6° In 1609 were firſt obſerv'd three little Stars, or Moons, moving about *Jupiter* by *Sim. Marius*; and in 1610 the ſame were obſerv'd by *Gallilæo*: Theſe are now frequently obſerved to diſappear in a clear Sky, when *Jupiter* happens to be diametrically interpoſed between them and the Sun.—Whence it appears they are void of Light, at ſuch Time when the Sun's Rays, intercepted by *Jupiter*, cannot be propagated to them in right Lines; and hence alſo, that, like the Moon they are opake Bodies, illumined by the Sun; and hence, again, ſince *Jupiter* does not illumine his Satellites when found behind him, he himſelf, in that Part turn'd from the Sun, may be argu'd to be void of Light.

7° When *Jupiter*'s Moons are diametrically interpoſed between *Jupiter* and the *Sun*, there is ſeen a round Spot on *Jupiter*'s Disk, which is ſometimes larger than the Satellite itſelf.—Whence it appears, that the Satellites are opake Bodies, illumined by the Sun, that they project a Shadow upon the Sun, and that the round Spots ſeen in *Jupiter* are the Shadows of the Satellites. Whence, alſo, the Interſection of the Shadow being found to be a Circle, the Shadow muſt be conical; and therefore the Figure of the Satellites, at leaſt as to Senſe, is ſpherical.

8° The Earth being between *Jupiter* and the Sun; if, at the ſame time, any of the Satellites happen to be between *Jupiter* and the Sun, it is loſt in *Jupiter*'s Light; tho' ſometimes appearing like a black Spot.—This Phænomenon has been frequently obſerved by *Caſſini* and *Maraldi*, who have likewiſe noted very conſiderable Alterations in the apparent Magnitudes of the Satellites; for which no Reaſon could be given from the Diſtance of *Jupiter*, the *Sun*, or the *Earth*: *e. gr.* That the fourth, which is uſually ſeen the ſmalleſt, is ſometimes the largeſt; and the third, which is uſually the largeſt, ſometimes the ſmalleſt.—Hence, as the Satellites are illumined by the Sun, even then when immerg'd in *Jupiter*'s Light, yet do appear obſcure, there muſt be ſome Alterations in their Atmoſpheres, to prevent the Sun's Rays being equally reflected from every Part of their Surface; which muſt likewiſe be the Cauſe why their Shadow is ſometimes larger than themſelves.

Now, to ſum up the Evidence,—1° Since in *Venus*, *Mercury*, and *Mars*, only that Part of the Disk illumined by the Sun, is found to ſhine; and, again, *Venus* and *Mercury*, when between the *Earth* and the *Sun*, appear like dark Spots or Maculæ, on the Sun's Disk; 'tis evident, that *Mars*, *Jupiter*, and *Mercury*, are opake Bodies, illumined with the borrow'd Light of the Sun. And the ſame appears of *Jupiter*, from its being void of Light in that Part to which the Shadow of the Satellites reaches, as well as in that Part turn'd from the Sun; and that his Satellites are opake, and reflect the Sun's Light, is abundantly ſhewn. Wherefore ſince *Saturn*, with his Ring and Satellites, do only yield a faint Light, fainter conſiderably than that of the fix'd Stars; tho' theſe be vaſtly more remote; and than that of the reſt of the *Planets*: 'tis paſt doubt, he, too, with his Attendants, are opake Bodies.

2° Again, ſince the Sun's Light is not tranſmitted thro' *Mercury* and *Venus*, when placed againſt him; 'tis plain they are denſe opake Bodies; which is likewiſe evident of *Jupiter*, from his hiding the Satellites in his Shadow; and, therefore, by Analogy, the ſame may be concluded of *Saturn*.

3° From the variable Spots in *Venus*, *Mars*, and *Jupiter*, 'tis evident thoſe *Planets* have a changeable Atmoſphere; which changeable Atmoſphere may, by a like Argument, be inferr'd of the Satellites of *Jupiter*; and therefore, by ſimilitude the ſame may be concluded of the other *Planets*.

4° In like manner, from the Mountains obſerved in *Venus*; the ſame may be ſuppoſed in the other *Planets*.

5° Since then *Saturn*, *Jupiter*, both their Satellites, *Mars*, *Venus*, and *Mercury*, are opake Bodies, ſhining with the Sun's borrow'd Light, are furniſh'd with Mountains, and encompaſs'd

encompaſs'd with a changeable Atmoſphere; they have, of conſequence, Waters, Seas, *&c.* as well as dry Land, and are Bodies like the Moon, and therefore like the Earth. *Q. E. D.*

And hence, nothing hinders but that the *Planets* may be concluded to be inhabited.

As to the *Planetary* Inhabitants; *Huygens* in his *Coſmotheoros* argues very plauſibly for their Exiſtence, from the ſimilitude of the *Planets* with our Earth; thoſe, like this, being opake, denſe, uneven, round, heavy, illumined and warm'd by the Sun; having Night and Day, Summer and Winter, *&c.*

Wolfius deduces ſomething relating hereto from Arguments of another kind.—Thus *e. gr.* 'Tis ſcarce to be doubted, that the Inhabitants of *Jupiter* are much larger than thoſe of the Earth; and in effect of the Giant Kind. For it is ſhewn in Optics, that the Pupil of the Eye dilates in a ſtrong Light, and contracts in a weak one; wherefore, ſince in *Jupiter* the Sun's Meridian Light is much feebler than on the Earth, by reaſon of *Jupiter*'s greater Diſtance from the Sun; the Pupil will need to be much more dilatable in the Inhabitants of *Jupiter*, than in thoſe of the Earth. But the Pupil is obſerv'd to have a conſtant Proportion to the Ball of the Eye; and the Eye to the reſt of the Body ſo that in Animals, the larger the Pupil the larger the Eye, and the larger the Body.

To aſcertain the Size of theſe jovial Inhabitants, it may be obſerv'd that the Diſtance of *Jupiter* from the Sun, is to the Earth's Diſtance from the ſame, as 26 to 5; the Intenſity of the Sun's Light in *Jupiter* is to its Intenſity on the Earth, in a duplicate Ratio of 5 to 26; but 'tis found by Experience, that the Pupil dilates in a Ratio greater than that wherein the Intenſity of Light decreaſes; otherwiſe, a Body at a great Diſtance might be ſeen as clearly as a nearer: The Diameter, therefore, of the Pupil in its greateſt Dilatation, in *Jupiter*, is to its Diameter in the like ſtate in the Earth, in a Ratio greater than that of 5 to 26.——If then we put it, as 10 to 26, or as 5 to 13: ſince the ordinary Stature of the Inhabitants of the Earth is computed at 5 *Engliſh* Feet, 4 Inches and $\frac{3}{10}$; (which *Wolfius* tells us is his own Height) the ordinary Stature of *Jupiter*'s Inhabitants will be found 14 Feet $\frac{2}{3}$, which is very nearly the ſize of the Giant *Og*, mention'd by *Moſes*, whoſe Iron Bed was 9 Cubits long and its Breadth 4. See GIANT.

The Motion of the PLANETS.

That the *Planets* do all revolve round the Sun as their Center, and not round the Earth, is evident from a thouſand Phænomena.—— 1° The Orbit wherein *Venus*, *e. gr.* moves, does certainly encompaſs the Sun, and therefore in deſcribing that Orbit, the *Planet* muſt turn round the Sun. See ORBIT.

That her Orbit includes the Sun, appears hence that ſhe is ſometimes above the Sun, ſometimes below it, ſometimes beyond it, andſometimes on this ſide; all which are evident from the Circumſtances of her Phaſes. See PHASES.

That ſhe does not move round the Earth is no leſs apparent from her being ever obſerved in the ſame Quarter with the Sun, never receding from him above 45°.——She never therefore comes to be in oppoſition to the Sun; no, not to be in a Quartile Aſpect, or to have a Quarter of the Heavens between them; both which, like the Earth, ſhe muſt frequently have, did ſhe attend and move round the Earth.

2° That *Mercury* revolves round the Sun appears in like manner from his Phaſes, which reſemble thoſe of *Venus* and the Moon; and from its Neighbourhood to the Sun, from whom *Mercury* never recedes ſo far as *Venus* does.

3° That the Orbit of *Mars* includes the Sun, is evident from that *Planet*'s being found both in Conjunction and Oppoſition with the Sun; and in both Caſes ſhining with a full Face.——Indeed, from the ſame Circumſtances it appears, that the Orbit of *Mars* encompaſſes the Earth; but then, it follows, likewiſe, from *Mars*'s Diameter appearing ſeven times as big when in Oppoſition, as when in Conjunction, that he is ſeven times nearer the Earth, in the latter than the former Poſition. The Earth therefore is far from being the Center of *Mars*'s Motion; but *Mars* is ever nearly at the ſame Diſtance from the Sun.——Again, *Mars* view'd from the Earth moves very irregularly; is ſometimes ſeen to proceed ſlower, ſometimes faſter; ſometimes ſtands ſtill, ſometimes goes backward; (*the Reaſons whereof, ſee under the Article* OPTIC *Irregularity*) but view'd from the Sun, will ever appear to move with the ſame conſtant uniform Tenor; whence 'tis evident, he reſpects the Sun, not the Earth, as the Center of his Motion.

4° The ſame Appearances whence *Mars* is ſhewn to revolve round the Sun as a Center, are likewiſe obſerv'd in *Jupiter* and *Saturn*; whence the ſame Concluſion may be made of them.

Laſtly, that the Earth revolves round the Sun, as a Center, is evident from her Place which we have obſerv'd to be between the Orbits of *Mars* and *Venus*; and from the Phænomena of the ſuperior *Planets* view'd therefrom.——If the Earth ſtood ſtill we ſhould never ſee thoſe *Planets* either ſtationary or retrograde; the Earth therefore moves, but it is ſtill found between the Orbits of *Mars* and *Venus* which encompaſs the Sun; therefore the Earth too encompaſſes the Sun.

To this Aſtronomical Demonſtration, may be added a Phyſical Demonſtration, of the Earth's Motion from Sir *Iſaac Newton*.—It appears from abundant Obſervation, that either the Earth turns round the Sun, or the Sun round the Earth, ſo as to deſcribe equal Area's in equal times: But he demonſtrates, that Bodies revolving about one another by ſuch Law, do of Neceſſity gravitate towards each other. (See GRAVITATION. Whence if the Sun gravitate to the Earth, Action and Re-action being ſtill equal, the Earth will likewiſe gravitate toward the Sun. (See RE-ACTION.) But he proves, further, that two Bodies gravitating towards each other, without directly approaching one another in right Lines, muſt both of them turn round the common Center of Gravity of both.—The Sun and Earth, therefore, do both revolve round one common Center.—But the Earth being but a Point in compariſon of the Sun, the common Center of Gravity of the two, will be within the Sun's Body, and not far from its Center.—*The Earth, therefore, revolves round a Point, within the Body of the Sun; and therefore round the Sun.* See EARTH and SUN.

