CONTENTS

EVALUATION: By Marshall McKusick

Background Information. Life of Ellison Orr. Charles Reuben Keyes. Recent Research Based on the Reports. Significance of the Reports. Provenience of Manuscripts and Specimens. Bibliography.

INDEX TO IOWA ARCHAEOLOGICAL REPORTS, TEN VOLUMES: By Marshall McKusick

Notes and Explanation. Iowa Site Designations. Index Entries.

VOLUME ONE: By Ellison Orr

Report of Surveys of Mounds and Mound Groups, Excavations of Same and of Prehistoric Cemeteries in the Valley of the Upper Iowa River by Party under Supervision of Dr. Charles R. Keyes, and Authority of Iowa Planning Board's Project Number 1047, Summer of 1934.

VOLUME TWO: By Ellison Orr

VOLUME THREE: By Ellison Orr

Report of Surveys and Excavations of Mound Groups along the Mississippi River Bluffs and Terraces from McGregor to Clinton, Iowa, under Project 1047 of the Iowa Planning Board, by Party under Dr. Charles R. Keyes, April 8 to Aug. 10, 1935.

VOLUME FOUR: By Ellison Orr

Sundry Archaeological Papers and Memoranda, 1935.

VOLUME FIVE: By Ellison Orr

Survey and Excavation of Indian Mounds, Village Sites and Cemeteries in the Valleys of the Upper Iowa and Mississippi Rivers, 1936.

VOLUME SIX: By Ellison Orr

Sundry Archaeological Papers and Memoranda, 1937.

[VOLUME SEVEN: By Ellison Orr. Not Included in Microcard Series]

Reminiscences of a Pioneer Boy, 1933. (This volume is an autobiography and is not part of the Archaeological Reports.)
VOLUME EIGHT: By Ellison Orr

Sundry Archaeological Papers, 1938.

[VOLUME NINE: By Ellison Orr. Not Included in Microcard Series]

Sundry Historical Papers, March 21, 1941. (This volume is not part of the Archaeological Reports.)

VOLUME TEN: By Ellison Orr

VOLUME ELEVEN: By Ellison Orr

Report of an Archaeological Survey of the Broken Kettle and Kimball Prehistoric Indian Refuse-Mound Village Sites, Project 3600 of the WPA, Sponsored by the Graduate College of the State University of Iowa, 1939.

VOLUME TWELVE: By Ellison Orr

Sundry Archaeological Papers and Memoranda, 1939.
EVALUATION OF THE IOWA ARCHAEOLOGICAL REPORTS

In the fall of 1960 shortly after my appointment at the University of Iowa, I had a talk with Dr. William Ritchie, State Archaeologist of New York. He told me bluntly that there was a great deal to do in Iowa and that he hoped I intended to publish all of the previous research. He then stated that in his opinion a number of Ellison Orr’s Archaeological Reports were well worth publishing just as they were written in the 1930’s. Over the past two years Ritchie’s remarks often recurred to me as I consulted the Reports. For a number of reasons, however, publication seemed remote. Getting caught up in terms of publishing work done at the University during the 1950’s has taken up much of my time and it will take another year to publish recent studies of the principal collections and a general synthesis. To attempt a publication of Orr’s reports in a standard monograph format would limit my professional activity in other directions for possibly another two years. A tremendous amount of research has been done in the midwest since the manuscripts were written. To do an effective job the Iowa Reports must be restudied in the light of the thousands of specimens most of which are not effectively catalogued. In addition the Reports are not systematically organized and a great deal of editing, rewriting and comparative information is required for formal presentation. The obvious way out of the dilemma is the Microcard series Archives of Archaeology and where they are available for consultation by specialists. The Index which I have prepared is annotated to facilitate research for comparative information.
Life of Ellison Orr

The author of Iowa Archaeological Reports, Ellison Orr, was a fascinating man of wide interests. Born in a log cabin in McGregor, Iowa, in the year 1857, he has written at length about his early life in an unpublished autobiography (Orr, Vol. 7) *Reminiscences of a Pioneer Boy*. A brief biography of Orr has also been published by Field (1951). Orr spent much of his early life farming and teaching school in Allamakee County. Unlike many of his contemporaries Orr possessed a very keen interest in natural history and he picked up a smattering of knowledge in geology, botany, ornithology and archaeology. As a young man he sometimes went out with companions to dig up a mound or rock shelter looking for Indian relics. In 1904, at the age of 47, Orr moved to Waukon, Iowa and settled down to the life of a businessman, managing the local telephone company until his retirement in 1930. He was 73 years old at this time and he decided to devote his full attention to archaeological investigations. It was an unusual decision to make but the amazing thing is that he vigorously undertook a new career and made such a remarkable contribution.

