The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

PUBLIC DOCUMENTS.

FOR 1899-1900.

CONTENTS OF VOL. I.

1. Message of the Governor.
 2. Report of the Secretary of State.
 3. Report of the State Treasurer.
 4. Report of the State Superintendent.
 5. Report of the Adjutant General.
 6. Report of the Quartermaster General.
 7. Report of the Regents of the University.
 8. Report of the State Board of Agriculture.
 9. Report of the Supervisor of Inspectors of Illuminating Oils.
-

CONTENTS OF VOLUME II.

1. Report of the Railroad Commissioner.
2. Report of the State Board of Health.
3. Report of the Dairy and Food Commissioner.
4. Report of the Commissioners of the Public Lands.
5. Report of the Free Library Commission.
6. Report of the Regents of Normal Schools.
7. Report of the State Veterinarian.
8. Report of the Natural History Survey.

CONTENTS OF VOLUME III.

1. Report of the State Board of Control.
 2. Report of the State Bank Examiner, 1899.
 3. Report of the State Bank Examiner, 1900.
 4. Report of the State Board of Arbitration.
 5. Report of the Milwaukee Hospital for the Insane.
-

CONTENTS OF VOLUME IV.

1. Report of the Commissioner of Labor Statistics.
2. Report of the Commissioners of Fisheries.
3. Report of the Commissioner relating to Manual Training and Agriculture.
4. Report of the State Board of Immigration.

Inaugural Message

BY

Governor Robert M. LaFollette

TO THE

Wisconsin Legislature.

REGULAR SESSION, 1901.

THE MESSAGE.

Gentlemen of the Senate and Assembly:

It is alike a privilege and a pleasure to congratulate you as the chosen representatives of the people of the State assembled under the law to express their will in your legislative acts. The session before you promises to be one of arduous labor and unusual responsibility. In compliance with the Constitution and established precedent, I submit the information and recommendations which follow:

RECEIPTS AND DISBURSEMENTS.

The efforts of my predecessor to introduce better business methods into the financial system of the State government has resulted in emphasizing many defects and instituting some improvement in the management of State funds. Any reformation introduced in the administrative departments of government must be extended to legislative, educational, and judicial branches, as well, before there can be reasonable hope of obtaining the desired results. So long as the administrative and legislative departments persist in attempts to shift, each upon the other, responsibility for tax levies to meet deficiencies which both help to create, there must be abundant opportunity for improvement.

Under the law the fiscal year of the State ends September 30, and all regular official reports are for the term ending on that day. This fact, with a few others closely related to it, I believe to be responsible for much of the public misunderstanding of State finances and for most of the misleading information concerning State affairs upon which legislators have been obliged to rely for guidance. Reports for the fiscal year show balances upon a date within a few weeks after the receipt of large amounts of revenue as license fees from corporations, etc., but months before the close of the administration term—months in which extraordinary disbursements, including legislative expenses in each biennial term, must be made before considerable revenues are again received. The usual and natural result of

this system is found in misleading official reports, showing a handsome cash balance at the close of the fiscal year, and four months later a new administration finds itself confronted at the beginning of its term of life with an alarming deficit as the foundation for new appropriations by the Legislature and the natural and steady growth in ordinary current expenses.

Take, for example, the present conditions, which are admittedly an improvement over those that have prevailed heretofore, owing to the refusal of the administrative officers to attempt to pay from the current expense funds all extraordinary appropriations authorized by the Legislature without providing for them by increased revenues. At the close of the fiscal year, September 30, 1900, the balance in the general fund of the State was \$496,408.74. At the end of the calendar year and administration term, January 7, 1901, the general fund balance was only \$151,833.77. Of this last balance, \$50,000 is derived from advance payment of railway license fees which do not become due until the month of March. The State aid to free high schools, amounting to \$97,607.83, due December 1, 1900, is unpaid—although the warrants therefor are in the Treasury Department—because available moneys in the general fund are required to meet current expenses. These items, when properly deducted, leave a net balance of \$4,125.94 in the general fund. Legislative and other expenses payable within the next few days will aggregate more than \$100,000, and there is no appreciable amount of receipts due to the general fund from any source before the time for payment of corporation license fees and State taxes, which was changed from February to March by the last Legislature. Besides this inevitable deficit there is an additional deficiency of \$323,505.74, being the amount of appropriations by the last Legislature the payment of which has been refused on account of lack of means in the general fund, and which continues as a charge to be paid out of that fund as soon as sufficient moneys “not otherwise appropriated” shall accumulate therein. In brief you have a legacy of over \$300,000 excess appropriations from the last Legislature to take into your considerations, and the administration begins business with a considerable treasury deficit in sight in lieu of the balance which might be expected from the condition of the general fund at the close of the fiscal year as shown by the annual official reports available to the public for purposes of information.

If the facts presented above are not sufficient to convince you of the desirability of better consideration of the revenues of the State before new expenditures are authorized, perhaps a stronger argument may be found in the accompanying table, showing the total receipts and disbursements of the State for a period of ten years, from 1889 to 1898:

Receipts and Disbursements of the State of Wisconsin from Oct. 1, 1889, to Sept. 30, 1898.

Years.	Receipts of State of Wisconsin from all sources except taxes, annual and biennial, from Oct. 1, 1889, to Sept. 30, 1898.	Annual and biennial taxes levied and collected in the State of Wisconsin from 1889 to 1898, inclusive.	Total annual and biennial receipts of the State of Wisconsin from 1889 to 1898 by tax and other sources.	Disbursements of State of Wisconsin, annual and biennial, from 1889 to 1898, beginning Oct. 1, 1889, and ending Sept. 30, 1898.	Excess of receipts over disbursements, annual and biennial, in the State of Wisconsin, from Oct. 1, 1889, to Sept. 30, 1898.	Excess of disbursements, annual and biennial, in the State of Wisconsin, from Oct. 1, 1889, to Sept. 30, 1898.
1889	\$1,342,418 60	\$1,196,740 57	\$2,539,159 17	\$2,574,227 77		\$35,068 60
1890	1,375,861 05	1,011,225 01	2,387,086 06	2,320,643 40	\$66,442 66	
1891	1,780,386 78	1,029,141 16	2,809,527 94	2,741,785 02	67,742 92	
1892	1,694,795 70	1,134,768 22	2,829,563 92	2,593,733 96	235,829 96	
1893	1,853,837 04	1,165,486 36	3,019,323 40	3,184,823 31		165,499 91
1894	2,342,047 68	1,181,524 72	3,523,572 40	3,014,645 12	508,927 28	
1895	1,824,453 15	457,437 32	2,281,890 47	3,220,337 09		938,446 62
1896	1,787,611 01	1,542,430 52	3,330,041 53	3,310,363 82	19,677 71	
1897	1,909,815 84	1,365,597 09	3,275,412 93	3,638,364 93		362,952 00
1898	2,160,574 58	2,177,848 32	4,338,422 90	3,708,582 50	629,840 40	
Amount...	\$18,071,801 43	\$12,262,199 29	\$30,334,000 72	\$30,307,506 92	\$1,528,466 93	\$1,501,967 13
<i>Biennial.</i>						
1889-1890	\$2,718,279 65	\$2,207,965 58	\$4,926,245 23	\$4,894,871 17	\$31,374 06	
1891-1892	3,475,182 48	2,163,909 38	5,639,091 86	5,335,518 98	303,572 88	
1893-1894	4,195,884 72	2,347,011 08	6,542,895 80	6,199,468 43	343,427 37	
1895-1896	3,612,064 16	1,999,867 84	5,611,932 00	6,530,700 91		\$918,768 91
1897-1898	4,070,390 42	3,543,445 41	7,613,835 83	7,346,947 43	266,888 40	
Amount...	\$18,071,801 43	\$12,262,199 29	\$30,334,000 72	\$30,307,506 92	\$945,262 71	\$918,768 91

These statistics, covering each year and each biennial period, show that in four years out of the ten there was an excess of disbursements over receipts even at the close of the fiscal year. It is not difficult in view of the system that has been in use to believe that the trust funds of the State have been in requisition for general fund purposes during the greater portion of all those years. It may not be practical to make the fiscal year of the State end with the calendar and administration year, so far as the general official reports are involved. It ought to be possible for the Legislature to require complete reports of the financial condition of the State government to be published at the beginning of the calendar year. These will afford great assistance to legislative committees. In addition there should be required more accurate estimates for disbursements, the same to be made in detail for each department of State government. With this exact knowledge of the condition of the State's business at the close of each administration and at the beginning of each legislative session, the proper committees can formulate a legislative budget or appropriation bill covering all expenditures. The above table of aggregate receipts and disbursements for a period of years, I believe you will find of value. It shows a steady and rapid increase in the cost of State government. While there is abundant evidence of expanding usefulness and of unquestioned public benefits derived from most of the new expenditures incurred by the State, an advance of almost fifty per cent. in the cost of State government within a period of ten years is entitled to high rank among the facts worthy of grave consideration in all departments of government.

DEFERRED TIME FOR TAX PAYMENTS.

In his report to the Executive, the State Treasurer invites attention to the action of the last Legislature in extending the time for the payment of license fees of corporations and of general State taxes. He notes that these changes result in the depletion of the general fund of the State during a period when large sums are needed to meet current expenses. It does not appear that these changes were made to meet any general or just demand, or to relieve any interest from hardship, and it is recommended that the earlier dates of expiration for time of payment for these taxes be restored.

TAXATION.

The general scope of legislation and the large number of subjects acted upon in each session is unfavorable to the exhaustive

examination and consideration of a problem) as intricate and complex as the complete revision and codification of the tax laws.

The creation of a commission to make such investigation as the character and importance of the subject demand, to report to the Legislature the results of its examination, and to make recommendations in aid of just and efficient tax laws, could not fail of public approval.

Chapter 206, Laws of 1899, authorizes the appointment of a Tax Commissioner and two assistants to the Commissioner, for the purpose of investigating the tax system of this State, reporting thereon to the Legislature, and formulating and recommending legislation.

Owing to the scope of the work, and the great loss sustained to the Commission in the death of the first Tax Commissioner, General Michael Griffin, I am advised that no complete plan of revision of the tax laws will be proposed in the report made at the opening of the session.

The disappointment experienced on this account will, I believe, be lessened by the aid which you will doubtless receive from the Commission during the session in remedying the evils existing in some directions, and mitigating, if not wholly correcting, them in others. I would, under no circumstances, urge undue haste in the work of the Commission. It is of the utmost importance to each citizen and every interest, that all the time necessary should be taken and every possible facility furnished to enable it to complete, in a satisfactory manner, recommendations for a revision of the tax laws.

But, though it may require another biennial period to perfect and complete this work of the Commission, the fact should, under no circumstances, be made the excuse or justification for delaying such corrections of manifest inequalities as it is possible for the present Legislature to effect. Indeed, the great task of the Commission in constructing a complete system may be aided by remedying every defect possible in the existing law, either by amendment or independent act at this session, thus advancing along the line of revision and testing results wherever possible. In the meantime, the excess of burden which has so long rested upon certain classes of our citizens would be transferred to those who have carried less than a proportionate share in the past. Every act of government should be fair and just, and no portion of the system which allows certain classes of property to escape taxation, wholly or in part, should be permitted to stand upon the statutes.

The forthcoming report of the Tax Commission may not offer

any recommendations to you respecting amendments to existing laws with a view of equalizing, in so far as may be, the assessment and collection of taxes. Nevertheless, in this work which it plainly behooves you to undertake, you will, without doubt, be greatly aided by the Commission either by further report during the session, or by co-operation with your committees in charge of this subject, in framing, perfecting and amending legislation to that end. Such legislation may be incorporated in, and made a part of, the final system of taxation and adopted as the law of this State. But, in the meantime, you will have rendered a great service to your constituents by affording the largest measure of relief you can give them at this time.

One of the first questions you should consider in dealing with the subject of taxation is the law creating the Commission itself. A careful examination of it will, I believe, convince you that it requires either very radical amendment, or that it should be entirely recast and re-enacted.

One provision of this law seems to me very objectionable as a matter of public policy. There is absolutely no limit or check whatever upon the expenditure of money which may be made under it. In terms it authorizes the employment of any number of persons, to be paid salaries as the Commissioner, who is empowered to place them on the pay roll, may determine. In addition to this, the law warrants the payment of expenses and disbursements on account of the Commissioner, his assistants and clerks, without limitation, itemized accounts, vouchers, or the approval of any other officer of the State. In this respect I think the law is without example or parallel in the statutes of the State. Certain it is, if there be precedent for such legislation, it should not be enlarged. Such a discretion is very liable to be abused sooner or later. Under a provision nearly, if not quite, as bad, it is reported that a sister State has incurred an expense of over one hundred thousand dollars for one year's work by her Tax Commission.

Another feature of this law which I believe can be changed with great advantage to the important duties of the Commission and economy to the State is the transfer of all statistical work to the Bureau of Statistics. Work of this character requires the services of men trained to the business. It should be under the supervision and control of the Commissioner of Statistics, whose reputation would at once give authority to this branch of the work, and guarantee rapidity and accuracy in its execution. This would relieve the Commission of the burden of attempting to build up a statistical bureau, and of supervising that special class of work, with which they can be

acquainted only to a limited extent. To obtain the best results, it seems to me the Commission should be free to give their time wholly to the vigorous enforcement of existing law, a critical study of its practical operation, and the development of better methods suggested by intelligent and discriminating observation and experience. Their valuable time should not be spent in supervising an office force in the performance of clerical and statistical work. There has for some time been employed in this office, besides the Commissioner and his two assistants, a force costing \$5,700 per annum. I urge upon your attention the advisability of relieving the Commission of the performance of all labor of this character, believing that in so doing you will save money for the State, and, at the same time, advance the important work of the Commission.

This act further provides that the Tax Commission shall report to the Legislature on the first day of the session the results of its investigation and such legislation as they have formulated for the equalization of taxes. The Constitution, and well-observed custom, make it the duty of the Executive to submit to the Legislature upon its assembling his views respecting legislation and such recommendations as he may have to make. The act charges the Executive with the appointment of members of the Tax Commission, thereby fixing upon him direct responsibility to the State for the performance of their duties. But no provision is made enabling him to become informed as to their work from time to time, or as to the character or contents of their report, or any legislation they may propose. It would seem to me advisable that the Commission should be required to furnish such information to the Executive respecting its work as he may call for from time to time; to confer and consult with him in the prosecution of the work; and at least sixty days before the meeting of the Legislature to make its report to the Executive, who should transmit the same to the Legislature upon its assembling, together with any recommendations based thereon.

In conclusion upon this point, I desire to say that the Tax Commissioner has extended to the Executive every courtesy with respect to work in his office; but as only the introduction to the report is completed at this time, I am deprived of the valuable aid to be expected from the recommendations of the Commission, which will finally be incorporated therein.

While the act provides that the Commission shall have general supervision of the system of taxation throughout the State, that it may require local officers whose duties pertain to the assessment and collection of taxes or the disbursement of public funds to report to it, no authority is given to prescribe and en-

force any rules or exercise any control whatever for the correction of faults found, or to exact a more faithful performance of duty on the part of local assessors. Supervision thus limited serves no end, except as an aid in securing information; and the single purpose of the law would seem to be the securing of information, the report of the same to the Legislature, with recommendations respecting legislation thereon.

In extending the term of service over a period of ten years and fixing the salary of the Commissioner at \$5,000 and the two Assistant Commissioners at \$4,000 each, the Legislature was undoubtedly prompted by the desire to attract to this service men of ability and fitness, such as the work demands. It does not, however, appear reasonable that it should require ten years to revise the tax system, or that when a revision has been completed by the Legislature that it should require the services of the Commission as a standing committee on revision for six or eight years thereafter. The period covered by two biennial sessions of the Legislature would appear to be a generous allowance of time for a thorough and complete performance of all the work contemplated by the law.

It is in no sense a disparagement of the value of the Commission's services, or the importance of the work, which prompts me to recommend that either the powers and duties of the Commission be greatly extended or that the term of service be shortened to a time consistent with the accomplishment of the duties defined by the law as it now stands.

Even if the term of service is shortened, an enlargement of the powers and duties of the Commission along certain lines would aid greatly in the work and facilitate, I believe, perfecting a complete tax system. In the solution of any practical problem experience is of great value. If, while engaged in formulating and revising the law, the Commission's power is extended to a supervision of its operation and enforcement, time will be saved to the Commission and the State in the end. Observation of the working of the machinery of the law in its details on the ground will be of immensely greater practical value than a much longer period of time spent in the office in purely constructive work. The information so obtained will be reliable, the recommendations based thereon simple and practical, their application already demonstrated.

Hence, I recommend that you so legislate as to require the Commission not only to have a general supervision of the system of taxation, but to take such measures as will enforce the provisions of the law, that all property be placed on the assessment roll at the actual cash value; that it be required to institute proper proceedings enforcing penalties provided for public

officers whose duties pertain to the assessment and collection of taxes, and against individuals and the officers of corporations failing to comply with the provisions of the law with respect to the disclosure of property for assessment; to prefer charges for the removal from office of any assessor who has violated the law respecting assessment, and, in the prosecution of the same, authorize the Commissioner to call upon the Attorney-General or any district attorney of the State to prosecute any violation of the law respecting the assessment and collection of taxes; to visit, through some member of the Commission, each county in the State, personally, and investigate the work of assessors, with authority to summon the assessors of the county to appear before such Commission, or any member thereof, and to submit to examination respecting the performance of their duties as such assessors; to have full power and authority to take testimony and examine individuals and officers of corporations, and require the production of books and papers; and where the offices and books and papers and any of the witnesses are located outside the State, whenever necessary, to be empowered to take depositions in order to procure such information as may be useful either in enforcing the law or in enabling the Commission to recommend legislation; to examine upon their own motion, or upon the information of any individual, into any complaint as to property liable to taxation that has not been assessed, or has been improperly assessed, or to take such proceedings as will insure its assessment under the law, whether such property be owned by an individual, a copartnership, or corporation.

While the added powers and duties herein suggested will, in their performance, make some demands upon the time of the Commission, I believe that knowledge on the part of the assessors and tax officers that the Commission is clothed with such power and authority will go a long way toward securing strict obedience to the law on the part of such officers. With the certainty that they are liable to be called upon to report fully to the Commission with respect to the performance of their duties at any time, their work will be performed with a view of being subjected to scrutiny and investigation, which, in and of itself, will produce radical reform at the outset.

That the law with respect to the assessment of all property can be so amended, supervised and enforced as to secure uniformity of assessment and enormously increase the tax upon classes of property which now escape wholly or in part, there is not the slightest reason to doubt. With neighboring States adding two or three hundred millions to the assessed valuation of personal property in a short twelve months, we shall be derelict in our duty indeed, if we fail to strengthen the law wherever

it is weak and provide for its vigorous enforcement. To this end the assessor should be clothed with authority, and it should be made his duty, to interrogate under oath individuals and the officers of corporations with respect to property. Failure to perform this duty in any case should be made the subject of such reasonable penalties as will make it possible to secure the conviction of any assessor who fails to perform his duty.

It should furthermore be made the duty of the assessor to report to the Tax Commission, for their information, and to the district attorney of the county, any individual who refuses to answer fully, or is believed to have evaded or misstated with respect to his property, or the property of any corporation of which he is an officer. It should be made the duty of the district attorney upon receiving such information from any assessor, or upon the sworn complaint of any individual that property liable to taxation has not been assessed, or has been improperly assessed, in either case, to cite such individual or person complained of to appear before the circuit court, or a judge thereof, there to be examined and answer fully questions relative to such inquiry, and to be subject to proceedings in contempt for failure to so appear and so answer, and liable to prosecution for perjury for knowingly and wilfully answering untruthfully as to any material fact upon which he is interrogated.

It is not my purpose, nor would it be possible within the space properly assignable to this subject, to instance all the changes by amendment and otherwise urgently demanded in the tax laws.

I understand that the Tax Commission has devoted much time to investigation, with a view of determining whether the corporations, including railroads, street railways, telegraph and telephone systems, insurance, trust and guarantee companies, taxed by license fee, and express companies, sleeping-car, freight line and equipment companies, taxed by a special *ad valorem* method, are justly and proportionately taxed under existing laws. The facts thus secured, together with the Commission's conclusions deduced therefrom, will, I believe, be communicated to you at this session. Not being advised of the results of such investigation, or of the nature and contents of the report, I can, of course, submit nothing with reference thereto.

I am, however, able to present to you in this connection some information in the form of tables, and notes explanatory thereof, which in themselves may aid in promoting your investigation of the entire subject. These, in connection with whatever you receive from the Tax Commission along the same and other lines will, I trust, enable you to arrive at an early and just conclusion respecting the many phases of this question.

For the tables which follow I am indebted to the Commissioner of Statistics, who carefully investigated the subject and worked out his conclusions about a year ago. He has recently, at my request, re-examined and somewhat extended his work, and I submit the same for your consideration.

*Assessed Value, Market Value, Per Cent. of Assessed of Market Value, Amount of Tax, Per Cent. of Tax of Market Value, in 1890 and 1899.**

1890.

CLASSIFICATION OF PROPERTY.	Assessed value.	Market value.	Per cent. of assessed of market value.	Taxes paid.	Per cent. of tax paid of market value.
Real property.....	\$464,590,340	\$1,022,794,776	45.40	\$10,570,700	1.03

Total	\$618,536,152	\$1,968,013,776	31.50	\$14,139,670	.72

1899.

Real property.....	\$519,713,082	\$1,138,377,000	44.90	\$13,730,820	1.19
Personal property..	111,008,415	862,500,000	12.90	2,932,842	.34
Railways.....	51,390,269	256,893,610	20.05	1,357,731	.53
Total.....	\$682,111,766	\$2,257,770,610	29.80	\$18,021,393	.80

*The preceding table shows, for all assessable real and personal property in the State, except telegraph, telephone, express and street railway companies, the assessed and market value; the per cent. of assessed of market value; the amount paid as taxes; and the per cent. of the tax of the market value for 1890 and 1899.

For 1890, the true or market value of real property and of tangible personal property, except railways, was obtained from the reports of the United States census of that year. For railway companies, it was obtained by computing the average market value of the stocks and bonds of the leading lines for the month of October, 1890, and by including the smaller lines at their cost. For intangible personal property, such as mortgages, notes, accounts, bonds and stocks, the value was partly obtained from the census and partly estimated. The census placed the mortgages at nearly \$122,000,000. This figure was accepted, and \$128,000,000 was added for other intangible property, making the total for this class \$250,000,000.

For 1899, the market value of the assessable property was obtained in a different way. Of real property, it was computed from its total assessed value for the year, and the per cent. relation which the assessed value of all sales of real property, recorded from September, 1898, to September, 1899, bore to the selling price. The total assessed valuation, and the per cent. of the assessed value of the selling price, was, in turn, obtained from the reports of the assessors and registers of deeds to the Secretary of State. While this is the best method, so far tried, for obtaining the market value of real property, it alone was not depended upon. For the purpose of testing the facts obtained under it, two other investigations were made. The first of these consisted of per-

The results given in the foregoing tables may be slightly varied by changing the order of classification, and by extending the investigation over a period of several consecutive years. I believe, however, that no substantial variation in result will be obtained by any different method of investigation which may be adopted. The disclosures here made are positively startling, and, unless these tables are shown to be radically wrong, they present a situation calling for prompt action on the part of the law-making power of the State. This action should discriminate neither in favor of nor against any class or interest, but each individual and every corporation transacting business within the State, except such fraternal and other associations as are now expressly exempt from taxation by law, should be required to pay a justly proportionate share of the taxes.

One of the questions you will have to determine in dealing with this subject is whether railway companies shall be taxed directly by assessment upon the value of their property, or whether they shall continue to pay under the license system a certain percentage upon their gross earnings. The strong objection to a license fee upon gross earnings is that it allows the corporation to make its own report of the amount of its gross earnings, or, in other words, to assess itself. It is but just to note in this connection, that, as appears by the above tables, the

sonal inquiries as to value and assessment of representative farms in sixteen counties and of business and residence property in thirteen cities. The second, as will be explained more fully below, consisted of an effort to obtain such information for all assessable property, on a larger scale, through correspondence. Both proved satisfactory, and practically the same results were obtained as under the first method.

The market value for 1899 of all personal property, except railways, was also had from the basis upon which this property was assessed. A circular letter requesting information concerning the per cent. relation which the assessed value of the different kinds of personal property bore to the market value was directed to the assessors, town, village, city and county officers, and, besides these, to such other persons in the different parts of the State as we had reasons to believe were familiar with tax matters. About one-half, or nearly 4,500 of these inquiries were answered. These answers were carefully examined, compared and compiled. The facts obtained from them, before accepted or used, were also fully considered, not only in connection with the probable increase in property since 1890, but in every other connection that was thought to have some bearing upon their accuracy.

The true value of intangible personal property, or mortgages, notes, accounts, stocks, bonds, etc., for 1899, was placed at \$275,000,000. Of this, mortgages constitute about 40 per cent. Upon intangible personal property the information obtained was less definite than for other property. The returns, however, warrant the conclusion that the above sum is a fair estimate.

The market value of railways was computed from the average market value in 1899 of their stocks and bonds. For a few of the smaller roads no quotations could be found and these were included at their cost value. Because no reliable facts regarding them could be had, a few of the smaller logging roads were also omitted entirely. Their value and tax, however, was so small that their omission does not disturb the relations in the table.

The facts as to assessed valuation and tax were obtained from reports of the Secretary of State.

The relation, in per cent., which the assessed valuation of the different classes of property bore to the true value, in 1899, stands as follows:

Real property:

Acres, 40 per cent.; lots, 51.12 per cent.; all real property, 44.90 per cent.

Personal property:

Merchants' stock, cattle and horses, bank stock, 33 per cent.; other tangible personal property, except money and railways, 8 per cent.; money and intangible personal property, 5 per cent.; railways, 20.05 per cent.; all personal property, 14.6 per cent.

All property:

Both real and personal property, 29.9 per cent.

railway companies have been fairer than the average of individuals, who, as to the great mass of personal property, assess themselves: the percentage of assessed of market value of the railways being 20 5-100 as against 12 9-100 for all other personal property in 1899. In no case, however, should the assessment be left to the taxpayer, whether corporation or individual, without some check or safeguard for the State. If the railway companies are to be taxed directly by assessment upon the value of their property, then I have no hesitation in saying that the assessment should be made by a State Board of the highest possible character and ability. If the present system of a license fee, fixed at a certain rate per cent. upon gross earnings, is to be continued, then I recommend that there be reposed in some representative of the State, either the Tax Commission or Board of Assessment, authority to increase the amount of gross earnings, reported by any railway company, to such sum as will, in the judgment of the Commission or Board of Assessment, render the amount just and equitable as representing the actual gross earnings of the company reporting the same; that such be taken as *prima facie* evidence of the actual gross earnings of such railway company; but that any railway company considering itself aggrieved by the sum so fixed as gross earnings may appear before such Commission or Board of Assessment and be fully heard, and produce witnesses and evidence in their behalf in respect thereto. The final determination of the Commission or Board should in some form be subject to the supervision of the courts. Authority to increase the amount or value of personal property of the individual, as returned by him, is now conferred upon the assessor by statute. Like authority should be given the Tax Commission or Board of Assessment with respect to the corporation, if taxed upon its own report of gross earnings.

With no other class of property is there presented so flagrant an example of open disregard of the law as in the case of bonds, mortgages, securities, and the average amount of money in possession and on deposit. A conservative estimate, based upon the latest accessible data together with the census figures for 1890, shows real-estate mortgages in Wisconsin amounting to \$110,000,000. This takes no account of unrecorded securities, computed at \$165,000,000. The last printed report of the Secretary of State gives the total value of all notes, bonds and mortgages assessed in 1898 as \$13,514,227. It is therefore safe to say that not over five per cent. of the taxable notes, bonds and mortgages in the State pays any tax whatever.

The average amount of money in possession and on deposit which the assessor succeeded in finding and returning as taxed in 1898 was only \$7,163,444. On the first Monday in July,

1898, the state and private banks alone reported to the State Treasurer "money on deposit" amounting to \$40,976,312.70. The report of the United States Comptroller of the Currency shows that on the 5th day of May, 1898, the very month in which assessments were made, there was in the national banks of Wisconsin \$46,224,201.43. Or in both national, state and private banks on these two dates in 1898 an aggregate of \$87,200,513.50. More than \$80,000,000 of this money wholly escaped taxation that year.

I am aware that in the literature which has rapidly accumulated on the subject there is much speculative discussion of "perfect theories" and "new systems" which wholly eliminate the personal property tax. But there are certain elementary principles respecting taxation, the justice of which we believe in, the practical operation of which we well understand, and from which, I am sure, no mere academic discussion will tempt you to depart.

I know well it is urged that any attempt to place these shirking millions on the assessment rolls will be wholly futile, and end in paying a premium on perjury, increasing the interest rate, and driving money out of the State. But we should remember that no persistent, resolute, determined effort has been made to enforce the existing tax laws, much less correct even their more manifest defects and give to their provisions vitality and force. In some States there have been spasmodic attempts to reach some classes of property, quickly discouraged and discredited, however, by those interested in having others pay their taxes. It is only very recently that real, thorough-going tax reform has been generally inaugurated. And when some adequate penalty has been attached to an assessor's failure to perform his duty; when it is made some one's business to see to it that the assessor obeys the laws or pays the penalty; when individuals and corporations are subjected to the same searching examination as to concealment respecting taxable property that the fraudulent debtor now encounters in trying to avoid his other liabilities; when the attempt to make one's neighbor pay one's taxes meets the same public condemnation and the same legal punishment that the individual encounters in trying to defraud the individual or the corporation,—then the first of these objections will be effectually disposed of. The so-called intangible property—notes, bonds and mortgages—will then become tangible and assessable property.

But it is asserted that the money will be driven out of the State before its owners will consent to pay the tax upon it. If it is driven out of the State where will it go? In every State in the Union today public sentiment is strongly aroused and organ-

ization everywhere moving to make all taxable property, individual and corporate, meet its assessments and pay its taxes.

On all sides laws are being revised, and, in some States, constitutional amendments are being adopted to secure this result. It is reasonably certain that the day is at hand when no State in the Union will offer an asylum of refuge for capital seeking to evade the payment of taxes. Temporary transfers of limited amounts may be made. A few individuals may seek a change of residence. But we can spare the citizen who will expatriate himself rather than pay his taxes. It will be but a little time before the tax-dodger will find himself without a home and a country. Furthermore, it is not believed that much incentive will remain for so removing property from the State, because adding to the assessor's rolls the immense volume of property which now escapes will largely reduce the rate of taxation upon all classes of property.

It is asserted that it will raise the interest rate to make money and mortgages pay taxes. Possibly it may increase the interest rate somewhat to enforce the law as to money and mortgages. In California, where they have a constitutional provision that real-estate mortgages shall be assessed to the owner of the mortgage, and the assessed valuation of the real estate reduced by the amount of the mortgage, two different claims are made by those opposed to the assessment of mortgages: one, that the interest rate is increased to an amount sufficient to make the borrower pay the taxes; another, that an agreement between the borrower and lender is insisted upon by the latter, requiring payment by commission or otherwise, sufficient to reimburse the lender for the amount of taxes which he is required to pay upon the mortgage. It is a fact, however, as shown by the last census, that the interest rate in California is lower than in adjoining States, though this may be in part due to independent causes. After much discussion of the subject, Missouri adopted at the recent election a constitutional amendment similar in effect to that of California. Whatever may be the exact fact as to the effect on interest rate as between the borrower and lender, the principle is to be commended, because it taxes each man justly on the record. The mortgagor has to the extent of the mortgage parted with an interest in the real estate. The mortgagee has acquired that interest, and each is taxed only upon his proportionate share. There is another aspect of the case worthy of attention. Any law which secures a correct return of property by the assessor is to be commended. It is a distinct gain for honesty, and lodges in the public mind a more wholesome respect for the law. The individual possessor of wealth and the

corporation of large capital engaged in evading and violating the tax laws are doing much to beget a disregard and want of respect for all law, and to excuse violation of its letter and spirit with all classes. But there is further answer to be made to the objection to taxing money, because it is claimed it will increase the interest rate. It is a manifest injustice to each taxpayer to compel him to pay an additional tax, occasioned by allowing several hundred millions of money and securities to go untaxed in this State, in order to maintain a lower interest rate for the advantage of the comparatively few who borrow. It is a matter for congratulation in Wisconsin that the great proportion of those who borrow, both upon real estate and collateral security, borrow for the purpose of improving property, extending business operations, and carrying and maintaining lines of credit in conducting every-day commercial transactions. If some addition to the interest rate in this State should follow the taxing of notes, mortgages and money as an adjustment between borrowers and lenders, it is a proposition which will admit of no dispute that the individuals, co-partnerships and corporations borrowing the money have no right to ask the other taxpayers to contribute directly or indirectly toward keeping the interest rate down, or, in other words, to the payment of a portion of that interest.

In conclusion upon this important subject, I have only this to add: It is not unlikely that a complete revision of tax legislation may result in reconstructing the system upon radically different lines. There are many reasons that may be urged therefor, entitled to more or less weight. But these questions will be settled when they are reached in order. Your responsibility is a present one. And I commend this subject to your most careful consideration, confident that you will meet it with courage and fidelity, and discharge every duty devolving upon you justly, fairly and promptly.

A PRIMARY ELECTION LAW.

Commissioned by the suffrages of the citizens of this State to represent them, you will have neither in the session before you nor in any official responsibility which you may assume, a more important duty than that of perfecting and writing upon the statute books of Wisconsin a primary election law.

It is a fundamental principle of this republic that each citizen shall have equal voice in government. This is recognized and guaranteed to him, through the ballot. In a representative democracy, where a citizen cannot act for himself for any reason, he must delegate his authority to the public official who acts

for him. Since government, with us, is conducted by the representatives of some political party, the citizen's voice in making and administering the laws is expressed through his party ballot. Hence, to preserve his sovereign right to an equal share in government, he must be assured an equal voice in making his party ballot. This privilege is vital. This is the initial point of all administration. It is here government begins, and if there be failure here, there will be failure throughout. Control lost at this point is never regained; rights surrendered here are never restored. As the foundation is laid, so will the structure be reared. The naming of the men upon the party ticket is the naming of the men who will make and enforce the laws. It not only settles the policy of the party, it determines the character of the government.

For many years the evils of the caucus and convention system have multiplied and baffled all attempts at legislative control or correction. The reason for this is elementary. The evils come not from without but from within. The system in all its details is inherently bad. It not only favors, but, logically and inevitably, produces manipulation, scheming, trickery, fraud and corruption. The delegate elected in caucus is nominally the agent of the voter to act for him in convention. Too frequently he has his own interests alone at heart, and, for this reason, has secured his selection as a delegate. As a consequence, he acts not for the voter, but serves his own purpose instead. This fact in itself taints the trust from the outset, and poisons the system at its very source. No legitimate business could survive under a system where authority to transact its vital matters was delegated and re-delegated to agents and sub-agents, who controlled their own selection, construed their own obligations, and were responsible to nobody.

From the very nature of the case such a system must build up a strong central power. The opportunity offered to acquire a mastery of party nominations, thus controlling great political organizations, and with them patronage and legislation as well, was certain to be seized upon by men possessed of the talent of combination, manipulation and political management. Hence, to-day, it is well understood that the whole complicated business is managed by a central power, from which emanates all orders, and to which even "instructed" delegates in convention are, in some mysterious way, quickly made subservient. This controlling power is the established political machine. Its overthrow is always possible; but since it is the inevitable result and logical outgrowth of the system, such overthrow can only be temporary, and the machine will either be restored or

give way to a new machine constructed upon the same lines and operated upon the same principle of supreme authority.

The officials nominated by the machine become its faithful servants and surrender judgment to its will. This they must do in self-preservation or they are retired to private life. Wielding a power substantially independent of the voter, it is quite unnecessary to regard him as an important factor in government. He can usually be depended upon in the elections, because campaigns are so managed as to make strong appeal to party feeling, and he has to vote his party ticket or support that of the opposition nominated by the same method. Under our system of party government the selection of the candidate is the vital question.

It is unfair to assail the men who constitute or control the machine. As long as the delegate system is preserved, so long will some political machine control in the politics of the State. But even if it were possible to conduct a political convention without interference or domination from the political machine, it ought not to be intrusted with the selection of men who are to make and execute the laws. If it were possible to eliminate all bargains and deals and dickers and corruption, if the delegates were controlled by the purest motives, and desired only faithfully to represent the voters, whose agents they are,—even then the nominating convention is under no circumstances a fit place to transact the most important business in a representative government. A political convention is never a deliberative body. It is impossible from the brevity of its life, the confusion of its proceedings, the intangible character of its records, to fix or attach any abiding sense of responsibility in its membership. Its business is rushed through under pressure for time. Excitement and impatience control, rather than reason and judgment. Noisy enthusiasm outweighs the strongest argument. Misstatements and misunderstandings will defeat the best candidate. The plain truth can hardly keep pace with hurrying events. It is rare, indeed, that the results of a convention are satisfactory to anybody excepting the few who secure some personal advantage or benefit from it.

It is strange that the citizen has so long remained patient under practices which compel him to hand over the most important of his prerogatives to others to be exercised for him, and with so little regard either to his wishes or his interests.

