1885.

INDEX TO PUBLIC DOCUMENTS.

VOLUME I.

GOVERNOR'S MESSAGE.

No. 1. Secretary of State.

2. Commissioners of Public Printing.

3. State Treasurer.

4. State Superintendent.

5. Railroad Commissioner.

MESSAGE

OF

JEREMIAH M. RUSK,

GOVERNOR OF WISCONSIN.

DELIVERED TO THE LEGISLATURE, JANUARY 15, 1885.

MADISON, WIS.:
DEMOCRAT PRINTING CO., STATE PRINTERS.
1885.

GOVERNOR'S MESSAGE.

To the Honorable the Legislature:

You assemble after the lapse of a longer period than any which ever before separated legislative sessions in Wisconsin, and it is fitting that we first reverently and gratefully acknowledge the blessings which under Providence have come, in rich abundance, to us as a commonwealth and as a people.

During the two years just gone we have happily been spared the presence of pestilence, famine or other cause of general distress. The commercial depression prevalent in the country at large has touched us more lightly than many other states. Peace has dwelt continually within our borders. The spirit of obedience to law has abided with our people. Justice has been promptly and faithfully administered. Education, the life of our governmental system, has gone forward with vigorous step. And all in all we have abundant cause for contentment and gratitude.

FINANCES.

The state finances are in a good condition, and the trust funds, kept constantly invested as far as possible in interest-bearing securities, produce a satisfactory income.

The general fund account, as reported by the secretary of state, furnishes a complete statement of the cost of maintaining the state government for the past two years, including interest paid upon certificates of indebtedness to the several trust funds.

Of the general fund there was on hand on the 30th day of September, 1882, $364,220.68. The receipts of the fund for the biennial term have been $2,907,204.04, the disbursements

Financial.

therefrom $2,332,857.57, leaving a balance on hand September 30, 1884, of $938,567.15.

By separate years, and by comparison with the year ending September 30, 1882, the disbursements were as follows: For the year ending September 30, 1883, $1,296,472.40, being $109,664.86 more than for the year ending September 30, 1882. This increase is explained by the facts that the capitol extension expenditure for 1883 was $87,274.23 more than in 1882; the legislative expenses $20,004.60 more than in 1882, and the expense of publishing the geological survey, as provided by law, more by $26,282.02 than in 1882.

For the year ending September 30, 1884, the disbursements from the general fund were $1,036,385.17, being $150,422.37 less than for the year 1882. The greater part of this reduction arises from the fact that, while in 1882 the legislative expenses and cost of publishing the laws were $124,486.28, the biennial system obviated the necessity of any expenditure for either purpose in 1884.

The expenses incident to the care of the capitol building have increased somewhat during the past year, because of the many repairs which I did not deem it prudent to delay, and of the purchase of furniture required for the new extensions.

The expenditures thus made to January 1, 1885, are: For the rebuilding of the west steps and portico, which I found to be in a dangerous condition, the sum of $2,493.03; for building and repairing the walks and driveways around the new wings and in the park, the sum of $4,796.80; for changing the old supreme court and library rooms into committee rooms, and making a connecting corridor, the sum of $2,091.12; for furniture for the new wings, $4,719.91; for carpets for the new wings, $2,764.17, and for gas fixtures, and fitting same in the new wings, the sum of $1,356.42. I have also caused to be placed in the boiler room, at a cost of $2,200, two new boilers for the purpose of supplying the additional heat required for the extensions.

The expenditures from the governor's contingent fund to

Financial.

January 1, 1885, were $1,747.45, and the balance to the credit of the fund was $2,087.82. In view of the many possible urgent demands upon this fund, I would recommend that the usual appropriation be increased.

TRUST FUNDS.

There was to the credit of the school fund in the treasury on September 30, 1884, $18,492.67, and the productive school fund on that day amounted to $2,913,612.16, and the school fund income for the biennial term was $398,973.62.

The university fund has received during the two years $21,085.68; had on hand September 30, 1882, $2,966.39, and has paid out for bonds and loans $24,933.38. The total amount of the university fund producing an income on September 30, 1884, was $228,909.30. The receipts of the university fund income for the two fiscal years were $152,058, of which $850 was interest on the Johnson endowment, $20,332.20 were received from the university, $27,801.77 from interest on the university fund, and $103,075 from the tax levied under the statute.

The agricultural college fund receipts for the two years were $30,628.65; balance on hand September 30, 1882, $5,304.47. The disbursements $35,866.48; leaving a balance September 30, 1884, of $66.64. The productive agricultural college fund, now drawing interest, is $286,965.22, and the income of the fund for the biennial term was $34,947.54.

The normal school fund has received during the two years $258,813-53. There was on hand September 30, 1882, $17,969,62. There has been disbursed during the same time $262,331.77, and there remained on hand September 30, 1884, $14,451,38. The total amount of normal school fund now drawing interest is $1,290,572.36, and the income for t6h period, including interest, tuition fees, etc., was $176,223.9'e all of which was transferred to the regents of the normal Schools.

Financial.

There was to the credit of the drainage fund September 30, 1882, $48,808.29, and it has received during the two years $131,575.46. There was on hand September 30, 1884, $48,619.82, and $131,763.93 has been appropriated to counties and disbursed under the laws.

Of the St. Croix and Lake Superior Railroad trespass fund there remained on hand September 30, 1884, $36,092.79, and as the companies have completed their roads and they are now protecting their own lands, and but few lands remain unpatented, this fund can now be adjusted between the state and the companies, and the amounts due them paid over and the fund closed up.

ESTIMATES OF EXPENDITURES AND REVENUES.

The secretary of state estimates that the revenues received under the general laws will be sufficient to defray the ordinary expenses of the state for the years 1886 and 1887. At the end of the fiscal year there was a balance on hand of $938,567.15. Owing to this large surplus, the secretary of state did not include the item of $240,000 of state tax, which was authorized by the last legislature, in the tax levy of 1884, and it seems to me that no additional tax will be necessary for 1886 and 1887. This is the first time in its history the state has reached this desirable condition.

STATE DEBT.

The account between the state and the general government for direct war tax, as stated by the first comptroller of the treasury, shows that the state is yet indebted to the general government to the amount of $51,145.56. The accounting officers of the government have, from time to time, credited to the state, upon the direct war tax, certain sums which should have come to the state as trustee, and have been passed to the school and swamp land funds. Thus it has come about that the state has paid a portion of its direct

war tax out of these trust funds. As I think these funds, especially the school fund, should be carefully and jealously maintained, I believe provision should be made for reimbursing them the amounts so credited.

There is a bill now pending in both houses of congress providing that the entire direct war tax be refunded to the several states, by repaying such as have paid, and by crediting such as have not paid. The passage of this bill would entitle Wisconsin to receive back the sum of $429,196.68, and have credit for the $51,145.56 unpaid. I suggest that the legislature memorialize congress to pass this bill.

CHARITABLE AND PENAL INSTITUTIONS.

The charitable, reformatory and penal institutions of the state are, by the law as it now is, under the control of the state board of supervision, whose report will be laid before you. Of the whole amount appropriated for these institutions for the years 1883 and 1884 there remained unexpended on the 30th day of September, 1884, $125,891.50, and on the 1st day of January, 1885, there remained $56,474.10.

The total number of persons cared for in the six state institutions under the charge of this board was 3,721, and the daily average was 2,016; the total cost to the state for current expenses to September 30, 1884, was $651.691, and to the 1st day of January, 1885, was $721,108.40.

The State Hospital for the Insane has had an average of 476 patients under treatment for 1883, and an average of 510 for the year 1884, and cost $96,545.70 for the year 1883, and $91,722.22 for the year 1884; a weekly cost per capita for 1883 of $3.90, and for 1884 of $3.46. The cost of subsistence, including farm products, for the year 1883, was $36,927.15, and for the year 1884 was $37,566.71. The board estimates the expenses of this hospital for the years 1885 and 1886 to be $104,000 each year, and estimates that there will be paid by counties for the term, $82,351.12; there remains of the last appropriation unexpended, $32,000, and this leaves to be ap-

propriated by the legislature for current expenses for the two years, $94,000. They also ask for a special appropriation of $10,000 for the improvement of the water supply, which is now in tanks in the top of the building, and which is not safe and not so available in case of fire.

The Northern Hospital for the Insane had an average of 567 patients during 1883, and 613 during 1884, and the current expenses for 1883 were $114,735.48, and for 1884 were $117,110.52, a weekly cost per capita for 1883 of $3.89, and for 1884, $3.67. The cost of subsistence proper including products of the farm, in 1883 was $36,927.15, and in 1884 was $51,441.02. The board estimates that the expenses of this institution will be $248,000 for the years 1885 and 1886; that there will be paid in by counties $104,578.34; leaving to be supplied by the legislature for current expenses $143,000. By a fire on November 15, 1884, destroying the interior of the building containing boiler, pump, engine, laundry, drying and ironing rooms, this institution sustained an estimated loss of $10,950, and to make the repairs necessary by reason of this fire the board have been permitted to incur an indebtedness in excess of their appropriation to the amount of $6,500, and for the payment of this sum an appropriation should be made.

The Institution for the Education of the Blind has had an average of 57 pupils for 1883, at an expense of $16,670.48; and an average of 63 for 1884, at an expense of $17,525.32; and the board estimates the expenses for 1885 and 1886 at $36,300.00; and with a surplus of $2,500 from the last appropriation, asks that there be appropriated for that period $33,500. The per capita cost is $5.61 per week for 1883, and $5.34 for 1884. This is necessarily much larger in this institution than in the others because of the small number of the small number of pupils, the expense of instruction in music, and because the pupils are less helpful by reason of their misfortune.

The Institute for the Education of the Deaf and Dumb had an average of 188 pupils in 1883, and 205 in 1884, and at

an expense of $35,666.30 for 1883, and $38,536.37 for 1884. The per capita cost was $3.65 a week for 1883, and $3.61 for 1884. The expenses for 1885 and 1886 are estimated at $84,000; the probable receipts from sales at $1,500, and a surplus at the end of the present appropriation year of $1,250, leaving a balance to be supplied by appropriation of $81,250. The board asks for a special appropriation of $1,000 to purchase real estate so they can control the outlet of the sewer, and $10,000 for the purpose of building a new boiler house detached entirely from the other buildings, and which would seem prudent for the safety of the inmates and the care of the buildings.

I am constrained in this connection to call the attention of the legislature to the advisability of providing for the deaf-mutes of the state some other means of education. There were in Wisconsin, according to the census in 1880, 1,079 deaf-mutes, of whom 600 were of school age, between 6 and 20, and less than one-third of these were receiving instruction. This fact shows that a large number of deaf children in this state are growing up in ignorance, and that the provision made for the education of deaf-mutes is yet inadequate. The policy of the state and the spirit of our people demand for this evil a correction. In localities where the number of such unfortunates is sufficient to justify it, day schools and the employment of teachers for the special purpose of teaching them to converse with hearing people, I am led to believe, would meet the want, and afford them preparation to enter the common schools and receive the same education as other children. I commend this subject to your attention, as one well worthy of your careful study and consideration.

The Industrial School for Boys at Waukesha has had an average yearly attendance of 291 for 1883 and 300 for 1884; and the current expenses for 1883 were $42,038.73, and for 1884 were $42,229.74. The per capita cost for 1883 was $2.78 per week and for 1884, $2.71. The board estimate that they

will require for 1885 and 1886, for current expenses and purchase of material for shops, $186,200; that there will be received from counties the sum of $17,168.02; and from the sale of products $90,000, leaving to be supplied by appropriation for the term, $80,000.

The State Prison at Waupun had an average of 363 prisoners during the year 1883, and an average of 398 during the year 1884. The current expenses of the Prison for 1883 were $50,031.29 for 1884 were $53,949.52; and the proceeds of the convict labor for 1883 were $38,573.53; and for 1884 were $44,-648.62. The cost per capita for 1883 was $2.65 per week, and for 1884, $2.61. The current expenses of the prison for 1885 and 1886 are estimated at $118,000; and the probable receipts from convict labor at $94,000; and a probable surplus of the last appropriation of $4,500, leaving to be provided by appropriation the sum of $19,500.

COUNTY ASYLUMS.

There are now organized, under the laws, eleven county institutions for the care of the insane, as follows: In the counties of Brown, Columbia, Dane, Dodge, Grant, Green, Jefferson, Rock, Sheboygan, Walworth and Winnebago. In addition to these, the county of Manitowoc has a building nearly ready to be occupied. These institutions, to a great extent, are under the supervision of the board of charities and reform, and are reported to be in a very satisfactory condition. There were cared for in these eleven institutions, at the close of November, 1884, 635 patients — all chronic insane — and the reported average cost of maintaining these is $1.82 per capita per week. When the building in Manitowoc county is completed, the twelve will have accommodations for 830 patients. There are but few insane persons cared for in the county jails and poorhouses, and none of them treated badly; those not having proper care and treatment have been transferred to the state or county asylums,

by direction of the board. The management of these county institutions has been very satisfactory during the past year, and as long as care is taken that they do not drift into the contract system of poorhouse management, they will no doubt continue to work a beneficent purpose in the care of the chronic insane.

The Milwaukee county asylum, treating both acute and chronic cases, and which is maintained at the joint expense of the state and county, had an average of 308 patients under daily treatment during the past two years, and the work has been conducted very successfully. The state pays to the county the sum of $2.75 per week for each patient maintained; which cost the state $39,929.21 for the year 1883, and $41,747.35 for the year 1884. The total current cost of maintenance, including replacements and repairs of property, was $62,147.86 for the year ending September 30, 1884; an average per capita cost of $3.89 for the year 1883, and $3.86 for the year 1884.

The Wisconsin industrial school for girls, now established and successful, had, on September 30, 1884, an attendance of 165 pupils. The management is in the hands of a board of ladies, who, in their labor of love, are zealous and efficient. The institution gives promise of great usefulness.

INSURANCE

The revenue derived by the state through taxes and fees imposed by the law upon insurance companies was $57,362.13 for the year 1883, and $64,904.75 for the year 1884. The laws relating to insurance seem to work great good in protecting the people of the state from the transactions of fraudulent and insolvent companies, and tends to add to the business of the solvent companies that can not afford to do business at a losing rate. The administration of the department has been efficient and you will find valuable information in the report of the commissioner.

Railroads.

RAILROADS.

The total miles of railroad in the state of Wisconsin, on the 31st day of December, 1884, were 4,204.54; an increase of 370.8 miles since December 31, 1882. The earnings for the year ending June 30, 1883, were $19,706,858.10, an average of $5,344.20 per mile of operated road; the operating expenses and taxes were $12,513,745.92, an average of $3,393,74; and the net earnings for the year were $7,193,112.18, or an average of $1,950.46 per mile. The earnings for the year ending June 30, 1884, were $20,411,573.96; expenses and taxes, $12,689,996.49; earnings per mile, $5,131.91; expenses per mile, $3,190.54; net earnings, $7,721,577.47, and net earnings per mile, $1,941.37.

The number of passengers carried in the year 1883 was 3,807,675, being an equivalent of 169,991,697 passengers carried one mile. In the year 1884 there were 4,473,480 passengers carried, or an equivalent of 199,919,011 passengers carried one mile; being an average of 46.69 miles traveled by each passenger, and at an average cost of 2.69 cents per mile. The number of tons of freight carried in the state in 1883 was 4,462,367, equal to 758,352,663 tons carried one mile; in the year 1884 the number of tons of freight carried was 4,670,201, an equal of 949,567,585 tons carried one mile, and at an average cost of 1.44 cents per ton per mile. This is less than it has ever been in this state, and it is a most gratifying exhibit to the producer and shipper and creditable to the carriers. The number of persons employed by the railroad companies for the year ending June 30, 1884, was 15,423, and the total sum paid these employes was $8,834,358.63; being an average of $572.80 each per annum. Thus it will be seen that there is a large army of persons employed, and a large sum of money distributed in the state by this one active and useful industry of our commonwealth. The revenue paid to the state for licenses to operate the roilroads was $586,328.58 for the year ending September 30, 1882;

Militia.

$683,082.51 for the year ending September 30, 1883, and $754,269.44 for the year ending September 30, 1884.

A large amount of means invested in the railroad property of Wisconsin, and railroad interests and industries are largely identified with and woven into the life of our people; railroads in this age have become a necessity to the people, and the creative industries and enterprises are the life blood and support of railroad investments; the one is, and ought to be, identified with the other, and legislation should be in the interests of harmony, firmly for the protection or some right, or the correction of some wrong, and freed from animosities and hostilities.

The legislature at the last session passed a law requiring reports and imposing a license upon such sleeping car companies as operate in this state. This law may be somewhat defective under the interpretation insisted upon by the companies, and the reports and revenue to the state are of the most meagre sort. I commend the matter to your careful consideration.

The commission in Wisconsin is, in most cases, one of suggestive and advisory powers, rather than arbitrary; and in no state has the commission system been productive of better results or more good than in our own, and I commend to you a careful study of the commissioner's report for the details of railroad work and railroad operation.

MILITIA.

The strength of the Wisconsin national guard at the last semi-annual meeting, September 29, 1884, was 2,529, organized as follows:

Commander-in-chief and staff						15	Officers.
1st Regiment	10	Companies	656	Men		38	"
2nd "	10	"	682	"		38	"
3rd "	10	"	693	"		37	"
4th Battalion	4	"	282	"		17	"
Light Horse Squadron	1	"	68	"		3	"
Making a total of	35	"	2,381	"		148	"

State Board of Health.

During the past two years three companies have been disbanded, four new companies organized, the third battalion increased to a regiment, the original fourth batallion disbanded, its companies assigned to the regiments, and a new fourth batallion organized, composed of the infantry companies located in Milwaukee. These changes have secured a more equitable distribution of the companies allowed by law, a more systematic organization of the regiments, and are believed to have materially increased the efficiency of the force, which is now in a better condition than ever before, and under good discipline.

I invite your early and careful consideration to the necessity of making provision for compiling, perfecting and recopying the files and records of the adjutant general's office pertaining to the war of the rebellion. The demand for transcripts of the military history of soldiers steadily increases and necessitates a use of the original papers, which is now rapidly destroying them. The value of these records to the state, the soldiers and those dependent upon them can not be overestimated, and it is beyond question that this value will increase for many years to come, as the possibility of supplying their place by the testimony of individuals is rapidly decreasing. When this important work has been completed, so as to meet the requirements of the office, I recommend that a complete roster of Wisconsin volunteers, showing the material facts in the military history of each soldier, be prepared and printed by the state. The example of all our neighboring states, in this regard, is well worthy of our imitation. The cost will be trifling compared with the value of such a publication.

STATE BOARD OF HEALTH.

The report of the state board of health and vital statistics shows that the state is comparatively free from any serious diseases and that there have not recently been any extensive epidemics. The board, however, urgently presents the

fact that it is the common belief of those whose judgment is entitled to most confidence, that cholera will extend from Europe to this country within the next few months, and should it do so, no citizen or community in this state is free from the danger that it may reach them. They therefore urge upon all citizens and communities such preparation as will put them in the best possible attitude of defense, and they advise that a fund of not less than $15,000 be provided by the legislature to meet all emergencies that may arise for the general safety of the state. Legislation is also needed to confer upon the board greater power, to enable it to enforce such rules and regulations as it may make for the reporting of cases of contagious or epidemic diseases, and to enable them to maintain a quarantine whenever occasion may require it.

Matters relating to the public health are of universal concern, and as this board is composed of gentlemen eminent in their profession, who have given the subject within their province thorough study, for the benefit of the people, free of charge, you will, I am assured, give proper attention to their report and suggestions. The report should be printed apart from the public reports, and the greater number should be distributed by the board.

IMMIGRATION.

The biennial report of the board of immigration shows that of the 49,368 immigrants arriving at Milwaukee during the year 1883, 27,230 made Wisconsin their home; and of the 41,272 immigrants who arrived at the same place during the year 1884, 23,632 remained in the state. The board have no means of informing themselves of the number of immigrants who land at lake ports other than Milwaukee, or who go direct into Wisconsin from Chicago without passing through Milwaukee. The new-comers were mostly Germans and Scandinavians, who settled principally in the northern portion of the state. The disbursements of the board during

Education.

the year 1883 were $3,089.20, and during the year 1884 were $2,906.57.

FISHERIES.

The fish commissioners have expended $6,518 for the year 1883 and $5,950.43 for the year 1884, and have been very successful in their work. The recommendations of the board relating to the preservation of the fish, deserve your attention; and especially should the unreasonable and unlawful catching of fish in great quantities in the inland lakes and rivers in some manner be checked.

BUREAU OF LABOR STATISTICS.

Under chapter 319 of the laws of 1883, establishing a bureau of labor statistics, I appointed Frank A. Flower, of Milwaukee, commissioner, and he at once entered upon the duties of his office. The law as it now stands is very imperfect and inadequate for the purpose for which it was designed, and should be revised and amended by this legislature. This bureau, with encouragement on the part of the legislature and better facilities for collecting statistics, will result in great benefit to the state.

EDUCATION.

The vital importance of popular education can not be overestimated, and the interest of our people in the subject is commensurate with its importance. The report of the state superintendent, which I commend to your attention, is replete with interesting statistics and suggestions, and shows the common school system of our state to be in a condition of steady growth and improvement, which is exceedingly gratifying.

In July last this state was honored with the meeting of the national educational association, held in this city. This was the largest educational convention ever held, and there were among its members many of the most eminent persons of that profession in the United States. The meeting re-

University.

sulted in great good to this state, and the organization and liberality of our educational system were the subjects of commendation and praise.

I have no doubt you will give just and thorough consideration to all suggestions for the improvement of the public schools, or for extending their field of usefulness; but I feel justified in calling to your especial attention the recommendation of the state superintendent, that provision be made by law for the free supply of text books for the pupils in the public schools. The absence of uniformity in the books used, even in adjacent school districts, creates a serious expense to that quite large class of citizens who are not permanently located; and this expense falls most heavily upon a class least able to bear it, and whose children receive their education almost entirely from the common schools, and has, no doubt, deterred many children from attending school. The experience of a large number of cities and some states, which have adopted the system of free text books, indicates that a larger attendance will be secured, a higher efficiency attained, time saved and less money expended, by supplying just the books required.

UNIVERSITY.

The reports of the regents and the president of the university will be laid before you, from which it is a pleasure to note that the institution is in a generally satisfactory condition. It has recently met with a serious loss, by the destruction by fire of Science Hall, with valuable collections and apparatus. The regents will present to you plans and estimates for a building to replace the one destroyed, and will ask for the requisite appropriations for that and other purposes. The university has attained a high rank and ought to be an object of universal pride to the people. It deserves generous support from the state, and I trust its wants will receive liberal treatment at your hands.

Agriculture.

AGRICULTURE.

Agriculture is the chief source of wealth to the state and the ultimate reliance of its people. Upon the successful prosecution of this pursuit depends, in a great degree, the prosperity and happiness of all classes. The interests involved are so important and so far reaching and diverse in detail, that a commission or state board of agriculture should be established. Other states have found such of great practical utility.

The state has become a great thoroughfare for the transportation of live stock from different sources. Some means should be provided whereby our domestic animals may be protected from the importation and spread of contagious diseases. The state board of health has suggested the appointment of a veterinary surgeon with adequate power in the premises, and I commend this matter to your attention.

The great progress that dairy husbandry has made in this state is largely due to the efforts of the State Dairymen's Association. To this industry, and to the energy and intelligence displayed by the dairymen, much praise is due for bringing about a result in which the state justly feels a great pride. I recommend a liberal appropriation for this association, and also that its proceedings be printed and bound separately.

The State Horticultural Society represents a distinct branch of industry, and its proceedings should be printed and bound in a volume by itself, and remain, as formerly, at the disposal of the society. The society is doing a good work; is making a creditable exhibit at the exposition at New Orleans, and as their expenses are largely increased, I recommend that the usual appropriation of $500 be increased to $1,000 this year.

Ameeting of the representative farmers was held in Madison on November 25th last, to consider the propriety of stablishing an agricultural school separate and apart from

other institutions of learning. It was the sentiment of that convention that the agricultural department of the state university had, thus far, failed to attract any considerable number of students; and that the conditions were such as of give little hope for improvement in this respect in the tuture; and that the time had come for the founding of a purely agricultural school. The action of this convention was indorsed by the Wisconsin state grange, at its annual session in this city last December. I believe such a school, devoted purely to training men to be better farmers, would operate to check the dangerous rush of farmer boys to the cities and into the professions; would in the end add dignity and power to the agricultural class, and would be beneficial to the people generally. The agricultural department of the university has, through no apparent fault of the institution, not fully met the wants of the agricultural classes in this particular; but the experiment station is doing good work and merits encouragement.

CAPITOL EXTENSIONS.

At the time of delivering my annual message to the legislature of 1883 there had been expended upon the extensions of the capitol, under chapter 250 of the laws of 1882, the sum of $49,217.89, being 85 per cent. of the amount earned at that date under the contract. Under the supervison of the architect and building superintendent, work was being pushed vigorously and with fair prospects of completion by January 1, 1884, when, on November 8, 1883, occurred the unforeseen disaster in the south wing. Said wing was inclosed at the time, the interior walls, iron work and roof being in position. Most of the interior work above the basement walls, with the roof and a portion of the south exterior wall, came down with a sudden crash, carrying with it these forty workmen employed on the building at the time. Of the forty men, five were killed instantly and eighteen wounded. One of the wounded, after several months of suffering, died of his

Capitol Extensions.

injuries. Being absent at Bayfield on official business, at the time of the accident, I telegraphed the secretary of state to see that every proper provision was made for the care of killed and wounded. This was done, and has been continued under my direction, and the expense, amounting to $5,174,04, has been paid through the office of the superintendent of public property.

Perhaps, in strictness, this expenditure was beyond the law. These men thus injured were laboring men. They were at work upon the capitol of the state when disaster, swift and unexpected, came upon them. In the circumstances, I felt if I did less the people of Wisconsin would not justify me. On the occurrence of the accident, all work on the extensions stopped. A committee of experts, consisting of James R. Willet, of Chicago; A. C. Nash, of Cincinnati; C. F. Struck, of Minneapolis, architects; and Godfrey Ludwig, of Cincinnati, master mechanic, was called by order of the building commissioners and asked to investigate the matter and report as to the cause of the accident. Which duty the committee of experts performed, submitting their report in writing, and recommended some changes in the original details as necessary to properly strengthen the buildings. Without unnecessary delay, the work of rebuilding was begun, and Mr. W. W. Boyington, architect, of Chicago, engaged, with instructions from the commissioners to direct such changes in the reconstruction as he deemed necessary for the security and safety of the almost completed north wing, as well as the south extension.

Pursuant to these instructions, Mr. Boyington directed that other and heavier iron columns be substituted for those provided for in the contract, to extend from the basement walls to the roof, instead of from the brick piers on the second floor; that additional columns be put in, and iron work of increased strength. All without changing the plan, which had been drawn with especial reference to the convenience and wants of the supreme court, state library and

historical society, and had been adopted after consultation with and upon the recommendation of the judges of the supreme court and the officers of the historical society. Thus the extensions have been completed and accepted by the commissioners. They are pronounced by Mr. Boyington to be abundantly safe, and are practically fire-proof. The cost of labor and material in making the alterations directed by Mr. Boyington, in excess of what the same would have been if done under the contract, is ascertained to be $11,169.95, which amount has been audited by the building commissioners, and I recommend that an appropriation be made at an early date for the payment of the same.

EXPOSITION.

In accordance with the laws of the United States, the president appointed Hon. E. Holton, of Milwaukee, commissioner, and Hon. J. M. Smith, of Green Bay, alternate commissioner, for the state of Wisconsin to the World's Industrial and Cotton Centennial Exposition at New Orleans, commencing December 16, 1884. These gentlemen have had charge of collecting, preparing and displaying an exhibit of the resources and products of Wisconsin, and they have faithfully and efficiently performed this work. Congress declared that this exposition should be national and international in its character, and appropriated a large sum of money to aid in the celebration. Five thousand dollars was set apart to each state, to encourage and assist them in making a full and complete exhibition of all the arts, manufactures and products of the soil and mine within the state.

There being no session of the legislature in this state, and no provision of law affording funds for the purpose, the commissioners raised a sum of money by subscription, sufficient for the immediate needs of the undertaking. This state, in the exposition, will stand the test of comparisons with all the other states of the Union, and will be proud

of its success and greatly benefited by the spread of knowledge concerning its resources and the value of its products. As the benefit is to the entire state, so should the expense be borne by the people. I would, therefore, recommend that a sufficient sum be appropriated to defray the disbursements of the commission, including the repayment of the amounts subscribed.

BANKS AND BANKING.

The business of banking is one essentially dependent upon the confidence of the people, and one which affords opportunities for fraud upon depositors, but which happily seldom occur. Whether safeguards may be lawfully adopted to further secure those depositing with state and private banks from loss, is a subject worthy of your consideration.

Thus, in discharge of the duty laid upon me by the constitution, I have brought briefly to your attention those matters of which the public interest seems to demand especial mention; and I assure you it will give me great pleasure to join you in every effort to promote the welfare of the state, and to meet the just expectations of the people, whose servants we all are.

STATE OF WISCONSIN.

REPORT OF THE SECRETARY OF STATE.

DEPARTMENT OF STATE,

OCTOBER 10, 1884.

To his Excellency, JEREMIAH M. RUSK.

Governor of the State of Wisconsin:

SIR:—In conformity with the laws of the State of Wisconsin prescribing the duties of the Secretary of State, I have the honor to submit the biennial report of this department, showing the condition of the several funds, a complete statement of the receipts and expenditures during the biennial fiscal term closing September 30, 1884. The report also includes various statistical tables and other information of interest to the people of the State.

GENERAL STATEMENT.

The aggregate result of the last two years' financial transactions on all the Funds of the State is as follows:

General and other Funds.

GENERAL FUND.

Receipts	$2,907,204 04	
Disbursements		$2,332,857 57

General Fund.

GENERAL FUND.

This fund embraces all the revenue of the State applicable to the payment of the ordinary expenses of the State Government.

The sources from which it is derived are the annual State tax, tax on civil actions, licenses of railroad companies, plank road companies, telegraph companies, insurance companies, hawkers and peddlers, notary public fees, office fees and sales of laws and reports. The expenditures therefrom are authorized by permanent and temporary appropriations, and by the several laws requiring the Secretary of State to audit accounts. A detailed statement of the transactions in this fund will be found in Appendix "A."

The receipts and disbursements have been as follows:

RECEIPTS.

1. FROM COUNTIES.

	1883.	1884.	
State Tax, general expenses..	*$499,910 43	†$109,754 00	
Interest on certificates of indebtedness.....	157,500 00	157,500 00	
Interest due School Fund Income	7,088 36	7,088 36	
Annual levy for State University	45,632 52	57,442 52	
Support of inmates of Charitable Institutions.....	97,065 06	97,114 36	
State Tax on Civil Actions...	5,060 00	4,504 00	
	$812,256 37	$433,403 24	$1,245,659 61

School Fund.

SCHOOL FUND.

The School Fund is composed of:

1. Proceeds of lands granted by United States for support of schools.
2. All moneys accruing to the state by forfeiture or escheat.
3. All penalties for trespass on school lands.
4. All fines collected in the several counties for breaches of penal laws.
5. All moneys paid as an exemption from military duty.
6. Five *per cent.* of net proceeds of sales of United States public lands.

The number of acres of unsold land, the proceeds of which are applicable to this fund, is 120,829. The cash receipts and disbursements during the last two years have been as follows:

RECEIPTS.

	1883.	1884.	
Sales of land	$18,484 93	$9,837 51

SCHOOL FUND INCOME.

The interest received on School Fund investments and on the principal due for sales of school lands, constitute the School Fund Income. The amount of this Fund in the Treasury on the 1st day of June, is annually certified by the Secretary of State to the State Superintendent of Public Instruction, and by him apportioned, under the provisions of section 554 of the Revised Statutes, among the several counties of the State, for the use of common schools in the manner provided by law. The apportionment is made according to the number of children in each town, village and city, over the age of four and under the age of twenty years, as shown by the report of the State Superintendent during the year preceding.

The receipts and disbursements during the last two years have been as follows:

RECEIPTS.

	1883.	1884.

DRAINAGE FUND.

This fund consists of one-half the proceeds of sales of all swamp and overflowed lands received by the State from the United States, and is distributed on the first Monday of July under the provisions of section 254, Revised Statutes, among the several counties, wherein such lands lie, in proportion to the amount of sales in the respective counties. The moneys so paid are then apportioned by the county clerks to the several towns in their respective counties, and are expended under direction of the town board in draining and reclaim-

Drainage Fund.

ing the swamp lands in such town, and in constructing roads and bridges over such swamp lands. The number of acres of unsold land is 509,073. The cash receipts and disbursements during the last two years have been as follows:

Railroad Trespass and Deposit Funds.

ST. CROIX AND LAKE SUPERIOR RAILROAD TRESPASS FUND.

This fund consists of moneys received into the State Treasury, in trust, under the provisions of chapter 46, of the General Laws of 1869, and acts amendatory thereof. The disbursements therefrom have been for the purpose of protecting the St. Croix and Lake Superior Railroad lands, in accordance with the terms of said acts.

ST. CROIX AND LAKE SUPERIOR R. R. DEPOSIT FUND.

This fund consists of moneys received by the State Treasurer in trust, under the provisions of section 14, chapter 126, Laws 1874, as amended by chapter 392, Laws 1876. The time for proving settlement upon and thereby acquiring title to the

railroad lands in said acts described, having expired in April, 1877, no payments have been made into this Fund during the last two years. The disbursements have been as follows:

WISCONSIN RAILROAD FARM MORTGAGE LAND COMPANY.

Chapter 235, Laws of 1882, authorizes the Commissioners of the Wisconsin Railroad Farm Mortgage Land Company to close up the business of said corporation, and to turn over and pay to the State Treasurer all its money and bank accounts, and take his receipt therefor, and at the same time to make its report in writing, to the Secretary of State, of its proceedings under this act. Accordingly the said Commissioners paid the sum of $8,935.09 into the Treasury, and deposited with the Secretary of State, the books together with a list of claimants to whom dividends are yet due with the amounts set opposite their respective names. Since the receipt of said money by the State, the following have been the disbursements:

RECEIPTS FOR 1884.

	$8,935 09	$8,935 09

Allotment Fund.

MANITOWOC AND CALUMET SWAMP LAND FUND.

Chapter 51, Laws of 1866, conferred upon certain commissioners named therein, lands in Manitowoc and Calumet counties, to be sold for "drainage and other purposes," of those counties. The legislature of 1883, by chapter 352, revoked the trust thus created, and directed the State Commissioners of public lands to investigate and sell the residue, and, after defraying the expenses thereof, to deposit the balance in the State Treasury. From said sale arises the fund.

In conformity to directions in the law the commissioners of public lands fully investigated the matter. The official investigation of said commissioners may be found in the report of the Commissioners of Public Lands.

RECEIPTS FOR 1884.

Treasurer Manitowoc and Calumet Swamp Land Commission	$318 17

DISBURSEMENTS.

ALLOTMENT FUND.

Section 3, of chapter 190, General Laws 1862, directed the State Treasurer to receive such sums of money as might be placed in his hands by any volunteer making an allotment, as provided by the act of Congress approved December 24, 1861, and to dispose of the same according to the order and direction of such volunteer. The fund consists of moneys so received by the State Treasurer and yet unclaimed by the beneficiaries named by the volunteers.

	$97,170 09	$713,412 41	$684,691 00	$125,891 50

STATE DEBT.

The bonded debt of the State, created in 1861–63, for the purpose of carrying on the war for the maintenance of the Union, has now all been paid or converted into certificates of indebtedness to the Trust Funds, except two thousand dollars, one thousand of which falls due July 1, 1886; the other thousand, July 1, 1888.

The distribution of the debt on the 30th *ultimo*, was as follows:

Estimate of Expenditures and Revenues.

War bonds outstanding	$2,000 00
Certificates of indebtedness, School fund	1,562,700 00
Certificates of indebtedness, Normal School fund	515,700 00
Certificates of indebtedness, University fund	111,000 00
Certificates of indebtedness, Agricultural College fund	60,600 00
	$2,252,000 00

ESTIMATE OF EXPENDITURES AND REVENUES.

In accordance with the requirements of Subdivision 13, Section 144, Revised Statutes, I append the following detailed estimate of expenditures to be defrayed from the treasury during the years beginning January 1, 1886, and January 1, 1887, based on expenses of former years, in which are shown the amounts provided by permanent or temporary appropriations and the amount required to be provided for as before stated. I also submit a careful estimate of the revenues from which such expenditures are to be defrayed:

EXPENDITURES.

1. SALARIES AND PERMANENT APPROPRIATIONS.

Governor's office	$6,600 00	
Lieutenant Governor	1,000 00	
Secretary of State's office	7,000 00

Printing	4,500 00	
Blue Book	7,000 00	
Incidentals	4,000 00	
Gas	1,100 00	
Publishing and printing laws	20,000 00	
		$136,600 00

TAXES FOR DEFRAYING EXPENSES FOR YEARS 1886 AND 1887.

As will be seen by the estimates of receipts and expenditures, based on preceding years, there will be no necessity of levying a state tax for general purposes for either of these years. In case, however, the legislature makes extraordinary appropriations, it will be necessary to make provision for the same.

Apportionment of Taxes.

STATE TAX FOR GENERAL PURPOSES.

Chapter 195, laws of 1883, authorizes the levying of $240,000 as a state tax for 1884, in addition to taxes required to be raised by section 247 and 260 Revised Statutes, which sums are for school purposes, and chapter 300, laws of 1883, for University fund. With the amount now in the State Treasury, together with the increased revenues from licenses paid by railway, insurance, telegraph and telephone companies, with minor sums received from other sources, which will be amply sufficient to defray the expenses of the state during the ensuing year, I have concluded to make no apportionment of this $240,000 to the various county clerks, believing that in so doing the interests of the tax payers will be best subserved; that it is contrary to good public policy to levy a tax to lie idle in the vaults of the State Treasury. It would seem advisable that chapter 195, laws of 1883, be repealed.

APPORTIONMENT OF TAXES.

The Secretary of State is required by section 1070, of the Revised Statutes, to certify to the county clerk of each county, on or before the second Monday of October in each year, the amount of State Tax and Special Charges apportioned to and levied upon his county. In this certificate are to be included the amounts due from counties for the support of persons in the Hospitals for the Insane and the Industrial School for Boys. These amounts are obtained from reports made by the State Board of Supervision to the Secretary of State, in pursuance of section 21, chapter 298, laws of 1881. The time prescribed in said chapter for reporting to the Secretary of State is the twentieth of October, which is after the latest date when the Secretary must certify the same to the county clerks. The law should be

so amended as to cause these certificates from the State Board of Supervision to be made to the Secretary of State on or before the first Monday of October.

BOUNTY ON WILD ANIMALS.

The legislature of 1883 so amended the law relating to bounties on wild animals, that it now devolves upon the county, wherein the animal was killed, to pay to the claimant for bounty a sum equal to that paid by the State. This, with the cutting off of bounties on foxes, and reduction of one dollar per scalp on wolves, has materially reduced the amount paid by the State compared to the year 1882.

DETAILS OF REPORT.

For the purpose of easy reference, the full financial details required by law, and such tabular statistics as may be deemed of interest, are classified as follows:

"A."

Includes detailed statement of the receipts and disbursements of the several funds belonging to the State.

"B."

Showing the relative value of real and personal property as assessed by the State Board of Assessment for the year 1884.

"C."

Showing the valuation of taxable property of the several counties of the State as determined by the State Board of Assessment for the year 1884, and the apportionment of the State tax and special charges for said year.

"D."

Abstract of Assessment rolls of the several counties as returned to this Department for the year 1884, showing the

averaged assessed value of live stock and real estate by counties, and total assessed value of all property in the State.

"E."

Valuation of property in different Counties in the State as fixed by the County Boards of Supervisors and Town Assessors, and the amount of State, County, Town, City and Village taxes levied in 1883.

"F."

Statement showing for what purposes the county tax was expended in the several counties for the year ending December 31, 1883.