Orr was competent as a surveyor and spent a great deal of time mapping and photographing mound groups, village sites, petroglyphs and prehistoric cemeteries in northeast Iowa. As a resident of Allamakee County he possessed long term associations and friendships through which he acquired a great deal of information on site locations and specimens. As Orr's entries indicate a great many sites were actually mapped, excavated or visited up to 30 years before his retirement. His interest in archaeology was shared by Harry and Fred Orr whose work is also summarized and noted in these volumes.

A real turning point in Orr's life was brought about by his friendship with Charles Keyes who needed a field supervisor for archaeological excava-
tions under WPA contracts. From 1934 to 1939 Ellison Orr directed summer excava-
cations in northeast, northwest and southwest Iowa. During the winters he wrote up his field notes into the Archaeological Reports, having them bound at his own expense. He was a very old man—77 to 82 years of age—during his direction of this work. Nevertheless he was vigorous and because of the amount of winter leisure time he was able to write down in more or less manageable form an enormous amount of accurate information. Several of the volumes are excellent and all of the remainder are extremely useful. They collectively form a lasting tribute to his work.

During his last years several honors were given him. The Orr Focus of Oneota culture was named for his work in Allamakee County along the Upper Iowa River. At the age of 92 he was given the honorary degree Doctor of Science by Cornell College (Iowa). Orr during the last year of his life, at the age of 93, interested amateur archaeologists to start the Iowa Archeological Society. He was also instrumental in the establishment of Effigy Mounds National Monument located in Allamakee and Clayton Counties.

Charles Reuben Keyes

Most of the work by Ellison Orr was done under the direction of Charles R. Keyes, and his name occurs frequently in these reports. As has been mentioned the Archaeological Reports would never have been written by Orr if it had not been for the stimulation, friendship and trust placed in him by Keyes. Dr. Keyes was a native Iowan, born in Mount Vernon in 1871, and lived there almost all of his life. Educated at Cornell College in Mount Vernon, Keyes did graduate work at Harvard obtaining a M.A. and later a Ph.D. in Germanic Languages. He also studied in Germany at the University of Berlin and
University of Munich. He taught at the University of California at Berkeley for three years before returning to Cornell College where he was a Professor of German for 38 years until his retirement in 1941. He actively pursued interests in ornithology, archaeology and the German language. A biography and bibliography of Keyes has been published by Ennis (1951, 1952).

In 1921 Keyes made a survey of sites in the vicinity of the University of Iowa Lakeside Laboratory at Lake Okoboji at the request of the Director. In the same year he was appointed Research Associate of the State Historical Society with the title Director of the Iowa Archaeological Survey. From 1921 to 1941 Keyes spent his summers studying archaeological specimens, collecting information, and arranging and sometimes directing excavations. During the normal academic year he of course continued to teach German as well as a course in anthropology. After 1941 as an emeritus Professor of Cornell he continued to devote his time to his position as Director of the Iowa Archaeological Survey until his death in 1951. In 1944 Dr. Keyes was appointed Visiting Research Professor of Archaeology at the University of Iowa, Iowa City.

"In a real sense Dr. Keyes was the "founding father" of Iowa archeology. Under his leadership it was first given official recognition by the State. He placed the work on a scientific basis, set high scholarly standards; and aroused wide popular interest in the field. He gave early encouragement to the movement that led to the establishment of the Effigy Mounds National Monument."

Quoted from Ennis (1951:16)

Dr. Keyes published about twenty articles on Iowa archaeology during his lifetime. Most of these are very short notes, progress reports and summaries which have been superceded by later work. One can not evaluate the work of
Keyes solely by his publications for he provided an initial stimulus which has been continued since his time. In addition he made the initial formulations of the Woodland, Hopewell, Mill Creek, Glenwood and Oneota archaeological manifestations in the state. In large measure it was this synthesis that gave direction to Orr's research and provided the intellectual base from which Iowa archaeological remains could be systematically explored.

**Recent Research Based on the Iowa Archaeological Reports**

The manuscript reports contain most of the existing field data on Iowa archaeology, and for this reason they have been extensively used in studies of particular cultures. The following publications should be consulted in working with Orr's reports since each of the authors has summarized the data and consulted the collection in terms of more recent knowledge of Iowa and midwestern archaeology.