The Orbits of the Planets are all Ellipſes; one of whoſe Foci is in the Sun.—This, *Kepler* firſt found from *Tycho*'s Obſervations; before him all Aſtronomers took the Planetary Orbits for eccentric Circles. See ORBIT, ELLIPSIS, ECCENTRIC.

The Planes of theſe Orbits do all interſect in the Sun; nor are their Extremities far a-part.—In effect, they are but little inclined to one another; and the greateſt Angle any of them makes with the Plane of the Earth's Orbit, *i. e.* of the Ecliptic, is that of *Mercury*, which lies at an Angle of 6° 52′; that of *Venus* is 3° 23′; that of *Mars* 1° 52′; that of *Jupiter* 1° 20′; and that of *Saturn* 2° 30′.

The Line wherein the Plane of each Orbit cuts that of the Earth, is call'd the *Line of the Nodes*; and the two Points wherein the Orbits themſelves touch that Plane, *the Nodes*. See NODE.

The Diſtance between the Center of the Sun, and the Center of each Orbit, is call'd *the Eccentricity of the Planet*. See ECCENTRICITY.

And the Angle at which each Plane cuts that of the Ecliptic, *the Inclination of the Plane*. See PLANE, INCLINATION, and ECLIPTIC.

To account for the Motion of the *Planets* about the Sun; there needs nothing but to ſuppoſe an uniform projectile Motion, in ſtrait Lines, at firſt given them; and a Power of Attraction or Gravitation, ſuch as we obſerve in all the great Bodies in our Syſtem.—For a Body A, (*Tab. Aſtronomy, Fig.* 6.) proceeding uniformly along the Line AB; will, by the Intervention of the attracting Body C, be every Moment diverted out of its rectilinear, and bent into a curvilinear, Path; according to the Laws of Central Forces. See CENTRAL *Force*.

If, then, the projectile Motion be perpendicular to a Line CA, drawn from the attracting Body C; and its Velocity ſo proportion'd to the Force of Attraction of A, as that the centripetal and centrifugal Forces are equal, *i. e.* that the Conatus to fall to the central Body C, in a right Line, AC; and that to proceed in the Direction of the Tangent, AB, balance each other: The Body will revolve in a circular Orbit Aβγδ, *&c.* See CENTRIPETAL and CENTRIFUGAL.

'Tis not improbable, that at the Beginning, this was the State of things; and that the Velocities impreſs'd on the ſeveral *Planets* were ſo combin'd with their reſpective Maſſes and Diſtances from the Sun at which they were to roll; as that their Momenta ſhould counter-balance the Sun's attractive Force, and be preciſely counter-balanced thereby: whence the primitive Orbits muſt have been perfect Circles, from which they don't even now deviate very far; the Eccentrity of the Earth's Orbit being only $\frac{69}{10000}$ of its Semidiameter. See ECCENTRICITY.

If the *Planet*'s projectile Motion be not perfectly adjuſted to the Sun's Attraction; the Orbit deſcribed will be an Ellipſis.——If it be too ſwift, the Orbit will be greater than a Circle, and the nearer Focus coincide with the central Body; if too ſlow, the Orbit will be leſs than a Circle, and the further Focus coincide with the central Body.

Indeed the Form of the Planetary Orbits, does not only depend on the Adjuſtment of the firſt projectile Velocity with the Sun's Attraction, but alſo on the Direction wherein that Motion was originally impreſs'd.——If that Direction were according to the Tangent A B, as above ſuppoſed, and the central Forces exactly balanced, the Orbit would be circular; but if that Direction were oblique, in any manner, whether aſcending to or deſcending from the Sun, the *Planet*, notwithſtanding any Adjuſtment of its Velocity to the Attraction, would be an Ellipſis. See PROJECTILE.

The

The Motions of the *Planets* in their elliptic Orbits are not equable, by reaſon the Sun is not in their Centers but their Focus.——Hence they move, ſometimes faſter and ſometimes ſlower, as they are nearer or further from the Sun; but yet theſe Irregularities are all certain, and follow according to an immutable Law.——Thus; ſuppoſe the Ellipſis BEP, *&c.* (*Tab. Aſtronomy, Fig.* 61.) the Orbit of a *Planet*; and the Focus S, the Sun's Place; AP the Axis of the Ellipſis, is called the *Line of the Apſides*; the Point A the *higher Apſis* or *Aphelion*; P the *lower Apſis* or *Perihelion*; SC the *Eccentricity*; and ES the mean Diſtance of the *Planet* from the Sun. See APSIS, APHELION, PERIHELION, *&c.*

Now the Motion of the *Planet* in its Perihelion, is ſwifteſt; in its Aphelion, ſloweſt; at E the Motion as well as the Diſtance is mean, *i. e.* ſuch as would deſcribe the whole Orbit in the ſame time it is really deſcribed in.

The Law whereby the Motion is regulated in every Point of the Orbit, is, that *a Line, or Radius, drawn from the Center of the Sun to the Center of the Planet, and thus carried along, with an angular Motion, does always deſcribe an Elliptic Area proportional to the Time.*——Suppoſe, *e. gr.* the *Planet* in A, and thence in a certain Time to proceed to B; the Space or Area the Ray SA deſcribes, is the Triangle ASB; when, at length the *Planet* arrives at P, if from the Center of the Sun S there be drawn SD, in ſuch manner as that the elliptic Area PSD is equal to that ASB; the *Planet* will here move thro' the Arch PD, in the ſame time wherein it moved thro' the Arch AB; which Arches are unequal, and nearly in a reciprocal Proportion to their Diſtance from the Sun. For from the Equalities of the Areas it follows, that the Arch PD muſt exceed AB as much as SA exceeds SP.

This Law was firſt demonſtrated by *Kepler*, from Obſervation; and is ſince accounted for from Phyſicks: And to this all Aſtronomers, now, ſubſcribe, as of all others that which beſt ſolves the Planetary Phænomena.

Computation of a PLANET's *Motion and Place.*

As to the Periods and Velocities of the Planets, or the Times wherein they perform their Courſes; they are found to have a wonderful Harmony with their Diſtances from the Sun, and with one another. The nearer each *Planet* is to the Sun, the quicker ſtill being its Motion; and its Period the ſhorter.——The great Law they here all immutably obſerve is, that *the Squares of their periodical Times are as the Cubes of their Diſtances from the Centre of their Orbits.* See PERIOD, DISTANCE, *&c.*

This Law we owe to the Sagacity of *Kepler*, who found it to obtain in all the primary *Planets*; as Aſtronomers have ſince found it to do in the ſecundary ones. See SATELLITE.

Kepler deduced this Law, meerly from Obſervation and Compariſon of the ſeveral Diſtances of the *Planets* with their Periods: The Glory of inveſtigating it from Phyſical Principles, is due to Sir *Iſaac Newton*, who has demonſtrated that, in the preſent ſtate of things, ſuch a Law was inevitable. See GRAVITATION.

A *Planet*'s Motion or Diſtance from it Apogee, is call'd the *mean Anomaly* of the *Planet*; and is meaſur'd by the Arch, or Area, it deſcribes in the Time.—When the *Planet* arrives at the middle of its Orbit, or the Point G, the Diſtance or Time is call'd the *true Anomaly*.——When the *Planet*'s Motion is reckon'd from the firſt Point of *Aries*, 'tis call'd its *Motion in Longitude*, which is either *mean*, *viz.* ſuch as the *Planet* would have were it to move uniformly in a Circle; or *true*, which is that wherewith the *Planet* actually deſcribes its Orbit, and meaſur'd by the Arch of the Ecliptic it deſcribes. See ANOMALY, LONGITUDE, *&c.*

Hence may the *Planet*'s Place in its Orbit for any given Time after it has left the Aphelion, be found.—For ſuppoſe the Area of the Ellipſis ſo divided by the Line SG, that the whole elliptic Area may have the ſame Proportion to the Area ASG as the whole periodical Time wherein the *Planet*, deſcribes its Orbit, has to the Time given: In this Caſe G will be the *Planet*'s Place in its Orbit. See PLACE.

The Phænomena of the inferior Planets, are their Conjunctions, Elongations, Stations, Retrogradations, Phaſes, and Eclipſes. See CONJUNCTION, ELONGATION, STATION, RETROGRADATION, *&c. under their reſpective Articles.*

The Phænomena of the ſuperior Planets are the ſame with thoſe of the inferior; with an Additional one, *viz. Oppoſition.* See OPPOSITION, *&c.*

The particular Phænomena, Cirumſtances, &c. of each *Planet*, ſee under the Name of the reſpective *Planet*, &c.

The general Proportions, Diameters, Surfaces, Solidities, Diſtances, Gravities, Degrees of Light, &c, *of the ſeveral Planets*; ſee under the Articles *Solar* SYSTEM, DIAMETER, SEMIDIAMETER, *&c.*

PLANETARY, ſomething that relates to the Planets. In this Senſe we ſay *Planetary Worlds, Planetary Inhabitants*, &c. See PLANET.

PLANETARY *Syſtem*, is the Syſtem, or Aſſemblage of the Planets, primary and ſecundary, moving in their reſpective Orbits, round their common Center, the Sun. See *Solar* SYSTEM.

PLANETARY *Hours* in Chronology. See HOUR.

PLANIMETRY, PLANIMETRIA, that Part of Geometry which conſiders Lines and plain Figures; without any Conſideration of Heights or Depths. See GEOMETRY; ſee alſo LINE and FIGURE.

The Word is particularly reſtrained to the Menſuration of Planes, or Surfaces; in oppoſition to *Stereometry*, or the Menſuration of Solids. See MEASURING.

PLANISPHERE, a Projection of the Sphere and the ſeveral Circles thereof, on a Plane; as, upon Paper, *&c.* See PLANE, SPHERE, and PROJECTION.

In this Senſe, Maps of the Heavens and the Earth, wherein are exhibited the Meridians, and other Circles of the Sphere, are called *Planiſpheres*. See MAP.

PLANISPHERE is ſometimes conſider'd as an Aſtronomical Inſtrument, uſed in obſerving the Motions of the heavenly Bodies; conſiſting of a Projection of the Celeſtial Sphere upon a Plane, repreſenting the Stars, Conſtellations, *&c.* in their proper Situations, Diſtances, *&c.* See STAR and CONSTELLATION.