It is the essence of republican government that the citizen should act for himself directly wherever possible. In the exercise of no other right is this so important as in the nomination of candidates for office. It is of primary importance that

the public official should hold himself directly accountable to the citizen. This he will do only when he owes his nomination directly to the citizen. If between the citizen and the official there is a complicated system of caucuses and conventions, by the easy manipulation of which the selection of candidates is controlled by some other agency or power, then the official will so render his services as to have the approval of such agency or power. The overwhelming demand of the people of this State, whom you represent, is that such intervening power and authority, and the complicated system which sustains it, shall be torn down and cast aside. This it is your duty, and high privilege as well, to accomplish in the session before you. This, it is well understood, cannot be accomplished by any temporizing measure or so-called caucus reforms. The defects of the caucus, convention and delegate system are fatal because organic. It cannot be amended, reconstructed or reorganized, and its perpetuation secured. Its end is decreed by the enlightened moral sentiment of the entire country. It can no more resist the development which is sweeping it aside than could the adoption of the Australian ballot be successfully opposed a short ten years ago. It may secure trifling delays by temporary expedients. Its advocates may insist on making it a fetich and being sacrificed with it. But its knell has been sounded in Wisconsin, where it is already defeated, and a decade will leave scarcely a trace of its complicated machinery in existence in any State in the Union.

The demand of the voter to-day is clear and explicit. He asks that there be restored to him the citizen's right to vote directly for the party nominee of his choice. He asserts that denial of this right, or doubt of his ability to exercise it, is an impeachment of the principle upon which State and National government is based. There is no valid objection which can be interposed to this reasonable demand upon the part of the citizen, and I submit that the Legislature should primarily address itself to the business of framing a law that shall accord to him, in full measure, the sovereign power of the ballot. The plan of such legislation will not be found difficult of practical application. The details should be plain and simple. The specific provisions of such legislation are to be determined by the Legislature, not by the Executive department of the State government. The legislation should be so framed as to insure to each voter an equal voice in the selection of the candidates of his party, without let or hindrance on the part of any man; accompanying this should be such provisions as will insure an accurate registration and determination of the will of the people as expressed in such primary election.

Care should be taken that sufficient time be given the voter carefully to consider the character and merits of each candidate seeking nomination at the hands of the people.

When this has been done, and not till then, the mandate of the people, expressed at the polls last November, will have been obeyed.

A primary election conducted under such a law will enable every voter to express his personal choice by direct vote for the candidates of his party. It will take of his time but one visit to the election booth, and but long enough while there to mark his ballot.

In the pursuit of his regular occupation day by day, in the quiet of his home under conditions the most favorable for reaching a sound conclusion, the voter will have time and opportunity to form his opinion as to the merits of the various candidates, and a few moments, at the most, on primary election day will be required to record that carefully matured judgment. How much more likely is the citizen to attend upon a primary election under these circumstances than to give up a considerable share of the entire season in order to attempt to express his preference through the uncertain medium of an authority delegated to one set of men selected in one set of caucuses for County officers, another for Assemblymen, another for State Senators, another for Congressmen, another for State officers, each followed by nominating conventions; caucuses, and conventions as well, a scene of confusion, wrangling, dispute and disorder, where weak men are badgered and corrupt men are bought.

It is to be expected that objection will be interposed to any plan offered. It is right that all objections should be fairly considered. I apprehend, however, that very little time will be consumed on your part upon the objection that under a primary election nominations would not be distributed with reference to geography or nationality. When primary elections are held upon the same day, there is no opportunity for advantage by either party over the other in this respect, and the selection of candidates will be made upon considerations of greater importance to the people than either the nationality or place of residence of the candidates.

The objection has been offered that cities would be able to control as against the country in a primary election, because of the better opportunity to poll a large vote where the population is dense. It is scarcely fair to make this objection as pertaining to primary elections. It would be quite as easy to poll a full vote in the country in a primary election as it is to get out a representative vote to a caucus under the present system, and it is no more of an objection against primary elections that the density of population in cities offers greater facility for polling the

city vote than it is against the election of delegates in caucuses. Neither would there be a stronger tendency, for any reason, for cities to unite as against the country with primary elections than with caucuses. In practice it has never been found possible to unite cities against the country in any political way. Any attempt to accomplish this would defeat itself by rousing and solidifying the agricultural sections of the State.

It has been further objected that a primary election would afford opportunity for the presentation of an unlimited number of candidates, resulting in such division of the vote that nomination by plurality will be made by a small majority. This is one of the defects of nominations by political conventions. Under the caucus and convention system we often have a large number of candidates located in such parts of the State as to divide the vote of the candidate most obnoxious to the machine, each candidate claiming local support because of residence, for the purpose of gathering up delegations that may be transferred in convention to the candidate selected by the machine. Nor is this pretense confined to encouraging candidates for one particular office, with a view of controlling the nomination of that office. It is not unusual, for instance, in a gubernatorial contest for the machine to encourage many candidates in different sections of the State to seek nomination for the other places on the State ticket, not for the purpose of nominating them for such offices, but to secure control of the delegations from counties or congressional districts, which are to be used in the convention for the purpose of nominating the candidate chosen by the machine for the head of the ticket. This sometimes goes to the extent of bringing out many candidates for the same office, rewarding such candidates for having gathered up their delegations for this purpose by appointment to some office within the control of the machine. Indeed, so many phases of this practice are possible under the caucus and convention system, one would scarcely expect its advocates to venture it as an argument against primary elections.

When it is taken into account that, under a primary election law, men of the highest talent and especial fitness for public life will readily consent to become candidates for public office—men who can scarcely be tempted to stand as candidates under the present system; when we consider that under such a law the nominations will be made by a majority of all voters in an orderly and decent contest, determined by direct vote of the citizen under all the sanctions of the law; and when it is likewise manifest that mere stalking horses and straw candidates could make but a very limited appeal for popular vote, it must be ap-

parent to any fair-minded man that a primary election is certain to limit rather than enlarge the field of candidates.

If, however, upon trial it should be found desirable, or if, in your judgment, it should be deemed wise at the outset, this objection can be effectually met by providing that the voter at the primary election shall indicate upon his ballot his first and second choice of the candidates presented for each office. And that if no candidate has a majority over all candidates of first choice, then the candidate having the largest number of first and second choice votes shall be accorded the nomination. Rare indeed, if ever, would an occasion present itself where this plan would not decide the nomination by a majority of the votes. In considering this objection it should be borne in mind that in no case under the caucus and convention system where there are a large number of candidates for any office does a majority of the voters determine the nomination. After much shifting, compromising, and trading with respect to other offices on the ticket, the majority vote in the convention does not represent or express, in any way, a majority vote by the voters. Indeed, it not infrequently happens that the candidate nominated has scarcely been considered as a candidate during the selection of delegates, in which case, as well as when "dark horse" candidates are sprung upon conventions, absolutely no opportunity is given the voter to express any choice.

Furthermore, under the caucus and convention system, delegates are almost invariably elected solely with reference to the head of the ticket, whether for State or county offices. As to other candidates upon the ticket, the voter scarcely hears mention of them by name. Under a primary election, since the voter must himself, personally in the election booth, pass upon the fitness and qualification for the nomination of every candidate on the ticket, those who are standing for the other important places below the head of the ticket, whose nominations ought in all cases to be made with care, will find it necessary to make a canvass upon their own account and upon their own merits instead of being successful through some combination with one or the other of the candidates for the head of the ticket.

It is obvious that any fair, candid consideration of this question removes every objection that can be interposed. The great reform accomplished through the Australian ballot, and its education to the voters everywhere, ought to demonstrate that an honest, intelligent effort to give the people of Wisconsin a primary election law, providing for all nominations to be made by direct vote, is not only wise and just, but practicable and feasible from every possible point of view.

The principle has been applied in several States with such a degree of success that the matter is no longer an experiment. These laws have placed the selection of the candidates of all parties, and, consequently, the selection of all officials, in the hands of the people. The character of the officials selected, the increased interests of the people in the selection of the candidates for public office, alike plainly point the way of progress along which the people of this Commonwealth have bidden us proceed.

I have extended this discussion more at length and dealt more in detail in suggesting legislative enactment than would be warranted ordinarily. But in view of the history of the movement for this legislation in our State, I have been prompted by a sense of duty in so doing.

I commend the matter to your careful consideration, knowing that you will faithfully execute the command of the people.

EDUCATION.

THE DISTRICT SCHOOLS.

When the educators of the State agree on the proposition that the district schools are inadequate for their work, and are steadily losing in usefulness and depreciating in popular favor; when this judgment is confirmed by a decreasing attendance upon the district school and corresponding removal to the cities for better common school advantages; when the best authorities give assurance that "for every hundred pupils now attending district school only one pupil reaches a high school,"—then it must indeed be time to pause in praise of our colleges and city schools long enough to emphasize the necessity of more generous support and of more successful supervision for the too long neglected country schools.

Wisconsin is an agricultural State. With comparatively few exceptions her cities are only centers of farm prosperity. The products of cultivated soil, always the most important factor in the development of the commonwealth, will gain rapidly in importance through the acquirement by farmers of the vast territory in the northern half of the State, following the clearing of the forests. Nowhere does education bring dividends more regularly than upon the farm. Nowhere is lack of it more extravagant in loss. The ignorant city laborer wastes only his own time and energy. An incompetent farmer may squander the productive power of the land which he occupies in addition to his misapplied efforts and labor. The valuable results of edu-

cation in farm work are shown in the awakened interest and progressive methods which have come from the University Dairy School and Agricultural College. I believe that this branch of educational work should be broadened in scope by adding elementary training in agricultural knowledge to the course of study in district schools.

Plainly our educational system is getting out of balance and requires readjusting. A committee with authority from the State Teachers' Association is under instructions to ask from the Legislature encouragement for county training schools to better qualify teachers for district schools, and for the extension of the existing system of State aid to high schools, in order to reach and improve the weak graded schools in the country, and establish others where they are so much needed. I believe that legislative action to meet this emergency in the life of district schools cannot be too strongly recommended. If, in your judgment, such action is found to be necessary, I am confident the exercise of a more rigid economy in other appropriations for educational purposes, in order to meet this new demand, will find justification in final results as well as in immediate public approval. All citizens must favor some readjustment of an educational plan which combines the assurance of many highly accomplished scholars with the menace of a multitude with but meager educational opportunities.

UNIVERSITY OF WISCONSIN.

The Reports of the Board of University Regents and of the President of the University convey to you detailed information respecting the growth and needs of this institution. The value to the State from its continued development, and its reputation throughout the country, are so well established and so generally appreciated that its friends and supporters can have no cause of apprehension for the future. Its growth in influence and usefulness within the last decade has exceeded the anticipations and hopes of its most sanguine promoters. State provision for the increasing expenses inseparable from growth has been generous and prompt. The new burdens have been carried by the people without complaint. If the advocates of university expansion will keep in mind their obligation to the State, which can be done without lessening the zeal for the cause in which they have enlisted, I am sure that they will meet with few obstacles in legislative action or in public sentiment.

The plea sometimes made that State universities cannot afford to compete with institutions of learning lavishly endowed by multi-millionaires is not valid. It is not necessary to en-

gage in competition in extravagant expenditure. In point of fact, our own and certain other State universities in the West are competing successfully in work and growth with the oldest and most richly endowed colleges in the country, without expenditures which would bear comparison. You will not forget—indeed, the friends of the University will not permit you to forget—that the University of Wisconsin has its rivals in universities of neighboring commonwealths. Few citizens of Wisconsin will be found ready to argue that this State cannot afford to keep pace with adjoining States in educational work and advancement.

During the last biennial period the material improvements of the University have included the enlargement of Main Hall, the construction of a suitable building for the College of Engineering, and the completion of the Library Building for the State Historical Society and University. The first provision for the last-named structure was made under Governor W. H. Upham's administration, and largely through the instrumentality of his influence. As a permanent home for the invaluable historical records and volumes of the State, as well as an important auxiliary to all University work, this splendid structure will stand an enduring monument to the enterprise of its distinguished projectors.

Additions to "the means of acquiring a thorough knowledge of the various branches of learning," during the last two years, include the reorganization of the College of Engineering and the establishment of the School of History and the School of Commerce. The purpose of this last school is to furnish "a course of study especially fitted for the training of young men who wish to enter business careers or branches of the public service in which a knowledge of business is essential." The practical utility of such a school to meet the demands of a commercial people requires no argument.

Under the head of immediate and special needs which will call for extra appropriations, the University authorities make most prominent a new building for the College of Agriculture, suitable equipment for the new building of the College of Engineering, and provision for the School of Commerce. I have no hesitancy in commending each of these proposed improvements as worthy your approval, but confess some doubt as to whether you will be able to honor all the worthy demands upon the taxing power without imposing an onerous burden upon the taxing power of the State. For reasons somewhat similar to those which prompt recommendations of State aid to country schools, I am inclined especially to favor every practical encour-

agement to the growth of the College of Agriculture without delay.

Perhaps it is as well to admit that the Executive may be influenced somewhat by a kindly prejudice in favor of the University of Wisconsin. But I am convinced that its friends will have no cause for disappointment if you deal with its requisitions and arguments with the most strict analysis of their merits.

The following suggestions from the report of the President of the Board of Regents to the Governor are submitted as the language of experience and wisdom:

"A great modern institution of learning demands a great and growing income. The problem is not merely how much to appropriate and expend, but how to make the best use of the moneys received from the State, the Nation and individuals. While economy and care must always be exercised, the State will not have discharged its duty to the University, nor the University fulfilled its mission to the people, until adequate means have been furnished to every young man and woman in the State to acquire an education at home in every department of learning."

STATE NORMAL SCHOOLS.

By the report of the Board of Regents of Normal Schools I am led to the conclusion that this important branch of educational work is making rapid progress, and that the several schools under the management of this Board are in a generally satisfactory condition with respect to their material needs. The Normal School Regents have been hampered somewhat in the last two years by inability to secure for use some of their accredited resources. Of the \$70,000 appropriated by the last Legislature for additions and repairs to buildings and equipment, only \$50,000 has become available, owing to the insufficiency of the general fund of the State to provide for all legislative appropriations. Considerable loss to the State Normal School fund and the income fund has resulted from a loan made nearly ten years ago and inadequately secured against default in payment. The Regents make a seemingly reasonable request that the educational trust funds should be protected by legislative action against loss by such loans made by the State. I commend to your consideration especially that portion of the Normal School Report which gives in detail those subjects which, in the judgment of the Regents, call for legislation.

CHARITABLE, PENAL AND REFORMATORY INSTITUTIONS.

For many years the people of Wisconsin have had reason for just pride in the enlightened care which the State has given to

the afflicted classes of its citizens who are properly a State charge. While faulty details of management in some cases and individual official failures in some instances have been revealed, the conduct of Wisconsin's charitable, penal and reformatory institutions, as a whole, has attracted widespread attention and commendation throughout the country, and has furnished models for many States. Occasional abuses as discovered and exposed have served to point the way to correction and improvement, and rarely brought reproach upon the general system of control and management.

The great evils developed in these institutions since their establishment have resulted from permitting superior and subordinate positions in them, to be used in varying degree as political patronage. The desirability of selecting such officers and employees with primary regard to their qualifications and fitness for peculiar duties, while not a new discovery, cannot be too frequently recognized, nor too forcibly emphasized. But responsibility for misuse of the appointing power cannot be escaped by any temporary plan for shifting or dividing it, or by resorting to rules and orders subject to revocation and disregard at pleasure by those who formulate and promulgate them. I am convinced that the successful application of correct civil service principles to employment in these institutions always must depend upon the good faith and purpose of those intrusted with the appointing power. Most of the improvement noted in this direction, I think, may be easily traced to a recognition of wholesome public sentiment, rather than to the efficacy of formal rules. If this is a mistaken conclusion, if mere rules to govern appointment supply the really controlling influence, your Honorable Body might relieve the Governor and the Board of Control of serious responsibility, and do permanent good to the public service, by giving such rules the force of law. The subject is one of importance and worthy your careful consideration.

You will appreciate the inability of the Executive at once to acquaint himself with the conditions and needs of the many and widely-scattered State institutions, or even in the limited time at his disposal to do justice to the full and comprehensive report of the State Board of Control. In addition to this report, the Legislature doubtless will secure valuable information from the legislative committee appointed to visit and inspect the various State institutions. The following summary from the Board of Control shows the number of inmates, of officers, and employees, and the total population of each institution on October 1, 1900:

NAME OF INSTITUTION.	Inmates Oct. 1, 1900.	Officers and employees Oct. 1, 1900.	Total Popula- tion.
State Hospital for Insane.....	424	122	546
Northern Hospital for Insane.....	585	169	754
School for the Deaf.....	180	46	236
School for the Blind.....	105	44	149
Industrial School for Boys.....	328	54	382
State Prison.....	496	47	543
State Public School.....	147	45	192
Home for Feeble Minded.....	394	84	478
State Reformatory.....	115	21	136
Total.....	2,784	632	3,416

By changing the system of procuring supplies and making all purchases in open market under competitive bids, the Board is able to show a very material saving to the State, notwithstanding a steady advance in prevailing market prices during the last biennial term. The result justifies the experiment, and appears to be sufficient answer to the criticisms of those who previously supplied State institutions through local markets, and who urged that citizens of the State should be given the business in preference to non-residents, regardless of cost. This theory is akin to the too-prevalent notion that State institutions are built and maintained at certain places for the benefit of those particular communities, rather than with regard for the welfare of the inmates and the best interests of the State. Such arguments may be safely ignored by those charged with the conduct of State business.

Your particular attention is called to that portion of the report by the Board of Control which deals with the expense to the State on account of subsistence and perquisites for the superintendents of institutions. It is plainly a case where statutory provision has been ignored at considerable cost to the State. I am advised by those in position to know, that in some institutions the expenditures for subsistence of superintendents and their families, for entertainment of their friends, for carriages, servants, etc., exceeds more than twice the annual salaries of the superintendents. It is evident that radical and immediate change is demanded in the existing plan of supporting these officers and their families. I believe that the Legislature should make adequate and specific provision for the shelter of the several superintendents, outside of the institutions, and for a limited allowance for subsistence as well; but there can be no justification or excuse for extravagant expenditure on this account, or for the entertainment of friends and visitors of officials at public expense. I am informed that but two residences will be required in addition to accommodations already available to pro-

vide separate homes for the superintendents of the several State institutions. The situation seems imperatively to require prompt and decisive action on your part.

To the several recommendations for additions and permanent improvements offered by the Board of Control, you will, of course, give due consideration. Their experience and special knowledge should qualify the members of the Board accurately to estimate the future requirements of the State in this direction. At the present time, I do not consider myself either prepared to strengthen their suggestions by indorsement, or qualified to question them as of doubtful wisdom.

WISCONSIN NATIONAL GUARD.

From the report of the Adjutant-General it is learned that existing laws revised by the last Legislature for maintaining and regulating the State Militia are generally satisfactory. The few changes recommended in that report are reasonable in suggestion, modest in appropriations asked for, and plainly designed for the betterment of the organization. No other argument in favor of approving them by legislative action should be necessary.

The value to both State and Nation of a well organized, properly disciplined and thoroughly equipped militia force has been often and recently demonstrated. In no other part of the public service is it more apparent that the most complete efficiency affords the best and surest economy. The lessons of experience have been applied in the reorganization of the Wisconsin National Guard, following the Spanish-American War. Notwithstanding that the work has been performed almost wholly with new men, and, at times, with insufficient equipment, all information available to the Executive at this time indicates distinct progress and improvement in the character of organization and training. The State cannot afford to permit its guards to lack in the highest degree of proficiency through want of proper and reasonable equipment.

TRUSTS AND MONOPOLIES.

The evils to be reached by legislation on trusts and monopolies are such combinations and confederations as are organized to control prices, create monopolies and destroy competition, or which, in their practical working, have that effect.

It is not because a corporation has a large capital or transacts a large and profitable business that it is an injury to the community or a menace to its prosperity. On the contrary, the development and growth of modern business have made large ag-

gregations of capital absolutely necessary, and such capital is fairly entitled to a reasonable and legitimate profit. The wrong is done and the injury inflicted when such combinations of capital are enabled, by means adopted for that purpose, to control prices, stifle competition and create a monopoly.

The decisions of the highest courts of the United States, and of the several States, leave no room to doubt that the power of the legislative branch of the government is ample to redress all wrongs so done to society. The decisions of the courts are practically uniform to the effect that no one has any right to enter into any agreement or combination when the purpose or the effect is to control prices or create a monopoly. Further, it is also apparent that the right to prohibit such contract or combination is clear, when the object is to control prices, even if it is not intended unreasonably to increase prices. It is along these lines that the anti-trust legislation of Congress known as the Sherman law was enacted, and also similar legislation by the several States. With only some unimportant exceptions, such legislation has been uniformly sustained by the courts. It is expected that during the present session the United States Senate will pass the House bill extending the scope of the Sherman law, increasing its penalties and making prosecutions under it mandatory on the part of United States district attorneys of the country.

Evils of this kind exist and are in operation in every State. Their extent and harmful effect may or may not have been exaggerated in the public estimation, but all must agree that there is much that ought to receive the consideration of the legislative branch of the State government. The present law of this State on the subject is principally contained in chapter 357 of the General Laws of 1897. I regard it as entirely insufficient, either as a remedy or a restraint. In the first place it only applies to corporations. It is entirely plain, however, that partnerships and individuals may enter into agreements and combinations, which, in their results, will be just as disastrous to the public interests as can any confederation of corporations. It is not perceived that the corporate character of the party doing it makes the controlling of prices, or the creating a monopoly, any more or less hurtful than if the same thing was done by a partnership or individual.

In the next place, it only denounces such combinations when entered into by corporations organized under the laws of this State. It is of course known that the whole subject of interstate commerce is under our system exclusively a matter of Federal cognizance; but surely the State has some control over the business transactions within its limits, even by foreign corpor-

ations. It is a large subject. The line where the power of the State ends and the power of the National government begins may be difficult to define, but, the State having some power in the matter, the duty of State government is exactly commensurate with the limits of its powers.

Furthermore, the only remedy provided or suggested by the present statute is a proceeding in the courts to vacate the charter and annul the existence of the offending corporation. Such a remedy is to a great extent illusory. Corporations must of necessity act by officers and agents, and it is submitted that one efficacious way to control the corporation is to act upon the individuals who control its affairs and shape its policy. I recommend to the Legislature of this State an entire revision of the laws relating to this subject, and the enactment of such laws as shall promise an efficient remedy for the great evil, and which at the same time shall not hamper individual enterprise or take from capital the reasonable returns to which it is fairly entitled when invested in business enterprise.

I think legislation should be adopted providing that if any corporation organized under the laws of this or any other State, or any partnership or association of individuals, or any individuals, shall enter into, or become a member of, or a party to, any trust, agreement, combination, confederation or understanding with any other corporation, partnership, person, or association of persons, to regulate or fix the price of any commodity or to limit the amount of any commodity to be manufactured, mined, sold, transported or placed on sale or disposed of, or to do, or to refrain from doing, any other thing with the intent to control and fix the price of any commodity to be manufactured, mined, sold or transported in this State, such corporation and the officers and agents thereof, and such partnership, individuals and associations of persons, shall be deemed guilty of a conspiracy to defraud, and shall be subject to such prosecution and punishment and such penalty or forfeiture as may, in the judgment of the Legislature, be proper.

Such enactment should also contain suitable provisions making all such contracts and agreements void, and provide machinery for the collection of such penalties and forfeitures and for the annulment of the charter of such offender, if a domestic corporation, and for the forfeiture of the right to do business in this state if a foreign corporation, and imposing such penalties on the individuals convicted of violating the law, as may be appropriate.

THE LEGISLATIVE LOBBY.

The Legislature of 1899 enacted chapter 243 of the Laws of 1899, designed to control and somewhat restrict the operations of what is commonly termed "the lobby" in relation to legislation. The principle involved in that enactment has my unqualified approval. It is of course neither possible nor desirable to isolate the members of the Legislature from the people of the State. All public officers are but the servants of the people, and in discharging their various duties the more closely they keep in touch with, and learn the wishes and interests of, the people, the better. But when either individuals or corporations keep at the seat of government a body of salaried agents, or counsel, whose duty it is to bring about or prevent legislation, as their employers may desire, who accomplish such results not so much by open and public argument before the Legislature and legislative committees as by personal influence exerted in various ways upon individual members of the Legislature, it becomes an evil which ought to be controlled and checked as a menace to the welfare of the State.

In my judgment the fullest opportunity ought to be given for free and fair discussion of all subjects of legislation before the two Houses and their various committees by all who are interested in these subjects; but, in my opinion, that ought to be the extent of the services permitted to be performed by legislative agents or lobby counsel. Any argument which cannot bear the light of publicity ought not to be permitted to influence legislation or to be permitted to be made.

Chapter 243 of the Laws of 1899, while a step in the right direction, does not go far enough to reach and eradicate the real evil. In my judgment, it ought to be so amended as to restrict, in so far as may be, the lobby to public argument before the two Houses or the committees thereof. And all other means and methods of influencing legislation by legislative agents or lobby counsel, who are paid for their services by others, should be prohibited under such pains and penalties as the wisdom of the Legislature shall prescribe.

THE INSPECTION OF ILLUMINATING OILS.

An examination of the law regulating the inspection of illuminating oils will, I believe, make plain the advisability and necessity of some amendment to its provisions. In all cases where officials are compensated by a fee system, the Legislature is likely to be less guarded in preserving a just relation between service and reward. That in the end the public pays the bill,

when the office is a fee office, is quite likely to be lost sight of. Whether this be true or not in any given case, excessive salaries or official compensation is demoralizing to the service, an incentive to political corruption, and the occasion of bias and suspicion in the public mind, prejudicial to good government.

I am thoroughly convinced that the fees received by the State Supervisor of Oils, and by certain deputies as well, are greatly in excess of a reasonable compensation for the character of the services performed. Whenever the income from any office is more than fairly compensatory it should be reduced. In fixing the compensation of an office, due regard must of course be had to the knowledge and ability requisite and to the responsibilities and exactions demanded in discharging its duties.

From the last official report of the State Inspector of Oils made to the Governor October 25, 1900, it appears that he received from fees for the fiscal year ending September 30th the sum total of \$5,432.72. I understand that at no time in many years have the duties of the position under the existing law been so arduous as to interfere with the official giving his attention, at least most of the time, to private business. This cannot be justified or defended upon any ground, and should not be permitted to continue.

The importance of a thorough inspection of oils, both to life and property, is in no sense underestimated. I am aware of the extensive use of this product by thousands of our citizens, but I am confident that there will be no difficulty whatever in finding a responsible and competent official to supervise the inspection of oils at a maximum salary of \$1,500 per year, to be paid, as now, from the fees collected. The principal duty of the State Supervisor of Oils, as defined by the law, is the supervision of the work of the deputies, and he should be required by the terms of the statute to employ all of his time in the discharge of the duties of his office and to fully evidence this in his report.

I believe that all the fees for inspections should be paid to the State Treasurer and by him set aside and constitute a fund for the payment of reasonable fees to deputy inspectors, not exceeding a fixed maximum amount in any case. The balance of any such fund remaining, after payment of all fees and expenses connected with the administration of the law, should be paid into the general fund at the end of the fiscal year.

It will be observed that the statute now provides for the use of brands or stencils for marking the barrel or other receptacle containing oil which has been tested. Your attention is particularly called to this and other sections of the statute bearing upon the inspection of oils by local deputies with the recommen-

dation that the same be thoroughly revised and changed by requiring the use of stamps or seals, which will admit of but a single use, under regulations prepared with such care and thoroughness that it will insure every observance of the law with respect to testing oils and promptly reporting such test. The stamps or seals should be designed and issued by the State Treasurer under strict regulations, preserving a record as to numbers and districts and the stamps or seals accounted for in the reports of fees by the supervisor and his deputies.

IMPROVEMENT OF HIGHWAYS.

During the last five years organized effort has reinforced the public press to create a general interest in the work of improving highways. While the importance of good roads in the development and welfare of the commonwealth is admitted everywhere, the State is indebted to private enterprise and individual generosity for the inauguration of practical work and example in modern, approved road building. A system which provides asphalt pavements for pleasure riding in cities, and supplies little more than a right of way over frequently impassable ground for vehicles used to convey the products of the State to the primary market, cannot be accepted in evidence of wise or far-sighted economy. Prudent regard for the tax-payer will suggest great caution in removing the barriers placed in the Constitution against employment of State powers and resources in works of internal improvement. Under the existing system of highway maintenance and control, an enormous amount of money and labor is expended each year upon the roads of Wisconsin. It is too apparent that much, if not most, of this expenditure is wholly wasted. Until this available resource for the betterment of roads has been brought under a more economic system as a result of a complete revision of the laws respecting highways, those who urge for this work the necessity of greater powers to the Legislature and State officials through constitutional amendment must be prepared to explain to the voter the neglect properly to exercise the authority and means at hand.

I recommend thorough investigation and revision of the road laws of the State, and suggest that the legislative committees having this subject in charge be organized with more consideration for its great importance.

WOMEN AS MEMBERS OF CERTAIN STATE BOARDS.

The State Federation of Women's Clubs, fairly representative of the intelligent and progressive womanhood of Wisconsin,

has suggested the need of a woman as one of the force of factory inspectors to insure a proper investigation of factories and stores in which women and girls are employed in large numbers. There can be but slight excuse for conflicting opinion respecting the wisdom of action in harmony with this suggestion. The State cannot reasonably refuse the same measure of consideration for women who toil which is accorded to male wage-earners engaged in similar employment. That public sentiment which tolerates such employment for women, which upholds co-education in all public institutions of learning, must approve the claims of women for such recognition, as best qualified to determine the needs and interests of their sex subject to State supervision and regulation. There is room for no doubt regarding the usefulness of woman's work and influence in the supervision and management of public institutions of every character where women are either inmates or patrons.

I recommend that provision be made by the State for the employment of a woman as additional factory inspector; and that the law be so amended as to secure to women representation on each of the following State Boards: the Board of Control of Charitable, Penal and Reformatory Institutions, the Board of University Regents, and the Board of Normal School Regents.

ABOLISHMENT OF THE STATE LAND OFFICE.

Your consideration is invited to the arguments advanced by the Commissioners of the Public Lands in support of their recommendation for the repeal of the law which abolishes the Land Office as a separate department of State government.

As the custodians of records showing original titles to millions of acres of lands in the State, and as the constitutional trustees of millions of dollars of trust funds, the Commissioners unite to urge that their office should not be merged into another department, and possibly the legality of their own official actions be brought into question, solely because public criticism has heretofore been directed against the employment of unnecessary clerks in this department. It should be possible for the Legislature, without abolishing the Land Office Department, to make, and it certainly ought to make, the same limitation as to the number of employees provided in the law of 1899 for transferring the work to the office of the Secretary of State. No other apparent purpose will be served by the transfer of this department to the State Department. It is evident that the execution of the law will complicate the work of the Commissioners rather than simplify it, embarrass the office of the Secretary with new duties and responsibilities, and may result in confusion of public records of great value and frequent usefulness.

STATE PRINTING AND PUBLIC DOCUMENTS.

The development of State institutions and the growing appreciation of the value of public documents necessitates a large and steady increase in the variety and volume of State printing. Under the law, three of the elective State officers act as Commissioners of Printing. It would be by mere chance if any one of them brings to his duties any practical knowledge of the business. From the character and scope of the work, expert and technical qualifications are vitally essential to intelligent and economical supervision. The amount now expended in the supervision of this public business is believed to be ample to secure to the position the services of a master printer, experienced in all branches of the work, and familiar with its value in detail. The public interest would be served without added expense to the State, if the law were amended to require such special qualifications from the occupant of this position.

The Attorney-General is the only State officer not required by law annually to report the conduct of his department. For obvious reasons a record of the work of this important branch of service is desirable. In most States the official opinions of the legal department are preserved in document form as a part of such report. Within a few years, if published, the reports of this office would be a valuable reference for precedents, save time and labor for legislative and administrative departments, and relieve each Attorney-General from the necessity of re-investigating the questions which have been repeatedly raised and decided under previous administrations. This will economize in the work of this office and ought to result in a corresponding saving in expenses. I therefore recommend that the Attorney-General be required to report to the Executive annually; such report to contain a concise account of the transactions of his office for the fiscal year, including the substance of legal opinions rendered upon matters of public interest only.

I believe that the Blue Book should be compiled and published under direction of the Bureau of Statistics, and recommend such amendment to existing law as will enforce this suggestion. The chief value of this work must be found in the accuracy of its figures and the compactness of its form. I am confident that great improvement in this respect will be effected by placing the work under control of the Commissioner of Statistics. For a number of years some portions of its contents have been unduly expanded and matters incorporated of no value for reference, while the number of volumes printed has grown to be a burdensome extravagance.

A somewhat similar abuse appears in connection with the publication and free distribution of expensive maps. The Railroad Commissioner in his report requests that his department be relieved from this unwarrantable charge, and it is recommended that this request be granted in such a manner as wholly to relieve the State government from a seemingly needless expense.

FIRE INSURANCE ON STATE PROPERTY.

The cost of fire insurance for the Capitol and some other public buildings has become a considerable expense, which must be largely increased if this plan of protecting against loss by fire is consistently pursued. It is questionable whether the State with its abundant resources is practicing real economy in paying profit-seeking companies to share risks of this character. Prompted by legislative expression many years ago, the State officials discontinued insuring State property. The destruction of a building used for the Industrial School at Waukesha served as an incentive and argument for the revival of the insurance policy. If, with the better materials and safeguards of modern buildings, and the added protection of watchmen now provided, legislative judgment approves insurance of State property against loss by fire, then the policy should be specifically authorized and provided for by law, and not left to the varying opinions and doubtful authority of State officials and boards intrusted with the care of widely scattered property of the State.

WISCONSIN SOLDIERS.

The erection of monuments upon the battlefields of the Civil War to commemorate the patriotism and valor of Wisconsin soldiers has been long recognized as a becoming exercise of State authority and use of State funds.

I furthermore submit as worthy of legislative consideration and action that a more enduring tribute to deserving war heroes and most useful object lesson for all generations to come may be provided by the establishment, either at Old Camp Randall or other accessible place associated with war memories, of a Memorial Hall and War Museum, where the flags, records and relics of Wisconsin troops in all the wars may be collected and preserved for all time.

THE ANTI-PASS LAW.

Public approval of the law enacted by the last Legislature to prohibit the use of free transportation, telegraph, and telephone privileges by public officials has been so general and earnest that no opposition is anticipated to the final passage of the resolution for a constitutional amendment which will place this act beyond the possibility of legislative repeal.

VARIOUS RECOMMENDATIONS.

TRANSPORTATION FOR STATE OFFICERS AND EMPLOYEES.

The aggregate cost of railway mileage used by the different State departments from June 1, 1899, to January 1, 1901, a period of nineteen months, is reported by the Secretary of State to be \$26,632.66. During the year 1900, the amount paid by the State for such mileage was somewhat in excess of \$17,000. Of this total, \$5,645 was used by the warden and deputies employed in fish and game protection, and paid for out of the licenses and fees collected by that department. An examination of the apportionment of mileage to individual officers and employees who have used the same reveals some extraordinary charges which require more strict regulations in furnishing transportation to State officers. I recommend the enactment of a law specifying officers and employees entitled to transportation at State expense, with provisions which will restrict the use of such transportation to official business, and require explicit itemized travel-vouchers, duly attested, to be returned monthly, when, and as, other expense accounts are rendered. I would further suggest that, instead of mileage books being furnished, each person so authorized to travel at State expense should be required to purchase credential books, and that all returns of transportation should be accompanied with the railroad credential at the time such expense account is presented for auditing.

STATE BANKING LAWS.

The State Bank Examiner in his report emphasizes the importance of action by the Legislature, at this session, in advancing the joint resolution for the submission of an amendment to a vote of the people, empowering the Legislature to change the banking laws by a two-thirds vote of its members elected. With the exercise of all possible promptness, there can be no revision or amendment of the banking law prior to 1903. The need of revision of these laws has found expression in some form in three successive regular sessions of the Legislature. In the judgment of the Examiner, those provisions which evoked criticism and opposition to the banking law rejected by the people in 1898, were, in the main, of minor importance. Failure of this character should not discourage further legislative consideration and effort to remedy the evils of the law, which are generally admitted.

LEGISLATION FOR CITIES.

The widespread and persistent complaints of existing faults in the government of cities are resulting, in many States, in efforts to remedy defects by means of radical State legislation. Many model charters have been devised, but the model city government remains to be discovered. The State may well proceed with caution in interfering with established local government in response to the demand for merely theoretical experiment. But the State cannot safely ignore the danger to itself from bad local government in its most populous districts. By careful consideration of all measures affecting the larger cities, the Legislature can at least avoid much of the special legislation, framed and forwarded by selfish interests, which creates new abuses more frequently than it eradicates old ones. It is not just to the important interests to be affected by legislation for cities to permit a few city representatives to exercise the full legislative power of the State, while a majority of the representative body in which such power is vested remains ignorant of the true purpose and indifferent to the results of such law-making.

BUREAU OF LABOR STATISTICS.

Within recent years the work of the Bureau of Labor Statistics has been subjected to improved methods and intelligent system. Resulting benefits to the public are numerous and unmistakable. Legislation recommended in the report, which seems to me most deserving of consideration, includes a law requiring employers to report to the Bureau all accidents occurring to employees while engaged in their duties of employment; also amendments to existing laws, to require fire escapes on school-houses and office buildings, to regulate the employment of children in places of amusement, and to give greater power in the enforcement of laws to insure sanitary conditions in factories and workshops.

INADEQUATE VETERINARY LAWS.

The veterinary laws of the State have not been materially modified since their enactment several years ago. The disease of bovine tuberculosis has since been discovered, and the relations of this with the human phase of the disease, together with Wisconsin's great interests as a dairy State, make the subject one of much importance. Existing laws require the condemnation and slaughter of all animals affected with contagious dis-

eases, which is held by experts to cause unnecessary cost to the State and loss to individuals in many instances. The same laws which impose such expense upon citizens do not afford due protection against the importation into Wisconsin from other States of animals so affected. It has been suggested — and it seems to me wisely suggested — that with legislation designed to assist in the enforcement of proper regulations, a non-salaried commission representing the live-stock interests would be able to protect the State against many of the dangers from this source to which those interests are now exposed.

DAIRY AND FOOD PROTECTION.