**Woodland Culture: Logan.** Woodland culture of northeastern Iowa has been studied by Wilfred Logan (1958 MS.). The report was a Ph.D. thesis accepted in anthropology in 1958 at the University of Michigan. Logan informs me it will eventually be published as a *Bulletin of the Bureau of American Ethnology*. At present (1962) it is available on both microfilm and in book form (microfilm positive prints), and can be ordered from University Microfilms, University of Michigan, Ann Arbor.

Logan systematically summarizes Orr's extensive mound excavations in northeastern Iowa and integrates them together by means of artifact and pottery identification and analysis. Orr's diagrams and photographs are not included in Logan's report and mound excavations elsewhere in Iowa are generally omitted. To this extent the Iowa Archaeological Reports are still extremely
useful. Orr did not excavate any Woodland village sites in Iowa although he
did excavate a campsite in Wisconsin (cf. Index entry: High Bank Site). Orr's
excavation of Woodland Rock shelters was sketchy. Logan supplements Orr's
rock shelter excavations by reports on his own work and that of others. As a
biographical note, Logan knew Iowa archaeology well, serving as the first
Park Archaeologist at Effigy Mounds National Monument and also as the first
editor of the *Journal of the Iowa Archaeological Society*.

**Oneota Culture: Mildred Mott Wedel.** Oneota culture of northeastern Iowa
is well described by Wedel (1959) in a monograph which draws together all of
Orr's Upper Iowa River excavations. It is an excellent study because it dis-
cusses problems of Oneota sites and culture in the light of recent work. Gen-
erally most of Orr's work on Oneota culture has been superceded by Wedel's
(1959) study, although it is still useful to have the originals available.
Not all of Orr's work is fully included in Wedel's publication. Mildred Mott
Wedel has long been interested in Iowa archaeology and made an excellent earlier
contribution in her M.A. thesis (University of Chicago) summarizing and inter-
preting the early documents on Indian movements and tribal locations in Iowa
(Mott, 1938).

**Oneota Culture: Dale Henning.** At the same time Wedel published her
study, Dale Henning was working on an M.A. thesis at the University of Iowa.
Recently published (Henning 1961), it is an interesting analysis of pottery
from eastern and western Iowa. It is not based on Orr's work except in a
general way.

**Mill Creek Culture: Reynold Ruppe.** Reynold Ruppe worked several sum-
mers at two Mill Creek sites, the Wittrock and the Phipps sites. No publica-
tion is yet available. Two of Ruppe's students have published briefly on
the Phipps site.

**Mill Creek Culture: Eugene Fugle.** In an M.A. thesis submitted to the University of Iowa in 1957 a graduate student of Ruppe, Eugene Fugle, studied the non-ceramic assemblages from the Broken Kettle and Kimball sites excavated by Orr. He compared them with the specimens excavated by Ruppe at the Phipps site. This study was later rewritten and considerably improved and has recently appeared in print (Fugle 1962). It has an excellent summary of Mill Creek Culture in terms of recent research.

**Mill Creek Culture: John Ives.** In an M.A. thesis submitted to the University of Iowa in 1956, a graduate student of Ruppe, John Ives, studied the pottery from the Kimball site excavated by Orr and compared it with pottery from the Phipps site excavated by Ruppe. This study has recently appeared in print (Ives 1962). It is generally a sound classification of Mill Creek pottery and can be relied upon.

**Glenwood Culture: Adrian Anderson.** No recent excavations of importance have been centered in southwestern Iowa and Glenwood culture has been described entirely in terms of Orr's excavations. An M.A. thesis originally written at the University of Iowa in 1957 by a graduate student of Ruppe, Adrian Anderson, has recently become available in print (Anderson 1961). It summarizes Orr's excavation reports. In addition it is extremely valuable because the specimens were restudied and the pottery classified. The pottery and artifact classification is based upon Ives (1954) and Anderson (1954, 1960). The original excavation reports by Orr contain a number of illustrations and detailed descriptions that have not been included.