Such is the Aſtrolabe, which is a common Name for all ſuch Projections. See ASTROLABE.

In all *Planiſpheres*, the Eye is ſuppoſed to be a Point viewing all the Circles of the Sphere, and referring them to a Plane whereon the Sphere is as it were flatten'd.—This Plane is call'd the *Plane of the Projection.*

A Perſpective Plane is only a Plane of Projection placed between the Eye and the Object, ſo as to contain all the Points which the ſeveral Rays drawn from the Object to the Eye impreſs thereon. (See PERSPECTIVE *Plane.*)—But in *Planiſpheres*, or Aſtrolabes, the Plane of the Projection is placed beyond the Object; which is the Sphere.

The Plane of the Projection is always ſome of the Circles of the Sphere. See CIRCLE.

Among the infinite Number of *Planiſpheres*, which the different Planes of Projection, and the different Poſitions of the Eye, would furniſh; there are two or three that have been preferr'd to the reſt.—Such are that of *Ptolomy*, where the Plane of Projection is parallel to the Equator.—That of *Gemma Friſius*, where the Plane of Projection is the Colure, or Solſtitial Meridian, and the Eye the Pole of the Meridian.—That of *John de Royas*, a *Spaniard*, whoſe Plane of Projection is a Meridian, and the Eye placed on the Axis of that Meridian, at an infinite Diſtance. This laſt is call'd the *Analemma.* See ANALEMMA.

The common Defect of all theſe Projections is, that they diſtort and alter the Figures of the Conſtellations, ſo as it is not eaſy to compare them with the Heavens; and that the Degrees in ſome Places are ſo ſmall, that they afford no Room for Operation.

All theſe Faults M. *de la Hire* has provided againſt in a new Projection, or *Planiſphere*; where 'tis propoſed the Eye ſhall be ſo placed, as that the Diviſions of the Circles projected ſhall be ſenſibly equal in every Part of the Inſtrument.——The Plane of his Projection is that of a Meridian.

PLANO-*Concave Glaſs*, or *Lens*, is that, one of whoſe Surfaces is concave, and the other plain. See GLASS.

The Concavity is here ſuppoſed to be ſpherical, unleſs the contrary be expreſs'd.——For the Properties, Grinding, *&c.* of *Plano-Concave Lens*'s, ſee LENS; ſee alſo GRINDING, *&c.*

PLANO-*Convex Glaſs*, or *Lens*, is that, one of whoſe Surfaces is convex, and the other plain. See CONVEX.

The Convexity is ſuppoſed to be ſpherical, unleſs the contrary be expreſs'd. For the Properties, Grinding, *&c.* of *Plano-Convex* Len's. See LENS, *&c.*

PLANT, PLANTA, an Organical Body, conſiſting of a Root, eſſentially, and probably too, a Seed; and producing uſually Leaves, a Stem, Branches, and Flowers. See ROOT, *&c.*

Or, a *Plant* may be defined, in *Boerhaave*'s manner, to be an Organical Body compoſed of Veſſels and Juices; to which Body belongs a Root or Part whereby it adheres to ſome other Body, and particularly the Earth, from which it derives the Matter of its Life, and Growth. See VEGETABLE.

A *Plant* is diſtinguiſhed from a *Foſſil* by its being organical, and conſiſting of Veſſels and Juices; (See FOSSIL.) and from an Animal, by its adhering to another Body, and deriving its Nouriſhment therefrom. See ANIMAL.

Plant is a general Name, under which are comprized all vegetable Bodies, as *Trees*, *Shrubs*, and *Herbs*. See TREE, SHRUB, and HERB.

From the Obſervations of *Malpighi*, Dr. *Grew*, M. *Reneaume*, *Bradley*, and others, there appears a great Similitude between the Mechaniſm of Plants, and Animals; the Parts of the former ſeem to bear a conſtant Analogy to thoſe of the latter; and the Vegetable and Animal Oeconomy appear both form'd on the ſame Model.——To give an Idea

hereof

hereof, it will be neceſſary to deſcribe the Parts whereof *Plants* conſiſt.

Structure and Oeconomy of PLANTS.

The Parts of *Plants* are——1° The *Root*, a ſpongy Body, whoſe Pores are diſpoſed to admit certain humid Particles prepared in the Ground: On the Size of the Veſſels and Pores of the Root, the Quality of the Root is found much to depend.——*Boerhaave* conſiders the Root as compos'd of a Number of abſorbent Veſſels, analogous to the Lacteals in Animals. And M. *Reneaume* takes it to do the Office of all the Parts in the Abdomen which miniſter to Nutrition; as the Stomach, Inteſtines, *&c.* See ROOT.

2° The *Wood*, which conſiſts of Capillary Tubes, running parallel from the Root throughout the Stalk.——The Apertures of theſe Tubules are ordinarily too minute to come under the cognizance of the Eye, unleſs in a Piece of Charcoal, Cane, or the like. Theſe Tubes Mr. *Bradley* calls *Arterial* Veſſels; it being thro' theſe that the Sap riſes from the Root. See WOOD.

3° Beſide theſe, are other larger Veſſels, diſpoſed on the out ſide of the Arterial Veſſels between the Wood and the inner Bark, and leading down to the Covering of the Root.—Theſe the ſame Author calls the *Venal* Veſſels, and ſuppoſes them to contain the liquid Sap found in Plants in the Spring, *&c.* See VEIN, SAP, *&c.*

4° The *Bark*, which is of a ſpongy Texture, and, by many little Strings paſſing between the Arteries, communicates with the Pith. See BARK.

5° The *Pith*, or *Pecten*, which conſiſts of little tranſparent Globules, chain'd together ſomewhat like the Bubbles that compoſe the Froth of Liquor. See PITH.

Add, that the Trunk and Branches of a Tree bear a Reſemblance to the exterior Members or Limbs of an Animal, which it may ſubſiſt without, tho' their rotting and Mortification frequently occaſion a total Deſtruction thereof.—Accordingly, we find the like Effects from the wounding or lopping of a Tree, as that of a Limb, *viz.* an Extravaſation, Callus, *&c.*

Now, for the Oeconomy or Uſe of theſe Parts.—The Root having imbibed the ſaline and aqueous Juices of the Earth, and fill'd itſelf therewith for the Nouriſhment of the Tree; thoſe are put in Motion by Heat, *i. e.* are made to evaporate into Steam, which from the Root enters the Mouths of the Arterial Veſſels, and mounts to the top with a force anſwerable to the Heat that puts it in Motion.—By this means it gradually opens the minute Vaſcules roll'd up in the Buds, and expands them into Leaves.—Now, as all Vapours, upon feeling the Cold, naturally condenſe; ſo this, when arrived at the extreme Parts of the Arteries, *i. e.* the Buds of the Tree, meeting the cold Air condenſes into a Liquor, in which Form it returns by its own Weight, thro' the Venal Veſſels, to the Root; leaving behind it ſuch Parts of its Juice, as the Texture of the Bark will receive, and requires for its Suſtenance.

Thus does the Juice continue to circulate; till the Winter's Cold congealing it into the Conſiſtency of a Gum, it ſtagnates in the Veſſels; in which State it remains till the freſh Warmth of the ſucceeding Spring puts it in Motion again: upon which it renews its former Vigour, puſhes forth Branches, Leaves, *&c.*

This ſhort View of the Vegetable Oeconomy will bear ſome further Illuſtration; there being ſeveral curious Points here couched, and, as it were, folded up *in Semine*.—The Principle, then, whereby the Root, after imbibing its Food, determines it to mount upward, contrary to its natural Gravity, is ſomewhat obſcure: Some will have it effected by means of the Preſſure of the Atmoſphere, in the ſame manner as Water is rais'd in Pumps: But this is precarious, as being founded on a Suppoſition that the abſorbent Tubules are void of Air; beſides, that the Atmoſphere could not raiſe the Juice 32 Foot high, whereas there are Trees much higher. See ATMOSPHERE.——Others have recourſe to the Principle of Attraction, and ſuppoſe the Power that raiſes the Sap in Vegetables to be the ſame with that whereby Water aſcends in Capillary Tubes, or in Heaps of Sand, Aſhes, or the like; but neither will this alone ſuffice to raiſe Water to the Tops of Trees. See ATTRACTION, ASCENT, CAPILLARY, *&c.*

One would ſuſpect, therefore, that the firſt Reception of the Food, and its Propagation thro' the Body, were effected by different Means; which is confirmed by the Analogy of Animals. See FOOD, HEART, *&c.*

The Motion of the Nutricious Juices of *Plants* is produced much like that of the Blood in Animals, by the Action of the Air; in effect, there is ſomething equivalent to Reſpiration throughout the whole *Plant*. See RESPIRATION.

The Diſcovery of this we owe to the admirable *Malpighi*, who firſt obſerved that Vegetables conſiſt of two Series or Orders of Veſſels.——1° Thoſe abovementioned, which receive and convey the alimental Juices; anſwering to the Arteries, Lacteals, Veins, *&c.* of Animals.——2° Tracheæ, or Air-Veſſels, which are long hollow Pipes, wherein Air is continually received and expelled, *i. e.* inſpired and expired; within which Tracheæ, the ſame Author ſhews, all the former Series of Veſſels are contained. See TRACHEA.

Hence it follows, that the Heat of the Year, nay, of a Day, of a ſingle Hour, or Minute, muſt have an effect on the Air included in theſe Tracheæ, *i. e.* muſt rarify it, and conſequently dilate the Tracheæ; whence alſo muſt ariſe a perpetual Spring, or Source of Action, to promote the Circulation in *Plants*. See HEAT, RAREFACTION, *&c.*

For, by the Expanſion of the Tracheæ, the Veſſels containing the Juices, are preſſed; and by that Means the Juice contained is continually propelled and ſo accelerated; by which ſame Propulſion, the Juice is continually comminuted and rendred more and more ſubtile, and ſo enabled to enter Veſſels ſtill finer and finer; the thickeſt Part of it being at the ſame time ſecreted and depoſited into the lateral Cells, or Loculi of the Bark, to defend the Plant from Cold, and other external Injuries. See BARK.

The Juice having thus gone its Stage, from the Root to the remote Branches, and even the Flower; and having in every Part of its Progreſs depoſited ſomething both for Aliment and Defence; what is redundant paſſes out into the Bark, the Veſſels whereof are inoſculated with thoſe wherein the Sap mounted; and thro' theſe it redeſcends to the Root, and thence to the Earth again.—And thus is a Circulation effected. See CIRCULATION *of the Sap*.