In his biennial report, which will accompany other documents submitted to the Legislature, the Dairy and Food Commissioner suggests, as necessary, some modifications of the laws which his department was created to enforce. The importance of safeguarding the people of the State against the dangers of adulterated food products, as well as the wisdom of protecting the honest products of the State against competition with cheaply produced counterfeits, will warrant all reasonable provision to extend and improve the work of this Bureau.

STATE LIBRARY COMMISSION.

The work of the Wisconsin Library Commission and the institution of the system of free circulating libraries, inaugurated through private enterprise and constantly promoted by the generous support of the Hon. James H. Stout, I believe to be fairly entitled to more liberal encouragement from the State than is being given at the present time.

EXPENDITURES ON ACCOUNT OF EXECUTIVE RESIDENCE.

Ever since the State purchased an Executive residence the cost of fuel, light, repairs, furniture, carpets, etc., has been borne by the State under the direction of the Superintendent of Public Property. During the last ten years the average expenditure for this purpose has been about \$2,000 annually. While the question has not been heretofore raised respecting the duty and powers of the Superintendent in this respect, I am unable to find specific authority in the law for such expenditures. I therefore suggest that the purposes for which such moneys may be expended in and about the Executive residence should be clearly defined, and the amount of such expenses fixed by legislative enactment.

STATE EMPLOYEES.

I believe that it will be possible to effect a material saving to the State, without injury to the public service, through a reduction in the number and a reorganization of the force of employees in the public service. After having an opportunity to become familiar with the situation and to acquire accurate information with reference thereto, I purpose in a later communication, but in ample time to permit legislation at this session, to present you with recommendations for such changes as appear to be justified by the conditions and needs of the service.

CONCLUSION.

Permit me to say, in conclusion, that I am sure you will realize the importance of a short session in which the public business shall be transacted with all the dispatch commensurate with the care and consideration which it justly demands.

In discharging the duties which the highest obligations of public trust impose, let us preserve that comity of relation which will aid in accomplishing the largest measure of good to the great Commonwealth which has honored us with its confidence and invested us with its authority.

ROBERT M. LA FOLLETTE.

BIENNIAL REPORTS

OF THE

SECRETARY OF STATE

COMMISSIONERS OF PUBLIC PRINTING

AND THE

SUPERINTENDENT OF PUBLIC PROPERTY

OF THE

STATE OF WISCONSIN

FOR THE TWO FISCAL YEARS ENDING SEPTEMBER 30, 1900

MADISON
DEMOCRAT PRINTING COMPANY, STATE PRINTER
1900

STATE OF WISCONSIN.

Report of the Secretary of State.

DEPARTMENT OF STATE,

October 1, 1900.

To His Excellency, EDWARD SCOFIELD,

Governor of the State of Wisconsin:

SIR:—In compliance with the statutes prescribing my duties, I have the honor to transmit herewith the biennial report of this department for the fiscal years ending September 30, 1899, and September 30, 1900, respectively. As in the past the report shows the condition of the several funds, with a complete statement of the receipts and disbursements, for the biennial fiscal period.

In addition to the usual statistical information found in the report of this department, I have added a brief summary of the taxation of legacies under the provisions of chapter 355, laws of 1899, and also a compilation of the report on exempt property made under the provisions of the statutes every five years.

I have the honor to be,

Yours respectfully,

WM. H. FROEHLICH,

Secretary of State.

GENERAL STATEMENT

The aggregate result of the transactions during the fiscal years ending September 30, 1899 and 1900.

	Balance, Sept. 30, 1898.	Receipts, 1899.	Receipts, 1900.	Total.	Disburse- ments, 1899.	Disburse- ments, 1900.	Total.	Balance, Sept. 30, 1900.
General Fund.....	\$201,012 86	\$2,746,453 89	\$2,768,209 74	\$5,715,706 49	\$2,584,104 90	\$2,635,192 85	\$5,219,297 75	\$496,400 74

General Statement.

REPORT OF THE

General Fund.

GENERAL FUND.

This fund embraces all the revenues of the state applicable to the payment of the ordinary expenses of the state government.

The sources from which it is derived are, a general fund tax, a tax on civil actions, license of railroad companies, log driving and booming companies, telegraph and telephone companies, street railway and electric light companies, insurance companies and hawkers and peddlers; fees received from notaries public, from various state offices and from the sale of books and reports.

The expenditures therefrom are authorized by permanent and temporary appropriations, and by the several laws requiring the Secretary of State to audit accounts.

A statement of the transactions of this fund will be found in detail under appendix "A" in this report.

The receipts and disbursements have been as follows:

RECEIPTS.		
	1899.	1900.
Suit tax	\$5,835 00	\$5,130 00
From counties for charitable and penal institutions	216,628 37	231,653 94

SCHOOL FUND.

The School Fund is composed of:

1. Proceeds of lands granted by the United States for support of schools.
2. All moneys accruing to the state by forfeiture or escheat.
3. All penalties for trespass upon school lands.
4. All fines collected in the several counties for breach of penal laws.
5. All moneys paid as an exemption from military duty.
6. Five per cent. of net proceeds of sales of United States public lands.

The number of acres of unsold land, the proceeds of which are applicable to this fund, is 32,440.79.

The cash receipts and disbursements during the two years have been as follows:

	1899.	1900.
County fines	\$16,567 46	\$17,158 31
Sales of lands	23,225 05	4,404 78

Loan to town of Saxon	2,000 00
Loan to town of Underhill	525 00
Loan to board of education, town and city of Ripon....	1,250 00
Loan to board of school directors, town of Newbold....	2,400 00
Loan to village of Thorpe	1,000 00
	<u>\$196,540 00</u>

University Fund Income.

UNIVERSITY FUND INCOME.

This fund is derived chiefly from the annual tax levy of 17-40 of one mill on all the assessable property in the state, authorized by sec. 390, Wisconsin Statutes, as amended by chap. 170, laws of 1899, from the interest on university land certificates and loans, and from students' fees, etc.

This entire fund is placed at the disposal of the University Board of Regents by transfer to the treasurer of said board. The detailed record of its expenditures is kept by said treasurer distinct and independent of the accounts of the state. The receipts and disbursements during the last two years have been as follows:

RECEIPTS.

	1899.	1900.
General fund, ½ of 1 per cent R. R. etc., licenses, Washburn Observatory, Agricultural Institutes	\$21,798 48	\$21,798 48
General fund, interest on certificates of indebtedness	7,770 00	7,770 00
Jackson bequest, interest on.....	300 00	150 00
Interest on bank deposits	108 29	160 94
Interest on land certificates and loans..	408 95	384 16
General fund, appropriation for new buildings		135,000 00

\$1,776,706 56

Normal School Fund Income.

NORMAL SCHOOL FUND INCOME.

This fund is derived from the interest on swamp land certificates and loans and a state tax levy of 19-60 mill tax, as provided by sec. 406a, W. S., Chap. 170, Laws of 1899, makes the appropriation in such sections specific in amount. By the provisions of section 394, Wisconsin Statutes, this entire fund is placed at the disposal of the Board of Regents of Normal Schools, by transfer to the treasurer of said board and the detailed record of expenditures is kept separate and distinct from the accounts of the state.

The receipts and disbursements during the last two years have been as follows:

RECEIPTS.

	1899.	1900.
Tax, sec. 406a and chap. 170, laws 1899..	\$190,000 00	\$190,000 00

	<u>\$287,579 82</u>	<u>\$337,689 69</u>

Drainage Fund.

DRAINAGE FUND.

This fund consists of one-half the proceeds of sales of all swamp and overflowed lands received by the state from the United States, and is distributed on the 30th day of September, under the provisions of sections 251a and 254, Wisconsin Statutes, among several counties wherein such lands lie, in proportion to the amount of sales in the respective counties. The moneys so paid are then apportioned by the county clerks to the several towns in their respective counties and are expended under direction of the town board in draining and reclaiming the swamp lands in such town, and in constructing roads and bridges over such swamp lands. The number of acres of unsold land is included in Normal School Fund.

The cash receipts and disbursements during the last two years have been as follows:

RECEIPTS.

R. R. Farm Mortgage Co., and Allotment Fund.

WISCONSIN RAILROAD FARM MORTGAGE LAND COMPANY.

Chapter 235, laws of 1882, authorizes the Commissioners of the Wisconsin Railroad Farm Mortgage Land Company to close up the business of said corporation, and to turn over and to pay to the State Treasurer all its money and bank accounts, and to take a receipt therefor, and at the same time to make its report in writing to the Secretary of State, of its proceedings under this act. Accordingly the said commissioners paid the sum of \$8,935.09 into the Treasury, and deposited with the Secretary of State, the books, together with a list of claimants to whom dividends are yet due, with the amount set opposite their respective names.

Balance September 30th, 1899.....	\$4,446 64
Balance September 30th, 1900	<u>\$4,446 64</u>

ALLOTMENT FUND.

Section 3, of chapter 190, general laws 1862, directed the State Treasurer to receive such sums of money as might be placed in his hands by any volunteer making an allotment, as provided by the act of congress, approved December 24, 1861, and dispose of the same according to the order and direction of such volunteer. This fund consists of moneys so received by the State Treasurer and yet unclaimed by the beneficiaries named by the volunteers.

There having been no payments made from the fund during the year, the account stands as follows:

Details of Report.

DETAILS OF REPORT.

For the purpose of easy reference, the full financial details required by law and such tabular statistics as may be deemed of interest, are classified as follows:

"A"

Includes detailed statements of the receipts and disbursements of the several funds belonging to the state for the years 1899 and 1900.

"B"

Under "B" the valuation of taxable property of the several counties of the state, as determined by the State Board of Assessment for the years 1899 and 1900, and the apportionment of the state tax and special charges for said years are given.

"C"

Abstract of the assessment rolls of the several counties as returned to this department for the years 1898 and 1899, showing the average assessed value of live stock and real estate by counties, and the total assessed value of all property in the state. The relative value of real and personal property as fixed by the State Board of Assessment for 1899 and 1900 is included in the abstract.

"D"

Valuation of property in the different counties in the state as fixed by the county board of supervisors and town assessors, and the amount of state, county, town, city and village taxes levied in 1898 and 1899.

"E"

Statement showing for what purpose the county tax was expended in the several counties for the years ending December 31, 1898 and 1899.

"F"

Statement showing all indebtedness of towns, cities, villages and school districts, December 31, 1898 and 1899.

"G"

Statement showing all indebtedness of the several counties, December 31, 1898 and 1899.

Details of Report.

"H"

Statement of the principal farm products grown in 1897 and 1898, and 1899, and statement of the principal farm products growing at the time of making the annual assessment for the years 1898, 1899 and 1900.

"I"

Report of agricultural societies for 1898 and 1899.

"J"

Abstracts of marriages, births and deaths reported to this department during the two years.

"K"

Statement showing amount of taxes collected upon legacies, according to ch. 355, laws of 1899, to Sept. 30, 1900, inclusive.

"L"

Statement showing all taxes levied for the year 1899, and all the bonded and other indebtedness, in towns, cities and villages, totaled by counties.

"M"

Statement showing returns of exempt property by assessors, as required by section 1012, Wisconsin Statutes.

"A"—General Fund Receipts for 1899.

APPENDIX "A."

DETAILED STATEMENT

OF THE

Receipts and Disbursements of the Several Funds

For the Fiscal Year Ending September 30, 1899.

Report of the Commissioners of Public Printing.

REPORT

OF THE

Commissioners of Public Printing

DEPARTMENT OF STATE, Oct. 1, 1900.

To His Excellency, EDWARD SCOFIELD,
Governor of the State of Wisconsin.

Sir:—In accordance with the provisions of Section 355 of Chapter 20, of the Wisconsin Statutes of 1898, we beg leave to submit our biennial report for the fiscal period ending September 30, 1900.

The total amounts paid for publishing and advertising are as follows:

Publishing general laws in newspapers	\$50,700 00
Publishing local laws in newspapers	204 75
Advertising sales of land	516 45
Miscellaneous publishing, advertising, etc.	1,462 49
Publishing laws in state paper	1,951 80
Totals	\$54,835 49

During the period above mentioned, the Secretary of State installed a new method of keeping the accounts of the state with the state printer. By this system we are able to present below a detailed statement of the public printing for the two years comprising the biennial period without referring to the general books of account in the Department of State. The orders issued for printing, together with a sample of each job, will be found on file in the Department of State. The following tables show the amount of money paid to the state printer for printing, the cost of the paper furnished by the state and the total cost for each Department of the state government which has had printing during the period. To the total cost of paper has been added the cost of waste allowed by law:

Report of the Commissioners of Public Printing.

In accordance with the provisions of Section 297 of the Wisconsin Statutes of 1898, we issued advertisements during the first week in June, 1900, for proposals for doing the state printing. July 14, 1900, at 12 o'clock noon was the time set in said advertisement for opening the bids. The following bids were opened and read at that hour:

Bidders:	Per centum discount from maximum price.
Democrat Printing Co., Madison.....	73 $\frac{1}{3}$
M. J. Cantwell, Madison.....	58

The Democrat Printing Company having bid the greatest discount the contract was awarded to it. The only material difference between this last contract and that of previous years is a clause relative to waste, provision for which is made in Section 313 of the Statutes. Heretofore waste has been allowed at the actual percentages mentioned in the Statutes. The clause in the contract is based upon an opinion of the Attorney General to the effect that the printers could charge only for the actual wastage and not arbitrarily the five and ten per cent. mentioned in the Statutes, unless the actual wastage reached these percentages. This clause will undoubtedly result to a considerable saving to the state, and together with the very large percentage of discount bid by the Democrat Printing Company, makes a very desirable and satisfactory contract for the state. The contract made empowers said company to do all the letter press printing, binding, ruling, blank books, (including stock for binding), authorized or required by the Legislature for its use or the use of the state in all its Departments, for the term of two years from January 1, 1901, in accordance with the provisions of Chapter 20, of the Wisconsin Statutes of 1898, and all other existing statutes or laws of the state relating to public printing. The said company also furnished the bond required by Statute. This together with the contract is on file in the Department of State.

During the past two years there has been expended for paper \$12,730.87, of this \$12,644.87 was for paper of the first class and \$86.00 for that of the second class.

Owing to the extremely high prices in the paper market during the fall of 1899 and the spring of 1900, together with the fact that the supply of paper on hand, was about sufficient for the needs of the state, we did not advertise for proposals for a new supply until August 21, 1900. We believed that the unsettled conditions of the markets would cause a falling off in the demand and a consequent break in price. This view was borne out by the fact and by the date for opening bids, September 18, 1900, there was a material reduction in the price of all grades of paper. In drawing the specifications for proposals, a new departure was made by the insertion of a clause com-

Report of the Commissioners of Public Printing.

selling bidders to file with their bid a sample quire of the stock they intended to furnish the state if they were awarded the contract. This provision applied only to such papers in which no water-mark could be specified. By this means the Commissioners were able to see just what stock the state would get before they awarded the contract, besides affording a comparison with the state sample and the sample of the bidder, before the entire quantity of stock had been shipped and placed in the Capitol. These samples were given a rigid inspection and test and the contracts were let to those parties who furnished the most desirable sample of paper compatible with the prices bid. The following table presents a comprehensive view of the bids, together with the prices on the several different samples submitted by the bidders:

Bids received on paper of the first class.

Commissioners of Public Printing.

Report of Superintendent of Public Property.

ANNUAL REPORT

OF THE

Superintendent of Public Property

For the fiscal year ending September 30, 1899.

MADISON, Wisconsin, September 30, 1899.

To the Honorable EDWARD SCOFIELD, Governor:

In compliance with law I herewith submit my annual report, covering the transactions of the Department of Public Property for the fiscal year ending September 30, 1899. As the report shows, the total expense of the Department for the past year is some six thousand dollars more than for the preceding year. This condition was to be expected because of the many and necessary improvements made in the Capitol building and the Executive residence, and the grounds adjacent to each. New closets and plumbing were put in the Capitol building in the basement and on the Assembly floor at an expense of \$2,500. A new cement gutter was constructed around the Capitol park, \$1,825 of the cost of which being chargeable to the past fiscal year. New furniture has been placed in several of the offices in the Capitol to the amount in round numbers of \$2,300, as compared with \$700 last year. Almost the entire east side of the park has been graded and resodded, as was the entire strip all around the park lying between the sidewalk and gutter. This was done at great cost, but, in the judgment of all who have examined the work, the results warranted the expenditure. New hardwood floors have been placed in several of the rooms in the Capitol building, and other improvements made which rendered necessary an expenditure for lumber the past year of more than double that of the year preceding. Improvements have been made at the Executive residence which adds 50 per cent. to its appearance, and greatly to its attractiveness as a home.

Legislative years, in this Department, are always more expensive than off years, but it is gratifying to me to be able to report that the expense of conducting the Department the past year has been more than \$2,500 less than the Legislative year of two years ago.

Report of Superintendent of Public Property.

The following is a summary of the

STATIONERY ACCOUNT.

Stock on hand October 1st, 1898, as per Exhibit "A"	\$3,316 65	
Amount of stationery purchased during the year, as per Exhibit "B"	3,921 57	
Stationery disbursed during the year, as per Exhibit "C"		\$4,071 26
Stationery on hand October 1st, 1899, as per Exhibit "D"		3,166 96
	<u>\$7,238 22</u>	<u>\$7,238 22</u>

The amount received by the Department during the past year for books sold, amounted in the aggregate to \$626.60, and for condemned property, \$25, which said amounts have been paid to the State Treasurer by me and his receipts taken therefor.

The Department also received from the several insurance companies in which the Capitol Building is insured \$100.87, being the amount of loss as adjusted, occasioned by the fire in the engine room of the building, which took place on the morning of June 18th, 1899. This amount has been paid to the State Treasurer, and I hold his receipt for same.

EXHIBITS.

Exhibit "A" herewith, shows the stock of stationery on hand October 1st, 1898; Exhibit "B," the amount of stationery purchased during the year; Exhibit "C," the stationery disbursed during the year; Exhibit "D," the amount of stationery on hand October 1st, 1899; Exhibit "E," the expenditures of the department during the year other than stationery; Exhibit "F," the expenditures at the Executive residence during the year; Exhibit "G," the books on hand October 1st, 1898; Exhibit "H," the books received from October 1st, 1898 to October 1st, 1899; Exhibit "I" the books distributed during the year; Exhibit "K," the books sold during the year; Exhibit "L," the condemned property sold during the year; Exhibit "M," the books on hand October 1st, 1899; Exhibit "N," the damaged books on hand.

Report of Superintendent of Public Property.

ANNUAL REPORT

OF THE

Superintendent of Public Property*For the fiscal year ending September 30, 1900.*

MADISON, Wisconsin, October 1st, 1900.

To His Excellency EDWARD SCOFIELD, Governor of Wisconsin:

In compliance with the provisions of section 291 of the Wisconsin Statutes of 1898, I herewith submit my report of the transactions of the Department of Public Property for the year ending September 30, 1900.

The disbursements of the Department for all purposes, other than stationery, during the year, amounted in the aggregate to \$83,812.85. This is \$3,735.81 less than the expenditures for the year preceding, but \$2,432.87 more than for the corresponding year of 1898. The enhanced price of fuel in 1899 accounts for nearly \$900.00 of this sum, and premiums paid on insurance more than covers the balance.

April 16, 1900, the insurance on the Executive residence and contents, and the barn and summer house for \$15,000.00 was renewed for a period of five years, and of the full premium paid (\$90.00) less than \$11.00 is properly chargeable to this year's expense account.

June 1, 1900, the insurance of \$500,000.00 on the Capitol building was renewed for three years, and an additional \$100,000.00 of insurance taken out upon the contents of the building, the premium paid, after deducting \$111.00 rebate on unearned insurance, amounting to \$2,289.00. Of this amount only \$254.34 is properly chargeable to the year,—entitling the Department to a credit on the premium paid on both buildings of \$2,113.66.

The extraordinary expenses of the Department for the year have been quite large, but the expenditures were deemed absolutely necessary, and include such items as cement gutters, \$400.00; trees for park, \$500.00; iron settees for park, \$216.00; coil for ventilation of chambers, \$500.00; carpets, etc., for different offices, \$1,958.50; steel vault fixtures, \$2,581.50; insurance, \$2,289.00; new furniture, \$225.00; drinking fountain in park, \$200.00.

Report of Superintendent of Public Property.

It is gratifying to be able to state that the general expenses of the Department for the four years ending September 30, 1900 (excluding all special appropriations made by the Legislature in each case and the \$2,113.66 unearned insurance) have been \$29,102.94 less than they were for the four years ending September 30, 1896.

The disbursements of stationery to the different departments entitled to receive it during the year amounted in the aggregate to \$2,638.23. The disbursements of stationery for the four years ending September 30, 1896, amounted to \$18,285.92; while the stationery disbursed for the four years ending September 30, 1900, only footed up the sum of \$14,248.33, making a difference in favor of the four years ending September 30, 1900, over the four years ending September 30, 1896, of \$4,037.59. This added to the \$29,102.94 reduction in the general expense account for the quadrennial period shows that the Department has been conducted at an expenditure of \$33,140.53 less during the past four years than for the four years next preceding.

The following is a summary of the stationery account for the year:

STATIONERY ACCOUNT.

Stock on hand October 1st, 1899, as per Exhibit "A"	\$3,166 96	
Amount of stationery purchased during the year, as per Exhibit "B"	3,388 53	
Stationery disbursed during the year, as per Exhibit "C"		\$2,638 23
Stationery on hand October 1st, 1900, as per Exhibit "D"		3,917 26
	<hr/>	<hr/>
	\$6,555 49	\$6,555 49

There was received by the Department during the year for books sold, \$352.40; and for condemned property sold, made up of the following items: One Remington typewriter, \$30.00; one lot old flooring, \$8.80; one old safe, \$15.00; total, \$53.80. These several amounts have been paid to the State Treasurer and his receipt taken therefor.

About September 20, 1900, this Department was notified that the new system of bookkeeping would go into effect October 1st, 1900. To comply with the requirements of this system it is necessary to make a careful inventory of all the personal property in the Capitol building and Executive residence, and give a specific value to each article. To do this will take long time and an immense amount of labor. I am now engaged on this work and hope to have the inventory complete before January 1, 1901, and in case I succeed in completing same I will file a supplementary report, giving the inventory in detail.

EXHIBITS.

Exhibit "A" shows the stock of stationery on hand October 1st, 1899; Exhibit "B," the amount of stationery purchased during the year; Ex

BIENNIAL REPORT

OF THE

STATE TREASURER

OF THE

STATE OF WISCONSIN

FOR THE TWO FISCAL YEARS ENDING SEPTEMBER 30, 1900

MADISON
DEMOCRAT PRINTING COMPANY, STATE PRINTER
1900

STATE OF WISCONSIN.

Report of the State Treasurer.

STATE OF WISCONSIN,
Treasury Department.

MADISON, Oct. 10, 1900.

To His Excellency, EDWARD SCOFIELD,
Governor of the State of Wisconsin.

SIR: In accordance with the requirements of law, I have the honor respectfully to submit herewith the biennial report of the receipts and disbursements of this office during the fiscal years ending September 30th, 1899 and 1900, exhibiting a complete statement of the financial transactions of this Department, together with a statement in detail of the condition and the operations of the state and private banks during the same fiscal years.

I desire to call your attention to several changes that were made by the Laws of 1899 for the time of the payment into the state treasury of license fees by railway companies and state taxes by county treasurers. Sections 2 and 4, of Chapter 308, of the Laws of 1899, extended the time for the making of reports of railroad companies and also the time for the payment of the license fees of said companies from February 10th to March 10th; and Section 8, of Chapter 335, of the Laws of 1899, extended the time of settlement for state taxes by county treasurers from the first to the third Monday in February in each year. As these are the important sources of revenue of the state treasury, these extensions seriously embarrass the general fund at a time when large sums are needed to meet the

General Report.

legislative and other expenses that usually occur at the beginning of the year. I would respectfully suggest, therefore, that the legislature be called upon to repeal these sections, so that the state taxes and the license fees of railroad companies shall be payable as in former years not later than the first Monday and the 10th day of February respectively in each year.

Your attention is also respectfully called to Section 1216, Wisconsin Statutes of 1898, which requires the State Treasurer to issue licenses to telegraph companies upon the receipt of their report. Payment of the license fees, however, is not required until the first day of June each year. In consequence of this telegraph companies are licensed to do business before the payment of their license fees. There is no valid reason why telegraph companies should not make their reports and pay the license fees as telephone companies are required to do by Section 1222a of the Wisconsin Statutes of 1898, and I respectfully suggest that the legislature be called upon to amend said section 1216, so that these companies will be placed exactly on the same footing.

I am sir, very respectfully,

J. O. DAVIDSON,

State Treasurer.

Balance Sheet.

BALANCE SHEET.

The balances to the credit of the several funds Sept. 30, 1899, were as follows:

General fund	\$363,391 85
School fund	212,430 87
School fund income	165,577 38

RECEIPTS AND DISBURSEMENTS IN DETAIL.

GENERAL FUND.

This fund embraces all the revenues of the state applicable to the payment of the ordinary expenses of the State government.

The sources from which it is derived are from the annual tax levied for the support of Free High Schools, Hospitals for the insane and Industrial School for Boys. A special levy for the establishment of manual training departments in connection with High Schools; also tax on civil actions, license on railroad companies, plank road companies, street railways, telephone companies, insurance companies, trust companies, boom companies, hawkers and peddlers, notary and office fees, sales of books, laws and reports, amortization of interest on deposit with Bank Depositories, and United States appropriation for the Wisconsin Veterans's Home.

The expenditures therefrom are authorized by permanent and temporary appropriations and by the several laws requiring the Secretary of State to audit accounts.

The receipts and disbursements have been as follows:

ANNUAL TAX.

The tax collected from the several counties for the above purposes during the fiscal years ending September 30, 1899, and September 30, 1900, is as follows:

	Oct. 1, 1898, to Sept. 30, 1899.	Oct. 1, 1899, to Sept. 30, 1900.

School Fund.

SCHOOL FUND.

The School Fund is composed of:

1. Proceeds of land granted by the United States for support of schools.
2. All money accruing to the state by forfeiture or escheat.
3. All penalties for trespass on school lands.
4. All fines collected in the several counties for the breaches of penal laws.
5. All funds paid as an exemption from military duty.
6. Five per cent. of net proceeds of sale of United States public lands.
7. Interest on deposits from state depositories.

School Fund Income.

SCHOOL FUND INCOME.

The interest received on school fund investments, on the principal due for sales of school lands and on moneys belonging to the School Fund Income on deposit in Bank Depositories and the mill tax (Sec. 1072a, W. S.) constitute the School Fund Income.

All moneys received in this fund are apportioned to the different counties in accordance with Sec. 1072a, W. S. The apportionment, which is for the use of the common schools, is made according to the number of children in each town, village and city over the age of four and under the age of twenty years, as shown by the report of the State Superintendent during the year preceding. The receipts and disbursements during the last two years have been as follows:

RECEIPTS.

	Oct. 1, 1898, to Sept. 30, 1899.	Oct. 1, 1899, to Sept. 30, 1900.
One mill tax	\$600,000 00	\$625,000 00
Interest on certificates of indebtedness	109,459 00	109,459 00
Interest on land contracts	16,599 13	16,510 63
Interest on funds in banks	2,428 55	2,875 95

University Fund Income.

UNIVERSITY FUND INCOME.

This fund is derived from the annual tax levy authorized by section 390 of the Wisconsin Statutes, which is 17-40 mill on all assessable property in the state; and from the interest on university land certificates, loans and apportionment of funds with Bank Depositories—one-half of one per cent. of railroad and other license tax. United States Appropriation for Agricultural Experimental Station and College of Agriculture and Mechanical Arts, state appropriation for College of Engineering and Dairy building, tuition fees, rents, etc. This entire fund is placed at the disposal of the Board of Regents by the transfer to the treasurer of said board, and the detailed record of its expenditures is kept by said treasurer distinct and independent of the accounts of the state.

The receipts and disbursements during the last two years have been as follows:

RECEIPTS.

Drainage Fund.

DRAINAGE FUND.

This fund consists of one-half the proceeds of sales of all swamp and overflowed lands received by the state from the United States, and one-half of the amount received from the sale of indemnity lands, chapter 340, laws of 1889, and is distributed on the first Monday of October among the several counties, wherein such lands lie, in proportion to the amount of sales in the respective counties. The moneys so paid are then apportioned by the county clerks to the several towns in their respective counties, and are expended under direction of the town board in draining and reclaiming the swamp lands in such town, and in constructing roads and bridges over such swamp lands. The number of acres of unsold land is included in the Normal School Fund. The cash receipts and disbursements during the last year have been as follows:

RECEIPTS.

	Oct. 1, 1898, to Sept. 30, 1899,	Oct. 1, 1899, to Sept. 30, 1900.

Miscellaneous Funds.

ST. CROIX & LAKE SUPERIOR R. R. DEPOSIT FUND.

This fund consists of moneys received by the State Treasurer in trust, under the provisions of section 14, chapter 126, laws of 1874, as amended by chapter 392, laws of 1876. The time for proving settlement upon and thereby acquiring title to the railroad lands in said acts described, having expired in April, 1877.

Balance Sept. 30, 1898	\$408 02
Disbursements, 1899	\$408 02
	<u>\$408 02</u>	<u>\$408 02</u>

WISCONSIN RAILROAD FARM MORTGAGE LAND COMPANY.

Under chapter 135, laws 1882, the commissioners of the Wisconsin Railroad Farm Mortgage Land Company turned over and paid all the money in their hands to the State Treasurer who, with the Secretary of State, under the above named act are to close up business of said company.

There has been no business transacted in this fund the past two years.

Balance Sept. 30, 1898	\$4,446 64
Balance Sept. 30, 1900	\$4,446 64
	<u>\$4,446 64</u>	<u>\$4,446 64</u>

INDEMNITY LAND FUND.

The proceeds of land sold for indemnifying the State of Wisconsin for swamp lands sold by the United States. The number of acres of land unsold is 27,420.52. The cash receipts and disbursements during the last two years have been as follows:

RECEIPTS.

Sale of land, 1899	\$5,056 08
--------------------------	------------	-------

DISBURSEMENTS.

Transferred to Normal School Fund, 1899	\$2,528 04
Transferred to Drainage Fund, 1899.....	2,528 04
	<u>\$5,056 08</u>	<u>\$5,056 08</u>

Miscellaneous Funds.

ALLOTMENT FUND.

Section 3 of chapter 190, general laws 1862, directed the State Treasurer to receive such sums of money as might be placed in his hands by any volunteer making an allotment, as provided by act of congress, approved December 24, 1861, and dispose of the same according to the order and direction of such volunteer. This fund consists of moneys so received by the State Treasurer and yet unclaimed by the beneficiaries named by the volunteers. There have been no payments made from the fund during two years. The account stands as follows:

Balance Oct. 1, 1898	\$916 54
Balance Oct. 1, 1900	916 54
	<u> </u>

CALUMET AND MANITOWOC COUNTY INDEMNITY FUND.

(Chap. 352, Laws 1883.)

Balance Oct. 1, 1900	\$41 86
Receipts for 1899	104 27
Receipts for 1900	138 32
	<u> </u>
Total	\$284 45
	<u> </u>

WARD & SMITH FUND (SPECIAL).

The fund consists of the money left by legacies for the orphans of soldiers, and is paid to said orphans on their becoming of age. There have been no transactions during the two years.

Balance Oct. 1, 1898	\$1,111 43
Balance Sept. 30, 1900	1,111 43
	<u> </u>

COLUMBIA AND SAUK INDEMNITY FUND.

This fund was created by chapter 90, laws of 1885. The transactions during the two years were as follows:

Balance October 1, 1898	\$4,462 81	
Receipts for the year 1899	110 95	
Disbursement, 1900		\$4,573 76
	<u> </u>	<u> </u>
	\$4,573 76	\$4,573 76
	<u> </u>	<u> </u>

MENOMONIE INDIAN RESERVATION TRESPASS FUND.

Receipts, 1899	\$9,548 10
	<u> </u>

OFFICE OF STATE TREASURER,

MADISON, WIS., July 21, 1900.

I hereby certify that the foregoing statement is an abstract of the semi-annual reports made to this office by the state banks as far as it was practicable to arrange the items under general heads, in pursuance of the provisions of the 41st section of the act entitled "An act to authorize the business of banking," approved April 19, 1852.

JAMES O. DAVIDSON,

State Treasurer.

NINTH BIENNIAL REPORT

OF THE

STATE SUPERINTENDENT.

DECEMBER 1, 1900.

To the Legislature of Wisconsin:

The close of the biennial period in the administration of state affairs is made by law the occasion of submitting to your honorable body a report by the state superintendent, setting forth the condition of the public school system of the state and the development of educational interests during that period.

I take pleasure in submitting herewith my report for the biennial period ending June 30, 1900, through his Excellency, the governor of the state.

In addition to the general range of statistical matter presented in the biennial reports from this office, some additional tables have been incorporated, which will I trust prove interesting. I would call your attention especially to tables A, B, C, D, and E. A considerable portion of the report proper is devoted to a consideration of the country school problem, under the belief that that problem is the most serious one in educational matters confronting the people of the state and your honorable body as representatives of the people.

During my administration every county in the state has been visited, either by myself or representatives from the office in the interests of educational matters. In a large number of the counties several visits have been made, the 219 high schools of

General Report.

the state have been inspected, as well as most of the 166 institutes held during the two years. During the winter of 1899-1900 the state superintendent attended a considerable number of the farmers' institutes and addressed those in attendance on the subject of the rural schools. Other addresses have been given at county, state and national teachers' associations, and efforts put forth through an extended correspondence with school officers, principals and superintendents, for the purpose of arousing public interest in educational affairs, and securing a better organization of work, and compliance with the laws of the state.

I wish to make acknowledgment here of the hearty co-operation this office has received from all classes of officers and workers in educational work in the state. I believe that at no time in the history of the state has there been a more intelligent interest in educational affairs than at the present time. The number of important educational problems which are pressing for solution makes desirable a still further development of this interest until it shall reach not only all who are officially connected with the educational system of the state, but every man and woman as well. This result cannot be attained without continuous, persistent, and systematic agitation and organization.

The state has organized the public school system not as an act of charity, not for the benefit of the individual, but for the well being of the state itself. Upon this ground alone can there be found a justification for public taxation for educational purposes. It is therefore my belief that it is the business of officials connected with the state organization of public schools, and of every good citizen, to do whatever may be done to inform themselves concerning educational affairs, and to call the attention of every other citizen to the need for, and means of, improvement of the system of public education. Every possible effort to that end has been put forth during the present administration by

Statistical Tables.

every person connected with the department. If the force were larger much more could be done.

With the hope that you will be able to gather from the within pages something that will be of interest and value, this biennial report is respectfully submitted.

L. D. HARVEY,
State Superintendent.

GENERAL SUMMARY.

CENSUS.	1897-98.	1898-99.	1899-1900.	During biennial period from June 30, 1898, to June 30, 1900.

GENERAL SUMMARY.—Continued.

CENSUS.	1897-98.	1898-99.	1899-1900.	During biennial period from June 30, 1898, to June 30, 1900.	
				Decrease.	Increase.
TEACHERS' QUALIFICATIONS.					
Number of normal teachers employed, graduates in counties.....	369	551	745		376
Number of normal teachers employed, undergraduates in counties.....	1,785	1,611	1,399	386	
Number of teachers holding state certificates, in counties.....	447	444	533		86
First grade certificates granted:					
By county superintendents.....	457	528	457		
By city superintendents.....	105	95	175		70
Second grade certificates granted:					
By county superintendents.....	1,630	1,847	1,636		6
By city superintendents.....	235	158	161	74	
Third grade certificates granted:					
By county superintendents.....	5,946	5,645	5,310	636	
By city superintendents.....	472	428	459	13	
Certificates limited to less than one year, in counties.....	621	458	645		24
Total number of certificates granted.	8,033	8,731	8,843		810
Applicants refused certificates:					
By county superintendents.....	2,466	2,199	1,785	681	

SUMMARY OF FREE HIGH SCHOOLS.

FOUR YEARS COURSE.	1897-98.	1898-99.	1899-1900.	DURING BIENNIAL PERIOD FROM JUNE 30, 1898, TO JUNE 30, 1900.	
				Decrease.	Increase.
Number of such schools.....	152	153	163		11
Number of teachers employed.....	492	539	591		99
Number of pupils under 20 enrolled.....	13,693	14,688	15,152		1,459
Number of pupils over 20 enrolled.....	286	234	241	45	
Number of pupils in English branches only.....	6,934	7,497	8,461		1,527
Number of pupils in German.....	3,620	3,763	3,838		218
Number of pupils in Latin.....	3,544	3,802	3,764		220
Number of pupils in Greek.....	50	55	70		20
Number of graduates this year.....	1,748	2,438	2,023		275
Number of graduates since organization.....	16,500	18,938	20,951		4,451
Number of non-resident pupils enrolled.....	2,565	2,730	2,797		232
Average salary of assistants.....	\$513 00	\$492 95	\$506 90	\$6 10	
Average salary of principals.....	1,235 00	1,113 25	1,105 25	127 75	
Number of principals with salary \$1,000 or over.....	106	99	105		1
Number of female principals.....	3	4	3		
Number of schools with average attendance less than 25.....	31	4	4		1

GENERAL SURVEY.

To the general summary of statistics for the two years 1898-'99, 1899-'00 has been added a summary of statistics for the year 1897-'98, taken from the biennial report of that year. These statistics have been added for the purpose of making a comparison of conditions at the close of the year ending June 30, 1900, with the conditions existing at the close of the year ending June 30, 1898. Columns have also been added showing increase and decrease in various items. In order to present certain matters which have not heretofore been set forth in the biennial report, but which seem to be of importance, and matters of information, five new tables have been added.

TABLE A.

Enrollment of pupils classified in counties, not including cities having superintendents, for the year ending June 30, 1900.