**Significance of the Archaeological Reports**
The foregoing comments indicate the range of use that has recently been made of Ellison Orr's Iowa Excavation Reports. The potential is by no means exhausted. Taking into consideration the publications now current, I am convinced that a number of monographs must still be written relying heavily upon the work by Keyes and Orr. Specifically I can suggest the following list of potential monographs which would be excellent individual contributions to our knowledge of Iowa prehistory if they were published:

1. Kimball Site Report of Mill Creek Culture
2. Broken Kettle Site Report of Mill Creek Culture
3. Mound Excavations and Burial Cults in Iowa
4. The Hopewell Horizon in Iowa
5. Analysis of Mound Types, Groups and Distributions in Iowa
6. Glenwood Culture
7. Oneota Cemeteries in Iowa
8. Handbook of Type Specimens from Iowa Excavations
9. Analysis of Petroglyphs from Northeastern Iowa

In my opinion the time has not yet arrived to renew extensive excavations in Iowa. There is a need to consolidate previous work before additional collections will be meaningful.

Provenience of Manuscripts and Collections

The great bulk of the Collections obtained by Keyes and Orr are now at the Iowa State Historical Society, Iowa City. Many of them have catalogue numbers on them but there is no catalogue and one must refer to Orr's notes. Since they are packed in boxes of various sizes, it is somewhat difficult to use them for study purposes. The Historical Society maintains the policy
of not loaning specimens to either individual scholars or institutions and over the years the collections have remained intact. Arrangements for studying the collections should be made with Dr. William Petersen, Superintendent. The Society also has collections obtained by Keyes as Director of the State Survey that are not described in Orr's reports. I learned with surprise that the skeletal material from Broken Kettle and Kimball (Mill Creek) was not turned over to the Historical Society by Keyes, although it should be with the rest of the collections. It is currently at the University of Iowa Medical School and arrangements to study it should be made with Dr. Helen Dawson, Department of Anatomy. The University of Iowa Archaeological Laboratory has none of the material excavated by Keyes. The University Museum of Natural History was not accepting archaeological specimens at the time of Keyes and Orr's work. There are some small collections left by Orr at the Effigy Mounds National Monument Laboratory. Arrangements for studying these specimens should be made with either the Park Archaeologist or the Superintendent.

Orr left his personal set of bound Archaeological Reports to Effigy Mounds National Monument. He and Keyes had spent many years arousing public support for this valuable project. It was his intention that the monument become a research center as well as a public visitors center. For some purposes it may be useful to have access to these volumes since photographs do not show up clearly on microcards. Arrangements to use the volumes in the Library at Effigy Mounds National Monument should be made with the Superintendent or Park Archaeologist. The original set of Orr's Reports contained twelve volumes. Ten of these are reproduced here since they deal exclusively with archaeology. Volume 9, Historical Papers, is devoted to local history and has not been included in this microcard series. Volume 7 was never given to the Effigy Mounds
Library by Orr. It is entitled Reminiscences of a Pioneer Boy and an unbound facsimile copy can be consulted at the University of Iowa Library. It is also excluded from the microcard series since it is not pertinent to archaeology.

Dr. Petersen informs me that Volume 7 will eventually be published by the Iowa State Historical Society.

The Iowa State Historical Society has a number of manuscripts by Keyes. I have gone through these and the information in them appears to have been substantially published (see Keyes bibliography by Ennis, 1952). In addition there are single copies of different volumes of Orr's work. These are unbound and lack photographs. These unbound volumes were written for the Iowa Planning Board of the WPA. At least two of them have a different arrangement than is present in Orr's personal bound set of volumes.

INDEX NOTES AND EXPLANATION

Index entries are briefly annotated to provide some information on the content of the sections. Because of the large number of scattered references throughout the ten volumes, an occasional entry may have been missed. There is some inconsistency in Orr's section titles and these have been modified for the sake of clarity. In citing page references after entries the volume number is first mentioned (i.e. Albany Mounds v. 3:96-100), in this instance volume three, pages 96-100. In almost every case mound groups are annotated according to the types of mounds present. These types are conicals (round mounds in floor plan), linear mounds (elongate floor plan), effigy mounds (principally birds or bears), and chain mounds (a row of conical mounds linked together with a linear mound). The other entries are self evident. Finally, Keyes and Orr recognized Woodland and the later agricultural cultures, but were not aware of the non-ceramic campsites we now term Archaic. Only one find was reported by Orr which can be associated with Early Man (see entry: Fluted Points).