Thus is every Vegetable acted on by Heat during the Day-time, eſpecially while the Sun's Force is conſiderable; and the Sap-Veſſels thus ſqueez'd and preſſed, and the Sap protruded, and raiſed, and at length evacuated, and the Veſſels exhauſted: And in the Night again, the ſame Tracheæ being contracted by the Cold of the Air, the other Veſſels are eaſed and relaxed, and ſo diſpoſed to receive freſh Food for the next Days Digeſtion, and Excretion.—And thus *Plants* may be ſaid to eat and drink in the Night-time. See NUTRITION.

The Veſſels or containing Parts of *Plants*, conſiſt of meer Earth, bound or connected together by Oil, as a Gluten; which being exhauſted by Fire, Air, Age, or the like, the *Plant* moulders, or returns again into its Earth, or Duſt.—Thus in Vegetables burnt by the intenſeſt Fire, the Matter of the Veſſels is left entire, and indiſſoluble by its utmoſt Force; and, conſequently, is neither Water, nor Air, nor Salt, nor Sulphur, but Earth alone. See EARTH.

The Juice, or Sap, of a *Plant*, is a Humour furniſhed by the Earth, and changed in the *Plant*; conſiſting of ſome foſſil Parts, other Parts derived from the Air, and Rain; and others from putrified Animals, Plants, *&c.* conſequently, in Vegetables are contained all kind of Salts, Oil, Water, Earth; and probably all kinds of Metals too, inaſmuch as the Aſhes of Vegetables, always yield ſomewhat which the Loadſtone attracts. See IRON, MAGNET, *&c.*

This Juice enters the *Plant* in Form of a fine and ſubtile Water, which the nearer it is to the Root, the more it retains of its proper Nature; and the further from the Root, the more action it has ſuſtained, and the nearer it approaches to the Nature of the Vegetable. See DIGESTION.

Conſequently, when the Juice enters the Root, the Bark whereof is furniſhed with excretory Veſſels fitted to diſcharge the excrementitious Part; it is earthy, watry, poor, acid, and ſcarce oleaginous at all. See SAP.

In the Trunk and Branches it is further prepared; tho' it ſtill continues acid, as we ſee by the tapping or perforating of a Tree in the Month of *February*, when it diſtils a watry Juice apparently acid. See TAPPING.

The Juice being hence carried to the Germs, or Buds, is more concocted; and here having unfolded the Leaves, theſe come to ſerve as Lungs for the Circulation and further Preparation of the Juice.——For thoſe tender Leaves being expoſed to the alternate Action of Heat and Cold, moiſt Nights and hot ſcorching Days, are alternately expanded and contracted; and the more on the account of their reticular Texture. See LEAVES.

By ſuch means the Juice is ſtill further altered and digeſted; as it is further yet in the *Petala*, or Leaves of the Flowers, which tranſmit the Juice, now brought to a further Subtility, to the *Stamina*.——Theſe communicate it to the *Farina*, or Duſt in the Apices; where having undergone a further Maturation, it is ſhed into the *Piſtil*; and here having acquired its laſt Perfection, it give Riſes to a new Fruit or *Plant*. See PETALA, STAMINA, APICES, FARINA, PISTIL, *&c.*

Generation of PLANTS.

The Generation of Plants does alſo bear a cloſe Analogy to that of ſome Animals; particularly ſuch as want Local Motion; as Muſſels, and other immoveable Shell-Fiſh, which are Hermaphrodites, and contain both the Male and Female Organs of Generation. See HERMAPHRODITE.

The Flower of the *Plant*, for all its Finery, is found to be the Pudendum, or principal Organ of Generation; but the Uſe of ſo much Mechaniſm, and ſo many Parts has been but little known.——We ſhall inſtance in a Tulip.

Its Flower conſiſts of ſix *Petala*, or Leaves; from the Bottom whereof, at the middle, ariſes a kind of Tube called the *Piſtil*; and around this are diſpoſed pretty fine Threads called *Stamina*, ariſing likewiſe from the Bottom of the Flower, and terminating in little Bunches a-top, call'd *Apices*, replete with a fine Duſt call'd *Farina*.—For the further Explanation of the Parts of Generation ſee PISTIL, STAMEN, FARINA, *&c.*

This is the general Structure of the Flowers of *Plants*, tho' diverſified infinite Ways, and to ſuch degree, that ſome have no ſenſible Piſtil, others no Stamina; others have Stamina without any Apices; and what exceeds all the reſt ſome *Plants* have no Flowers.—But, allowing the Structure now repreſented to be, as in effect it is, the moſt common; and that theſe Parts which ſeem wanting are uſually only leſs apparent: The Generation of *Plants*, in general, may be well accounted for.

The Fruit is uſually at the Baſis of the Piſtil, ſo that when the Piſtil falls, with the reſt of the Flower, the Fruit appears in its ſtead.—Indeed, frequently, the Piſtil is the Fruit itſelf; but ſtill they have both the ſame Situation in the Center of the Flower, whoſe Leaves diſpoſed around the little Embryo, only ſeem deſtined to prepare a fine Juice in their little Veſſels, for its Support, during the little Time they laſt, and it requires: tho' Mr. *Bradley* takes their chief Uſe to be to defend the Piſtil, *&c.*

The Apices of the Stamina are little Capſulæ, or Bags full of a Farina or Duſt, which upon the Capſulæ growing ripe and burſting, fall out.

M. *Tournefort* took this Duſt to be only an Excrement of the Food of the Fruit, and the Stamina to be no more than a kind of excretory Ducts, which filtrated this uſeleſs Matter, and thus diſcharg'd the Embryo-*Plant*. But Mr. *Morland*, M. *Geoffroy*, and others, find nobler Uſes for this Duſt.——According to their Syſtem, 'tis this Duſt that falling on the Piſtil fecundifies the Grain or Fruit incloſed therein; and hence they call it the *Farina fœcundans*.—Thus the Farina ſhould be the Male Part of the *Plant*, and the Piſtil the Female.

Mr. *Bradley*, at the bottom of the Piſtil of the Lilly, obſerves a Veſſel which he calls the *Uterus*, or *Womb*, wherein are three Ovaries fill'd with little Eggs, or Rudiments of Seed, like thoſe found in the Ovaria of Animals; which, he adds, always decay and come to nothing, unleſs impregnated by the Farina of the ſame Plant, or ſome other of the ſame Kind.—The Stamina, he ſays, ſerve for the Conveyance of the Male Seed of the *Plant*, to be perfected in the Apices; which when ripe, burſting forth in little Particles like Duſt, ſome of them fall into the Orifice of the Piſtil, and are either conveyed thence into the Utricle, to fecundify the female Ova, or lodg'd in the Piſtil, where, by their magnetic Virtue, they draw the Nouriſhment from the other Parts of the *Plant* into the Embryo's of the Fruit, making 'em ſwell, grow, *&c.*

The Diſpoſition of the Piſtil, and the Apices about it, is always ſuch, as that the Farina may fall on its Orifice.—'Tis uſually lower than the Apices; and when we obſerve it to be grown higher, we may conjecture the Fruit has begun to form itſelf, and has no further occaſion for the Male Duſt. Add to this, that as ſoon as the Work of Generation is over, the Male Parts, together with the Leaves, fall off, and the Tube leading to the Uterus begins to ſhrink. Nor muſt it be omitted, that the top of the Piſtil is always either cover'd with a ſort of Velvet Tunicle, or emits a gummy Liquor, the better to catch the Duſt of the Apices.—In Flowers that turn down, as the Acanthus, Cyclamen, and the Imperial Crown, the Piſtil is much longer than the Stamina; that the Duſt may fall from their Apices in ſufficient Quantity on the Piſtil.

This Syſtem favours much of that admirable Uniformity found in the Works of Nature; and carries with it all the ſeeming Characteriſticks of Truth; but 'tis Experience alone muſt determine for it.—Accordingly, M. *Geoffroy* tells us, that all the Obſervations he had ever made, the *Plant* was rendred barren, and the Fruits became abortive, by cutting off the Piſtils before the Duſt could impregnate them; which is ſince confirm'd by other Experiments of Mr. *Bradley*.

In many kinds of *Plants*, as the Willow, Oak, Pine, Cypreſs, Mulberry-Tree, *&c.* the Flowers are ſterile, and ſeparate from the Fruit. But theſe Flowers, M. *Geoffroy* obſerves, have their Stamina and Apices, whoſe Farina may eaſily impregnate the Fruits, which are not far off.

Indeed there is ſome Difficulty in reconciling this Syſtem to a Species of *Plants* which bear Flowers without Fruits, and another Species of the ſame Kind and Name which bear Fruits without Flowers; hence diſtinguiſh'd into *Male* and *Female:* of which kind are the Palm-Tree, Poplar, Hemp, Hops, *&c.*—For how ſhould the Farina of the Male, here come to impregnate the Seed of the Female?

M. *Tournefort* conjectures, that the fine Filaments, Tomentum, or Down, always found on the Fruits of theſe *Plants*, may ſerve inſtead of Flowers, and do the Office of Impregnation.—But M. *Geoffroy* rather takes it, that the Wind, doing the Office of a Vehicle, brings the Farina of the Males to the Females.

In this opinion he is confirm'd by a Story in *Jovianus Pontanus*; who relates, That in his Time there were two Palm-Trees, the one Male, cultivated at *Brindes*, the other Female, in the Wood of *Ottrantum*, 15 Leagues a-part; that this latter was ſeveral Years without bearing any Fruit; till at Length riſing above the other Trees of the Foreſt, ſo as it might ſee (ſays the Poet) the Male Palm-Tree at *Brindes*, it then began to bear Fruit in abundance.

Here, M. *Geoffroy* makes no doubt, the Tree then only began to bear Fruit, becauſe in a Condition to catch on its Branches the Farina of the Male, brought thither by the Wind.

For the manner wherein the Farina fecundifies; M. *Geoffroy* advances two Opinions.——1° That the Farina being always found of a ſulphurous Compoſition, and full of ſubtile penetrating Parts, (as appears from its ſprightly Odour) falling on the Piſtils of the Flowers; there reſolves, and the ſubtileſt of its Parts penetrating the Subſtance of the Piſtil and the young Fruit, excite a Fermentation ſufficient to open and unfold the young *Plant* incloſed in the Embryo of the Seed.—In this Hypotheſis the Seed is ſuppoſed to contain the *Plant* in Miniature, and only to want a proper Juice to unfold its Parts and make them grow.

