The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

# ALBUMIN LOSS

20 Grams  
Daily

Courtesy W. B. Saunders Co.

In cases of nephritis and nephrosis the protein loss due to albuminuria alone may be as much as 20 grams daily. To prevent or correct malnutrition, edema and decreased resistance, high protein intakes must be established and maintained.

Aminoids\*, a dietary protein supplement provides simple, efficient high protein regimens for patients with poor appetite, finicky taste or limited digestive capacity. Where daily dietary protein intake falls short of calculated protein need, Aminoids supplies the necessary protein nitrogen in the form of amino acids and peptides obtained from beef, milk, wheat and yeast . . . promptly absorbed . . . easily assimilated.

Dosage depends upon the discrepancy between protein need and food intake. Each tablespoonful of Aminoids contains the nitrogen equivalent of 4 grams of protein. Amounts representing 100 gm. of protein have been given daily, resulting in good body protein regeneration.

Supplied as dry granules, Aminoids is palatably taken in liquids or with cereals. Available in bottles containing 6 ounces.