Archaeological sites in Iowa are designated according to a standard trinominal system presented in abbreviated form in this order (Iowa-County-Site Number). As an example, in the designation 13AM-93 the 13 refers to Iowa listed alphabetically among the states and the AM refers to the Iowa County Allamakee. There are 99 Iowa counties each having a distinctive two letter abbreviation. The number 93 is a serial identification of the site within the county. Standard site forms and map locations are on file in the Archaeological Laboratory at the University of Iowa, Iowa City, where they are available for use by professional archaeologists. The Iowa Archaeological Reports
include notes about sites in 17 of the 99 Iowa counties. These counties included by Orr are listed below.

INDEX: IOWA ARCHAEOLOGICAL REPORTS

Albany Mounds v. 3:96-100. Illinois

Alexander Mounds (13 AM-93) v. 4:58, one conical and one linear

Allamakee County, Northeast Iowa see site references designated 13 AM-

Allamakee County Mound Survey v. 8:100-107, plat maps by T. H. Lewis 1880-1895, summary of named mound groups by Orr v. 4:139-144. see Upper Iowa River and Petroglyphs by T. H. Lewis v. 8: 62-87.

Arrowshaft Smoothers v. 6:35-46, specimens from Allamakee County

Awls (Allamakee County) v. 6:102

Axe, Oneota v. 6:149 G found on O'Regan Terrace q.v.

Bear Creek Rock Shelter (13 AM-127) v. 6:95-101, plat map and sketches of petroglyphs.

Bellevue Mound Group (13 JK - 10) v. 3:193, plat five conicals

Bellevue State Park (13 JK - 9) v. 2:89, plat three conicals.

Big Sioux Enclosure (13 LO - 2) v. 8:55 - 57. see Blood Run

Big Spring Mound Group (13 AM - 94) v. 1:114-119 plat and excavation report

Blackhawk Rock Shelter (13 AM-96) v. 8:20 - 23. v. 12: 15-24. Oneota culture found in excavation

Blood Run Mound Group (13 LO - 2) v. 2:4, 24-25, v. 8: 53-56. Large mound group with enclosure. Shell tempered, Oneota pottery found.

Bolles Terrace Cache (13 AM-97) v. 5:147 - 152 cache of core blanks without cultural identification

Boyce Mound Group (13 ML - 26) v. 10:171 - 2 conicals. excavation note

Braunschweig Collection v. 2:10. Mill Creek Culture

Brazell's Island (13 AM - 79) v. 5: 111-122. excavation of bear effigy. Part of Harper's Ferry Great Group q.v.

Broken Kettle Village Site (13 PM - 1) v. 2:28. v. 11:1-62, major excavation of Mill Creek culture village. illustrated with maps, sketches and diagrams.
Brookman Bluff Mound Groups (13 AM-98) v. 4:110, 114, v. 12:24A, four conical mounds

Brownsville Mound Group (Minnesota) v. 12:6.

Brushy Creek Mound Groups (13 W B-130) v. 2:58 plat 9 conicals and 39 linears

Buck Creek Bluff Mound Groups (13 CT - 44) v. 2:87-88, plat 2 conicals

Bulman Enclosure (13 AM - 72) v. 6:58 and v. 8:71, no cultural identification

Burke's Burial Place (13 AM - 14) v. 5:33 - 46, cemetery with at least 13 Oneota graves

Burke's School Terrace (13 AM -13) v. 12: 134 - 137, Oneota village site

Burge Mound Group (13 LN - 10) v. 2:41-42, 19 conicals

Burned Earth Mound (13 AM - 93) v. 4: 81-98 part of Waukon Junction Mound group q.v. excavation report

Caldwell Mound Group (13 HA - 1) v. 2:44-46, plat 11 linears

Catlinite (Minnesota, Wisconsin) v. 8:1-19, 31, general discussion in Iowa

Celts, hafting of v. 12:166-167 A

Clancy Lake (Peterson) Mound Group (13 CN - 1) v. 2:97-99, group of 19 conicals, 9 linears and one chain mound.

Clayton County, Northeast Iowa see site references designated 13 CT -

Clayton County Mound Survey v. 8: 88-99, plat maps by T. H. Lewis 1880-1885

Clermont Mound Group (13 FT - 2) v. 12:34, plat 9 conical mounds

Clinton County, Eastern Iowa see site references designated 13 CN-

Collins Pond Mounds (13 AM - 99) v. 8:45 2 conicals

Columbia College Mound Group (13 AM - 79) v. 1:71-73 see Harpers Ferry.
Conway Mound Group (13 AM-128) v. 12:26 several obscure conicals

Conway Petroglyph (13 AM - 129) v. 6:86 - 88 and v. 8:63 - 68, 70, in rock shelter

