PROVEN THERAPEUTIC RESPONSE WITH ONCE-A-DAY DOSAGE

Brief summary of prescribing information

Indications:

Relief of signs and symptoms of rheumatoid arthritis, osteoarthritis, and other arthritides, in both the acute flare and the long-term management of these diseases. Also for alleviating the pain and loss of motion of acute painful shoulder syndrome.

Contraindications: Hypersensitivity to salicylates.

Precautions: Like other salicylates, TRILISATE Tablets/Liquid should be used with caution in patients with chronic renal insufficiency, active erosive gastritis, or peptic ulcer. Reports indicate that when salicylates are given with steroids, the butazones, or alcohol, the risk of gastrointestinal ulceration is increased. Caution should also be exercised in patients requiring coumarin or indandione anticoagulants, or heparin. As with any drug, the usual care should be exercised during pregnancy; use immediately prior to onset of labor is not recommended. TRILISATE Tablets/Liquid have not been studied in rheumatoid arthritis patients in the Functional Class IV, nor in children under 12 years of age.

Adverse Reactions: TRILISATE Tablets/Liquid are generally well tolerated at recommended dosage ranges, particularly by the gastrointestinal system. As with all salicylates, salicylism and/or salicylate intoxication may occur with large doses or with extended therapy. Tinnitus may be regarded as a therapeutic guide; should it develop, reduction of dosage is recommended.

Dosage Summary: For moderate to severe disease, initiate therapy with 2000 mg to 2500 mg once a day (preferably at bedtime) or in divided doses (q. 12 h.). For mild disease, begin therapy with 1500 mg once a day or in divided doses (q. 12 h.). Allow 3-4 days to achieve steady state. Increase or decrease dosage, if necessary.

Supplied: TRILISATE 500 Tablets (pale pink, scored) in bottles of 100 tablets. TRILISATE 750 Tablets (white, scored) in bottles of 100 tablets.

TRILISATE Liquid in bottles of 8 fl. oz. (237 ml). Only on prescription.