Counties.	No. schools in counties having an average daily attendance not exceeding 10.	Less than 5.	No. schools in counties enrolling more than 5 and less than 11 pupils.	More than 10 and less than 16.	More than 15 and less than 21.	More than 20 and less than 25.	More than 25 and less than 31.	More than 30 and less than 36.	More than 35 and less than 41.	More than 40 and less than 46.	More than 45 and less than 51.	More than 50 and less than 56.	More than 55 and less than 61.	More than 60.

General Report.

Table A furnishes a classification of enrollment in counties, not including cities having superintendents. From this table it appears that there are

- 21 schools in the state with a total enrollment of less than 5,
- 203 schools in the state with a total enrollment between 5 and 11,
- 383 schools in the state with an enrollment between 10 and 16,
- 1,272 schools in the state with an enrollment between 15 and 21,
- 720 schools in the state with an enrollment between 20 and 26,
- 848 schools in the state with an enrollment between 25 and 31,
- 860 schools in the state with an enrollment between 30 and 36,
- 734 schools in the state with an enrollment between 35 and 41,
- 638 schools in the state with an enrollment between 40 and 46,
- 459 schools in the state with an enrollment between 45 and 51,
- 327 schools in the state with an enrollment between 50 and 56,
- 278 schools in the state with an enrollment between 55 and 61,
- 894 schools in the state with an enrollment more than 60.

From data furnished by county superintendents' reports, it further appears that there are 955 of these schools having an average daily attendance of not more than ten.

An examination of the table will show that these small schools are not confined to the recently settled portions of the state, but that on the contrary they are found more largely in the older portions of the state. The small schools in the northern and north-central parts of the state are due to the fact that that section is at present but sparsely settled. As the population increases most of these schools will show an increased attendance. The fact that in the newer counties the township system of organization exists will make it possible to consolidate the small schools readily, and thus obviate the evils attendant upon the maintenance of a school with a number of pupils so small that no interest, enthusiasm or emulation is developed, and will also secure better teachers than are ordinarily hired to conduct the smallest schools. In the older settled portions of the state, many of the schools which have an average attendance of less than ten at the present time, had a few years ago, an attend-

General Report.

ance two or three times as large. This result is due to changes in conditions which cannot be controlled. Similar conditions will arise in other portions of the state as time goes on, affecting the school population and also reducing the attendance from what it now is in many of the schools. The census shows that in a number of the older counties in the state, the school population is less than it was ten years ago. With practically one-sixth of the district schools having an attendance so small that good work cannot be done, and with the poorest grade of teachers employed, it is evident that something is needed to remedy this condition. It is undoubtedly true that the township system system of school organization which puts all the schools of a town under a single board comprised of the clerks of each sub-district, and gives that board authority to change the boundaries of districts, consolidate schools, and provide for the transportation of children, is the plan of organization by which the desired reform can be most readily secured. It is not, however, absolutely necessary to adopt this system of organization to remedy existing conditions, in part, at least. The law now provides that any school district may make provision for closing its schools, and sending pupils to adjoining schools, providing for the payment of tuition and for transportation of pupils by taxation. There is no question, however, but that these results can be secured more readily under the township organization, than in any other way, and the law makes provision for the change in any town from the present district organization to the township organization by a vote of the people. The advantages of the plan of consolidation of schools and transportation of pupils at public expense, are fully set forth in a paper prepared by Prof. A. A. Upham, of the Whitewater Normal School, and read before the State Teachers' Association at its session in 1899. The clear and full statements contained in that paper and the importance of the subject treated therein, warrant its publication in this report, and the attention of those interested in the subject is invited to it.

Transportation of Pupils at Public Expense.

TRANSPORTATION OF RURAL SCHOOL CHILDREN AT PUBLIC EXPENSE.

By Prof. A. A. UPHAM, State Normal School, Whitewater, Wis.

The decline of the rural school and the consequent need of consolidation have been the subject of much investigation. It is well known that all over the country the migration of population has been towards the cities so that while at the beginning of the century 96 per cent. of the population lived in the country, at the end less than 70 per cent. were left.

In the last 35 years the rural population of New York has decreased one-third. Of the 11,000 school districts nearly three thousand, or more than one-fourth, have six pupils or less, and two-thirds have less than 21. Vermont has 153 schools with less than 7 pupils each. Maine has 1,000 with less than 13 pupils each. Wisconsin has 183 with less than 6; 858 others with less than 11; with a total of 3,222 with less than 21 each.

The new conditions demand new adjustments. The adjustment suggested is transportation of rural school pupils at public expense. It is the purpose of this paper to show what the different states are doing and the results of their experiments. To this end I have solicited information from the State Superintendents of all the states and territories, from many of the County Superintendents and township trustees, from patrons whose children were transported, from the drivers of the teams, from the Principals of the central schools, and from the transported children.

From the reports received it appears that eighteen states have a law allowing the transportation of pupils at public expense, and thirteen are availing themselves of the privilege. The following is the list:

Connecticut,	Massachusetts,	Ohio,
Florida,	Nebraska,	Pennsylvania,
Indiana,	New Hampshire,	Rhode Island,
Iowa,	New Jersey,	South Dakota,
Kansas,	New York,	Vermont,
Maine,	North Dakota,	Wisconsin.

These states have nearly half the population of the United States.

In Maine the committee may transport or pay the board of pupils at a suitable place near any established school. Maine has 1,000 schools averaging less than 13 pupils each. "The fact that school districts have been abolished or that the school committee has suspended schools does not necessarily entitle public school children to conveyance."

New Hampshire and Vermont have laws which allow the use of not more than 25 per cent. of the school money for transportation purposes, and in Vermont this may be done, on a written application from ten resident tax payers, to transport scholars who reside more than one and one-half miles from the school house. The popularity of the movement in Vermont may be judged from the State Superintendent's report that "Within the past ten years the amount expended for transportation has increased over 400 per cent."

The condition of the rural schools and the matter of transportation in Massachusetts is the subject of a special report by G. T. Fletcher, agent of the Massachusetts Board of Education. From this we learn that

Transportation of Pupils at Public Expense.

Massachusetts enacted a law in 1869 providing for the conveyance of pupils to and from public schools. The first town to take advantage of this was Quincy—closing two schools in 1874.

In 1889 Agents G. A. Walton found that the cost of educating pupils in some *small* schools was \$50.00 each, while in schools of 25 pupils, the cost was \$10.00 each.

The growth of conveyance in Massachusetts is shown by the increased expenditure, \$22,000 in 1889-90; \$30,000 in 1890-91; \$50,000 in 1892-93; \$91,000 in 1895-96; \$123,000 in 1897-98, and \$124,409 in 1898-99.

To ascertain the state of feeling in Massachusetts, Agent Fletcher in preparing his report sent circulars of inquiry to each city and town in the state. About 200 replies were received representing all the different conditions. From this report I select a few points. More than 50 per cent. of the towns report changes in population affecting school conditions.

One town reports cost of schooling in small school \$46.82 per year, \$16.30 in central building. One district formerly had 60 to 80 pupils, now 13. Many towns have gained in the villages as much as they have lost in the country. "Within ten years 229 towns have practically abandoned the old fashioned district school and in its place have established central graded schools."

One Superintendent reports favorable results after 18 years of trial. Less sickness among transported children, and a saving of \$600 annually. Sixty per cent. of the towns raise money by specific appropriation, separate from the regular school fund; 40 per cent. make the regular school tax cover the cost of conveyance. "Fifty per cent. convey the whole distance, in the other towns the children walk to some designated point, except in some cases the carriage goes to each home in stormy weather. In some cases conveyance is furnished only in winter or stormy weather. Sometimes the children are conveyed to school but not from it except in stormy weather."

As to what is to be construed as a reasonable distance there is much difference of opinion. Age, strength, sex, nature of the road, amount of money, and disposition of the committee seem to be determining factors.

The weight of opinion in the Massachusetts report is decidedly in favor of consolidation and transportation. Frank A. Hill, Secretary of the Massachusetts Board of Education, in a letter dated Nov. 15th says: "The increase from \$22,000 ten years ago to \$127,000 at the present time measures, I think, in a trustworthy way the growth of the policy of consolidating public schools in our rural towns and transporting children to stronger central schools."

Rhode Island has a law, and is transporting. Emphasis is here laid upon the increased attendance: two schools having together graduated ten pupils in two years, and after consolidation, 16 pupils in one year, an increase of over 300 per cent. in the number of those who remained through the upper grades.

In Connecticut the law authorizes the school visitors to close small schools and unite them with the schools of adjoining districts. The Connecticut report for 1899 gives the number of schools closed as 84. Number of children transported, 849. Approximate cost, \$12,000. The children are mostly conveyed the whole distance. Sometimes they gather at the old schoolhouse, or at some convenient point from which the team starts. In some cases all who live more than a mile away, or some other fixed distance, are carried without regard to distance. Sometimes the town owns the vehicle and hires the driver. In one town a sum per day, depending upon attendance, was paid to parents. In one town

Transportation of Pupils at Public Expense.

\$20.00 per term, for each family or group of children, was allowed and deduction made for absence. It was noticed that the attendance was good in such cases. The expense is less than the cost of maintaining schools. One town expending \$292.00, effects a saving of \$300.00 yearly. The vehicles are covered and made comfortable by blankets and rugs. In all cases emphasis is laid upon the fact that the driver should be selected with much care.

In Connecticut the amount expended runs from \$10.00 per year in the town of Bozrah to \$1,380 in Windham. Ashford pays a family or group of children living two or more miles from school \$20.00 per full term. They pay the same whether the children are carried or not. Under those conditions the children become quite robust and able to walk.

In only one case in Connecticut was the cost increased. The report says: "Transportation is a success."

New York has a law, and in 1898-99 annulled 82 districts. Three hundred contracts were filed during the next year. Pupils conveyed are not enumerated separately, so there are no statistics showing number of pupils conveyed. Contracts were first made in 1896. Twenty-seven in all. The increase to over 300 last year shows the system to be very popular wherever tried.

New Jersey has a law and a few districts have availed themselves of the privilege of transporting, but the sentiment in favor of it is spreading and it is probable that next year more districts will fall in line.

Pennsylvania has a law providing that transportation may be done at a cost not exceeding the cost before closing the school. Here, as in several other states, statistics on the subject do not seem to be available, the school boards not being required to specify the amount of money expended for conveyance. And from no state was it possible to obtain the number of pupils transported.

The southern states are beginning to stir in this matter. The State Superintendent of South Carolina believes in consolidation and is looking up the system.

State Superintendent J. V. Calhoun of Louisiana says: "We are advanced only so far as talking about consolidation of rural schools and transportation of pupils. We are doing something but we need to convince and then find funds."

Florida reports two counties instituting the plan of transporting children. From one of these, Citrus, I learn that they are transporting three small schools four to six miles, 20 pupils at \$1.50 per pupil per month. The plan is growing in popular favor and they expect to do more next year. A copy of the notice to bidders specifies a vehicle of sufficient capacity, necessary umbrellas, wraps, etc., to keep the children comfortable, a good and reliable horse and a driver who is trustworthy and who shall have control of all the children—said driver to be acceptable to the Board of Public Instruction, to deliver the pupils between 8 and 8:40 and return them, leaving at 4:05, and to give a \$100 bond for the faithful performance of his work. The teacher of the central school is required to make out a monthly report registering the arrival and departure for each day, dates and causes of failure, and if there is any complaint, report it promptly by letter.

Duval County, Florida, is transporting 176 pupils at \$303 per month, having closed 14 schools. They began with two schools three years ago and the plan has been very popular. Extra teachers hired cost \$448, for what had before cost \$490 per month, thus saving \$42 per month. Schools of three teachers and 8-year grades were formed. They planned later to reduce 45 schools to 15. The Superintendent says, "We furnish wagonettes carrying 8, 12 and 16 passengers, so there is no difficulty

Transportation of Pupils at Public Expense.

in getting farmers to furnish teams and harness; this is an improvement over other ways."

One of the most noted examples is found in Kingsville, Ohio, a report of which was published in the *Arena* for July, 1889. The Kingsville experiment was made possible by a special act of the legislature passed for the benefit of this one town. This bill enacted that any township which by the census of 1890 had a population of not less than 1,710, nor more than 1,715, might appropriate funds for the conveyance of pupils in sub-districts. The law was based specifically upon the rate of population of Kingsville and was so worded to gain the support of legislators from other sections of the state, who were attached to the old plan, but who would not object to the object lesson. The residents of Kingsville have realized their fondest hopes. The average attendance has much increased and better schools have been provided. Fifty pupils have been conveyed, and the annual cost of tuition has been reduced from \$22.75 to \$12.25 per pupil. The plan enabled the Kingsville school to open a new room and supply another teacher to the central school, thus reducing the number of grades in a room. The daily attendance has increased from 50 to 90 per cent., thus increasing the return from the school fund invested. Over a thousand dollars was saved in Kingsville in three years.

The law has since been made general in Ohio and is everywhere proving satisfactory. Other townships in Ohio have followed the lead of Kingsville. One county, Madison, reports a decrease of tuition from \$16.00 per year to \$10.48 on basis of total enrollment, and from \$26.06 to \$16.07 on the basis of average attendance. But the item of cost is not the most important. The larger attendance, more regular attendance, better schoolhouses, better teachers, and the greater interest and enthusiasm that numbers bring are most important.

In another Ohio place, circles are drawn around the schoolhouse one mile and two miles distant. Pupils inside the first circle receive no public aid. Pupils between the two circles receive \$1.00 per month, and pupils outside the two-mile circle receive \$3.00 per month, and furnish their own transportation.

From the State Superintendent of Indiana I received the names of six township trustees who are transporting children. The work is not yet general enough to have statistical information gathered. From these trustees I received the following information and opinions:

One trustee from Richmond reports 100 children transported from two to four miles at a cost of \$527.25, or \$5.25 per pupil. This man reports that there was at first opposition to the plan, but that now there is very little.

From Henry County, Indiana, the "Trustee" of New Lisbon reports: "We insist on the very best hack service that can be had, good wagons with springs, weather-proof top, door at rear and window to admit light, cushioned seats and back; carpet on the floor, and four heavy lap robes. Heaters could be used but we have never had occasion to use them. Good teams are essential. All our roads are graveled, and the hacks run on schedule time as closely as a railway train. I make it a point to employ the very best men I can find to drive and care for the children." This man transports about 40 children from two to four miles with two hack lines at \$3.00 a day for both. He reports that there was some opposition at first but almost none now. By this plan two schools costing together \$6.00 per day are dispensed with, so the saving is \$3.00 a day. Four-fifths of a cent a mile is the average cost of transportation.

To the patrons of this school I sent the following questions:

1st. Is your property injured by the closing of the school and trans-

Transportation of Pupils at Public Expense.

porting of the children? Most of the answers are in the negative, but two say the property is injured, though one of these says, "The system of central schools is all O. K. if properly conducted. This is the eighth year for central schools and it has been a success."

2d. Do the children suffer in health? The answers are invariably, "No."

3d. Is the close association of children in the carriages worse than when they were scattered along the road? The answers are, again, mostly, "No." One, a woman, answers that she does not think the close association so bad as along the road, if a proper person is chosen as a driver. One patron says, "The control of the children has caused us more trouble than anything else," and he suggests that the driver should make the children behave, and that the first one in should pass to the farther end of the carriage, and thus avoid stepping on toes. Perhaps, by the time the plan has been running as long as street cars, this will be done. Reports say some drivers get along very well, others do not. The same may be said of teachers. One thinks they are much better off with some one to look after them.

4th. Does the eating of cold dinners affect the question much? Answer, "No, they ate cold dinners before the schools were consolidated."

5th. Is the all-day absence from home objectionable? Answer, "This is just the same as before."

6th. What else have you to say for or against the plan— Answers to this will be given in the summary.

Other places in Indiana report as follows: Crawfordsville, transporting 10 pupils, saves \$184 annually. In another place two of seven schools have been closed. In another place 20 children are transported for \$1.45 per day. Another reports the cost of transporting 10 children two miles, \$96 for a term of six months, one-half cent a mile for the distance actually conveyed. One driver reports that he makes a 15-mile trip daily and finds no difficulty in managing the children.

In Illinois there is no law on the subject but some county superintendents are agitating the subject. O. J. Kern of Winnebago County has published in pamphlet form one of the best articles on the subject.

Wisconsin has a law that permits the use of school money to transport pupils living more than a mile and a half from school, by the nearest traveled road. But so far as can be learned there is no organized transportation of pupils, though three counties are contemplating it, viz., Kewaunee, Dane, and Rock.

The school law of Iowa authorizes the contracting with other townships or independent districts for the instruction of children who are at an unreasonable distance from their own school; and where there will be a saving of expense, or increased advantage to the children, the board may arrange for transportation of any child to and from school.

In Winnebago County the plan is conducted on the largest scale of any Iowa place.

Number of children conveyed, 49. Distance two and one-half miles.

Number of teams used, 4. Cost of team and driver, \$25.00 per month.

Number of schools closed, 4; six next year.

Plan has been in operation three years.

Estimated saving, \$486.00 per year. Two-thirds cent a mile.

Forest City transports 15 pupils at \$1.50 each per month, an average distance of 4 miles—cost, three-tenths cent per mile.

Baldwin, Iowa, transports twelve pupils one and one-half miles at an estimated saving of \$11 per month. "Pupils meet at the old schoolhouse, and are left at the old schoolhouse at night. If pupil is not on time he is left. Only one has been left and he has not missed twice.

Transportation of Pupils at Public Expense.

Result is, pupils are never tardy and attendance is very regular. There is plenty of room for pupils in town so there is no extra expense except transportation." As far as the State Superintendent knows, citizens, teachers and pupils are pleased.

There are in Iowa 233 districts or sub-districts maintaining schools with an average attendance of less than 6, and 2,500 with less than 11. Fifty-three per cent. of the independent and 78 per cent. of the sub-districts have 20 or less. Three-fifths of the pupils are in ungraded schools.

North Dakota has a law, first in operation in July, 1899, that pupils two and one-half miles away may be transported.

South Dakota has a law and many are about convinced that where pupils live three or four miles they could have better schools at less cost by conveying to central schools. I was informed that transportation has been begun but have been unable to learn particulars or localities.

The last legislature of Kansas passed a law providing that where pupils reside three or more miles from the schoolhouse, district boards shall pay to the parent or guardian of such children a sum not to exceed 15 cents per day, for a period of not more than 100 days, for conveying such pupils to and from school. A fresh inquiry failed to elicit information that advantage is being taken of this law.

Nebraska has a law and is working under it in several places, notably, Fremont and Lincoln. One district reports a saving of \$70 a month.

In addition to the law providing transportation, Nebraska provides that a district may contract with a neighboring district for instruction of pupils and may transport its pupils to such district without forfeiting its right to share in the state apportionment of school fund. The State Superintendent says: "Best of all is, the pupils are better taught."

But not alone in this country is this consolidation of schools and conveyance being inaugurated. In Victoria, Australia, 241 schools were last year closed, making a saving of 14,170 pounds per annum. The attendance is so regular and the system so popular that applications are constantly made for its extension. A reasonable excuse in Victoria for non-attendance upon public school is that the distance is:

Two miles for a 9-year-old child,

Two and one-half miles for 9 to 12-year-old child, and

Three miles for a child over 12 years of age.

Victoria is a little larger than Wisconsin, with about half its population, one-half of which is rural.

SUMMARY.

From the reports, both printed and written, I gather the following summary of advantages accruing from the plan of transportation of rural school children at public expense:

1. The health of the children is better, the children being less exposed to stormy weather, and avoiding sitting in damp clothing.
2. Attendance is from 50 to 150 per cent. greater, more regular, and of longer continuance, and there is neither tardiness nor truancy.
3. Fewer teachers are required, so better teachers may be secured and better wages paid.
4. Pupils work in graded schools and both teachers and pupils are under systematic and closer supervision.
5. Pupils are in better schoolhouses, where there is better heating, lighting, and ventilating, and more appliances of all kinds.

Transportation of Pupils at Public Expense.

6. Better opportunity is afforded for special work in music, drawing, etc.
7. Cost in nearly all cases is reduced. Under this is included cost and maintenance of school buildings, apparatus, furniture and tuition.
8. School year is often much longer.
9. Pupils are benefited by widened circle of acquaintance and the culture resulting therefrom.
10. The whole community is drawn together.
11. Public barges used for children in the day time may be used to transport their parents to public gatherings in the evenings, to lecture courses, etc.
12. Transportation makes possible the distribution of mail throughout the whole township daily.
13. Finally, by transportation the farm again as of old becomes the ideal place in which to bring up children, enabling them to secure the advantages of centers of population and spend their evenings and holiday time in the country in contact with nature and plenty of work, instead of idly loafing about town.

We are in the midst of an industrial revolution. The principle of concentration has touched our farming, our manufacturing, our mining, and our commerce. There are those who greatly fear the outcome. There were those who prophesied disaster and even destruction of society on the introduction of labor saving machinery. We have adjusted ourselves to the new conditions thus introduced. Most of us believe that we shall again adjust ourselves to the new industrial conditions. The changes in industrial and social conditions make necessary similar changes in educational affairs. The watchword of to-day is concentration, the dominant force is centripetal. Not only for the saving of expense but for the better quality of the work must we bring our pupils together. No manufacturing business could endure a year run on a plan so extravagant as the district system of little schools.

The report of the committee of six appointed by the State Teachers' Association to investigate the conditions and needs of the country schools is also published herewith, as presenting forcible arguments and clear statement of facts relative to these matters.

Report of the Committee of Six on Rural Schools.

REPORT OF THE COMMITTEE OF SIX ON RURAL SCHOOLS.

The committee of six appointed by this body, one year ago, to make further report on the condition and needs of the country schools, was reduced to a committee of five, much to the regret of all concerned, by the resignation of Superintendent Emery from the committee in the latter part of the year. The remaining members, however, have given such time and labor to the work devolved upon them as the pressure of their daily duties would permit, and herewith present the results of their study and conference.

In the organization and management of a public school system, it would seem to be a cardinal principle that the state is bound to provide equal educational privileges for all the children of school age within its borders. The state undertakes the work of education for its own safety and the common good. And these results can not be attained by any system or policy which neglects the poor or the indifferent, and confers the least of opportunity and care on those who need it most. It is for the interest of every part of the commonwealth that every other part should have its full and free share in the educational ministrations of the state. Otherwise the whole theory of public education is a hollow delusion, without adequate ground or justification.

But along with this principle of equal privilege to all the children of the state, must go the complementary principle of equality of burdens. There should be a just and equitable distribution of the burdens of taxation so that all the wealth of the state shall contribute proportionately to the education of all the children of the state. (Since public education is for the common good, and all are alike interested in its results, it follows that one man should not contribute ten times, nor two times, as much per dollar for the common good as another man a few miles away. "The common good demands common support; and justice demands an equal distribution of the burden.")

These two principles (1) equality of privileges and (2) equality of burdens seems to us to lie incontrovertibly at the very foundation of state support of education. If, however, it can be held that there is any class of schools which deserves more than another, the fostering care and oversight of the state, it is the common country schools. The country child needs education as badly as any other. Moreover, the life of the city must be continually replenished and invigorated by its draft upon country youth. The city needs quite as much as the country, that the country youth should be decently trained for the duties of life and of citizenship. But the country child is the victim of certain physical disadvantages which sorely handicap him in his efforts towards even a moderate degree of culture. It is for the interest of the state at large that these disadvantages should be reduced to the minimum and not be aggravated by any removable defects of administration.

The first question to be asked, then, and a vitally important one, is the question whether the state is making all due and possible effort to secure to the country youth their full and equal share in the privileges of, and opportunities for, that elementary education which is the birth-right of every American citizen. To this question but one honest answer is possible, and that a negative one.

Whether the country schools are absolutely less efficient and fruitful than a generation ago is not a question of vital moment. We only waste breath and confuse the real issue by the discussion of that proposition. The unquestionable fact to which our earnest attention should be directed in this, that *the country schools are by no means as good as they*

Report of the Committee of Six on Rural Schools.

ought to be and might be, and that they are not keeping pace with the city schools in progressive excellence. The city school has, *relatively* speaking, good teaching, fair classification and close supervision. The country school, still speaking relatively, has poor teachers, crude classification, and little supervision.

But it is not alone in comparison with the city schools that the country schools are failing to sustain themselves. There is abundant evidence that *they are not keeping pace with the material progress* of the people. Country people are not now exerting themselves to such a degree, or making such sacrifice in the cause of public education as they did twenty-five years ago. It seems to be the lamentable fact that the country schools are not now held in that high favor by the people at large which they once enjoyed and to which they are indeed entitled. The causes of this diminished regard will be considered farther on.

Whoever seeks a way to better the condition of the country schools and to give to them a higher place in public regard must first essay a double diagnosis. He must inquire carefully into the causes which impede the progress of rural education, and, at the same time, into the reasons for a diminished interest on the part of the farmer class in their own schools.

Fortunately, it does not require any superhuman wisdom or insight to discover what are the chief evils which beset the country schools. Their great, comprehensive defect is in the quality of the teaching itself. *Poor teachers*, in so great a proportion to the whole number, are the bane of the rural school. Country teachers are, in most cases, young, immature, half-trained, ineffective, and lacking in professional ideals and ambitions. They undertake one of the most delicate, exacting and responsible of all callings, with little experience of life, and with little knowledge of the world or of human nature and its vital needs.

It is true that many bright and worthy young people enter the work of country teaching, but the majority do not remain in the work long enough to acquire that maturity of character and judgment, breadth of knowledge, and insight into educational problems which time and experience alone can give. Matrimony claims many, and sometimes none too soon. Greater rewards in other lines of labor withdraw many more; while of those who are found really successful in the work of teaching, the best are gradually gathered into the city schools of the land, through the greater watchfulness of city school officials and the greater emoluments which they offer. The teaching force of the country schools thus includes two classes of unfit teachers, the callow, apprentice class with no adequate conception of the work they so lightly undertake, and the "old stagers" who remain year after year in the work because nothing else opens to them, as unfit in the end of their career as in the beginning. We would not overlook nor forget a third class of earnest, faithful and insufficiently rewarded teachers, who relieve the situation and save it from utter hopelessness; but the two classes just described constitute a clear majority.

If we could place in the country schools as competent a body of teachers as are now found in most city schools, there would still be a rural school problem; but it would be far less formidable and refractory than it now is. We come, then, to a consideration of the reasons why the country schools have not as competent a body of teachers as the city schools. This brings us face to face with the financial obstacle to the greater efficiency of rural education. While farmers may have considerable property, they have not, as a class, much ready money. In most cases they have risen from narrower circumstances, and have been schooled to close economy, in some lines at least. They are not flush-

Report of the Committee of Six on Rural Schools.

handed, and other wants seem to them to press more closely than the better education of their children. For this and other reasons, the wages of country teachers are kept, in most cases, at so low a rate as to utterly preclude the securing of efficient teaching. We do not feel disposed to charge the low wages of country teachers wholly to parsimony or niggardliness on the part of the farming class. The fault lies in their standards of relative value and their lack of ability to distinguish good teaching from bad. Schooling is schooling to them, and they cannot understand how bad an investment poor teaching is at any price.

The recognition of this fact brings to view a second reason why country teaching is so often dear at any price, viz.—the woeful and devastating lack of discrimination in the selection and employment of teachers. There are many more would-be teachers than there are schools. There is room and opportunity, therefore, for selection. If country school officers would exercise the same care and wisdom in the selection of teachers that the same men would exhibit in the purchase of breeding animals, the average quality of country school teaching could be noticeably improved. But teachers are a commodity concerning which they have little skill in judging.

The rural schools of Wisconsin are administered by nearly 20,000 local officials. Many of these are unable, themselves, to read or write; few of them have the training or the experience which would qualify them for the task of school administration. Says one county superintendent of large experience: "The school officers as a rule are ignorant, so far as a knowledge of schools is concerned. They do not know a good teacher by her work, nor how to provide for a good school." Says another, one of the most active and earnest of our superintendents, "Not more than twenty per cent. of the school officers in this county attend to their duties or understand them." And we have no right to expect anything better under our present system. Is it reasonable to suppose that rural Wisconsin can furnish 20,000 persons able and willing to exercise such wisdom and discrimination as is needful for the selection of the best teachers out of the swarming army of half qualified young persons who covet even the small stipend of the country teacher? Here indeed is the weakest point in our public school system; and one reason for the superior excellence of city schools is found in the higher grade of school officers made possible, at least, by the larger unit of school administration.

A third obstacle co-operating with inadequate compensation and the ignorance and indifference of most district officers, is found in the sparseness of population, especially of child population in the rural districts of the greater part of the state. More than one-fourth of the country schools of Wisconsin have a total yearly enrollment of less than 20 pupils. Six per cent. have a yearly enrollment of less than 10 pupils. There is strong reason to believe that less than one-half of our country schools have an average attendance of 20 pupils. Taking the second superintendent district of Rock county as an example, we find that out of 81 rural schools only one had an average attendance of 30 pupils, while 20 schools had an attendance of less than 10 pupils, and 65 schools, or 80 per cent. of the whole had an attendance of less than 20 pupils. The average attendance for the whole 81 schools was only 16½ pupils per school. In Lafayette county, for further instance, out of 114 schools, 20 have an average attendance of less than 10, and 75 average less than 20 pupils. The daily average for the whole county is 19 pupils per school. We estimate that probably 1,000 teachers in Wisconsin are spending their time on less than 10 pupils daily.

Report of the Committee of Six on Rural Schools.

It is too much to expect of ordinary human nature to imagine that a school district having only a dozen, or half-dozen, of children in school will take that interest in their education which is necessary to the proper selection and adequate compensation of a good teacher. On the whole, the most stubborn and serious handicap on the country schools lies here, that the people of a district having few children *will not* tax themselves to the degree necessary for providing efficient teaching. In such cases, the few children actually in school lose interest and gradually drop out or go elsewhere; and thus the situation goes from bad to worse. And it is simply impossible that even a good teacher should keep up effort and ambition when surrounded by only a discouraged handful of pupils. One can hardly imagine a surer way to spoil a promising young teacher than to set her to marking time in such a school. All enthusiasm, all energy, and ambition must soon evaporate.

Thus far, we have dwelt on the reasons why poor teaching is so generally the lot of the rural schools. We must now pass to another factor governing the condition of these schools. Whether teachers be good or bad, there is need of co-ordinating and unifying oversight, of intelligent, forceful supervision. But where teachers are largely inexperienced, untrained and shifting in tenure, there is an absolute necessity for such supervision to save all effort from being wasted through misdirection and isolation. Not the least of the evils besetting our country schools is found in the sheer inadequacy of our county superintendency to meet the needs of the case. And, in this, we lay no fault at the door of the superintendents themselves. Under the conditions which exist in our rural regions, the distances to be traveled, the condition of roads, etc., it is a physical impossibility for the most enterprising and faithful superintendent to discharge the functions of genuine supervision toward more than fifty separate schools. But consider the conditions which exist. There are county superintendents, not a few in Wisconsin who yearly act the solemn farce of "supervising" from 200 to 300 scattered country schools. Under such circumstances, what can a superintendent do for the help, guidance or uplifting of the young, needy teachers under his nominal charge? He can be little more than a dispenser of third grade certificates. Two-thirds of all the county superintendents in Wisconsin find it hopelessly impossible to do for their schools that which most needs doing. Each one is like a hen trying to cover a hundred eggs. And their disability grows not alone out of the impracticable amount of territory which they must overlook—overlook is the word—but quite as much out of the fact that their office is "in politics," that they must so continuously silence their official conscience at the dictate of the law of self preservation. It is unjust and a continual menace to a strong, vigorous administration to allow this important office to be at the mercy of the popular vote. No official is so subject to public criticism as the county superintendent, because his work brings him into daily contact with the people, through teachers, pupils, parents, and school boards; and the polls afford only too safe and convenient an opportunity to "get even" for fancied grievances. Further emphasis is furnished by the fact that at the last election, when there was no political overturn, *40 per cent.* of the county superintendents in the state were denied a re-election.

Yet another element in the present condition of the rural schools calls for consideration, viz.: The effect of city schools and higher institutions on the country schools. It has been so often, and confidently asserted in late years, that the country schools are depleted by, and thus suffer injury from, the high schools and the preparatory departments

Report of the Committee of Six on Rural Schools.

of the normal schools, that it seemed to us worth while to make a thorough investigation of this matter. Accordingly a canvass was made of the state with the following results, of which a fuller statement may be found in the Wisconsin Journal of Education for November.

During the school year of 1897-8, there were 3,452 non-resident pupils enrolled in the 208 high schools of the state, being 21.6 per cent. of the whole enrollment in those schools. In the preparatory departments of the normal schools 214 country pupils were found, making with the high schools, 3,666 country pupils. But it is to be remembered that these are largely persons who hold common school diplomas, or have completed the work of the country schools. We estimate that not more than one-third of these would be in the country schools, even if higher schools were closed to them. One-third of 3,666 is 1,222.

But in the high school towns we found 1,530 country pupils enrolled in grades below the high school, with 163 more in the model departments of the normal schools. Furthermore, there are in the state 87 graded schools of three or more rooms, but without a high school department. In these we found 718 non-resident, country pupils. Combining results we have a total of 3,633 pupils drawn from the country schools by the combined attractions of normal, high and graded schools. We have, in round numbers, 6,400 country schools. Dividing the 3,633 pupils among the 6,400 schools, we find that each school has suffered a loss of 56% per cent. of one pupil each, or about one pupil in two years. This does not seem a destructive loss. These figures effectually explode the popular assumption that the preparatory departments of the normal schools are injuring the country schools, since they all combined draw less than one-eighteenth of a pupil annually from each country district.

But it remains to be said that the high schools do exert an appreciable influence, indirectly to the disadvantage of the country schools by detracting from the interest felt in those schools locally. The few leading people in every district who have a purpose to educate their children well, look over the country school to the high school or other institutions beyond. And the fact that many of the better class of farmers are constantly leaving their farms to renters and moving into town to give their children the better advantages there afforded, has two bad results. It leaves a renter for a school patron, and it makes the remaining farmers discouraged and dissatisfied with their school. But perhaps the worst effect of city on country schools is to be found in that laudable competition by which the cities gather in the best teachers, by paying better salaries and exercising more intelligence in the selection of teachers, and thus leave the "culls," the weak, the immature, and the unambitious to wreak their incompetency on the country children.

With this diagnosis of the actual condition and prospects of the schools themselves, and this exposition of the inequality of privilege entailed upon the country child, let us turn to consider, as briefly as may be, the inequality of burdens imposed upon the country taxpayers. If man had exhausted his ingenuity in seeking a device to produce inequality of taxation for this common good, he could not have scored a completer success than in the adoption of the small-district system prevalent in Wisconsin. These thousands of school districts make no approach to equality in either territory, wealth or population. The injustice and mischief which this works may perhaps best be shown by some examples from different parts of the state. A much more extended showing could easily be made if time allowed. But a few instances must suffice.

Report of the Committee of Six on Rural Schools.

Let us compare two prominent counties. Manitowoc county is well to-do in material ways and is rich, beyond most counties in the state in children. There is reason to believe that it has suffered less mischief from the small district system than perhaps any other in Wisconsin. Let us observe its inequalities in local taxation.

In the town of Franklin: Dist. No. 13 enrolls 35 pupils and raises on these by district tax, \$4.28 per capita. Dist. No. 1, with 62 pupils, raises 80 cents per capita.

Town of Cooperstown: District No. 5 raises \$3.61 per capita on 28 pupils; No. 2, 64 cents per capita on 78 pupils; while No. 3, with 80 pupils levied no district tax at all.

Town of Manitowoc Rapids: No. 11 raises \$5.28 each on 52 pupils, and No. 1 raises 71 cents on 35 pupils.

Town of Newton: No. 1, with 90 pupils, raises \$6.10 per capita, and No. 6, with 71 pupils raises \$1.04.

Town of Two Rivers: No. 2, with 21 pupils, raises \$16.38 per capita while No. 6, with 65 pupils, raises 76 cents each.

No. 3, in the town of Mishicott, raises \$10.32 per capita on 49 pupils, while four districts in the county raise no district tax whatever.

Thus in Manitowoc county, where country school conditions are thought to approach the ideal, there is a range in district taxation from \$16.38 per enrolled pupil down to nothing at all.

Rock county is also a wealthy county, but it is no longer rich in children. We find here such inequalities of local taxation as these.

Town of Beloit: Dist. No. 8, with 31 pupils, raises \$4.03 per capita; No. 4, with 8 pupils raises \$21.87 per capita.

Town of Bradford: Joint Dist. No. 14, with 40 enrolled, raises \$4.77 per capita; No. 6, with 18 pupils, raises \$12.50 each.

Town of Johnstown: No. 2, with 38 enrolled, raises \$3.94 per capita; No. 5, 14 pupils, \$17.85 per capita.

Town of Lima: No. 9, with 35 pupils, \$3.37 per capita; Joint No. 5, with 7 pupils, \$25 per capita.

Town of Rock: No. 7, \$3.64 per capita on 48 pupils; No. 5, \$11.75 each on 20 pupils. Dist. No. 3 in Clinton raises \$3.12 per pupil; while Dist. No. 12 in Turtle, whose schoolhouse is only one mile from the city limits of Beloit, raises \$28.57 per capita on seven pupils, for a six months school.

Here, then, are districts only a few miles apart in one of which the per capita of local taxation is nine times what it is in the other. And in Manitowoc county the per capita rate in one district is 23 times what it is in another, making no mention of districts which raise nothing. The average rate per enrolled pupil in Manitowoc county, as a whole, is \$3.10. In Rock county, as a whole, it is \$6.41, more than twice as much, while in the eastern half of the county it is \$7.14. In Rock county, the very lowest per capita rate of district taxation is greater than the average rate in Manitowoc county.

