The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

Cemented quality

Having been an orthopaedic company for decades Biomet Europe understands the importance of achieving the highest possible quality for bone cement. Therefore, at Biomet Europe every new batch of bone cement has to pass through 29 different tests to ensure the proper performance of our products during surgery.

The heart of our quality control is a new testing facility, in which our staff closely monitors the quality and performance of each new batch produced.

We constantly challenge and evaluate our production processes and methods to maintain a superior quality assurance program.

As a customer you can rest assured that we have taken every step possible to secure the quality of our products. Our packages not only contain our bone cement, they contain the approved results of 29 tests.

After all, we are the bone cement experts.