The 2d Opinion is, that the Farina of the Flower is the firſt Germ, or Bud of the new *Plant*, and needs nothing to unfold it and enable it to grow, but the Juice it finds prepared in the Embryo's of the Seed.

Theſe two Theories of Vegetable Generation, the Reader will obſerve, bear a ſtrict Analogy to thoſe two of Animal Generation: *viz.* either that the young Animal is in the *Semen Maſculinum*, and only needs the Juice of the Matrix to cheriſh and bring it forth; or that the Animal is contained in the Female Ovum, and needs only the Male Seed to excite a Fermentation, *&c.* See CONCEPTION, GENERATION, *&c.*

M. *Geoffroy* rather takes the proper Seed to be in the Farina; inaſmuch as the beſt Microſcopes don't diſcover the leaſt Appearance of any Bud in the little Embryo's of the Grains, when examined before the Apices have ſhed their Duſt.—In leguminous *Plants*, if the Leaves and Stamina be removed, and the Piſtil, or that Part which becomes the Pod, be viewed with the Microſcope, e'er yet the Flower be opened; the little green tranſparent Veſiculæ, which are to become the Grains, will appear in their natural Order; but ſtill ſhewing nothing elſe but the mere Coat, or Skin of the Grain. If the Obſervation be continued for ſeveral Days ſucceſſively, in other Flowers, as they advance, the Veſiculæ will be found to ſwell, and by degrees to become replete with a limpid Liquor; wherein, when the Farina comes to be ſhed, and the Leaves of the Flower to fall, we obſerve a little greeniſh Speck, or Globule, floating about at large.—At firſt there is not any Appearance of Organization in this little Body; but in time, as it grows, we begin to diſtinguiſh two little Leaves like two Horns. The Liquor diminiſhes inſenſibly, as the little Body grows, till at length the Grain becomes quite opake; when, upon opening it, we find its Cavity fill'd with a young *Plant* in Miniature; conſiſting of a little Germ or *Plumula*, a little Root, and the Lobes of the Bean or Pea.

The manner wherein this Germ of the Apex enters the Veſicula of the Grain, is not very difficult to determine.—For, beſides that the Cavity of the Piſtil reaches from the top, to the Embryo's of the Grains, thoſe Grains, or Veſiculæ, have a little Aperture correſponding to the Extremity of the Cavity of the Piſtil, ſo that the ſmall Duſt, or Farina, may eaſily fall thro' the Aperture into the Mouth of the Veſſels, which is the Embryo of the Grain.—This Cavity, or Cicatricula, is much the ſame in moſt Grains, and 'tis eaſily obſerved in Peaſe, Beans, *&c.* without the Microſcope. The Root of the little Germ is juſt againſt this Aperture, and 'tis thro' this it paſſes out when the little Grain comes to germinate.

The Proceſs of Nature in the Generation of Vegetables, and the Apparatus ſhe has contrived for that Purpoſe are ſo curious, and withal ſo little and ſo lately known among us, that we ſhall illuſtrate them further with Figures; taking the Melon for our Example, in regard the Parts of Generation are here very diſtinct.

By the way it muſt be obſerved, that tho' the Melon contains both Sexes, yet the Diſpoſition of the Organs differs, here, from the general one above rehears'd in the Inſtance of the Tulip: In effect, in the Melon are two diſtinct Flowers, or Bloſſoms, the one doing the Male Office, the other the Female; which we ſhall therefore call the *Male* and *Female Flower*.

Fig. 13. (*Tab. Nat. Hiſtory*) repreſents the Male Flower, or Bloſſom, of the Melon, the Leaves being ſtripp'd from off the Circle F F;——A B E repreſent the Head, placed in the Center of the Flower, and form'd of the Circumvolutions of the Apices B, and ſuſtained by four Columns G G G G. ——The Part B of the Head repreſents the Circumvolutions of the Apices while yet ſhut; and the Part E repreſents them open, and covered with the Farina, which they before contained, but which is diffuſed on the outſide when the *Plant* arrives at Maturity. Each Apex forms a kind of Canal ſeparate by a Partition into two. A Grain of the Farina is repreſented by D. ——*Fig.* 14. H, in the former Figure, repreſents the Pedicle that ſuſtains the Flower, and which in the Male-Flower produces nothing.

Fig. 15. repreſents the Female Flower or Bloſſom of the Melon, or that which bears the Fruit.——The Leaves are ſtripp'd off the Circle F F, as before, the better to ſhew the other Parts. The Knot of the Flower, or the Embryo of the Fruit is repreſented by A. The Piſtil is repreſented by B B; and is only a Continuation of the Embryo of the Fruit A. The top of the Piſtil ſpreads, in B B, into ſeveral oblong Bodies, each ſeparable into two Lobes. Theſe Bodies are very rough, furniſh'd with Hairs and little Veſicles proper to catch the Duſt of the Male Flower, and to conduct them to the Mouths of the Canals, which communicate as far as the Cells of the Grains contained in the young Fruit. Upon cutting the Piſtil tranſverſely in its ſmalleſt Part, we find as many Canals as there are Diviſions in its Head; which Canals correſpond to as many little Cells, each including two Orders of Grains, or Seeds, ranged in a ſpongy Placenta.

This Doctrine of Generation, affords us a Hint how to alter, improve, *&c.* the Taſte, Form, Flowers, Quality of Fruits, *&c. viz.* by impregnating the Flower of one, with the Farina of another of the ſame Claſs.

To this accidental coupling and intermixing it is, that the numberleſs Varieties of new Fruits, Flowers, *&c.* produced every Day; with many other Phænomena in the vegetable Kingdom; are to be aſcribed. See MULE.

The Affectation of Perpendicularity obſerved in the Stalks or Stems of *Plants*, as well as in their Branches and Roots makes a fine Speculation.——'Tis a Phænomenon never attended to till very lately. The Cauſe is very ſubtile, and has employ'd the Wits of ſeveral of the preſent Set of Philoſophers, particularly *Aſtruc*, *de la Hire*, *Dodart*, and *Parent*; ſee their ſeveral Syſtems under the Article PERPENDICULARITY.

Nor is that conſtant Paralleliſm obſerved in the Tufts of Trees, to the Soil or Ground they grow upon; a Circumſtance to be over-look'd. See PARALLELISM.

For the Fecundity of Plants, &c. See FECUNDITY, &c.

Diſtribution of PLANTS.

Plants may be divided, with regard to the manner of their generating, into 1° *Male*, or ſuch as bear no Fruit or Seed, and have only the Male Organ of Generation, *viz.* the Farina.—Of this kind are the Male Palm-Tree, Willow, Poplar, Hemp, Nettle, and Hop-Tree.

2° *Female*, or ſuch as bear Fruit, and have the female Organ, *viz.* the Piſtil, or Uterus, but want the Farina.—Such are the female Palm, Willow, Poplar, *&c.*

3° *Hermaphrodites*, or ſuch as have both male and female Parts, the Farina and Piſtil.

Theſe are again ſubdivided into thoſe in whoſe Flower both Sexes are united; as the Lilly, Gilliflower, Tulip, and much the greater Part of the vegetable Species; whoſe Piſtil is ſurrounded by the Stamina.——And thoſe whoſe male and female Parts are diſtinct, and at a Diſtance from each other; ſuch is the Roſe, whoſe Uterus is beneath the Petala; the Melon, and all of the Cucumber Kind, which have their male and female Flowers a-part; and all Fruit, Nut, and Maſt-bearing Trees, as the Apple, Plum, Gooſberry; the Walnut, Hazle, Philbud, Oak, Beech, Pine, Cypreſs, Cedar, Juniper, Mulberry, Plantane, *&c.* which have Catkins.

Plants may be again diſtinguiſhed, with regard to their Food, and the Element they live in; into—1° *Terrene*, which are thoſe that live only on Land; as Oaks, Beech, *&c.*

2° *Aquatic*, which live only in Water; either in Rivers, as the Water-Lilly, Water-Plantane, *&c.* or in the Sea, as the Fucus, Coral, Coralline, *&c.*

3° *Amphibious*, which live indifferently either in Land or Water; as the Willow, Alder, Minths, *&c.*

Plants are again diſtributed, with regard to their Age or Period, into 1° *Annual*, which are thoſe whoſe Root is form'd and dies in the ſame Year; ſuch are the leguminous *Plants*, Wheat, Rye, *&c.* 2° *Biſannuals*, which only produce Flowers and Seeds, the ſecond or even third Year after their being rais'd, and then die; ſuch are Fennel, Mint, *&c.* 3° *Perennial*, which are thoſe that never die after they have once bore Seed; of theſe ſome are Ever-Greens, as the Aſarabacca, Violet, *&c.* others loſe their Leaves one Part of the Year, as Fern, Colts-foot, *&c.*

Plants again are diſtinguiſhed with regard to their Magnitude, *&c.* into, 1° *Trees*, Arbores; as the Oak, Pine, Fir, Elm, Sycamore, *&c.*—2° *Shrubs*, Suffrutices; as the Holly, Box, Ivy, Juniper, *&c.* and—3° *Herbs*, as Mint, Sage, Sorrel, Thyme, *&c.* See TREE, SHRUB, and HERB.——But this Diviſion is rather popular, than juſt and philoſophical.

The Botaniſts give us more accurate and minute Arrangements, or Diſtributions, of the Vegetable Kingdom, into Claſſes, Genera, Species, *&c.* with regard to their Nature, Characters, *&c.* 'Tis a Point they are not well agreed upon from what Conſideration the Diviſion into Genera is beſt taken; ſome, as *Geſmer*, *Columna*, *Tournefort*, &c. chuſing the Flower and Fruit; and others taking in the Roots, Leaves, Stems, *&c.* See farther under the Article GENUS.

Our ingenious Mr. *Ray* diſtributes *Plants* into 25 Genera, or Claſſes, under the following Denominations.

1° *Imperfect Plants* which are ſuch as appear to want the Flower and Seed.—Such are, Corals, Sponges, Fungus's, Truffles, Moſs. See CORAL, SPUNGE, MUSHROOM, TRUFFLE, and MOSS.

2° *Plants* producing an *imperfect Flower*, and *whoſe Seed is too ſmall to be diſcerned* by the naked Eye;—ſuch are Fern, Polypody, *&c.* See FLOWER.

3° Thoſe whoſe *Flowers want Petala*;——ſuch are Hops, Hemp, Nettles, Docks. See PETALA, HOPS, *&c.*

4° Thoſe with a *compound Flower*, and which emit a milky Juice when cut or broke; as Lettuce, Dandelion, Succory, *&c.* See *Compound* FLOWER.

