The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

Orthopedic Products Division

Now, the perfect complement to the Neer II proximal humerus

Now you can replace both glenohumeral surfaces using the Neer II Total Shoulder System, with the components specifically designed to complement one another.

Only 3M offers you the glenoid resurface component designed for maximum compatibility with the Neer II proximal humerus. Made of ultra-high molecular weight polyethylene, it requires that only one groove be cut in the bone for secure seating, leaving maximum subchondral bone intact for strength and stability. It's the one you've been reading about... and it's available exclusively from 3M.

Only 3M offers you this wide range of sizes and stem designs.

Only 3M offers you the original Neer II proximal humerus for patients with displaced four-part fractures, aseptic necrosis or proximal tumors. Backed by eight years of clinical use, it offers improved fixation and biomechanics.

Only 3M offers you the Neer II Total Shoulder System — the components are compatible, the system is flexible.

Only 3M could design a synthetic cast

Less sticky—so it unrolls and molds easier; cast cream is optional.

Easier to wrap—the tape stretches on the bias, to let you change direction without tucking or folding.