It is a matter for regret that we have not found time to gather facts concerning the inequality of burdens as reckoned on the basis of assessed valuation of property in the districts. This is a work which ought yet to be done.

Returning to the condition of the schools themselves, and the quality of the results they are accomplishing, we recapitulate as follows: The country schools are suffering very generally and seriously from poor teaching due (1) to inadequate compensation, which prevents teachers from making more adequate preparation for their work and drives the better grades of talent into the city schools or into more remunerative callings; (2) to the lack of intelligence and discrimination shown by

Report of the Committee of Six on Rural Schools.

the majority of school officers in the selection of teachers, and their failure to get as good service as might be got; and (3) to the unequal distribution of pupils, some schools having more than can possibly be well taught by one teacher, while others, and by far the larger number, have so few as to be destructive of interest on the part of patrons, pupils, and teacher alike. Accessory evils are found in the grievous inadequacy of supervision under present conditions—an evil easily avoidable by a more liberal expenditure for this purpose—and in the indirect influence of city schools, tending to diminish the interest of the rural population in their own schools, and drawing the cream of the teaching profession steadily away from the country.

It might seem, then, that the country school is the victim of inexorable natural conditions, laws of nature, so to speak, from which it has no hope of deliverance. Even Dr. Harris, U. S. Commissioner of Education, writes to this committee, "I have been in despair in regard to the improvement of the rural schools since 1870 and up to the time of writing my part of the report of the committee of twelve." But we must not accept any hopeless or pessimistic view of the future of the rural school; though it is true that new conditions now environ it. The conditions of forty years ago can never return; nor is it desirable that they should. We must rouse ourselves from our Rip Van Winkle nap and push hard to create new conditions more genial and less perverse than those which now prevail. And, first of all, we must face existing facts and not thrust our heads, ostrich-like, into the sand to delude ourselves into a sense that all is well. We must agitate; we must investigate; we must not let the public mind be hushed to sleep with the assurance that there is nothing the matter and that we can not help it, anyhow. But we must not be content with criticism and analysis. We must put forth constructive and remedial effort.

We must consider, then, what agencies will best accelerate the slow and halting progress of the country schools. These schools will never reach their best estate, never satisfactorily fulfill the ends for which they exist, *until more money is spent on them*. We must remember that in education more than anywhere else, "there are no cheap things;" the cheapest is the dearest. Better prepared and matured teachers, better supervision, better schoolhouses and equipment, all mean greater expenditure.

But good schools do not call for extravagance; they call only for a wiser *economy*, in the true sense of the word. We ought to be getting better returns from even our present outlay. The first essential to this is better administration: but this means more intelligent, public-spirited, and faithful school officers; in short, *better men* in charge of school interests. That system of school administration is best which will tend most surely to put such men in charge of school affairs, and especially of the selection of teachers.

It is thought by some that the apathy and indifference of the farmer class towards their schools could be removed and a fresh interest and faith in universal education be aroused by a remodeling of the course or study of country schools, introducing and emphasizing new studies or exercises calculated to stimulate a love for rural life and pursuits. To make such a departure practicable and successful, would involve also a new departure on the part of our normal schools in the way of a new and differentiated preparation of teachers for this new work, which to be vital and effective, must be presented objectively, and not after the traditional text-book methods. Your committee are not agreed as to what might be reasonably expected of such a movement; but there are those in the land who have confidence in the value and efficacy of such

Report of the Committee of Six on Rural Schools.

a change in the country school curriculum; and their proposals should receive thoughtful attention.

To bring to a focus all that has thus far been said, it seems clear to this committee that three advance movements are essential to secure the proper development of the country schools:

1. A remodeling of our system of supervision, in which the county, regardless of size or population, is made the unit of supervisory organization, and the substitution of a new unit such that no superintendent shall be charged with the supervision of more than seventy schools as the outside limit. Along with this, should go such a change in the manner of appointing superintendents, and in the tenure of office, as will give them greater independence and make it no longer dangerous for them to discharge their responsibilities faithfully. Such a change would add but slightly to the burdens of any tax-payer and would greatly diminish certain evils from which the schools are suffering. It would seem that the time is now ripe for a vigorous movement in this direction.

2. The consolidation of weak districts and the elimination of at least all schools averaging less than ten pupils each, except in special or peculiar cases. This consolidation would, naturally, involve provision for the free transportation of pupils living at long distances from the school. The number of schools and schoolhouses in Wisconsin could be greatly reduced to the benefit of all concerned. Fewer and better located schools, with better teachers, better classification, better equipment, and a revived local interest are easily practicable whenever we can cut loose the bonds of inertia and tradition which yet invest us.

3. The lodging of school administration in fewer, more intelligent, and more responsible hands, to the end that greater care and discrimination shall be exercised in the employment and support of teachers.

The two measures last mentioned are so closely related, so largely necessitated by the same causes, namely our suicidal small-district system, that their accomplishment must be sought by the same means, and at the same time. Consolidation of weak schools into stronger ones, and consolidation of school administration into fewer and better hands, these are the great means for the regeneration and higher development of the country schools.

This is an age of consolidation, in business, in industry, and, let us believe, in education. Says Supt. Stryker, of Kansas: "Combination and concentration are the order of the day. This concentration, this combination, this division of labor, this increased skill of each laborer, this increase in the product, this crowding out of the smaller by the larger, must continue until it becomes universal in every department of human activity." The rural school will be no exception. It is only a question of time, and a question of how to accomplish the change with the least friction.

The small district as a unit of school administration *must go*, sooner or later; what shall take its place? There is something to be said for the *county* as a unit. That is already the unit in most of our southern states. But the political township is more in consonance with the traditions and practice of our northern states. The township is our natural and historical unit of political administration. No smaller unit has ever been successful; indeed, no smaller unit has ever been attempted except in this one particular of school administration. The whole logic of our political development points to the township as our unit of local government.

But we are not left to mere theorizing. The township as a unit of school organization has been thoroughly tested and thoroughly ap-

Report of the Committee of Six on Rural Schools.

proved. Some states like Indiana, Ohio, Pennsylvania, and Massachusetts, have given it long and satisfactory trial. Others, like Maine, Vermont, and New Jersey, have more recently fallen into line, but are enthusiastic in praise of the new departure. It seems pertinent and useful to introduce here the testimony of these states to the merits of the township system, as embodied in letters to this committee from their state superintendents. These are not ancient deliverances, but up-to-date expressions of current experience, viz.:

FROM THE STATE SUPERINTENDENT OF INDIANA.

Indianapolis, Nov. 29, 1898.

"Concerning the township system, I have this to say: I think it is the proper unit of school management, because in this unit the adjustment and readjustment of school districts may be made much easier than when the district is the geographical unit. I think the people of Indiana would not go back to the district system under any consideration. In the first place it is very convenient for the state department to reach the educational officers of the state since the number is comparatively small. All told, the school officers of Indiana are about 1,200. Then, making a county board of education out of the school trustees of the township enables the county superintendent to unify and classify the work of his county through this agency. I feel sure that the township system is by far the most economical one. In some of the recent comparisons of the district and township systems the authors have made the statement that the township system is much more expensive than the other; but these persons have failed in making their comparisons to show the conditions in the district-system states. In the comparison above referred to, there was nothing said about the very low salaries and about the very large number of teachers who were nothing more than young girls. In Indiana, one rarely enters the profession under eighteen years of age, and a very large per cent. of our teachers are mature; they are persons of from twenty to fifty years of age; many of them remaining in the work from three to thirty years. The teachers of our country schools very rarely teach for less than \$30 per month, many of them receiving as high as \$50 and \$60.

Under the township unit system we have also organized the township institute, which is one of the most important factors in our system at this time. These institutes are held once a month, at which time the teachers in many instances conduct the institute very much like model normal schools.

This system has made it possible for us to do more with the Young People's Reading Circle than we could have done otherwise. The Teachers' Reading Circle has been made more helpful, it seems to me, than it could possibly be under the district system. I may be very biased in my views, but it does not seem to me that there is any end to the argument in favor of the township unit system as compared with the district system."

FROM THE STATE SUPERINTENDENT OF OHIO.

Columbus, Dec. 5, 1898.

"The township system has this distinct advantage over the small-district system of school administration, viz.: Pupils may be transferred easily from one school to another; taxes may be levied more equitably, and public sentiment quite as freely consulted. We have tried both in this state."

Report of the Committee of Six on Rural Schools.

Maine, Vermont and New Jersey all changed to the township system in 1893. After five years of trial this is what they say:

FROM THE STATE SUPERINTENDENT OF MAINE.

Augusta, April 9, 1898.

"Since the township system went into effect in 1893, we have reduced our schools by something over one-fifth. Under the old system, about half of the teachers were relatives of the school officials. At present, that number is reduced to about one-fifth.

The time which teachers remain in the same school is materially increased. A larger proportion of our teachers than ever before are scholastically and professionally fitted for their work because of the greater care which has been used under the township system in the selection of teachers.

More has been done in repairing and improving the schoolhouses in the past five years than in the previous fifteen.

Many who formerly bitterly opposed the law are at present among its ardent supporters.

The township system will not cure all the evils from which the public schools are suffering, but under it we shall have better teachers, longer terms of service, more suitable physical surroundings, and hence better schools."

FROM THE STATE SUPERINTENDENT OF VERMONT.

Montpelier, Nov. 20, 1898.

"The town system has been in operation in Vermont since April 1, 1893. The system has greatly minimized the evils indicated in your paper. It equalizes taxation in the towns themselves. Under the district system there was great disparity in the taxation in the different districts. The system secures better teachers, and gives them greater permanency. Under the town system there is a consolidation of schools. In Vermont there was a reduction from 171 to 65 schools of six pupils or less made by the transition from the district to the town system. By the introduction of the town system, the expenditure of transportation was doubled."

FROM THE STATE SUPERINTENDENT OF NEW JERSEY.

Trenton, April 27, 1898.

"The township system has certainly tended to diminish the number of feeble schools in New Jersey, and is destined to accomplish much in that line. The matter of discontinuing small schools and transporting pupils is now under consideration by many of our school boards, and an enactment of our last legislature for this purpose will, I believe, give this move a great impetus. Without the township system concentration of pupils would be impracticable.

The general influence of the system has been to advance teachers' wages, make changes less frequent, and to improve our schools. There is a very decided and growing sentiment in favor of increasing our high school facilities, and this is also another result of our township system and made far more feasible through its establishment.

The general effect of the township system in New Jersey is unmistakably a good, long, decisive step forward. We will never go back to the neighborhood district system.

Report of the Committee of Six on Rural Schools.

The township system is permissory in Wisconsin, and is now in use in the whole or some part of eighteen counties, all in the northern part of the state. The endeavor has sometimes been made to draw conclusions from the experience of those counties unfavorable to the more general adoption of the township system. This committee has, therefore, sought the testimony of the county superintendents in those counties as to the workings of the system under their observation. With very few exceptions, the response is highly favorable to the township unit. To summarize briefly, two-thirds of these superintendents unqualifiedly endorse the system on all points; while only two or three question its superiority, on the whole.

Says one: "We get better results from the township system than could possibly be gotten from the district system."

Says another: "The secretaries of our townships are invariably men of more experience and more competent than the average member of the district school board; and having more practice in providing for the schools and engaging teachers, they are better qualified for the work."

Another says: "Judging from six years' observation, I will say that the township system is much to be preferred. The schools are better and more uniformly equipped, better wages paid, and better teachers hired for a year at a time."

Yet another writes: "The school board in the small district, seldom the best and most progressive men, for such positions, seek to engage the services of that teacher who will teach their school for the least wages. The executive board under the township system is usually composed of a different class of men. They are intelligent and are interested in the schools. They take pride in having good schools and having them well taught. They engage the services of good teachers, pay them good wages, and supply them with the necessary schoolroom aids, and do not discriminate in any manner in favor of one district more than another."

It is a matter for regret that the letters received from these superintendents can not be quoted more numerously and more at length. It should be noted that the testimonies just given are all from superintendents who have contact with both systems.

The township system in Northern Wisconsin exists under peculiar conditions. The motives which originally led to its adoption were not always above question; but it seems undeniable that it has brought great educational benefits to that region in spite of the "sharp" and even unscrupulous methods sometimes used in its financial application. That now and then a superintendent is dissatisfied with some of its features, or that, in rare instances, a town relapses into the small-district system, seems to us to weigh little against the general testimony in its favor.

Your committee do not imagine that the township system would prove an immediate and complete corrective of all the limitations of the country schools. Such a panacea can not even be hoped for. But we are convinced that its substitution for the present system would prove highly advantageous to rural education, and would greatly alleviate the most serious features of its present condition. Whether the time has arrived when direct effort should be made to secure legislation to this end, is a practical question on which we can not make a dogmatic declaration. But we are fully persuaded that such a movement, when made, should be "centrally initiated." It must be brought about by positive exactment of the legislature, just as the present school library system was. No administrative reform can afford to wait until the unintelligent and indifferent are informed and persuaded. Those who see

Report of the Committee of Six on Rural Schools.

the truth must cry aloud; and those who have authority must exercise it for the general good. Upon them the responsibility rests.

We recommend that a committee of five on rural schools be appointed by this association to co-operate with the state department of education in urging upon the legislature all practicable legislation tending towards greater efficiency in the work of the country schools, greater equity and liberality in their support, and greater thoroughness and independence in their supervision.

ALBERT SALISBURY,
J. W. STEARNS,
ANNIE E. SCHAFFER,
FRANK W. BIXBY,
DAVID THRONE,
Committee.

Table B presents a classification of teachers' wages. The usual statistics on the subject of teachers' wages are in the form of averages which give little information as to actual conditions. For instance, in one of the counties there are eight schools paying fifty dollars per month, thirty-two paying twenty dollars per month, the average wages of these forty teachers is twenty-six dollars, which gives no idea as to wage conditions in that set of schools. From this table it appears that there were last year

174 teachers receiving less than \$20 per month,
2,764 teachers receiving between \$20 and \$26 per month,
2,893 teachers receiving between \$25 and \$31 per month,
1,393 teachers receiving between \$30 and \$36 per month,
776 teachers receiving between \$35 and \$41 per month,
425 teachers receiving between \$40 and \$46 per month,
254 teachers receiving between \$45 and \$51 per month,
238 teachers receiving more than \$50 per month.

This table sets forth in detail the facts for each county in the state on the above mentioned basis of classification, but still leaves something to be desired.

From the statistics as gathered for many years in this office, it has been impossible to separate the wages of teachers in the rural schools of one department, from the wages of teachers in

General Report.

graded schools maintained in the cities and villages under the supervision of county superintendents. It is probable that most of the teachers who are paid above \$45 per month, are teaching in graded schools. It is intended that statistics for the ungraded rural schools shall be made a distinct feature in the next biennial report.

The fact that 2,938 teachers are paid in the district schools less than \$25 per month, and employed but seven or eight months in the year, is a striking one. It must be evident that teachers cannot afford to make thorough preparation for teaching where the returns are so small. Consolidation of the schools and the employment of higher paid, better prepared teachers, would not only be an economy from the financial standpoint, but a great gain for the pupils attending the schools.

TABLE B.
Teachers' wages classified, in counties, not including cities having superintendents.

Counties.	Less than \$20 per month.		No. teachers who receive not less than \$20 nor more than \$25 per month.		Not less than \$26 nor more than \$30 per month.		Not less than \$31 nor more than \$35 per month.		Not less than \$36 nor more than \$40 per month.		Not less than \$41 nor more than \$45 per month.		Not less than \$46 nor more than \$50 per month.		More than \$50 per month.

Cities furnishing free text books.—Ashland, Baraboo, Peloit, DePere, Eau Claire, La Crosse, Madison (in part), Marinette, Monroe, Oconto (in part), Onalaska, Portage, Rice Lake, Stanley, Superior, Tomahawk, Watertown, Wausau.

Table C shows the number of high schools in each county, number of school districts in the county, number of schools with two or more departments, number of graded schools of two departments, of three departments, of four or more departments and not connected with any high school. It also gives the number of districts in each county furnishing free text books, and the cities furnishing free text books.

Among the matters appearing in this table, the following are of special interest. Sixteen hundred and fifty six districts under the supervision of county superintendents furnish free text books. Eighteen cities also furnish free text books. The report shows 610 schools of more than two departments. There are 231 graded schools of two departments, 50 graded schools of three departments, 53 graded schools of four or more departments, not connected with any high school, making 334 such schools in all. Among the 610 schools of two or more departments, there are included these 334 graded schools, 174 high schools, and the remaining number, 101, consists of ungraded schools of two departments. In the 334

General Report.

graded schools not connected with any high school, there were enrolled last year 39,512 pupils.

Some provision should be made for better organization and supervision of these schools than now exists. The county superintendent very naturally feels that the ungraded schools need more of his time than the graded schools, and as in a large number of counties more work in supervision should be done than it is possible for two superintendents to do, he is likely to give his time and attention to those schools which in his judgment need it most. Theoretically the principal of the graded school is supposed to exercise some supervision over the teachers in the different grades. Practically nothing of the kind is done in most cases. His department is usually a large one, and every moment of his time is employed in teaching. Few, if any of these schools have detailed courses of study. In the 101 ungraded schools of two departments, it is probable that greater efficiency would be secured if some intelligent attempt were made to grade the schools, putting the primary and lower intermediate pupils in one department, and the upper intermediate and grammar pupils in the other.

Minnesota has for a number of years, had a state inspector whose whole time is employed in the graded schools. A similar officer is needed in this state. He could do much to assist the teachers in those schools in the way of better organization and administration of courses of study. He should cooperate to the fullest extent possible, with county superintendents, with principals of these schools, and with the school boards.

Statistical Tables.

General Report.

Table D presents comparative statistics for the years 1880 and 1900. This table has been prepared to show the development and changes in our school system during a period of twenty years. This table shows that the increase of school population during the twenty year period, has been 52 per cent., while the increase in attendance upon the public schools has been 49 per cent. The total number of teachers employed has increased 29 per cent. The showing as to number and kind of certificates issued, indicates progress. The increase in the number of first grade certificates issued in counties, has been 113 per cent., of second grade certificates 124 per cent., while there has been an actual falling off in the number of third grade certificates issued. Still more striking is the relation of the normal schools to the schools under the supervision of county superintendents. The increase in the number of normal school graduates teaching in these schools has been 341 per cent., while the increase in the number of under-graduates has been but 16 per cent. The total increase in the number of teachers from normal schools counting both graduates, and under-graduates, has been 55 per cent.

In 1900, 533 teachers holding state certificates were teaching under the supervision of county superintendents.

The average monthly wages of male teachers in counties has advanced \$6.70, during the twenty years, or 18 per cent., while the corresponding advance in the wages of female teachers has been \$6.88, an increase of 28 per cent. The per capita expense for each pupil in schools under county superintendents has risen from \$6.48 to \$10.81, an increase of 51 per cent. In the cities having city superintendents it has risen from \$11.48 to \$18.09, an increase of 58 per cent., while the per capita expense in counties for teachers' wages only, has risen from \$4.70 to \$7.08, an increase of 51 per cent.; in cities under city superintendents from \$8.35 to \$11.86, an increase of 41 per cent. The total expenditure for teachers' wages has increased 140 per cent.

The expenditure for buildings and repairs 196 per cent., for apparatus, furniture, etc., 151 per cent. The number of free

General Report.

high schools has risen from 110 to 219, the number of teachers from 277 to 664, while in the year 1900-1901 the number of teachers employed in the free high schools is 702.

Attention is called to the difference in per capita expense for maintaining schools in the counties and in the cities. If, as has been before indicated, the statistics showed the per capita expense for each pupil in school in the ungraded rural schools, the difference would be still more striking. While this table shows that during the past twenty years, there has been a large increase in the expenditures for public schools, it will appear from Table E, compiled from the report of the United States Commissioner of Education for 1897-'98, that Wisconsin is not paying for its public schools as large a sum per capita of population, as most of the states surrounding it. In the group of north central states, twelve in number, Missouri is the only one showing a smaller per capita expenditure than Wisconsin. No figures are available for the year 1898-'99.

THE RURAL SCHOOL PROBLEM.

The statistics for the year 1899-1900 show that the total enrollment of pupils between the ages of four and twenty in the public schools was 444,343; of this number 127,878 were enrolled in cities under city superintendents; 118,489 were enrolled in graded and high schools in cities and villages not under

General Report.

city superintendents; of this number fully 24,500 were enrolled in graded schools of two departments, practically on the same plane, so far as efficiency is concerned, as the ungraded schools. Deducting this number from 246,367, the total enrollment in graded and high schools, it would make the number enrolled in the ungraded schools 222,276; that is, a trifle over 50 per cent. of the total number of pupils enrolled in the state are to be found in these ungraded rural schools where the term of school is shortest, the wages of teachers lowest, the equipment poorest, and the quality of teaching done, the weakest.

Reports for the same year show 3,383 non-resident pupils enrolled in the high schools of the state, or 1.6 per cent. of the pupils enrolled in the rural schools find their way to the high schools.

The conditions which surround rural life seem to make some of these results inevitable, but when it is considered that over one-half of the pupils in the public schools get all the education which the schools give them under these adverse conditions, the seriousness of the problem is evident. Such of the conditions as may be improved should be modified. What are they?

DECREASE IN NUMBER OF SMALL SCHOOLS.

As has already been suggested, one of the conditions existing today under which nearly one thousand of these schools have an average daily attendance of not more than ten, can be modified in a very large number of cases by the consolidation of these small schools with other schools. The power to make this consolidation rests with those who are most directly interested in the matter of the education of their own children.

POORLY PREPARED TEACHERS.

That large numbers of the teachers in these schools are inadequately prepared to teach, either from lack of knowledge of the subjects they are to teach, or from lack of professional skill in teaching, or both, is a matter of common knowledge to all

General Report.

who are acquainted with the work of these schools. While the salaries paid teachers are as low as has been shown to be the case in a large number of these schools, it is not possible to secure the best grade of teachers. It is true, however, that a large number of teachers are satisfied to continue teaching from year to year upon the lowest grade of certificate which the superintendent is authorized to grant, and that the incentives and opportunities for improvement are not sufficient to secure any great development of teaching power.

If there could be a limit fixed to the time which a teacher may be allowed to continue teaching on a third grade certificate, better preparation would be a necessity, and would come. In view of the fact that the rural districts share equally with urban communities in the distribution of the school fund income, the basis of apportionment being the number of children of school age in all cases, and in view of the fact that \$100,000 are apportioned annually among the high schools of the state, this money being raised by general taxation, little or no direct value coming to the rural communities through such distribution, the question arises whether or not some further direct state aid should not be given to the rural schools, and the small graded schools, in communities where no high school exists.

If this could be done it would enable these rural districts to pay somewhat better wages, and with the higher qualifications demanded of teachers would secure better teaching ability. It is not simply a question of benefiting a local community; it is a question for the state of educating all its citizens for better citizenship; all parts of the state are equally and vitally interested in securing this result.

TRAINING SCHOOLS FOR RURAL SCHOOL TEACHERS.

If higher qualifications are to be demanded of teachers, it is the duty of the state to provide opportunity for securing these qualifications. It is not enough that a teacher gains such a

General Report.

knowledge of the subjects to be taught as to enable him to pass a creditable examination in those subjects; in order to secure the best results, he must have some training directed toward developing skill in the art of teaching. It is as absurd to say that because a teacher knows a subject he can teach it, as it would be to say that because a person knows the theory of music, he can play the piano without special training. The normal school system of the state is taxed to its utmost capacity at the present time. Its teachers are very largely sought for the graded and high schools; comparatively few of the graduates going into the district schools, or if they do, remaining there but a short time. It is evident that some other provision must be made available or teachers' preparation if higher qualifications are to be demanded.

At the present time, the only provision made for this purpose by the state is through the county training school and the teachers' institutes, for which latter purpose \$6,000 is appropriated annually from the normal school fund income, and \$6,000 from the general fund of the state. In view of the importance of the work to be done, this fund should be increased to at least \$20,000 by state appropriations.

Under a law passed in 1899, providing for the establishment of county training schools, and furnishing state aid to the amount of \$1,250 to each of the first two schools so organized, two such schools have been established; one in Marathon county, and one in Dunn county. The success of these schools during the year they have been maintained has been most marked. The enrollment for the second year has increased and the graduates from the schools are teaching in the counties where the schools are located. These graduates have given a solid year's work to the distinctive preparation for teaching in district schools, and are giving back to the counties where they are teaching, and to the state, returns for the money expended on their training in better teaching service. More of these schools should be established. They reduce the cost of the teacher's preparation to a

County Training Schools.

minimum; many of those in attendance are able to live at their own homes, making the expense of the year's tuition but trifling; the presence of such a school in a county, in charge of teachers of recognized ability, gives an impetus to all educational movements in the locality.

The first annual report from each of the two training schools is presented herewith:

FIRST ANNUAL REPORT OF THE MARATHON COUNTY TRAINING SCHOOL BOARD.

To Hon. L. D. Harvey, Madison, Wis.:

Sir:—We have the honor to transmit herewith the first annual report of the Marathon County Training School for Teachers.

The school was organized in accordance with chapter 268, laws of 1899. The resolution of the county board passed June 15, 1899, was as follows:

Resolved, by the Board of Supervisors of Marathon county, Wisconsin, that there is hereby established in accordance with chapter 268, laws of 1899, a County Training School for Teachers.

The purpose of this school shall be to give instruction in the elementary branches of learning and to fit teachers for country school work.

No tuition shall be charged to any resident of Marathon county attending such school.

The County Training School Board shall secure from the Board of Education of the City of Wausau, room and seating in the new high school building, and make such agreement relative to admission of students to instruction in high school and grammar school grades as they deem wise, it being understood that all such instruction and rent of rooms and heating and equipment shall be without cost to the county.

There is hereby annually appropriated out of the general fund of Marathon county, a sum sufficient to carry out the provisions of this resolution, said sum not to exceed twenty-five hundred dollars in any one year. This appropriation shall be disbursed by the County Treasurer upon the order of the President and Secretary of the Training School Board.

The County Training School Board shall annually render to the County Board a complete statement of the expenditure of all moneys coming into their hands and shall file with the County Clerk the bonds required by chapter 268, laws of 1899, after their approval by the Finance committee of this board."

A. L. Kreutzer of Wausau and H. J. Blanchard of Colby were elected by the County Board as members of the Training School Board.

Prof. O. E. Wells and Miss Rosalia Bohrer were selected to constitute the teaching force and the school was opened Sept. 11, 1899.

County Training Schools.

The year's work was divided into quarters and the following course of study, after approval by the State Superintendent, adopted:

First Quarter.—School Management, Reading, Arithmetic, U. S. History, Grammar and Composition.

Second Quarter.—Observation and Methods, Literary Reading, Arithmetic, U. S. History, Geography.

Third Quarter.—Practice Teaching, Literature, Physiology, Physical Geography, Music.

Fourth Quarter.—Practice and Psychology, Literature, Elements of Agriculture, Constitutions, Drawing.

At the end of the first month the enrollment was 34. The total enrollment during the year was 56, and twenty-three persons were given certificates of graduation from the prescribed course on June 29, 1900. A list of these graduates with ages and previous experience in teaching is attached.

We also transmit a statement of the financial transactions of the board, a general statement from the principal of the school on the work as a whole and the desirability of change as brought out by the experiences of the year.

It is the opinion of the board that considering the fact that this was the first school of the kind ever organized in this state which had as its direct aim the improvement of the teaching force in the rural schools, the results of the first year's work are deserving of more than passing notice. Marathon county employs, outside of the City of Wausau, nearly two hundred teachers. Of these two hundred teachers more than fifty have been new and inexperienced each year and their work, because of poor preparation and lack of professional knowledge, crude and experimental. The further usefulness of this school depends upon its ability to materially improve this condition.

We believe from our observation of the practice work and from the appearance and the general impression given by the members of the graduating class, that they are able to take first rank among the teachers of the county.

It is a curious commentary upon conditions that nearly every one of the class was an applicant for a certificate at the county examinations held last fall, and that they were refused certification because the county superintendent considered them unable to do the work expected of a teacher, and that now upon the completion of the work prescribed there is no question about their ability to handle successfully the work of any school in the county. The improvement has been beyond the expectation of the most enthusiastic of the original supporters of the school. We declare without hesitation, that we believe the question of the success of the school as a factor that will build up the educational standing of the county, is settled.

The board calls your particular attention to the cost of this school. No educational institution in the state of Wisconsin gives such direct return for the money invested and no educational institution in the state is so near the people. The benefits of the school are felt at once and the good comes to the schools that receive little direct good from other state institutions of learning. County Training Schools for Teachers give no opportunity for lavish and unwarranted expenditure of public money and every dollar invested in them gives direct return.

The board wishes to acknowledge favors from the City Superintendent and the Board of Education of the City of Wausau. The quarters and the equipment provided in Wausau's splendid new high school building

County Training Schools.

and the kindness shown in opening the grades of the city schools for practice work are appreciated. The relations that exist between the city school system and the county training school constitute an important factor in the success of the school that should not be overlooked.

The board also makes acknowledgment for the help received from the State department. Without the interest taken by you and your assistants in the success of this venture, many difficulties would have given serious trouble because of the limited experience of this board.

The only recommendation we have to make is that these schools be taken under the close supervision and care of the state. While the county in which a training school is located should be closely identified with the school still our experience during the year has led us to the conclusion that the future of the school will demand close state supervision. Many counties in Wisconsin should have the benefits of these institutions that are unable to maintain such schools. The product of the state normals goes largely to the cities all over the state, and the final distribution of the product of a county training school can not be limited to one county.

We also call your attention to the necessity of attaching some value to the diploma issued at the completion of the course of study. We feel that the efforts of the class are deserving of substantial reward. If the graduate of a three year high school can secure an elementary state certificate after one year's work in a state normal, it is no more than justice that legal recognition be given the diploma issued by a County Training School for Teachers.

Respectfully submitted.

H. J. BLANCHARD, President,
A. L. KREUTZER, Treasurer,
JOHN F. LAMONT, Secretary.

Wausau, Wis., June 30, 1900.

REPORT OF PRINCIPAL OF MARATHON COUNTY TRAINING
SCHOOL.

Wausau, Wis., July 5, 1900.

JOHN F. LAMONT, Secretary, Wausau, Wis.

Dear Sir:—Replying to your inquiry for definite information upon special points mentioned in Hon. L. D. Harvey's letter, I enclose herewith a list of names of the graduates from the Marathon County Training School for Teachers together with their ages and experience in teaching.

Regarding desirable modifications or extensions of the work shown by the year's experience, I may say that any considerable extension seems impracticable if not impossible, within the limits prescribed by law. Our pupils have worked with great enthusiasm, earnestness, and persistence to accomplish that already outlined, and it does not appear that any important changes in the course are desirable. Doubtless our experience will enable us to estimate the capacity and attainments of the pupils better and thus to modify methods and emphasize details more wisely in some particulars, but the subjects themselves seem to be well chosen for the purpose of extending the information, transforming

County Training Schools.

the ideals and vitalizing the work of those who are to teach in the country schools.

In respect to the influence of the school and its teachers in awakening an interest in educational matters and in the development of the school, I have to say that the school itself is its own best argument and advocate. The uniform and constant testimony of the pupils to the vigor and thoroughness of the instruction, and their oft-repeated and cordial expressions of appreciation of its helpfulness, combined with their interest and ardor in the prosecution of the work, constitute a chain of evidence that can not be broken. The mental discipline and power, self-possession, and ready command of their subjects shown in the graduating exercises by the pupils from the rural schools with only one year's training were a surprise and delight to the audience. With all these characteristics evident beyond controversy the school will largely popularize itself. One full year's work completed enables us to promise largely and definitely for the future. We can now say truthfully and therefore confidently that we can do much for our pupils, consequently we feel justified in urging parents to send their children here.

The teachers have maintained with considerable regularity a column in the most widely circulated county paper in which they have set forth the work and progress of the school. They have also distributed a syllabus and quarterly statement at the beginning of the terms, and have attended public meetings conducted by the county superintendent in which we advocated the claims of education and the advantage of the Training School.

Of the 23 graduates: 1 had previously taught for a period of twenty-four months; none of the others had had any experience in teaching.

Age at graduation: 5, sixteen years; 7, seventeen years; 1, eighteen years; 5, nineteen years; 3, twenty years; 1, twenty-one years; 1, twenty-four years; average 18+ years.

Respectfully,

O. E. WELLS,
Principal.

FIRST ANNUAL REPORT OF THE DUNN COUNTY TRAINING
SCHOOL BOARD.

HON. L. D. HARVEY, Madison, Wis.

Sir:—Herewith we transmit to you the first annual report of the Dunn County Training School for Teachers.

The school was organized according to resolutions adopted by the county board of supervisors on September 5th, 1899, as follows:

Resolved, That there be and is hereby established a County Training School for Teachers, in accordance with the provisions of chapter 263, laws of 1899, the same to be located in the city of Menomonie.

The general purpose of this school shall be to give instruction in the elementary branches taught in the country schools, and to fit those attending the school for the work of teaching the country schools.

The County Training School Board shall secure from the Board of Education of the city of Menomonie, suitable rooms and seating for said school, and may make any agreement they deem best relative to the admission of students at the Training School to classes in the high school grades or Manual Training School of the city of Menomonie. It is understood that such instruction in the city schools, as well as the rooms and equipment and heating shall be without cost to the county.

The tuition in said County Training School shall be free to the residents of the county, who are qualified to do the work of the school.

There is hereby annually appropriated out of the general fund of Dunn County a sum sufficient to carry out the provisions of this resolution, said sum not to exceed \$2,500 in any one year, except the first.

The sum so appropriated shall be paid out and disbursed by the County Treasurer upon the order of the President or Acting President and the Secretary of the Training School Board, and the said Board shall render annually to the County Board a just and true account of all the moneys coming into their hands and expended by them. The several members of the County Training School Board shall file with the County Clerk a bond conditioned on the proper performance of his

County Training Schools.

duties in such an amount as shall hereafter be fixed and determined by this resolution. The said bond shall be approved by the chairman of the County Board of Supervisors. Said bonds are hereby fixed in the amount of five hundred dollars."

"*Resolved*, That the County Training School Board be and is hereby authorized and instructed to purchase for the County Training School the necessary text-books and reference books, and to rent the said text-books to the students of such school at a reasonable rental, to be fixed and determined by the said Board."

J. H. Stout of Menomonie and J. E. Florin of Menomonie were elected by the County Board as members of the Training School Board.

Prof. W. L. Morrison was elected by the Board as Principal of the school and began the work of the first quarter on September 18, 1899, with an enrollment of twelve pupils. Shortly after the opening of the school Miss Elizabeth Allen was elected as assistant. The total enrollment for the year was 57, of which number eighteen were graduated from the prescribed course on June 29, 1900.

The course of study adopted and approved by the State Superintendent is as follows:

First Quarter.—Arithmetic, Psychology, Grammar and Composition, Geography.

Second Quarter.—Arithmetic, Theory and Art of Teaching, Grammar and Composition, History.

Third Quarter.—Reading, Theory and Art of Teaching, Physiology, History.

Fourth Quarter.—Elements of Agriculture, Observation, Physical Geography, Constitution.

NOTE.—1. Library Reading throughout the year.

2. Spelling and Penmanship for those who are deficient in those subjects.

3. A course of twenty weeks in Algebra is offered for those students whose work in third grade subjects is strong enough to warrant their taking it.

We transmit herewith a statement of the receipts and disbursements of the Training School fund, a statement from the Principal relative to the work of the school and the desirability of changes as brought out by the experiences of the year.

We realize that this first year's work in one of the first schools established in this country, whose purpose is the direct improvement of teachers for rural schools, has been, from the very nature of things, experimental. We now believe that the experiment has been a successful one, and that the cost of maintaining the school is fully warranted by the results. Although there were only eighteen who were awarded certificates of graduation, there are a number of others who did not fully complete the course for various reasons, but who will make stronger teachers for the training they have had in this school than many who have been teaching heretofore.

Dunn County employs from thirty-five to fifty new and inexperienced teachers every year. In the past a majority of these teachers have received their education almost wholly in the rural schools, which they teach later. A few of them have had the benefit of a course in the high school, and a smaller number have had some normal training. In view of these facts the work of a large percentage of them cannot have been otherwise than unsatisfactory in many respects.

The County Training School is designed to better these conditions,

County Training Schools.

and we believe from our observation of the work of the school from time to time, and from the appearance of its graduates and students that within a few years the teaching force of the county may be materially strengthened.

The policy of making frequent changes of teachers in rural schools is quite prevalent. Generally a change of this kind means a reorganization of the school and much loss of time. The teachers trained in one method of organization, management and teaching will undoubtedly succeed each other with less loss of time than teachers with no training and with self-made methods. We believe the students of this school receive such training as to make them suitable successors of each other in this respect.

We know of no unfavorable criticism upon the merits of this school among the citizens of the county. The fact that a majority of those attending the school who did not graduate this year are intending to return to complete the course shows that the school has the approval of those who are personally concerned therein.

The committee appointed by the County Board at its annual meeting in November, for the purpose of visiting and inquiring into the condition of the school made the following report:

"To the Board of Supervisors of Dunn Co., Wis.—

Sirs:—Your committee appointed to visit and inspect the Dunn County Teachers' Training School and to report thereupon, do hereby report that we have visited the said Teachers' Training School, have observed the work and conversed with the principal and assistant teachers and are fully convinced that the most sanguine expectations of the promoters of the enterprise will be realized.

We find an enrollment of 42 enthusiastic and zealous young teachers participating in the advantages offered by the school, with every indication of augmented membership to fifty or more during this first term of the school's existence,—tangible evidence of public appreciation of the institution.

The present prosperous condition and flattering future prospects of the school are in our judgment largely due to the conservative methods of the Training School Board, together with the ability and industry of the principal and his assistant."