5° Thoſe with a *compound Flower of a diſcous Form*, and whoſe *Seed is winged* with Down; as Colts-foot, Flea-bane, *&c.* See WINGED.

6° *Herbæ capitatæ*, or thoſe whoſe Flower is compoſed of long fiſtulous Flowers gathered into a round Head, and covered with a ſcaly Coat; as the Thiſtle, great Burdock, Blue-bottle, *&c.*

7° *Corymbiferous Plants* with a diſcous Flower, but no Down; as the Daiſy, Yarrow, Corn-Marygold, *&c.* See CORYMBUS.

8° *Plants* with a *perfect Flower*, but only one Seed to each Flower, as Valerian, Agrimony, Burnet, *&c.*

9° *Umbelliferous Plants*, with a Flower of five Petala, and two Seeds to each Flower, See UMBELLÆ.——This being a large Genus is ſubdivided into ſeven Species, *viz.* thoſe with a broad flat Seed like a Leaf, as wild Garden Parſnip: with a longiſh and larger Seed, ſwelling in the middle, as Cow-weed, and wild Chervil: with a ſhorter Seed, as Angelica: with a tuberous Root, as the Earth-nut: with a ſmall ſtriated Seed, as Caraways, Saxifrage, and Burnet: with a rough hairy Seed, as Parſly, and wild Carrot: with intire Leaves ſubdivided into Jags, as Senicle, and Thoro-Wax.

10° *Stellate Plants*, whoſe Leaves grow round the Stalks, at certain Intervals, in form of Stars; as Mug-Weed, Madder, *&c.* See STELLATE.

11° *Rough leaved Plants*, which have their Leaves placed alternately, or in no certain Order along the Stalks; as Hounds-Tongue, Mouſe-Ear, *&c.*

14° *Suffrutices*, or *Verticillate Plants*, whoſe Leaves grow by pairs, on their Stalks, one Leaf right againſt another, the Flower being monopetalous, and uſually in form of a Helmet; as Thyme, Mint, Pennyroyal, Vervain, *&c.* See VERTICILLATE.

13° *Polyſpermous*, or thoſe with many naked Seeds, at leaſt five, ſucceeding their Flower; as Crows-foot, Marſh-Mallows, Cinquefoil, Strawberries, *&c.* See POLYSPERMOUS.

14° *Bacciferous Plants*, or ſuch as bear Berries; as Briony, Honeyſuckle, Solomon's-Seal, Lilly of the Valley, Nightſhade, Aſparagus, *&c.* See BACCIFEROUS, BERRY, *&c.*

15° *Multiſiliquous*, or *Corniculate Plants*, which after each Flower produce ſeveral long ſlender Siliquæ, or Caſes wherein their Seed is contained; as Orpine, Navel-wort, Bears-foot, Columbines, *&c.* See MULTISILIQUOUS, *&c.*

16° *Vaſculiferous Plants*, or thoſe with a *Monopetalous Flower*, and which, after each Flower, have a Veſſel beſide the Calyx, containing the Seed; as Henbane, Bindweed, Rampions, Fox-Glove, Eye-Bright, *&c.* See VASCULIFEROUS, *&c.*

17° Thoſe with an *uniform tetrapetalous Flower*, bearing their Seeds in oblong ſiliquous Caſes; as Stockgilly-Flower, Muſtard, Radiſh, *&c.*

18° *Vaſculiferous Plants*, with a *ſeeming tetrapetalous Flower*, but of an anomalous or uncertain kind, and in reality only monopetalous, falling off altogether in one; as Speedwell, Fluellin, Plantane, yellow and wild Poppy, *&c.*

19° *Leguminous Plants*, or ſuch as bear Pulſe, with a Papilionaceous Flower, conſiſting of four Parts joined at the Edges; as Peaſe, Beans, Vetches, Tares, Lentils, Liquorice, Trefoil, *&c.* See LEGUMINOUS.

21° *Plants*

20° *Vaſculiferous Plants*, with a *pentapetalous* or five headed *Flower*; as Maiden-Pinks, Campions, Chickweed, St. Johns-Wort, Flax, Primroſe, Wood-Sorrel, *&c.*

21° *Plants* with a *true bulbous Root*; as Garlick, Daffodil, Hyacinth, Saffron, *&c.* See BULB.

22° Thoſe whoſe *Roots approach nearly to the bulbous Form*; as Flower-de-luce, Cuckoo-pint, Baſtard Hellebore, *&c.*

23° *Culmiferous Plants*, with a graſſy Leaf, and an imperfect Flower, having a ſmooth hollow jointed Stalk, with a long ſharp pointed Leaf at each Joint, and the Seeds contained in a chaffy Husk; as Wheat, Barley, Rye, Oats, and moſt kinds of Graſs. See CULMIFEROUS.

24° *Plants* with a *graſſy Leaf*, but *not Culmiferous*, with an imperfect or ſtamineous Flower; as Ruſhes, Cats-Tail, *&c.*

25° *Plants* whoſe *Place of Growth is uncertain*; chiefly Water-Plants, as the Water-Lilly, Milk-Wort, Mouſe-Tail, *&c.*

For the Tranſmutation of one Species of Plants *into another.* See TRANSMUTATION, DEGENERATION, *&c.*

The Properties and Virtues of *Plants* have been obſerved by ſome Naturaliſts to bear an Analogy to their Forms.—In the *Philoſophical Tranſactions*, we have a Diſcourſe of Mr. *James Pettiver*, to ſhew, That *Plants* of the ſame or like Figure, have the ſame or like Virtues and Uſes.—Thus, the Umbelliferous Tribe, he obſerves, have all a Carminative Taſte and Smell, are powerful Expellers of Wind, and therefore good in all flatulent Diſorders.—The Galleate or Verticillate Kind are a Degree warmer, and more powerful than the laſt, and therefore may be reputed Aromatick, being proper for Nervous Diſorders.—The Tetrapetalous Kind are hot like the two former, but exert their Power in a different Way, *viz.* by a Diuretick Volatile Salt, which makes them of Uſe in Chronical Diſeaſes, Obſtructions, Cachymias, *&c.*

PLANTA, in Anatomy, the loweſt Part, or Sole of the Foot of Man. See FOOT and SOLE.

PLANTAGENET, in Hiſtory, an Addition, or Sur-Name, bore by many of our ancient Kings. See SURNAME, *&c.*

The Term *Plantagenet* has given infinite Perplexity to the Criticks and Antiquaries, who could never ſettle its Origin and Etymology.—'Tis allowed it firſt belonged to the Houſe of *Anjou*, and was brought to the Throne of *England* by *Henry* II. where his Male Poſterity preſerved it till the Time of *Henry* VII. a Space of above 400 Years.

'Tis diſputed who it was that firſt bore the Name. Moſt of our *Engliſh* Authors conclude, that our *Henry* II. inherited it from his Father *Geoffrey* V. Earl of *Anjou*, Son of *Fulk* V. King of *Jeruſalem*, who died in 1144.—This *Geoffrey* they will have the firſt of the Name; and our *Henry* II. the Iſſue of *Geoffrey* by *Maud* only Daughter of *Henry* I. the ſecond.

Yet *Menage* will not allow *Geoffrey* to have bore the Name; and in effect the old Annaliſt of *Anjou*, *J. Bourdigne*, never calls him ſo.—The firſt, *Menage* adds, to whom he gives the Appellation, is *Geoffrey* third Son of this *Geoffrey* V.

Yet muſt the Name be much more ancient than either of theſe Princes, if what *Skinner* ſays of its Origin and Etymology be true.—That Author tells us, that the Houſe of *Anjou* derived the Name from a Prince thereof, who having kill'd his Brother to enjoy his Principality, took to Repentance, and made a Voyage to the *Holy Land* to expiate his Crime; diſciplining himſelf every Night with a Rod made of the Plant *Genêt*, *Geniſta*, Broom; whence he became nick-named *Planta-genêt.*

Now, 'tis certain that our *Geoffrey* made the Tour of *Jeruſalem*; but then he did not kill his Brother; nor did he go there out of Penance, but to aſſiſt King *Amauris* his Brother.—Who then ſhould this Prince of the Houſe of *Anjou* be? Was it *Fulk* IV? 'Tis true he diſpoſſeſs'd his elder Brother *Geoffrey*, and clapt him in Priſon, but did not kill him; nay, *Bourdigne* obſerves, he was even releaſed out of the ſame by his Son *Geoffrey* V. already mentioned.

Further, this *Fulk* did make a Journey to *Jeruſalem*, and that, too, partly out of a penitential View; we are aſſured by *Bourdigne*, he did it out of Apprehenſion of the Judgments of God and eternal Damnation, for the great Effuſion of Chriſtian Blood, in the many mortal Battles he had been in.—The Annaliſt adds, that he made a ſecond Voyage; but 'twas to return God Thanks for his Mercies, *&c.* To which we may add, that *Fulk* was never call'd *Plantagenet*; ſo that what *Skinner* advances appears to be a Fable.

There is another common Opinion which appears no better founded; and 'tis this, that the Name *Plantagenet* was common to all the Princes of the Houſe of *Anjou*, after *Geoffrey* V; whereas in Fact the Name was only given to a few; and that, as it ſhould ſeem, to diſtinguiſh them from the reſt. Thus *Bourdigne* never applies it to any but the third Son of *Geoffrey* V; and diſtinguiſhes him by this Appellation from the other Princes of the ſame Family.—Tho' 'tis certain it was likewiſe given to the elder Brother, *Henry* of *England*, as before obſerved.

PLANTARIS, in Anatomy, a Muſcle which has a fleſhy Beginning, from the back part of the external Protuberance of the Thigh-bone, and deſcending a little way between the Gemellus and Soleus, becomes a long and ſlender Tendon, which marches by the inſide of the great Tendon over the Os Calcis to the bottom of the Foot; and expands itſelf under the Sole, upon the Muſculus perforatus, to which it adheres cloſely, as the Palmaris does in the Hand. See FOOT, PALMARIS, *&c.*

Some reckon this among the Extenders of the Foot. See EXTENSOR.

PLANTATION, in the Colonies, a Spot of Ground which ſome Planter or Perſon arrived in a new Colony, pitches on to cultivate and till for his own Uſe. See COLONY.

PLANTING, in Agriculture and Gardening, the ſetting of a Tree, or Plant, taken up from its former Place, in a new Hole or Pit proportionable to its Bulk; throwing freſh Earth over its Root, and filling up the Hole to the Level of the other Ground. See PLANT, TRASNSPLANTING, GARDENING, *&c.*

PLANTING *an Orchard.* See ORCHARD.