"G."

Statement showing all indebtedness of towns, cities, villages and school districts, December 31, 1883.

"H."

Statement showing all indebtedness of the several counties December 31, 1883.

"I."

Showing sales of real estate in the several counties for the year ending August 31, 1884.

"K."

Statement of the principal farm products growing at the time of making the annual assessment for the year 1884.

"L."

Statement of the principal farm products grown in 1883.

"M."

Report of agricultural societies for 1883.

"N."

Statement of votes given for associate justice supreme court, and for circuit judges in the first and fourteenth judicial

Details of Report.

circuits at the judicial election held on the 3d day of April, 1883; and for circuit judges in the 3d, 7th, 8th and 9th circuits, at the judicial election held on the 4th day of April, 1884. Also for election to fill vacancy in the seventh judicial circuit.

"O."

List of corporations organized under the general laws during the two years ending September 30, 1884.

"P."

Abstracts of marriages, births and deaths reported to this department during the two years ending December 31, 1883.

"Q."

Statement of votes given for electors and for state officers, November 4, 1884.

ERNST G. TIMME,
Secretary of State.

APPENDIX "A."

DETAILED STATEMENT OF THE RECEIPTS AND DISBURSEMENTS OF THE SEVERAL FUNDS FOR THE FISCAL YEAR ENDING SEPTEMBER 30, 1883.

STATE OF WISCONSIN.

REPORT

OF THE

Commissioners of Public Printing.

DEPARTMENT OF STATE,
October 10, 1884.

To His Excellency, JEREMIAH M. RUSK,
Governor of the State of Wisconsin:

SIR: We have the honor to submit herewith our biennial report for the term ending September 30, 1884.

The important operations of this department during the two years last past, aside from the routine work required by law, have been the completion of the printing and binding of the Geological Reports of the State, the purchase of paper and the letting of the state printing contract beginning January 1, 1885, for two years.

STATE PRINTITG.

The state printing contract with David Atwood was completed December 31st, 1882, and since that time the Democrat Printing Company, of Madison, the successful bidders for doing the state printing for two years from that date, have done the work.

On July 22d of the present year, the commissioners having previously advertised in accordance with law, met in

State Printing.

the Secretary of State's office and proceeded to open the bids of the contestants. The following are the bids:

	Per centum of discount.
David Atwood	40½
Democrat Printing Company	42
M. J. Cantwell	33⅓

The Democrat Printing Company, of Madison, having bid the greatest per centum of discount from the maximum rates as set forth in chapter 20 of the Revised Statutes, was awarded the contract according to law. It will be seen that the next contract, which begins January 1, 1885, is not quite as low as the present one, but we consider it a very reasonable bid.

PURCHASE OF PAPER.

On account of the change in the law, providing for the printing of public documents, agricultural and other reports, the number of copies of the latter two being greatly increased, the demand for paper has of course increased correspondingly. We managed, however, by economical management, and by utilizing much of the surplus stock on hand and by a few light purchases, to run through the year 1883 without advertising for a general stock. On the 1st of August of the present year, the commissioners advertised for a stock of paper according to law, and on the 2nd day of September the commissioners met in the secretary of state's office and opened the bids.

Purchase of Paper.

The following is the description, size, quality and quantity of paper, and the bid of each of the contesting parties:

DESCRIPTION OF PAPER.	Niedecken & Co.	Bradner, Smith & Co.	Harvey M. Harper.	Standard Paper Co.
FIRST CLASS.	Cts. per lb.	Cts. per lb.	Cts. per lb.	Cts. per lb.
3,000 reams sized and super-calendered Book paper, 25x38 inches, weighing 60 pounds per ream	7.39½	7.70	7.31	7.60
40 reams print paper, 25x38 inches, weighing 40 pounds per ream	4.25	4.50	6.00	4.95
SECOND CLASS.				
150 reams Record Medium, 18x23 inches, weighing 40 pounds per ream	16.55	16.85	15.20	16.75
25 reams Granite Cover, 20x25 inches, weighing 40 pounds per ream	9.43	8.50	9.00	8.9
50 reams extra wove Folio Post, 17x22 inches, weighing 20 pounds per ream	12.50	12.50	12.50	11.50
300 reams extra wove Folio Post, 17x22 inches, weighing 24 pounds per ream	12.50	12.40	12.50	11.50
50 reams extra wove Folio Post, 17x22 inches, weighing 28 pounds per ream	12.50	12.45	12.50	11.50
250 reams extra wove Double Flat Cap. 17x28 inches, weighing 28 pounds per ream	12.50	12.35	12.50	11.50
1,000 sheets 3-ply Bristol Card Board (white) per M	2.97	3.00	3.00	2.35
10,000 sheets No. 29 (Crane & Co.'s) bond, 17x22 inches, per M	22.00	22.25	24.00	22.40

SUMMARY.

H. NIEDECKEN & Co., Milwaukee —	
First class	$13,379 00
Second class	3,412 00
Total	$16,797 00
BRADNER, SMITH & Co, Chicago —	
First class	$13,932 00
Second class	3,405 10
Total	$17,337 10
HARVEY M. HARPER & Co., Chicago —	
First class	$13,254 00
Second class	3,347 00
Total	$16,601 00

Purchase of Paper.

STANDARD PAPER CO., Milwaukee —	
First class	$13,759 20
Second class	3,250 50
Total	$17,009 70

The bid of Harvey M. Harper, of Chicago, being the lowest in the first class paper, he was awarded the contract.

The bid of the Standard Paper Company, of Milwaukee, being the lowest on the second class paper, it was awarded the contract.

This stock of paper we think will be sufficient to meet the requirements of the state and Legislature for the next year at least.

The cost of the state printing is given in detail in the report of the Secretary of State, and it will not be worth while to repeat it here; but the following is an abstract of the amount paid for printing and binding for the the two years beginning October 1, 1882, to September 30, 1884:

DESCRIPTION.	Cost of printing including binding and paper.
Session Laws, 1883	$7,905 92
Blue Book	4,866 83
State Agricultural Society	14,401 63
Northern Agricultural Society	2,031 92
Horticultural Society	3,470 39
Dairymen's Association	1,656 93
Historical Society	1,581 64
Legislature	5,757 74
State Board of Health	1,436 78
State Librarian	756 28
Reports and Miscellaneous printing for state departments, including binding for two years	15,896 34
	$59,762 40

All of which is respectfully submitted,

ERNST G. TIMME, Secretary of State,
E. C. McFETRIDGE, State Treasurer,
L. F. FRISBY, Attorney General,
Commissioners of Public Printing.

SUMMARY OF THE REPORT OF THE SUPERINTENDENT OF PUBLIC PROPERTY FOR THE TWENTY-ONE MONTHS FROM JANUARY 1, 1883, TO SEPTEMBER 30, 1884.

OFFICE OF SUPERINTENDENT OF PUBLIC PROPERTY,
MADISON, WIS., September 30, 1884.

To His Excellency J. M. RUSK, *Governor:*

I have the honor herewith to submit the following report of the affairs pertaining to this office for the period commencing January 1, 1883, and terminating September 30, 1884.

STATIONERY.

As shown by inventory submitted with the report of this office for the year ending January 1, 1883, there were stationery supplies in my hands at that date to the value of $3,725.47. There has come into my hands by purchase, during the period covered by this report, stationery to the value of $2,970.30, as shown by statement of purchases herewith, marked "Exhibit A." There has been disbursed to the state and legislative officers the amount of $4,656.12, shown by accompanying detailed statement, marked "Exhibit B." leaving on hand at this date the amount of $2,039.65, an inventory of which is submitted with the full report.

The legislature of 1883 appropriated for the purchase of stationery for the use of state officers for the years 1883 and 1884, and for the legislative officers of 1885, the sum of $6,000. Of that sum there remains in the treasury unexpended at this date the sum of $3,029.70. Most of this will be expended to pay for stationery contracted for, and that must be purchased before another appropriation can be made.

GENERAL EXPENDITURES.

The expenditures through this office under Chap. 293 of the Revised Statutes, have been swelled during the period cov-

Furniture.

ered by this report beyond what has been usual, by reason of the disaster to the south extension of the capitol last November. Under advice of the Governor, expenses of burying the killed and caring for the wounded and their families have been paid by the state to the extent of $5,117.04. In other ways the enlargement of the capitol has tended to increase the labors and expenses of this office. Additional laborers have been necessary, and most of the north extension has been provided with new furniture necessary to its occupancy. Expenses incident to the session in the capitol of the National Educational Association last July; the rebuilding of the west portico and steps of the capitol, found necessary for the safety of that portion of the building; and the extension and repairing of the asphaltum walks and drive-ways in the park, are other extraordinary expenses during the past year.

The total expenditures since my report of January 1, 1883, other than for stationery, were as shown by statement herewith, marked "Exhibit C."

FURNITURE.

The value of furniture and other movable property in the capitol can only be estimated as heretofore. Adding the amount purchased since the last report to the estimated value of what was then on had, and deducting from the product ten per cent. per annum for wear and tear and breakage, will perhaps give as nearly as practicable the value of such property in and about the capitol at this date, as follows:

On hand Jan. 1st, 1883 (estimated)	$13,246 10
Purchased since last report	8,244 75
Total to account for	$21,490 85
Deduct ten per cent. for two years	4,298 16
On hand Sept. 30, 1884 (estimated)	$17,192 69

FUEL.

The fuel supply for the coming year has been contracted for but not yet delivered. The enlargement of the capitol

Books, Pamphlets, Etc.

increases the consumption of fuel about one-third, and provision has been made accordingly. The amount on hand at this date is estimated to be 150 tons of coal, valued at $1,200. About six hundred tons per annum is the quantity estimated to be necessary for the enlarged building. About 400 tons was the amount annually consumed previous to the building of the extensions.

BOOKS, PAMPHLETS, ETC.

Since January 1st, 1883, twelve thousand copies of Volume 1, and four thousand copies of Volume 4 of the report of the Geological Survey of the State have come into the custody of this office, and have been disposed of according to law. One thousand copies of each volume were reserved for sale as the law directs. But few have thus far been sold, the remainder, being, at this date, in charge of this office.

There has been realized from the sale of geological reports and other books the sum of $664.45, which has been paid over to the state treasurer.

Two hundred copies of Shepard's Digest, purchased pursuant to chapter 243, laws of 1883, have been distributed as that statute provided. The session laws of 1883, and the report of the State Agricultural Society for 1884, received by this office since my last report, have been disposed of as the law requires. Of the latter, (12,000 copies) about one-half were delivered to the secretary of the Agricultural Society, pursuant to chapter 320, laws of 1883.

Any statement of the number and value of books and documents in charge of this office must be merely an estimate. On January 1st, 1883, the estimated value of this class of property on hand was $34,833.25. The additions since that date, less disbursements, show that there is now on hand such property to the value of about $37,500.00 Most of this property being subject to distribution, no attempt had been made or required up to two years ago to keep even so much as an approximate account of it.

Exhibit "A."

The following summary exhibits the amount of state property in charge of this office at this date, actual and estimated:

Stationery, per invoice	$2,039 65
Furniture, tools, etc. (estimated)	17,192 69
Coal (estimated)	1,200 00
Books and documents (estimated)	37,500 00
Total	$57,932 34

Respectfully submitted,
W. H. BENNETT,
Supt. Public Property.

BIENNIAL REPORT

OF THE

STATE TREASURER

OF THE

STATE OF WISCONSIN.

FOR THE

FISCAL YEARS ENDING SEPTEMBER 30, 1883 AND 1884.

OFFICE OF STATE TREASURER,
MADISON, October 10, 1884.

To his Excellency, JEREMIAH M. RUSK,
Governor of the State of Wisconsin:

SIR:—In accordance with the requirements of law, I have the honor respectfully to submit herewith the biennial report of the receipts and disbursements of this office during the fiscal years ending September 30, 1883 and 1884, exhibiting a full statement of the financial transactions of this department, and including also a detailed statement of the operations of the bank department.

Yours respectfully,

EDWARD C. MCFETRIDGE,
State Treasurer.

West Wisconsin Railroad License Fund.

WEST WISCONSIN RAILROAD LICENSE FUND.

In accordance with the provisions of chapter 245, of the laws of 1877, entitled "an act to distribute more equally the burdens of taxation in certain counties in the state," the West Wisconsin, now part of the "Chicago, Minneapolis, St. Paul and Omaha Railway Company," has prepared a duly certified statement or list of lands now owned by said railway company in each of the several counties wherein said lands are located, and which are exempt from taxation, on the first day of August, 1883. Such statement was duly transmitted to this office and filed as required by law, and in accordance therewith the proper amount apportioned to the several counties, such apportionment being at the rate of 2½ cents per acre upon the lands of said company so exempt from taxation.

The following is a statement of the number of acres reported for each county, and the amount apportioned to such county:

St. Croix county..	1,102.00	acres at 2½ cts. per acre.....	$27 55
Dunn county.....	73,792.57	acres at 2½ cts. per acre.....	1,844 81
Pepin county.....	10,215.79	acres at 2½ cts. per acre.....	255 39
Buffalo county...	12,807.32	acres at 2½ cts. per acre.....	320 18
Eau Claire county.	50,856.24	acres at 2½ cts. per acre.....	1,271 40
Chippewa county.	20,744.47	acres at 2½ cts. per acre.....	518 61
La Crosse county.	2,440.51	acres at 2½ cts. per acre.....	61 01
Monroe county...	33,319.03	acres at 2½ cts. per acre.....	832 97
Juneau county ...	1,386.91	acres at 2½ cts. per acre.....	34 67
Wood county	280.40	acres at 2½ cts. per acre.....	7 00
Jackson county ..	92,323.50	acres at 2½ cts. per acre.....	2,308 08
Clark county.....	22,561.51	acres at 2½ cts. per acre.....	564 03
			$8,045 70

North Wisconsin Railroad License Fund.

NORTH WISCONSIN RAILROAD LICENSE FUND.

In accordance with the provisions of chapter 22, general laws of 1879, entitled "an act to facilitate the execution of the trust assumed by the State of Wisconsin by her acceptance of the grants of land to aid in the construction of certain railroads in said state," the North Wisconsin Railway Company, now part of the "Chicago, Minneapolis, St. Paul & Omaha Railway Company," has prepared duly certified statements or lists of lands now owned by said company in each of the several counties, in which said lands are located, and which on the first day of August, 1883 and 1884, were, and are, exempt from taxation, and has transmitted such certified statements to this office to be filed as provided for by the above named act, and in accordance therewith the following amounts have been duly apportioned and paid to the several counties, to wit.

	1882-1883.	1883-1884.

Cash Items	474,543 02	294,672 41
U. S. Currency	1,771,983 98	1,393,281 60

OFFICE OF STATE TREASURER,

MADISON, July 14, 1884.

I hereby certify that the foregoing statement is an abstract of the semi-annual reports made to this office by the several banks that made reports (as far as it was practicable to arrange the items under general heads) in pursuance of the provisions of the forty-second section of the act entitled "An act to authorize the business of banking," approved April 19, 1852.

E. C. McFETRIDGE,

State Treasurer.

STATEMENT *of the condition of the private banks and bankers on the morning of July* 7, 1884.

Condition of Private Banks and Bankers.

OFFICE OF THE STATE TREASURER,

MADISON, July 14, 1884.

I hereby certify that the foregoing statement is an abstract of the semi-annual reports, made to this office by the several private banks and bankers, that made reports (as far as it was practicable to arrange the items under general heads), in pursuance of the provisions of the 41st section of the act entitled "An act to authorize the business of banking," approved April 19, 1852, and section 2023, revised statutes.

E. C. MCFETRIDGE,
State Treasurer.

BIENNIAL REPORT

OF THE

STATE SUPERINTENDENT

OF THE

STATE OF WISCONSIN,

FOR THE

TWO YEARS ENDING JUNE 30, 1884.

ROBERT GRAHAM,
State Superintendent.

MADISON, WIS.:
DEMOCRAT PRINTING CO., STATE PRINTERS.
1885.

OFFICE OF THE STATE SUPERINTENDENT,

MADISON, WIS., December 6, 1884.

To His Excellency, JEREMIAH M. RUSK,

Governor of Wisconsin:

SIR: — I have the honor of submitting, through you, to the legislature, the Biennial Report of the Department of Public Instruction, which embraces the period beginning June 1, 1882, and ending June 30, 1884.

I am sir, very respectfully,

Your obedient servant,

ROBERT GRAHAM,

State Superintendent.

BIENNIAL REPORT

OF THE

STATE SUPERINTENDENT.

OFFICE OF STATE SUPERINTENDENT,

MADISON, December 6, 1884.

To the Legislature of Wisconsin:

The last report issued from this department, under date of December 10, 1883, included statistics relating to the schools up to and including the thirty-first day of May, 1882. By chapter 298, general laws of 1883, the time for making annual reports by school district officers was changed, so that thereafter statistics were to be compiled up to and including the thirtieth day of June, annually, instead of the thirty first day of May, as theretofore. Since 1881 three different periods have been designated by law as the time for making up annual reports by school district officers, viz.: August 31, May 31, and June 30. These changes have necessarily interfered with accurate and complete statistical tabulation of the work of the schools, and with just and valuable comparisons of such statistics from year to year. It is certainly desirable that no further changes be made in the period covered by annual reports, unless demanded by most urgent and imperative necessity. The time for holding annual meetings by school districts, the first Monday in July, as now fixed by law, is doubtless as convenient as any that could be selected, all things considered. The duty of making up the annual report by district clerks immediately after the annual meetings are held, would seem to be an arrangement business-like in character, and calculated to insure promptness and accuracy. This, no doubt, will be the result when the advantages of the practice are apprehended, and the

habit established. The delay of some officers in making reports the present year has caused great inconvenience in the office of the state superintendent, and unfortunate delay in the publication of this report.

In the following general summary of the more important items reported in detail in the statistical tables, attempt has been made to present in condensed form the results of the work of the schools for the period of two years covered by the report, a comparison of these results of one year with the other, and a comparison of the year 1884 with the year 1882, the year covered by the last report of the state superintendent.

GENERAL SUMMARY.

ENUMERATION.

	1883.	1884.
Number of persons in the state between four and twenty years of age, June 30	510,125	528,750
Number of persons in the state between four and twenty years of age in 1882	.....	495,233
Increase	.....	33,517
Number of person in the state between seven and fifteen years of age, June 30	269,425	286,542
Number of persons in the state between seven and fifteen years of age, in 1882	.....	257,429
Increase	.....	29,113

ENROLLMENT AND ATTENDANCE.

	1883.	1884.
Number of persons between four and twenty years of age enrolled in the public schools during the year	308,274	315,804
Number of persons between four and twenty years of age enrolled in the public schools in 1882	.....	302,014
Increase	.....	13,790

General Summary.

	1883.	1884
Number of persons under four years of age enrolled during the year	409	311
Number of persons under four years of age enrolled in 1882	.....	353.
Decrease	.....	42
Number of persons over twenty years of age enrolled during the year	997	854
Number of persons over twenty years of age enrolled in 1882	.....	1,085
Decrease	.....	231
Total number enrolled in the public schools during the year	309,680	316,969
Total number enrolled in the public schools in 1882	.....	303,452
Increase	.....	13,517
Number of persons between seven and fifteen years of age, who attended school during the year	234,800	238,266
Number of persons between seven and fifteen years of age who attended school in 1882	.....	223,575
Increase	.....	14,691
Number of persons between four and twenty years of age in cities who attended school during the year	53,771	56,420
Number of persons between four and twenty years of age in cities who attended school in 1882	.....	50,842
Increase	.....	5,578
Number of persons between four and twenty years of age outside of cities who attended school during the year	254,503	259,384
Number of persons between four and twenty years of age outside of cities who attended school in 1882	.....	251,172
Increase	.....	8,212
Per cent. of number between four and twenty years of age in cities who attended school during the year	46	45.4
Per cent. of number between four and twenty years of age in cities who attended school in 1882	.....	47.
Decrease	.....	1.6

General Summary.

	1883.	1884.
Per cent. of number between four and twenty years of age outside of cities who attended school during the year	65	64.2
Per cent. of number between four and twenty years of age outside of cities who attended school in 1882	.....	64.
Increase	.....	.2
Per cent. of the whole number between the ages of four and twenty years enrolled in the public schools during the year	60.4	60.
Per cent. of the whole number between the ages of four and twenty enrolled in the public schools in 1882		61.
Decrease		1.
Per cent. of the whole number between seven and fifteen years of age who have attended school during the year	87	83.2
Per cent. of the whole number between seven and fifteen years of age who attended school in 1882	.....	87.
Decrease	.....	3.8
Number of days of attendance of pupils in the public schools during the year	25,020,711	29,100,774
Number of days of attendance of pupils in the public schools in 1882	.....	22,147,244
Increase	.....	6,953,530
Average number of days of attendance per pupil	80.8	91.8
Average number of days of attendance per pupil in 1882	.....	73
Increase	.....	18.8
Average number of days attendance per pupil in cities.	127.9	173.4
Average number of days attendance per pupil in cities in 1882	.....	115.
Increase	.....	58.4
Average number of days attendance per pupil outside of cities	69	74.1
Average number of days attendance per pupil outside of cities in 1882	.....	64.6
Increase	.....	9.5

General Summary.

	1883	1884
Number of persons enrolled in normal schools, colleges and the university during the year (excluding law department and theological schools), including model department in normal schools	5,335	5,821
Number of persons enrolled in normal schools, colleges, and the university (excluding law department and theological schools), including model department in normal schools, in 1882	.....	4,914
Increase	.....	907
Number of persons enrolled in private schools	21,191	15,616
Number of persons enrolled in private schools in 1882	.....	20,967
Decrease	.....	5,351
Total number enrolled in all the schools during the year	336,206	338,406
Total number enrolled in all the schools in 1882	.....	329,333
Increase	.....	9,073

DISTRICTS AND SCHOOL HOUSES.

	1883.	1884.
Number of cities maintaining schools under special charters	33	34
Number of cities maintaining schools under special charters in 1882	.....	31
Increase	.....	3
Number of districts and sub-districts in the state outside of cities	5,707	5,767
Number of districts and sub-districts in the state outside of cities in 1882	.....	5,593

Number of schools with two departments	217	239
Number of schools with three departments	76	77
Number of schools with four or more departments	193	203
Number of towns in the state which have adopted the township system	16	20

General Summary.

HIGH SCHOOLS.

	1883.	1884.
Number of high schools in the state organized under the free high school law	114	115
Number of free high schools making special reports and receiving state aid	110	112
Number of pupils under twenty years of age enrolled during the year	7,324	7,531
Number of pupils over twenty years of age enrolled during the year	195	158
Whole number of days of attendance in free high schools during the year	908,500	925,791
Average number of days of attendance of pupils enrolled during the year	120.8	120.4
Number of pupils instructed in English branches only	6,400	6,274
Number of pupils instructed in other than English branches	1,119	1,411

	1883.			1884.		
	Male.	Female.	Total.	Male.	Female.	Total.
Whole number of pupils who completed the course of study during the year	143	311	454	152	323	475
Whole number of pupils who have completed the course of study since schools were organized	992	2,035	3,027	1,109	2,321	3,430
Number of teachers employed in free high schools	128	104	232	132	102	234

	1883.	1884.
Amount received for tuition from non-residents	$11,730	$14,713
Number of teachers holding state certificates	12	14
Number of teachers holding normal school, college, or university diplomas	68	73
Number of teachers qualified by special examination	30	25
Number of free high schools having an average daily attendance of more than twenty-five pupils	95	100
Number of free high schools having an average daily attendance of less than twenty-five pupils	15	12

General Summary.

SPECIAL STATISTICS.	1883.	1884.
Number of schools maintained in towns which have the township system	86	110
Number of districts outside of cities, maintaining schools with more than one department, which have adopted a course of study	212	217
Number of districts maintaining schools with one department only, which have adopted a course of study.	785	946
TEACHERS.		
Number of teachers required for all the schools	7,314	7,459
Number of teachers required in 1882	.....	7,093
Increase	.....	366
Number of male teachers employed during the year	2,457	2,378
Number of male teachers employed in 1882	.....	2,456
Decrease	.....	78
Number of female teachers employed during the year	8,478	8,251
Number of female teachers employed in 1882	.....	7,631
Increase	.....	620
Number of different teachers employed during the year	10,935	10,629
Number of different teachers employed in 1882	.....	10,087
Increase	.....	542

TEACHERS' CERTIFICATES.

	1883.			1884.		
	Male.	Female.	Total.	Male.	Female.	Total.
Number of teachers who received first grade certificates during the year	98	70	168	119	80	199
Number who received second grade certificates	213	381	594	232	434	666
Number who received third grade certificates	1,638	5,957	7,595	1,659	6,176	7,835
Whole number of certificates issued by county superintendents during the year	1,949	6,408	8,357	2,010	6,690	8,700
Number of certificates issued by city superintendents	47	527	574	59	584	643

General Summary.

	1883.	1884.
Number of normal school certificates countersigned during the year	21	26
Number of normal school diplomas countersigned during the year	19	26
Number of diplomas of college graduates countersigned during the year	8	4
Number of diplomas of University graduates countersigned during the year	9	10
Number of limited state certificates awarded at state examination	3	9
Number of unlimited state certificates awarded at state examination	5	1
Number of life certificates acquired by twenty-one years of teaching	15	11
Whole number of teachers' certificates issued during the year	9,011	10,430

DICTIONARIES, MAPS, GLOBES.

Number of districts and departments supplied with Webster's dictionary	5,507	5,587
Number of districts and departments supplied with a map of Wisconsin	3,158	3,430
Number of districts and departments supplied with a map of the United States	3,532	3,810
Number of districts supplied with a globe	2,055	2,172

LIBRARIES.

Number of districts supplied with a library	269	289
Number of volumes in all school district libraries	28,038	30,985
Number of volumes added to libraries during the year.	2,991	3,320
Amount expended for libraries during the year	$2,742	$4,294
Total value of school district libraries	$25,975	28,643

Financial Statement.

FINANCIAL STATEMENT.

The following summary shows the amounts received and disbursed for public schools, including schools in cities, for the year ending June 30, the sources of receipts and the purposes of disbursements.

APPORTIONMENT.

	1883.	1884.
Amount apportioned to the several towns and cities from the school fund income	$197,536 80	$213,138 66
Rate per capita upon persons of school age	40	42

	1883.	1884.
RECEIPTS.		
Amount in hands of school district treasurers, June 30	$717,717 93	$655,369 57
From taxes levied by counties, towns, cities, villages, and school districts	2,275,662 77	2,486,965 78
From income of school fund	219,820 13	208,659 12
From all other sources, including loans	274,989 96	323,820 20
Total amount received for school purposes	$3,488,190 79	$3,674,814 67
DISBURSEMENTS.		
For building and repairing	$383,928 56	$440,095 41
For apparatus, libraries, furniture, records, etc.	70,236 23	82,432 55
For old indebtedness	96,860 97	124,757 55
For teachers' wages	1,878,149 78	1,866,906 30
For all other purposes	399,949 64	402,894 23
Total amount paid out during the year	$2,829,125 18	$2,917,086 04
Amount on hand June 30	$659,065 61	$757,728 63

Financial Statement.

UNIVERSITY OF WISCONSIN.

	1883.	1884.
Amount on hand, September	$13,800 18	$9,687 52
Amount received from university fund	13,925 33	13,805 20
Amount received from agricultural college fund	17,377 14	17,057 31
Amount received from state tax	45,632 51	57,442 52
Amount received from students, room rent and incidental fees	5,167 40	6,100 48
From students for laboratory expenses	1,122 92	2,051 87
From experimental farm, sale of products	1,459 78	1,339 87
From all other sources	2,344 75	2,604 51
Total amount received	$100,830 01	$110,089 28
DISBURSEMENTS.		
For salaries of instructional force	$49,784 53	$52,358 55
For expenses of regents	286 10	317 31
For insurance, repairs and improvements	13,772 60	10,594 04
For incidental expenses	6,403 22	6,645 96
For fuel and light	1,277 86	6,261 99
For library and furniture	2,341 94	1,615 78
For Washburn observatory	5,708 18	4,674 19
For experimental farm	6,506 31	5,339 40
For all other purposes	5,061 75	9,813 26
Total amount paid out	$91,142 49	$97,620 48

Financial Statement.

NORMAL SCHOOLS.

	1883.	1884.
RECEIPTS.		
From normal school fund	$76,183 69	$75,650 92
From tuition and book rent	11,833 27	12,129 72
From all other sources	7,859 50	22 25
Total amount received	$95,876 46	$87,802 89
DISBURSEMENTS.		
For salaries of instructional force	$60,299 44	$62,051 98
For text and reference book libraries	3,183 34	2,810 65
For fuel and light	4,993 97	5,230 36
For repairs	10,930 72	5,002 36
For expenses of regents	349 90	354 85
For services and expenses of committees	742 75	532 05
For salary of secretary of board of regents	600 00	600 00
For all other purposes	3,999 20	4,830 20
Total amount paid out	$85,099 32	$81,412 45

TEACHERS' INSTITUTES.

Of the amount expended for teachers' institutes, $1,777.32 in 1883, and $1,864.31 in 1884, was paid from the general fund, and the balance from the normal school fund income:

	1883.	1884.
Amount paid for conductors' salaries	$4,092 50	$4,397 50
Amount paid for conductors' expenses	1,799 56	1,738 58
Amount paid for incidental expenses	328 58	389 01
Total amount paid out	$6,220 64	$6,525 09

GENERAL REVIEW.

By chapter 320, general laws of 1883, the report of the state superintendent, as that of all other state officers, is required to be made biennially, and cover the period of two years. By section 166, Revised Statutes, it is made the duty of the state superintendent to include in his report an abstract of all the common school reports received by him. This section not having been repealed, the abstracts of the reports received for the years 1883 and 1884 are necessarily included in this report, occupying nearly double the space heretofore required by statistical tables in the annual report of the state superintendent. By the same law of 1883 the number of pages of this report is limited to 300. This makes it necessary to omit much of the matter other than statistical usually included, and of general interest to students of educational movements and progress, and to greatly abridge the general review.

General Review.

By the statistics to be found in the general summary, it will be seen that the school population of the state is steadily increasing, being 528,750 in 1884, an increase of 33,517 over the number reported in 1882. Of this increase 14,892 represents the gain of 1883, and 18,625 that of 1884. The increase of the number attending school has not kept pace with the increase of the population, being only 9,073. By the reports it appears that 6,873 represents the gain in 1883, and 2,200 that of 1884. This includes the nnmber reported as attending private schools, normal schools, colleges and the state university. But it is to be remembered that the statistics relating to private schools are very meagre indeed. Several of the largest cities in the state, where it is well known there are large numbers of private schools maintained, make no report of the number in these schools who are not enrolled in the public schools. By the reports of the private schools which have been received, it will be seen that the number enrolled the present year is given as 15,616 — 5,575 less than in 1883, and 5,351 less than in 1882. In normal schools, colleges and the university there has been an increase of 907 in the enrollment over that of 1882; of this number 421 represents the increase of 1883 over 1882, and 486 that of 1884 over 1883.

When it is remembered that a large proportion of the increase of population in Wisconsin during the last two years has been in the newer portions of the state, where time is required to provide facilities for public education, and in a few large cities where accommodations are always inadequate for the school population — especially for primary grades of pupils — the reason for the increase of school attendants failing to equal the increase of school population is quite apparent.

The number of persons under four and of those over twenty years of age enrolled in public schools has decreased.

Efforts have been continued during the last two years to ascertain the number of persons in the state between the

General Review.

ages of seven and fifteen years, and the proportion of these attending public schools. More care has evidently been taken to furnish correct statistics upon these points than formerly, but the failure to receive reports from some important localities still leaves the information incomplete, and the statements of the totals inaccurate. But the returns received approximate the truth relating to this class of our school population, and indicate quite satisfactory results, as did the reports of 1882.

The increase of the number between seven and fifteen years of age in the state over the number reported in 1882 is 29,113. Of this number 11,996 represents the gain of 1883 over 1882, and 17,117 that of 1884 over 1883. The increase of this class who have attended school during the two years is 14,691; a gain of 11,225 in 1883, and of 3,466 in 1884. If we could add to these figures statistics from such localities as failed to report upon this matter, they would doubtless show that nearly all this class of our school population attend school during some part of the year. The per cent. of this class which attended school during the year 1883, according to the reports, is 87, and during the year 1884, 83.2.

The average number of days each pupil enrolled has attended school is 91.8 in 1884, as compared with 80.8 in 1883, and 73 in 1882. In cities the average number each pupil enrolled attended is 115, 127.9, 173.4 for the years 1882, 1883 and 1884, respectively. Outside of cities the average is 64.6, 69, and 74.1 for the same years.

The number of school districts in the state has increased during the period covered by this report by 174, and the number of school houses by 143.

A little study of the statistical tables will suggest many other points of comparison, which would be interesting and instructive to consider in this place did the limits of this review permit. There is little necessity, however, for calling attention to these points, specifically, as they will readily suggest themselves to such as are accustomed to scan such

General Review.

tables to determine the tendency and drift of popular estimate of public education, and to ascertain whether this most potent and pervasive factor of American civilization is losing in any degree its grasp upon the confidence and regard of the people of our commonwealth.

None are more keenly alive to the mutations of popular estimates of the public schools than those who are immediately connected with them in the relation of teachers, supervisors, or managers. There is a well-nigh universal agreement among intelligent and competent judges, that at least two elements are indispensable to the best success of public schools of any grade in any place, viz.: (*a*) a strong, intelligent and pervasive public interest; and (*b*) competent, enthusiastic and earnest teachers. Fine buildings and sites, extensive and well-selected libraries and cabinets, and abundance of apparatus and illustrative appliances, are not to be lightly esteemed, but on the contrary are to be greatly desired and highly prized. It is to be remembered, however, that these are not *indispensable* conditions of a good school, or good school work. They are *impossible* conditions for a arge majority of the common schools in Wisconsin, or in any other state. And in every place where they are found, except as the result of an intelligent comprehension of the use to be made of them, and put into the hands of efficient teachers as tools for constant use, their possession is a mockery and a sham, and of no educational value, if not positively harmful. The interest of the community, then, in the public school, is one of paramount importance, and all the gauges of that interest are properly watched with greatest interest, and its mutations observed with closest scrutiny. Whatever tends to weaken that interest, or undermine confidence in the public school, is rightfully challenged as a menace. So intimately connected are these two elements of success of public schools — prevailing public interest and competent teachers — that it is exceedingly difficult to assign precedence to either. As a rule the presence of one

insures the presence of the other. It is, therefore, a matter of congratulation to find from year to year in the reports from the several counties of the state, evidence that the public school is strongly entrenched in the hearts of our people, and that the general interest therein carries them steadily forward abreast of the growth and needs in all sections of the state.

The question whether the common schools can be greatly improved over their present condition, or brought to occupy a much more advanced position than they now do, is one which is so closely related to another question, viz.: whether it is possible to secure for these schools a corps of teachers of higher culture, clearer insight, stronger personality and greater force of character, that it becomes a problem surrounded with many difficulties. That more and more the persons employed in the common schools of the state are females rather than males, and are young, and therefore necessarily immature in judgment and only fairly furnished in scholarship, are facts that are indisputable. After further observation for a period of two years, statements of the annual report of 1882 can be reiterated and emphasized, that "as a consequence, pupils are not inspired to strive for proficiency, are not interested, but are repelled by the hum drum routine of school exercises, make little or no progress in the branches they nominally study, and soon become irregular in attendance, or drop out altogether. In the employment of teachers of low grade of scholarship and ability to teach, is found a very potent reason for the early withdrawal from school of a large number of pupils." The fact is that when pupils are of about the same age of the teacher, and consciously very nearly approach her in range of acquirements, and perhaps excel her in natural ability, there is apt to develop a mutual distrust of ability to help, and a withdrawal from school which is also mutually satisfactory. The question is a vital one, whether there is any remedy for this; whether the limitation of the usefulness and the mission of the com-

General Review.

mon schools is unalterably fixed by the character of the teachers obtained and obtainable for them, so that in spite of great interest in and effort for their improvement, they must remain at about the state of proficiency already reached.

The answer to this question is to be found, in part, in several directions. 1. In more permanency and continuity in the work of the teacher. 2. In systematic work of the schools through courses of study. 3. In more systematic and specific supervision. 4. In the enlargement of the free high school system.

There is very little hope that the average time which now constitutes the period which persons devote to teaching will be greatly extended in the near future; but there is hope that something may be done whereby the same person will be retained in charge of the same school for a longer period than is now prevalent. And this will be a great gain. When school district officers can be induced to inquire for persons competent to take charge of their school for a series of years, and when teachers can be induced to regard the act of engaging a school as one which involves entering upon the work of training a class of youth which will require a series of years to complete, and which will probably cover all the elementary school training many of those youth will ever receive, much has been accomplished toward removing the business of teaching from the realm of mere experiment, and for securing attention to the necessity for systematic and careful planning of the work, as well as to an adequate preparation for it.

The effort in this state to induce teachers to systematize the work of the common schools by organization upon the basis of a course of study, has resulted only in advantage — the more rapid advancement and more equal and symmetrical development of pupils, and greater efficiency and economy of the time and strength of the teacher through better

classification — where the experiment has been made in good faith, and with earnest purpose. The great draw-back to universal success and general prevalence of the practice has been the absence of official sanction and authority, and the frequent change of teachers. It will readily be seen that where a new teacher with no interest in the matter, no plan of work digested, and no purpose to continue in the work for any length of time, succeeds one of very opposite spirit, methods and purposes, the work of the latter in organization and systematic procedure will be quickly overruled and undone. I am strongly of the opinion that the time has come when every district board should be required by law to adopt a course of study, prescribed by the state superintendent, just as much as they are required to adopt a list of text-books, or maintain a public school for a certain time every year, or keep the school house in repair. And every teacher should be required to organize the school in accordance with the provisions of the course adopted, and make such reports to the district clerk, as will enable him to report through the town clerks to the county superintendent the facts and results shown by the records. These reports should be made conditions precedent to receiving apportionment of county and state funds, as other reports are now made such conditions.

The wisdom of such a provision is apparent from the fact that while the whole number of certificates issued by the county superintendents was 726 more in 1883 than in 1882, and 343 more in 1884 than in 1883, the number of first grade certificates issued in 1883 was 94 *less* than in 1882, and in 1884 was 63 *less* than in 1882. The number of second grade certificates issued in 1883 was 60 *less* than in 1882, and in 1884 12 more than in 1882.

COUNTY SUPERINTENDENCE.

The supervision of the common schools by county superintendents is necessarily quite general in its character, and

General Review.

altogether too fragmentary and incomplete to be of the highest value. The large number and scattered situation of schools under the care of each, results in infrequent and brief visits, and, as a rule, but one visit can be made in a district during a term of the school. Many of these can be made only toward the close of the term. While such visits are often fruitful of good, by reasons of suggestions based on observation, and the opportunity they afford for rendering special assistance and advice to teachers and officers, and for friendly arbitration in cases of differences of opinion or judgment which are constantly arising, yet there is a very general conviction that more definite and specific work with teachers and school officers, which shall relate to the organization, management and equipment of the schools, is especially desirable, which, in the nature of direction and guidance, shall more nearly comport with the real purpose and aim of the work of supervision. For several years efforts have been made through this department, in various ways, to promote the unity and effectiveness of the work of the county superintendents, and annually conventions of these officers have been called and held for the purpose of considering the work, comparison of views and practices, and conference with state superintendents. The constant hindrance to the best results of such efforts has been the failure to secure the general attendance of county superintendents at these conventions. The cost of attending a meeting at a central point in the state for those living in counties remote from the place of meeting, is considerable; and many can hardly afford to add this to the ordinarily heavy expenses connected with the office, and thus diminish the net income from salaries which usually are less than those paid to other county officers with less attendant incidental expenses. It is my purpose, during the present winter, to hold a series of conventions at different points in the state, for conference with county superintendents, concerning their work. In view of the large number of

new men who will take up this work at the beginning of the next year, such conferences appear indispensable to even a fair degree of efficiency, unity and mutual understanding. While much of the value of larger gatherings and wider comparisons will fail to be realized, yet it is hoped that many will be reached which would not otherwise, and the expense to such as attend will be materially lessened.