In view of the fact that we have so favorable a report from the County Board of Supervisors and that the work of the school is so fully appreciated by patrons and students of the school, we believe that the question of the success of the school as a factor in building up the educational standard of the county is settled.

We wish to suggest the importance of legislative enactment, placing some legal value upon the certificate of graduation from these schools, whereby the graduates may be exempt from passing teachers' examination before receiving certificates to teach.

Respectfully submitted,

J. H. STOUT, President,
J. E. FLORIN, Treasurer,
N. O. VARNUM, Secretary.

County Training Schools.

REPORT OF PRINCIPAL OF THE DUNN COUNTY TRAINING
SCHOOL.

MENOMONIE, WIS., July 2, 1900.

Supt. N. O. VARNUM,

Menomonie, Wis.

Dear Sir:—As you request, I enclose the Principal's report of the Dunn County Teachers' Training School.

Judging from no precedents or legal requirements in regard to such a report,—for this first year has been purely experimental,—this report will necessarily be informal.

As is well known by those closely related to the school, it opened September 18th with only twelve students and one teacher. Four weeks later the enrollment had reached forty-one, and another teacher was added to the school. Following this was a constantly increased enrollment, until it had reached fifty-seven, the maximum number for the year.

These students were principally from the rural districts, having received no better advantages than those offered by the common schools, but expressing a determination to make teaching their calling.

As is shown by the following table, a few of these had taught, a number more were in possession of legal qualifications to teach, while the remainder were partially in possession of these qualifications.

As will be seen by reference to the course of study, the aim is to take students under these conditions and give them one year's training for their mission; but from lack of elementary preparation it was impossible for more than eighteen to complete the entire course the first year. The remainder will take from twenty to forty weeks longer to do the same work. These relations between the material at hand and the course of study need not continue as wrought out through the first year of the school's life; but it is hoped that at least seventy-five per cent. of the students enrolling can do the work in one year. This can confidently be expected when students coming to us are the finished products of the rural school, taught by graduates of the Training School.

The question is often raised: "Can it be expected that those taking a single year in the Training School will be as well prepared to teach as the graduates of the four years' course in a high school?" But this is an unnecessary comparison. The high school does not enter into the proposition. The only essential element in the question of our County Training School is, that fifty people with little or no training for their profession, are either teaching, or about to begin teaching in the common schools of this county. These are induced to take forty weeks of training under teachers of approved qualifications for the work. When this is done, common experience, as well as common sense, must decide that they will be vastly improved as teachers.

The prospect is very bright for our Training School. It is estimated that the school will open next September with at least sixty students determined to avail themselves of this opportunity.

Some modifications will need to be made in our course for the coming year in order to bring it in harmony with the attainments of those entering the school. It is recommended that at least three quarters, instead of two, be given to the study of arithmetic, and that history and constitution run together through three quarters. The remainder of the course of study seems fully in accordance with the needs of the school.

County Training Schools.

In closing will say, the enthusiasm and good will of the students have been a great source of encouragement to the teachers. These are reliable evidences of the demands upon both state and county for such an institution to elevate the common school to a much higher plane than it now occupies.

Following is some information concerning those graduating from the school:

Of the 18 graduates, 5 had received their highest previous preparation in high schools; 1 in a graded school; 1 in college, and 11 in district schools.

Previous experience in teaching: 2 had taught seven months; 1, eight months; 1, twelve months; 1, thirteen months.

Age at graduation: 2, seventeen years; 5, eighteen years; 2, nineteen years; 5, twenty years; 2, twenty-one years; 1, twenty-three years; 1, twenty-four years; average age, 19.5 years.

W. L. MORRISON,
Principal.

FINANCIAL STATEMENT.

Receipts.

Sept. 5	Appropriation by County Board	\$2,500 00
Nov. 23	Appropriation by County Board.....	1,000 00
June 29	Book Rent	98 20
June 29	Tuition	12 00
June 29	Discount on Bills	10 30
	Total Receipts.....	\$3,620 50

Expenditures.

June 29	Teachers' Salary	\$2,925 00
June 29	Text Books	342 55
June 29	Desks	176 85
June 29	Placing of Desks	11 50
June 29	Printing	20 45
June 29	Diplomas	10 00
June 29	Telephone and Telegraph	90
June 29	Stationery, Books, Furnishings, etc.....	70 35
	Total Expenditures	\$3,557 60
	Balance on hand June 30, 1900.....	\$62 90

The apportionment of \$1,250 from the state had not been made at the date of this report. When received the balance would be \$1,312.90.

N. O. VARNUM,
Secretary of Board.

Improvement of the Rural Schools.

With higher qualifications for teachers, available means for better preparation of these teachers, better wages through aroused public sentiment and direct state aid, with consolidation of the small schools into central schools, a considerable modification can be effected of existing conditions, in the interests of school facilities for children residing in rural communities; but with these results accomplished, more yet is needed.

I can probably give no better statement of what seems to me to be one of the principal needs for the improvement of the rural schools than is contained in Bulletin No. 5, issued from this office during the current year, and for that reason that Bulletin is printed as a part of this report.

AGRICULTURE AND DOMESTIC ECONOMY IN RURAL COMMUNITIES.

By L. D. HARVEY, State Superintendent.

There has been for some time a steadily growing demand that provision should be made in the public schools for instruction in the principles of agriculture. This question has been discussed in farm journals, in farmers' institutes, at meetings of the National Congress of Farmers, and by writers in scientific, educational, and other journals. The province of Ontario has this year provided for giving instruction in this subject in all the rural schools within its borders. In New York, work has been going on for two or three years, under the auspices of the agricultural department of Cornell University, directed toward securing intelligent and effective work in nature study in the public schools of the state. In other states, the subject has been agitated, but little has been attempted beyond the work of the agricultural colleges and experiment stations. This wide-spread interest in and discussion of the subject, should arrest the attention of those engaged in educational work, and especially all those who have to do with the determination of educational systems and policies.

The discussion concerning the incorporation of courses of study in domestic economy in our public schools, with special reference to the needs of the girls, has been confined almost entirely to the cities. There is a growing sentiment in this country in favor of making a place for that study in our public school courses. An examination of the field will disclose the fact that in manual training, in the specific work known under the head of domestic economy, and in the work in agriculture thus far organized in this country, we are far behind foreign countries, both in the scope of the work attempted and in the extent to which it has been organized. France, Germany, Ireland, Belgium, Denmark, Norway and Sweden, have all made far greater progress than we in giving in-

Improvement of the Rural Schools.

struction in the principles of agriculture, in grades of schools below the agricultural college. Most of these countries have developed work in manual training in large numbers of schools, to an extent found in but few of the cities in this country. In several of those countries they have also made much progress in teaching domestic economy to pupils in the public schools. In view of the extent to which these lines of work have been carried in the countries of Europe, and of the agitation for their organization in the United States, the following questions arise:

First:—Is this new demand simply another fad, or does it grow out of a real necessity which is coming to be recognized by the people?

Second:—In the field of agriculture is there any useful body of knowledge which can be taught outside the agricultural college, to farmers' boys, either in existing schools or in schools to be specially organized for such work?

Third:—Will this body of knowledge, if taught, and the training coming with the mastery of it, be of greater practical value to these people than any other body of knowledge and accompanying training which could be given during the same time? The same questions apply with equal force to the subject of domestic economy in the teaching and training of girls in rural communities.

The foregoing questions will now be considered in order.

FIRST:—"IS THIS NEW DEMAND SIMPLY ANOTHER FAD, OR DOES IT GROW OUT OF A REAL NECESSITY WHICH IS COMING TO BE RECOGNIZED BY THE PEOPLE?"

In considering this question it is necessary first to consider how far existing school facilities in rural communities meet the needs of the young people being educated in those communities, and also to what extent the boys and girls living in the rural districts are availing themselves of the opportunities for education offered in the high schools and higher institutions in cities. The complaint is universal that the common schools in rural communities are not up to the standard which is desired. Those who know anything of the conditions in these schools believe this complaint to be well founded. This condition is due in part to the fact that the teachers in those schools have not had proper training, that their work is not properly supervised, and that the term of school is not of sufficient length. It is also due to other conditions incident to the scattered population, and the exigencies of farm life. These conditions are such as to make it impossible to give the kind of training and instruction in these schools which is needed to secure the best results. Does the common school in rural communities equip the boys and girls attending them as they should be equipped to successfully meet the conditions of rural life which exist today?

Demands Which Modern Conditions Make Upon the Successful Farmer.

The farmer feels the press of competition at the present time more than ever before in the history of this country. Facilities for transportation make it possible to lay down farm products grown at a great distance from him, in his home market. Industrial organization in various lines is making itself felt upon the farm. The farmer of the future must not only be intelligent in his farm work, but he must be a business man as well. To farm successfully today, requires greater intelligence and business sagacity than ever before. In manufacturing it has come to be recognized that technical training and skill based on

Improvement of the Rural Schools.

scientific knowledge are absolutely essential for success in competitive fields. The same thing is true of farming. The farmer must know something of the scientific basis upon which successful results in agriculture depend. He must be able to read intelligently books and journals which present the results of the latest investigation, thought and experience in his line of work. He must not only have the ability to do such reading, but he must know that it is a necessity for him to do it, and he must have a desire to do it. He must also know how to carry into his work on the farm, principles of business organization such as are required in any other field of industrial or commercial enterprise. He must know whether a given crop or stock product is costing him year by year more than it returns to him, and if so he must understand what modifications it is necessary for him to make in the carrying on of his farm, in order to prevent such loss. He should also be familiar with the principles of economics at least in so far as those principles in their application, affect him personally. He should also have such a further knowledge of economic conditions which may be affected by legislation, as will enable him to reach correct judgments, that may determine his action as a voter and as a citizen.

In order to secure the most desirable quality of citizenship, other things than these are also necessary. Some of these additional things the schools are now attempting, with more or less success, to give.

Educational Conditions in Rural Communities.

In Wisconsin last year, the total enrollment in the public schools was 445,142. Of this number more than one-half were enrolled in the rural schools. In the city high schools there were enrolled 3,383 non-resident pupils. These may properly be regarded as pupils from rural communities who are attending high schools in the cities, leaving enrolled in the country schools fully one-half the whole number of pupils in the public schools, and who get practically no further school training than that afforded by these schools. The greater number of these boys and girls will continue to live in the country, although many of them will drift to the cities, some to achieve success, others to be lost in the whirl of city life.

Will any one contend for a moment that the instruction given in the rural schools will adequately equip these boys and girls for the highest success, either on the farm or in the city? Remembering that these country schools are taught by teachers in many cases poorly prepared, and unaided by good supervision; considering the irregularity of attendance, and the length of the school year, could it be expected that the most desirable results would be secured? These pupils go out from the school with perhaps a better knowledge of arithmetic than of any other subject taught, and yet those who have had to do with them know how meagre their knowledge of this subject is, and how little skill they possess in applying this knowledge in practical business operations. They have learned a few facts of geography, most of which will be forgotten within a year after the close of school. Few of them have any adequate command of the English language, or know how to write a business letter. They have studied some text book in U. S. history, but have probably learned more of the details of battles and campaigns than of any other phase of the history. Of the commercial, industrial and economic development of the country, they know little or nothing. They have committed to memory some portions of the constitution of the state and of the national government, but know little of civic life beyond this. Not one in ten of them can read a popular book on the

Improvement of the Rural Schools.

principles of agriculture, or a farm journal intelligently. Of the sciences upon which successful practice in agricultural pursuits depends, they know absolutely nothing. And yet they are to enter upon their life work with this preparation. I am not claiming that all this work can be properly done in the rural schools, nor that all of it can wisely be undertaken. With properly trained teachers it is possible that beginnings in the study of elementary science might be made in the rural schools, but few of the pupils have the maturity of mind to enable them to grasp anything beyond the merest rudiments of these sciences until after their days of attendance at the rural schools have passed. In this discussion I am confining myself chiefly to the specific preparation for intelligent work in agriculture and in domestic economy, and shall not attempt to discuss the general lines of training now undertaken in the public schools. I am not now contending that the schools shall give all the information and training essential for the farmer's success. The schools can not do it if they would. A large part of this training and information must come from the boy's experience in the actual work of farm life. What I am contending for is that the schools at the present time and under present conditions of organization, do not furnish such knowledge and training as will enable the farmer's boy to make the most of himself upon the farm, and to derive the largest benefit from his contact with and experiences in the every day work of the farm. His interest in farm journals is confined chiefly to the illustrations and the advertisements. He does not care to read and could not read intelligently if he would, much of the matter which would be of most value to him in these journals. The same is true of the large number of most excellent books now published, dealing with the best modern practice in farming.

Thus far I have been dealing with the conditions under which the boy enters upon an active farm life. How is it with the girl? Her instruction in the rural school has been the same as that given the boy. Has it better fitted her for her duties in rural life than it has the boy? Whatever she has learned directly fitting her to discharge these duties, she has learned in the home and not at school. I believe that she may better learn many things in the home than in the school. I know she does not learn many things in the home which she ought to know and practice in her own home later on, both for her own well being, comfort, and happiness, and for that of her family; and I further know that many of these things may be taught in the school. Not all of them in the rural school, under existing conditions, but that a school may be so organized as to give knowledge and training in these essentials.

Present Agitation Due to a Recognized Need for Something Better.

In view of these considerations does it not appear likely that the present agitation in favor of a more practical training of boys and girls in the rural communities, for the every day concerns of rural life, is the outcome of a careful consideration of these questions, of an agitation on the part of those who have considered them, which has resulted in an awakening of public sentiment, culminating in a demand for something different at least from what we now have. With many people the demand is based upon dissatisfaction with present conditions; a demand for something, they know not what. They see that the rural schools are not doing for country boys and girls all that they need to have done for them, and while they are vague as to what more shall be done, and as to how, when, where, and by whom it shall be done, they are earnest in the desire that something shall be done. This demand, then, is not

Improvement of the Rural Schools.

a fad; it has grown out of a settled conviction on the part of a large number of people that improvement is necessary, and they are looking to those whose business it is to study, shape, and organize educational systems and policies to show the way in which it can be done.

SECOND:—"IN THE FIELD OF AGRICULTURE AND DOMESTIC ECONOMY, IS THERE ANY USEFUL BODY OF KNOWLEDGE WHICH CAN BE TAUGHT OUTSIDE THE EXISTING AGRICULTURAL COLLEGE AND TECHNICAL SCHOOLS, TO FARMERS' BOYS AND GIRLS, EITHER IN EXISTING SCHOOLS, OR IN SCHOOLS TO BE SPECIALLY ORGANIZED FOR SUCH WORK?"

This is a question which most people will at once and without hesitation answer affirmatively, and yet it is not so easy to formulate the body of knowledge which can be so taught. The province of Ontario in Canada, answers this question by putting into every rural school in the Province this year, a text book on Practical Agriculture, which is to be taught by the teachers of those schools. This book deals in Part I with The Plant; Part II, The Soil; Part III, The Crops of the Field; Part IV, The Garden, Orchard and Vineyard; Part V, Live Stock and Dairying; Part VI, Other Subjects, which includes chapters on bees, birds, forestry, roads and the rural home, and an appendix giving list of trees, list of weeds, spraying mixtures, etc.

Cornell University has organized a bureau in its agricultural department which is this year expending \$18,000 in an effort to secure an intelligent consideration of nature study in the common schools of New York. Prof. Bailey, who is at the head of this bureau, does not send out a formal course of study, but does seek to secure organized effort through farmers' bulletins, leaflets for farmers' reading clubs, and leaflets for the teachers which give in detail, lessons in nature work, and which are to serve as a guide for the teachers in carrying on this subject in the school.

A number of the agricultural colleges of the country have organized short courses for the purpose of meeting the wants of the farmers' boys who have had no other education than that which the country schools afford. The short courses offered by the Agricultural Department of our own University are among the very best. In these short courses some very practical subjects are being considered, and that they are being considered with success is shown by the fact that the boys who take the work in the short courses are eagerly sought for to take positions at good wages. After even two short terms' work in these courses the earning capacity of these boys, as measured by what farmers and dairymen are willing to pay for their services is doubled or trebled. It is unquestionably true that the school which is to best fit the boy or girl for farm life, and probably for any other kind of life should undertake to train them to intelligently observe the things about them. It should not only train them to observe intelligently, but in the giving of that training it should direct the observation so that it shall concern itself with what is worth observing, and so that the results of the observation will be not merely curious or interesting information, but knowledge which shall be of value. The study of nature to be of most value for the purposes under consideration, must go beyond mere observation of phenomena, and wherever it is possible, seek for the reasons lying back of the phenomena.

Agricultural Instruction Provided For in Foreign Countries.

In Ireland agriculture has been for years a compulsory subject for boys of the fourth and higher classes in all rural schools, and it is op-

Improvement of the Rural Schools.

tional for girls. For this work the Commissioners of National Education have laid down a program consisting of various chapters of a book entitled "Introduction to Practical Farming," which deals with such subjects as the following: Cultivation of land; manures; live stock; dairying; gardening; agricultural implements; land drainage and reclamation; farm fences, etc.

In France instruction in "Elementary Ideas of Agriculture" is compulsory, and a complete scheme in the form of a practical guide for the uses of teachers for giving such instruction has been formulated. It states the aim as follows: "The aim of elementary instruction in agriculture is to initiate the bulk of our country children into that degree of elementary knowledge which is necessary to enable them to read a modern book on agriculture with profit, or to derive advantage from attending an agricultural conference; to inspire them with a love of country life, so that they may prefer it to that of towns and factories; and to convince them of the fact that agriculture, besides being the most independent of all means of livelihood, is also more remunerative than many other occupations, to those who practice it with industry, intelligence and enlightenment."

A former Director General of French agriculture, in speaking of agricultural instruction, says: "The aim and object of France has been not only to give children and young people the means of acquiring knowledge, but also to establish means for interesting old cultivators. In this country of extreme competition, we must admit that the agriculturalist can only thrive if in working the soil, he adopts scientific methods. Old routine is no longer sufficient in this branch, as it is proved to be insufficient in manufacture."

In Germany agricultural education has so broadened out as to include training in every technical part of a farmer's work, culture of forests, fruits, flowers and vines; schools to teach wine, cider and beer making, machine repairing, engine running, barn construction and surveying; knowledge of poultry, bees, and silk worm raising; domestic economy, sewing and accounts for farm women.

The royal commission appointed to investigate the causes of agricultural depression in England in 1897, reported among other things as follows: "We believe that it is essential for the welfare of agriculture that there should be placed within the reach of every young farmer a sound, general school education, including such a grounding in the elements of sciences bearing upon agriculture, e. g., chemistry, geology, botany, and animal physiology, as will give him an intelligent interest in them and familiarize him with their language."

In the Scandinavian countries of Norway, Sweden, Denmark, and Finland, agricultural education has reached a high stage of development. There are more than 150 agricultural, horticultural, forestry, and dairy schools in these four small states. Agricultural instruction in these states is not undertaken in the primary schools, but is offered in a class of schools corresponding somewhat to our high schools, taking as students young men who have reached 18 years of age, and who wish to fit themselves for the work of farming.

Nearly every other country of Europe, including Russia, as well as many of the colonial dependencies of European nations, have organized schools for the purpose of instruction in this subject. In view of these facts, it would appear that there must be a considerable body of knowledge concerning the subject of agriculture, which the schools may undertake to teach. In view of the status of agricultural instruction in France, Germany, Ireland, England, and the Scandinavian countries, it would seem that there is such a body of knowledge pertaining to this

Improvement of the Rural Schools.

subject as may properly be taught in the schools of a lower grade than the agricultural college.

What May Properly Be Attempted.

Without attempting to go into detail, it seems entirely reasonable to assume that instruction may be given profitably in schools of the grade of our elementary and secondary schools in the following subjects:

The Soil.

Plant Life.

Animal Life.

Economics of Agriculture.

Manual Training.

Domestic Economy.

In dealing with the first topic, The Soil, consideration should be given to its composition, modes of cultivation, fertilization, drainage, effect of rotation of crops upon the soil, means of restoring worn out soil to a condition of fertility, and the adaptation of different soils to different classes of products.

Under the second topic, Plant Life, there should be a consideration of the various forms of cultivated plants, including a knowledge of best varieties for local cultivation; germination; modes of growth; modes of harvesting; care for after harvesting; effect upon soils; economic values for marketing, for feeding, and for fertilization. For the boy who is to be a farmer, or the girl who is to be a farmer's wife, and possibly for any other boy or girl, the botany of the corn plants, the modes of growth of other forms of plant life on the farm, if properly taught, may prove at least of as much value as the study of mosses, or other forms of plant life upon which much time is now spent in the field of botanical instruction. This study would be for him a matter of practical utility, and would give him knowledge that would awaken an interest in the growth of agricultural products, resulting in more intelligent cultivation, better adaptation of crops to soil, and better financial returns.

Treatment of the third topic, Animal Life, should provide for a study of the domestic animals grown for pleasure or profit, including a knowledge of breeds and breeding; feeding; judging; care, including the prevention and treatment of the diseases of domestic animals; preparation for marketing either the animals or their products; and such knowledge of animal pests, and of the modes of treatment for the prevention of their ravages, thus far discovered, as would enable the farmer to save many a crop which otherwise might be ruined. Might not such knowledge be so organized and taught as to be of at least as great value, both for knowledge and for training, as the study of the tadpole, the crayfish, and the angle-worm?

In treating the fourth topic, The Economics of Agriculture, study should be made of the relations of the farmers to general industrial, and commercial organizations; of the economics of farm life, including a practical system of domestic accounting, which would enable him to tell with the same accuracy that the manufacturer tells, the cost of any given product during any given period of time.

Under the fifth topic, Manual Training, instruction could profitably be given in wood working, not only for the purposes of hand and eye training, but for the practical knowledge and skill resulting from such training, and which would be of value to him as a farmer. To this might be added elementary instruction in blacksmithing, which would enable him to make any of the simple repairs of tools at home, that otherwise he would be compelled to have done at a distance from his own home, and with considerable expenditure of time and money.

Improvement of the Rural Schools.

Under the general subject, Domestic Economy, instruction could be given in sewing, including dress making and millinery work, which certainly would be of value to the girls who are either to perform these lines of work for themselves, or to supervise that work when done for them by others. It would not only develop skill, but would cultivate the taste, and develop a knowledge of the difficulties incident to such work which would make them more considerate of those who might be in their employ, or under their supervision.

In cooking, a course of instruction might properly be given which should include a knowledge of the constituent elements of food products, and their value for definite purposes, which would enable them to construct for the animal, man, a balanced ration. For all concerned this is perhaps as important as the determination of a balanced ration for the cow or the hog. It should also include a knowledge of invalid cooking, which would enable them to know what are proper foods for invalids and how to prepare such food. Such a course of training would develop economy and skill in the choice and preparation of food which would not only result in the saving of money, but in the better physical, mental, and moral condition of those fed. To this might be added practical instruction in the different details of housekeeping which would add much to the appearance, pleasure, and comfort of the home.

In horticulture and floriculture, instruction might be given which would be of value to both girls and boys in the matter of adorning and beautifying the home surroundings.

For the work on the soil, on plant life, and animal life, and in cooking, a knowledge of essential scientific principles and their application would be necessary. It would not be necessary, even though it were desirable, to give extended courses in geology, botany, zoology, physics, and chemistry in order to place this instruction on a rational, scientific basis. For the teacher, it would be essential that he decide what is to be taught in any one of these branches, and then to decide what knowledge of science is necessary in order that the desired instruction may be properly given.

It must be apparent that in this paper it would be entirely improper to attempt to go into detail as to the precise things which should be taught in each of these subjects. The only question is, do these subjects, taken together, contain a body of knowledge of high utility to the country boy and girl, and which may be taught to them? I have already indicated my belief that these subjects do embrace such a body of knowledge, and that under proper conditions that knowledge may be taught.

THIRD: "WILL THIS BODY OF KNOWLEDGE IF TAUGHT, AND THE TRAINING COMING WITH THE MASTERY OF IT, BE OF GREATER PRACTICAL VALUE TO THESE PUPILS THAN ANY OTHER BODY OF KNOWLEDGE, AND ACCOMPANYING TRAINING WHICH COULD BE GIVEN DURING THE SAME TIME?"

This question is one which seems to me needs but little discussion. It is a body of knowledge which directly concerns these people in their subsequent vocations. It is a kind of knowledge which is essential today for success in those vocations. It is a kind of knowledge, both in scope and character, which will rarely be obtained by the individual unless obtained in the school. Is there any other body of knowledge which could be substituted for it, and which would be of higher utility to these people for all the practical purposes of life? If there be such another body of knowledge, I do not know what it is. I am thoroughly convinced that it is not the body of knowledge that these young people now get, even the few of them who complete the work of the secondary

Improvement of the Rural Schools.

schools. Will the effort put forth in acquiring this knowledge result in training as valuable as the training resulting from the acquisition of a body of knowledge of less practical value? I am one of those people who believe that knowledge may be valuable in itself and that its acquisition may furnish the highest kind of training; that the student who spends time anywhere in any grade of school in acquiring knowledge of value only for training, when he might acquire other knowledge valuable for other purposes, and equally valuable for training, is wasting his time and energy. A five-dollar gold piece has a certain definite value, but the individual who would accept a five-dollar gold piece when he had his option either to take that or a ten-dollar gold piece, would be a fool. The essence of training is doing. In nearly every one of the lines of work suggested, the student is brought into direct contact with things, is trained to study them and their relations to each other, to himself, and to other things; he would furthermore be constantly employed in dealing with these things, and not with words. He would be required to see something, and to do something at every stage of his work, and the seeing and doing would be guided by thoughtful consideration of means and ends. This training, while it would be general in its scope would, at the same time, be specific in nature as well, as it would develop skill along the lines where skill would be needed in his subsequent work. Do not these conditions furnish the best possible elements, both for the training of the mental and physical activities of the individual?

One of the chief purposes in education should be to develop interests, and one of the very necessary outcomes of such a course of training would be to develop an intelligent interest in the activities incident to rural life.

Work Above Outlined Can Not Now Be Done in Existing Rural Schools.

If now I have established the proposition that the line of work indicated is demanded by existing conditions, that it is valuable and feasible, both for knowledge and training, the only question that remains to be answered is,—Under what conditions can such instruction be given? I wish to say at the outset, that I do not believe it feasible under existing conditions as to age of pupils, preparation of teachers, supervision of school work, and length of the school year, in rural schools as at present organized, to undertake much if any of this work.

A parliamentary commission appointed to investigate and report on Manual and Practical Instruction in Primary Schools under the board of National Education in Ireland, after a most exhaustive examination of the subject, reported last year as follows: "The evidence we have received throughout Ireland, goes to show that the subject as taught is of little educational value. This subject is taught in the national schools as a rule entirely from a single text book, and is unaccompanied by any practical illustrations, a knowledge of the text book alone being required by the rules of the commission. The children do not get any real grasp of the subject, as no efforts need be made to give them a practical acquaintance with the objects and processes described in the lessons. For example, Dr. T. J. Alexander, Head Inspector of National Schools in Cork, states that the present book teaching is worthless. Mr. Purser, another Head Inspector, expressed the same opinion. Lord Monteagle, who is much interested in agricultural education, is of opinion that the present teaching out of a book is wholly useless if not worse. Similar evidence was given by many other competent witnesses. This opinion is quite in accordance with the evidence we received in England.

Improvement of the Rural Schools.

Mr. T. G. Rooper, one of Her Majesty's Inspectors of Schools in England, declared that he would never encourage the teaching of agriculture merely from a book. We are consequently of the opinion that the course of agriculture as at present prescribed for National Schools, should be altered. The new course should consist of instruction in the elements of the natural physical sciences that have a direct bearing on agriculture, and this instruction should be given with the aid of experiments of a simple character, performed as far as possible by the pupils themselves. Such a course of instruction will be of a nature entirely within the capacity of the children of a primary school. It will afford a good disciplinary training for all children, even for those who are not to be subsequently engaged in the practice of agriculture, while it will enable those who are to be so engaged, at a later stage, to make intelligent use of scientific treatises on the subject."

"The course in agriculture thus modified will naturally constitute the course in elementary science for boys in rural schools."

The following is from a publication recently issued by the French government, on "The Teaching of Elementary Ideas of Agriculture in Rural Schools":

"Instruction in the elementary principles of agriculture, such as can be properly included in the program of primary schools, ought to be addressed less to the memory than to the intelligence of the children. It should be based on observation of the every day facts of rural life, and on a system of simple experiments, appropriate to the resources of the school, and calculated to bring out clearly the fundamental scientific principles underlying the most important agricultural operations. Above all, the pupils of a rural school should be taught the reasons for these operations, and the explanation of the phenomena which accompany them, but not the details of methods of execution, still less a resume of maxims, definitions, or agricultural precepts. To know the essential conditions of the growth of cultivated plants, to understand the reasons for the work of ordinary cultivation, and for the rules of health for man and domestic animals—such are matters which should first be taught to every one who is to live by tilling the soil; and this can be done only by the experimental method.

"The master whose teaching of agriculture consists only in making the pupils study and repeat an agricultural manual, is on the wrong path, however well designed the manual may be. It is necessary to rely on very simple experiments and especially on observation.

"As a matter of fact, it is only by putting before the children's eyes the phenomena to be observed, that they can be taught to observe and that the principles which underlie the science of modern agriculture, can be instilled into their minds. It should be remembered that this can be done for the rural agriculturist only at school, where it will never be necessary to teach him the details which his father knows better than the teacher, and which he will be certain to learn from his own practical experience.

"The work of the elementary school should be confined to preparing the child for an intelligent apprenticeship to the trade by which he is to live, to giving him a taste for his future occupation; with this in view, the teacher should never forget that the best way to make a workman like his work is to make him understand it."

The course outlined by the French government indicates that the work designed for the elementary schools is of a character known in this country as nature study, and elementary science lessons, the scope and character of the science lessons being determined with reference to their bearing upon the subject of agriculture.

Improvement of the Rural Schools.

Nearly thirty years ago the experiment of introducing this subject into the district schools was tried in Canada, and proved so complete a failure that it practically put a stop to the whole matter until within the past two or three years. It is now being undertaken again, and time alone can determine what the success of the experiment will be. If it should succeed there, it would be no proof that it would succeed here. No teacher is allowed in the schools of the Province of Ontario who has not had at least one year of professional training, and the training schools give instruction in this subject. Whenever we have in our rural schools a body of professionally trained teachers who have had specific instruction in this subject and modes of teaching it, we may then hope to make some progress in the rural schools, but until then, we must look elsewhere for this instruction.

A New Class of Schools Needed in Rural Communities, to Be Known as County Schools for Instruction in Agriculture and Domestic Economy.

In 1899, the legislature in Wisconsin enacted a law authorizing county boards to make appropriations for the establishment and maintenance of county training schools for district school teachers, and provided for state aid to the amount of \$1,250 to each of the two schools first organized. The state aid was limited to two schools for the purpose of giving opportunity to try the experiment thoroughly before embarking upon it on any extended scale. The two schools were organized last year, and are meeting the most sanguine expectations of their promoters. Indications are that if the legislature shall extend the aid to other schools, there will in the near future be a considerable extension of this line of work.

For the purpose of giving the kinds of instruction I have been discussing, I venture to suggest the following plan:

Extend the idea upon which the county training schools for teachers were organized so as to provide for the establishment of county schools for instruction in agriculture and domestic economy. Give to any county establishing such a school state aid to the amount of at least one-half the sum actually expended for purposes of instruction in such school. Admit to these schools boys and girls who have at least completed the course of instruction in the elementary schools, and who have reached the age of sixteen. Provide for courses such as I have already considered in discussing the body of knowledge which should be taught, including manual training, and make the course two years in length. Add to the courses already indicated such instruction in language, literature, history, and mathematics as may be carried on in connection with the other work. Such a school should have in connection with it a small tract of land to be used for illustrative and experimental purposes; not the line of experiments which the agricultural experiment station undertakes, but a more simple line which could be carried on under the direction of the teachers, and which would be of value for observation and training purposes. Such a school could give in addition to the other work, a great body of the work now given in the short courses in agriculture offered in our agricultural colleges, and it could carry on work in some lines, considerably in advance of what is now undertaken in those short courses. Such a school centrally located in a county would furnish an opportunity for attendance by residents of the county, at a very moderate expense. Many of the pupils could board at their own homes, while others could board themselves, returning home on Friday night, to remain over Sunday. Such a school would

Improvement of the Rural Schools.

necessarily have to be equipped with such simple laboratory apparatus as would be necessary for the experimental work in science. It would need a well selected library of books on agriculture and domestic economy, and should be supplied with the best periodical literature pertaining to those subjects. It could be made a distributing center for that county, of the agricultural bulletins sent out from the agricultural colleges, and if effort were made to interest the pupils in such of these bulletins as came within the range of their comprehension, they in turn would interest their parents in them. The result would be that where one is now read in such a community, ten would then be read, and with greater interest and more intelligence. (Such a school would also be a center for meetings of farmers for discussion upon agricultural subjects. When a number of such schools were established, professors could be sent out from the agricultural college, going from one to another, remaining a sufficient time at each to give instruction not only to the students, but to farmers who might care to attend, in various subjects which could not be taken up in the school itself. The dairy industry, for instance, would furnish an excellent field for such work. The example of Denmark furnishes an excellent illustration of the value of such traveling professors. The same plan is successfully followed in Germany, and in Ireland, as well as in some other countries.

Relation of the County School of Agriculture and Domestic Economy to the County Training School for Teachers.

If such a school could be established in connection with the county training school for teachers, provision could be made for giving instruction to students in the training schools in such phases of the work in agriculture and domestic economy as could profitably be undertaken in the district schools. With such a body of teachers so trained, we might then reasonably expect to secure some of the results which many hope to see coming from the introduction of this subject into the district schools.

Two difficulties present themselves in the carrying out of this plan. One is the absence of specially trained teachers for this work. The other is the absence of text books in which have been formulated the body of knowledge which should be taught. Our agricultural colleges can very readily supply the teaching force as soon as it becomes evident that there will be a demand for such teachers. In the schools first organized the teachers will have to depend upon themselves and upon the books now published through many volumes of which the material to be taught is scattered. Experience will indicate what work can most profitably be done, and with the development of the system, well considered and carefully arranged text books will follow as a matter of course. I believe such a plan as this is a feasible one, that it will command the support of the people most interested, the farmers, that it will show tangible results early, and that as the system is extended it will awaken the intelligence of the community where the schools may be, and arouse an interest in matters pertaining to farm life which will give us better trained, more successful farmers, as well as better trained men and women, and better citizens.

Supervision of Rural Schools.

SUPERVISION OF RURAL SCHOOLS.

Any one who has any knowledge of the subject knows how utterly inadequate is the supervision of the rural school, not through the fault of the superintendent, but because of conditions which he is powerless to control.

In 1899, a bill was introduced in the legislature, which had for its purpose the remedying of these defects. An argument setting forth the necessity for some legislative action and discussing the merits of the bill was made before the joint committees on education, and a large number of the members of both houses of the legislature. As that argument presented quite in detail the reasons for modification of the existing system, and as the same reasons exist to-day as then, I incorporate that discussion of the question as a part of this report. The bill failed to become a law; I had little hope when it was presented to the legislature that it would be enacted into a law; it was a radical measure, but the discussion served to awaken interest and call attention to existing evils. I believed that the measure proposed was a good one; I believe so still, but if the people of the state are not prepared for so radical a measure, I am in favor of any proposition that gives reasonable promise of removal of existing evils, and more effective supervision.

CONDITIONS WHICH MAKE A CHANGE IN THE PRESENT SYSTEM OF SUPERVISION OF THE DISTRICT SCHOOLS DESIRABLE.

There were enrolled during the school year ending June 30, 1898, in the schools under the supervision of county superintendents in Wisconsin 306,000 children. There were expended for the maintenance of these schools during the same year, \$3,171,000. Over ninety-five per cent. of the children enrolled in the rural schools attend no higher schools, but go directly from the district schools to the affairs of life. These schools were taught by 9,800 teachers, under the supervision of seventy-two county superintendents.

Where interests so large are involved as the education for citizenship of over 300,000 children annually in these schools, necessitating the expenditure of so large a sum of money raised by voluntary taxation,

Supervision of Rural Schools.

it is important for those concerned with the administration of educational affairs, as well as for those who pay the taxes, and whose children are being educated, that the best possible returns for the expenditure shall be realized.

QUALIFIED TEACHERS AND CLOSE SUPERVISION A NECESSITY.

In order to secure the highest results in the administration of these schools two things are absolutely essential, and need only to be stated to command the assent of every intelligent citizen. The first is that these schools shall be in the charge of persons thoroughly qualified to do the work of teaching in such a manner as shall secure the best possible training with the least loss of time. The second is that there shall be efficient and organized supervision of the work of the teachers in these schools. The necessity for this supervision is evident when we take into consideration the fact that not less than one-third of the entire teaching force in these schools drops out each year, and their places are filled by new, and in most cases, inexperienced, teachers. Without careful supervision the work of an entire term may be practically wasted because of the inexperience and inefficiency of the teacher; or, if work is well done during a term, the next teacher may fail to inform himself of the work done by the preceding teacher, assume that all pupils in the school should begin the work in each subject anew, and thus waste the time of the pupils in going over again and again work which has been done before. Effective supervision will remove this difficulty, and save time to the pupils and keep alive their interest because new work is given them.

No man engaged in any industrial enterprise where any considerable number of men are employed and any large expenditures made, thinks of carrying it on without providing for close and effective supervision at every stage in the progress of the work. The lumberman provides for it among his men in the lumber woods. When the logs are taken to the mill the same close and effective supervision of the men employed in cutting them into the various grades of lumber and handling this lumber until the time it is shipped to the points of destination, is continued. When the lumber reaches the factory where it is to be worked up into various finished products, the value of supervision is fully recognized, and must be taken advantage of if the manufacturing enterprise is successful. The same thing is true in every phase of organized industrial or commercial activity. It must be evident that sound business principles demand that in the expenditure annually of \$3,171,000 for any purpose of such vital importance as the education of the citizens of the state, there must be careful and effective supervision of the persons employed to do this work.