PLANTING *of Foreſt-Trees.* See SEMINARY, TREE, *&c.*

PLANTING *of Wall-Fruit-Trees.*—After 2 Years Growth in the Nurſery, Stone-Fruit, being firſt inoculated or grafted, are ready for Removal; which is beſt done in *October* or *November.*

To prepare the Soil for its new Gueſt; a Hole is dug 2 foot deep; or if the Soil be not very good, the Pit is made ſhallower, and Earth rais'd above it.—With the Soil dug up, they frequently mix either a rich Soil from elſewhere; or a Manure, ſo as the Mixture be at leaſt as rich as the Soil out of which the Plant came.

The Hole being half fill'd up with this Compoſt, it is trodden down, to afford a firm Reſt to the Root, all the Extremities whereof are cut off, and the Tree fitted to the Wall by cutting off ſuch Branches as grow directly either towards or from-wards the Wall, and leaving only the ſide Branches, which are to be nailed to it.

This done, the Tree is ſet in its Hole, as far from the Wall as is conſiſtent with the Heads ſpreading thereon; that the Root may have the more room backwards, and the Hole then fill'd up with the Compoſt.

If the Soil be poor 'tis proper to manure round the Tree; and in the end of *February*, to cover it with Fern or Straw.—'Twill be neceſſary to prune and nail the Tree to the Wall, at leaſt twice or thrice every Year. See WALL-*Fruit.*

Reverſe-PLANTING, is a Method of Planting wherein the ordinary Poſition of the Plant, or Shoot, is inverted; the Branches being ſet in the Earth, and the Roots rear'd into the Air.

Agricola mentions this monſtrous Way of *planting*, which he aſſures us ſucceeds very well in moſt, or all ſorts of Fruit-Trees, Timber-Trees, *&c.* foreign and domeſtick.

Bradley affirms us to have ſeen a Lime-Tree in *Holland* growing with its firſt Roots in the Air, which had ſhot out Branches in great Plenty; at the ſame time that its firſt Branches were turned into Roots and fed the Tree.

The induſtrious Mr. *Fairchild* has practiſed the ſame at home; and gives us the following Directions for the Performance thereof.

Chuſe a young Tree of one Shoot, of Alder, Elm, Willow, or any other Tree that takes root readily by laying. Bend the Shoot gently down till the extreme Part be in the Earth, and ſo let it remain till it has taken good Root.—This done, dig about the firſt Root, and gently take it up out of the Ground till the Stem be nearly upright; in which ſtate ſtake it up

Then prune the Roots, now erected in the Air, from the Bruiſes and Wounds they received in being dug up; and anoint the pruned Part with a Compoſition of 4 Parts of Bees-Wax, 2 of Roſin, and 2 of Turpentine, melted together and applied pretty warm.—Then prune off all the Buds or Shoots upon the Stem, and dreſs the Wounds with the ſame Compoſition, to prevent any collateral Shootings; and leave the reſt to Nature. See FECUNDITY.

PLANTING, in Architecture, denotes the diſpoſing of the firſt Courſes of ſolid Stone on the Maſonry of the Foundation, laid level according to the Meaſures, with all the Exactneſs poſſible. See FOUNDATION, BUILDING, HOUSE, *&c.*

PLASM, PLASMA, a *Mould*, wherein any Metal, or ſuch like running Matter, which will afterward harden, is caſt. See MOULD; ſee alſo PLASTIC.

PLASTER, or PLAISTER, in Building, a Compoſition of Lime, ſometimes with Hair, ſometimes with Sand, *&c.* to parget or cover the Nudities of a Building. See PARGETING.

PLASTER *of Paris*, is a Foſſil-Stone, of the Nature of a Lime-ſtone; ſerving many Purpoſes in building; and uſed likewiſe in Sculpture, to mould and make Statues, Baſſo Relievo's

Relievo's, and other Decorations in Architecture. See STONE, STATUE, &c.

It is dug out of Quarries, in ſeveral Parts of the Neighbourhood of *Paris*; whence its Name.—The fineſt is that of *Montmartze*.

This *Plaſter* is of two kinds, *viz. Crude*, or in the Stone; and *burnt*, or beaten.

The *crude* is the native *Plaſter* as it comes out of the Quarry; in which ſtate 'tis uſed as Shards in the Foundations of Buildings.

The *burnt Plaſter* is a Preparation of the former, by calcining it like Lime in a Kiln or Furnace, and then beating it into Powder, and diluting and working it. See LIME, &c. In this ſtate it is uſed as Mortar or Cement in Buildings. See MORTAR.

This, when well ſifted and reduced into an impalpable Powder; is uſed to make Figures and other Works of Sculpture; and is beſides of ſome Uſe in taking out Spots of Greaſe, &c. in Stuffs and Silks. See FIGURE, SCULPTURE, &c.

In the *Plaſter*-Quarries is alſo found a kind of falſe Talc, wherewith they counterfeit all kinds of Marble. See MARBLE, GYPSUM STUC, &c. See alſo PLASTICE.

PLASTIC-*Virtue*, a Faculty of forming, or faſhioning any thing. See FACULTY.

The Word comes from the *Greek* πλαστις, of πλασσω, fingo, *I faſhion, form*, &c.

Some of the ancient *Epicureans*, and perhaps the Peripateticks too, imagined, a *Plaſtic Virtue* to reſide in the Earth; or at leaſt to have anciently reſided therein; and that 'twas by means hereof and without any extraordinary Intervention of a Creator, that it firſt put forth Plants, &c. See EARTH, WORLD, &c.

Nay, ſome of them, whether ſeriouſly or not we don't undertake, taught, that Animals, and even Man, were the Effect of this *Plaſtic Power*. See PLATONIST, PERIPATETIC, &c.

PLASTICE, or the PLASTICK *Art*, a Branch of Sculpture; being the Art of forming Figures of Men, Birds, Beaſts, Fiſhes, Plants. &c. in Plaſter, Clay, Stuc, &c. See SCULPTURE, PLASTER, &c.

The Workmen concerned herein are called *Plaſtæ*.

Plaſtice differs from Carving, in that here the Figures are made by Addition of what wants: But in Carving always by Subtraction of what is ſuperfluous. See CARVING.

The *Plaſtic Art* is now chiefly uſed among us in Fret-Work-Cielings; but the *Italians* apply it to the Mantlings of Chimnies with great Figures. See FRET-WORK, CIELING, &c.

PLAT, a popular Term among Mariners, &c. for a *Sea Chart*. See CHART.

PLATA, PLATE, in Commerce, a *Spaniſh* Term, ſignifying *Silver*; as Vellon, which they pronounce Veillon, ſignifies *Copper*. See SILVER, COIN, &c.

Theſe two Terms are not only uſed to expreſs the Species of thoſe Metals ſtruck in *Spain*, but alſo to diſtinguiſh between ſeveral of their Monies of Account.—Thus they ſay a Ducat of *Plata*, and a Ducat of Vellon; a Rial of *Plata*, and a Rial of Vellon; which Denominations augment and diminiſh the Value by almoſt one half; 34 Maravedis of *Plata* being equal to 63 of Vellon; and the Piece of Eight being only 272 Maravedis of *Plata*, but 510 of Vellon. See DUCAT, PIECE *of Eight*, RIAL, and MARAVEDIS.

PLATE, in Commerce, denotes Gold or Silver wrought into Veſſels for domeſtick Uſes. See GOLD, SILVER, MARK, PUNCHION, &c.

PLATE, in Heraldry, is a round, flat Piece of Silver, without any Impreſſion; but as it were form'd ready to receive it.

The Term is uſed only by *Engliſh* Heralds: for in other Nations they are known by the Name of Bezants, Argent. See BEZANTS.

PLAT-BAND, in Gardening, a Border, or Bed of Flowers, along a Wall, or the ſide of a Parterre; frequently edg'd with Box, &c. See BORDER, PARTERRE, EDGING, &c.

PLAT-BAND, in Architecture, is any flat ſquare Moulding, whoſe Height much exceeds its Projecture. See MOULDING.

Such are the Faces or Faſciæ of an Architrave, and the *Plat-band* of the Modillions of a Cornich. See ARCHITRAVE, CORNICH, &c.

The *Plat-band* is ſignified in *Vitruvius*, and others, by the Words *Faſcia*, *Tænia*, and *Corſa*. See FASCIA, TÆNIA, &c.

PLAT-BAND, of a Door or Window, is uſed for the Lintel, where that is made ſquare, or not much arch'd. See LINTEL.

Theſe *Plat-bands* are uſually croſs'd with Bars of Iron, when they have a great *Bearing*: But 'tis much better to eaſe them by Arches of Diſcharge built over them. See DOOR, WINDOW, &c.

PLAT-BANDS of *Flutings*, the Liſts or Fillets between the Flutings of Colums. See FLUTING.

PLAT-FORM, in War, is a Place prepared on the Ramparts, to raiſe a Battery of Cannons upon. See RAMPART, BATTERY, &c.

It is made by the heaping up of Earth on the Rampart; or by an Arrangement of Madriers, riſing inſenſibly for the Cannon to roll on; either in a Caſemate, or on an Attack in the Out-works.

PLATFORM, in Architecture, is a Row of Beams, which ſupport the Timber-Work of a Roof, and lie on the top of the Wall, where the Entablature ought to be raiſed.

The Word is alſo uſed for a kind of Terras-Walk, or even Floor, on the top of a Building, from whence we may take a fair Proſpect of the adjacent Country.

Hence an Edifice is ſaid to be cover'd with a *Platform*, when it is flat a-top, or has no Ridge. See ROOF.

Moſt of the Oriental Buildings are thus cover'd; as were all thoſe of the Ancients.—*Cæſar* was the firſt among the *Romans* who procured Leave to Build his Houſe with a Ridge, or Pinnacle. See PINNACLE.

PLATFORM, or *Orlop*, in a Man of War, is a Place on the lower Deck, abaft the Main-Maſt, and round about the main Capſtan; where Proviſion is made for the wounded Men, in time of Service.—It is between the Main-Maſt and Cockpit.

PLATONIC, ſomething that relates to *Plato*, his School, Philoſophy, Opinions, or the like. See PLATONISM.

PLATONIC *Bodies*, are the ſame with what we otherwiſe call *Regular Bodies*. See REGULAR *Bodies*.

