The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

In Head Cold Weather

Each tube is packed with amphetamine, S.K.F., 0.325 Gm.; oil of lavender, 0.097 Gm., menthol, 0.032 Gm. 'Benedrine' is S.K.F.'s trademark, Reg. U. S. Pat. Off., for their nasal inhaler and for their brand of amphetamine. Amphetamine was formerly known as benzyl methyl carbinamine, Pat. Nos. 1879003, 1921424 and 2015408.

'Benedrine Inhaler' is particularly valuable when used at the onset of a head cold.

It improves respiratory ventilation promptly, thus helping to re-establish normal breathing.

It also assists in maintaining drainage of the nasal accessory sinuses—an important factor in preventing acute attacks from becoming chronic.

The early use of 'Benedrine Inhaler' is especially indicated for your patients who catch cold easily.