Some of the counties of the state have been accustomed to pay the expenses of the superintendent while attending the annual convention, and I recommend the passage of a law authorizing each county superintendent to attend one such convention annually, and charge the necessary expense to the county, and requiring county boards to audit and allow such accounts. A computation reveals the fact that the entire expense of attending one of five conventions by all the superintendents in the state, held at as many different points, including traveling and incidental expenses for two and one-half days each, would not exceed six hundred dollars — an average of less than ten dollars for each county or superintendent district. There is no doubt that with thorough organization and proper direction, the supervision of our common schools may be made much more effective in quickening and increasing general interest in the matter of public education, and in promoting greater efficiency of the schools. The sum mentioned would seem to be a very small tax for which to secure the benefit indicated.

FREE HIGH SCHOOLS.

The legislation of 1883, which placed the immediate supervision of the free high schools in charge of the state superintendent, has been fruitful of good results. Many of the boards having charge of these schools have been induced to give careful attention to the courses of study prescribed, and to so modify the course adopted, or the character of instruction imparted, that the evident needs and conditions of pupils are more fully met. Earnest effort has been made to

General Review.

secure teachers properly qualified, and the principals have shown commendable desire to comprehend the scope and detail of the work sought to be accomplished, and to co-operate in endeavors to secure the best practical results.

That these schools have fully justified the wisdom of extending aid to them, both in the way of pecuniary assistance and immediate oversight and direction, is manifest from the statistics relating to them. While the number of free high schools has not increased, the number in attendance, the aggregate number of days of attendance, the number given instruction in higher branches, and the number completing the course of study, have steadily increased, as well as the amount collected for tuition of non-resident pupils, this amount in 1884 considerably exceeding one-half the amount appropriated by the state for their assistance.

The limit of ten years now fixed by law for state aid for free high schools will be reached by many schools before another session of the legislature, and provisions should be made for extending this appropriation indefinitely.

I desire to reiterate the statements in my last annual report, that these schools "meet a demand that is felt in nearly every community, and are highly appreciated wherever established under fair conditions for success;" and "if the statistics were attainable there is no doubt but that another very important way in which these schools exert a useful and wide-reaching influence would be found in the opportunity they afford young people to prepare themselves in scholarship for the position of teachers in the elementary schools."

There are some indications that in many localities there is beginning to be felt an interest in establishing free high schools in rural towns, in connection with the common schools, where no graded schools exist. Nothing, in my judgment, would so quickly and greatly bring our common ungraded schools into the line of desirable systematic and definite organization and instruction, as such a movement.

Free Text-Books.

It would at once introduce the best features of a graded system into the common schools of the towns where established; it would place before every pupil a goal within easy reach, to be won by application and success in the lower forms of school work; the time of promotion being dependent upon regularity and studiousness, would have a tendency to reduce to a minimum two great evils, irregular attendance and idleness; and the very conditions of advancement would require systematic instruction, involving a course of study in all schools tributary to high schools. With these conditions established, the natural incentive of friendly rivalry among teachers in suitably preparing pupils for the high schools, and the emulation among school boards to secure the best teachers possible for the elementary schools for the same purpose, might be safely depended upon to largely increase the general interest in public schools and improve the instruction in schools of all grades. I earnestly invite attention to the expediency of making an annual appropriation to aid in the establishment and maintenance of free high schools in towns without graded schools, equal in amount to that now appropriated which is entirely confined in its benefits to villages and cities, and the localities contiguous thereto. Justice towards the sections which, while contributing by tax to the support of free high schools hitherto receiving aid, are themselves even less favored than localities having these schools were before receiving this aid, by reason of shorter terms and lower grades of schools, would seem to commend this measure, as well as the general interests of the public schools.

FREE TEXT-BOOKS.

The policy of the state of Wisconsin has been very liberal in matters relating to free public schools from the period of its organization to the present time. Needed provisions for extending the benefits and improving the character of the

Free Text-Books.

public school system, have only waited upon conviction of their merits, and opportunity for supplying them. Instruction is not only free in the common schools, but the university, the normal schools, and in the several charitable and benevolent institutions, which afford care and training for the unfortunate juvenile population. This is commendable; and every proposition looking towards placing these advantages within the reach of all classes, and with the least possible hindrance to their acceptance, and the highest praticable success in their dispensation, should receive the attention which its merits demand. Especially is this true of elementary education. No child in the commonwealth should be left for any cause practicable to overcome, without that foundation for possible future usefulness as a citizen, and for the honor and respect and equality which education and a love of learning commands, that is to be acquired in the training of the public school.

While tuition in our common schools is free, yet in various ways attendance at these schools is accompanied by no inconsiderable expense, which on the part of large numbers is found to be onerous, and often charged as unnecessary. Among these expenses is that for text-books for use in schools. The lack of uniformity in the books used even in adjoining districts, the short time the books are in use, and the cost when purchased singly, combine to make the expense on this account quite large, and especially burdensome upon such as have large families, or have occasion to change residence from one district to another.

The present law authorizes electors of school districts to empower district boards to purchase text-books for use in public schools, to be loaned or furnished pupils under such conditions as may be prescribed by the voters and regulations of the district boards. Very few districts have voluntarily undertaken to furnish free text-books to pupils. Some cities have done so, and the result has co-incided with experience in other states, and proved of great advantage.

Normal Schools.

Attendance has been increased, uniformity of text-books secured, prompt supply, better classification, and very much reduced aggregate expense, are some of the fruits of the measure, wherever tried.

The state of Massachusetts in March, 1884, by statute, required the school committee of every city and town thereafter to purchase at the expense of the city or town, text-books and all other needful school supplies used in the public schools, and provided that these should be loaned to pupils free of charge. Under date of January, 1885, the Hon. J. W. Dickinson, secretary of state board of education for Massachusetts, writes me: "The law is working well in our commonwealth. The people like it. I have reports from all parts of our state showing that it has increased the attendance (in some cases ten per cent). The new method of supplying books and supplies is cheaper by two-fifths than the old. The schools can now organize at once on the beginning of the term, and the teachers can make a thorough classification of the pupils. Our schools are now free schools."

Doubtless like or even greater advantages would accrue to our schools from a similar law in Wisconsin, where remoteness from business centres, and the consequent difficulty of procuring promptly needed books of the right kind, and the limited trade and attendant high prices, result in delay, confusion and great expense.

NORMAL SCHOOLS.

The statistics relating to the four normal schools of the state indicate no decline in the interest with which they are regarded in the several sections where located. Three of these have been constantly taxed to the limit of their capacity by pupils applying for admission; the fourth, latest established, while not so largely crowded, has become a source of supply for trained teachers in large numbers, for a wide section in the portion of the state where located.

Normal Schools.

An ideal normal school, devoted to professional work only, in the technical sense of that term, and a practicable normal school, under the conditions and limitations of involuntary environments, are quite wide apart in character. To the casual observer this is to the prejudice of the real school. The visitor looks for his ideal. This can be found only in part, and that only in fragments, as connected with, or the result of quite prolonged drill in academic work under skillful teachers. No man has yet been able to so clearly define professional work in training teachers, that it may be consciously discerned disconnected from instruction in some technical branch of study. But it is believed there is slowly being evolved through study and experience no inconsiderable body of doctrine which is a reliable basis for processes in practice in normal schools. It is believed that our own are not behind those of other states in the study and practical solution of the problem. Such of the reports of the presidents of these schools as can be given space in this report, will clearly indicate the character and scope of the work undertaken, and the spirit with which it is prosecuted.

In compliance with the conditions upon which an additional normal school was established in the city of Milwaukee, a new, tasteful, and commodious building has been erected upon an eligible site in that city, for the use of such school. At this date, however, no transfer of the property has been made to the board of regents of normal schools, and no steps have been taken by that board toward opening the school.

After six years of marked success in the management of the normal school at Whitewater, Dr. J. W. Stearns voluntarily resigns the presidency, to accept an appointment in the university of Wisconsin, as professor of the theory and art of teaching. No successor has yet been elected.

University of Wisconsin.

UNIVERSITY OF WISCONSIN.

In the matter of higher education, the University of Wisconsin holds out to the young of both sexes in the state the opportunity and the promise of superior facilities. In the number and ability of the faculty, in the large and growing library, cabinets, museums, laboratories, and collection of physical apparatus, as well as in the various colleges and departments of instruction, there are afforded facilities which are equaled in but few of the states. During the past year a chair of theory and art of teaching has been established, and Prof. J. W. Stearns, for many years the successful President of the State Normal School at Whitewater, was elected to fill the position. Prof. Stearns is expected to enter the service of the University early in April, 1885.

The liberal spirit with which the legislature in recent years has considered the necessities and provided for the wants of the University, has borne fruit in the confidence and respect which the institution now commands in every section of the state, and the jealous care with which the interests and reputation of the institution are everywhere cherished. This condition ought soon to result in greatly increasing the numbers drawn thither to enjoy its advantages. Natural growth will demand yet more liberal means of support; prospective needs should be anticipated as far as practicable, that provision thus made may invite and encourage growth. The recent calamity of destruction of Science Hall and its valuable contents by fire, makes this duty especially incumbent upon the present legislature, the discharge of which will be no doubt a personal pleasure to individual members, as well as a compliance with the universal demand of press and people in every part of the state.

Teachers' Institutes.

TEACHERS' INSTITUTES.

The institute work of the state continues to be of unabated interest and importance. These institutes constitute about the only means whereby a very large proportion of teachers in common schools are reached, and inspired with the earnestness, purpose and spirit so needful for their own success, and the advantage of pupils they may have in charge. These teachers eagerly throng the institute, desirous of information, and often making great sacrifices to obtain it. The work is limited only by the supply of apt persons qualified to successfully conduct institutes, and the means at command for expenses. In the year 1883, sixty-four institutes were held in as many counties and superintendent districts in the state, and in the year 1884, sixty-three were held. The summary shows the amount expended in each year, and the object for which expended. Institutes were held in all the counties of the state in 1883, except Ashland, Bayfield, Burnett, Douglas, Florence, La Fayette, Langlade, Price, Sawyer and Washburn. In 1884, institutes were held in every county except Ashland, Bayfield, Burnett, Douglas, Florence, Langlade, Marinette, Price, Sawyer, Washburn and Waukesha.

Unlike the adjacent states, which require teachers attending examinations to contribute a fee for the expense of institutes, Wisconsin has chosen to place this help at the command of her teachers without cost other than personal expenses whilst in attendance. The limited means available for this work, has necessarily determined the character, as well as the amount of work to be undertaken, and has doubtless been of value, inasmuch as all measures have been chosen with deliberation, after mature consideration of their value, and comparison with others within compass of means at command. But the limitations were fixed many years ago; the state has grown, meantime, and the demand

for more, better, more varied and longer institutes, has increased with the material prosperity. Could more means be devoted to this work, the character and scope of the work could be enlarged to meet this demand, plans for which can not now be entertained for lack of means.

Should an expansion of the institute work be deemed advisable, and means be appropriated for that purpose, the occasion may be auspicious for legislation which will require all teachers to attend at least one institute each year, unless sufficient excuse is offered. Such provision, while not affecting the large majority who eagerly avail themselves of all means of information and improvement, would favorably reach and affect not a few who need such helps most, but through thoughtlessness or indifference neglect them altogether.

EXAMINATIONS OF TEACHERS FOR STATE CERTIFICATES.

At a supplementary examination by the board of examiners appointed to examine teachers for state certificates for the year 1882, held December, 1882, Miss Harriet A. M. Reed, of Madison, was recommended for an unlimited state certificate, and Mr. Thomas Burke, of Watertown, for a limited state certificate. These certificates were issued, in accordance with the recommendations of the committee.

Pres. J. W. Stearns, of Whitewater, Prof. Wm. H. Beach, of Beloit, and Supt. John Nagle, of Manitowoc, were appointed to conduct the examinations for 1883. Sessions were held for the examination of candidates in July and December. Mr. Thomas Burke, of Wayside; Mr. P. H. Hewitt, of Manitowoc; Mr. H. C. Walsh, of Two Rivers; and Mr. A. R. Wittman, of Manitowoc, were recommended for unlimited state certificates. Mr. John O'Hara, of Kewaunee; Mr. Conrad E. Patzer, of Manitowoc; and Mr. John F. Sims, of Manitowoc, were recommended for limited state certificates.

Educational Meeetings.

At the session in December, Mr. Francis Cleary, of New London, was recommended for an unlimited state certificate; Mr. H. R. Smith, of Richland Centre, and Mr. Michael Harrington, of Madison, were recommended for limited state certificates.

For the year 1884, Supt. John Nagle, of Manitowoc, Prof. William H. Beach, of Beloit, and Prof. Albert Hardy, of La Crosse, were appointed as the board of examiners. A session was held in Madison in July, and the following named persons were recommended for limited state certificates: Mr. James Burke, Cato; Mr. J. B. Logue, Richland Center; Mr. J. L. Sherron, Albany; Mr. John Moeller, Manitowoc; Mr. H. L. Terry, Lake Mills; Mr. C. W. Du Mont, Edgerton; Miss Henrietta Solberg, Manitowoc.

Certificates have been issued to all the persons named, of the grade recommended by the board of examiners.

EDUCATIONAL MEETINGS.

The Wisconsin Teachers' Association held its annual meeting in Sheboygan in July, 1883. President C. F. Viebahn, of Watertown, presided at the various sessions and delivered the annual address. Other addresses were given, and papers read, which made the session one strongly marked for the ability and high character of the exercises. Professor J. W. Stearns, of Whitewater, was elected president of the association, and C. H. Keyes, of River Falls, secretary.

The hospitality and cordial good will of the people of Sheboygan was manifested in many ways, and contributed much towards the interest and pleasure of the association.

An executive session of the association was held in December, in Madison, at which an address was given by Professor W. H. Payne, of Ann Arbor, upon Education as a University Study, and one upon Industrial Education in Europe and America, by Miss S. A. Stewart, of Milwau-

Educational Meetings.

kee. A report upon moral education in the schools was presented from the advisory committee, which elicited great interest and has since attracted wide and favorable attention. This session of the association was one of unusual value.

The annual meeting of the association for 1884 was held in Madison in July. The session was brief, and somewhat overshadowed by the presence of large numbers of members of the National Educational Association and affiliated organizations which were holding meetings in the city at the same time. One of the pleasant features of this session, were the addresses of Ex-State Superintendents Barry, Draper, Pickard, McMynn, Fallows and Whitford, whose official life covers nearly the entire period of educational life and progress in the state.

Prof. R. W. Burton, of Janesville, was elected President for the ensuing year, and C. H. Keyes was re-elected Secretary; L. H. Clark, of Tomah, was elected Treasurer.

In compliance with the invitation of the Wisconsin Teachers' Association, seconded by cordial official action of various boards of education and others interested, including the Governor of the state and the Mayor and council of the city of Madison, the National Educational Association held its annual meeting in the city of Madison in July of the present year. The gathering was notable for the great numbers in attendance, for the high character of the leading participants, the ability and vigor of addresses and discussions, the wide area from which visitors were attracted, and the large and varied exhibit of school work held in connection therewith. The claim is made that it was the largest educational gathering ever assembled.

The teachers of this state of all grades were present in large numbers; the entire capitol was graciously placed at the disposal of the guests, by the governor, as well as the various churches and halls in the city, where simultaneous meetings of sections and affiliated organizations were held.

School Laws and Dictionaries.

The hospitality of state and city officials, and of the people of the city, was extended without reserve, and most cordially appreciated.

The inspiration of so large a convention, composed of persons of high repute from every section of the country, and the revelations of the exhibits, can but prove stimulating and healthful, and of more than transient benefit. It should be counted as high honor to have entertained so august an assemblage.

AMENDMENTS OF THE SCHOOL LAWS.

The supply of school codes having been entirely exhausted some months since, nothwithstanding numerous applications were made for copies I have deemed it wise to defer the publication of a new edition until the assembling of the legislature would afford an opportunity for a few changes in the statutes which have been found needful in the interests of harmony, and the elimination of ambiguity. These proposed changes will be presented in the form of bills in due time, to the committee having the matter of education in charge.

WEBSTER'S UNABRIDGED DICTIONARIES.

At the date of my last report, December 10, 1882, there were 52 Webster's Unabridged Dictionaries on hand. During the years 1883 and 1884, up to the 30th day of September, there have been purchased 615 copies, making a total of 667 copies to be accounted for.

Of these, 263 copies have been furnished to school districts as a first supply; 342 copies have been sold to school districts for re-supply; 32 copies have been sold to other parties authorized by law to purchase of the state; 30 copies remain on hand September 30, 1884.

Receipts of the state treasurer for $2,618, in payment for the 374 dictionaries sold, are on file in this office.

Official Labors.

MAP OF WISCONSIN.

During the two years ending September 30, 1884, 226 of the Nicodemus & Conover Map of Wisconsin have been sold, and the amount received therefor ($478) has been paid to the state treasurer, and his receipts therefor are on file in this office. By chapter 90, general laws of 1883, the state superintendent was authorized to sell these maps at $2.00 per copy. Previously the price was $4.00, and between the date of the last report and the reduction of the price in March, 1883, 13 copies had been sold at $4.00 each; the balance reported, 213 copies, were sold at $2.00 each.

There remain of these maps on hand, 181 copies.

The 400 copies of the railroad map of the state, authorized to be distributed by the state superintendent among the schools of the state, by chapter 258, laws of 1883, have been sent to districts purchasing a Nicodemus & Conover map, and to others making application as far as the supply admitted.

OFFICIAL LABORS.

Since my last report my official labors have been directed as far as consistent with other duties:

(a) Toward a thorough supervision and inspection of the Free High Schools, examining the courses of study, the plan of instruction, and introducing into the courses of study the theory and art of teaching, organization and management and course of study for ungraded schools — thus furnishing facilities for the teachers of common schools to make some preparation for their duties with comparatively little expense.

(b) The visitation and inspection of teachers' institutes and the Normal Schools.

(c) General conventions of county superintendents of schools.

Official Labors.

By these means it has been attempted to lay a better foundation for the elements of a general intelligence, by systematic, continuous, and progressive work in the common school, from which a large majority of the entire population obtain their education.

For specific information relating to the State University and Normal Schools, reference is respectfully made to the documents accompanying this report. Special reports from county superintendents are also appended, indicating features of the work coming under their immediate observation.

I have personally visited thirty-five counties, and have decided forty-eight appeals. I have been seconded in my labors most heartily and efficiently, by my assistant, Hon. W. H. Chandler, to whom the state of Wisconsin is very largely indebted for the present high position which her elementary instruction occupies.

ROBERT GRAHAM,
State Superintendent.

University of Wisconsin.

DOCUMENTS ACCOMPANYING REPORT.

UNIVERSITY OF WISCONSIN.

EXTRACTS FROM REPORT OF THE BOARD OF REGENTS.

To His Excellency, JEREMIAH M. RUSK, *Governor:*

* * * For a series of years past the history of the university has been that of rapid, continuous and wholesome growth. This growth is not to be measured by the increase in the number of students in attendance alone, but also by the necessary additions to real estate and buildings, by the progressive enlargement of cabinets and libraries, by the establishment of new and the expansion of old departments of instruction, and especially by the higher grade of instruction imparted in nearly or quite all the courses of study.

Since our last report the chairs of pharmacy and materia medica, and of the science and art of teaching, have been founded, and an agricultural station has been established, embracing experimental investigation, and departments of instruction in chemistry and botany, in their relations to agriculture.

Notwithstanding this continuous growth of the university in usefulness, influence, property, and in every source of permanent strength, the board of regents is compelled to contend with the fact, that the increase in the sources of pecuniary sup-

University of Wisconsin.

port from year to year, bears no just proportion to the increased demands of the institution intrusted to their care and supervision, or to the increase in the property and population of the state. With a total average income the past two fiscal years of but little more than eighty thousand dollars per annum, from all public sources, including the total product of the university fund, the income arising from lands donated by the federal government for the benefit of agricultural and mechanic arts, and the receipts from state appropriations — the government of the university has been required to furnish nearly four hundred students with free tuition in all the branches of higher education, conduct valuable and somewhat extensive investigations in agriculture, partially maintain an astronomical observatory of high character, contribute to the support of a boarding house for young ladies, repair old and construct new buildings, pay a large insurance, and provide for more extensive apparatus, cabinets, libraries and other facilities of instruction absolutely essential to this as to all institutions of similar grade and character.

The value of the work thus being performed, important as it is in its direct and immediate advantages to the population of the state, can not be estimated by present results in any adequate degree. In a moral and educational view, the influences exerted are necessarily permanent and accumulative, to an extent far beyond the possibility of human calculation. But even in a purely mercenary sense, the state has no reason to regret its proportion of the expenditure in this direction, since all is returned tenfold in the accumulated property of the university itself, in the more intelligent control and utilization of the industrial resources of the state, and in the diminished expenditures of the government otherwise, in the interests of public order and progress.

The present tendency of public opinion is toward manual and industrial education, and the recent progress of the uni-

versity has been mainly in this direction. The income from the lands donated by congress in 1862 for the benefit of "such branches of learning as are related to agriculture and the mechanic arts," scarcely exceeds a fifth part of the total income from public sources, but the legislature of 1883 provided in some degree for the deficiency of resources in these departments, by a specific appropriation for the support of an agricultural station, to the extent of the income provided in the act, and the regents have not failed to give practical effect to the purpose of the state, with the prospect of large and important practical results.

The wisdom and propriety of extending a generous support to those branches of education relating to agriculture and the mechanic arts are made sufficiently manifest by the fact that not less than 200,000 persons in Wisconsin, of all ages, are engaged in the occupation of agriculture, and nearly 100,000 persons in manufactures and mechanical and mining industries—the two classes constituting nearly three-quarters of the total number of all persons engaged in all classes of occupations in this state, according to the census of 1880. The value of our farm products for the year preceding the date of the census reached a total of nearly $73,000,000, while the capital in Wisconsin manufactures alone is placed by the same authority at nearly $75,000,000, with a gross annual product of more than $128,000,000. To train hand and brain in ways that shall best utilize and multiply the forces concerned in these vast industries is certainly not beneath the dignity or foreign from the duty of the state, and this work requires a concentration of the influence and resources at our command, rather than their dissipation by divided effort.

The regents are aware that propositions have been suggested for separating the department of agriculture, or the departments of agriculture and of mechanic arts, one or both, from the body of the university, thereby diverting the income from the national grant of 1862, or a portion

University of Wisconsin.

thereof, from its present application to the support of the university.

That which Wisconsin most requires at this time in the line of public education is not a multiplication of institutions devoted to that purpose, but a better equipment and support of those we now have. * * * * *

There seems to be a prevailing misapprehension as to the precise purpose contemplated by the act of congress under consideration. Your attention is particularly called to section 4 of that act, which declares the object of the colleges to be, "*without excluding other scientific and classical studies,* and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts, in such manner as the legislatures of the states may respectively prescribe, in order to promote the liberal and practical education of the industrial classes *in the several pursuits and professions of life.*"

According to this language, and the whole tenor of the act, scientific and classical studies were not to be excluded from the colleges endowed. Nor were the courses of instruction to relate to agriculture or the mechanic arts exclusively; on the contrary, they were to be such as the state should deem necessary to the education of students in all the pursuits and professions of life. This is the language and meaning of the law, and it is quite difficult to discover how any institution different in purpose or character from the present university of Wisconsin, including all its departments, would entirely conform to the requirements of the law.

It may be considered a question, indeed, aside from any expressed purpose of the law, whether the best policy of the state would be to educate the sons of farmers exclusively, or even generally, for the duties of the farm. There seems to be a law above human law which dictates that young men from the industrial classes shall be educated "in the several pursuits and professions of life." Exchange and in-

terchange of pursuits and professions are apparently essential conditions of national prosperity and progress. The sons of farmers best fill the places vacated by classes enervated by the successes of commerce and the luxuries of city life; and to-day neither New York nor Boston could maintain its ascendancy in commercial or professional strength but for the continual accession of hard muscles and untainted brain from rural life. And it is the right and also the duty of classes made strong by free air, economy, deprivation and labor to assert for themselves, in commerce, manufactures and the professions, all the advantages of that strength, earned for them by the sacrifices of their fathers and themselves, by educating themselves "in the several pursuits and professions of life;" and all experience proves that attempts to overthrow this order of progression mostly or wholly fail.

The necessity of economy, also, seems to require us to unite in promoting and protecting the plan of education already instituted and established, enlarging and expanding the usefulness of the university in all its departments, especially in such departments as are apparently deficient at the present time — and should those departments relating to agriculture seem to be included in the latter class, it is quite certain that the board of regents will be found ready to coöperate in all efforts to place it upon broader and stronger foundations.

GEO. H. PAUL,

President of Board of Regents.

REPORT OF THE PRESIDENT OF THE UNIVERSITY.

The wants of a thriving university are like the hunger of a growing boy, not easily nor long satisfied. It is to be feared that the people of Wisconsin may inconsiderately object to this vigor of development, because of the many claims that accompany it. The university has made rapid

University of Wisconsin.

progress in the years immediately past, both in the amount and quality of instruction and in its accessories. Thorough and extended collegiate work calls for the aid of many experienced instructors, and for the means of making that instruction fully effective. The great difference between it and intermediate work in these particulars, it is difficult for those not conversant with the facts fully to appreciate.

The university now needs for instruction in zoölogy a full collection of typical skeletons which will help to disclose the fundamental ideas of the animal kingdom. We are very reluctant to lose the partial collection, belonging to Mr. Ward, which we now hold in trust.

We are ready in biology and botany to do original work. Yet, we can not enter successfully upon it, unless we have in our library the books and periodicals that give in detail the work already done. These books of reference are indispensable for the student, who is to know how far inquiry has extended, and what remains to be done. The department also of physics, geology, chemistry, agriculture and engineering, would be greatly aided by the ability to purchase at once standard works. Our library fund only suffices to maintain the library after these immediately urgent wants are met.

If we are to receive the full benefit of our campus, we need a new gymnasium in connection with it, one that shall offer much more perfect conditions of physical training than the old one, and also furnish a suitable arsenal for our arms. The entire department of hygiene, in itself of great, of almost supreme, importance, can not be put and kept on an adequate basis, without the full service of a professor in this department. When physical exercises are directly and wisely adjusted to the wants of each student; when the exercises are required, and instruction in this department is given in connection with them, we shall find, not only the value of this work greatly increased, but its power to sustain other forms of labor greatly enlarged. Amherst College has

for years maintained such a professorship with great advantage.

The work in practical and theoretical mechanics has been so successful that our present quarters are insufficient for farther growth. A building exclusively devoted to this work, and with greatly enlarged accommodations, has become very desirable.

In spite of the great liberality of the state, our reasonable expectations in reference to income have not been fully met. In the first instance, our endowments have yielded less than we had reason to hope. A portion of them have lain for considerable periods without investment, and investments are yielding and promise to yield less than formerly. There is also another occasion of disappointment. The valuation of the state remains very low, and the fractional tax upon it has been a fixed, instead of an elastic and growing fund, as we had hoped.

Under this conjunction of past liberality and renewed wants, it is easy for the public to misunderstand the problem the university presents. A feeling of dissatisfaction and complaint may readily take the place of the more just sentiment of congratulation and hope. The university of Wisconsin has really achieved an extraordinary success, and is doing its work with unusual breadth and efficiency.

There has been an unreasonable disposition on the part of a few to find fault with the numbers in attendance on the university. In comparing this institution with the university of Michigan, they have overlooked two things; first, that the large numbers of that institution are due chiefly to its professional schools. These schools, whatever may be their value, are certainly of much less value than collegiate instruction. It is this instruction which always constitutes and must constitute the very soul and body of a university. Professional schools are accessories whose desirability is dependent upon circumstances. (Our relations to Chicago are such that we have never thought the establishment of a

medical school to be a project of any particular promise. We can plead for it neither necessity nor any special advantages. On the other hand, all the accessories of a medical college remain with us to be created.)

If we turn to the strictly central and indispensable work of college instruction, we find that the university of Wisconsin is doing in this particular business for Wisconsin as mnch as the university of Michigan is for Michigan. The university of Michigan, as much the earlier institution, is drawing largely from other states; but it has scarcely more collegiate students from its own state than we have from our own state.

The income, on the other hand, of the university of Michigan is two and one-half times greater than that of the university of Wisconsin. The two institutions do not differ much from each other in the ratio of instructors to students. No thorough and sufficient university work can be done without an instructional force that will seem disproportionately large to those who are contented that the university shall merely carry forward the work of the high schools in a few of the most obvious directions of study. If, however, we are determined to have an institution with a liberal curriculum, well sustained in each department, our expenditure must be proportioned to this very comprehensive, far-reaching and important object. We think it plain, to those who understand the case, that the university of Wisconsin, both absolutely and relatively to other institutions, is doing the work of higher instruction, which it proposes, not only fully and successfully, but also economically.

There has also been a partial misunderstanding of the actual growth of the university. The convenient but very inadequate list of members has been applied in such a way as to conceal rather than uncover the facts. The grade of work has been steadily advanced in the university, and this action has thrown back many students on the high schools, to the advantage of these schools, and to our own advantage.

University of Wisconsin.

The preparatory department has been abolished, and this step has greatly reduced the aggregate number of students.

This change took place in 1880. At that time there were 105 sub-freshmen, and 324 college students. The year immediately following this change was not affected by it as regards the number in college courses. It requires five years before the entire effects of a measure of this kind are seen in the college classes. A preparatory department of 105 students should yield at least forty each year to the freshman class. This number, when spread over four years — making all due allowance for the dropping off in attendance — ought to furnish hardly less than 100 students in the college classes. In 1884, therefore, we should have suffered a loss — if this tendency remained uncorrected — of 75 students, due to the abolition of the preparatory work. As a matter of fact, however, the catalogue of 1884 shows 312 students in college studies, as against 281 in 1879, and 324 in 1880. While, therefore, we seem to have suffered the loss of 12 students, comparing 1880 and 1884, we have really been overcoming a tendency which would naturally have issued in the loss of 75 students. In other words, we have gained 63 students. This is a result which calls for congratulation and not regret. A decline in numbers was expected as the immediate result of dispensing with the preparatory department.

If we look at the relation of the university to the state, we have equal ground for satisfaction. There are but two or three colleges in the country that have more college students than the university of Wisconsin from the state to which they respectively belong. The names of very few young men from the state of Wisconsin are now found in eastern catalogues. It may be doubted whether there is any other institution that furnishes so large a portion as does the university of Wisconsin, of the entire body of collegiate students graduated within the state which it represents.

It would hardly be desirable that this university should have any more complete command of higher education than

University of Wisconsin.

that which has fallen to it. It needs the stimulus of the little competition that still remains. The collegiate graduates have reached 65, with a steady tendency to increase.

Nor are appearances less promising when we look at the relation of the university of Wisconsin to the high schools. We are receiving about 130 students each year, and nearly four-fifths of these come to us directly from the high schools. We have now a strong list of accredited high schools; and most of the high schools of the state order their course of study more or less in reference to the university.

Under these very profitable and promising conditions, the state can well afford to renew and enlarge its liberality toward the university.

The lines of growth are these: If we wish numbers, we may well do something by wise advertisement to secure a larger attendance from the neighboring states. There is no institution of equal power so little known beyond the borders of its own state as the University of Wisconsin. Honor abroad and a liberal percentage of foreign students enhance the estimate in which a university is held at home.

Much more may be done and should be done to aid and improve the high schools of the state. We can not at once create students ready for college. This must be accomplished by the intervention of intermediate schools. The life and enthusiasm of these schools are our strength. We may well look for much aid in this particular to the Superintendent of Public Instruction. It is also possible that the faculty of the university should do more in visiting these schools, and in stimulating and directing this intermediate work. While we would by no means overlook the fact that the high school has a function of its own aside from the university, we fully believe that this, its first and proper and more important life, calls for the inspiration given it by its connection with the University.

We trust that the professorship of pedagogy just established will be very helpful in this direction. Instruction in

didactics will not only aid those who are at the head of our high schools in ordering their work for the greatest benefit of the community to which they belong, the attention of these schools will be constantly directed to higher education and the enlarged lines of work offered in the university. This professorship will be ordered in the direct interest of general education, and, through general education, of the university.

The last and most direct line of growth for the university lies in its development within itself of its own educational purposes. Every new form of work added to our old work, all old work done with fresh efficiency, tend, not only to attract more students, but to make the service we render to those already present more complete.

We can not secure the force of large life without large life itself. It is to this end we make bold, year by year, to renew our claims, and to present the enlarging wants of the university.

We are sure the people of the state will not grow weary in well doing, if they are only convinced that the work of education is well done.

JOHN BASCOM.

The Normal Schools.

THE NORMAL SCHOOLS.

EXTRACTS FROM REPORT OF THE BOARD OF REGENTS.

To his Excellency, J. M. RUSK,
Governor of Wisconsin:

* * * * During the two past years, meetings of the Board were held in July and February of each year, being the times designated by law, for making financial settlements with each school and transacting other business within the province of the Board.

The schools have been visited at intervals by the following standing committees of the Board: "*Executive*," "*Teachers*," "*Graduating Classes*" and "*Inspection of Schools and Buildings*." These committees have special and distinctive work assigned them. In the discharge of these duties, each member, from personal observation, has opportunities of gaining a knowledge of the character and scope of the work being done by the normal schools of the state.

The buildings and grounds, as well as the portable property of each school, are in good condition. Necessary repairs have been made when required for the preservation of property, and the comfort and convenience of the schools. The most important, since last report, being the re-construction of the out-houses at Whitewater and Oshkosh, and placing new heating and ventilating apparatus in the south wing of the Platteville building.

The normal schools are using every effort to make their influence felt throughout the common schools. While a few of the students complete the advanced course and are fitted to take charge of graded or high schools, by far the

The Normal Schools.

greater number take only the elementary or partial course, and have in view a better preparation for teaching in country schools or in the lower departments of graded schools. The interests of the country schools are, therefore, constantly considered. The "course of study for country schools" is made the basis of much of the work attempted in the first year of the course, thus insuring on the part of every student some familiarity with the principles underlying such a course and an acquaintance with methods adapted to country schools. The ungraded schools are at a serious disadvantage on account of isolation, limited supervision, short terms of school, frequent change of teachers, and an all but complete absence of appropriate apparatus and reference books; yet no schools make more satisfactory returns for good teaching than these. In the rural district the teacher occupies a position of more influence among his pupils and patrons than does the teacher of a graded school. Here he lives among his pupils, and on account of the paucity of other sources of information he is appealed to as authority; his opinions carry more weight and his example has more influence than in any other class of schools. In the country school, unless the teacher is more than all other school forces, the result is failure; in the graded schools, supervision, division of labor, systematic arrangement, abundance of apparatus and needed reference books make a fair degree of success possible, even when the teacher wields comparatively little influence. Our normal schools realize the condition and needs of the country schools and are faithfully and earnestly laboring to fit teachers to do such work as the interests of these schools demand.

The National Educational Association has just closed its twenty-fourth annual session at Madison. In point of membership, no such educational gathering has ever before assembled on this continent. Among the six thousand present were teachers from every state and nearly every territory in the Union. Schools of every grade were represented by

The Normal Schools.

their ablest workers. Advocates of different educational themes and the friends of the various systems of schools were afforded the greatest possible opportunity to set forth their views and show results. It was a marvelously complete exhibit of the educational condition of the entire country. Wisconsin appreciates the honor conferred by having such a convention within her limits, and is proud that it was able to give substantial proof of the sympathy of its citizens with the work of the teacher. But the state will reap a still greater reward. Our teachers will enter upon the labors of another year with higher ideals, with greater inspiration, with a fuller sense of the nobility of the teacher's calling, and with a better understanding of the work to be done than ever before. Our normal schools especially will feel this quickening impulse. On account of their professional character, every suggestion claiming to be in the interest of the art of teaching receives their careful consideration, and if at all promising is put to the test of actual practice. While all the educational interests of the state will share in the benefits resulting from this great gathering, it may be confidently claimed that none will be benefited more than the normal schools.

Chapter 299, laws of Wisconsin, 1880, made it "the duty of the Board of Regents of Normal Schools to establish an additional normal school in the city of Milwaukee, in the fourth congressional district of this state, and to proceed to organize and conduct the same without impairing the efficiency of the normal schools already established as provided by section 399, of chapter 26, of the revised statutes of 1878, as soon as said board shall, in its own judgment, be able to provide from the funds at its disposal for the maintenance of said school in said city of Milwaukee: provided, the said city of Milwaukee shall donate a site and a suitable building for said normal school in said city of Milwaukee, the location and plan of said building to be approved by said board of regents, and the said site and buildings to be together of a value not less than fifty thousand dollars."

The Normal Schools.

It also made it "the duty of said board of regents to act upon the site and plans of the building submitted to them within sixty days from the date of receiving the same upon their application therefor, and the said city of Milwaukee shall, as soon thereafter as said board shall have approved said site and plans, proceed with the erection of said building in accordance with the plans adopted."

In fulfilling the requirements of the law above quoted, the board of regents selected a site in the 4th ward of said city, and approved plans for a building, prepared by E. T. Mix, architect. The requirements of the laws have been complied with on the part of the city by the erection of the building in accordance with the plans. The building is a handsome and commodious structure, conveniently arranged with special reference to the needs of a first-class normal school. It now remains for the board of regents to organize and open the school, which will be done as soon as the funds at the disposal of the board will justify. * * *

The salaries paid normal teachers may seem large in proportion to those paid in high schools and some of the colleges of our state. Yet the sums paid are not sufficient to make the teaching force as secure or permanent as would best serve the interests of our normal schools. For many years it has been a source of grave concern and much labor on the part of the regents, to keep the schools supplied with able and efficient teachers. Two years ago there were in the service of the four schools, sixty teachers, an average of fifteen to each; since that date there have been four resignations from Platteville, five from Whitewater, eleven from Oshkosh, and seven from River Falls, being nearly fifty per cent. of the entire number. Most of these resignations were from among our best teachers, who were called to the service of normal schools of other states, and to institutions of learning within our own state, with an increase of salary over that paid by the board. To these resignations may be added that of President Stearns, of Whitewater, received

The Normal Schools.

since writing the above. I can not express my appreciation of President Stearns' ability and services to the school over which he has so long presided, and to the cause of education in the state, in better language than by quoting the following, from the *Wisconsin Journal of Education:*

"J. W. Stearns has tendered his resignation of the presidency of the normal school at Whitewater, and accepted the appointment to the chair of theory and art of teaching in the University of Wisconsin, tendered him by the board of regents of that institution. President Stearns' resignation will take effect at the close of the present term, about February 1st, and he will enter upon the duties of his new position immediately thereafter. By his habit of mind, his education, his experience, and his recent studies and investigation, Dr. Stearns has become peculiarly endowed with especial fitness for the chair to which he has been called, and those who know him best confidently predict that he will make pedagogy, as a university study, attractive, interesting and profitable to students, and by original work and the ability he will bring to the effort, place that department in the University of Wisconsin in the front rank of similar departments in the country. Six years ago he was elected to the presidency of the normal school at Whitewater, and since that time has administered its affairs with great wisdom and fidelity, drawing all stndents towards himself and towards their work and the school in earnest fealty and enthusiastic loyalty, by his ability, his genial and courteous manners, and his kindly interest in the welfare of all under his charge, and uniting the faculty and community in co-operative efforts for the success of the school.

"President Stearns has taken an active interest in institute and association work in the state, and by his lectures, reports, discussions and addresses, has attracted that attention to his ability, his scholarship, his interest and research in the line of pedagogics, which has culminated in his election to the important position he has now been called to fill. The teachers of the state have occasion for congratulation that our own and not the university of another state secures him to its faculty."

* * * * * * * * * *

In reviewing the work done by the teachers' institute I am pleased to report that it is steadily growing in public favor throughout the state. Each succeeding year proves its power and usefulness in elevating the tone of our public schools. It imparts a knowledge of the philosophy of teaching and school management, it stimulates its members to

direct their studies along those lines most useful to them in their work as teachers, and induces many of the younger and inexperienced members to seek a more thorough and systematic preparation in the normal schools and other higher educational institutions of our state.