FAILURE OF THE PRESENT SYSTEM.

The present system which provides for the examination and certification of teachers, and the supervision of these schools by the county superintendents fails in almost every county of the state to meet the two requirements named. The county superintendent examines teachers to determine their qualifications, and issues certificates which legally qualify them to teach. It is also made a part of his duty to visit the schools and supervise the work done in them. When the superintendent has been elected and is ready to enter upon his work, what are the conditions which confront him? Ninety per cent. of the superin-

Supervision of Rural Schools.

tendents of the state say this year, and what is true this year has been true in any year since the county superintendency went into effect, that they are unable to limit the issue of certificates to people whom they believe to be thoroughly qualified for the work of teaching; that they are beset by political influence demanding that certificates shall be issued to friends or relatives of the political supporters of this officer without reference to qualifications. If they fail to accede to these demands, they are threatened with defeat in the next nominating convention, or at the polls. Here and there a man is found strong enough and independent enough, because not entirely dependent upon the salary of the office for a livelihood, to stand up manfully and refuse to issue certificates for any reasons except that the persons applying for them show the necessary educational qualifications. Such men are rare, however, and frequently pay the penalty of their convictions by defeat at the polls. Their successors take warning from the fate of their predecessors, and do not attempt to fight what they deem to be the inevitable. What are the results? Certificates are issued to a number of people far in excess of the number of schools in the county, sometimes to double the number, with the inevitable result that a large number of immature, unqualified teachers are legally entitled to teach. Many of these people are engaged to take charge of schools and in numerous cases the entire expenditure for the maintenance of such schools is worse than wasted. Not only have the children gained nothing, but they have actually lost, because they have lost an interest in their work, and bad mental habits have been developed. It is hardly fair to blame the county superintendents for failure to stand up against this political pressure. They are simply human. In most cases they are either dependent upon the salary which they receive for their support, or they are holding the office as a mere makeshift, intending to leave it as early as possible for some more congenial employment. In either case, they do what nineteen people out of twenty would do under similar circumstances, stifle their own convictions, yield to the pressure, and subject the schools to the rule of immaturity and inefficiency.

In regard to the second requirement, that of effective supervision, what does the superintendent find? In a large number of counties in the state, the number of schools is so great as to make even one visit to each of them during the school year practically impossible. In a number of counties of this state there are many schools which the superintendents have not been able to visit during the past year, and there are a number of counties where it is credibly reported that there are schools where three or four years have elapsed without a visit from the county superintendent. In most cases this is no fault of the superintendent. In Dodge county there are 235 teachers at work in the district schools. In Grant county, 294. In many other counties the number ranges from one to two hundred. When we consider the demands made upon the superintendent in conducting two series of examinations yearly in different parts of his county, and examining the hundreds of sets of examination papers, the time required to do the necessary office work, and the travel necessary to reach the different schools in his county, it will be evident that the task set him is one beyond the power of mortal man to accomplish. Effective supervision does not mean an hour's visit to a school once a year, or even once a term. When we consider the large number of inexperienced teachers engaged in each county every year, and realize that in many cases it is impossible for the superintendent to reach these teachers until nearly the close of their term of service, it will be evident that such visits are productive of little or no good, and only serve to emphasize the lack of any supervisory force. In some

Supervision of Rural Schools.

counties in the state the number of schools is sufficiently small, so that superintendents are able to do effective work in supervision. If they could be relieved from the political pressure which forces them to issue certificates to people unqualified, their work would be effective, and the schools would take a high grade. In a few counties in the state this condition obtains, but it is not too much to say that even in these counties when a person is elected to the office who is not strong enough to stand up against the demands of political influence, he may do an injury to those schools in a single term which can not be repaired by even the most efficient and independent superintendent during the next four years. These conditions are not over stated. Twenty years of observation and experience in dealing with the rural school problem, supplemented by the frank and candid statements of a vast majority of the superintendents, prove that the facts have here been understated, rather than overstated.

COMPLAINT THAT THE INTERESTS OF THE DISTRICT SCHOOLS HAVE BEEN
IGNORED.

For years there has been heard the statement from numerous sources throughout the state, that in our educational interests the common schools have been neglected; that the legislature has, with liberal hand, provided for the needs of the university, and the normal schools, the high schools and the institutions for the criminal and defective and dependent classes, but that practically nothing has been done to improve the character of the training given to the great mass of the children in the state in the common schools. Are these statements true? They are believed to be by the men and women engaged in educational work, almost without exception; they are believed to be true by thousands of the citizens of the state not directly engaged in educational work, but who are interested in the education of their children. They are believed to be true, not only in this state, but in every state in the Union, and three years ago the National Educational Association, the largest and most powerful educational association in the world, appointed a committee of twelve of the acknowledged leaders in educational work in the United States, to investigate this problem of education in the rural schools, and to prepare a report setting forth its conditions, the necessity for and means of improving them. This committee spent two years in investigating the subject, and has prepared a most elaborate report covering the entire field. While they take up other sources of weakness in the rural schools, they emphasize most emphatically the two sources already mentioned, and make clear the necessity for bettering these conditions before any considerable improvement in the common schools can be expected. This is the mature conviction of a body of men who have been studying educational problems all their lives. Not simply teachers, but men with administrative and executive ability, men of affairs as well, who discuss the question and reach their conclusions not only from an educational standpoint, but from the standpoint of business organization, as well. While we have been deploring this condition of the common schools year after year, those interested and upon whom the responsibility naturally devolves, have been seeking for some way to remedy matters. The necessity for radical change in the plan of organization has become manifest whenever and wherever the problem has been investigated, but the fear of opposition to any radical measure has deterred those interested in most cases from proposing any remedy.

Supervision of Rural Schools.

A REMEDY PROPOSED AND ITS HISTORY GIVEN.

Bill 263, S., and concurrent bill 491, A., is a measure somewhat radical in its nature, but which has been prepared with the conviction that if any attempt is made to improve these schools it is wise to put fully before the people existing conditions, and to propose such a remedy as may reasonably be expected to remove the existing evils without bringing into existence new and greater evils. This measure is not of sudden growth, but in outline was proposed to the State Teachers' Association in 1890. It was approved by that body without a dissenting vote. A committee was appointed by that association to prepare in detail a plan for the reorganization of the supervision of these schools, and to report at its next meeting. In 1891 the committee presented its report. This report was again adopted by a unanimous vote of the association. A committee on legislation from that body was appointed, and instructed to prepare a bill embodying the recommendations of the report, and to present it to the legislature. The committee discharged this duty, prepared the bill, and it was introduced at the legislative session of 1892, but failed of adoption. The present bill is practically the same measure. It has been introduced in response to the demands from a large number of people engaged in educational work in the state, and in response to what is believed to be a feeling general throughout the state, that there is a crying need for improvement in the rural schools. A synopsis of the bill is herewith presented, which sets forth in detail its provisions. That it is a radical measure is admitted. The interests of 300,000 children who are attending these schools, the interests of the parents of these children, and of others who pay the taxes for the support of them and demand the best possible teaching obtainable in these schools, and that radical changes are necessary to secure such teaching, are the reasons which convince the authors of the bill that it is a wise measure, though it be a radical one.

ESSENTIAL PROVISIONS OF THE BILL.

The bill provides for the abolition of the office of county superintendent, and the creation of that of district inspector of common schools in its stead. It provides for the creation of a state board, who are to appoint the district inspectors. This proposed board to consist of the professor of pedagogy of the university, board of examiners for state certificates, and the institute conductor from each normal school. The state superintendent is to appoint an assistant, who shall act as secretary of the board. The salary proposed for the secretary is two thousand dollars.

The bill provides for the creation of not more than one hundred and fifteen inspection districts, the boundaries thereof to be determined by the board, the number of schools in the several districts to be as nearly equal as may be, the districts of compact form and contiguous territory, and bounded by township lines; the boundary lines to be changed or new districts added when made necessary by growth of population. The inspectors first appointed to enter upon the duties of their office on the first Monday of January, 1901, and to continue to serve until July 1, 1903, the terms thereafter to begin on like dates and continue for two years. Provision is made for filling of vacancies whether caused by death, resignation or removal. Inspectors must be selected from residents of the inspection districts for which they are appointed, and must possess the same educational qualifications as required for county super-

Supervision of Rural Schools.

intendents under existing laws. The board is given authority to prepare rules and regulations for forming examination districts and keeping records.

The bill provides for a salary of one thousand dollars for each inspector, and five dollars additional for each school or department thereof in his inspection district, this amount to be in full for services, expenses and stationery, and provides for the retention from the one-mill tax of a sufficient sum from each inspection district to pay the salary of the inspector of that district, and for apportionment of the amount not so retained. It gives the district inspectors the same powers as county superintendents. The members of the board are to receive no salary, but are to be paid five dollars a day for services in attendance upon the meetings of the board, and necessary expenses incurred in attending such meetings, two meetings being provided for annually.

COMPOSITION AND QUALIFICATIONS OF THE PROPOSED APPOINTING BOARD

It is believed that the composition of the appointive board provided for by this measure is such as to make it an ideal board for the purposes for which it is created. The men who constitute the board are in every case selected originally with reference to their ability to perform other educational work of the highest quality. The professor of pedagogy in the university is selected by the president of the university because of his eminent qualifications for the work there required of him. He is elected by the board of university regents. The institute conductor from each normal school is selected by the president of that normal school with reference to his ability, first to do institute work and properly represent the school throughout the state, and, second, for his ability as a teacher in the school. He is elected upon the recommendation of the president of the school, by the board of normal school regents. The three members of the state board of examiners are appointed by the state superintendent with reference to their learning, experience, breadth of view, and common sense in determining the qualifications of teachers. Since that board has been organized its members have been selected from among the leaders in educational work in the state, and without reference to their party affiliations. No state superintendent would dare to appoint a man to this position who did not possess the qualifications above indicated. Hundreds of people come before this board annually, and any incompetence or political bias manifested by the members would subject the state superintendent who appointed them to such criticism as would make his position a burden to him. These facts remove absolutely any fear of partisan bias or of the exercise of political influence by the board in making appointments. What are the further qualifications of the members of the board? First—The members of this board together will know personally every person in the state of Wisconsin eligible to the office of inspector. The professor of pedagogy in the university will know the university graduates who become eligible, because of personal contact with them in the class room. The members of the state board of examiners will know personally the qualifications of every individual coming before them for examination and there securing legal qualification for the office. The institute conductors will together know every graduate from the normal schools who becomes eligible to the office, thus covering the entire ground of eligibility.

Second—The professor of pedagogy in the university and the institute conductors from the normal schools cover practically every county in the state each year in the institute work. One of the members of this

Supervision of Rural Schools.

board has been engaged for twenty years in the institute work, and has probably worked in every county of the state, and in most of them many times. Every member of the board, as it would exist under this law, has had many years of service as a teacher in the state, and knows the local conditions in a large number of the different counties. It will thus be seen that the board as constituted is made up of men non-partisan in character, who know the people eligible to the office of inspector, and who know the local conditions. The different interests which they represent will demand of them the greatest care and the highest efficiency in the selection of their appointees. It may seem that the preponderance of normal-school men is unwise. There are two reasons why this is not true. First—They are and have been broad minded, intelligent men, who come in contact with people outside their profession in all parts of the state, and thus come to know the sentiments of communities better than those who are confined closely to the work of the school room. Second—Each institute man is concerned to see that no other normal school has in any way the advantage over his own, and any attempt to secure an undue advantage would create opposition, on the part of every other normal school man on the board. Third—The character of the men who have held these positions since the organization of the normal school system, and the fact that they have ever been ready to assist qualified teachers, no matter where they were trained, in securing positions, is evidence that there would be no abuse of the appointing power by them. Fourth—One of the most important functions of this board is the organization with their appointees, of the work of inspection on a business basis. Every time the professor of pedagogy in the university or the conductor goes out for work in any county of the state, he will go as a representative of the board, to advise with and counsel and assist the inspector in carrying out the plan of organization decided upon. The institute conductors come into vital relations with the inspectors in every institute which they conduct. As members of this board they would be able to secure the most hearty co-operation and intelligent action toward realizing the best results from institute work.

These are some of the reasons which it would seem must remove the objections to such a board which may be entertained by an unbiased man, and which are based on the fear that it may become a political machine.

THE STATE SUPERINTENDENT IN NO WAY CONCERNED WITH THE APPOINTMENT
OF THE DISTRICT INSPECTORS.

It has been charged that the state superintendent is to appoint the inspectors. The bill has been framed with special care to remove the state superintendent as far as possible from any relations with the appointing power. His relations with the appointees by this board are exactly the same as they now are with the county superintendents. It was urged in the committee that framed the bill originally that the state superintendent should be a member of the board. The present state superintendent, who was a member of the committee, insisted that this was unwise, that he was the only elective officer connected in any way with the plan of organization, and that he should not be subject to the charge which might be made, of using his political influence for his own interests. Furthermore, that he was the officer to whom appeals would lie from the ruling of the inspectors, and that in deciding these appeals it would be eminently unwise that he should constitute a part of the appointing power which had placed these inspectors in their positions.

Supervision of Rural Schools.

SECRETARY OF THE BOARD.

Provision is made for a secretary of the board, who simply acts in that capacity as a keeper of records for the board, and performs such clerical work as may devolve upon him in that position. By the terms of the bill he is to be appointed by the state superintendent as an assistant. The work which he would be assigned outside of the duties as secretary would be chiefly that of looking after the organization, course of study and management of the graded schools of two, three or four departments, which have no high school connected with them. There are 319 of these schools in the state. Their courses of study are in a chaotic condition, as they are practically without any supervision at all. The county superintendents in the main feel that their work lies more largely with the ungraded schools, and that the person in charge of the school, as principal, is better able to plan and organize the work in the grades of his school than are the teachers in the ungraded schools. This principal teacher is usually required to teach every hour in the day, and is often himself lacking the knowledge which is essential to the proper classification and grading of such a school. Its course of study is frequently unfitted to the needs of the pupils. The state of Minnesota, with less than a hundred such schools, has a state inspector, whose whole time is given to work in them. It has for a long time been the feeling among educational men that there should be some direct assistance given to these schools from the office of the state superintendent, but without an increased force such work is impossible. It has been suggested in some quarters that such an officer might be a very valuable man to publishing houses, the insinuation being that honest men could not be found to fill such a position. Such a gratuitous insult to the intelligence and integrity of the teaching force of the state from which such officer would be selected is entirely unwarranted.

TERM OF OFFICE.

The bill contemplates no change in the term of office after the first term, except a change in time, from January 1, to July 1, when the term shall begin. This puts the inspector into his position before the opening of the schools for the year, and if he retires from the position at the close of his term, at such a time as will not interfere with the work in his district. It also enables any retiring inspector to enter upon the work of teaching at the opening of the next school year. As it now is, if a county superintendent retires from office December 31, and wishes to enter upon the business of teaching, he is usually compelled to wait until the following September to secure a position. The appointment of inspectors is to be made by the board for each term of two years, from residents of the inspection district for which the appointment is made. They must possess the same educational qualifications as are now required for county superintendents. They must have an acquaintance with the common schools, experience in teaching, and general executive ability. The reasonableness of continuing the present qualifications must be evident to all. While an educational qualification does not alone determine one's fitness for the position of inspector, it is one of the essentials. As has already been indicated, the members of this board have exceptional opportunities for determining the other elements of fitness possessed by the different persons who may be eligible.

Supervision of Rural Schools.

BETTER BUSINESS ORGANIZATION OF THE WORK OF SUPERVISION WILL RESULT.

The bill provides for securing the necessary records for the inspector's office, and for the office of the state superintendent, and for making such reports as are required. As the payment of salaries is dependent upon the making of such records and reports, and as the board has power to remove from office any inspector who may be proved to be derelict or inefficient in the performance of his duties, it is clear that there would be no trouble in securing a better business management of the office than has ever existed under the present system. It is not uncommon for a superintendent newly elected to the office, to find when he enters upon its duties that needed records are lacking, and frequently that absolutely no records of any kind have been left by his predecessor. A superintendent who was asked for certain information from the state superintendent's office, replied that he had entered upon the office at the beginning of this year, and that there had not been left by his predecessor a single record of any kind. He could not tell the number of teachers in the county, nor could he determine who held certificates, nor who were teaching, nor where any teacher was employed. There was not an examination paper on file. Another county superintendent of one of the largest counties reported in the middle of February that he had been engaged since entering upon his office, January 2, in trying to find out who were teaching in his county; that there were no records to show the names of teachers, nor where they were engaged. It is made the duty of the county superintendent to advise and consult with town clerks in the matter of selection of books for the district school libraries. It must be evident that to do this wisely for his county it is desirable that he shall know what books are in the different districts of the county, and yet not to exceed a dozen of the superintendents reported at the superintendents' convention held in February, that they had such a list on file. In many cases the reason given was that the demands upon their time for visiting schools were so great as to leave them no time for office work. It must also be remembered that 40 per cent. of the county superintendents now in office did not hold that office during the preceding term, and were not responsible for the failure of their predecessors to make and leave proper records. These are a few of the things that would be corrected under a system which would fix responsibility and hold the inspectors accountable. An effort has been made for a score of years to introduce a course of study into the rural schools, not to make them graded schools by any means, but to specify certain subjects which should be taught, and the order in which they should be taught, together. This was designed to prevent an immense waste. In the old-time schools, a teacher compelled classes to turn back and begin their books anew each term. Unless the inspection district is sufficiently small to enable the inspector to make close supervision, it is impossible for him to tell whether any attention is paid to this course of study or not, and if it is used by one teacher, to determine whether such records are left by that teacher as will enable the next one to take up the work where it was left off, and thus save pupils' time. The country boy or girl who can attend but six or seven months in a year has no time to waste in grinding over the same grist year after year, but without close supervision such waste of time and energy is inevitable.

Supervision of Rural Schools.

COMPENSATION OF THE BOARD.

No salary is provided in the bill. It makes provision for the payment of five dollars per day to members of the board for necessary meetings. After the first organization of the work, a single day at each of two meetings annually would be entirely ample to perform the necessary work of the board. This would make the total cost due to the existence of the board a mere trifle.

NUMBER OF INSPECTION DISTRICTS.

The measure provides for increasing the number of inspection districts from the present number, 72, to 115. The wisdom of this provision will be evident to any one who knows anything of the conditions which make it possible to secure adequate inspection of schools. This number of inspection districts would give an average of seventy-three schools to each inspector, the maximum number which any person can possibly supervise with any degree of effectiveness. The number of inspection districts should be greater, rather than smaller. When it is remembered that there are forty-three superintendent districts in the state now, with a number of teachers ranging from one hundred to two hundred, ninety-four in each district, it will be seen at once that the greater portion of the state is without any adequate supervision. Some of the northern counties have fewer than seventy-three schools, but in most of these counties the schools are widely scattered, requiring the superintendent to travel long distances to reach them, and the country is filling up rapidly, new schools being organized each year, so that in a very short time such counties will have more than this average number. Reference is here made to the statements in the first part of this paper as to the value of the superintendents' visitation to the schools conducted by inexperienced teachers early in the work of the year, and to the necessity for repeated visits to such teachers. With the number of schools in each inspection district provided for in this bill, or as near that number as local conditions may warrant, it would be possible for the inspector to prevent many teachers from making a failure, and the waste of time and money incident to such failure, where under existing conditions failure inevitably occurs.

PAY OF INSPECTORS.

The provisions of the bill for payment of the inspectors would increase the present cost for supervision by about \$84,000. This means that the amount of increased taxation due to this measure would be 14 cents on every \$1,000 of assessed valuation, or 17 cents for each child enrolled in the public schools last year, or it would increase the total expense for school purposes per capita in Wisconsin by three and seven-tenths cents. In fixing this salary it was the purpose to make it cover all expenses, which are now in many counties paid separately, and the cost of printing and stationery, and to make it sufficiently large to secure the services of thoroughly competent men. The average salary would be \$1,360.00; the average salary paid to the principals of four years' course high schools in this state is \$1,233.00. When it is remembered that they have no traveling expenses to pay, and that their bills for stationery and printing are paid by the high school boards, it will be seen that the salary fixed for the inspectors is considerably below that of the high school principals. Each inspector will find it necessary to keep a team, to own a carriage and sleigh, and to pay his

Supervision of Rural Schools.

expenses while on the road and also the necessary amount required for printing and stationery, which varies from \$75 to \$200 for each county. While the work of the district school inspector is different from that of a high school principal, it seems clear that its importance is no less, and that the work of directing the educational forces in 70 to 75 schools effectively, requires ability fully the equal of that of the high school principal.

IS IT WISE TO EXPEND \$3,171,000 ANNUALLY FOR THE COMMON SCHOOLS WITHOUT USING SUCH A PORTION OF THIS SUM FOR SUPERVISION AS WILL SECURE THE BEST RESULTS FROM THE REMAINING EXPENDITURE?

With the present expenditure of \$3,171,000 annually for the support of the common schools, it is simply a business proposition whether expending a larger portion of this amount than at present for the work of close supervision, is a wise one. As already stated, the cry for many years has been that liberal expenditures have been made for the high schools, normal schools and university, but that nothing is done for the rural schools. The bill provides for payment of these salaries from the portion of the one mill tax, which would be apportioned among the different inspection districts. It is believed that the increased sum necessary may thus be used without any increase in the burdens of local taxation, and that by such use the effectiveness of the schools would be increased very largely, using the remainder of the one mill tax apportionment and the sum now levied by local taxation for the wages of teachers and other necessary expenses. The wisdom of liberal expenditures for supervision is realized in all the city systems of schools. For illustration, in the public schools of Milwaukee there are 850 teachers, probably the best body of teachers in the state; nearly all of them are university and normal school graduates with experience in teaching. These teachers are gathered within an area no greater than a single township, and yet there is expended annually in Milwaukee for supervision of these 850 teachers and 35,000 pupils a larger sum than is expended in the entire state of Wisconsin, outside the cities, for the supervision of 9,800 teachers and 306,000 pupils. It is not to be expected that as large a proportionate sum could be expended for supervision in the country as in a city like Milwaukee. Yet when, not only in Milwaukee, but in all of the great cities of the country it is recognized as wise economy to expend these large sums for close supervision, it must be evident that an increase over the present expenditure for supervision in the country schools scattered over more than 50,000 square miles of territory, taught in thousands of cases by teachers without any experience or professional training, is the part of business wisdom.

OBJECTIONS TO APPOINTMENT OF SUPERVISORY OFFICERS CONSIDERED.

One of the sources of opposition to the measure naturally expected, comes from the proposal to change the mode of selecting the supervisor from that of election by the people to that of appointment by a board. The full force of this reason is realized by the supporters of the bill, but it is their belief that the vast majority of the people are far more interested in the quality of the training which their children receive in the schools than they are in the mode of selecting the officers upon whose work the efficiency of the schools depends. It will not do to mistake the views of a limited number of interested parties for the views of the hundreds of thousands of people who are not heard.

Supervision of Rural Schools.

A proposition to put the selection of any officer in the hands of any board is one that always awakens the suspicion that there is some political job in the background or that the centralization resulting from such a measure will abridge the rights of the people. The fact that there are few cities in the state or in the United States which elect superintendents of schools by a popular vote and that there is no clamor on the part of the citizens of these cities for a change in the mode now employed to that of direct vote, is evidence that a large mass of the people believe that greater efficiency in their educational work can be secured through the appointive system rather than by the elective system. In this state the people in the cities are interested equally with the people in the country in the efficiency of the country schools. They contribute liberally through taxation to the support of the schools in the country. A large influx of young men and women from the country to the cities occurs annually and the people of the city are interested that those from the country coming to the city life shall come with the best education which it is possible to give them.

It is urged as being vitally important that the people in each county should elect the superintendent of their schools by popular vote. The same argument was made in 1861, when the change was made from town superintendents to that of county superintendents. It was then claimed that it was taking it out of the hands of the people immediately interested, and transferring the power to a larger unit, thus removing the people farther from the officer to be selected. The change, however, from the town superintendent to the county superintendent was somewhat of an improvement, and the people have long ceased to feel that their interests have suffered because of the larger electoral unit.

THE SUPERINTENDENT OF SCHOOLS SHOULD POSSESS CONSTRUCTIVE, ORGANIZING ABILITY REQUIRING PROFESSIONAL SKILL.

It must be borne in mind that the office of superintendent of schools is different from any other county office. The duties of every other county officer are definitely and fully set forth in the statutes. Certain duties of the county superintendent are also enumerated in the statutes. He must examine teachers, visit schools, make certain reports, must conduct an institute in his county each year. Beyond this the statutes do not and cannot properly go. Yet the chief value of the superintendent's services is in work entirely outside of the performance of these duties. His work of supervision cannot be formulated by statute. His work in conducting teachers' meetings, associations and in general in awakening and organizing the educational forces of the county, are not the product of statutory enactments; but these are the most important functions of that office. They are functions which are strictly professional in character, requiring either special training, or long experience, and, in any case, a high degree of skill. Every one must admit that special skill or professional ability in educational work is not best obtained through a popular election. If it could be so obtained, why should not the teachers in each district be elected by popular vote at the district meeting, instead of being appointed by the district board? If it could be so obtained, why is it that in those cities where the best schools are always to be found the city superintendents are appointed, instead of being elected by popular vote? That it cannot be so obtained is no reflection upon the intelligence of the people. It arises from the fact that the great mass of people are fully occupied with the daily business concerns

Supervision of Rural Schools.

of their own vocations, and do not give the special study and attention to the needs of their educational system that must be given in order to secure its best development. That this last statement is correct, is shown by the fact that not one parent in twenty ever visits the school in which his children are enrolled once during the school year.

EDUCATIONAL LEADERSHIP ESSENTIAL TO EDUCATIONAL PROGRESS IN ANY LOCALITY.

It is true that no reform is practicable which runs too far in advance of the present attitude and views of the people to be affected by it. It is true that no reform can be carried on successfully unless supported by the intelligence of the people. This might at first thought seem to be an argument against the appointment of school superintendents, but it is equally true that in no school district, county or city, in this or any other state, has educational progress and development been made except through the impetus and guidance given by the efforts and labors of some leader in educational work. Point out a county in this state in which educational ideals are high, and the schools are excellent, and you will find that it is because there have been strong men as superintendents of schools, who have awakened public interest and aroused the intelligence of the people, and directed it toward securing action for better teachers and better schools. Put into that same county, with its high standards, a superintendent lacking in character and qualities of educational leadership, and in two years' time the educational standards of that county will be so lowered and the schools so deteriorated that it will take years under the best leadership to bring them back to their former position.

RESPONSIBILITY OF THE LEGISLATURE TO PROVIDE FOR EFFICIENT SUPERVISION FIXED BY THE ONE MILL TAX AND COMPULSORY ATTENDANCE LAWS.

Is it not true that the legislature has put itself in such a position that responsibility rests upon it directly for wise action and radical action, if necessary, in the interests of the common schools? The legislature has imposed a one mill tax upon all the taxable property of the state for the support of the public school system. If it has the right to impose such a tax, and no one questions the right or the wisdom, because the business of public education is the business of the state, does not the exercise of that right carry with it the responsibility to demand such supervision of these schools as shall prevent that money raised by general taxation from being wasted by the employment of incompetent teachers. *The legislature has no right to impose a tax and then allow the money thus raised by taxation to be used in any way but that which is most effective in securing the results aimed at by the imposition of the tax.* The legislature has passed a compulsory-attendance law, requiring the attendance of every child between the ages of seven and thirteen upon some school, public or private, for at least twelve weeks in each year. What right has the legislature to enact such a law? The right exists in the necessity for intelligent citizenship for the existence of the state, and is absolutely fundamental, but the legislature has no right to demand that a child shall attend the school whether such attendance involves hardship on the part of the parents or not, unless that school is of such a quality as to render that attendance of value in the education of the child. Under existing conditions there are hundreds of schools in the state of Wisconsin where, from lack of qualified teachers and of proper supervision, the money used for their main-

Supervision of Rural Schools.

tenance and the time of the children spent in them, are absolutely wasted. The children are the losers, rather than the gainers, by attendance upon such schools. *If the legislature has a right to tax the public for the maintenance of public schools, if it has a right to enforce attendance upon these or other schools, it is not only a right, but a duty for it to see that the schools supported by this taxation are of the best quality attainable for the money expended in their maintenance.*

No charge can be truthfully made against this bill, that it interferes in any way with any private or parochial school interest, or seeks in any way to affect those interests. The bill affects no religious organization or interest. If enacted into a law, it cannot be used in any way for political purposes, further than to abolish politics in the management of the common school system. The cry that it curtails the rights of the people is a cry born of lack of knowledge, of timidity, or of personal or political interest. Shall such timidity or such interests rise higher in the estimation of the legislature than the interests of the hundreds of thousands of children whose only education will be secured in the district schools?

"WHAT IS BACK OF THIS BILL?"

The question has been asked, what is back of this bill? The answer is, that there is back of it the double indorsement of the State Teachers' Association, and of the great majority of the educational men and women of the state. There are back of it years of thought and study of the problem of how to better conditions in the rural schools. There is back of it the very general sentiment that the rural schools are not keeping pace in their progress with the other portions of our public school system. There is back of it the judgment of the National Educational Association, that a change in the present system which will grant legal authority to teach to those only who are qualified to teach, and that more efficient supervision of the teachers in these schools are absolutely essential to their further improvement. There are back of it the interests of the more than 300,000 children who were last year enrolled in these schools, and of the thousands more to be enrolled in each succeeding year, who are to be put in the balance against timidity, sentiment and political cowardice. There is back of it the sentiment of a large number of intelligent citizens with no political aspirations, but who believe that the common schools constitute the most important and vital part of our public school system.

For thirty-eight years the schools have been under the present system of supervision. The state has had a marvelous development. Growth in every direction, industrial, commercial and otherwise; the educational system has grown; we are justly proud of our great university, of our normal school system, of our splendid high schools, but we have little to be proud of in the common school system.

FORWARD.

The proud motto of the state is "Forward." In every material direction that has been the motto of every citizen of the state from its admission into the Union, to the present time. Has not the time come to take a step forward in the development of our common schools and to enter upon the new century untrammelled by worn-out conditions, to begin a new era of progress which will place our state in the very front rank of all the states in its common school system, as it now stands today in the front rank of all that pertains to the higher education?

Manual Training.

MANUAL TRAINING AND DOMESTIC ECONOMY.

Under the law providing for state aid to the amount of \$250 to each high school offering a course in manual training, approved by the state superintendent, nine schools are now furnishing such facilities. One of the most serious difficulties in organizing this work has been the extreme difficulty the school boards have experienced in securing competent teachers; it has been almost impossible to find teachers who have been trained for this work. There is a rapidly growing interest in the state in the matter of manual training. A considerable number of cities are investigating the subject, and if teachers were readily available, competent to carry on work successfully under conditions which must necessarily exist, I believe we should soon see a considerable extension of this system of training into the grades below the high school.

If manual training has the value claimed for it, it should be begun long before the pupil enters the high school; but a small percentage of pupils enrolled in the city schools ever enter the high school. Those who leave at or before the completion of the eighth grade work, should have such opportunities for securing the results of this training as they could utilize. There should be in the state, a school devoted to the preparation of teachers who could successfully carry on work in manual training and domestic economy in our city schools. This school should be organized in connection with some one of the normal schools; it should aim to give and be prepared to give a thorough course of training to fit teachers for the work indicated, either in high schools or in grades below the high school. If the normal schools could undertake such training as would be necessary to fit the young ladies attending those schools to systematically teach sewing in the public schools, it would be possible to send out into the state five hundred young women each year, who would be thoroughly competent to introduce that work wherever they went. This is one phase of manual training

Teachers' Institutes.

which could, under such conditions, be introduced into any system of schools with practically no expense to the community. The results of that kind of work, where it has been tried, have shown its value; not the least value is the increased local interest aroused in the work of the public schools.

TEACHERS' INSTITUTES.

By statutory enactment, the State Superintendent, acting with the Board of Regents of Normal Schools, is authorized to provide institutes for the instruction of teachers in the different counties of the state. This duty involves the supervision of the same and consequently makes the institute work no small factor in the state department of public instruction.

Some one has said that the hope of the nation lies in the common school, and educators are generally agreed in the statement. In Wisconsin a little more than one-half of the pupils in our public schools are in the common or district schools. In no other division of public school education are poorer teachers employed, poorer wages paid, poorer instruction given, or less paid per pupil for instruction. These facts thrust the district school problem into a prominence which commands the serious attention of all interested in the destiny of our commonwealth. This department, early recognizing these conditions and the urgent need of doing everything possible to help the rural teacher, instigated certain changes which the following defects in the old system seemed to indicate were imperatively demanded:

First. Lack of uniformity in the work. From year to year different persons were appointed to conduct institutes in the various counties of the state. In the majority of cases these conductors had no knowledge and could secure none of the previous work done in a county. Going blindly at their work, they many times duplicated the subject matter previously given, or took up a line of study entirely independent and having no

Teachers' Institutes.

connection, whatever, with the previous year's work. The same was true of the teachers in attendance. As they moved from county to county, they were liable to find the same work in the institutes of this year that they had in another county last year, or there failed to be any connection between the two years' work.

Second. The lack of a definite outline of work given far enough in advance of the institute to allow the conductor sufficient time for preparation. With the few exceptions where enterprising county superintendents previously outlined a course of study conductors were likely to go to their institute without a clear knowledge of what they were to teach. This resulted in a miscellaneous lot of "exercises" being presented which were of necessity illogical, scattering and without a definite aim; the teachers in attendance left the institute without any connected line of thought being "clinched" previously in their minds.

Third. The employment of incompetent conductors. For political and other reasons, many county superintendents seemed forced to recommend to the institute committee the employment of persons who through lack of education, experience or executive ability were utterly incompetent to be the instructors of teachers. Some of these found a place upon the list of institute conductors. Many good educators who were successful in their special fields as high school principals, city superintendents, or teachers, were failures as institute conductors, due to the fact that the institute problem presents pedagogical phases not seen in these fields.

Fourth. The attempt to give instruction in too many subjects, and in the higher branches not directly pertinent to the rural school teacher's actual work in the class room. As many as twenty studies have been offered in institutes with only two conductors, and no limit placed upon the number of branches which each teacher in attendance might pursue. Among these subjects were the first and second grade studies, which, with the possible exception of algebra and physical geography, are

Teachers' Institutes.

not taught in our district schools, and consequently do not enter into the problem of institute work.

Fifth. The lack of sufficient knowledge on the part of the institute committee of the quality of work done in the field by the conductors.

Sixth. No adequate supervision of the work done as observed in the field. With rare exceptions, conductors were left undisturbed in their institute work, receiving neither friendly criticism nor favorable comment upon the same.

Seventh. Fundamental pedagogical principles violated in the instruction.

1. The work seemed to be either entirely academic, partaking of the nature of the summer school; or purely professional with the academic features entirely wanting.
2. The teachers were not held to account for work done—mere listeners, without any active participation.
3. The "lecture" method, largely employed by conductors, failed to awaken any response on the part of the teachers, and superficial work was the result.
4. Close individual work seemed lacking. This was due to the large number in the classes, the failure of conductors to require preparation, and the abandonment of pedagogical recitation methods.

Eighth. The majority of institutes, were of too short duration to accomplish any definite results, and the cost per capita per day was disproportionate to that of the longer term institute.

Early in 1899, the committee on institutes, under the direction of the state superintendent, began to thoroughly organize the work. The first step taken was toward a unification of the same, and to this end three plans were carried out: First; a syllabus, containing outlines of the different branches to be taught in the institute, sufficient reading material for a four weeks' institute, and general directions and suggestions to conductors and county superintendents, was prepared by the

Teachers' Institutes.

state superintendent and a sufficient number printed to supply all teachers in attendance at the year's institutes. Besides establishing a uniform line of institute work throughout the different counties of the state, this syllabus gave definiteness to the work that enabled conductors to make due preparation in advance for their institutes.

Second; under direction of the state superintendent, an institute conductors' school of one week's duration has been held in April, 1899, and 1900. The purpose of this school was to supplement the printed instructions of the syllabus, to afford to conductors and superintendents an opportunity to discuss different phases of the work, and to definitely settle many disputed questions concerning methods, management, etc. This school has included in its enrollment members of the different faculties of the state normal schools, city and county superintendents, high school principals, and other educators from this and other states. The exercises of the syllabus were exemplified by the regular conductors, to make clear to those who were about to enter the institute field for the first time just what was wanted. From frequent comments made upon the work of this school and its results, it may be safe to say that no one thing has done so much to clarify, give definiteness to, and strengthen the institute work in Wisconsin, as has this school of instruction. Old conductors testify that they have greater confidence in themselves and their work, county superintendents see a higher class of instruction by the conductors, and the inexperienced are started in the right direction for institute work. The first year's attendance was 122; the second, 180.

Third; it was found impossible to completely unify the work without some system of reports for institute conductors and county superintendents. The state superintendent, therefore, furnished blank reports to these persons, with the request that a daily record of the work done in the institute be kept therein. At the close of the institute the reports were mailed to the state department, where they were kept separate for the differ-

Teachers' Institutes.

ent counties; on the assignment of institutes for the succeeding year, they were mailed to the leading conductor, who passed them on to his assistants, and they in turn finally returned them to the office of the state superintendent. In this way the institute conductors were informed of the specific nature of the work in any county for the previous year. The state department was likewise fully informed of the same, and in apportioning assistance to the different counties these reports have proved of great assistance.

While in high schools and all our common schools legal qualifications of a certain standard are required of teachers the institute seems to have been a notable exception to this rule, and no special qualifications were required for institute conductors.