Cornell Mound Group see Patterson - Cornell

County Line Mound Group (13 JK - 19) v. 3:187 plat 17 linears and 5 conicals

Cross Mound Group (13 WD - 3) v. 2:70 2 conicals, village site and large rectangular boulder outlines

Deppe Mound Group (13 JK - 11) v. 3:54-73. 8 conicals. excavation of 2 indicated stone slab burial floors

Des Moines County, Southeastern Iowa see site references designated 13 DM-

Dubuque County, Northeast Iowa see site references designated 13 DB-

Eckards Mound Group see French Town

Effigy Mound Outlines v. 12:35 comparison of representative shapes. Effigies are common in N. E. Iowa and are noted in this index under individual mound groups. They occur only in the three northeastern counties adjacent to the Mississippi River; namely Allamakee, Clayton and Dubuque.

Elephant Terrace (13 AM - 106) v. 1:9-19. v. 8:60-61. excavation report of Oneota cemetery

Enclosed Areas, different types of ceremonial and military embankments included. see entries Big Sioux, Blood Run, Bulman, Hanging Rock, Hartley, Hayes, Lane Farm, Lyons, Marins Fort, New Galena, Old Fort, Ratcliffe, Simonsens Ford, Turkey River, Wittrock, Lansing

Eslick Mound Group (13 WB - 131) v. 2:53-54 plat of 5 conicals and 13 linear mounds

Fayette County, Northeastern Iowa see site references designated 13 FT

Fenger, Henry Mound Group (13 CN-5) v. 3:184. plat 5 conicals

Fenger, L. Mound Group (13 CN - 6) v. 3:185 plat 7 conical and 2 linear mounds
Fish Farm Rock Shelter (13 AM - 46) v. 8:24-37, 77-82 petroglyph sketch drawings

Fire Pits, Oneota v. 6: 147 A - 148

Flatiron Terrace (13 AM - 1) v. 6:96 Oneota village site, refuse pits, burials.

Fluted Points v. 6:69-70

Fort Crawford Military Reservation Map v. 12:30

French Town (Eckards) Mound Group (13 CT - 27) v. 2:84, v.3:101-126 plat of 10 conicals and 1 linear. excavation report

Gelo Cave v. 12: 158. No cultural remains

Green Island Mound Group (13 JK - 12) v. 3:191 plat of 15 conicals and 3 linears

Gudovissy Mounds (13 CT-44) v. 3:86-95 plat 16 conicals and 1 linear. excavation reports. These mounds are extension of Turkey River Group q.v.

Hammel Mounds (13 AM-95) v. 1:114-118 plat map. 3 conicals excavated but nothing found

Hanging Rock Enclosures. Three present. see Hanging Rock Mound Groups

Hanging Rock Mound Groups (13 AM - 101) v. 4:114. v. 12:78-80 A northern group has 13 conicals and an enclosure. The southern group has 11 conicals, 1 linear, 1 bear effigy and 2 enclosures. excavation reports note little found. These mounds are part of the Yellow River Mounds q.v. nearby petroglyphs assigned same site number. Hanging Rock Petroglyph v. 4:49.

Hanging Rock Petroglyphs (13 AM-101) v. 4:49

Hardin County, Central Iowa see site references designated 13 HA-
Harpers Ferry Great Group (13 AM-79) general discussion v. 12:46-42 with maps. excavation reports v. 1:67, 71-86 and v. 5:89-122. The largest mound concentration in Iowa originally contained over 900 mounds including conicals, linears and over 170 effigies. Original survey was made by T. H. Lewis in 1889 and 1892. The great group contains a series of mound clusters. For excavation reports see entries Brazell's Island, Ryan and Houlihan, Columbia College, Luth Hennessy and Martell Mounds. Mound groups on the periphery include entries Hill Mounds (Allamakee Co.), Mud Hen Joe and Oil Well.

Hartley Enclosure (13 AM-103) v. 6:60-61. see Lane Farm

Hartley School Mounds (13 AM-102) v. 8:38-39. Group of 9 conicals and 1 linear

Harvey's Island Mounds (13 CT-45). general description and excavation reports. three mound groups. linears and conicals present. v. 3:127-145 and 195-196. v. 12:128-129

Hauntown Mound Group (13 CN-8) v. 3:186. plat of 4 linear and 1 conical

Hawbaker (Wickwire) Mound Group (13 WB-132) v. 2:56 plat of 12 conicals and 9 linears