J. H. EVANS,
President.

EXTRACTS FROM BIENNIAL REPORT OF THE PRESIDENT OF NORMAL SCHOOL AT PLATTEVILLE.

The report upon the condition and progress of the State Normal School at Platteville, for the two years beginning September 1, 1882, and closing August 21, 1884, is herewith presented. * * * * * * * * * *

Students assigned to the preparatory department are expected to be prepared to enter upon the normal course in one term and are admitted to the normal department upon their record while members of the preparatory. Applicants not fitted for preparatory department are assigned to grammar grade. Pupils who complete the course in the grammar grade are admitted to preparatory or normal without examination. The number entering each year upon the normal course is from 100 to 200.

PROFESSIONAL TRAINING.

During the two years just closed, the constant aim has been to strengthen and enlarge the professional element of the school. Members of the faculty have cheerfully aided in all efforts having this end in view. While the necessary academic instruction has been no less thorough than heretofore, the experiment has been tried of bringing the pupil into contact with professional thought, immediately upon entering upon the normal course. One very important function of a normal school is to test theory by actual work. Only by this means can a change be shown to be an improvement.

The Normal Schools.

It has been the practice to defer purely professional instruction until the pupil had met the demands of the school in his knowledge of common school studies. Thus from one to two terms were given to academic work alone. True, the organization and discipline were expected to exert an influence favorable to impressing right views of educational processes, yet they lacked the force of direct and systematic instruction. Much may be learned incidentally by being a member of a school that is well organized and under good discipline, but much more ought to be learned where these conditions are made to supplement systematic training. Students sufficiently mature to enter profitably upon the normal course, are, by virtue of that maturity, fitted for the consideration of professional pursuits. So the attempt has been made to make the training, at least to some extent, professional from the very beginning of the course. This effort has taken the direction of elementary lessons in mental science, accompanied by a consideration of matter and method as related to the faculties to be trained. Thus far the work has been almost entirely confined to what is prescribed for the first form, in the course of study for country schools.

The student is led to observe mental states and to consider the best means to be used in the most natural order for the proper training of the faculties. Acts of observation, perception and attention are invested with new interest when seen in their true relation to the acquisition of knowledge. One promising result is already observed: students read with better understanding, and hence with more eagerness, works that treat of the principles of education. It is believed that the following desirable results may reasonably be expected: (1.) Teachers will be led to study the child who receives the instruction as well as the subject in which instruction is to be given. (2.) Teachers will learn to judge of the quality of instruction by its adaptation to the mental needs of the learner. (3.) Students who remain in the

school only one or two terms will have some idea of referring methods of teaching to principles, and thus be less liable to become mere imitators of what they have seen but had not comprehended. It is the purpose to extend these lessons in mental science so as to embrace principles that may serve as guides through the common school course.

In addition to the work here outlined, the course of study as given in the catalogues of the school, for the two years just closed, contemplates that each student shall pursue at least one professional study each term while he remains a member of the school. In all of this work specific instruction is given and class recitations and examinations are required.

But the professional training follows two other lines—observation and practice-teaching.

Every student is expected to become familiar with the management of each grade, and with the instruction of each class taught by the regular teachers of the model school. Recognizing the value of a good model, students are encouraged to make frequent and extended visits to this department of the school for the purpose of observing exemplifications of such work as may be under discussion in classes in management or in method. Opportunities of observation are afforded at all times and are eagerly accepted by many of the students. It has been found, however, that so long as observation is optional with the pupil, not a few allow other duties to interfere with observation, either neglecting it entirely or giving it so little attention that the result is not satisfactory. It has accordingly been thought best to make observation a regular exercise of the school, with class organization, and to require written reports. Each term classes in observation are formed and the members distributed so that each shall observe all the exercises in the different grades of the model school during the hour designated. By changing the hour for observation at intervals of three weeks, a large part of the work of the school is

brought under the pupil's observation in a comparatively short time. At the close of each week, pupils submit detailed reports in writing, in which they show the method pursued in class instruction and state such principles as they had been able to find exemplified in the exercises witnessed. It is readily seen that such reports can be made a basis of valuable discussions and suggestions. Not a few fail for a time to observe anything that can be any guide whatever to the character of the teaching. But it is believed that such directions may be given and such suggestions offered as shall enable the observer to appreciate excellencies in the work observed. Here the student is not burdened with the responsibilities of class discipline, or with giving direction to the thoughts of those under instruction, but gives himself to the task of studying the processes of imparting and receiving instruction. He learns to distinguish between teaching and recitation hearing, and to know the proper place and use of each; to observe the effect of different motives, and to give thoughtful consideration to the means employed to arrest and to hold attention.

Students who have had experience in teaching largely engage in this work and find it instructive even with comparatively little supervision. Their experience has made them painfully conscious of their own want of skill in some department of school work; and they gladly avail themselves of every opportunity to observe the methods of those who are counted skillful in the art of teaching. Every good school attracts many teachers to observe its processes, and thus becomes a center of influence. Especially should the model department of a normal school be recognized as a place where the experienced teacher may find confirmation of his own practices, or find such exemplifications as may enable him to make corrections in such of his own methods as he had found unsatisfactory. Such as have had no experience in teaching are likely to waste time in observation, unless they are under skilled supervision and intelligent direction.

The Normal Schools.

The interests of this class, therefore, receive special attention. The benefits to be gained from observation are frequently presented, and reasons given why students should become intimately acquainted with the workings of the model school. Directions are given what and how to observe, and such aids afforded by the supervisor and by the teacher in charge as may give intelligent direction to the work. It is the aim of the school to afford every opportunity for observation, and to render such assistance to the student as may make the exercise both interesting and profitable.

The amount of practice teaching done in the school has varied but little for four years, the average being about 725 weeks, and the number of different pupils engaging in the work about seventy each year. This amount fairly meets the demands for practice, can be closely supervised, and does not seriously impair the quality of instruction. It is the purpose to give the student the advantage of teaching as great variety of subjects and grades as may be consistent with the good of the school. In connection with the practice teaching lessons are given and discussions held upon topics in class management and instruction naturally found in the experience of the teacher.

It is believed that the minimum of work in professional training should be very considerable, and should be extended as fast and as far as circumstances may allow. This is the policy of the school; and year by year class instruction in professional studies, observation and practice are becoming more highly appreciated as the value of each in the problem becomes more apparent.

It is hoped that these two years have registered some progress. While conscious of inability to fully comprehend the difficulties and properly to deal with the various phases of the work of training the young, the ever present conviction of its importance has been an incentive to earnest and

diligent effort. If this effort has been wisely directed, future results will show a corresponding gain.

In all departments of the school and throughout its various exercises the constant aim has been to awaken thought so that the pupil may arrive at his conclusions by the exercise of his own faculties. This governing principle may be expressed in the language of Prof. Joseph Payne: "The art of education consists in the practical application of principles gained by studying the nature of the child; the central principle, which governs all the rest, being that it is what the child does for and by himself that educates him."

D. McGREGOR,
President.

EXTRACTS FROM BIENNIAL REPORT OF PRESIDENT OF NORMAL SCHOOL AT WHITEWATER.

The average daily attendance in the normal department in 1882, was 208; in 1883, it was 209. * * * * * New classes are formed at the opening of each quarter, and thus the school is adapted to the needs of those who teach or engage in other labor during part of the school year.

COURSE OF STUDY.

Only about one-fifth of the applicants for admission report themselves as having attended high schools. This is an important fact in its bearing upon the kind of work which the normal school must do. Unquestionably the first requisite in a teacher is culture. If he is to teach well he must not only know that which he is to teach, but also enough more to apprehend its relations and the relative importance of its parts. He must also have in him the fruits of culture, right mental and physical habits, ability to use his resources, quick discernment, and a genuine interest in the things of the understanding. These things do not develop in most persons without much more and better training than has

been enjoyed by the great majority of those who present themselves for admission to the normal school. It must be admitted, also, that the opportunities for securing them are most favorable in a large and fairly equipped school, with teachers who devote their time to work in special departments; where young people from widely separated communities meet in honorable rivalry, and where the practical value and necessity of the training is present to the minds of all and pervades the whole atmosphere. At the age of seventeen, moreover, studies which were before learned slowly and by imitation and iteration, become significant and are learned rationally. Thus it seems to be necessary and wise, for the present at least, that these schools should continue to supply the general training in school studies which is the first requisite in the preparation of teachers. The only way to escape this necessity would be to raise the standard of admission, and if this were done to such an extent as to sensibly diminish the amount of the work, the direct influence of the normal school over the teaching in the common district schools would be greatly impaired, if not altogether destroyed.

The extent of this influence may be estimated in part by the statement of the number who withdrew from the school each year to teach. Very few of these go into the graded schools, as the times of withdrawal sufficiently show. It is more difficult to supply, with even an approximation to accuracy, the materials for completing this partial estimate. A comparison of the catalogues of the school for the two years last past shows that 104 of the 226 students in the first and second year classes of 1882 did not return to the school in 1883. If we assume that one-half of these are teaching, which from past experience seems to be a reasonable estimate, we shall have to add to the withdrawals of 1883 fifty-two more pupils of the elementary course who were teaching last year, and mostly in the district schools.

The Normal Schools.

PROFESSIONAL TRAINING.

What the school has done for these in the way of professional training may be stated as follows: (1.) It has given them class-room drill in the branches which they are to teach, which, with the tests to which they have been subjected, has tended to form in them higher standards of excellence and habits of greater accuracy and thoroughness, at the same time that it has constantly kept before them the problems of presentation to others, and taught them how to think upon them. (2.) It has also given them opportunity of systematic observation of the teaching in the various departments of the model school, and required of them regular reports of these. (3.) It has given them regular instruction five times a week for ten weeks in the organization, management and methods of teaching in district schools. (4.) It has given them ten weeks' instruction in school economy and management. This is the scope of the first year's instruction and training in the normal school.

The idea has been repeatedly advanced that the province of the normal schools is to teach methods, but with the rational grounds of methods, the philosophy that underlies them, these schools have nothing to do. The reason assigned is that this philosophy is abstruse and too difficult for the pupils to master. The position does not seem to me to be well taken. The necessary result of teaching methods empirically is that the teachers are made mere imitators; they can reproduce the methods they have learned at the normal school, but will have little power of adapting them to changing circumstances; they can have no conception of the real ends to be gained by their work, and, therefore, can not do it intelligently; they will not have in them the foundation for intelligent growth in their profession. If they continue in the work a philosophy will grow up in their minds — that is probably a necessity of mature minds — but it will be quite likely to be a narrow, hard and crude

philosophy, which grows out of their practices, and, therefore, confirms them instead an instrument of intelligent self-criticism. Moreover, it is easy to exaggerate the difficulty of understanding the elementary principles of any philosophy. A right method of approach renders abstruse subjects easier of apprehension, as this always takes account of the actual mental condition of the learner. And, further, it is absurd and contrary to all educational practice, to say that because a subject can not be presented in all its length and depth, therefore it is unprofitable to do anything with it. I believe that the elementary principles of psychology and educational science can be presented in an interesting and very profitable manner to normal pupils, so as to become fruitful in their minds of broader views and better practices in teaching.

This is attempted first in the second year of the elementary course, and afterward more fully in the senior year. The work in the theory of teaching, which occupies twenty weeks, is followed by practice in teaching in the model school under constant guidance and supervision. The extent of this work has been steadily increased and supported by the systematic study of methods in the different branches taught in the common schools. The following tables show the amount of the work during the last two years:

1882–3.

In Preparatory classes,	25 weeks.
In Grammar Grade classes,	90 weeks.
In Intermediate classes,	220 weeks.
In Primary classes,	360 weeks.
Total,	695 weeks.
Number of persons who taught,	40
Average time of each,	17¼ weeks.

1883–4.

In Preparatory classes,	103 weeks.
In Grammar Grade classes,	287 weeks.
In Intermediate classes,	335 weeks.
In Primary classes,	475 weeks.
Total,	1,200 weeks.

The Normal Schools.

Number of persons who taught,	70
Average time of teaching by each member of Senior class,	17½ weeks.
Average time of teaching by each member of Elementary class,	22 weeks.
Average time of teaching by each member of Two-Two class,	13½ weeks.

The Elementary class is the one presented for certification at the close of the term, and the Two-Two class the one below. The practice work of the elementary course is therefore fairly represented by adding together these two averages. It is believed to be sufficient to develop and fairly test the teaching ability of the licentiates.

CERTIFICATION AND GRADUATION.

Two years more of study after completing the Elementary course are necessary to graduation. The full course corresponds quite closely with the requsitions at the state examinations for life certificate, the only additional study being Latin. Less than this could not consistently be required while the diploma of the school, when countersigned, remains equivalent to a life certificate, and it would be obviously unwise and contrary to sound policy to make these state seminaries for teachers inferior to the professional standard of the state. It is to be regretted that a larger number of students do not complete the full course. Comparing the number of pupils in the first year class with the number certificated and graduated the past two years and we get the following result.

1883.—Certificated, about 1 in 9. Graduated, about 1 in 17½.
1884.—Certificated, about 1 in 5. Graduated, about 1 in 20½.

These ratios are at best but a proximate representation of the general result. They show obviously, (1.) That the normal school is not to be estimated, so far as its effect upon the teaching force of the state is concerned, by the number of persons who complete the courses of study; (2.) That, considering the age of the pupils, the natural causes which diminish the number of all school classes, and the inducements which are continually offered to engage in teaching before

the work of preparation is finished, a very fair proportion of those who enter the school complete the elementary course; and (3.) That some still more powerful forces work to prevent a large number from completing the full course. These are, (1.) That elementary students almost always teach for a year or two before completing their course, and in consequence many of them are led to put off their return from year to year, until the project is abandoned; and, (2.) That an elementary certificate, when countersigned, is equal to a five years' certificate, and many do not look forward to a longer teaching period. It is difficult to determine what the effect of abolishing the certification would be. It would probably take away one of the inducements to make more preparation than is absolutely requisite in order to pass the county examinations; and would be likely to cause more students to complete the full course. The effects of abolishing the full course, or confining it to some one school, would be to lower the professional standard of the whole body of students, for it is a daily object lesson, shaping their ideal of education, and lifting their aspirations; and would destroy in a single year results and tendencies which it has taken twelve or fifteen years to create.

INCREASED FACILITIES.

The means for doing the work of the school properly have been considerably increased during the two years. The new furniture introduced into the most of the rooms is a great improvement upon that displaced, and a proper model of what school furnishing should be to comply with known conditions of healthful growth. The new system of heating and ventilating works satisfactorily, and makes the sanitary conditions of the building creditable. The improved conveniences for practice work have made possible the great and necessary increase in this.

The Reference Library has grown from 980 volumes to 1,414 volumes. It has been carefully selected with a view

The Normal Schools.

not only to meeting the needs of Normal students in the prosecution of their studies, but to promote in them habits of reading useful books, and especially of making them acquainted while at the school with such books for young readers as will help them in teaching and in inspiring others with the love of knowledge. One of the greatest needs of the schools of this state at the present time is, in my judgment, that of suitable books for the young to read, books with which they can supplement and expand the meagre and dry outlines of the ordinary text-books, and so escape out of the intellectually hide-bound condition in which confinement to these leaves them. School work is barren and comparatively unprofitable if it does not strive to beget habits of reading, if it does not at least introduce the child to the world of higher interests which the power to read opens to him. This is often rendered exceedingly difficult because neither the home, nor the school — nor, indeed, the town or village itself oftentimes — furnish books adapted to his wants. If the teacher knows of such books, owns a few and occasionally reads from them and even loans them, an impulse will be given which will often prove not less in value, measured by its results, than the formal instruction of the school. That those who are to teach should have access to such books and learn their use can not be questioned. The library in this school is freely and constantly used by students of all grades.

Connected with it is a good reading room, maintained by the students, where are to be found many of the leading journals, magazines and reviews. The exercises of the school are so conducted as to keep up a living and intelligent interest in this as a means of becoming acquainted with current events and the more important discussions in literature, art and science.

The work-shop, which was begun a year ago in a small way as an experiment, has proved both popular and valuable. It affords limited means of working both woods and

metals, and serves to develop in satisfactory degree the resourcefulness of the pupils. They are not only led by it into the thought and practice of making for themselves what they need, but it also serves as a corrective to excessive bookishness, and an interesting and profitable form of physical exercise.

During the present year my service of more than six years in charge of this Normal School will be brought to a close. The progress and prosperity of the school during that period has been in large measure due to the constant interest, intelligent oversight and liberal policy of the Board of Regents, whose committees have repeatedly visited it and made themselves familiar with its work and with its needs, and to the earnest labors of a faithful and efficient corps of teachers.

J. W. STEARNS, *President.*

EXTRACTS FROM BIENNIAL REPORT OF PRESIDENT OF NORMAL SCHOOL AT OSHKOSH.

Reference to records will show that the total enrollment for each of the past two years is almost identical, but that the average membership and attendance has increased somewhat.

OCCUPATION OF GRADUATES.

51 have graduated from Advanced course.
3 of these have never taught since graduation.
45 of these are still teachers or superintendents.
3 of these are practicing law.
1 of these has completed a course in college.
2 of these are now undergraduates in college.
136 others have completed the Elementary course.
4 of these have not taught since graduation.
12 of these are pursuing the advanced Normal course.
5 of these are pursuing a University course.

The Normal Schools.

61 of these have taught every year since graduation.
73 of these are teaching the present year.
4 of these are deceased.
16 of these (men) have entered other vocations.
11 of these (ladies) have married from the profession.

The school continues to receive representatives from more than half the counties of the state, though the large majority are gathered from within a radius of sixty miles. The special rates, generously granted students by the different railways, will largely equalize the burden of travel. Hereafter the difference in representation of different sections must indicate approximately the stimulative influence of a school upon the communities with which it comes most immediately in contact. The one notable exception to this criterion of relative interest is the influence of the county superintendents, several of whom are arousing a strong professional spirit, promptly indicated by an increased attendance of normal students from their districts.

STANDARDS OF ADMISSION.

As stated in the last report from this school, there has been a steadily persistent effort to obtain an improved quality of mental and moral power in the students of the normal course by such increasingly close tests of attainment and character as the large number of applicants seemed to warrant. The improvement has been marked on both lines; first, the occasions for reproof and severe discipline have been greatly reduced; and, secondly, the number failing to meet required tests successfully at the close of any line of work is very notably less than eight years ago. While much has thus been done to elevate the tone of school work and facilitate the inculcation of its professional bearing, the final step which ought to be taken at the earliest practicable moment by all our normal schools is yet to be made. Hitherto there has mingled with the thought that the student was to be made a better teacher of the respec-

tive elementary branches, the realization that he was deficient in the mere mastery of topics, and that the making of a better *scholar* must be as prominent as the directly professional purpose. This condition of things is sadly confusing to teachers, students and patrons. We believe that, with the ample facilities for preparation in scholarship, by a special department, for all not favored with good home schools, the community is prepared to sustain a standard of admission sufficiently high to enable us to disregard the element of mere attainment in elementary branches when professional training begins.

To train students to a skillful use of a branch, as an instrument of mental discipline and culture, must presuppose sound attainments that can not be secured in conjunction with the professional work without serious loss to both processes.

CO-OPERATION OF SCHOOL OFFICERS.

One of the most encouraging indications that the more strictly professional aspect of our work will best serve all interests, is the increasing call for "trained and tested" teachers. During the last two years, the demand has been more than double our supply. A very extensive correspondence has developed in the effort to exercise a careful discrimination in placing teachers adapted to the wants of different communities. The belief that a teacher is far more economically trained in a seminary devoted to the special work than through the tediously wasteful process of manifold mistakes by an isolated teacher ignorant of his work, is but just dawning in many communities. Whatever can be done by correspondence to aid districts and youths in avoiding the loss of incompatibility and incompetence, seems indispensable to the establishment of a true professional spirit.

CORPS OF INSTRUCTION.

Since the last report two able teachers, Miss Mary H. Ladd and Mrs. Helen E. Bateman, have severed their connection

The Normal Schools.

with the school to accept more lucrative positions in the German-American normal school of Milwaukee. Their term of service is so nearly co-extensive with the entire history of this school, that their departure is of more than transient importance. Their services were ever eminent and important in the building of sound scholarship, while each possessed strong personal qualities that have been impressed on the ideals of many hundreds of teachers, drawing them to a more loyal allegiance to truth and an unfaltering devotion to duty.

The limited income of your Board that necessitates the loss of its eminent teachers purely because other institutions can offer better pecuniary inducements, is a serious bar to the highest excellence of the schools under your charge.

While it is certain that there is no better training for a teacher of great native power than that gained as teacher in a normal school, it is the height of unwisdom for the state to fail to reap the benefit of services which have become valuable under its fostering influence.

That we have been remarkably favored in filling vacancies thus caused, must be attributed to good fortune rather than to any wisdom in the course to which the Board is forced through diminished income.

The enlargement of our corps of teachers has not kept pace with the growth of the school; consequently a large number of the classes are over-crowded to an extent inconsistent with the peculiar work to be done in a normal school.

Were it but the mere effort to test scholarship, or a question of a superficial presentation of true method, the demand would not be excessive; but it is the awakening of spirit, the arousing of interest in the ultimate humanity involved in every exercise, and the steadying of the brain of these callow adults until they see the truth, measurably, as a child would, that taxes powers to the utmost and makes unduly large classes a burden.

The Normal Schools.

STUDENT TEACHING.

The high value of testing the power of each student to impress others, by face to face work with classes of pupils in different grades, under the guidance of a teacher thoroughly familiar with the spirit of method, is scarcely disputed. But how great numbers can be efficiently supervised, and at what stage of mental progress students can most successfully engage in this practical training, are questions that have not been completely answered.

We have deemed this phase of the student's training of such moment that the ablest of our teachers have always devoted their most careful thought to enabling students to meet this crucial test fairly, by skillful application of their power.

This distribution of responsibility through several members of the faculty diffused a spirit of interest in this phase of our work that was fruitful in other directions. The present plan of one teacher of methods acting in conjunction with the president has the merit of enabling a mind to devote special thought to the elaboration and application of general principles to actual cases free from the local bias of particular surroundings. In general, this is a gain upon former plans, but, in some measure precludes the intimately sympathetic appreciation of individual pupils gained by direct contact with the department teacher. The student is, therefore, still encouraged to a more full association with the general work of the room in which he may be engaged, until the spirit of the room comes to co-operate with his theories.

OBSERVATION.

The school of practice in Normal Schools is usually likewise designated a school of observation. But in most cases the observation is desultory and aimless. Only experienced teachers and those who have thought systematically regarding the significance of school processes, can mold a "visit" into an observation of a school.

The Normal Schools.

Beginning in this school with encouragement to students to visit the different grades of child-work as frequently as possible, it has passed through the phase of suggested guide points under which observation should be taken, the requirement of reports at close of the term upon points of defect or excellence in methods observed, to the present weekly meeting of the president with the corps of observers for discussion of phases of work observed.

This is a great stimulus to the unobservant nature, a corrective of immature and erroneous views, and the foundation of a considerable body of practical thought upon methods and child-nature with which the student moves forward to subsequent work both in observation and teaching.

G. S. ALBEE,
President.

EXTRACTS FROM BIENNIAL REPORT OF PRESIDENT OF NORMAL SCHOOL AT RIVER FALLS.

The school has been fortunate in the health of its students, pupils and faculty; and its material resources have been maintained at a high state of usefulness.

The essentials of instruction have been most helpful to a large number of students.

It is believed that migration of numbers of students to new territories has modified the number and character of students in actual attendance.

Preparatory students have participated in the professional work during the two years, and it is believed that some modifications of the conditions for entrance and of the course of study should be offered to those students who are positive that they can spend only a limited time in study — for the number of graduates from any normal school is a very small representation of the professional work actually performed.

It is believed that the work of the state high schools may be made preparatory to the Normal School course, and the

number of Normal School graduates be increased, by a policy of accepting the standings of high school graduates for entrance to Normal Schools.

The organic law of the school thoroughly defines its aims thus: "The exclusive purpose and object of each Normal School shall be the instruction and training of persons, both male and female, in the theory and art of teaching, and in all the various branches that pertain to a good common school education, and in all subjects needful to qualify for teaching in the public schools; also to give instruction in the fundamental laws of the United States, and of this sate, in what regards the rights and duties of citizens," and the constant effort of the faculty has been to conserve the specified interests. At no time, however, can the important question of *manner* of administering a school, or of teaching a pupil, be fixed in character so as to become a stereotyped form whose use can be recommended with safety, omitting the specified conditions that give the particular case its characteristics. The medical fraternity recognizes this doctrine and stigmatizes the practitioner who assumes the fixity of disease sufficiently to treat the unseen patient. In this disposition to recognize new conditions and to modify means correspondingly, the Normal School finds sustained interest in its faculty and students, and it finds its chief obstacle to apparent progress, since routine bids for all souls that court repose, and readjustments imply abandonment of routine. These obstacles, however, are constantly disappearing under the zeal of purposes in which the individual student is an objective. Attendant of perpetual modifications is the difficulty of maintaining a faculty. Many excellent teachers are deterred from undertaking the work, since the service implies more hours per day than in some other schools that present other inducement equal to normal service, and good teachers are driven from the faculty by the persistence of the needs for mobilizing the teachers' means.

The bulk of work falling upon the faculty of a Normal

The Normal Schools.

School is found in the elementary branches — reading, writing, spelling, numbers, and practice teaching, wherein the study of the child is emphasized — *how* he thinks and *what* is his present thought. To so awaken many students that self-activity shall supersede apathy, is to mold again the habit, and refurnish the mind with such facts as shall constitute a body of knowledge. The weighty matter of undoing much that has previously been done, by lifting these students into consciousness, must be prosecuted with care to avoid extremes. Teaching is comparatively easy when it has to do with unfolding for a series of years; but when the normal teacher or the institute conductor is asked to transform lethargy, error, and unconsciousness into teaching power, in a short time, there are too many factors for success, and the probabilities are that the *manner* of the school or institute will be impressed, rather than the essentials of education.

The building, furniture and apparatus of this school are well preserved, and the books and cabinet specimens are catalogued and in place.

The faculty has worked unitedly and cheerfully; and has studied to improve its methods with all grades of pupils.

The sentiment of the people in the territory from which come most of the students is intelligent regarding the purpose and means of the school, and the local community accords most cheerful support to the Model Grades.

W. D. PARKER,
President.

REPORT OF THE VISITING COMMITTEES.

TO THE PLATTEVILLE NORMAL SCHOOL.

Hon. ROBERT GRAHAM, *State Superintendent*:

Your committee appointed to visit the Platteville normal school report as follows:

All the members of the committee visited the school during the year at least once, two of them twice.

We found the school full of pupils and in good working order.

The committee were very favorably impressed with the good order and thorough discipline of the school, which seemed to be secured without any special effort on the part of the teachers, seemed to be spontaneous on the part of the pupils. The general tone and spirit of the school were excellent, not only a prompt, cheerful compliance with all the rules and regulations, but also a deep and pervading interest in the proper work of the school.

The earnestness and devotion of the teachers to their work were as marked as the interest and industry of the pupils.

In the normal department proper, the instruction, in the main, was excellent, intelligent, persuasive, thorough. We desire especially to commend the work of the president of the school; also the instruction in English literature, mathematics, music, Latin and reading.

In natural science, the text-book seemed to be taught quite thoroughly; but your committee would respectfully suggest to the honorable board of regents that if they do not wish the famous saying of Agassiz to apply to the students of the Platteville normal school, they "study nature in the schoolroom, and when they go out of doors they can't find her,"—

Report of the Visiting Committees.

the work of the professor of natural science should be considerably lightened. He should not be required to instruct five or six classes a day.

In the model school, the instruction by the regular departmental teachers was good, especially so in the primary and intermediate departments.

Your committee are of the opinion that there is room for improvement in the training and practice work. The supervision of the practice teachers does not seem to be as close and rigid as it might be, at least as it should be.

Young teachers groping along in their first feeble, tentative efforts, need considerable watchful care, help and encouragement. At such a time, hopefulness, energy and enthusiasm are quite apt to be contagious.

Would it not also be better for the pupil teachers to spend more time as lookers-on during the instruction of the regular teachers of the Model School, under a competent critic? They could thus see more and learn more of good teaching than by working so much alone.

As regards the oft-discussed question of Normal Schools doing professional work alone, leaving the so-called academic instruction to the High Schools, your committee is divided, two of the committee holding to the professional-work-alone idea, the other holding that the Normal Schools are doing their proper work *now*. He holds that the best teachers are made by thorough *training* in correct habits of thought and study, and not by learning theories; and that the High schools are not yet doing as thorough work in such *training* as the Normal Schools are doing.

The committee would be glad to report that the grounds and the outhouses are kept in as good condition as they should be — if they *were* so kept. Some money could be well expended by the Board of Regents in beautifying the grounds and in making the outhouses more convenient and comfortable.

When this was suggested to the resident regent, he said:

"These things were very much better than the pupils had at home." That is probably true, but your committee supposed the idea of a Normal School was that it should be in *all things* a *Model School,* where the esthetic culture of the pupils should be considered as well as their intellectual training.

One member of the committee visited the school at the close of the year, and had an opportunity of examining some of the papers prepared by the graduating class on the several subjects of study embraced in the curriculum of the school, and reports that the work done evinced care and thought in the preparation of the papers, and a good knowledge of the subjects treated. He further reports that the graduating exercises were of a high order, the class as a whole having a fine command of good English.

Finally, your committee would report that on the whole the State Normal School at Platteville is doing a noble work, and we ask for it that it be well sustained by the state.

GEO. W. BURCHARD,
WM. H. WALKER,
ALBERT HARDY,
Committee.

TO THE WHITEWATER NORMAL SCHOOL.

Hon. ROBERT GRAHAM, *State Superintendent:*

The committee appointed for the school year of 1882–3, to visit the State Normal School at Whitewater, respectfully submit the following report:

In January, the committee visited the school, and in June two of its members made a second and final visit. At the time of the first visit, the teachers and students of the Normal Department were engaged in the regular monthly examination. The observations of the committee, at this time,

Report of the Visiting Committees.

were necessarily confined to the building and grounds, and the library and scientific collections.

The building is in good condition, the rooms were clean and tidy, the museum of natural history and the other collections were in good order. The library contains all necessary reference books, and the reading room was well supplied with newspapers, magazines and reviews. The facilities for heating the rooms seemed to be sufficient. There was some apparent defect in the ventilation, especially as regards the room used for a chemical laboratory.

The committee visited the model schools and found them in good order. These constitute a graded school of three departments, primary, intermediate and academic. The course of study is quite similar to that in any other good graded school. The methods of teaching, as observed in the recitation rooms, were generally the same as those found in other schools. In this department were about one hundred and sixty scholars. In conducting recitations the teachers seemed to attach less importance to distinct enunciation than the committee thought desirable.

At the time of the second visit, the school in both the normal and graded departments was in its usual condition. All the departments were in operation, and thus an opportunity was afforded for forming a most correct opinion of the organization, condition and work of the institution.

Your committee noticed, with satisfaction, the good order which pervaded all the departments. The intercourse between teachers and students seemed to be cordial and proper. We incline to the opinion that more than ordinary attention is paid to the manners of the students, especially in the higher classes. In respect to the manner of conducting recitations, the committee do not feel entirely satisfied. The teachers, although encouraging mental precision in high degree, seemed to attach less importance to mental activity than is desirable. The need of greater mental action in the recitation room was not entirely confined to the students.

Report of the Visiting Committees.

Methods of teaching are important, but unless accompanied by energetic expression, are comparatively ineffectual. In the high school and in the university, as well as in the pulpit and at the bar, we have long ceased to look for distinct enunciation and graceful expression in all cases, but we have a right to expect to find these elocutionary graces in the higher classes of our normal schools. In this school, possibly not an exception to similar schools in this particular, we did not find them to a degree fully satisfactory. There is no part of what is called an "education," more important than the "intelligent, intelligible, correct and effective interpretation and expression of thought and emotion, in speech and action." We found too little evidence, either in the public declamations or in the class exercises, of constant and persistent attention to the proper use of the voice.

Your committee noticed some difference in the manner of conducting recitations. This is not undesirable if the teacher does not check rather than call out effort on the part of the student. The best result of the best teaching is to develop originality and spontaneous mental activity. The committee looked over, with pleasure, some of the examination papers of the students. They were creditable to those who prepared them.

Your committee desire to express their thanks for the courtesy extended towards them by the president and teachers of the school, and with the minor exception cited, to express their satisfaction with all they saw pertaining to the government, discipline and general tone of the department of instruction in this school.

One fact, however, not directly relating to method of instruction, appears to be of sufficient importance to warrant the committee in directing to it your special attention. We refer to the organization of the school. It consists of two departments — the Normal department and the Graded School department. The register of the Normal department

contains the names of 210 ladies and 104 gentlemen, or a total of 314. These are classified as follows:

Senior class	10
Junior class	14
Elementary class	24
Second year students	50
First year students	176
Special	9
Preparatory	28
Post graduate	3
Total	314

It will be observed that the number pursuing the studies of the last three years of the Normal course is only about 50 per cent. of those pursuing the first year studies. The studies of the first year are Reading, Drawing, Vocal Music, Writing, English Grammar, Geography, Arithmetic, the Elements of Algebra, and Theory and Practice of Teaching. This course does not embrace as much as the ordinary Grammar school course. If we add United States History and Physiology, and take out Theory and Practice of Teaching, the two courses are identical. Now, it occurs to your committee that the work done for the first year students as well as that done for the special and preparatory, is almost all just such work as is done in the Grammar schools, and during the first year in the High schools of the state; and, that the Normal school should have nothing to do with this. The 200 scholars who are receiving their preparatory or grammar school instruction at the Normal school cost the state a large part of the running expenses of the Normal department. Your committee are of opinion that those designing to teach, would obtain this preparatory knowledge and training in other schools, if they could not obtain it at the Normal school. Of the large number of "first year students," only about 25 per cent. enter upon the second year course — and of those who begin the second year only about 50 per cent. finish the elementary course. Now, the

Junior, Senior and Elementary classes constitute only 15 per cent. of the whole number; hence, we conclude that only about 15 out of each hundred in the Normal department intend to graduate. In this respect the Normal school contrasts unfavorably with our Colleges and University. In view of the large expense incurred for the instruction of those who do not intend to pursue the vocation of teaching as a life work, your committee recommend a three years course of study, covering the present Advanced course and the last year of the Elementary; and, that the requirements for admission be advanced to meet the change in organization.

Your committee make this recommendation with less reluctance after considering the facilities now afforded for obtaining instruction and training in the other schools of the state. With the exception of Pedagogics and Theory and Practice of Teaching, the Normal course of study is the same as that of our High Schools. The methods of teaching in these, as relates to mental discipline, facility of expression, and precision of statement, will not, so far as we have observed, suffer in comparison with those practiced in the Normal School.

That the change proposed would diminish the number in attendance is both probable and desirable. It is desirable because the school should be more professional; or in other words, more normal. At present it seems to be a High School with a Normal Department attached. The elementary course of normal training is defeated of its purpose by the limited attainments of those who choose it. There is not found in this course of study and training a reasonable assurance of fitness to teach on the part of all those who have finished it. Your committee gave such attention as they could to the exercises of the school, and they concluded that the elementary course is an inducement to many to shorten their attendance, including many who might other-

wise prolong such attendance to the end of the advanced course.

Your committee find that the graded school contains about 160 pupils. The reason for this school is said to be that it affords facilities to the normal school to practice the art of teaching. In regard to this it may be said that the normal school itself is a model school for all the departments of a public school except the primary. Students there see daily the best methods of securing regularity, punctuality, attention and systematic study. The recitations of the normal classes should show promptness, distinct and proper pronunciation, good temper, self-control, terseness and vigor and propriety of expression. Hence students have, in a well conducted Normal school, training that fits them to succeed as teachers. To this there seems to be one exception. The methods adapted to the advanced classes are not the best for the primary; hence, your committee recognize the necessity for a primary model school. This should not exceed forty or fifty in number. Professional knowledge is not acquired, except by and from one's own experience. The benefits of model schools are often overestimated. They contribute little to the necessary outfit of the successful teacher. The great teachers of the past did not have them, and the best teachers of the present were not trained in or by them. These are men who have disciplined their minds by severe study, pursued patiently for years in academic and collegiate courses. No good citizen can contemplate with satisfaction our Normal Schools yearly sending out graduates to take charge of our public schools, whose attainments too often are as limited as those of the scholars they are employed to teach.

An additional reason for limiting the model department to a single school, is the saving in expense thus effected. So far as efficient normal instruction is concerned, your committee feel certain that it would not be diminished by adopting a three years' course of study, increasing the requirements

for admission, and having one model primary school. Your committee are aware that a tuition fee is required of those attending the model schools, but they find that it falls far short of covering the cost.

Another reason for lessening the current expenses of this and the other normal schools, if it can be done with advantage to the state, is that other normal schools may be established in parts of the state not now enjoying their benefits, except to a limited degree. So far as the school at Whitewater is concerned, about 40 per cent. of those in the normal department are from Walworth county. Of those in the model schools the proportion is larger. Of the 182 remaining, after taking out the 129 from Walworth county, more than 55 per cent. are from counties that border Walworth. Of the whole number of students in the normal department, more than 75 per cent. are from Walworth and the counties adjacent Any attempt to delocalize this and the other normal schools may be regarded as impracticable. If, however, we confine them exclusively to the training of teachers, we obviously delocalize their benefits. Your committee are of the opinion that if there were more normal schools, properly located in different parts of the state, each would possibly do as much real normal training as each of those now at work is doing. If this is a correct impression, it is obviously for the interest of the state that the income of the normal school fund should be applied to the support of as large a number of schools as can be efficiently conducted.

The committee desire, in conclusion, to bear testimony to the industry and fidelity of the teachers of the school, and to express the satisfaction with which they learned from citizens of the place where the school is located, of the good conduct and high character of the students.

GEO. H. PAUL,
JNO. G. McMYNN.

Report of the Visiting Committees.

Hon. ROBERT GRAHAM, *State Superintendent:*

The third member of the committee appointed by you to visit and report upon the condition of the Whitewater Normal School, finding some features contained in the report presented by the majority of said committee which he can not wholly indorse, would respectfully present the following minority report:

As stated in the report of the majority, the third member was present at only one meeting, but at that time he attended the various exercises of the school, and failed to observe that sufficient importance was not attached to distinct enunciation, on behalf of either teacher or pupil. Neither did he at that time notice anything in the methods of teaching that would justify him in concurring with the opinion held by the majority of the committee at the time of their second visit, that the need of greater mental activity was not entirely confined to the students. On the contrary, he was well satisfied with the clear, energetic, and intelligent manner in which the various exercises were conducted.

The third member of your committee, recognizing the force of the arguments presented for the abolition of the departments of the Normal School known as First Year, Special, and Preparatory, joins in the recommendation that such change be made. But he is not of the opinion that the money thus saved to the state should be used for the establishment of other normal schools, but rather for the more perfect equipment of the schools already established, in the line of more extensive libraries, improved philosophical apparatus, and better chemical laboratories. The establishment of new institutions for higher education and professional training is an object by no means so desirable as the continued improvement and perfecting of those already established. The superficiality of many American college graduates is due largely to the inferior training of the institutions which have sent them forth — to the fact that we

have paid more attention to increasing the number of our colleges than to strengthening the older ones. We should bear in mind the fact that a normal school is properly a school for training teachers. Increasing the requirements for admission, perfecting the training of the pupils with strict adherence to the aim of making them proficient teachers, raising the standard of examinations for graduation with a view to the fact that it is not simply *how,* but *what* the graduates teach that will determine their usefulness, in a word, the improvement in the quality of a single normal school is of vastly greater importance than the establishment of new schools. The normal schools now maintained by the state are so located that their advantages are available to persons in different parts of the state, at the least practicable expense for traveling; so that the principal argument for the establishment of additional normal schools — putting the training of such schools within reach of the greatest number of persons at the least expense for traveling — seems of little weight when we consider the insufficient training that would be given to the graduates.

With the exception noted above, the third member of your committee concurs with the report presented by the other two members.