PLATONIC *Love*, denotes a pure ſpiritual Affection, ſubſiſting between the different Sexes, abſtracted from all carnal Appetites, and regarding no other Object but the Mind, and its Beauties; or a ſincere diſintereſted Friendſhip, ſubſiſting between the ſame Sex, abſtracted from any ſelfiſh Views, and regarding no other Object but the Perſon.

The Term took its Riſe from the Philoſopher *Plato*, a ſtrenuous Advocate for each Kind. See PLATONISM.

The World has a long time laugh'd at *Plato*'s Notions of Love and Friendſhip.—In effect, they appear arrant Chimæras, contrary to the Intentions of Nature, and inconſiſtent with the great Law of Self-Preſervation; which Love and Friendſhip are both ultimately reſolvable into. See PASSION.

PLATONIC *Year*, or the *great Year*, is a Period of Time determined by the Revolution of the Equinoxes; or the Space wherein the Stars and Conſtellations return to their former Places, with regard to the Equinoxes. See YEAR, STAR, PRECESSION *of the Equinoxes*, &c.

The *Platonic Year*, according to *Tycho Brahe*, is 25816; according to *Ricciolus* 25920; according to *Caſſini* 24800 Years.

This Period, which is more than five times the Age of the World, once accompliſh'd; it was an Opinion among the Ancients, that the World was to begin a-new, and the ſame Series of things turn over again. See PERIOD.

PLATONISM, the Doctrine and Sentiments of *Plato* and his Followers, with regard to Philoſophy, &c. See PHILOSOPHY.

The Founder of this Syſtem of Philoſophy, *Plato*, the Son of *Ariſtocles*, was an *Athenian*; born about the Year of the World 3625; who after having ſpent his Youth in Exerciſes of the Body, Painting, and Poetry, became a Diſciple of *Socrates*.—After his Maſter's Death, he applied himſelf to *Cratylus* and *Hermogenes*; 'till being a Maſter of the *Greek* Philoſophy, he travelled into *Italy*, where he learnt that of the *Pythagoreans*. See PYTHAGOREAN.

Thence he proceeded into *Egypt*; where, in thirty Years Reſidence he became fully acquainted with the Secrets of the *Egyptian* Prieſts. See SYMBOL.

At his Return to *Athens* he began to retale the Stock of Learning he had collected, among his Countrymen; philoſophizing daily in the Academy, a delicious Villa in the Neighbourhood of that City. See ACADEMY.—And hence his Diſciples were called *Academicks*.

In Phyſicks, he chiefly followed *Heraclitus*; in Ethicks and Politicks, *Socrates*; in Metaphyſicks, *Pythagoras*.

After his Death, two of the principal of his Diſciples, *Ariſtotle* and *Xenocrates*, continuing his Office, and teaching, the one in the Academy, the other in the Lyceum; form'd two Sects, under different Names, tho' in other reſpects the ſame; the one retaining the Denomination of *Academicks*; ſee ACADEMICK. The other aſſuming that of *Peripateticks*. See PERIPATETICK.

In after-times, about the firſt Ages of the Chriſtian Church; the Followers of *Plato* quitted the Title of *Academiſts*, and took that of *Platoniſts*.

'Tis ſuppoſed to have been at *Alexandria* in *Egypt* that they firſt aſſumed the new Title; after having reſtored the ancient Academy, and re-eſtabliſh'd *Plato*'s Sentiments; which in proceſs of Time had many of them been laid aſide.

Porphyry, *Plotin*, *Iamblichus*, *Proclus*, and *Plutarch*, are thoſe who acquired the greateſt Reputation among the *Greek* Platoniſts. And among the *Latins*, *Apuleius*, and *Chalcidius*.—Among the *Hebrews*, *Philo Judæus*.—The modern Platoniſts own *Plotin* the Founder, at leaſt the Reformer, of their Sect.

The *Platonic Philoſophy* appears very conſiſtent with the *Moſaic*; and a great Party of the primitive Fathers follow the Opinions of that Philoſopher, as being favourable to Chriſtianity.——*Juſtin* is of Opinion, *Plato* could not learn many things he has ſaid in his Works, from mere Natural Reaſon; but thinks he might have learnt them from the Books of *Moſes* which he read when in *Egypt*.

Hence *Numenius*, the *Pythagorean*, expreſsly calls *Plato* the *Attic Moſes*; and upbraids him with Plagiariſm in that he ſtole his Doctrine about the World and God, from the Books of *Moſes*.

Theodoret ſays expreſsly, that he has nothing good and commendable about the Deity, and his Worſhip, but what he ſtole from the *Hebrew* Theology; and *Clemens Alexandrinus* calls him the *Hebrew Philoſopher*.

Gale is very particular in his Proof of the Point, that *Plato* borrowed his Philoſophy from the Scriptures, either immediately, or by means of Tradition; and, beſide the Authority of ancient Authors, brings ſome Arguments from the thing itſelf.——As, *e. gr.* *Plato*'s Confeſſion that the *Greeks* borrowed their Knowledge of the one infinite God, from an ancient People, better and nearer to God than they; by which People, our Author makes no doubt, he meant the *Jews*: from his Account of the State of Innocence; as, that Man was born of the Earth, that he was naked, that he enjoy'd a truly happy State, that he converſed with Brutes, *&c.*——In effect, from an Examen of all the Parts of *Plato*'s Philoſophy, Phyſical, Metaphyſical, and Ethical; this Author finds in every one, evident Characters of its ſacred Original.

As to the Manner of the Creation, *Plato* teaches that the World was made according to a certain Exemplar, or Idea, in the Divine Architect's Mind. And all things in the Univerſe, in like manner, he ſhews, do depend on the Efficacy of eternal Ideas.

This Ideal World is thus explained by *Didymus*: "*Plato* "ſuppoſes certain Patterns, or Exemplars of all ſenſible "things, which he calls *Ideas*; and as there may be various "Impreſſions taken off from the ſame Seal; ſo is there a vaſt "Number of Natures exiſting from each Idea." This Idea he ſuppoſes to be an eternal Eſſence, and to occaſion the ſeveral being in Nature to be ſuch as itſelf is: And that moſt beautiful and perfect Idea which comprehends all the reſt, he maintains to be the World.

Further, *Plato* teaches that the Univerſe is an intellgent Animal, conſiſting of a Body and a Soul.——The firſt Matter whereof this Body was form'd, he obſerves, was a rude indigeſted Heap, or Chaos: Now, adds he, the Creation was a mixt Production; and the World is the Reſult of a Combination of Neceſſity and Underſtanding, *i. e.* of Matter, which he calls Neceſſity, and the Divine Wiſdom.

For the *Anima Mundi*, or Soul of the World; ſee ANIMA *Mundi*.

The Principles, or Elements, which *Plato* lays down, are Fire, Air, Water, and Earth. See ELEMENT.

He ſuppoſes two Heavens, the *Empyrean*, which he takes to be of a fiery Nature, and to be inhabited by Angels, *&c.* And the *Starry* Heaven, which he teaches is not adamantine or ſolid, but liquid and ſpirable. See HEAVEN.

His Phyſicks, or Doctrine *de Corpore*, is chiefly laid down in his *Timæus*; where he argues on the Properties of Body, in a Geometrical Manner; which *Ariſtotle* takes occaſion to reprehend in him.——His Doctrine *de Mente* is delivered in his 10th Book *of Laws*, and his *Parmenides*.

St. *Auguſtin* commends the *Platonic Philoſophy*; and even ſays, that the *Platoniſts* were not far from Chriſtianity: He adds, that the Generality of the new Platoniſts of his Time embraced the Faith.

Juſtin Martyr profeſſes, that *Plato*'s Doctrine was of the utmoſt Advantage to him, in helping him to believe the Myſteries of the Chriſtian Faith.—To which it may be added, that it was in good Meaſure by *Plato*'s Help that *Origen* confuted *Celſus*. See TRINITY, *&c.*

Indeed the late Author of *Platoniſme devoile*, carries things to an extravagant Length when he contends, that the Dogma's of our Religion are only the Opinions of *Plato*; that the Fathers give us nothing of the Myſteries thereof but what they learnt from him; and that Chriſtiany is only a palpable Platoniſm.——To which Opinion M. *le Clerc* ſeems a little inclined. See GOD, FATHERS, *&c.*

PLATONISTS. See PLATONISM, and ACADEMICKS.

PLATTOON, in War, a ſmall, ſquare Body of 40 or 50 Men, drawn out of a Battallion of Foot, and placed between the Squadrons of Horſe, to ſuſtain them; or in Embuſcades, Streights, and Defiles, where there is not room for whole Battallions, or Regiments.—*Plattoons* are uſed when they form the hollow Square to ſtrengthen the Angles. See MUSQUETEER, HOLLOW *Square*, BATTALLION, *&c.*

The Grenadiers are generally poſted in *Plattoons*. See GRENADIER.

The Word is form'd, by Corruption, of the *French Pelaton*, a Bottom, or Clue of Thread.

PLATTS, on board a Ship, are flat Ropes, made of Rope-Yarn, and woven one in another. See ROPE, *&c.*

Their Uſe is to ſave the Cable from galling in the Hauſe; or to wind about the Flukes of the Anchors, to ſave the Pendant of the Fore-ſheet from galling againſt them.

PLATYSMA, *Myoides*, in Anatomy. See QUADRATUS *Genæ*.

PLAY, *Luſus*. See GAME, and GAMING.

PLAY, in Poetry, *&c.* See DRAMA, TRAGEDY, COMEDY, &c.

PLAY-*Houſe*. See THEATRE, AMPITHEATRE, &c.

PLEA, *Placitum*, in Law, that which either Party in a Cauſe alledgeth for himſelf in Court. See PLACITUM, CAUSE, and COURT; ſee alſo PLEADING, *&c.*

Pleas, are either *of the Crown*, or *Common Pleas*.

Pleas of the Crown, are all Suits in the King's Name, for Offences committed againſt his Crown and Dignity, or againſt his Crown and Peace.—Such are Treaſons, Felonies, Miſpriſions of either, and Mayhem. See TREASON, FELONY, *&c.*

Edward I. enfeoffed *Walter de Burgo* in the Land of *Ulſter* in *Ireland*, &c. excepting the Pleas of the Crown, *viz.* Rapeſtal, willful Firing, and Treaſure-trove. *Cam. tit. Ireland.*

Common Pleas are thoſe agitated between common Perſons; tho', by the Definition above laid down, they ſhould compriſe all other except thoſe there enumerated, notwithſtanding the King be a Party.

Plea may farther be divided into as many Branches as *Action*; in as much as they are in reality the ſame thing. See ACTION.
