Medical Toxicology

*Diagnosis and
Treatment of Human Poisoning*

Matthew J. Ellenhorn, MD

Clinical Professor of Medical Toxicology
UCLA School of Medicine

Donald G. Barceloux, MD, FACEP

Assistant Clinical Professor of Emergency Medicine
Loma Linda University School of Medicine

Medical Toxicology: Diagnosis and Treatment of Human Poisoning is a comprehensive and authoritative new reference that will be invaluable in the diagnosis and treatment of human poisonings. Written by two highly regarded specialists in toxicology and medicine, this volume represents the only current and by far the most complete compilation ever of information on human toxicology.

Each toxic substance is extensively presented. You'll find the toxic dosage, pharmacokinetics and pathophysiology for each substance, as well as detailed clinical manifestations, analytical laboratory methods and treatments for a multitude of different poisonings.

Medical Toxicology: Diagnosis and Treatment of Human Poisoning is divided into five major sections: general approach to the poisoned patient, therapeutic drugs, drugs of abuse, chemical products, and natural toxins. Chapters provide critical reviews of a wide range of currently known toxic substances, both common and unusual.

This practical volume also features an extensive index and up-to-date bibliographies which allow you easy cross-referencing. With over 1,500 pages and 8,000 references, **Medical Toxicology: Diagnosis and Treatment of Human Poisoning** is the most current and complete reference of its kind. All physicians or administrators who manage the treatment of human poisonings should add this definitive book to their library shelves.