H. B. DALE.

TO THE OSHKOSH NORMAL SCHOOL.

Hon. ROBERT GRAHAM, *State Superintendent:*

Your committee, appointed to inspect the state normal school at Oshkosh, for the year ending August 31, 1883, respectfully submit the following report:

Owing to the constant demands of other public duties, the whole time which we gave to actual visitation was only six days. One of our number inspected the school alone at the close of the winter term, and the entire committee visited

Report of the Visiting Committees.

it once together about the middle of May. We made a hasty survey of the buildings and school premises, and they appeared to us to be in excellent condition. The discipline and order of the school were exceptionally good.

The teachers, however, especially those in the upper grades, we found to be greatly overworked. Their power would be doubled by such a simplification of the programme as would reduce their work at least one-fourth. When the teacher has given to his classes all the fresh and vital products of his recent investigation, when he is compelled painfully "to spin the web and fiber of his discourse out of the depths of his consciousness," in order to meet the daily demands of the recitation room, what wonder if he finds, all too soon, that the human machinery is in imminent danger of breaking down, and if he is compelled by the instinct of self-preservation to change his work. It was noticeable in the higher departments of the school, that with one or two exceptions, all the teachers had a worn and exhausted appearance. This is probably not altogether due to the unreasonable amount of class instruction required of each teacher. Too much time is put upon examination papers. The colleges are learning by experience that written examinations, although indispensable, are mainly useful as a test of accuracy, and the tendency is to reduce them to the minimum.

They should be used as a means of rewarding the fidelity of able and diligent students and of stimulating to industry those who may be indifferent and idle; but the teacher should not be in bondage to them, so that when the routine work which they impose is finished, he is unfitted for the duties of a citizen, and incapable of giving inspiration in the class-room.

Another cause may be found in what is not inaptly termed "coddling." Certainly the power of personal influence is not to be despised, and the student must be encouraged to

come to his teacher with his difficulties and his perplexities; but, while this is true, every pupil of the normal school ought to be trained in habits of self-reliance and independent thinking. There is undoubtedly such a thing as inexcusable selfishness, sometimes seen in institutions of learning, which is always eager to lock the recitation room before the proper time, and to be off about its own affairs, leaving the students who need help and counsel to their inexperience and the mercy of chance. But is there not in the normal schools a mistaken benevolence which wastes the precious time of many of the teachers in doing for the pupils things that might better be done by the pupils themselves? We believe that it would be wise for the faculty to discriminate in these matters, and to reserve more of their moral and intellectual force for educating the conscience and for developing and strengthening the character of the young men and women who are soon to be teachers of others. We consider it noteworthy, that a faculty, whose individual members attempt to do so many things, should be able to give so much instruction of a high order; but we insist that the efficiency of the institution would be greatly increased by dropping from the schedule of studies many subjects which are not essential to the distinctive work of the normal school and which only serve to burden and bewilder. We instance, as perhaps an extreme case, that a single teacher of natural science is expected to give instruction in such a number of unrelated departments as could appropriately be divided among eight specialists. It would require a miracle of versatility to be an authority in all of them.

At the risk of being thought over-critical your committee desire in no captious spirit to call attention to a danger which, in their judgment, is incident to the system of normal instruction, viz.: the excessive prominence given to the mere *technique* of teaching. From this results:

(a.) Learning facts by the machinery of pedagogy which

Report of the Visiting Committees.

should be fully known by the pupil before going to the class-room.

(b.) A dependence of the pupil on pedagogy more than upon the productive power of his own intellect.

(c.) Great waste of time in recitation-room.

(d.) A lack of discipline in independent and productive thinking.

The best intellectual preparation for the work of instruction is that which gives the student complete command of his faculties, ability to grasp a given subject, and the power of forgetting self in "the study of a puzzling problem."

In the opinion of your committee the energies of the faculty should not be expended upon pupils who probably can never be made available as teachers. Not all persons who are capable of acquiring the rudiments of knowledge are also capable of managing a school and of successfully imparting knowledge to others. It is the duty of the normal school to discriminate, and by applying the principle of selection to furnish the state with teachers of superior quality after having fairly tested their character, their ability, their discretion and their intellectual attainments. The sifting process in education, it is true, is not an agreeable or an easy one.

No over-worked faculty, however conscientious its individual members may be, can make it altogether impartial and effective. The difficulties which attend the process are very great; every one who is conversant with school supervision is familiar with their nature and number. But the difficulties are not insuperable and constitute no argument against it; they should only serve to provoke the energy and resolution necessary to overcome them.

The Oshkosh Normal School has the conditions of success. It has gifted and self-sacrificing instructors. It has a remarkably large proportion of students who are eager to master the course of study, and are interested in every kind of knowledge which can in any way contribute to their fu-

ture success. Now the authorities will deserve the gratitude of an interested public if they will so modify the programme as to allow the real students to get the full benefit of the best teaching ability which the school affords. These are the persons who need such normal training and practice as shall save them from mistakes in the country districts and the graded schools. It is to them that directors and boards of education have a right to look for future recruits. But if normal instruction shall be misdirected, if the requisite training and practice shall not be given, boards of education in Wisconsin will probably continue to regard "experience" as a necessary qualification in candidates for position. Now, is it a heresy to assume that the character, tact, ability and scholarship of the normal graduate should have been so adequately tested as to make the diploma a good and sufficient recommendation?

Perhaps we unconsciously idealize the normal school and its possibilities, but we can not refrain from indicating here what we consider one of its most important duties, namely, to promote the culture and growth of morality in the public schools. Catholic and Protestant, Orthodox and Liberal are agreed that moral education is more essential to the safety of the state than intellectual training. Even the skeptic and the agnostic readily make this admission. But in regard to the best means for securing moral instruction for the children of the state, and the proper place for imparting it, the writers and thinkers of different creeds are at variance. Some honestly believe there can be no training in morality apart from systematic instruction in theology, because, they maintain, religion and morality are not co-ordinate and independent principles, but all true morality has its source in religion, and precepts and rules of morality can have no authority unless they are sustained and supported by a sound theology. Others with equal sincerity declare their belief in the existence of a secular morality potential for good in this work-a-day world. Which of

these theories is the true one would be difficult to settle by a majority vote, because majorities can not pass upon agnostic morality and secular morality as distinguished from morality which has its source in religion. But if the question were submitted whether moral instruction in the public schools should be given by men and women of character, with whom moral conduct means what ought to be done rather than what is expedient, the enlightened conscience of the community and even its hereditary conscience aided by self-interest would respond in the affirmative.

Now there is an imperative necessity for a host of teachers who, by reason of their integrity, their superior cultivation, their sympathy with all that is best in human nature, their mastery of self and selfishness, can bring to bear upon the children of the public schools the power of the moral sentiments. Teachers must be found to supplement through unobtrusive methods, the defective home training which makes children a terror to the neighborhood. In a recent number of the *North American Review* we find these words: "For all this work of moral education, the first step forward is the securing of a proper preparation for the specialty of character culture in our normal schools." Morality is a plant which requires a pure spiritual atmosphere to insure its healthy growth. Now the atmosphere of the school room is just what the personality of the teacher makes it; hence there is surely a fitness in considering a high order of personal character as the ideal product of the normal school. Boards of education frequently deplore the weakness of their instructional force resulting from a want of truthfulness in language, genuine honesty of purpose, and fidelity in keeping the spirit of a contract, and they would be immensely grateful to our normal schools or any other institutions of learning for a supply of teachers who should be warranted not to spend their time in "posing" for the admiration of the public, but should set about the business of instruction with the simplicity of manner and the

singleness of purpose which are the tokens of true character. Letters of inquiry as to the fitness of applicants who are eager to teach in our public and private schools, make "character" of equal importance with ability and scholarship. Is not the invariable emphasis laid upon moral qualifications an infallible proof that now more than ever thoughtful people are learning to distrust the advantages of a cultivated intellect, unless it is regulated and held in check by a conscience which is obedient to the law of righteousness? Is not this a sign of the times which the normal school would do well to heed? There is a demand for teachers who need not be saints or geniuses, but who must be men and women of absolute integrity. And if the normal school, after being fairly tested, does not furnish a reasonable supply of these, the question whether or not it fulfills the end of its existence will certainly be asked. No matter how well the normal school shall perform the work of a first-class academy, unless it shall furnish teachers of a high order of excellence, the public will in the end declare it to be unnecessary, on the ground that it is not doing the distinctive work for which it was intended. Is it too much to expect that the Oshkosh school, with its earnest president and his faithful associates, will make such a record that no reasonable man will in future question the wisdom and beneficence of its founders?

ALEXANDER KERR,
EDWARD H. MERRELL,
C. LULING,
Committee.

Report of the Visiting Committees.

TO THE RIVER FALLS NORMAL SCHOOL.

Hon. ROBERT GRAHAM, *State Superintendent:*

In accordance with your wishes, this committee visited the River Falls Normal School and beg leave to submit the following report:

We found the local sentiment in River Falls apparently quite favorable to the Normal School, and said school working in full sympathy with the public schools of the village.

River Falls supports excellent schools, including a good higher department. Between the schools of the state and the schools of the village we observed a healthy emulation; but could discover no strife, no bitterness of feeling.

We were highly pleased with this state of affairs, and we hope the same conditions now exist wherever your other state schools are found.

The unification of interest in this particular instance we are bound to think is due in no small degree to the liberal spirit of the president and his assistant teachers in the River Falls Normal School.

In other states, possibly in our own, schools strong from state or national aid have been known to disregard the rights of the feebler local schools; thus mutual antagonisms have arisen, destructive of the highest success of both parties. The state school has spoken with contempt of every thing below it; the local school has missed no opportunity to pay back such insolence with usury.

Your committee found the attendance of pupils at the Normal School fair, perhaps as large as the present faculty could give proper attention to, but not as large as we were in hopes to see in such a school. The citizens of the northwest, we fear, do not fully realize the importance of a thorough education for teachers and the facilities offered at this institution.

These pupils impressed us with the great earnestness

which they manifested in the pursuit of knowledge. Every moment seemed precious to them; every suggestion was carefully treasured. We saw no idleness; we saw no time going to waste.

The text-book was not the only thing consulted by them; reference books were freely used, and we inferred from what we saw and heard, that at least some time was devoted to miscellaneous reading and literary culture. This pleased us; this pointed toward better teaching for our children.

The conditions for *health* seemed most excellent. The system for heating and ventilating is the most perfect application of the Ruttan idea of heating we have ever seen. Immense volumes of moderately heated air flow up into the several rooms and are drawn off before they become loaded with carbonic acid and poisonous exhalations. The rooms are large, airy and sunny. The site is fine, affording a delightful view of the adjacent country. The grounds are ample, affording a rare chance for outdoor exercise and athletic sports.

We hope the normal regents will continue the policy of roomy grounds and pleasant surroundings. "Man does not live by bread alone."

You are, however, especially interested in what we have to say of this school in its distinctively professional work. We were pleased to see that every student in the normal grade was at once put in the line of teaching, either in the study or practice of professional doctrine. This continues a period of four years for those who remain in the school and take the full course. The work is not simply catalogued; it is found in the school, it was steadily pressed forward by the president and his lady assistant.

The outline of professional work is a good one; it is progressive, it advances from the simple to the complex; it unites theory and practice. It reaches up into the realm of philosophy, down into the field of labor.

The River Falls school is professional in another sense,

Report of the Visiting Committees.

equally important. We allude to its efforts at the development of thought from the text by philosophic principles, and a careful interest in the *habits* of thought. To state in plainer phrase what we mean, we say this: The classes were composed not of mere pupils, but of coming teachers, who were studying the matter in hand not simply to know it, but *how* to know it best with a view to impart the same at some future time.

We do not undertake to say that every member of the faculty rose to an appreciation of this thought in his teaching; but most did, and several attained superior results therefrom.

Your committee desire to make the following recommendations:

1st. We ask that the several teachers in the Model department have a career opened before them. These teachers are most important to the success of the school. They should be well paid; they should be kept growing; they should have large liberties; they should not be underlings, *groundlings.* Their classes should not be broken up by student teachers. It is not fair to them or to the parents who pay a liberal tuition for their children's attendance on the Model school. We say to your board of regents, select strong model teachers; the strongest they can find. Then give them a chance.

Let the students from the normal department see much of the work of these model teachers, and when the students teach in the model school, let it be under the direction of the model teacher.

2d. We hope you will relieve the president of so much class work, and give him a better chance to look after the professional work of the school.

We ask the same for the conductor of institutes; he is called upon to do too much in the way of detail, and cannot broaden as he ought.

By putting the professional work distributively into the hands of the president, the institute conductor and the model

teacher, we believe the influence of this school would soon be felt in the remotest corner of the state.

3d. We beg that something be done by the normal regents to create a demand for higher education in these schools.

At River Falls, only two students finished the full course of four years. We don't believe in testing a school simply by the number of its graduates; but this sending out multitudes of boys and girls with only a rudimentary education to teach our children and youth is a disgrace to the state, is a crime against posterity.

Certainly our normal schools from their position of commanding influence should denounce it; at least should stand aside from it, and have nothing to do with it.

The books in your office show that one hundred and eighty-nine normal certificates have been countersigned by the Superintendent of Public Instruction and only ninety-five normal diplomas. Thus the vast majority of normal students who are teaching have barely the *elements* of an education. None of them can lay claim to a liberal education save the few who by self-help or college-help have wisely supplemented the normal school. Grand souls these; but ah, how few!

4th. We beg you, sir, as a member of the University Regents to press vigorously forward toward the establishment of a chair of pedagogics. Wisconsin needs it, needs it at once.

We find in your official records the following startling fact:

Seventy-five (75) principals of free high schools in Wisconsin hold diplomas countersigned giving them the effect of state certificates.

Thirty-four (34) or nearly one-half of these are graduates of the university of Wisconsin.

That is, the university furnishes nearly as many principals for our graded schools as all the four normal schools together.

Report of the Visiting Committees.

This of itself is sufficient argument for immediate action.

But every thoughtful person knows that the principles and philosophy of education should be taught not only to the future teacher, but to the future citizen, the future parent as well.

Not till then, may we hope for good homes, good schools, good states.

5th. That this subject of Normal Schools is engaging so much attention, is being so freely discussed, must be to all true educators a matter of profound gratitude. Let us have anything but stagnation. May we not be on the eve of new discoveries, of new departures?

It must be so.

Then, would it not be well to have a committee of eminent educators visit all the Normal Schools of Wisconsin and study them as a whole?

Such a committee could see the Normal School effort in its unity throughout the state, and might submit a report which would contain the germs of vast improvement; "a consummation devoutly to be wished."

Respectfully submitted,

SAMUEL SHAW,
WM. E. BARKER,
W. P. BARTLETT,
Committee.

MADISON, WIS., August 31, 1883.

REPORTS OF COUNTY AND CITY SUPERINTENDENTS.

CITY OF APPLETON, 1884.

A. B. WHITMAN, SUPERINTENDENT.

In addition to the annual report required by law, I will give a statement of the schools of Appleton which is generally interesting to those who have supervision of schools, or who give attention to educational subjects.

SCHOOL SYSTEM.

The city is divided into four districts, each independent of the others. The High School is supported and controlled by the Second School District. The pupils of the three other school districts have to pay $15 tuition to attend the High School.

BOARD OF EDUCATION.

The directors and clerks of the four districts, together with the mayor of the city and city superintendent, constitute the Board of Education. This board decides the course of study for the different grades, and adopts the text-books used in the schools. The authority of the board in this respect extends over all the city.

CITY SUPERINTENDENT.

The City Superintendent of Schools is chosen annually by the Board of Education. The superintendent examines teachers and the scholars for promotion, and he also regulates the length of the terms for the schools and the time to begin the same.

LOCAL BOARDS.

All other duties, powers, and control of schools exercised by school officers, belong to, and are vested in the four local school boards. Annual school meetings are held in the four

separate districts, when appropriations for each district are raised by the popular vote of the electors present; and at these meetings the clerk, director, and school treasurer of each district are chosen in the same way as in country districts.

The rapid growth of the population has crowded the rooms in all the schools of our city. The lower rooms being most crowded, as is seen below. The number of pupils enrolled in the first primary room in the several districts is as follows:

First district	112 pupils enrolled.
Second district	100 pupils enrolled.
Third district	106 pupils enrolled.
Fourth district	89 pupils enrolled.
Average in primary rooms	102 pupils enrolled.

The average daily attendance of these departments is about 95 per cent. The daily attendance in all departments in common grades was 54 pupils to each teacher. The average daily attendance in the High School was 31 to each instructor.

This is due to no fault of any school officer, but arises from the want of school room and the rapid growth of the school population.

The Third district had a four-room school-house destroyed by fire, and are now building a ten-room building to replace it, which will cost about $23,750 when finished and ready for use.

The interest taken in our city schools is good. The citizens are generally very liberal in their appropriations to support the public schools, and usually raise the amount which is asked for by the school boards, and, in some cases, increasing the estimates which the boards have made for the ensuing year.

Vocal music and industrial drawing were added to the course, but it will be gradually brought into the grades for want of proper teachers.

There is room for improvement and advancement in the school work in Appleton; but the condition of the school is good, and the scholarship, deportment and attendance are satisfactory, when everything is taken into account. The people have good reason to be liberal and to give encouragement and support to the public schools, which are the pride of the school officers of Appleton.

CITY OF LA CROSSE.

ALBERT HARDY, SUPERINTENDENT.

In 1883 the census showed 5,135 children of school age in the city; the census of 1884 shows an increase of 532 in one year.

Notwithstanding the efforts of the school board to provide school facilities, and the liberal response of the city council, the very rapid growth of the city leaves us much short of school room.

COST OF TUITION, BOOKS, ETC.

The cost of tuition per pupil, *i. e.*, the cost per pupil based on teachers' wages, is $12.35. Last year it was $12.62. The total cost per pupil, based on all expenditures except building, is $18.55. Last year it was $18.09. The slight increase this year is due to increased cost of repairs and fuel. Very few schools in the country can make so good a showing.

The cost of text-books this year is thirty cents a pupil, based on the average enrollment; for the three years the free text-book system has been in use the average cost per pupil per year is forty-six cents. The cost of miscellaneous supplies per pupil for the year is thirty-seven cents. This includes drawing materials, writing materials, paper, pencils, ink, in short all the materials the pupil needs for his school work. Thus all books and supplies cost the city sixty-seven cents for each pupil of the average enrollment.

Reports of County and City Superintendents.

In my former reports I spoke of the great increase of the number of pupils in attendance, especially in the grammar grades, and of the greater regularity of attendance. These results of the free text-book system are more marked this year.

After an experience of three years with such results, there can be, I think, no question of either the economy of the plan or its general utility.

The state of Massachusetts has adopted the system, and California is considering the advisability of adopting it, and it is only a question of time when the system shall become general.

INSTRUCTION, DISCIPLINE, TEACHERS.

Notwithstanding the large increase of the number of pupils, the absorption into the grades of a large number of children, partially educated elsewhere and poorly prepared to fit into the grades, and the consequent opening of rented rooms, and the necessary transfers, all tending to disturb and retard the pupils, the schools have made a very commendable progress during the past year. Both in instruction and discipline, I feel that the school has made a step forward.

To a very large extent this forward step is due to the earnestness, fidelity and intelligent labor of our corps of principals and teachers.

CRAWFORD COUNTY, 1883.

J. H. M'DONALD, SUPERINTENDENT.

During the year just passed some important changes have been made in the arrangement and management of our schools. Experience has shown that the new measures are wise ones; and the results already obtained give evidence that the changes introduced have improved our education.

Reports of County and City Superintendents.

I can safely assert that the schools, as a whole, were never more prosperous, or more efficient, successful and harmonious in their work than now. For years the schools have been crowded; more room was an imperative necessity. In a great measure it has been furnished. What has been accomplished in many cases, has been done in the face of difficulties; and could not have been done at all except by persistent effort. In districts where the burden of taxation falls upon half a dozen patrons, it seems impossible for them to make the desired improvements.

TEACHERS.

The school year ending June 30th, 1883, supplies my official records with the following summary:

Total number of applicants	246
Total number of certificates granted, to males	50
Total number of certificates granted, to females	106
Number male applicants refused certificates	6
Number female applicants refused certificates	44
Number First Grade certificates granted	2
Number Second Grade certificates	19
Number non-resident teachers	12
Number who have since left the county	14
Number of teachers more than the number of schools	37

But few of our teachers have enjoyed opportunities for thorough discipline or liberal culture, themselves; and hence fail, in some cases, to successfully comprehend the nature and needs of the human mind; and too many school officers have been satisfied with this kind of teaching. The possession of a certain amount of book knowledge has been supposed to constitute an education; and the most successful teacher is the one who has put the scholars *through* the most arithmetic, geography and grammar. Yet there is encouragement in the fact that the number of this class of teachers and school officers grows less each year. The institutes which have been held in the county in recent years have done much to remedy this matter, as well as to

encourage and stimulate those who are really striving to improve themselves in their profession.

Some teachers would do much more and better work if they possessed the means to do it with; such as good school rooms, properly arranged, and furnished with apparatus; but especially a uniformity of text-books. You will see by referring to "General Statistics" in my annual report, that there is a deficiency in each of the latter. Better wages were paid last than any year since I came into office; and it resulted favorably in calling into service the old and experienced teachers. A good per cent. of my teaching force is in attendance upon the normal schools and local high schools; and many more are to follow within the next year, while a few insist on remaining in the old rut, and acting as "camp-followers." The former will have all the assistance it is possible for me to give them; while the latter may expect to receive little or no encouragement.

TEXT-BOOKS.

Thirty-two districts have adopted a list of text-books; twenty-seven use only those adopted; twelve purchase text-books, of which four loan, and eight sell them to the pupils. The question of text-books, without a uniformity, is annoying to the teacher and expensive to patrons. If it were possible to secure a uniformity, a great deal of precious time would be saved thereby. On one of my visits last year I found a school that was using parts of *four series of readers, four* of arithmetic, *three* of geographies, and *two* or *three* grammars. There were thirty-six scholars present, and the largest class that recited during the half day of my attendance consisted of four members. This was not an average case, yet I found many schools sadly wanting in this particular.

VISITATIONS.

It has been my purpose when visiting schools to spend sufficient time (nearly a half-day at each visit — numbering

83 districts once, and 36 twice, in all 119 during the year), to become acquainted with the methods of instruction and discipline adopted by the teacher, and also the wants of the schools, and as far as possible to consult with the scholars, teacher and patrons, as to their deficiencies, and how they could best be remedied. Have also tried to impress upon the teachers, and the patrons of the schools too, the advantages which the teacher derives from attendance on institutes; that the district board should encourage, and, if necessary, demand their attendance. But I had rather have one volunteer than two who have to be coaxed to attend. Those who are regular in this matter, and prompt in the performance of what is required of them, are my most successful teachers.

INSTITUTE.

To be frank, I feel no little embarrassment at having to report the but partial success of my last institute. Never before have I worked so industriously in trying to secure a good attendance. I sent them an encouraging circular, talked with them pertaining to the institute, whenever I met with them; coaxed them; told them, when I suspected they might be short of funds, that I would pay their board till such time as they could earn the money. But, *all* to no avail! Again, to add to our light attendance another unpleasant feature, the county fair was called during the second week. Prof. A. J. Hutton, I venture to say, *never* worked harder to create an interest, or to impart methods of teaching, accompanied by interesting and valuable information. Those who did attend are indebted to him for wise counsel, excellent methods and untiring patience; and those who were absent lost a golden opportunity for acquiring lessons on Theory and Practice. Number enrolled, 53; number of days institute was in session, eight and one-half.

SCHOOL-HOUSES.

During the year four frame buildings have been erected, of which the town of Scott built two, Seneca one, and Free-

man one. The village of Soldier's Grove will build, during the ensuing year, a $2,000, two-story frame building. It is in close proximity to the counties of Vernon and Richland, and will afford an excellent opportunity for the attendance of non-resident pupils. Many old buildings have been repaired and re-seated; also, sites enclosed. In this line we are doing all that can reasonably be expected.

CONCLUSION.

In looking over the past year we see many improvements made, much good work done, many hopeful indications, and many reasons for encouragement. I am thankful to town clerks, school district officers, and the state department for the hearty co-operation extended me in the performance of my duties; to teachers for the readiness displayed in receiving my suggestions, and to the patrons for the hospitality shown me while among them.

DODGE COUNTY, 1884.

J. T. FLAVIN, SUPERINTENDENT.

In view of the fact that the report of the state department is now published only biennally, a special report made at this time, should, I presume, cover the work of the past two school years.

About all facts of interest being set forth in the statistical report annually made, any extended recapitulation seems unnecessary. It is so easy, and also so stereotyped, to report from year to year marked improvement in the condition of our schools that evidently many are unable to resist the temptation to indulge in the meaningless platitudes.

Progress is not a plant of hasty growth, and when applied to our schools, it is not often reached by rapid strides; but on the contrary, where substantial, permanent advancement is noted, it has been occasioned by long continued, patient, per-

sistent effort. We have inherent obstacles to contend with, but it is the part of wisdom to deal vigorously with things as we find them, and instead of idly deploring existing imperfections, labor steadily and earnestly to bring about the desired condition. Time is a powerful auxiliary, and there are defects in our schools, which, perhaps, naught else will be sufficiently potent to eliminate.

As I have toiled on with systematic effort in attempts to help better the condition of the schools of this county, I have invariably met with the most encouraging coöperation and I have been led to believe that my labors have not been entirely fruitless in good results.

An improved educational sentiment has been developed, and, as a rule, a disposition exists to make all needful provision for the maintenance of good schools. This is noticeable in an especial manner, in the increased demand for well qualified teachers, and this demand is honored in advance by persons who cheerfully devote the necessary amount of time and incur the unavoidable expense incident to a proper preparation for the intelligent discharge of the duties of a practical instructor.

Our numerous graded schools are, without exception, under the direction of most competent principals, and while accomplishing a noble work in the immediate locality where situated, are centres from which radiate a most salutary influence on other schools. In them are prepared many of our teachers, and it is a keen pleasure to notice their good work reproduced in a large measure by those students who come forth from them, when they change the roll of pupil for that of teacher.

There is manifest among our teaching force a spirit of improvement, and an unmistakable determination to constantly strive to better their qualifications, and one of the effective agencies in this direction has doubtless been our teachers' institutes. The conductors assigned us have rendered excellent service, and interest on the part of the teachers in those annual sessions suffers no diminution.

Reports of County and City Superintendents.

The presence of Dr. Stearns, his instruction and lectures, have been the fruitful source of much inspiration to all. Dr. Higbee, state superintendent of Pennsylvania, honored us by his attendance at our last two institutes, favoring us with many valuable suggestions, and delivering stirring, instructive addresses along the line of educational work.

At examinations, associations and institutes, attention has been fully directed to the course of study, coupled with thorough and exhaustive explanation and discussion of the same. I have ever been studiously careful not to take a position so far advanced as subsequently to be compelled to recede from it, and in urging the adoption of the course of study have pursued a conservative course. Fair progress has been made and reasonable expectations realized.

The work of the office has steadily increased, and this is peculiarly true in the matter of correspondence, a prompt attention to which requires very much of my time. This, however, seems to be occasioned by a growth of confidence on the part of the patrons, officers and teachers of our schools, who more and more seek counsel and advice of the superintendent, and coming from such a source, in such a cause, the additional labor thereby imposed is most cheerfully performed.

DANE COUNTY—FIRST DISTRICT, 1883.

F. O. BURDICK, SUPERINTENDENT.

I am able this year to present a more favorable report in nearly every respect than last year.

1st. The schools have been more thoroughly classified.

2nd. Better attendance.

3rd. More interest on the part of school boards.

4th. Older and more experienced teachers in the work.

5th. Teachers better paid.

Out of one hundred and thirty-six teachers engaged to

teach the summer schools one hundred and ten have reported having made an honest attempt at "grading." I should judge from observation made during my visits to these schools that about sixty per cent. of the number have been quite successful in their efforts. Examinations were held in several schools, at the close of the school year, for graduation from the course of study. Fourteen pupils passed the examination and became entitled to a common school diploma. The questions for the final examination were furnished by me and an average of eighty per cent. was required for passing. The questions were uniform and I think fully as difficult as those used in the teachers' examinations. In one or two instances those graduating from the common school are now teaching, some have gone away to higher schools, others still remain in the district schools. I look for a greater number to complete the course of study the coming year. Will try to hold appropriate graduating exercises in several localities for those passing the final examinations. Such a move, I think, will tend to stimulate teachers and pupils to greater efforts in the future to proper classification.

Better attendance was reported this year than the year before. Last year 5,064 pupils between the ages of 4 and 20 years, were reported as having attended school. This year the report shows an increase of 241 pupils attending school.

I have sent printed reports of the condition of the schools as I found them during my visits to nearly every clerk in this part of the county, and the result has been that many of the district boards have taken steps to better the condition of their schools.

The average age of teachers employed in the schools during the year is 23 years, and the average experience in the school room, six terms of three months each. Let the county "speak" that can present a better report in this direction.

The average wages paid to male teachers per month is $38.53, and to females $25.36. This is an increase over the

Reports of County and City Superintendents.

wages paid last year. I think the result of thus increasing the wages has been a great benefit to the schools by securing older and more experienced teachers.

I have made 179 visits to the schools during the year; held 10 public examinations, with an attendance of 324 applicants; 196 of the number obtained certificates. First grade, 4; second grade, 22; third grade, 170.

As we continue in this work, the wider we find the field and the greater the responsibility. There is a great deal to be done and too little time to do the work. If there has been any portion of this work that we have labored harder to accomplish than another, it has been to secure better teachers and to establish the course of study in as many schools as possible.

REPORT FOR 1884.

I began my work in this office three years ago, having three objects prominently in view, which I have labored earnestly to accomplish, viz.: 1st. To secure better attendance on the part of the pupils. 2d. To secure teachers with better qualifications with better pay. 3d. To establish, so far as practicable, "The Course of Study" in the district schools. I have the pleasure in this my last annual report of stating that my labors in these directions have not been in vain, and that I have accomplished my purpose to quite an extent in each of these different branches of work.

The attendance the past year has been at least fifteen per cent. better than at any other time during the two previous years, and I can unhesitatingly say that the interest manifested on the part of the pupils in their school work has been much better.

The increase of the average wages per month of male teachers is $3.79 and of female teachers $2, and a corresponding increase in the average standing of teachers at teachers' examinations.

While not able to report a very great increase in the number of schools which have adopted "The Course of Study,"

still we are able to report great progress in those schools which *have* adopted the same.

Last year, for the first time, I commenced the work of graduating pupils from The Course of Study. A uniform list of questions was sent to all teachers having pupils ready to take the examination, asking the teachers to conduct the same and return the papers to me for inspection. The result was that nine passed the examination, with an average standing of eighty per cent. and upward.

Near the close of the *present* year I ascertained from the teachers about the number again ready to take the examination. I accordingly sent questions to all the teachers reporting such pupils, requesting them to hold the examination on the 14th and 15th of February, and to send all papers to me after having examined the same themselves. The number passing the examination I found to be forty-three, with an average standing ranging from seventy-five per cent. to ninety-six per cent., and, therefore, entitled to diplomas. For these, Common School Commencement exercises were held as follows: At Windsor, February 29th, at Marshall, March 7th, and at Cambridge, March 14th, 1884. Each of the pupils entitled to a diploma took some part in the programme, with original productions largely. The diplomas presented were the very best to be found in the market (from Donahue & Henneberry, Publishers, Chicago, Ill.), and were presented at the close of the exercises.

The exercises at each place passed off very pleasantly, indeed, and did much toward creating a favorable public sentiment toward the Course of Study. The pupils took hold of the work with a good degree of interest and upon the whole the exercises had a very beneficial effect upon the mass of children who watched the examinations, attended the exercises and witnessed the presentation of the diplomas. It will stimulate many "to go and do likewise." One pupil in conversation with her mother was regretting that she could not obtain a diploma this year. All at once she

brightened up and said, "Never mind, mamma, I'll obtain one next year, don't forget that." And such will be the endeavor of quite a number of pupils, if this line of work is followed out by the incoming superintendent. The papers of all the pupils who passed the examination and received diplomas were entered at the late state fair and drew first premium. Were I to remain in office the coming year, I had planned to have a premium offered the pupils for the best paper in the final examination, based upon accurateness, neatness, etc., as a farther stimulus to better work in the district schools. But this part of the work must now be carried on by other hands, and I can only hope for their success.

Another thing which has increased the interest on the part of the pupils the past year is the "monthly report" for each pupil in the different forms, embracing the pupil's standing in all of his studies, deportment, attendance and punctuality, which were sent to the parents for their examination and signature. These blanks were furnished by myself and were used in all of the schools. Nearly all the teachers report good results coming from their use.

GREEN COUNTY—1883.

D. H. MORGAN, SUPERINTENDENT.

I herewith enclose my annual report. Like all that I have ever made, it is incomplete.

Very few of our town clerks fill all the blanks, and I am obliged to depend upon my own and teachers' knowledge to fill up as far as we know. There is one fact that this year's report has settled as I supposed it would be settled when we got at the truth. Nearly all of the children between the ages of seven and fifteen attend school, and from personal observation I believe them to be quite regular in their attendance. Among the foreign population very few attend

school after they are fifteen. At that age they are supposed to know their catechism, which completes the education of Lutherans and Catholics. Though I report to you a large number who have received certificates, I am not able to get enough to fill the schools that have "one year" certificates. We are not able to hold our old teachers very long as the school term is too short, particularly in "foreign" districts, where the terms are seldom more than five months, supplementing with German or Norwegian for one or two months more.

I am pleased to say that the teachers' meetings of the past year have done good in many ways, especially in writing. I have visited no school where a portion of time is not set apart for writing. It has required constant urging and some *management* to bring it about. I do not think it has been the fault of the teachers altogether. Parents are careless about furnishing material. Now our teachers make such a "racket" that the paper and ink are forthcoming.

Our teachers, almost without exception, are doing all they can in trying the *grading* system. I have no doubt of its final accomplishment. Proper institute work and teachers' meetings in connection with the instruction given in our pamphlet will finally conquer. Parents care little or nothing about it; are satisfied with the "good old way" or *any* way; do not oppose, but fight the "township system" through ignorance and fear of increased taxes. When we have a legislature intelligent enough to take the animal by the horns and give us the system without let or hindrance, that will end that matter, as it only needs trying to make it acceptable to all.

Any suggestions relating to the work of grading will be very acceptable.

Reports of County and City Superintendents.

JUNEAU COUNTY.

M. L. BUNNELL, SUPERINTENDENT.

Since this date last year one new district has been organized, No. 7, Necedah, and one, No. 4, Armenia, having failed to maintain school for two successive years, has been dissolved. The number of public schools in the county is, therefore, the same as last year, ninety-five. We have ninety-nine school buildings capable of accommodating, according to town clerks' reports, 5,251 pupils. The past season has been marked by greater improvement in the school houses of the county than has been known before in many years, six good buildings having been erected and provided with patent seats, besides repairs, amounting almost to new buildings, being made on several others. Districts No. 4, Lyndon, and 9, Lemonweir, two of the three spoken of last year as having the poorest houses in the county, now have buildings deserving of mention as being among the best. These are encouraging signs. We may with reason expect that an educational sentiment that has become strong enough to sanction so great an outlay to provide for the physical requirement of the school, will also take sufficient pride in improving its intellectual condition to demand that competent teachers be employed and to provide the means necessary to secure them. This is usually the result of an improvement in school property. That which costs the most is the object of greatest attention and interest. Other things being equal, the best schools are found in the best school buildings. There are several other districts sadly in need either of new houses or extensive repairs on the old ones.

EXAMINATIONS AND CERTIFICATES.

There are at present in force in the county 9 first grade certificates, 14 second grade, and 108 third grade; making a total of 131. Of this number about 20 either do not intend

to teach or will teach in other counties, leaving about 111 available teachers, or about 7 less than are actually needed. This deficiency will no doubt be fully supplied by the supplementary examination. If so, we shall have qualified teachers enough to supply the schools—which is very desirable as it will obviate the necessity of granting permits to persons unable to obtain certificates and who very seldom succeed as teachers for the reason that they have not an adequate knowledge of what they are required to teach. No permits are issued except to those who have an average standing of 50, at least, and then only upon written request of the district board, which request is placed on file. It has been my aim during the past two years, by raising the required standing and by endeavoring to make each examination a little more rigid than the preceding one, to cull out, and keep out, the least desirable teachers to such an extent that the number of certificates held in the county shall correspond as nearly as possible to the number of teachers required; hoping thus to secure the double result of providing the schools with only the best teaching material in the county and, by removing "cheap labor" competition to the greatest extent possible, of insuring to good teachers reasonable pay for their services. A constantly rising standard, which may be provided by raising the required average or by requiring more difficult tests, is the only means by which the majority of teachers can be incited to continued study. If they realize the necessity of being a little better qualified at each subsequent examination, they will be much more likely to try to improve themselves, thereby increasing their efficiency as teachers. With many, no other incentive is so powerful.

The standing required is, for third grade, an average of 65 per cent.; for second grade, an average of 75 per cent. on third and second grade branches; for first grade, an average of 85 per cent. on third, second, and first grade branches. Efforts have been made to encourage teachers whose third

grade standings are high enough, to take up the study of second and first grade branches, and quite a number have this fall undertaken the work. Many say, as a reason for not doing so, that district boards will not pay any more for a second or first grade teacher than for one who holds only a poor third grade certificate. This is true in too many cases but not in all. There are many schools in the county, and they are our best ones, where a *poor* third grade teacher can not find employment, and I have known of but two cases during the year where a higher grade teacher has not received considerably more than the average paid to third grades.

WAGES.

There has been a slight increase in teachers' wages during the year, and indications this fall point to a further rise. The average paid per month in the country districts during the past year was, to males, $32.28; to females, $19.65. The corresponding figures for last year are $29.96 and $19.25. The highest average wages in towns containing no high school, was paid in Orange, $22.50. The lowest in such towns was paid in Clearfield, Kildare, and Lemonweir, $18.00 in each. The average paid to principals of high schools in the county was $97.73, the highest, $111.11, being paid at New Lisbon. Average paid to female teachers in village schools, $32.50. Necedah, the banner village in this respect, pays each of its subordinate teachers $40.00 a month, making no distinction in the matter of wages between the different positions — an arrangement both fair and just.

INSTITUTES — GRADING SYSTEM.

During the past year more of our teachers have had the advantage of institute drill than ever before, the meeting at Wonewoc being attended by 81 and the one at Lyndon by 42 others. The work done at both places was confined almost exclusively to the explanation and discussion of the

grading system for country schools and the best methods of introducing it. Considerable interest in the scheme was manifested by the majority of the teachers, while there, and there is reason to believe that better work will be done in this line during the coming winter than we have been able to do before. The plan contemplates a change in the working of our country schools which will take several years, under the most favorable circumstances, to accomplish perfectly. But to one who will take the pains to get an understanding of it, it will be plain that the improvement it will cause is sufficient to justify an earnest effort to introduce it.

Great aid has been given to the movement by chapter 325, laws of 1883, which, after authorizing the state superintendent to prepare and furnish courses of study for high schools, further provides that "the courses of study herein authorized to be prepared shall include instruction in the theory and art of teaching, and organization, management, and course of study of ungraded schools, and all examinations of teachers shall include examination upon these subjects." By this provision is clearly indicated the expectation that the free high schools will devote special attention to preparation of teachers for the common schools as a return for the aid in their support extended by the state; and failure to comply with it will be considered sufficient cause for withholding such aid.

There have been two diplomas, or certificates of graduation, issued during the year to country school students; one to Miss Annie Trehey, of District No. 6, Seven Mile Creek; the other to Wells Davidson of No. 9, Lemonweir. There are now three of these diplomas held in the county.

OUR HIGH SCHOOLS.

We have five regularly organized high schools in the county which without doubt will compare well with the majority of such schools in the state. A regular course of study is prescribed and followed and every year quite a

Reports of County and City Superintendents.

large number of graduates is sent out. Upon these graduates and the higher-class students in these schools we must, on account of our remoteness from normal schools, depend mainly for teachers. And it is only reasonable to expect that they should be qualified to hold at least a second grade certificate. Some of them are but the majority are not. Several high school graduates have failed during the past two years to get even a third grade. Many of them are capable of passing a creditable examination on second and first grade branches alone, but fail to get higher grade certificates because of their inability to reach the required standing in third grade branches. Here is where the trouble lies and where a change might be made with excellent results. The high schools do not furnish enough thorough drill in the elementary studies. The higher branches, the study of which may be gratifying and flattering to the pride of the students and their friends, are in many cases pursued at the expense of the lower ones. Arithmetic, geography, grammar, and history, which, with reading, writing, and spelling, should form the basis of higher education, are dropped — if introduced at all — early in the course, before the majority of the pupils are old enough to have anything like a lasting knowledge of them. The result is that many of them after spending two to four years in the study of philosophy, geometry, rhetoric, literature, Latin, etc., are graduated with less knowledge of the subjects which, if they become teachers, they need to understand, than is possessed by some of the pupils in our country schools.

I would not be understood as being in favor of excluding the study of the higher branches or reducing the number of them. The knowledge of them is valuable. But to be of the greatest and most enduring benefit it should follow, not precede, a reasonably thorough understanding of the elementary branches; otherwise the education received, instead of being well founded and symmetrical, is superficial and top-heavy.

The blame for this condition of things does not rest with the students nor the teachers. It is not caused by lack of application on the part of the former nor by faulty methods of instruction employed by the latter. Both are doing the work mapped out for them in the different courses of study. These courses should be revised. They should provide for a thorough review and study of the common branches during the latter part of the course, and no diploma should be issued to a graduate who has not passed, satisfactorily, a rigid examination in them.

In one of our high schools a change similar to the one here suggested has recently been made in the course of study—an example which might be followed with profit by the others.

SCHOOL VISITS.

During the year every school in the county has received at least one visit, and more than one have been made to as many as possible. Besides the usual observation of instruction, management, etc., note has been made of the kind and amount of appliances furnished by the district to aid the teacher and the pupils in their work; the provisions made for their health and comfort; and the evidences of interest in and care for the school property on the part of the district board. And while in many cases but little remains to be desired, in many others as little that is desirable appears. Some districts are entirely destitute, having neither dictionary, maps, globe, charts, chalk (one or two having no blackboard—they have no use for chalk), or anything else with which to illustrate and facilitate the work which, unless in the hands of ingenious, skillful teachers, often soon becomes to a great extent dull, tiresome, disagreeable, and to the same extent, unprofitable. These things may be had at little expense and when once provided, if the teacher will not, or does not, use them, his place should be supplied by one who will.

In many cases, also, sanitary considerations of all kinds

Reports of County and City Superintendents.

are entirely disregarded An elaborate and costly system of ventilation and furnishing is of course out of the question, but pure air may be made obtainable by means of windows that will raise and lower (a thin strip of board slanting inward and upward from the window sill will raise the cold air above the heads of children sitting near the windows), cracks and holes in walls, door, floor, roof and ceiling may be battened and patched; draughts, cold feet and consequent sickness may in a measure be prevented by banking the house, if it has no wall, and supplying plenty of good dry wood — all at a cost of money trifling in comparison with the benefit derived from this outlay.

The care of school property should in some districts receive more attention. By an occasional visit the board would be able to see whether proper care is being exercised by the teacher to protect the in-door furniture and to impress upon his mind and that of the school the necessity of it; whether the buildings are suffering from lack of paint; whether the gates and fences are in good repair, giving the grounds a snug, tidy appearance; and whether the outhouses are in respectable condition. The time and labor necessary would be furnished gratuitously by the board as very few districts pay their officers, but it is to the interest of the community that this should be done and there is no one else empowered or required by law to do it.

One very noticeable and unnecessary obstacle to the uniform progress of classes, observed during school visits, is the great diversity of text-books in use. The attention of district boards is called to the revised statutes, section 440, which provides that the school boards "shall determine what text-books shall be used in the several branches taught in the schools, make a list of such books, and file one copy with the clerk and keep one copy posted in the schoolhouse."

About half of our districts (forty-six) have complied with

this provision. After a series of books has been adopted, the board should see that they are introduced and used.

COMPULSORY EDUCATION.

The whole number of children of school age in the county is 5,969. The number who have attended school during the year, 4,333. The number between the ages of seven and fifteen years, who are required by law to be sent to school at least twelve weeks in each year, 3,205. Number of such children who have attended the public schools during the year, 3,027; leaving 178 of the age contemplated by the law referred to, who, according to town clerks' reports, have had no schooling whatever during the past year, except the number that may have been sent to private schools. Last year the number of this class reported as not having attended school was 360 — over twice the number this year. This indicates that the efforts made in this direction during the year by our district officers, have not been unavailing and also that continued effort may still further reduce the number.

LA CROSSE COUNTY.

A. O. RHEA, SUPERINTENDENT.

I am aware that I am behind time, but I hope you will be willing to make allowance for the fact that I had to wait for town clerks to make their reports, and was obliged in three instances to return them for correction.

The county can boast of many school houses which are models of convenience and comfort. They are well warmed, seated and arranged, and provided with a fair amount of maps, charts, globes, etc., but there are quite a number that contain very few of these conveniences, and are wholly unfit for the purposes for which they were designed. The comfort, health and best interest of the children of the county require that, in a few cases, new houses be erected, and others be re-plastered and re-seated.

Reports of County and City Superintendents.

It affords me pleasure to be able to testify to the faithfulness of our teachers, their progress both in educational qualifications and methods of teaching and the better general comprehension of their duties.

From a careful observation of their condition through the agency of teachers' reports and personal visits, I am satisfied that our schools were better and more thoroughly taught this year than last. A professional pride, and desire to excel, the effects of institute instruction, are producing a healthful influence upon our schools, and supplying us with better qualified and more efficient teachers.

The examinations last fall and spring were made thorough and well calculated to test the applicant's knowledge of the branches taught, and his ability to successfully impart instruction, so far as an examination might determine. About seventy-four per cent. of the number applying received certificates. I have aimed to secure the best teachers, by making the tests of such a character as to throw out the weak and inefficient, while the live, energetic teacher, who keeps abreast with the time, and whose aim is high, will find no great difficulty in showing his ability to engage successfully in the great work of instructing the young.

Two institutes have been held during the year, one in the fall at West Salem, and one in the spring at Bangor. At the former fifty-two were in attendance, at the latter sixty-two. Both were conducted by Prof. J. B. Thayer as principal and gave good satisfaction. The influence of these was everywhere apparent in the school work of the past year.

During the year, I have visited each school twice, except a few that had only one term of school. I have endeavored to make my visits as unxepected and informal as possible, and to inform myself in regard to the attainments of the pupils, the progress they are making in their studies, their general deportment, and the fitness of the teachers for the positions they occupy. I have generally found the schools doing well, and making commendable progress in their

studies, and in most of them the best of discipline maintained.

Very strong efforts have been made to secure the grading of the schools, but the results have not been all that could be desired. Seventeen schools of one department are reported as having adopted the Course of Study, and many others are working in accordance with the course and the results are very encouraging.

The teachers' associations have been of very great benefit to the teachers. I find those who attend these meetings, as a general thing, teach the best schools and give the best satisfaction where they are employed. We hope to continue these meetings the coming winter and make them worthy of patronage.

From the observations I have been able to make, I am led to believe that the people of this county feel interest in the welfare of the public schools, and, as a natural result, they have been greatly improved within the past few years.

LAFAYETTE COUNTY.

H. C. MARTIN, SUPERINTENDENT.

The high schools of Shullsburg and Darlington, and the departments connected therewith, are in a flourishing condition. These schools rank well with those of other counties, and of these schools we are justly proud.

One new district has been formed and a school house built in the town of Gratiot, so that we have in the county 123 school districts. In Blanchardville the second story of their school house has been completed. In Collins a new school house has been built. District No. 9, town of Shullsburg, also has a new school house. These improvements have mostly been made since June 30th, last, and will properly come in next year's report.

Reports of County and City Superintendents.

We find a graded school of three departments in the village of Argyle; schools of two departments in the villages of Belmont, Benton, Fayette, Gratiot and New Diggings; also one near Leadmine, in the northern part of New Diggings. Considerable interest is manifested in these schools by the people in their respective localities. Still, if this interest were a little more universal and a little more intense, it would prove increasingly beneficial to the schools. Good work is being done in these schools. The teachers seem to be willing and alive to the best interest of the school, and only need encouragement and support from parents and school officers.

Most of the other schools in the county have teachers able and willing enough to do good work if school boards and parents have and show an interest in seeing it done.

Among the teachers there has been a quickening of interest in their work, as was shown, in part, by the attendance of 115 of them at the institute last spring. This increase of interest has been appreciated and correspondingly met, in most instances, by parents and school officers; but there are still quite a number of districts in the county where the school house is old, small and poor in every respect, and where the interest in education is correspondingly small and poor. There is no excuse for some of these terribly poor school houses. If the district is small and the pupils few, it should be divided and the parts given to adjoining districts. It is better for the children to go farther to a good school than to live next door to a poor one.

There have been during the past year, too many requests from school boards for teachers unable to pass the public examinations, or failing to attend the public examinations.

The rule will be that such permits, if granted at all, will be granted only after qualified teachers wishing to teach and holding certificates have been employed.

It can not be urged too strongly that school boards should select from the best teachers, pay them fair wages, and if pos-

sible, hire them for the entire school year. I am glad to report that in quite a number of schools this is now done. I hope to be able to report next year that most of the teachers are hired for the whole seven, eight or nine months, as the case may be. Having done this, the school board should not find much fault with what the teacher does, or the methods he uses, but encourge him to do his best and make him responsible for the results. If the results are satisfactory the same teacher should be hired for the next year. In order that the school board may know what the teacher is accomplishing they must visit the school, examine into its condition, advise and counsel with the teacher. If this duty, which is imposed by law in section 441, of the R. S., was carefully performed by every school board, the efficiency of our schools would be greatly increased.

I must also urge upon school officers to be prompt and accurate in their official business, especially in their reports to the town clerks, so that the town clerk's report to the county superintendent, and his to the state superintendent, may be accurate and reliable, and hence of greater value.

Judging from the reports of the town clerks, certainly not more than half our school houses are completed and ready for the teachers in respect to seats, blackboards, maps, dictionaries, globes, out-buildings, fences and all minor details in and around the school house. What was said in last year's report in condemnation of poorly furnished school houses, and of poor and sometimes utter want of out-buildings, might be again repeated. Eighty-seven of the 123 school houses have separate out-houses for the sexes; ten more than last year. While these eighty-seven appear to be in good condition, yet, if we go inside, much less than that number will be found properly furnished and ready for the teacher. We find twenty without a dictionary. Only forty-five have a map of Wisconsin, and only sixty have a map of the United States. Thirty-four have reading charts.

The school houses in the county are very poorly fenced.

Reports of County and City Superintendents.

Only fifty-seven out of the 123 school house sites are well enclosed.

Only sixty-one districts have adopted a list of text-books, and but forty three of these use only the text-books adopted.

The average wages per month of male teachers is $37.65½, of female teachers, $24.23½, being a slight increase over last year.

The whole number of children, over four and under twenty, in the county is 7,792. Of these 5,421 attend school.

According to the reports of the town clerks, there are 528 children, between seven and fifteen, who do not attend school at all, and yet we have a law saying that these children must attend school.

Concerning the work to be done this winter, the announcement of which can perhaps be best made by means of this report (besides visiting the schools), the following has been decided upon: There will be a teachers' meeting at the high school building in Darlington, on Saturday, Jan. 17th, 1885, at 1 o'clock; at Shullsburg, Jan. 24th; at Belmont, Jan. 31st; at Argyle, Feb. 7th; at Gratiot, Feb. 14th. Evening educational meetings may be held in different parts of the county, but these will be announced hereafter.

It is hoped that, in some or all of these places, the teachers will not be satisfied with one meeting, but that they will organize into a permanent association and their meetings become regular. Every teacher in the county is expected to attend the meetings at some one of these places, or at some other place in the county where the teachers are organized. The principal of the school where these meetings are held will be requested to, and undoubtedly will, deliver a short address or read a paper upon some subject of interest to teachers. The county superintendent will try and do his part at these first meetings. Every teacher should come prepared to talk five minutes on some subject near to his heart, or, at least, to ask a few pertinent questions that shall provoke healthful discussion.

Also, personally at these meetings, or by mail, each teacher is requested to deliver to the county superintendent a carefully prepared written report of his school, giving a short history of the school and a particularly exact account and detailed report of its present condition in every respect. These reports will be filed in the office of the county superintendent and remain a part of the records of the office. One or more of the best written and most readable of these reports will be published. The report from the poorest school house in the county ought to be published, but we will not promise. This however we will promise, that unless some action is taken during the next year, in some districts, either to repair the old or build a new school house, these districts will be publicly reported and published as having the poorest school houses in the county.

MILWAUKEE COUNTY, 1883.

JOHN REILLEY, SUPERINTENDENT.

I have held eight examinations for teachers' certificates during the last year, at which one hundred and ten applicants were examined, of which two received first grade, four second grade, and seventy-two third grade certificates. While avoiding all technical or catch questions, we endeavored to make the examination thorough.

The benefits to be derived from raising the standard of qualification of teachers is becoming very apparent.

District boards that grumbled and refused to pay a teacher more than $25 per month, but who were finally prevailed on to employ a good teacher, after a trial of one term, were anxious to engage the same at $40.

Again, if young teachers and parents understand that this standard is to be maintained and gradually raised, they will see that it is an object to prepare themselves and chil-

dren for teachers. This is shown by the fact that our county is better represented in the normal schools than ever before.

INSTITUTE.

An institute of two weeks was held at Bay View, commencing August 14, 1882, conducted by Prof. A. A. Miller, of Waukesha, and T. W. Reilley, of Fond du Lac. This proved to be one of the most successful and interesting institutes ever held in the county.

The enrollment of active members reached sixty-five. There being sixty-eight schools in the county requiring eighty-three teachers. Hence we had an attendance of over 78 per cent. of the teachers in the county. Many of the absentees would have attended had the institute been later in the season, so as not to come in conflict with other business.

This fall we held an institute of two weeks, commencing August 20th, at Wauwatosa, conducted by Prof. Lewis Funk and Principal A. W. Smith.

The decision of the "Committee on Institute Work," to use the "Manual of Course of Study" in place of a syllabus was a wise one. While I have read the Manual carefully and consulted it frequently, while teaching, I must confess that I did not realize that it contained as much as it does, until I came to study it in preparation for this "Institute."

The enrollment of active members was seventy. Considering the number required to teach our schools (87), this was very encouraging. I do not think that a class of teachers ever derived more benefit from attending our "Institute" than our teachers did from this one. The success teachers are having in carrying into practice ideas received at the institute, in the schools that I have visited this season, convinced me that the time and money teachers spend while attending our "Institute" is wisely and profitably invested. Universal satisfaction is expressed by the teachers, with Messrs. Funk and Smith on account of the way in which they conducted the "Institute."

Reports of County and City Superintendents.

VISITATIONS.

During the last year I have visited each school in the county from two to five times. My labors for the past year consisted principally with school boards, to induce them to make necessary improvements about their schools, as to ventilation, school-apparatus, etc.

I have reason to feel encouraged in the task undertaken, by the earnest support given by teachers and school officers to improve the condition of their schools, by putting into execution suggestions thrown out at the institute, association meetings and during my visits of inspection; methods by which the children and parents would be led to take a greater interest in the cause of education.

I am happy to be able to announce that there is a decided improvement in our schools. That we have drones yet in the ranks is a deplorable fact. Many enter the school room as teachers with no other object in view than to replenish their pockets, while preparing for some other line of duty without caring one iota whether the children under their care improve or not.

I think the time has arrived when some such promises should be made by applicants for certificates, as is required of candidates for admission to the normal schools, viz., that it is their intention to make teaching their business.

I trust that the time is not far distant when no person will be allowed to enter a school-room as teacher before he or she has received a thorough systematic training for the profession.

Is the moulding of the immortal mind of a child of less importance than the care of its body? Then, if a quack is not to be tolerated in the person of a physician, should he be in that of a teacher?

During my visits I took particular pains to inspect the condition of the outhouses. In many I found the walls covered with obscene writing and figures that had, undoubtedly remained there for years. The neglect of school

Reports of County and City Superintendents.

officers and teachers to guard against this source of evil deserved the sharp criticism that was invariably given.

COURSE OF STUDY.

The adoption of the "Course of Study" and properly classifying the children, has received a good deal of attention during the last year. I am glad to be able to report that we have met with considerable success. All the teachers interested in the advancement of their pupils, having entered heartily into the task of grading their schools.

During the last school year I required teachers to make a monthly report to me of the standing and progress of pupils in the "Middle and Upper Forms," using a blank similar to the one inclosed for that purpose. And at the same time copy the standing of the pupils into the "Register" to be kept as a permanent record in the school.

I have found in many schools of the county, pupils that should be classed in the "Primary Form" and doing primary work, attempting to do work that belongs to the Middle or Upper Form. Thus through the ignorance of an incompetent teacher precious time is wasted. The "Course of Study" will give superintendents an opportunity of holding teachers responsible for the proper grading of the pupils.

While the work that should be done in each form is so minutely stated in the "circular" and explained by institute conductors and superintendents, teachers that plead ignorance of what should be taught in each form are certainly out of place in a school room.

TEACHERS' ASSOCIATION.

A teachers' association was formed at a meeting held in Bay View, May 6th, 1882, by the teachers of Milwaukee county. Since then we have held six sessions. The benefits derived from these meetings by the earnest teacher can not be overestimated. As a supplement to the work done at the institute they are a success. The primary object we had in view was to give the young candidate the benefit of

the experience of the older teachers in overcoming difficulties they will meet with in the school room. But while the better class of teachers have taken an interest in the association and cheerfully performed any task assigned them, the persons standing most in need of instruction are the ones that are always absent from institutes and teachers' meetings.

In arranging our programmes I have taken pains to suggest such topics and class exercises to the committee on programme as I found the teachers most in need of instruction in, as I visited the different schools. For the ensuing year we have decided to hold five sessions. The first to be held at Bay View, November 17, in which the exercises will be conducted according to the inclosed programme.

Principal Funk having become part owner of the Bay View *Herald,* it will be made the official organ of the association. There will be an educational column in this paper, giving all local news pertaining to progress of education in the county.

SCHOOL HOUSES.

During the last year a great deal has been done toward putting the school-houses in proper condition. The old shaky pine benches are giving way to the patent desk. Many school-boards are supplying their schools with maps, globes, reading charts, etc. There were two school-houses built last year that deserve special notice. One in district No. 8, town of Wauwatosa, at a cost of six thousand dollars. Some of the heaviest taxpayers, while not having a child to send to school, were the strongest advocates of erecting a building that would be a credit to the district.

Joint district No. 12, between Oak Creek and Franklin, is just completing a splendid two story building at a cost of $2,700. This school, under the management of Mr. Henry Killelea, has been one of the best conducted district schools

in the county. The intention is to organize this school under the high school law as soon as the new building is ready for occupation.

HIGH SCHOOLS.

We have two schools in this county organized under the high school law. One at Wauwatosa, under the supervision of A. W. Smith, and one at Bay View, with Lewis Funk as principal. Both of these schools are doing excellent work.

Pupils attend the Wauwatosa school from a distance of five miles. The amount received for tuition from pupils outside of the district, in this school the last year amounted to $321.04. Three of the graduating class of last year, of this school, and two of Bay View, received "First Grade Certificates," at the examination, held this fall.

This I consider proof that the instruction given in this school is second to none given in like institutions in the state.

The subject of organizing high schools in different parts of the county, has received so much attention lately that I feel confident that in the next few years there will be at least three more organized in this county. Parents are beginning to realize that it is better to support High Schools and give their children the benefit of a good education at home, rather than send them to the city or away from home, where they will be exposed to temptations and, perhaps, contract habits that will soon reduce them to moral and physical wrecks.

OUTAGAMIE COUNTY, 1883.

J. A. LEITH, SUPERINTENDENT.

Number of applicants for certificates	204
Number of certificates granted to applicants	118
Number of applicants refused certificates	86
Maximum wages per month for female teachers	$37 00
Minimum	18 00
Average	24 00

Reports of County and City Superintendents.

Maximum wages per month for male teachers	$65 00
Minimum	25 00
Average	37 24
Number of schools in superintendent district	117
Number of schools with three departments	2
Number of schools with two departments	5
Number of visits made to schools during the year	256
Number of children of school age in superintendent district	8,733
Number of children of school age that have attended public school	5,582

Part of the number of children that have not attended the public schools have attended private schools; the remainder have not attended any. Our institute of two weeks conducted by Prof. Sawyer was held in the city of Appleton, beginning the last week of March, 1883; one hundred and eight teachers were enrolled. Professor Sawyer is an able and pleasant conductor. His work was much appreciated by the teachers. Our teachers' meetings were somewhat broken up last winter on account of the many snow storms and the numerous snow drifts. But we intend to go on with renewed vigor this year if the weather is not too uncertain. We had some excellent meetings last year and it is hoped that our vacation will not be an obstacle to our future progress. As to the course of study, we are doing what we can; it has its "ebbs and flows"; much depends upon the ability of the teachers that have charge of the schools. We keep the teachers supplied with the revised edition of the course. But notwithstanding the many efforts put forth to secure its adoption, through the frequent changes of teachers we occasionally find schools losing ground. Our best teachers often leave us because they can do better elsewhere and their places are filled with young, inexperienced recruits. Thus, in a degree, we are supporting training schools for others to reap the benefits. Last year we felt a scarcity of teachers. In districts where they had voted at their annual meeting to have experienced or male teachers they had to be supplied as best they could under the circumstances. Many of our schools are annoyed by a diversity of text

books. It seems that the variety is becoming greater every year. In some towns no two districts have the same kind of text books. The text books in themselves are good enough, but the variety in the county makes it quite annoying and in a great degree are an obstacle to our progress. The county is comparatively new and many families change residence during a year. It seems expedient to me to have a uniformity of text books throughout the entire state.

Another great obstacle to our schools is the lack of school supplies, one of the greatest essentials of a progressive school. Many districts have neither outline maps nor reading charts and when we suggest to the officers to supply their schools, some of them talk as if the expenses were coming out of their own pockets. On the whole, our schools are progressing and there is on the part of patrons a growing spirit in behalf of good schools, also a growing demand for first class teachers. The teachers as a class are earnest and faithful in their work, and where circumstances are in any way favorable are doing reasonably well.

PEPIN COUNTY—1884.

J. D. ELDRIDGE, SUPERINTENDENT.

Having been appointed to this office late in the present school year, I am not so well prepared to report on the condition of the work as one who has had the supervision of the work for a year or more. As far as my knowledge extends it is going well.

The teachers as a whole have been earnest and faithful. Ten less persons were engaged in teaching in the county this year than last year. In several districts the same teachers have taught throughout the year.

Teachers wages have advanced somewhat this year. The average wages for males being, $44.01 against $37.12 last year; females, $27.68 against $26.42 last year.

Reports of County and City Superintendents.

I have endeavored to keep the standard in examinations about as established by my predecessor, preferring not to make any material changes until I became better acquainted with the needs of the schools under my charge.

About sixteen per cent. of those attending the spring examinations failed to receive certificates; of the balance about one-third were granted limited licenses. Many of the teachers are studying for second grade, and a few for first grade certificates. I have encouraged this as much as possible, being convinced that those who are satisfied with present attainments and who are not working for something higher, are, as a rule, drags on the profession and soon degenerate into educational tramps.

We have had no teachers' institute this year, but expect one at Durand beginning August 11th. Prof. J. B. Thayer, conductor, assisted by Mr. McMahon, principal of Durand high school.

Considerable progress has been made in grading our common schools, in accordance with your circular on "Course of Study," during the past year, yet much more remains to be done in this line.

Since assuming the duties of the office we have visited every school in the county at least once and in some instances have repeated our visit. It has been my aim to meet teachers and pupils quietly and courteously, and by suggestions and encouragement be helpful to them in their school-work. I have also made it a point to form the acquaintance of as many of the patrons of the schools as possible and interest them in educational matters.

We have several good school buildings in the county, the best being at Durand, which cost about $6,000. There are a few left yet which are a blot on the landscape and a disgrace to the vicinity that tolerates them. They are relics of bygone days and are growing less each year and will soon be counted as things past.

I have from time to time used the columns of the Pepin

Reports of County and City Superintendents.

county *Courier* for educational purposes. During the spring term of schools I furnished, under the head of "Field Notes," items relative to schools as I found them on my visits to the different districts. I expect to continue these the coming year and also add other matter pertinent to the work.

The country schools have heretofore usually been divided into two terms, a winter term of four months, and a summer term of two or three months. It is my opinion that the interests of all concerned will be better served by a fall term of two months, closing just before Christmas, a winter term of three months, beginning immediately after the holidays, and a spring term of two months, commencing about April 10th. I shall do all I can to have such a division made; several school boards have signified a willingness to try it, and doubtless others will do so.

The two high schools in our county located at Durand and Pepin, have the past year been under competent teachers, and are doing much in supplementing the work of district schools.

I was present at the graduating exercises of the Pepin school and from the tone and style of the exercises am prepared to say that they were fully up to the average of those of like institutions.

The Durand school has as yet held no graduating exercises, but we learn that steps have been taken to graduate a class next year. We hope this will be done for it will prove productive of a greater educational interest in that community.

While we have not been able to do all we hoped, we feel that some progress has been made, and enter on the duties of the coming year with a firm purpose of doing all in our power to make the schools of this county more important factors in the making of good and intelligent citizens.

Reports of County and City Superintendents.

PORTAGE COUNTY, 1883.

ANDREW P. EEN, SUPERINTENDENT.

On June 30, 1883, there were 18 joint and 71 regular school districts making a total of 89 districts in the county. During the year four new districts have been formed in the county, but there has also been a loss of one district through the consolidation of two districts into one, so that the net increase in the number of districts has been three only.

Although the law requiring the attendance of children between seven and fifteen years of age at school has not been strictly enforced, yet there is but a small per cent. of such children that have not been enrolled in the schools during the year. The reports from three of the towns in regard to those items were incomplete, but in the remaining fourteen towns, the number of children between seven and fifteen years was reported to be 2,163, of which number 1,913 were stated to have been enrolled in the public schools during the last year.

Quite a number of new school houses have been built in the county during the year, and many districts have provided new furniture for their school rooms.

Fifty-six districts have adopted lists of text-books and of those forty-seven use only the books adopted. Many districts purchase text-books and sell them to pupils.

During the school year which began June 1, 1882 and closed June 30, 1883, I made 164 school visits. In visiting schools I have made a practice of inquiring into the attendance and progress of pupils, the discipline of the school, the programme of daily work and the methods employed by the teacher. I have then made such suggestions as I deemed proper and advisable, and have also generally made such remarks to the school as seemed appropriate. I have generally found the schools in good condition and believe that

Reports of County and City Superintendents.

good progress has been made in the schools of the county during the year.

In examinations I have endeavored to present such questions as should thoroughly test the applicant's knowledge of the different branches, and in granting certificates I have aimed to maintain the standard of attainment as high as possible under existing circumstances, and I think our standard will compare favorably with those of other counties in the state.

Our annual institute was held at Amherst during the latter part of last March and continued in session two weeks. Prof. W. C. Sawyer, of the Oshkosh Normal School, was present and had charge of the greater part of the work. Seventy-two members were enrolled and the institute was as pleasant and profitable a one as we have had for some time.

The total amount reported as expended by districts for school purposes during the year was $21,110.98; of this amount $14,682.41 was for teachers' wages. The foregoing items of expenditures do not include the amount expended in district number three of the town of Eau Pleine, which failed to report. In comparing these items with those of my first annual report, which was for the year ending August 31, 1880, I find that the total amount reported as expended during the year was $15,417.46, of which amount $12,405.95 was for teachers' wages. This shows an excess in the total amount expended during the year ending in 1883 over the total amount expended during the year ending in 1880 of nearly $6,000. Of this excess over $2,000 is due to building and repairing, for which purpose only $1,058.29 was expended the latter year, as against $3,112.20 during the past year, and over $2,000 of it is due to the increased amount paid as teachers' wages. Perhaps the fact that the last school year included a period of one year and one month may have helped some to make the amounts reported as expended so much larger the past year than in the former year.

In comparing the wages of teachers for the above mentioned years I find that the average of wages for male teachers has increased from $31.42 per month in 1880, to $36.57 in 1883, an increase of $5.15 per month. The wages of female teachers have increased from an average of $21.09 per month, in 1880, to $23.69 in 1883, an increase of $2.60 per month. This increase in teachers' wages, though not large, is yet gratifying, in view of the low wages teachers had been receiving.

In considering the better wages paid to teachers and the increased amount paid for school purposes generally, I would infer that the interest of the people of Portage county in the cause of education is not diminishing but is rather on the increase.

RACINE COUNTY—1884.

W. G. GITTINGS, SUPERINTENDENT.

During the last school year ending June 30, 1884, two large and substantial new school houses have been built in this county, at a cost of $1,900. One of these is a commodious brick building; the other is a frame building, well furnished. The people in both of these districts had the foresight to procure sites sufficiently large to admit of convenient play grounds.

During the last summer vacation a good frame school house has been built in the county, and a comfortable addition has been built to the primary department of Union District in Burlington, making the school room capacity amply adequate for the wants of children in that department.

This county is divided into 55 regular and 21 joint districts, with the school houses in the county, making in all 76 school houses in the county. Of these 67 were in good condition last year.

Reports of County and City Superintendents.

A number of school houses have during the last summer vacation undergone general repairs, and have been supplied with patent desks, blackboards and other school furniture. There are a number more in need of repairs; and a few which are utterly unfit for use, the buildings being old and dilapidated and having no school apparatus, with desks and seats in open defiance to the known laws of health. I have remonstrated against this condition of these school houses, and have reasons to believe that the time is near at hand when all the poor school buildings in the county will be replaced by better ones; and hope that the apathy which now exists in a few school districts towards educational matters will be replaced by a desire to further educational interests.

The school room capacity is 4,022, while the whole number of children of school age in the county is 5,451. Of these 3,416 attended public schools and 345 attended private schools during the last year, making 3,761, or 69 per cent. of children of school age which have attended school.

The number of children between the ages of 7 and 15 in the county is 2,875. Of these 2,312 attended public schools and 250 are reported as having attended private schools. making 2,562, or 89.11 per cent. of the children, subject to the compulsory law in attendance upon school, either public or private, during the last year. We believe the latter to be the only just calculation, and therefore claim a large attendance, which was also quite regular throughout the year.

The number of districts having Webster's Unabridged Dictionary is..	67
Number having black-boards.....	73
Number having maps of United States.....	37
Number having maps of Wisconsin.....	27
Number having globes	19
Number having reading charts.....	15
Number having libraries.....	22

The mixed condition of the text-books in many schools a great hindrance to efficient work. I have labored to remedy this evil; but the new law which requires the submission

of a change in text-books to the district meetings, makes it hard to accomplish this purpose. I am pleased to be able to state, however, that at the last annual school meetings a few districts voted for an entire new series of text-books, while several others voted to change the books in part.

The number of districts which have legally adopted a list of text-books is 49; using only those adopted, 41; number which purchase them, 6; which sell them, 5; which loan them, 1.

The total amount expended during the year for building and repairing was $4,985.31; for services of male teachers, $4,005; for services of female teachers, $15,512; for all other purposes, $5,047.74, making the total expenditure during the year, $29,550.05, an excess of $650.72 over the total amount expended during the previous year. By far the greater portion of this extra expenditure has gone toward repairing school houses, purchasing maps, apparatus and reference books.

During the last year 15 male teachers were employed in the county at an average salary of $33.69 per month, being somewhat less than the average monthly wages of male teachers during the previous year.

There were 81 different female teachers employed in the schools of this county during the last year, at an average monthly salary of $27.09 per month.

Of the teachers of this county, three hold state certificates, four are graduates of normal schools, twelve have attended normal schools, nine hold first grade certificates, twenty-eight hold second grade certificates, and the rest hold only third grade certificates.

During the year two public examinations have been held in each of the three inspection districts in the county, at which there were 172 different persons examined. Of these 51 failed to pass the required tests.

The schools of this county (this district) require 83 teachers. Ninety-six different persons were employed during the

Reports of County and City Superintendents.

year—15 males and 81 females. Many of our teachers are young, and have had little professional training. The average age of our teachers is 24 years. We think, however, that the teachers of this county, as a class, are earnest and careful in the preparation of their school work. They seem to be working toward their own improvement, and are striving with commendable zeal to secure a higher grade of certificate. We have tried, and hope we have succeeded, to give the schools of this county only the best of those who applied for certificates.

The annual teachers' institute was held at Union Grove, beginning August 18, and continuing two weeks. The total enrollment of members was 87—10 males and 77 females. The average daily attendance was 57.

Prof. H. D. Maxson, of Whitewater, and Miss Mattie Mizelle, of Union Grove, conducted the exercises of this institute.

The course of study for ungraded schools was made the basis of the work. The institute has been a very efficient means of elevating the standard of qualifications among our teachers.

The rainy weather during the first week of the institute interfered with the attendance to some extent; but the conductors expressed themselves well pleased with the interest and energy manifested by the teachers, and especially during the second week.

Pres. J. W. Stearns, of Whitewater, spent one day with us at the institute, and in the evening delivered an interesting and instructive address to the teachers on "Learning to Read."

Nearly all of our teachers are making an effort to organize their schools in compliance with the course of study outlined in the state superintendent's manual. About one-third of the districts have legally adopted the course of study, while the teachers are using the course with more or less success in many other schools.

Reports of County and City Superintendents.

Last winter eight successful teachers' associations were held in different parts of the county. The topics discussed at these gatherings were ably presented by the teachers to whom they were assigned, and related mainly to district school work.

During the year I have visited every school under my supervision, have visited at least two-thirds of them twice, and a few of them oftener. When circumstances permitted I called on the school officers and often corresponded with them in relation to the needs of their schools.

I have the satisfaction of knowing that almost without exception they were willing to co-operate with me in any plan proposed for the interests of their schools.

I am glad to be able to state that, during the year, the schools have been well sustained. The districts as a general thing are able to maintain good schools for a reasonable length of time, and what is more gratifying still, the inclination to do so is commensurate with the ability.

Our schools are surely progressing. They are better furnished, better organized, better taught than in former years and public sentiment is growing in their behalf.

SECOND DISTRICT, ROCK COUNTY, 1883.

WM. JONES, SUPERINTENDENT.

From the reports of the several town clerks I find that the 87 schools of the Second Superintendent District were maintained for the past year at a cost of $28,226.32.

I also find that the number of children of school age was 3,518, of whom 2,706 attended school for a part of the year at least, and 812 or 23 per cent. did not. To this attendance may be added 3 under 4 and 5 over 20 years of age — 8 in all.

The cost per capita on the basis of school population was $8.02, while on that of attendance it was $10.40. But to

know the cost per capita avails nothing, the aggregate cost of schooling to the people remains the same; the important thing to know is, who are the absentees. From data furnished me by the teachers and from the town clerks' reports I am able to state with approximate correctness: they are 606 or 44 per cent. of our school population under 7 and over 15 years of age, and 206 or 9 per cent. of those between those ages.

The first class number 1,375, the second 2,139. Of those of school age under 7 and over 15, the former compares with the latter as 3 to 2, though in which class absenteeism is greater I am unable to say.

It will thus appear that in the country schools at least, the true school age is between 7 and 15, and it may be pertinent to inquire if 9 per cent. absence here is not too large to be justified under the law.

On the other hand, two principal reasons exist for the large loss per cent. They are: First, the growing tendency among parents to defer the beginning of the child's school instruction until about his seventh year; and second, the practice of sending away to school those who have attained their 15th or 16th year. As to this practice permit me to say, that if our country schools were properly graded, the course of study extended, and suitable apparatus supplied, it would, in my judgment, materially prolong attendance upon them, much to their benefit and that of the pupils of all grades, to say nothing of the saving to parents.

BUILDING AND REPAIRING.

But one school house has been built during the year, that in District No. 1, in Beloit township. It is a substantial stone structure, suitably located and commodious, and makes an agreeable change from the old one. When furnished with all necessary apparatus, the grounds fenced, shade trees planted and a well dug, it may well serve as a model for those yet to build. I am glad to note a goodly

amount of repairing done, much of which is excellent, but it is not enough to make the school room tight and warm; some regard should be had to its proper lighting, heating and ventilating.

In my last report I briefly suggested the necessity of providing separate outhouses for the sexes where this was not the case, and of renovating others needing it, believing that the merest hint in this direction would produce the desired reform. It has done so in some instances but not in others.

APPARATUS AND LIBRARY.

But $69.80 have been expended for apparatus and library. There seems to be a complete decadence of interest in school libraries. The great increase in publication of juvenile books, papers and periodicals, which characterizes these times, and the very general practice of supplying the home with them, have undoubtedly operated against the maintaining of these libraries. But entertaining books are not always instructive books. A child entering upon his *'teens* needs better mental food than much of that found in most of the so-called juvenile reading. It should be remembered that the taste in this respect is easily formed, and that the *mental* drift rarely ever changes in this direction in after years. Hence the need for select reading, that which will constitute valuable and disciplinary material for the true development and growth of the child's mental faculties. Let the school library be established and maintained.

As to apparatus a somewhat better policy prevails; and yet I feel it my duty to say that few of our schools are supplied with apparatus anywhere near adequate to the demand for effective school work. Our teachers are, as a class, earnest, zealous, and intelligent, most of whom have received special training in the use of these appliances, both at the Normal and in the Institute, but on entering on their fields of labor in the school room, they find little besides the text book with which to carry on the work. Hence a vast deal of

misspent energy characterizes their efforts before their classes in their endeavor to illustrate subjects which can only be illustrated by the use of suitable appliances. Advancement has been made all along the line in every other department of human interests, and the people have been quick to seize and hold the good things as they came. Great improvements have been made in school furnishments, as well, and yet little thought seemingly has been given to their utility, and, as before said, we find schools to-day, in this superintendent district, some utterly, and others well nigh destitute of suitable and necessary articles for the illustration of subjects required by law to be taught in them.

TEXT-BOOKS.

There is also great need that those districts which have not adopted a uniform series of text-books should do so without delay. Without such uniformity proper classification is impossible, and the right progress of the school sensibly retarded. The course of study should be extended and the work under it systematically extended. The "Manual on the Course of Study for Country Schools" aims to accomplish this desired end.

I am glad to report that it is very generally in use among the teachers of this district, with good results.

Permit me to say that there is nothing about this Manual which requires formal action by the district board.

It addresses itself to the teacher, is for his guidance, systematizes his labors, suggests methods and exemplifies the relations of the several branches as to the time to be expended upon them, and the degree of prominence each should receive in order to maintain a just balance between them, and thus prevent that one-sided culture which too often results from a disregard of these considerations. When the tenure of office of the teacher becomes more permanent, so that the fruits of the provisions of this little work

may be experienced under the hand adopting them, the school not organized under it will be the exception.

TEACHERS' LIBRARY.

It is now three years since I began the agitation of the question of a teachers' library association. In December, 1881, such a society was formed, with seven names subscribed to the constitution, and a pledge of six books, which were afterwards received. Our number has risen from seven to one hundred and thirty-five members at the present time, and from the first donation of seven books, the library has grown to three hundred and fifty volumes, properly classified and nicely catalogued. We beg to be excused a feeling of pride in this flattering result. Much of the success here attained must be attributed to the co-operation of Principal R. W. Burton, of the Janesville schools, and his corps of teachers. Others, also, outside of the profession, have contributed material aid, one especially, Mr. Willis Miles, county treasurer, whose relation to the society has been that of custodian of the books, special clerk, and earnest advocate and champion of the cause at all times. I am glad to be able to report that the books are being read, and their general helpfulness acknowledged. A few there are who seem not to appreciate the advantages which this library may be presumed likely to afford them. In the main, however, the indications of its ultimate influence for good upon the profession, are gratifying indeed.

It is a well known fact that a teacher unconsciously reflects upon his pupils the mental cast which he receives from his reading; this being the case, should not the question "What do you read?" largely determine the fitness of an aspirant for position as *teacher* of the young? Let this sentiment but prevail and it would stimulate to the perusal of books of real worth, not omitting those that treat on education, the science and art of teaching, etc.; for it must be remembered that our profession numbers in its ranks some

Reports of County and City Superintendents.

of the world's foremost thinkers, and owns a literature second to no other.

I close with a brief allusion to the Institute which met at Clinton last September. On the testimony of its members I feel justified in saying that it was one of the best. The enrollment must be confessed not what it should have been, though the average daily attendance was unprecedented. Our experience with Prof. Maxson was as good as a term at the Normal. His perfect self-poise, command of language, mastery of the subjects he presented, appreciation of the teachers' needs, and above all, his courteous treatment of those whose diffidence made speech difficult, not only won the esteem of all, but really advanced the work of the session as nothing else could have done. Our teachers look forward with pleasure to the time when they may meet him again in the same field of labor. The Manual received careful attention, the exercises being based upon it. Its many excellencies were made to appear, and the teachers departed promising to carry its provisions into their school work.

ST. CROIX COUNTY — 1883.

MRS. E. I. DWELLEY, SUPERINTENDENT.

The past school year has, I trust, been one of marked advancement and success. Under the instruction of faithful teachers our pupils are doing more and better work than during last year. Better habits of studying, methods of recitation, and ability to express thought show this, while the monthly written examinations afford evidence of more thorough work. There is manifestly a growing appreciation of the benefit of good schools among the most intelligent portion of the citizens. They are becoming sensible of the importance of a uniformity in books, and systematic course of study. Some of our schools are progressing very

satisfactorily. They have been under the management and instruction of competent teachers, who have exerted themselves for the improvement of their pupils, have endeavored to teach the pupils to do right by appealing to his sense of right, and placing him upon his honor before his associates. We have found that this method is effective and productive of the best of results. Particularly has this been the case with the larger pupils.

ATTENDANCE.

Our schools have continued the good work of improvement in attendance and punctuality, and notwithstanding the deep snow and severe weather of last winter, have made an advance, even, upon the record of the previous year. While nearly all of the schools are deserving of commendation for the gain that has been made in regularity and punctuality during the past year, some of them deserve special mention. Several of the schools passed through a whole term without one case of tardiness, and one through the whole year with only two cases of tardiness, some of the pupils walking two miles. This school was not in session during two days of severe storm. These results are gratifying and are creditable to our teachers. They are the results of well disciplined and attractive schools, aided by the hearty sympathy and co-operation of parents. I think many children are detained from school a part or all the time, either from the absence of interest in them, or from the inability of their parents to compel attendance, it matters but little which. If kept from school that they may be a source of gain, it is very bad economy, since the accumulation of one dollar in this manner necessitates the loss of a much larger sum in the future. Our laws demand that the parent shall give to his child the opportunity to obtain an education, either in the public schools or by private instruction. I consider the demand in this respect to be imperative, and while the parent has the right to choose between public and private instruction he

has no right to choose between *ignorance* and *education.* We have labored hard to increase the regularity and punctuality in attendance; and though the per cent. has been enlarged over that of previous years, yet the result has not been satisfactory. We shall not be relieved from the annoyance attending such irregularity till parents as well as pupils shall be educated to understand the necessity of promptness and uniformity in our school system.

WRITTEN EXAMINATIONS.

We have introduced written examinations into many of our schools. These examinations make much additional labor for the teacher, but they nearly all seem willing to grapple with every duty, however laborious, if beneficial to their schools. A written examination in the hands of a competent teacher is one of the best means of awakening the faculties. It makes every one to a great extent an originator. It stirs up the pupil to think and gather new material for himself. It increases the mental force — the development of all the powers of the mind. The youthful mind must be cultivated, refined, strengthened and elevated, that the current of life may flow through the wholesome regions of elevated thought, instead of wasting itself in a mechanical form. Whatever is fitted to secure this end should find a place in our schools. We conduct our examinations with regularity, fairness and thoroughness, and have come to the conclusion that they are absolutely essential to the continued progress of a school. But the mental discipline involved in written examinations is not their only virtue. They give stimulus to effort, which could not be called forth by any other device. Pupils are made to see and feel the results of these written examinations.

TEACHERS.

We rely largely upon our Normal schools for a supply of teachers for our public schools, and school boards are beginning to consider this — are trying to furnish their schools

with trained teachers — with those who are not a reproach to the profession of teaching. One great hindrance to the success of the schools of our county is the too frequent change of teachers. A spirit of change seems to pervade the community, and an old or permanent teacher is an anomaly. Teachers too often take hold of the responsible work of instruction as a temporary make-shift. But they are not to blame more than their restless and fickle employers. A certain amount of time is necessarily spent by each teacher in which to learn the peculiarities of the position, the disposition of the pupils, before successful labor is performed. Skill results from continued effort in any department of labor. A faithful and efficient teacher is a treasure whose loss, like health, can never be afforded. Everything depends on the teacher — he gives life, moulds and fashions as he pleases. When our school boards understand and appreciate this, we shall have better schools. St. Croix county is well supplied with teachers, and the only complaint is, that many of them are young and inexperienced. Occasionally we meet with a person who follows teaching as a profession, but the number of such is very limited. This fault will probably continue as long as teaching furnishes but a pittance, and not a comfortable living. We hope the time is not far off when we shall see a corps of able, earnest workers in this line; morally irreproachable, intellectually superior, and of good culture, who will make it a life business. It occurs to me that it would be an excellent idea to permit teachers to visit neighboring schools once or twice during each term, to learn the methods of other teachers. The time so spent should not be deducted from the teacher's wages. As a whole, the teachers have been earnest and devoted, are ready and anxious to improve in their modes of instruction and government. They have shown a commendable care in the prompt return of reports, also in the preparation of their school register. Many of our teachers have received their training, more or less, in the River Falls nor-

mal school. I am happy to say that this institution is exercising a good influence here, in raising the standard of qualifications of those who aspire to the profession of teaching.

EXAMINATIONS.

During the past year I have held eleven examinations of three days each. The work has been both written and oral, and the papers written have been preserved for future reference. I have endeavored to raise the standard of qualifications of teachers from time to time. We are fast reaching that point where it means something to hold a third grade certificate. As a result of this effort, the indolent and inefficient class of teachers are gradually drifting into other employment — while the earnest workers, seeing the necessity for higher attainments and more thorough culture are laboring diligently to meet the demand in this direction. The evidence of increased zeal and interest in their work is very gratifying, and it gives me pleasure to report a good degree of improvement during the year in both scholarship and method of teaching; 127 persons are now holding unexpired certificates; 4 first grade, 23 second grade, 100 third grade; 59 applicants were refused certificates.

SCHOOL HOUSES.

Eight new school houses have been built the past year, several have been repaired, reseated with patent seats, and are in most respects pleasant and comfortable. I issued a circular calling the attention of the clerks to the outbuildings connected with the school houses, their situation and condition. Forty-two responded immediately to my request. This shows to me that it is a want of thought on the part of school boards, more than a desire to save expense. But very few of our school houses are properly ventilated. In some rooms a hole overhead is considered a ventilation. In the estimation of three-fourths of our school boards, a school

house is ventilated when the windows can be raised. Pure water is needed in connection with school houses. There should be a supply of wholesome water in every school room, especially in warm weather. If a spring is not within convenient distance, a well should be dug on the premises. School boards are inexcusable for allowing pupils to drink unhealthy water, as is now the case in many districts. Five wells have been dug the past year, all of them yielding pure water. I have made 211 visits this year—was unable to visit five schools during the winter term on account of the blockaded condition of the roads. These visits have enabled me to note the progress made, and to note such facts as shall assist me to render essential assistance to our teachers. I find that the most of the teachers are trying to arrange their schools according to the course of study prepared by the State Superintendent. Some are doing an excellent work in this direction, but it will require time and labor to succeed in grading our country schools. We are endeavoring to cultivate a taste for drawing and music, introducing them as a general exercise. I hope to report good results another year.

A Teachers' Institute was held in March, conducted by President W. D. Parker, of the River Falls Normal School assisted by Professor C. H. Keyes, of River Falls. This institute continued five days, and was attended by 112 teachers. The large enrollment and regular attendance of the teachers, are evidence that they are becoming thoroughly aroused to the importance of their work. Evening lectures were delivered by Rev. M. Benson and Rev. W. W. Rowley. Efficient work was done and the teachers in attendance went forth to their schools better prepared for the faithful discharge of their duties. Teachers' Associations have been held monthly and a growing interest is manifested by the teachers. The attendance is not as large as we would wish to see, but quite a number of faithful teachers are never absent. We have adopted a new constitution and are striv-

Reports of County and City Superintendents.

ing with renewed energy to make this part of our work necessary to all teachers who manifest a desire for progress in the work of teaching. We are endeavoring to bring about a uniformity in the books used. Seventy-two districts have adopted a list of text-books; 58 use only text books adopted; 36 districts purchase books; 14 loan them, and 21 sell them to the pupils; 209 different persons were employed to teach during the year; 100 districts have black-boards; 19 have reading charts; 44 have a map of Wisconsin; 65 a map of the United States, and a few are entirely destitute of maps of any kind; 43 have a globe; 93 have Webster's unabridged dictionary; 8 districts have libraries.

In conclusion I will say that the year's work has been an improvement on the work of last year. We hope, and shall labor that the present year may exhibit a rapid growth in all that pertains to perfect schools. I desire to express my great indebtedness to teachers, members of school boards and friends of education, for whatever success has attended my efforts to promote the welfare of the schools of this county, and close with the hope that every effort made by all to advance the educational interests of our schools may result in happy fruition.

SAUK COUNTY, 1884,

J. T. LUNN, SUPERINTENDENT.

STATISTICAL SUMMARY.

Children of school age, 4 to 20 years	9,242
Of these not enrolled at public schools	2,675
Children of compulsory school age, 7 to 15	4,919
Of which not enrolled at public schools	458
Average days schooling per district	133
Average days per pupil enrolled	76
Number of teachers required to fill the schools	183

Reports of County and City Superintendents.

Number of persons now authorized to teach	208
Total expense of schooling	$56,082
Of which 227 female teachers received	28,082
And 48 male teachers received	9,767

SCHOOLING.

High Schools at Reedsburg, Sauk City and Spring Green, respectively, have been directed by competent and skillful principals, to whom have resorted a large number of our lower teachers to enlarge their education, and while so doing have also absorbed unconsciously many principles and practices that are of as much profit to their patrons as the scholarship for which alone they came to strive. Under a law of the last legislature these schools are doing far more than ever before to impart the theory and art of teaching to their student teachers, as a sort of a recompense to the rural districts which are taxed for the state aid to high schools.

Graded schools are seven in number, of which about half receive proper local sympathy and support, and return therefor as profitable measures and methods as can be shown by the high schools, whose larger and more pretentious patronage somewhat obscures the merits of their humbler co-workers.

Country schools are one hundred and fifty in number, of which not more than one-third are run on business principles; certain factors of which are that it is cheaper in the long run to pay fair wages to a skillful workman than to pay poor wages to a botch; and that a teacher needs implements to work with as much as one in any other calling.

Wherever the public exercise due interest and foresight, they usually secure, by hook or crook, a good school, and *vice versa*, their not having such is *prima facie* evidence that a poor one suffices them. Often do district officers plead the cause of some would-be low priced teacher, saying: "We have no advanced pupils, so any one will do to teach our school," and it is of no use to argue with them

Reports of County and City Superintendents.

that there may be an intimate relation of backward pupils to backward teachers. It is worthy of attention, that while at no season are there considerable numbers of attending pupils whose labor can be of much profit to parents, that the attendance per pupil enrolled is little more than half what it might be were the parents really anxious to utilize the schools to the utmost for them.

TEACHERS.

Good teachers are paid too little and poor teachers too much for the welfare of the county — a premium is bestowed upon mediocrity and a discount demanded of merit. When I have interfered to prevent incompetent teachers from receiving more wages than they could earn, I have usually been treated by both boards and patrons as meddling with what was none of my business.

So long as the public continue blindly indiscriminate in the bestowal of wages, the standard remaining as now, the present ratio of certificates will be approximated of:

No first grade to 110 limited certificates.

Five second grade to 156 third grade.

While these figures reflect adversely on the scholarship of our teachers, they with rare and temporary exceptions are of good moral habits, and possessed of sound sense, which tend them to exact civility and order of their pupils, who are thereby secured time and opportunity for study and work, even though in uneconomical directions.

PROMOTIVE.

The normal institute at Reedsburg of two weeks in September, was patronized by 90 attendants, who should be somewhat more skillful for their presence there, as the exercises were made as practical and profitable as circumstances permitted.

The county and local associations met as usual, though they were not as well sustained as their advantages merit.

Circulars to teachers have been sent, detailing defects in

our procedures and exhorting them to better practices, and more thorough scholarship. Specimen work was solicited, and furnished by about one-fourth of our schools, for the national exhibit at Madison, where our work compared favorably with any other of like grade; and was unique in one respect at least, it being the only county collection of work from Wisconsin.

The course of study for country schools has been persistently pushed, and all evasions or neglect of its provisions inquired into; notwithstanding which, inexperienced or careless teachers shattered sadly the work of their more faithful predecessors.

Visiting schools was prosecuted regardless of weather or of roads, as 255 visits to all the schools testify, and there is little doubt that much of whatever proficiency our schools possess is due to the acqaintance and criticism which these visits facilitate.

GENERAL REMARKS.

The close of an incumbency of eleven years may justify a few reflections and comments on the superintendency into which I ventured with considerable enthusiasm to push the educational interests of the county to the front rank, by adopting and practicing the most advanced methods adapted to our circumstances, and resolved not to flinch therefrom by adverse criticism.

Ere long it was found a most uneven contest to pit one man against the inertia of thirty thousand people of the county and three hundred of the fraternity, most of whom cling so tenaciously to old-time habits and economy as to be invulnerable to educational appeals.

Many yet regard the superintendent as a supernumerary whose office they would willingly vote to abolish, so that a strong public sentiment is lacking to back up his measures for the common weal.

So much was this felt, that year by year less value was

placed on appeals to the people, and more on those to teachers over whom alone the superintendent has any coercive authority by which to secure co-operation to improve the schools.

If thorough, the superintendent's acts often conflict with the pockets and pride of applicants and patrons, so that he becomes the most disliked of county officials, which, with his traveling expenses, gives him a claim on you for higher compensation.

Female teachers continue gradually to oust those of the other sex, rather by underbidding than by over-qualifying; and it is worth scrutinizing whether the decrease in male teachers is not accompanied by a corresponding decrease in the number of advanced, mature pupils, many of whom seem averse to youthful female teachers, few of whom are well enough posted on public business or questions to branch out into interesting discussions that attract older pupils.

The changing ratio of sex seems also to cause our institutes and associations to become harder to carry, and less profitable, because the debate and conflict which light up and impress topics are more difficult to incite among ladies than gentlemen.

But while there has been a loss of strength and breadth, there has been a gain of tact and tenderness, as ladies manage to secure order, civility and industry of pupils to an equal degree with gentlemen, and usually by methods more in sympathy with childhood, so that pleasant schools are on the increase.

As a whole I have witnessed far more improvement in the discipline and industry of schools than in their scholarship, as the public control the wage gauge which practically regulates the scholastic attainments demanded of teachers whom the superintendent measures and labels rather than elects, and whose never ceasing inflow and outgo neutralize the best of schemes for their improvement.

There is not one-fourth as many idle, impudent, whisper-

ing schools as there were ten years ago, as I have insisted that a teacher could keep a school straight whether he could teach it right or not.

The country schools for which the superintendent most labors, do not gratifyingly respond to his zeal and efforts, nor is it probable that the near future will see them average much above their present status unless a marked change in public policy ensues.

There is in the community a progressive minority, which is at once its leaven and its hope, and the chief factor in our educational advancement. To members thereof who have through so many long years cheered me by sympathy, guided me by counsel, and supported me by ballot, I return my most sincere thanks therefor, with the hope that it may not all have been in vain.

SHEBOYGAN COUNTY.

A. F. WARDEN, SUPERINTENDENT.

Compared with the work done, the interest manifested and the general educational status of the state at large, Sheboygan county's educational affairs are fairly prosperous and reasonably satisfactory, far as they unquestionably are from what they should be.

That the schools of Sheboygan county are not what they should be, favorably as they may and do compare with those of other counties of the state, will hardly be disputed by any one, and the fact is perhaps needlessly stated. That their condition and character is such as it is, is fairly attributable to the lacking interest of the public in their general welfare, parsimony of maintenance, and the poor and inadequate qualifications of the great mass of instructors. Generally stated, the public has or takes little or no concern in the schools, the character or style of the school-buildings, the convenience and suitableness of the furnishings, the

pleasantness and salubrity of surroundings, and, most serious of all, the character and amount of work done, and the educational results obtained for the money expended. And while all this and more is true of the public, it is exceptional and perhaps unreasonable to expect to find competent and conscientious teachers — teachers who can and do rise above the mere pecuniary benefits their occupation affords, and who are in some measure impressed with a realization of the sacredness and responsibilities of their calling. This criticism is not peculiar to Sheboygan county, but applies in a greater or less degree to the cause of education throughout our whole broad commonwealth. There is no disguising the fact that our schools are not what they should be, nor yet what we might reasonably expect for the money expended, and different from what they might be, were our citizens to more directly and earnestly concern themselves in their behalf, thoroughly acquaint themselves with the school-work, and provide a more generous maintenance. These are shameful and grating confessions to have to make, but a regard for candor rather than an idle boast compels their utterance.

The public elects the school-board, the school-board hires the teacher, and then both public and board leave the school to the teacher, who, not altogether unreasonably nor unjustly, views the importance and responsibilities of his work by the attention which it attracts from his employers and the measure of compensation which he receives. The compensation being meagre, the instruction is immeasurably more so, as might be expected, and the result is the condition of school affairs which actually exists, a condition that cries aloud and unmistakably for reform! Good wages do not necessarily secure competent instructors, but there is nevertheless a compensating balance between the measure of service performed and the price which it commands in the market, which is as true in the field of pedagogics as in the more physical and perhaps less skilled employments

of the world at large. And it is hardly to be expected that the best and most intelligent element of society will seek employment in educational work, when less competency brings surer and better rewards in other pursuits. There must be an equivalency between the service and the remuneration, and until there is, our schools must remain in inferior hands. A change will be attended with increased expense, but what more warrantable pretext for public expenditure? The reality of the above finds a too practical illustration in the fact that fully seventy-five per cent. of our schools are in the hands of females, and the average age of the public school instructor is twenty-two years. Females, the poorest paid sex, and those lacking maturity of years being entrusted with the instruction of the youth of our state, through the parsimony of school maintenance. We would not be understood as taking exception to female instruction, and we have only alluded to the sex as a class for the purpose of an illustration.

Appreciating these facts which are unavoidably thrust upon the attention of a County Superintendent, we have attempted in part to remedy the evil in our own county by rigorous examinations, thus limiting the number of teachers, lessening the competition for employment, and thus, while securing the better element of teachers, also force remuneration to a point more nearly on a plane with the higher grade of service thus secured, in the hope eventually of attracting and encouraging a better grade of talent to seek employment in the schools of the county with the certainty of appreciated labors and a recompense commensurate with the work performed. In this we have been reasonably successful, though the progress has been slight. The average wages paid teachers in the county in the year 1881, as shown by the official report of our worthy predecessor, Mr. B. R. Grogan, were, male, $37.70; female, $23.40. This has been increased during the two following years to $40.25 and $25.65, respectively, as shown by the report transmitted herewith.

Reports of County and City Superintendents.

The showing is slight, far less than we had hoped, but is still gratifying, as being a step, perhaps, if not a stride, in the right direction. The work will be persisted in and the examinations during the following year will be continued to be made severe tests of attainments, and we trust with more marked results in the increased compensation paid to teachers.

We have repeatedly visited the schools of the county during the year, our aim being to see the work of every teacher every term of school, and despite bad weather and worse roads, at times, we have been enabled generally to accomplish our purpose in this respect. The certain uncertainty of our calls has exercised a wholesome effect on a certain class of teachers, while the frequency of visits has enabled us to note the progress of classes and the attention paid to criticisms and suggestions.

The annual Teachers' Institute, occurring the last two weeks in August, was held at Sheboygan Falls, and was conducted by Prof. L. D. Harvey, City Superintendent of Sheboygan, and Prof. W. J. Brier, Principal of the Plymouth High School, both capable and practical educators. The work was eminently practical and was concerned more with methods of instruction than with affording academic advantages, and was consequently of incalculable benefit to the greater number of those attending. In addition to this work an attempt was made to familiarize the teachers with the Course of Study prepared and issued by the state department of instruction. The apparent difficulties in the way of its adoption and practical workings were explained away, and the benefits thereby to be obtained were plainly shown and impressed upon the teachers. This work we have supplemented by circulars since issued, and we hope to report progress in the practical adoption of the Course of Study another year. There were one hundred enrolled, the daily attendance and the interest manifested by the teachers in the work being for the most part all that could be

desired. However, the institute was not sufficiently attractive to generally call out the poorer element of teachers who find too ready pretexts for remaining away from the Institute.

The county has four excellent high schools that are accomplishing a grand amount of excellent work and have attained a distinction such that the citizens of the county may well feel proud of them. The high schools of Sheboygan, under Prof. B. R. Grogan, Sheboygan Falls, under Prof. B. F. Anderson, Plymouth, under Prof. W. J. Brier, and Glenbeulah, under A. W. Burton, are models of instruction, wisely and generously maintained, with a few or no superiors in Wisconsin, and are doing an inestimable work for the young men and women of the county who are attracted in large numbers to take advantage of the opportunities which they afford for advanced and superior instruction.

The general details and summaries of our report suggest much in an educational way that indicates only too plainly a too lax public interest in the welfare of our common schools. The showing is provocative of serious comment and reflection; however, the statistics themselves are sufficiently real without explanation, and their perusal will suggest all that comment could offer.

VERNON COUNTY — 1883.

W. D. HAUGHTON, SUPERINTENDENT.

Instead of the customary special paper in connection with my annual report of Vernon county schools, I send you at this time a comparative statement for 1882–3, which plainly shows the advance we have made during the past year. Our report last year showed an increase of school attendance and of outlay for school purposes over former years. This year's showing is largely in advance of 1882, and consequently of the years preceding it.

Reports of County and City Superintendents.

The change, and thus the lengthening of the school year, in part accounts for this increase. Yet the accompanying statement, very carefully taken from reliable sources, speaks well for the steadily increasing prosperity of Vernon county schools. Our corps of male teachers is becoming less each year, while that of female teachers steadily increases. We held two normal institutes, with a good attendance, and eighteen public examinations at eight different points during the past year.

COMPARATIVE STATEMENT FOR 1882 AND 1883.

	1882.	1883.	Increase
Whole No. of children from 4 to 20 in the county	8,955	9,038	83
Whole No. of days school was taught	20,228	24,148	3,920
Whole No. of pupils who attended school	6,601	6,790	189
Whole No. of days of school attendance	364,126	397,154	33,028
Number of new school houses built	9	13	4
Cost of new school houses	$4,635	$11,322	$6,687
Amount paid for teachers' wages	$18,922	$25,325	$6,403

Number of schools, 160; licensed teachers, 183.

Quite a number of new school houses are being built this year, also.

WAUPACA COUNTY.

O. E. WELLS, SUPERINTENDENT.

The past year has not been without encouragement to those interested in the advancement of the educational interests of the county. Eight new school houses have been built during this time. Two of these are in districts newly organized, one was required by the burning of a building that had been recently repaired at considerable expense, and

furnished with patent seats, while the other five replace structures which the good taste and enlightened sentiment of the communities pronounced unsuitable for school purposes. Many others have been repaired so as to increase their comfort and convenience very materially, and some have been so renovated as to render them almost equivalent to new ones. Excepting in a few instances, this has been accomplished without the necessity of official constraint, and whatever influence the circulars issued from this office relative to the subject may have had in awakening this activity, all praise is due to the intelligent public spirit which demands better accommodations for the schools.

An addition has also been made, at a cost of $1,069.45, to the school house at Clintonville for the use of the free high school organized and opened there at the beginning of the year. The city of New London has voted to organize a free high school and provide suitable buildings for its occupancy. The organization is already completed, the structure in process of erection, and present indications seem to warrant the expectation that it will be highly creditable to the city and an important factor in the educational facilities of the county.

Accompanying the material prosperity of the schools comes the repeated, earnest and persistent demand for better teachers. Better not only in literary training, but in efficiency of management. "Send us a teacher who can control our school—one that you can stake your reputation upon"—is the request that most perplexes the superintendent and causes him to tremble for his reputation; and yet it augurs much of hope for the future, since it betokens on the part of district officers an active and intelligent interest in the welfare of the schools.

The experiment has been made of sending a written report to the clerk, frankly stating the actual condition of the school as revealed during my visitation, and the success met with seems to justify its continuation. It is believed that the at-

tention of school officers thus directed to their duties has awakened their interest, enlisted their sympathy, and secured their co-operation in a greater degree than would have otherwise been the case. The circulars relative to the examination and licensing of teachers published by the state superintendent in the Journal of Education for November, 1882, and March, 1883, have been combined, printed and distributed to school officers and teachers, exerting a most wholesome influence in regard to this responsible and delicate obligation of the superintendent. The enormous pressure heretofore brought to bear upon him to aid incompetents in avoiding the plain requirements of the law is relieved, and his time and energies can more profitably be devoted to other important interests.

The course of study received a very large share of attention during the year, although no constraint was put upon the teachers in regard to its adoption. Its thorough distribution was carefully attended to; the use being made of it was one of the chief topics of consultation in my official visits, and all were admonished to be ready for its adoption in the immediate future. The newspapers throughout the county kindly offered me the use of their columns, and through their assistance much valuable information, culled from every available source, was circulated. In this way the scope and purpose of the plan was made intelligible to the public, and specific directions for its operation were made available. A circular was issued from this office urging its claims upon teachers and district officers. An attempt was also made, preparatory to its introduction, to secure greater uniformity of text books, and a list of books from which to choose was recommended. By these means a healthy public sentiment was awakened. But *sentiment* without *action* never accomplished any one's salvation; and action being loth to manifest itself, recourse was had in the spring to the superintendent's last resort — the examination. The results can best be described by adopting the words of St. Paul:

"What earnest care it wrought in them, yea, what clearing of themselves, yea, what indignation, yea, what fear, yea, what longing, yea, what zeal, yea, what avenging!" They have not, however, all "approved themselves to be pure in this matter," although many made the attempt and have done excellent work under the course. At the examination just held for the ensuing year all were pledged to its adoption, and a system of reports has been prepared which will insure thorough supervision of its working. The success of the undertaking will be watched with anxious care, but not with the expectation of immediate and complete victory.

While fully persuaded that the teachers of this county do not rank below the average throughout the state either in capacity or intelligence, there is yet no subject connected with my official duties that causes so much anxious concern as the better qualification of our teachers. This, however, is not occasioned by a general unwillingness of the teachers to improve their attainments. There are no adequate means for improvement accessible to them. Oshkosh is very easily and quickly reached from any part of the county, but it does not follow that the requisite facilities for the training of teachers are furnished by the proximity of a normal school. Many have resorted to it for instruction, but the expense incident to attendance and the rules governing their admission compel them to leave long before they obtain that for which they most sought its aid. "At least one term in all the 'Third Grade' branches" exhausts the time and means at the disposal of the applicants before they arrive at any fair proportion of the legitimate normal school work. School management, didactics, and kindred topics are at the end of a race which but few can run. * * *

When we consider that the cost of these schools to the state is but a small fraction of the expenditure on the part of those who attend them, it will not appear surprising that no remarkable exodus of teachers to them has occurred. The frequent appeal of teachers to the superintendent for

Reports of County and City Superintendents.

advice as to the best school for them to attend does not furnish so ready a reply as the liberal appropriation of money in their behalf by the state would seem to warrant.

The possibilities of assistance begin to appear from another quarter. Heretofore the high schools have not been organized or conducted with any direct reference to their ultimate or even reflex influence upon the teachers of our common schools. And, however well they have met the local demands, they have offered no inducements to teachers except in the direction of literary culture. By a judicious adaptation of their courses of instruction to fulfill the requirements of the new law they may do much to satisfy the urgent appeals for better instruction.

It is not impossible that the vicious tendencies of many of our educational methods are responsible for some portion of the deficiencies of teachers. It is often said that there are fashions in education as well as in dress. If there is either sense or propriety in the statement we must have reached the day of high heels and Grecian bends, bustles and bangs, in our methods. The intellectual pabulum of the pupil must be masticated for his deglutition, as if to obviate the pains of cutting teeth. All obstacles must be removed from his path and no difficulties must be overcome. The hard problems are to be cut out of his arithmetic, his history reduced to story telling, and "oral teaching" and "object lessons" sandwiched in to fritter away his time. An insane crusade has been carried on against oral spelling that has resulted in no spelling. A headlong plunge into the slough of "language lessons" has nearly swamped the thorough mastery of the English language. Pupils have been taught that there is now no such thing as the subjunctive mood, and the result is that not one in twenty can tell what the sentence "If I had a dollar I would give it to you" asserts, as to the possession of the dollar or the giving of it. From the clamor over the conjugation of verbs but few are able

to tell why certain parts of verbs are called "principal parts" or how the passive voice is formed. The perception which discovers marvelous perfection in Greek verbs with their augmentation, reduplication, inflectional endings, voice, mode and tense signs, and compound forms, and yet sees only absurdity in the compound forms of an English verb, may be very acute, but it is too fastidiously critical to be profitable to the teacher. Senseless fear of a latinized grammar has substituted contemptible slop-work for the thorough investigation of the laws of expression.

It is needless to multiply illustrations. The examination discloses the fact that the residuum of ordinary "oral instruction" is, in the metaphor of Sophocles, thinner than the shadow of smoke. There is too much highly wrought theorizing over the distinction between education and instruction. Unless the silk-worm *instruo* his laboratory by frequent repasts upon the leaves of the mulberry he cannot *educo* the beautiful thread for our much-prized fabrics. No more can the teacher *educo* the faculties of a child while neglecting to *instruo* his mind with material for its assimilation. The fact is, that from the time the pupil enters school until he graduates from the university a very large part of the teacher's obligation to him is the giving of instruction, and that education will be the most complete and useful in which *educo* is accomplished by means of *instruo*. He also will be the best educated who has learned to surmount difficulties for himself, and to obtain knowledge, both from the printed page and sustained, laborious and patient thought. Our schools need more of common sense and less of idle prattle about following in old ruts. A well beaten path is not necessarily a rut, nor more dangerous to tread than an aimless ramble over trackless fields. Nor can the modicum of knowledge that will suffice for the barest necessities of the citizen be the limit of the work attempted by the common schools until the mass of teachers is obtained from higher institutions of learning.

Reports of County and City Superintendents.

WAUSHARA COUNTY—1883.

J. H. TOBIN, SUPERINTENDENT.

"Old Waushara" county is slowly but steadily advancing in educational matters. Teachers' wages are increasing and there is a good demand for teachers that can do the best work in the school room. A small number of district officers in this as in other counties seem to think that the teacher with the lowest grade of certificate teaches just as well, and better, than one holding the highest, as they cite instances where some of the latter have failed; but as soon as they once change for one that is fully competent, and contrast his work with that of the poorer, they thereafter almost invariably try to procure the best.

It is cause for regret that although there is evidently a large number of districts having a surplus in the treasury, there are yet so many school houses insufficiently supplied with, if not altogether destitute of, the charts, maps and other apparatus necessary for the school room. Some years ago, A. S. Rogers, Esq., of Colebrook, canvassed the county and sold Mitchell's Outline Maps to nearly every district; but these are now old or destroyed, and their need is sadly felt. Several districts are reported as not having a copy of Webster's Dictionary.

Two sessions of the County Normal School were held; the first at Plainfield, the second at Poy Sippi. During these terms, which continued for five weeks each, all the second and third grade branches were pursued, and much improvement and interest was shown. The enrollment during the first term was 60, with an average attendance of 52; during the second an enrollment of 62, with an average attendance of 59.

The total number of applicants for teachers' certificates was 181. Of this number 130 received certificates, 12 of the second and 118 of the third.

Reports of County and City Superintendents.

Although this county had a surplus of teachers at the close of the fall examinations, there was a scarcity at the time of commencing the winter terms of schools. To supply this deficiency, several supplementary examinations were held. Without being aware of a lack of teachers in every quarter of the state or the true cause of its existence, a small number doubtless thought these extra examinations arbitrary and unnecessary, as there are a few in this county, as you described in your annual report, who think that the superintendent's imperative duty is to license at least as many teachers as there are schools in the county and if there were twice as many, it would be better still. Some of these are honest in their opinions, quite economical and frugal in their general business and school affairs, but never think that all that can be required of the examiner is to fairly test the qualifications of candidates for certificates, and write the decision, based upon the evidence furnished by the applicants themselves, and that it is against reason and common sense, to issue a certificate to or draw an order for paying, a person who has merely pleased the children, perhaps, but has not even led them to taste of the first benefits accruing from a good teacher's work.

It is not with vanity that I allude again to our county normal schools, and state that I firmly believe that if it were not for these, a large number of our teachers and students might be induced to attend the Oshkosh Normal school. We are all willing to acknowledge the great good we as teachers and students have received from these associations, and I presume that similar schools will be indefinitely continued. But calm reflection will convince all that their necessity is not as great since the permanent establishment of a state institution in such close proximity to Waushara county, and a larger representation should be present from this assembly district.

All but six of the schools were visited twice during the year, the whole number of official visits being one hundred

and eighty-nine. The schools were found in probably as good condition as those of other counties in this portion of the state, though there is great room for improvement.

There seems to be an earnest spirit to strive and raise the value of those schools where nine-tenths of the children of the commonwealth receive the rudiments of education. How fondly the patriot and true statesman looks forward to these primary, and I may add fundamental, institutions of learning.

STATISTICAL TABLES.

The following table is an exhibit of the apportionments of the school fund income made in June, 1883, and June, 1884, for the years ending June 30, 1882, and June 30, 1883. The rate for the former year was forty cents and for the latter year forty-two cents per child of school age. The amount received by the independent cities is included.

BIENNIAL REPORT

STATE OF WISCONSIN,

Railroad Department,

MADISON, WIS., *January* 5, 1885.

Honorable JEREMIAH M. RUSK, *Governor:*

In compliance with chapter 320, laws of 1883, I submit herewith the first biennial report of this department, covering the years ending June 30th, 1883, and June 30th, 1884. The former plan of printing the reports of companies in full has been abandoned in order to bring the published report within the limits of two hundred pages prescribed by the law of 1883 above referred to. To compensate for this loss tabulations have been made of all items of importance and these will be found under their proper heads. Companies report annually to the commissioner, as heretofore.

All companies operating railroads in this state have reported, except the St. Paul & Duluth, now in operation from the St. Croix River to Grantsburg, a distance of twelve miles.

Although the companies are required to send in their annual reports by August 30th, several of them were not received until November, thus unavoidably delaying the printing until a time when the printer was occupied by the other state departments, causing still further delay.

There is in the state a number of forestry roads, built and managed as private property exclusively, not doing a general public business, in no sense common carriers, which do not come under the supervision of this department and have not been required to report. When the forests, into, or through which they have been built, are exhausted, their tracks will probably be removed, or they will organize under the general law if their continuance be deemed necessary.

Companies Reporting.

COMPANIES REPORTING.

The following companies have reported:
Chicago, Milwaukee & St. Paul.
Chicago & Northwestern.
Chicago, St. Paul, Minneapolis & Omaha.
Fond du Lac, Amboy & Peoria.
Green Bay, Winona & St. Paul.
Menomonie.
Milwaukee, Lake Shore & Western.
Milwaukee & Northern.
Northern Pacific.
Prairie du Chien & McGregor.
St. Paul & Duluth.
St. Paul Eastern Grand Trunk.
Wisconsin Central.
Wisconsin & Minnesota and Chippewa Falls & Western.
Wisconsin, Pittsville & Superior.

The Chippewa Falls & Northern had become a part of the C., St. P., M. & Omaha before the time included herein, and the Wisconsin & Michigan a part of the Milwaukee & Northern for purposes of operation. During the time embraced herein the Fond du Lac, Amboy & Peoria was absorbed by the Chicago, Milwaukee & St. Paul and its track changed from narrow to standard gauge. The St. Paul Eastern Grand Trunk was rented to the Milwaukee, Lake Shore & Western and is operated by it. These lines will in the future be included in the reports of roads of which they have become parts, or by which they are leased. The lease of the Milwaukee & Northern to the Wisconsin Central expired August 1, 1883, and that road has, since that time, been operated by the parties owning it.

The following companies are included herein for the first time. The Menomonie Railway Company being the branch from Menomonie Junction to Menomonie City and to Red Cedar Falls in Dunn County and hitherto a part of the C.,

Cost of Road.

St. P., M. & Omaha; the Northern Pacific from the state line to Superior; the St. Paul & Duluth from the state line to Grantsburg, Burnett County; the St. Paul Eastern Grand Trunk, and the Wisconsin, Pittsville & Superior — the las two wholly in Wisconsin. The Milwaukee & Lake Winne bago, built in the fall of 1883, is included in the report of its lessee, the Wisconsin Central.

COST OF ROAD.

As stated in former reports, it is absolutely impossible to obtain the cost of original construction of several of our lines. Some of the companies, under this head, are in the habit of giving the totals of their indebteness — of bonds, stocks, etc. The cost of all roads, with equipments, was reported in 1884 at $162,936,363.40. The cost per mile of each road and the total cost is reported for Wisconsin, including equipment, as follows:

COMPANIES.	Cost per mile.	Total cost.
Chicago, Milwaukee & St. Paul	$31,018 00	$37,984,965 33
Chicago & Northwestern	44,090 58	40,608,454 19
Chicago, St. Paul, Minneapolis & Omaha	40,584 55	21,188,787 71
Menomonie	20,219 12	101,500 00
Green Bay, Winona & St. Paul	70,406 08	15,405,839 88
Milwaukee, Lake Shore & Western	31,046 07	11,164,168 53
Milwaukee & Northern	37,021 99	4,664,770 13
Wisconsin & Michigan	15,406 27	1,435,864 76
Northern Pacific	55,998 12	2,306,562 56
Prairie du Chien & McGregor	50,000 00	87,500 00
St. Paul Eastern Grand Trunk	40,500 00	1,010,000 00
Wisconsin Central	61,271 22	22,204,744 28
Wisconsin & Minnesota and Ch. Falls & Western	31,340 96	2,021,492 40
Wisconsin, Pittsville & Superior	10,237 24	207,713 68
Milwaukee & Lake Winnebago	52,116 00	3,325,000 00
Packwaukee & Montello	28,535 03	224,000 00

Fictitious Values.

The Chicago, Milwaukee & St. Paul of the larger lines and the Menomonie and the Wisconsin, Pittsville & Superior of the smaller are, perhaps, the only ones that have approximated the true cost. The average cost per mile of Wisconsin roads is reported at $40,323.70. That the cost reported in a majority of instances is anything but correct is too evident. The Green Bay, Winona & St. Paul quoted at over seventy thousand dollars per mile certainly never cost as much as the Chicago, Milwaukee & St. Paul quoted at thirty-one thousand dollars per mile. The road-bed, terminal facilities, stations and equipment of the latter make it of the most perfect in the state, while the former is cheap in original construction — or ought to have been cheap — and poor in equipment and terminal facilities.

FICTITIOUS VALUES.

Stock watering plays a large part in these items and no hope of improvement can be entertained, as long as the same amount of money can be raised more readily by placing stocks at fifty per cent. or less, than at par. The injustice appears when for the purposes of income the par value is always considered. There are undoubtedly in this state men of small capital, who, could they rely on the honest administration of railway finances, and that the capitalization corresponded with the actual cost of the road, would gladly invest their little surplus in railway stocks. What beneficent results might not be expected, if the people of the state thus became interested in the roads? Much of the outcry against railroads would disppear, and there would be less occasion for it. Railroads would then be fostered with the same intelligent self-interest as other home industries, while at present, as a rule, their non-resident owners are strangers to the communities they serve, and are watched as inimical to the well-being of the contributing territory. But persons unused to the uncertainties besetting the stock gambler can not be expected to make ventures in railway securities, when capitalization is too frequently greatest,

Interest and Dividends.

where the earning capacity is the smallest, and is commonly in the inverse ratio of solvency.

STOCK AND DEBTS.

The total of stock and debt in Wisconsin was, June 30, 1884, $158,726,279.15, an average of $40,436.35 per mile and an increase of $16,423,651.11 during the last two years, on 492.9 additional miles. This does not include the Northern Pacific. Of the above totals $75,119,662.11 is stock; $83,142,-217.09 bonded indebtedness, and $464,399.95 floating debt.

INTEREST AND DIVIDENDS.

There was paid on this investment during 1883 $3,603,-390.88 interest on funded debt, and $1,813,128.76 dividends on stock. Only three companies reported dividends declared, and one of those on preferred stock only. During 1884 the interest paid was $4,339,247.35, a little less than five and one-half per cent on the investment; and dividends declared $2,245,-112.36, not quite three per cent. on total stock reported.

The following are the only companies reporting dividends paid:

DIVIDENDS PAID.	1883.	1884.
Chicago, Milwaukee & St. Paul	$1,026,659 36	$1,192,298 98
Chicago & Northwestern	743,049 49	710,493 17
Chicago, St. Paul, Minneapolis & Omaha	.....	329,520 21
Wisconsin & Minnesota and Chippewa Falls and Western	10,400 00	12,800 00

While this showing is not very gratifying, it is but the natural result of fictitious values. Had the capitalization been limited to actual expenditures, we might expect to see dividends declared on more lines. Instances have occurred where investment in bonds of railways have carried with it stock to the same amount as the bonds purchased without any additional compensation. Stock thus given away representing no value does not tend to increase confidence, and ought not to be made a basis of revenue.

Earnings and Operating Expenses.

INCOME AND DISBURSEMENTS.

The total income of all lines in Wisconsin was, in 1883, from all sources, $20,245,255.55, as to $19,669,927.70 the preceding year, an increase of $575,327.85. In 1884 $21,120,871.54, an increase of $875,615.99.

The total disbursements were reported in 1882 at $17,346,646.42; in 1883 at $18,474,067.50, and in 1884 at $19,777,701.91; leaving an income over disbursements for said years respectively $2,323,281.28, $1,771,188,05 and $1,343,169.63.

EARNINGS AND OPERATING EXPENSES

for Wisconsin during the last three years have been:

	1882.	*1883.*	*1884.*
Passengers	$4,597,161 33	$5,306,176 01	$5,380,977 17
Freight	13,062,242 72	13,299,305 95	13,732,837 67
Mail, express, etc	1,056,630 27	1,052,156 51	1,245,609 92
Total earnings	18,769,197 32	19,706,858 10	20,411,573 96
Operating expenses	10,276,746 45	11,866,096 12	11,845,576 18
Earnings over expenses	$8,492,450 87	$7,840,761 98	$8,565,997 78
Per centage of operating expenses to earnings	.54	.53	.58
Income other than earnings	$900,730 88	$539,397 45	$889,796 28

The earnings from express companies were reported in 1884 separately at $365,623.76; from palace, drawing-room and sleeping cars at $62,406.83, from baggage $39,557.07 and from mails at $441,450.33.

Traffic in Wisconsin.

TRAFFIC IN WISCONSIN.

	1882.	*1883.*	*1884.*
Passengers carried	3,611,973	3,807,675	4,473,480
Passengers carried one mile	162,231,759	169,991,697	199,919,011
Average rate per mile	2.82 cents.	3.12 cents.	2.69 cents.
Tons of freight carried	5,499,321	4,462,367	4,670,201
Tons of freight carried one mile	813,414,402	758,352,663	949,567,585
Rate of ton per mile	1.53 cents.	1.75 cents.	1.44 cents.

The Omaha is not included in the above, not having furnished the desired information. The average charge in Wisconsin is considerably reduced by traffic passing through the state, and the purely Wisconsin business would undoubtedly show a considerably higher average charge than indicated above. This is not necessarily a matter of criticism, as the cost per mile on a long haul is less than on a short haul, and charges could not justly be fixed on a purely distance basis.

The average number of miles, upon which the above estimates are based, is, for 1883, 3687.52, and for 1884, 3975.63, an increase of 288.11 miles. Increased earnings divided by additional milage gives $3,039.17 per mile.

The total milage of all trains was in 1883 in Wisconsin 16,114,132, and the last year 17,135,013.

Train Mileage and Safety of Travel.

The following classified tonnage is reported:

	1882.	1883.	1884.
Grain	579,265	498,304	539,628
Flour	239,729	99,082	100,671
Provisions	98,701	89,093	94,050
Salt, cement, water lime and stucco	102,127	96,267	113,085
Agricultural implements and manuf'rs, etc.	214,190	255,039	280,720
Live stock	184,628	182,648	208,129
Lumber and forest products	1,779,591	1,436,977	1,711,397
Iron, lead and minerals	467,468	319,778	242,805
Stone, brick, lime, etc	210,106	194,114	307,894
Coal	219,718	263,856	327,408
Merchandise and other articles	229,725	895,349	554,335
All other freights	938,112	73,541	283,192
Total classified	5,263,360	4,445,774	4,670,201

The Omaha company alone neglected to give the classified earnings for Wisconsin, their accounts in that respect not being kept with that exact completeness that characterizes the other companies. This is to be regretted, as the carrying of commodities is a valuable index to the thrift and extent of our various industries.

TRAIN MILEAGE AND SAFETY OF TRAVEL.

Passenger trains in Wisconsin covered during 1883 the enormous distance of 4,154,143 miles, and increased it in 1884 to 4,752,457 miles, an increase of over half a million miles. The total number of miles run by all trains in Wisconsin was, in 1883, 16,114,132, and, in 1884, 17,134,813.

Three passengers were killed in 1883 and twenty-five injured. The companies report two of these killed and nine injured through their own misconduct or want of caution, but the companies' reports in that respect must be taken with some allowance, as juries not unfrequently differ with the officials as to the cause of accident, and it is but natural

Accidents.

that in doubtful cases the company in its reports should take the benefit of the doubt. Three passengers were killed in 1884, or one for every 1,384,714 miles, and eighteen injured, or one for every 203,785 miles. Only one of those killed received his injury through train accident. This is highly creditable to the roads, and speaks well for the safety of our passenger service. No state can show a better record than Wisconsin in this respect.

ACCIDENTS.

While accidents to passengers have been comparatively few, those to employes are too frequent. The following is a comparative statement taken from the reports of companies for the last three years of all casualties:

	1882.	1883.	1884.
Passengers killed from causes beyond their control	.....	1	.....
Employes killed from causes beyond their control	15	9	3
Others (trespassers, etc.) killed from causes beyond their control	.....	1	.....
Passengers injured from causes beyond their control	62	16	7
Employes injured from causes beyond their control	51	24	14
Others injured from causes beyond their control	2	2	3
Passengers killed by their own misconduct or want of caution	3	2	3
Employes killed from their own misconduct or want of caution	36	34	33
Others killed from their own misconduct or want of caution	59	41	53
Passengers injured from their own misconduct or want of caution	12	9	11
Employes injured from their own misconduct or want of caution	201	79	98
Others injured from their own misconduct or want of caution	59	24	18
Total number killed	113	88	92
Total number injured	376	154	151
Total number of accidents of all kinds	489	242	243
Total number passengers killed	3	3	3
Total number employes killed	51	43	36
Total number others killed	59	42	53
Total number passengers injured	74	25	18
Total number employes injured	252	103	112
Total number others injured	50	26	21

The Omaha, Wisconsin Central and Milwaukee & Northern do not give the nature of accidents for 1883, nor the two last named for 1884. Of the accidents reported by the other companies during this period of two years, forty-one were caused by falling from cars; fourteen to parties stealing rides; seventy-one at highway crossings and to parties tres-

passing on track; twenty-six in getting off train; twenty getting on train; eight persons, presumably brakemen, were caught in frogs and run over; eighty-five employes were killed or injured coupling cars; thirty-eight persons killed or injured in train accidents, many of them employes; forty-one in various ways not specified; two were struck by bridges.

Of the one-hundred and eighty persons killed, seventy-nine were employes, equal to about forty-four per cent. of the whole; six were passengers, about three per cent. The remaining eighty-five, about fifty-three per cent., were killed at highway crossings, on tracks and in yard. Of the three hundred and five injured, forty-three, or about fourteen per cent., were passengers; two hundred and fifteen, or about seventy-one per cent., employes; the remaining forty-seven, about fifteen per cent., being injured at crossings and on track. About sixty-one per cent. of all accidents are to employes, and more than one-half of these were caused by falling from cars and in coupling cars. It is to be hoped that the adoption of some automatic freight brake, several of which are now being used successfully by a number of roads in different parts of the country, will in the near future reduce the alarming frequency of accidents occasioned by compelling train hands to mount cars in motion in all kinds of weather and at all times. Eighty-five employes killed or crippled in coupling cars should impress on their humane employers the necessity of a change from the present link and pin, and it is to be hoped that the national convention of the master car-builders, who considered this subject at their last meeting, will, at their next, be able to agree upon the adoption of some one or more of the numerous contrivances invented to obviate the going between cars. They will also be looked to for a solution of the brake problem. The blocking of frogs so that men shall not be caught in them and run over, and have the accident attributed to their own want of caution, ought to be made general, and it might

License Fees.

be well to follow the example of other states to compel it by law.

EMPLOYES AND SALARIES.

Fifteen thousand four hundred and twenty-three persons were employed in railway operation and management during the year at a compensation of $8,834,358.63, or an average of $572.80 per capita. Situated, as we are, between the productive prairies of the west and the waterways affording cheap transportation to the marts of the world, transportation through the state will always engage the attention of our activity and energy, and furnish our population with remunerative employment. The reports of companies as to number of persons engaged in their various branches and amounts paid each class are not as complete as desirable, and an effort will be made to receive fuller statements in the future.

LICENSE FEE.

The revenue of the state is derived principally from railroads, and the income from this source is greater than that of any other state with the same mileage. Several questions have arisen as to the construction to be placed upon the law prescribing the license and two cases are now in the supreme court. The earnings of the different lines per mile of road for the years preceding the dates of their reports, for the last two years, are given as follows:

License Fees.

COMPANIES.	Year ending Dec. 31, 1882.	Year ending June 30, 1883.	Year ending Dec. 31, 1883.	Year ending June 30, 1884.
Chicago, Milwaukee & St. Paul	$6,546 44	$7,050 66	$7,022 79	$6,999 61
Chicago & Northwestern	6,417 26	6,429 09	6,443 98	6,159 11
Chi., St. P., Minn. & Omaha	5,917 87	6,331 01	5,268 89	5,036 00
Mil, Lake Shore & Western	2,826 06	3,034 23	3,090 31	3,060 53
Wis. & Minn. and Ch. Falls & W	3,932 69	4,107 02	4,190 54	4,083 03
Wisconsin Central	.....	2,825 65	3,215 03	3,280 14
Milwaukee & Northern	2,254 21	2,873 68	2,618 09	2,433 38
Green Bay, Winona & St. Paul	1,586 20	1,850 06	1,833 81	1,839 99
Prairie du Chien & McGregor	29,144 87	29,800 11	29,818 45	29,800 11
Fond du Lac, Amboy & Peoria	1,450 72	1,292 07	.....	.....
Menomonie	.....	1,498 18	848 64	939 80

Totals	$586,328 58	$683,082 51	$754,269 44

License Fees.

The law does not require the state treasurer to consult the railroad commissioner as to the proper amounts to be paid by the railroads for licenses. The commissioner has superior advantages for testing the accuracy of reports submitted. The importance attached to this richest source of revenue would seem to demand that it be watched with care and that no license be issued until the full sum required by law be paid. When a company's earnings are in the neighborhood of three thousand dollars per mile the temptation is certainly great for it to swell its mileage so as to reduce its earnings per mile below that amount and save three fourths of the amount due to the state. The law should be so amended as to require the commissioner to certify to the correctness of reports before licenses are issued, or to require his participation in issuing them.

Section 1795 of the revised statutes provides that the commissioner shall, on or before the tenth day of February in each year, ascertain and return to the state treasurer the gross earnings of all railroads of the state. This is done; but there is at present no law directing the state treasurer to delay issuing licenses until such reports are received, or to consider their contents in fixing the amounts. The whole subject is practically left in the hands of the companies. They are their own assessors and their own collectors.

Several companies, anxious to make as good a showing of earnings as possible to stockholders, have included "earnings for carrying company's material" in their reports; but finding that this included in statements to the state would subject them to the payment of a license fee on such earnings and might change their class so as to subject them to the highest license fee, when otherwise their earnings would fall below the requisite amount per mile, have deducted them in their reports to the state. The state treasurer refused to issue a license to the Chicago, St. Paul, Minneapolis & Omaha on this account for the year 1883. The Milwaukee, Lake Shore & Western presented the same question that

License Fees.

year, and the further question as to whether road placed in operation during the year should be included or excluded in the mileage, or whether the length of road should be averaged for the year. These and other questions are before the supreme court for settlement in an action brought to compel the treasurer to issue the license. The amount involved is over $26,000.

The Wisconsin Central operated until August 1st, 1882, the Milwaukee & Northern, and opened the 17th of December that year their new line from Schleisingerville to Neenah. In applying for a license for 1883, they excluded the earnings of the Milwaukee & Northern while in their possession and included the distance from Schleisingerville to Neenah, 63.8 miles. This would have relieved them from the four per cent. fee and made a difference to them and the state of $46,327.15. No license was granted and the case is in the supreme court. A decision of the question involved in these cases will do away with the difficulties experienced in ascertaining the true basis of the license.

During the winter of 1882 and 1883, a difference of opinion arose between the trustees of the Wisconsin Central and the commissioner as to the sufficiency of the license fee paid by them for the year 1882, involving among other questions the question of what should be considered "operated" road. A report of the claims made against the company and the facts supporting them was made on April 5th, 1883, to the governor and by him submitted to the attorney-general, in which report the commissioner said:

"The report of said company (including in its operation the Wisconsin Central proper, the Milwaukee & Northern and the Wisconsin & Minnesota and Chippewa Falls & Western) for the calendar year 1881, shows its gross earnings for said year to have been $1,561,104.75. Said report made to the state treasurer failed to give the number of miles of road operated, as required by section 1211 revised statutes, and thus made it impossible to determine what the

License Fees.

true basis for the computation of the license fee to be paid by the Wisconsin Central Company for the year 1882 was — no statement of its mileage being given. The license fee paid by it for the operation of all the above named lines was $17,681.63.

"In a report to the railroad commissioner, made in pursuance of section 1795 revised statutes, the gross earnings of the Wisconsin Central, and other lines above named, during the year 1881, were given at the same figures as those returned to the state treasurer, or $1,561,104.75, and its total mileage at 524 32-100 miles — the length of particular lines and branches not being given. In reports made to this office June 30, 1881, and June 30, 1882, the mileage of the above named lines was in each instance given as follows — and the mileage being exactly the same both of said dates this must necessarily have been their mileage on the 31st of December, 1881.

Main line (single track).	Miles.
Menasha to Stevens Point	63.55
Stevens Point to Portage	70.03
Stevens Point to Ashland	186.34
Appleton Spur, Menasha to Appleton	2.50
Menasha spur at Menasha	
Stevens Point east bank Wisconsin River	
Stevens Point west bank Wisconsin River	4.31
Packwaukee, on Buffalo Lake	
Leased of Milwaukee & Northern Ry	125.00
Leased of Chicago, Milwaukee & St. Paul Ry	9.00
Wisconsin & Minnesota and Chippewa Falls & Western	64.50
Total number of miles reported	525.33

1,860 feet. 8,160 feet. 8,790 feet. 3,945 feet.

"The railroad commissioner, having had his attention called to probable errors, or misstatements, in the mileage so reported by the Wisconsin Central for the year 1881, in applying for the license for 1882, and having carefully examined into the matter, has come to the conclusion that the mileage reported by said company for said year was overstated in the following particular:

"Menasha to Appleton, reported at two and one-half miles, had no existence in fact during the year in question, or at

any time during such year; nor had there been any such railroad track in existence for several years previous to the date of the reports herein referred to.

"The tracks at Menasha, Stevens Point and Packwaukee, amounting in all to four and thirty one hundredths miles, lead into mill yards, lumber yards or to other private institutions, and are built for the accommodation of the road or private parties. They had no depots upon them, and no facilities for the receipt or discharge of passengers or general freight, and were not open to the general public, and were not in the opinion of the commissioner "operated" within the meaning of section 1211 revised statutes.

"The Wisconsin Central, having operated the Milwaukee and Northern Railway for said year, reported the length of such road at one hundred and twenty-five miles, whereas the true length thereof, as reported to this office by the company owning it, was one hundred and twenty-four and four-tenths miles, a difference of six-tenths mile.

"The trains of the Wisconsin Central during the time in question ran over the road of the Chicago, Milwaukee & St. Paul from Schwartzburg into Milwaukee, a distance of nine miles. These trains were, when upon said nine miles of road, under the absolute control and management of the Chicago, Milwaukee & St. Paul company and its train dispatcher and officers — transacted no local business, and the Central had nothing to do with keeping the road in repair. The earnings were divided between the companies, and these nine miles of road were included in the report of the Milwaukee & St. Paul as a part of its track.

"I submit that the Wisconsin Central can not be said to have operated said nine miles of road within the meaning of section 1211, revised statutes.

"To recapitulate the over-statement of mileage in the report made by the Central —

License Fees.

	Miles.
Menasha and Appleton branch, not in existence	2.50
Spurs improperly included in reports	4.31
Mistake in length of Milwaukee & Northern	.60
Chicago, Milwaukee & St. Paul, Schwartzburg to Milwaukee	9.00
Total excess of mileage reported	16.41

"This deducted from the number of miles reported by the company, leaves the actual number of miles operated by it 507 9–10, and makes its average earnings per mile $3,073.58, and would have subjected it to the payment of the four per cent. license fee prescribed in subdivision 1, section 1213, revised statutes. Allowing it the nine miles of road, belonging to the Chicago, Milwaukee & St. Paul railway, makes the total mileage 516 91–100, and its average earnings per mile $3,020.07, still subjecting it to the four per cent. license fee.

Four per cent. on its gross earnings of 1881 would have made the license fee of the Wisconsin Central, and other lines reported by it, for the year 1882	$62,444 23
The license fee paid was	17,681 63
Difference still due state	$44,762 60

It is a noticeable fact that the two reports above referred to, covering the calendar year 1881, are the only reports ever submitted, in which the Wisconsin & Minnesota and Chippewa Falls & Western Railways have been included in the general Wisconsin Central system. At all other times these roads have been reported separately. The gross earnings of such roads, for the year 1881, were $195,137.11, and length 64½ miles, making the average earnings per mile $3,025.28. The proportion of the license fee paid by the Central applicable to said lines, apportioned according to the gross earnings and mileage reported by the company, was $2,290.24; whereas the Wisconsin & Minnesota and Chippewa Falls & Western would, if reported separately, have been subjected to the payment of four per cent. of their gross earnings as a license fee for 1882, or $7,805.48. Shortage $5,515.24. Said lines reported separately, as in the opinion of the commis-

sioner they should have been, would not have changed the liability of the Wisconsin Central proper, or relieved it from the four per cent. rate.

In conclusion it is proper to say, that the commissioner is aware that the officers of the Wisconsin Central have, since the above charges of excess in mileage reported came to their knowledge, claimed that the Central operated during the year in controversy a considerable number of miles not reported, but which should have been included in its report. This additional mileage consists, as far as the commissioner is able to ascertain, with *one single exception,* of spurs and side-tracks, which are liable to the same objections as the spurs above referred to at Stevens Point and Menasha. The exception alluded to, is the claim, now made, that about six miles belonging to the Chicago, Milwaukee & St. Paul Railway Company, from Schwartzburg into North Milwaukee was, during the year 1881, operated by the Wisconsin Central, but for some reason, unknown to the commissioner, with the other mileage now claimed by it to have been operated but not reported during said year, omitted from its in other respects very carefully prepared reports. None of the additional mileage now claimed has ever been included in any report of the Wisconsin Central Company, to the knowledge of the present commissioner.

"The six miles from Schwartzburg to north Milwaukee belonged during the whole of 1881 to and was operated by the Chicago, Milwauke & St. Paul Ry. Company, and was under its exclusive control and included in its reports. The Central had, however, under an arrangement with the owners, the right to run its cars over the track into north Milwaukee, whenever freight business at or from that point required. The Central run no passenger trains over this piece of road, nor regular trains of any description, issued no time table for its trains upon it, had no depots or stations and had nothing to do with keeping the roadbed or track in repair."

License Fees.

The Wisconsin Central during 1881 paid to the Chicago, Milwaukee & St. Paul $21,623.40 for the use of its line from Swartzburg into Milwaukee, which amount it deducted from its earnings in its report in applying for license. Not including its gross earnings on this piece of road, it seems wholly unjust that it should include the mileage. It should at least be compelled to include all the earnings or exclude the mileage. Including this amount makes its total earnings $1,582,-728.15 and the average earnings per mile, taking its mileage *as reported*, $3,018.63. Allowing it all its mileage reported, excepting the two and one-half miles not in existence, and adding the six miles, never reported until this controversy arose, into north Milwaukee, still leaves its average earnings per mile $3,000.50.

Reports made subsequent to April, 1883 have patched out the mileage as follows.

	Miles
Additional road built through Neenah	1.19
Additional road to depot (at Portrge) main line of C., M. & St. P. Ry	1.67
Additional road built to depot (at Ashland)	2.13
At Menasha	.847
At Neenah	.809
At Weyauwega	.500
At Steven's Point (same as in former reports)	4.622
At Auburndale	.591
At Brigg's	.146
At Hewett's	.064
At Marshfield	.812
At Sherry's	.086
At Mannville	3.500
At Hewitt's	.441
At Buckstaff's	.151
At Spencer	.744
At Unity	.300
At Lamont's	.162
At Abbotsford	.520
At Dorchester	.156
At Whittlesey	.092
At Chelsea	.173
At Westboro	.102
At Ogema	.232
At Prentice	.176
At Coolidge	.140
At Bad River	.208

This makes a total of 20 56–100 miles, and is the mileage depended upon by the officers of the road to exempt it from liability. This mileage, if admitted for 1881 as now claimed by the company, relieves it from further liability. The matter has been held in abeyance by the attorney general as a decision in the cases now pending may solve the questions involved.

SLEEPING CAR COMPANIES.

Chapter 353, laws of 1883, requires owners of palace cars, drawing-room cars and sleeping cars, except railroad companies operating railways in this state, to report to the railroad commissioner, on or before February tenth in each year, their gross earnings made "between points within the state of Wisconsin during the preceding calendar year." The law went into effect April 17th, 1883. Prior to that time no separate account had been kept of Wisconsin earnings by the companies affected. The Pullman's Palace Car Company, and the New York Central Sleeping Car (Wagner) Company are alone affected by the law. They were requested at the proper time to report all earnings made in Wisconsin during 1883, including the *pro rata* earnings in the state, where cars ran through, into or out of the state, on the same basis as earnings are now reported by the railroads under similar circumstances. But the companies were inclined to be technical in their interpretation of the law, claiming that earnings from passengers entering and leaving cars within the borders of the state alone came within its scope. The legislature, having the law relating to railroads before it, undoubtedly intended that these companies should report in the same manner.

The Pullman's Palace Car Company reported its earnings in Wisconsin for 1883, according to its construction of the law, at $12,188.50, two per cent. of which would make its license $243.77, one-half of which was paid into the state treasury with its report. The New York Central Sleeping Car Company reported earnings $813.00. Two per cent on

Railroad Crossings.

this, or $16.26, it paid into the treasury. Licenses were not granted them. Whether or not the companies are correct in their construction of the law, the courts will probably have to decide. The matter has been reported to the attorney general.

In my opinion the fee should be raised to four per cent., in order to place these corporations on a par with railroad companies operating their own cars of this discription in the state, which now pay four per cent. Wisconsin discriminates against the domestic and in favor of the foreign corporations. The penalty imposed upon railway corporations not complying with the license law should be extended to these companies, or something equivalent thereto, instead of the present very inconvenient and inadequate remedy by injunction.

STANDARD TIME.

Since November 1883 the railroads in this state have been running on the time of the 90th meridian west from Greenwich, now commonly designated as "Central Time." A statute making this the legal standard of time within the state would give a desirable basis of law to a custom which is now firmly established in fact and which will not be changed.

RAILROAD CROSSINGS.

It does not unfrequently occur that trouble arises between companies as to crossings of lines in process of construction. At Chippewa Falls in the spring of 1883 the Omaha and Wisconsin Central came to violence on this account and one man lost his life in the affray as the result of the companies taking the law into their own hands, unwilling to await a legal decision. A severe penalty imposed on any company undertaking to force a crossing under such circumstances may lessen danger to persons and property from mob violence.

Rates.

RATES.

Very few complaints as to charges would be heard if shippers were all treated alike, and no discrimination made between places. The fixing of rates can not at present be said to rest on any fixed principle, unless it be to charge that rate which will produce the most revenue for the time being. Discriminating in favor of one locality at the expense of another creates more dissatisfaction than any other one thing connected with railroad management. It is not excessive rates that shippers complain of as much as discrimination. "It does not make so much difference to shippers what the absolute rates are; the comparative rates are of more importance." To protect the small interests — and these are always in the majority — the rates per car load should be the same to those shipping one car load as to those shipping a thousand.

The present method of giving special rates to large shippers inevitably tends to drive the small manufacturer, the small merchant, the small business man of every description out and to throw business into the hands of the few. Make the car-load the unit in freight values, and give all an equal chance. The superior advantage of large capital is all that those doing a small business can contend against and the difference in rates may at times exceed their profits.

It is difficult to say what are, and what are not, reasonable rates. Chicago is to-day favored at the expense of cities to the east, and all territory tributary to Chicago, embracing Wisconsin, has to some extent the benefit of the low rate from Chicago to the seaboard. But in many cases this is more than overcome by high local rates. As railroads are originally built for the local traffic, they might be expected to nurse and favor it. On the contrary they carry competitive business at little or no profit, while local rates are expected to make up losses on through traffic, interest on bonds and dividends. This drives business and manufactures away from the local stations to competing points, where the traffic

formerly local and enjoyed by one company at remunerative rates, must be divided between several competitors at less paying or non-paying rates. This would, indeed, seem short-sighted policy, and it is difficult to ascribe any other reason than the love of conquest. Would not concessions in local rates tend to both harmony and prosperity?

In his testimony before the United States Senate Committee on Labor and Education, in 1883, Mr. Albert Fink, Commissioner of a bureau established by a number of railroads for the maintenance of uniform tariffs from Chicago to the seaboard, said:

"The mainstay of all roads is, or ought to be, the local business because they were built for tne local business, and not for the through business. Thus far—it may be said, the through business is an incident. But I desire to modify this expression, because it might be misunderstood. The road should get along without any through business; the road is primarily built for local traffic. That is the traffic which they can rely upon; but when they see some way of entering another market, of course they go into it. But as the competitive business is a shifting business, you can not rely on any through business to sustain you, and it is not a safe investment to build a road that could not be sustained to a great extent by its local business."

The whole question of rates is so complicated, so many and various influences surrounding it, that any legislation for its control should be most carefully considered. In my opinion no more should be charged for the shorter than the longer haul over the same line, without special cause showing necessity therefor. But no state legislation on the subject would meet all requirements, without federal legislation of a similar character to support it. The unnecessary expense involved in building needless parallel lines does not tend to lessen the charge of transportation and good sense would seem to dictate that where one road can well do the work required, no parallel line be permitted to be built. It

takes less income to pay interest and dividends on one line than on two; and protecting the original investment would strengthen the arguments for lower rates. A law in Massachusetts leaving the question of necessity of new roads to the railroad commissioners works satisfactorily.

PUBLIC AID.

Two ways are provided in which municipalities may bond themselves in aid of railroad construction, viz.: by a majority vote at a public meeting called for that purpose, or by petition of a majority of the tax payers. The latter method is a most mischievous way of imposing a burden upon a municipality and ought to be repealed. More than a bare majority should also be required at a public meeting in order to engage in this to municipalities frequently very burdensome enterprise.

For donations and grants of land see tabulated statements.

RAILROAD BUILDING.

At the end of 1882 there were reported 3,830.14 miles of railway in operation in Wisconsin; 390.29 miles having been built during that year. This was increased in 1883 by the addition of 189.26 miles, making the total mileage December 31, 1883, 4,019.4. In 1884, 225.81 miles were built, making the grand total at the beginning of 1885, 4,245.21 miles, making one mile of road to every 12.7 square miles of territory.

The more important extensions and lines built during the last two years are the following: The Chicago, Milwaukee & St. Paul and the Chicago, St. Paul, Minneapolis & Omaha have each built a line between Eau Claire and Chippewa Falls, so that those enterprising cities are now connected by three separate lines. The latter road has also completed its lines to Ashland, Bayfield and Superior.

The Chicago & Northwestern has built a branch from Wisconsin Valley Junction to Necedah.

The St. Croix & Chippewa Falls has just completed into St. Paul a line from Chippewa Falls. This is one of the

Railroad Building.

most important lines constructed in the state for years and places the Wisconsin Central, by which it will be operated, in the front rank of roads as a competitor for St. Paul.

The Milwaukee, Lake Shore & Western has continued its development of central northern Wisconsin by extending its line into Michigan and thence westerly toward Ashland, which point it expects to reach next season. It has also completed the St. Paul Eastern Grand Trunk from Oconto to Clintonville.

The Wisconsin & Michigan has likewise extended its line northward toward Iron Mountain, and has built a branch into Marinette.

The Northern Pacific has just completed its line into Ashland, forming a through line with the Wisconsin Central and Milwaukee, Lake Shore & Western for the south and east, independent of St. Paul.

The St. Paul & Duluth completed a year ago a branch from Rush City, Minnesota, to Grantsburg, this state.

The Wisconsin, Pittsville & Superior has built from Dexterville Junction on the Chicago, Milwaukee & St. Paul northerly 20 29–100 miles and promises further extension.

An enterprise that promises grand results to the northern portion of the state has been inaugurated the past season by the Minneapolis, Sault St. Marie & Atlantic. Forty-five and seven-tenths miles are now in operation by this company from Turtle Lake, on the northern division of the Omaha, easterly to the Chippewa River. It is intended to push this line toward the northeastern boundary of the state the coming season, with Sault St. Marie as the ultimate objective point.

Another project of equal importance is the construction of a road along the east bank of the Mississippi from the southwest corner of the state to Prescott, and thence through Minnesota to St. Paul. Considerable work has been done at various points along the line the past summer.

Railroad Maps.

CONDITION OF ROADS.

The roads generally show constant improvement by the lowering of grades, renewals of bridges and culverts and replacement of iron with steel rails. The Green Bay, Winona & St. Paul, specially reported two years ago, was again examined in the fall of 1884. The short pieces of rail mentioned in the report of Professor Conover have increased in number, the ditches are filling up, seriously affecting the drainage so necessary to a large portion of this line. A special effort seems to have been made by the company to insure the safety of its bridges, but further than that the property seems to be gradually depreciating. In justification of its officers I desire again to testify to their care and diligence in management evidenced by the total immunity of the road from accident to persons during the last year reported.

RAILROAD MAPS.

The large call for maps issued from this department caused the last legislature to authorize an extra issue. These are now all exhausted and there is in preparation a new map with extensions designated up to the first of January, 1885. Orders for maps are continually coming in from railroad officials, station agents, commercial travelers and most of all from teachers. Rivers have lost their importance as ways of travel and the railroads have taken their place, and a cheap railroad map of the state has become a necessary assistant in common schools.

CONCLUSION.

In conclusion justice to the companies requires an acknowledgment of the readiness with which they have met the requirements in regard to information asked both as to reports and when complaints have been made. Whenever complaints have been well founded they have been satisfac-

Acknowledgments.

torily adjusted. Their number has been small. In no instance has it been found necessary to report a question raised in regard to rates to the Attorney General.

NILS P. HAUGEN,
Railroad Commissioner.

NOTE.—On page 4, in speaking of cost per mile of road, the Wisconsin & Michigan was not mentioned as the statement as to cost of that line, as now found on page 3, had not been received when the report was written. This road is as well built as any new line in the state, and the statement of $15,406.27 as cost per mile is undoubtedly accurate and shows how cheap is railroad construction at the present low prices of labor and material. COMMISSIONER.

[1] The mileage in the different states of the C. & N. W. is not given, only as a whole 2,859.07.

NOTE.—In tables of mileage several corrections from distances given in former reports have been made, which will account for discrepancies in mileage between the same points at various dates, as well as changes in total length of lines. The total number of miles in the state is also slightly cha ged from that given in the first part of this report.

NOTE.—This table contains 22.74 miles more than the mileage given on page 24 of this report, and is occasioned by corrections as follows, viz.: Chicago, St Paul, Minneapolis & Omaha, 2.74 miles, and Chicago, Fairchild & Eau Claire River Railroad Company which has since the writing of that part of the report for the first time reported to this office. It reports 20 miles. This latter road has heretofore been operated as a forestry road, and has not, with other roads of that class, been required to report.

NEW ORGANIZATIONS.

RAILROAD COMPANIES ORGANIZED SINCE JANUARY 1, 1883, AND UP TO DECEMBER 31, 1885.

NAME OF COMPANY.	Date of Patent.	Names of Incorporators.	Capital Stock.	Projected Line.
Waukesha, Mukwonago & Geneva Lake Railway Company..	Mar. 10, 1883	Sewell Andrews, Henry A. Youmans, Allen T. Stebbins, Theron W. Haight, H. M. Enos Alex. Frager and C. S. Miller.....	$200,000 00	From the Village of Waukesha to the Village of Geneva, in the state of Wisconsin.
Chippewa Falls & Southern Railway Co	Apr. 24, 1883	Loren D. Brewster, David E. Miles, Rouget D. Marshall, L. Glucksman, L. C. Stanley, T. B. Kell, E. W. Culver, James M. Bingham and Daniel E. Seymour.....	100,000 00	From the City of Chippewa Falls to the City of Eau Claire, in the state of Wisconsin.
Chicago, St. Paul & Northern Pacific Railway.....	May 19, 1883	Wm. S. Rosecrans, Wm. H. Conger, Edw. McMahon, T. D. Weeks, W. R. Chadsay, W. A. Ogden, Hegerman Thos. S. Hillhouse, Geo. E. Rawlins, Samuel A. Strong, Pomeroy P. Dickinson, M. B. Strong, Reed McIlvain and A. J. Turner.....	11,000,000 00	From a point on the Wisconsin state line, near the Village of Geneva, in Walworth county, in a northwesterly direction to a point on Lake Superior, near Superior City, with a branch running from Necedah to a point near Clifton Mills; also a branch from Geneva to Milwaukee.
La Crosse & Onalaska Short Line Railroad Company	May 22, 1883	James Blauterburg, Wm. W. Cargill, Duncan D. McMillan, Samuel D. Cargill, Edw. N. Osborne.....	200,000 00	From the City of La Crosse to Onalaska. This line has been built and since its construction, been transferred to the Chicago, Milwaukee & St. Paul.—Commissioner.
Wood County Railroad Company.....	June 21, 1883	Henry Sherry, George Gerry, A. W. Patton, J. W. Wharton and J. W. Cameron.....	16,000 00	From a convenient point on the main line of the Wisconsin Central railroad, to a convenient point on the Wisconsin river, in Town 22, north.
St. Croix Railway Co..	June 30, 1883	W. H. Phipps, John C. Spooner, Horace C. Reed, D. B. Taylor and H. A. Taylor.....	100,000 00	From a point at or in Bayfield, to a point on the north line of section 6, in town 50 north, range 3 west.
Princeton & Western Railway.....	Aug. 4, 1883	Albert Keep, Marvin Hughitt, M. M. Kirkman, Chas. E. Simmons and J. B. Redfield..	50,000 00	From Princeton, Green Lake county, to Valley Junction, Monroe county, Wisconsin.

New Organizations.

Minneapolis, Sault Ste Marie & Atlantic Railway	Aug. 17, 1883	W. D. Washburn, Thos. ——, H. F. Welles, Clinton Morrison, J. R. Liddle, George R. Newell, C. R. Loring, Chas. A. Pillsbury, A. C. Rand, W. W. Eastman, Anthony Kelley, Chas. T. Martin and H. G. Harrison...	$12,000,000 00	From a point in the county of Polk, near the mouth of Big Rock creek, easterly to a point on the Menomonee river, near the Town of Florence.
Winona, Alma & Northern Railway Company	Aug. 21, 1883	August Finkelnburg, Richard R. Kempter, J. C. Traer, Charles W. Traer and J. W. Traer.	500,000 00	From a point on the east bank of the Mississippi river, in Buffalo county, to the City of Menomonie, in the county of Dunn, with a branch from some point on the main line westward to and into the state of Minn.
Canada, La Crosse & Southwestern Railway Company	Sep. 4, 1883	James L. Gates, Wm. T. Price, Wm. J. Thompson, Chas. F. Ainsworth, Wm. H. Roach, James Wadsworth, Loren W. Reynolds, F. A. Roseine and James McCord...	12,500,000 00	From the City of La Crosse, to a point on the state line of Michigan, in Marinette county; thence in a northeasterly direction to a point on the Sault Ste. Marie.
Minneapolis, Sault Ste. Marie & Atlantic	Sept. 29, 1883..	W. D. Washburn, H. T. Welles, John Martin, Thomas Lowry, Geo. R. Newell, Anthony Kelley, C. M. Loring, Clinton Morrison, J. K. Sidel, W. W. Eastman, Wm. D. Hale, Chas. A. Pillsbury and Chas. J. Martin.. ..	12,000,000 00	From a point in the county of Polk, near Osceola, easterly to a point on the Menomonie river near Florence.
Chippewa River & Menomonie River Railway Company	Oct. 2, 1883...	Samuel W. Chim, Orin H. Ingram, Frederic Weyerhauser, Elias W. Culver and William Irvine	1,500,000 00	From the center of section 20, town 32, range 10, in Barron county, to Lake Court Oreilles in Sawyer county, with branch to the Chippewa river.
Penokee & Gogebic Railroad Company..	Nov. 6, 1883...	Joseph L. Colby, Howard Morris, Gavin Campbell, T. L. Kennon and Fredric Abbott	2,000,000 00	From a convenient point on the Wisconsin Central Railroad, in the county of Ashland, to the Montreal river, in or near township 46 north, of range 2 east.
Wisconsin Improvement Syndicate	Jan 3, 1884...	George B. Ripley, Samuel Marsh, Stephen B. Kennick, David M. Kelley and Tracy P. Bingham	300,000 00	From Green Bay northerly to northern boundary of Liberty Grove, Door county; and from Green Bay southerly to the City of Fond du Lac.
The Superior Short Line R'y Company..	Feb. 6, 1884...	John C. Spooner, F. D. Harding, C. L. Hall, C. W. Porter, Charles A. Crass and Wm. H. Phipps	250,000 00	From Chicago, St. Paul, Minneapolis & Omaha R'y, south of Superior City, to a point on St. Louis bay.
St. Croix & Chippewa Falls R'y Company..	March 15, 1884	Urillard Merrill, W. G. Fitch, Joseph L. Colby, Frederick Abbott and Howard Morris.	1,600,000 00	From Chippewa Falls to St. Croix rixer.
Chicago, Wisconsin & Northern R. R. Co...	March 27, 1884	Theron W. Haight, H. M. Enos, E. W. Chafin, H. H. Youmans, E. A. Perkins, James Templeton, Henry S. Stanley, Henry T. Glover, W. H. Lee	1,500,000 00	From south line of Wisconsin on county line of Kenosha and Walworth, northerly to Northern division of Chicago, Milwaukee & St. Paul, in Washington county.