The committee found many incompetent men and women engaged in this work. Some were lacking in education, not having attended any school higher than the elementary course of the normal; others from their lack of executive ability, were not competent to manage any body of teachers; and a larger number, while strong in their regular fields of educational work, seemed to be at sea in the institute. This condition of affairs led the committee to set some standard as a minimum qualification for an institute conductor. While no definite educational standard was named, the general policy of the committee has been to allow nobody to engage in institute instruction who does not possess a life state certificate or its equivalent; successful experience in actual institute work is also required. The last qualification, while a most essential one for those who engage in this line of work, would naturally bar all new-comers. This prompted the committee on institutes to adopt a new policy regarding those who wished to take up the institute work for the first time. Such persons as showed an interest in common schools and their welfare by attendance at the institute conductor's school, and whose educational qualifications and school experience were sufficient in the estimation of the committee, were placed upon a so-called "tentative list", the con-

Teachers' Institutes.

ditions of which were, that said persons should instruct in an institute for one week without any compensation except actual expenses, their work to be inspected by some representative of the state department, and if found satisfactory, they were to be placed upon the permanent institute list; if not satisfactory, to be dropped from all institute work. This was done with the view that it is impossible to predict whether one will be successful in this line of work, except as he has shown himself proficient in the field itself. Everyone must do his first work in the institute, and in the judgment of the committee, this was thought to give all those who desired to do institute work a fair chance. By the adoption of these methods and through the instrumentality of the conductors' school, the syllabus, and the inspection, the personnel of those approved for institute work has been materially strengthened.

It was the belief of the state superintendent and the institute committee, that too many subjects were being taught in the institute, that it would be better to take up a few branches and give them a fair amount of consideration than to undertake too many which would of necessity be treated in a very superficial manner. The number of academic branches to be taught were therefore limited to six, with directions to conductors to restrict the number taken by any teacher in attendance, to four. Believing that the institute is primarily to teach teachers how to teach those subjects which they handle in the common school, the state superintendent considers that instruction in the first and second grade branches is unnecessary, and that all the time of the institute should be devoted to giving instruction in the actual studies which are taught in our common schools. The subjects offered, therefore, in all institutes were third grade branches.

At the beginning of the present administration it was apparent that the committee on institutes had no means of securing any accurate knowledge of the work done by conductors in the institute field, and it seemed as if this knowledge was impera-

Teachers' Institutes.

tive in the licensing of conductors. In conjunction with this idea, it was also apparent that some system of inspection of these institutes by competent persons would be of great value. If the weak conductor could be assisted to see his mistakes, and the strong conductor be given the praise due him, it was believed an additional stimulus would result. Personal observation of the work of different institutes in the various counties, would be of great assistance to the state superintendent and the institute committee in making appointments and in shaping the general policy of the institute. For these two reasons, viz.: to afford the institute committee a knowledge of the work done by conductors in the field and to give closer supervision to the same, it was thought best to carry on a systematic inspection. During 1899-1900, every institute, with four exceptions, was inspected by the state superintendent or some member of his staff, and the same plan is being pursued the present year.

The inspection of the institutes revealed the fact that many fundamental pedagogical principles were being violated in the instruction. While the instruction in an institute should be largely professional, the best way of exemplifying the professional is to correlate it with the actual academic work. It was observed that this was not being done in our institutes, and the committee has insisted upon this change being made. From the fact that the conductors did much of the work through the lecture method, and the teachers had nothing to do, it was easy to see that no response was awakened on the part of the teachers, and that no material results could come from an institute where the main body did not actively participate in the work. While the lecture method may, and probably does, have its value in the short term, inspirational institute, it can hardly be said that it is productive of lasting results. There needs to be a clear exposition of the subject by the conductor, and a response to the same from the teachers. This means that the institute should be divided into as small classes as possible; that definite lessons should be assigned by the conductor; and that

Teachers' Institutes.

these lessons should be thoroughly tested in the following recitation by as strict pedagogical methods as are employed in the regular school. The result of these changes has been very apparent in the work of the last two seasons, and all who have observed the methods employed, are convinced that only through such means can substantial knowledge be gained, which will be of permanent benefit to the teachers in their actual school work.

The two day institute may, and probably does, have its place in the city school work, as an inspirational factor, yet it is believed by the committee that it fails to carry out the purpose of institute work for country teachers, namely, to instruct teachers how to teach by giving them actual academic instruction which shall be of sufficient extent to show material results. Recommendations were therefore made that the short term institute be largely dispensed with in the counties and those of not less than one week, nor more than four, be held hereafter. As a result (see table below) it will be noticed that very few, two, three, and in fact five day institutes were held during 1899-1900 while there were few of twenty days, many of fifteen, and the largest number of ten days' duration. The statistics of 1900-1901, while not yet complete, show the contrast even greater. With the long term institute, it was found that more and better instruction was given to a larger number of teachers at a less cost per capita per day than in the short term institute. (See table below). This can readily be seen from the fact that while the traveling expenses of the conductors remain the same, their local expenses are materially reduced, for the reason that board can be obtained at a lower rate by the week than by the day. The testimony of superintendents is that the long term institute shows beneficial results in the school room which are not seen following the short term session.

Teachers' Institutes.

INSTITUTE STATISTICS.

1898-9.			1899-1900.		1900-01. *	
Length of session in days.	Number.	Actual days attendance.	Number.	Actual days attendance.	Number.	Actual days attendance.
20			2	3,620	5	8,640
19			2	3,876		
15			8	11,145	20	23,700
14			1	1,848		
11			2	1,452		
10	11	10,420	28	20,410	34	25,150
9			1	927		
8	2	1,552				
5	46	17,230	20	7,310	4	575
4	1	516			1	112
3	7	1,776	1	204		
2	27	3,740	6	912		
Totals . . .	94	35,334	71	51,704	64	58,177

* It will be observed that these statistics are not complete, as the institute year is not closed at the time this report goes to press. However, the majority of institutes have been held, and this information is appended to assist in drawing conclusions.

	1898-9.	1899-1900.	1900-01.
Total number in attendance.....	8,879	6,931	5,886
Total days institute.....	435	638	754
Cost per teacher per day.....	\$.226	\$.231	\$.200

The above statistics are taken from the tables found in Part II of this report. The change of policy as before mentioned is apparent from the figures given. The increase in the length of individual institutes has naturally reduced the number per year. The making of the institute a place for work through a period of from one to four weeks has resulted in a falling off of the total enrollment as one two-day session might have as many in attendance as a two-weeks session, while a two-weeks institute would be equivalent to five two-day ones. Referring to the table, under 1898-9, it will be seen that of the 35,334 days of actual attendance, 5,516 days, or 15 per cent., were two and three-day institutes. While these facts are apparent, it is interesting to note that the actual number of teacher-institute days has greatly increased, there being 46 per cent. more actual days of attendance per teacher in 1899-1900, when the long term institute was partially inaugurated, than in 1898-1899,

Teachers' Institutes.

when the two and five-day sessions predominated. In 1900, when the ten and twenty-day institutes are in the majority, there is still found an increase of 12 per cent. over the previous year and 64 per cent. over 1898-1899. This is probably due in part, though by no means entirely, to the increase in appropriation for institutes from \$8,000 in 1898-1899 to \$12,000 in 1899-1900. The figures opposite "cost per teacher per day" establish the fact that the longer term institutes are conducted at less cost than the shorter term when one considers the actual number of teacher-days provided for. In dealing with the matter of expense it must be remembered that in addition to the actual amount of institute work mentioned above, there have been provided yearly about ten thousand institute circulars which were delivered, transportation charges prepaid, to all the institutes of the state; one week's school of instruction for institute conductors; and many minor circulars and pamphlets—all paid for from the institute fund. These must have strengthened the general quality of the work, upon which, however, we are not able to place a monetary value.

The item, "total days institute" shows a steady increase in the actual number of days of institute provided for by the institute committee. In 1898-1899 there were 435 days with an appropriation of \$8,000; in 1900 there were 754 days of institute with an appropriation of \$12,000, or an increase of 73 per cent. over that of 1898-1899; thus, it will be seen that while the appropriation increased 50 per cent. the actual days of institutes provided for increased 73 per cent., to make no mention of the cost of the school of instruction, the syllabus, etc. While the expenditure of \$12,000 annually for institute work in Wisconsin is of great assistance in the effort of this department to better the common schools, it is not deemed sufficient to supply the demands made by county superintendents for the long term sessions. The committee has used the utmost economy in the distribution of this fund, placing institutes where the conditions seemed to warrant them most and with special reference

Teachers' Institutes.

to the statute which directs that the least assistance be given those counties which received the most direct benefit from the state normal schools. One has only to recall the fact that more than six thousand teachers are yearly attending these institutes; that the best educational talent of the state is employed in their instruction; that the institute affords the highest educational advantages enjoyed by the residents of some counties — to realize that the instruction of teachers carried on in the institutes of the state is a most important phase of educational work.

To show the purpose, methods, and organization of Institute work in Wisconsin, the following extracts are made from the Institute Syllabus for 1900:

GENERAL METHODS OF INSTITUTE WORK.

(From Institute Syllabus for 1900.)

The foregoing statement has brought out clearly the necessity for two kinds of work in every institute, one to increase knowledge and to make it definite, the other to secure a mastery of method in applying the knowledge in the teaching processes. Both phases of work are a necessity. The one should grow out of the other; the academic work furnishes the best possible basis for the professional work. To carry on academic work for a half a day, and then to talk about methods of work for another half day, is not a proper arrangement of work for the best results. Mastery of method means ability to use the method. Ability to use the method, means definite knowledge as to what the method is, as to where and when it is applicable, and practice in applying it. Leave out any one of these three conditions, and the individual fails to become a master of method. The first condition may be exemplified in the academic work of the institute conductor. The application of the method there pursued to a class of children dealing with the subject for the first time, makes necessary a knowledge of the difference in conditions and of the adaptations necessary to meet these different conditions. The short period during which the institute is held, renders it impossible to secure such an amount of practice on the part of the members of the institute in applying the method as is desirable for its complete mastery. It should, however, be a feature of the method of the institute conductor to secure the largest possible amount of this kind of work from every member of the institute. Exercises may be given and requirements made which will demand thought and effort in this direction. Even a moderate degree of success on the part of the teachers in the institute in applying a method will give confidence which will result in still further effort. Method in the institute work must take cognizance of the conditions not only in the institute, but in the schools where the teachers are to be employed. It is well to keep in mind two or three facts: one is that the average teacher in the institute will, in

Teachers' Institutes.

his or her school, use the text-books found there as almost the sole basis of instruction. Not one in twenty has the power, or confidence in his power, which will enable him to organize a plan of work in any topic which varies very widely from the plan followed in the text-book in that subject. This being true, it follows that the institute work should largely concern itself with increasing the teaching power along the line of a better use of text-books.

The method of the conductor in the exercises in the institute, should be such as will secure the largest amount of mental activity possible on the part of each teacher, and directed to the accomplishment of the purpose for which the exercise is conducted. The purpose should be clear in the mind of the conductor, and should be clearly adapted to develop the teaching and training power of the teachers; not to startle nor to amuse.

It cannot be too often repeated that "talks" by the conductor are of no value unless they grow out of and meet the conditions above stated.

Not how much can the conductor say in an hour, but how much can he get the teachers to think and to say of what ought to be thought and said during that hour, is the true test of the conductor's method in his exercises.

There are times when an exposition or presentation of a topic by the conductor is the best possible way of bringing a matter of importance to the attention of the members of the institute, but unless this is followed by work which is designed to test the character of the impression made and to deepen the desired impression, it frequently happens that little of permanent value results from the exercise, and the time devoted to it is practically wasted.

Work should be so conducted as to present something definite to the teachers and they should be held responsible for work so presented.

The tendency to present many things with much variety, results in confused notions on the part of teachers, weak impressions, and consequent lack of further effort to crystallize and make usable the ideas presented. To have a few things clearly understood, accompanied by a desire to use them, and growth of power in using them, should be the aim of the conductor.

The institute is dealing with teachers, the teachers are dealing with pupils. The purpose of the institute as already stated, is to develop teaching and training power. In any teaching the subject of method divides itself into two parts or phases. There is always something to be taught, and there should be method in determining what is to be taught at any time. This may be called the method of the *what*, or the method of determining what is to be taught. Our courses of study undertake to state what is to be taught in any school, or any system of schools, but they do it in a very general way, and the problem still remains for the teacher who is administering that course of study, in every day's work to determine definitely and clearly what is to be taught that day or the next day; to determine what the pupil is to learn or do in the preparation for the next recitation. The course of study does not do that. The course of study is never worked out in such detail as that. It offers the guide lines, the general scope of the work, its main features outlined more or less fully, but never so fully that the teacher does not always have this problem for solution: "What is the pupil to do in the way of learning, what is he to do in the way of preparation,—in practice or drill for tomorrow's exercise?" There is a method fundamental in character, which should be employed in this determination. A method which grows out of the nature of knowledge, and of the nature of the mind, which we can no more get away from in any good de-

Teachers' Institutes.

termination of these points, than we can get away from the influence of gravitation. We may not be conscious of it, but just to the extent that we make this determination properly, just to that extent we are employing the method of determining what is to be learned, done, or taught. There is no variety of methods, there is simply one. This statement cannot be truthfully made when you deal with the method of how to do things, because there are a hundred ways of doing a thing when you have determined what is to be done, but if the *what* depends upon the nature of the subject, the nature of human knowledge and the nature of the process by which knowledge is acquired, then that method is fixed. Now the teacher is concerned with the methods of the *what*. He is concerned still further when he has wrought out and determined for each day what the pupil is to do, and what he, the teacher, is to do. He is still concerned with another question of method, that of how he shall do what he has decided he has to do. These are two distinct phases of the work. The institute conductor has exactly the same problem before him. Every day in the institute, no matter if a syllabus of work is presented which offers the general outline, when he considers the class before him and recognizes their needs and their capacities, he has, in administering this course of study for the institute, exactly the same problem before him that the teacher has, and the same method of determining what is to be taught in that day's exercise, what the teachers in that institute are to prepare upon for the next exercise. He still has open a consideration of the question of how the work shall be done which he has decided needs to be done. So that for the teacher in the school or the institute conductor in the institute, method concerns itself with these two phases of work; the method of the *what* and the method of the *how*. In our institutes, in our teachers' associations, and conventions, in our normal schools, we have been omitting very largely a presentation and discussion of this method of the *what*. We have been concerning ourselves more largely and too largely, I believe, with the method of *how* to do. Is that wise? The first question always is "What ought to be done?" It does not matter very much how you do a thing not worth doing; if you do it well you get little out of it. So it is fundamental in the school or in the institute or the normal school, that first and foremost there shall be a wise determination of what is to be done. Is it not essential that we shall give such attention to this phase of our work as teachers, as shall shape more wisely the work we are doing in school, institute, and training schools, than we have been doing? Is it not true that teachers are wasting time and energy in doing things which are not worth the doing, which are simply taking time, but are not making for power and strength in the students? The reason for this is that we have forgotten the necessity of determining this fundamental thing, and have not addressed ourselves to the problem of how wisely to determine it, but have assumed that it will take care of itself, and then have devoted ourselves to determining how that work shall be done.

As there are similarities between the work of the institute conductor and the teacher, so there are differences. The teacher is teaching arithmetic, we will say. His aim is to develop the pupil's knowledge of that subject and his mental power. The pupil is unconscious of the method of the teacher, except when that method is so strikingly different from the one pursued by the last teacher as to attract his attention, and then it attracts it simply because it is different. He cares nothing for the method of the teacher. It is unnecessary for the teacher to call the pupil's attention to the method. It is essential for the teacher that he shall master the method which he is to use, that he shall have a def-

Teachers' Institutes.

nite, clean cut, wisely considered method adapted to the needs of his pupils, and the subject being taught, and the purpose in hand. But it is not essential that that method, the way in which the work is done, shall come into the consciousness of the pupil. Now compare this with the work in the institute. The conductor is teaching a class in the institute the same subject, arithmetic. We will assume that the purpose here is to give some academic work in that subject. He is interested in exactly the same way that the teacher is; first that the members of that institute shall broaden, deepen, and clarify their knowledge of this subject of arithmetic, and that out of the exercises shall come added mental power. Up to that point the institute conductor's problem is precisely the same as the teacher's problem in the teaching of that subject. The method varies because it is the method of the *how*; varies because he has a more mature body of students. But his work differs from the work of the teacher in this, that up to this point the teacher attending the institute has been concerned with arithmetic, with the subject matter, and he, like the pupil in the school, is unconscious of the method of the teacher, in this case the conductor. Not perhaps, as fully so, but if his interest has been developed in the subject matter before him, he loses consciousness largely of the method of the teacher. It is probable if the teachers could work in the institute for ten months upon this subject, that there would come to be in their minds some knowledge of the methods pursued by the teacher in his work, and that they would perhaps unconsciously reproduce them in their own work in teaching. But the institute is of short duration, and the way in which the conductor does work there does not so impress itself upon the teachers who are under his instruction as to very largely affect their work subsequently. Or if it does, it is perhaps the worst thing that could happen, for this reason: The conductors are dealing with mature people, and their work is adapted to the needs of mature people, and if those people simply copy the work they do, as too often is done, and attempt to reproduce the conductors' exercises, both as to matter in amount and kind, and as to mode of treatment, that is perhaps the worst thing that could be done. So the work of the institute conductor differs from the work of the teachers, in that he must bring into the consciousness of the teachers in that institute, a knowledge of the method he is employing in his work. There must be some consideration of that method, because these persons are going out to teach the subject, and teaching demands knowledge of the subject, and knowledge of the method of teaching the subject. So it becomes evident that the work of the institute conductor, differs from the work of the teacher in the summer school, where simply knowledge of the subjects is the thing sought. It differs further because in the development of this knowledge there must come a consideration of the method by which these individuals are to do related work with pupils of different grades of maturity from those in the institute. It adds to the ordinary work of teaching, the presentation to the members of the institute and a consideration of the method of work; both method of the *what* and the method of the *how*.

Taking up first the method of the *what* for a consideration of its scope and its application, I wish to lay down four propositions as fundamental in all teaching, as fundamental for the teacher in the preparation and determination of the work which is to be done in every recitation, with every class, always. These four propositions concern themselves with the teacher's determination of what is to be done for and in the next recitation.

1. The teacher must have in mind a definite purpose, or purposes, to be realized in the next recitation.

Teachers' Institutes.

2. The teacher must have in mind the things which must be known or done in order that the purposes may be realized.

3. The teacher must determine what of the things falling under 2 the pupil now knows or can now do.

4. He must determine what of the things enumerated in 2 the pupil still has to learn or to do, and the order in which they should be known or done.

No. 2 demands an enumeration of particulars of what must be known or done. We may suppose that a, b, c, d, e, f, g, h, are the particulars. These particulars are not dependent upon the pupil in any way. He cuts no figure here. They depend upon the nature of the knowledge. They are the things which the child or the adult or anybody must know in order that he may have that knowledge. So that concerns itself with a careful consideration of the subject matter, and what is essential to its knowledge. No. 3 is a determination by the teacher *to-day, before the work for to-morrow is assigned*, of what among a, b, c, d, e, f, g, h, the pupil now knows. That examination may determine that a, and c, and e, and g are known, and that b is partially known, and that f, and h, and d are entirely unknown, or that the pupil is unable to do those things. No. 4 is a determination of what remains to be known or done of the thing enumerated in No. 2; b, added knowledge in that; d, f, and h entirely unknown; those are the things remaining for to-morrow's work and which are to be assigned to-day. The order in which these things shall be known may or may not be essential. If it is a subject logical in its unfolding, then the order is an essential, because certain things must come before the next thing can be known. If it is a subject that is not logical, it is not so material, although there may be some one arrangement that is better than the others.

In every institute held during the institute season of 1900, conductors should daily assign work for preparation by members of the institute on such portions of the outlines of topics in the common school branches as may be selected. This assignment should be made in accordance with the four propositions stated above. In the next day's recitations the preparation made upon the work assigned the preceding day should be thoroughly tested. Teachers should understand that the same fidelity in preparation will be demanded as would be expected of pupils in a school properly conducted; that those who do not come to the institute with the purpose of doing the work assigned will get little or no benefit from their attendance and would better remain at home.

In testing the preparation of assigned lessons by questioning, conductors should avoid the plan sometimes pursued of asking a question and allowing members of the institute to answer in concert, or of calling for volunteers, thus tacitly giving teachers to understand that no one is expected to be prepared unless it suits his convenience to do so.

The question should first be asked and then individual members of the institute called upon by name or number to answer. The preliminary question and answer may of course make necessary subsequent questions which may be addressed to the individual then reciting, to other individuals, or finally left for volunteers to answer.

Conductors should at the outset let it be understood that a failure to prepare work assigned, must be explained by the person so failing. The demanding of such explanations by the conductor has a triple value. First, It makes clear to him whether the failure is due to his lack of definiteness in making the assignments; or to the fact that more work was assigned than could possibly be done by members of the institute; or that they did not have the necessary books or material for study. Second, Whether the teachers have failed to make the required prepara-

Teachers' Institutes.

tion through lack of effort. Third, It presents a good model for teachers to follow in their schools.

In the first case the conductor should remedy the defect by more definite assignment of work; by giving less work; by refraining from assigning work upon which preparation can not be made for lack of material in the hands of the teacher, or by taking steps to have the necessary material obtained.

In the second case, the conductor should make it clear that preparation must be made if the institute is to be continued.

SUGGESTIONS AND DIRECTIONS.

(From Institute Syllabus for 1900.)

Following the plan pursued last year this circular has been prepared for the purpose of giving general rules and regulations for organizing and conducting the teachers' institutes to be held this year under the direction and control of the State Superintendent and the Board of Regents of Normal Schools, and to present a course of study to be pursued in such institutes.

Outlines of topics in the common school branches, Reading, Arithmetic, Geography, Grammar, U. S. History, and Physiology are presented, sufficient in scope for work in an institute of four weeks.

For the one week institutes, academic work should not be attempted in more than one or two of the foregoing subjects, and should be selected from the outlines presented. The remaining work in such institutes should be professional in character, and should be carried on along the lines suggested in the statements of purposes preceding the outlines given. It should also include work in School Management and Pedagogy as one subject, and in Library Reading.

For the institutes of two or more weeks, academic work should be undertaken in not more than four, preferably in three of the subjects, selected from the five named above. School Management and Pedagogy as one subject should have a place on every program.

Work in Library Reading should be given one class period daily for one week.

Such time should be given as may be necessary, not exceeding five class periods, for a mastery of those portions of the school laws of most importance to teachers.

In the institutes held in counties where agriculture is the leading industry, one period should be given daily to a consideration of the work outlined in the Elements of Agriculture.

ACADEMIC WORK CONFINED TO THIRD GRADE BRANCHES.

The work of the institutes is to improve the teachers' methods in school organization, management, and teaching, and to enlarge and make more accurate his knowledge of the subjects taught in the common schools. Academic work in the second and first grade branches has no place in the institutes, and should not be undertaken.

SECTIONING.

All institutes having a membership of over fifty, with two conductors, should be sectioned. If the institute has a large membership there should be three or four sections.

Teachers' Institutes.

For the work in School Management the sectioning should be on the basis of experience, so that the instruction may be adapted to the needs of both the experienced and the inexperienced.

[For those without experience the matter of organization, classification, and program will need special consideration not necessary for those who have had considerable experience in teaching.

For the academic work on common school branches the sectioning should be on the basis of knowledge of the subjects, as indicated by grade of certificate held, by the County Superintendent's knowledge of the teacher, or by actual testing by the conductor.

TEACHERS MUST HAVE TIME FOR PREPARATION.

The amount of work taken by any teacher in the institute should be so limited as to make possible the daily preparation required by the conductors. The program may be so arranged when the institute is sectioned, as to allow each section some time during each daily session for study.

SPECIAL PREPARATION BY CONDUCTORS.

It is expected that all conductors who work in the institutes this year will make special preparation to conduct the work outlined in the within course of study for institutes. This preparation should be made before the institute season opens.

The institute is held for the benefit of schools by benefiting the teachers; they can get no benefit without individual effort. Personal work by every member of the institute should be the watchword of the conductors and county superintendent.

The institute is not held for the purpose of securing a temporary popularity for conductor or superintendent, by efforts to entertain and amuse through emotional exhortations and funny stories, supplemented by social distractions encouraged or organized by conductor or superintendent.

The conductor or superintendent who wins the permanent respect of the teachers, is the one who kindly and courteously but firmly insists that the purpose of the institute shall be realized through earnest, faithful work on the part of the teachers, wisely directed toward increasing teaching power.

PURPOSE OF INSTITUTE WORK.

(From Institute Syllabus for 1900.)

The purpose of all institute work is to develop teaching and training power.

By teaching power is meant the power which is exerted to the end that the pupil may know that which is worth knowing, and by training power is meant the power which is exerted to the end that the pupil may do and be that which is worth his doing and being.

Teaching and training power involve—

1. Accurate knowledge of the subject matter to be taught, and an appreciation of the character and extent of training to be given.
2. Ability to organize and arrange in logical order the matter to be taught and training to be given.
3. A knowledge of the mental processes involved in the mastery of any

Teachers' Institutes.

body of knowledge, and of the present condition of the pupil's mind as related to that body of knowledge.

4. Skill in calling into action at the right time the mental processes required in learning and training.

5. A knowledge of the essentials of school management and skill in management.

6. Sympathy and tact.

7. Correct ideals of what in the subjects taught is useful for knowledge and for training, and for securing the desired results from training. Correct ideals of the necessary training outside the course of study, and of the proper modes of securing the desired results from such training. Correct ideals of the teacher's preparation for work and responsibility for results.

Growth in teaching and training power in an institute depends upon the character and amount of work done by the teachers individually in the institute. The skill of the institute conductor is shown not in the amount of talking he does, but in the amount of the right kind of work which he succeeds in getting the members of the institute to do in preparation for the institute exercises, and in the institute exercises.

In the determination of any purpose which the institute exercise is designed to realize, the institute conductor should ask himself, "What end will this purpose serve?" In determining the mode of conducting the exercise for the realization of this purpose, he should ask himself in advance, "What will come of it?"

The program of the school of instruction for Institute Conductors held in Madiscn, April 9-11, 1900, is given herewith. It will show something of the character and scope of work attempted.

PROGRAM.

MONDAY, APRIL 9, 2:00 P. M.

1. Organization.
2. Consideration of Suggestions and Directions for Summer Series of Institutes, 1900, as given on pp. 4 and 5 of Institute Circular. L. D. HARVEY.
3. Purposes of Institute Work. L. D. HARVEY.
4. Exposition of Institute Exercise on Geography of Wisconsin. PR OF. W. C. HEWITT.
Discussion opened by PROF. C. E. PATZER.
5. Miscellaneous.

TUESDAY, APRIL 10, 9:00 A. M.

1. General Method of Institute Work. L. D. HARVEY.
Discussion opened by PROF. A. J. HUTTON.
2. Exposition of Institute Exercise in Geography—Duluth as a trade Center.
Salient Points in the Treatment of Other Trade Centers in Institute Exercises. PROF. F. E. MITCHELL.
Discussion opened by PROF. H. A. ADRIAN.
3. Organization and Management of Institutes. L. D. HARVEY.
General discussion.

Teachers' Institutes.

2:00 P. M.

1. Reading—Discussion of Purposes, p. 12, Institute Circular. L. D. HARVEY.
2. Exposition of Institute Exercise in Reading—Upper Form Work—using one of the selections given in the Circular. PROF. W. H. CHEEVER.
Discussion opened by PROF. ALBERT HARDY.
3. Elements of Agriculture—What Work may be Profitably Undertaken in the Long-Term Institutes?
Exposition of Institute Exercise of Some Portion of the "Outline of Work," pp. 59-62, Institute Circular. PROF. A. J. HUTTON.
Discussion opened by PROF. A. A. UPHAM.
4. Exposition of Institute Exercise on Position as a Factor in Geography—France. PROF. F. E. MITCHELL.
Discussion opened by by PROF. H. A. ADRIAN,

WEDNESDAY, APRIL 11, 9:00 A. M.

1. Arithmetic—Discussion of Aims to be Realized in the Institute. L. D. HARVEY.
2. Exposition of Institute Exercises in Arithmetic. PROF. H. A. ADRIAN.
Discussion opened by PROF. C. E. PATZER.
3. Institute Exercise on How to Interest Children in Reading, as outlined on p. 54, Institute Circular. MISS M. E. SCHREIBER.
4. Questions on Outline of Work in Arithmetic, as given in Institute Circular.

2:00 P. M.

1. School Law—General Consideration of Work to be Done in the Institutes, and Exposition of Institute Exercise. L. D. HARVEY.
2. Exposition of Institute Exercises in Treatment of the Pronoun, according to the outline on p. 42, Institute Circular.
PROF. J. W. LIVINGSTON.
3. Exposition of Institute Exercise in Treatment of the Verb, according to the outline on p. 41, Institute Circular.
PROF. W. C. HEWITT.
General discussion and questions on outline work in Grammar, as given in the Circular.

THURSDAY, APRIL 12, 9:00 A. M.

1. Miscellaneous. L. D. HARVEY.
2. U. S. History. Elaboration of the First Institute.
Exercise in History, according to the outline on p. 45, Institute Circular.
Exposition of Institute Exercise on "First Unit," p. 45, Institute Circular. PROF. E. W. WALKER.
Discussion opened by PROF. H. A. ADRIAN.
3. Library Work. Illustrative Exercise on Topic III, p. 54, Institute Circular. MISS M. E. SCHREIBER.
Questions on outline of work on The Use of the Library in the Schools, pp. 53-57, Institute Circular.

2:00 P. M.

1. School Management. What work is most needed by members of the Institute who have had little or no experience in teaching? What by experienced teachers in the Institute? L. D. HARVEY.

Teachers' Institutes.

2. Exposition of Institute Exercise on Second Unit of Work in U. S. History, p. 46, Institute Circular. PROF. E. W. WALKER.
Discussion opened by PROF. C. E. PATZER.
3. Simple Experiments Adapted to Institute Work in the Elements of Agriculture. PROF. E. S. GOFF.
Questions on work of the afternoon.

FRIDAY, APRIL 13, 9:00 A. M.

1. Purposes and Scope of Institute Work in Pedagogy as a Subject on the Institute Program. L. D. HARVEY.
2. Physiology—Presentation of sheets of simple drawings or diagrams useful in teaching Physiology and an Illustrative Institute Exercise showing how to get them made, and what use to make of them. PROF. ALBERT HARDY.
3. Exposition of Institute Exercise on Digestion, as outlined on p. 48, Institute Circular. PROF. A. J. HUTTON.
4. General discussion and questions on outline of work in Physiology.
2:00 P. M.

1. Library Work—Illustrative exercise on topic IV, p. 57, Institute Circular. MISS M. E. SCHREIBER.
2. Simple Experiments Adapted to Institute Work in the Elements of Agriculture. PROF. E. S. GOFF.
3. Economics of Institute Work. L. D. HARVEY.

SATURDAY, APRIL 14, 9:00 A. M.

General round-up of work undertaken during the week. L. D. HARVEY.
Suggestions concerning lesson plans prepared by conductors during the week. L. D. HARVEY.

Questions and general discussion on the work of the week.

A copy of the Institute Circular for 1900 has been sent to all persons who were last year approved by the Institute Committee as Institute Conductors, to others who have expressed an intention of being present at the Institute School, and to County Superintendents. It is hoped that all who attend the school will find time to make a careful study of the circular before coming, in order to have in mind the salient points of the work outlined. Such preparation will expedite the work of carrying out the program and will prevent loss of time in discussion of non-essentials.

Those who are desirous of doing work in the institutes to be held in Wisconsin this year are urged to be present during the entire week. But little will be gained by an attendance of one or two days.

Township Libraries.

TOWNSHIP LIBRARIES.

The township library has passed beyond the stage of trial and experiment. It has grown to hold a permanent place in the economy of school work in the state of Wisconsin. There is a growing realization of the value of the library in the communities, and teachers are finding more and more that efficient school work necessitates the use of books other than the text-books. It may now be safely said that nearly every one of our schools has its library. Six years ago the law was made mandatory. Since then it has required much vigilance and energetic insistence to secure the enforcement of the law in some parts of the state. This is true of the oldest settled, extremely conservative towns, and towns where the English language is little read or spoken. Owing to the efficient help of county superintendents and teachers, and to the good results evident when books have been used, the opposition to the law in these districts is growing less every year, and the law is readily obeyed where four years ago there was the greatest opposition to its enforcement.

STATISTICS.

By reference to statistics elsewhere given in this report, it will be seen that the number of towns purchasing books has continually increased, and that the amount of money annually expended for books has grown greatly.

CHANGES IN THE LAW.

The legislature of 1899 extended the provision of the township library law to include incorporated villages and cities of the fourth class, that is, the cities having a population of less than ten thousand.

Under the present law, "the treasurer of every town, incorporated village, or city of the fourth class shall withhold annually from the school fund or other income for the school dis-

Township Libraries.

trict or districts, the school house or school houses of which are located in his town, village or city, an amount equal to ten cents per capita for each person of school age residing therein for the purchase of library books. Between the first days of May and September of each year, the town, village, or city clerk (except that in cities having a board of education, such board of education, or a majority thereof, shall act in place of the city clerk) shall with the assistance and advice of the county or city superintendent of schools, as the case may be, expend all such money in the purchase of books selected from the list prepared by the state superintendent, for the use of the several school districts from which money has been so withheld, said books to be distributed among said districts, in proportion to the amount of money withheld from each."

The provisions of the law as amended in 1899 and as given above, simply acted to extend the old law to cities of the fourth class.

There was a further modification of the old law so that now, "in case of joint districts between one or more towns, a town or towns and an incorporated village or city, the treasurer or treasurers of the town or towns, shall transmit to the treasurer of the town, village, or city in which the school house or houses may be located, on or before the first day of June of each year an amount equal to ten cents per capita for each person of school age residing in that part of the joint district in his town at the time of the last annual school census".

It should be observed that the failure of any treasurer to transmit the money as required above to the treasurer of another town, village, or city in no way releases the treasurer of that other town, village, or city, or the town, village, or city clerk, or board of education in a city, from their responsibility for compliance with the law as previously quoted.

Township Libraries.

LIST OF BOOKS.

Three lists of books have been issued by the department during the biennial period covered by this report. A township list for 1899, a supplement to that list for 1900, and a high school list. In the township lists the books are grouped according to interests into three classes: one for primary form or primary grades, one for middle form or intermediate grades, and one for upper form or grammar grades. In each of these classes the books are grouped in the following sub-classes: (1) Fiction, (2) historical fiction, (3) myths, fables, and folk stories, (4) history, (5) biography, (6) science, (7) geography and travel. Picture books for youngest children and first books for children's reading have been made a special feature of the books for primary form. The Township lists also include books of poetry, song books, books for the teacher, books for the farmer, and a list of periodicals.

The High School List contains 757 books, classified according to subject matter into: (1) The teaching of literature and aids to the teacher, (2) ancient literature, (3) fiction; (a) novels portraying character development, and lessons in right doing, (b) novels portraying life, (c) fiction containing material for work in economics, (d) humorous fiction, (e) animal stories, (f) plot stories; (4) historical fiction (grouped according to time and country), (5) drama and poetry, (6) essays, (7) biography, (8) history, (grouped according to period and country), (9) travel, (grouped according to country), (10) science, (grouped according to sub-subjects), (11) sociology, economics, and civics, (12) psychology and pedagogy, (13) art, (14) conduct of life,—ethics, (15) out of door life and amusements, (16) domestic economy and agriculture, (17) debates and declamations, (18) song books, (19) reference books. These books have not been graded, for what a pupil ought to read depends upon what he has read, what he is interested in, and the work the teacher does with him, rather than upon the number of years he has at-

Township Libraries.

tended school. Each book in all three lists has been fully described and annotated, and in many cases references by pages are given. The title, author, publisher, edition, number of pages, size, kind of cover, whether book is illustrated or not, and price of each book are given. The notes on the books are made from the standpoint of the teacher, and designed to aid him in his work as well as to aid in the wise selection of books. Teachers will find the notes of especial value in using the books and directing the pupils' reading. The educational values are pointed out, and the things which are apt to interest the pupils indicated. These lists have been printed in sufficient numbers to supply each school, and teachers are urged to use them in their work.

PURCHASE OF BOOKS.

The department has used the utmost precautions in arranging for opportunities to buy these books cheaply, conveniently, and to have them supplied promptly after they are ordered. The books are secured at discounts from list prices, ranging from ten per cent. to fifty per cent. The past two years have been singularly free from mistakes and consequent annoyances on the part of the firm furnishing the books and those purchasing them. Every possible facility to this end has been furnished by this department—order blanks, lists of books, special instructions, and personal assistance have been freely tendered.

This department has recommended that each county superintendent have on file in his office a complete list of the books in each district of his county. The law requires the county superintendent to assist in the selection of books, and such a list will be of value to him in making a wise selection.

MODEL LIBRARIES IN THE DEPARTMENT.

The books which are listed in the Township and High School lists constitute the model Township library and the model High School library. These books have been classified, numbered, and

Township Libraries.

arranged according to classification upon the shelves, and a dictionary card catalog has been made. The books are kept in this office for reference and inspection by county superintendents, teachers, and those interested in school libraries.

PRESENT NEEDS.

The greatest need at present is to make the libraries more valuable in the education of children. That the library may be of the greatest educational value, the teachers must be familiar with the books, know how to read in the right way and how to use the books to the best advantage in their school work. This necessitates special instruction in juvenile literature and the use of books. Progress has been made in this direction. Some of the normal schools have regular instruction in juvenile literature and instruction is given in library use and economy. Three of the normal schools have all the books of the township library, and students going out from these schools are already familiar with many of the books which they will find in their school libraries. It is recommended that all of the normal schools have a course of instruction and reading which shall train teachers in the use of books and libraries. This work ought also to be extended to the high schools.

In most of the institutes, one week's instruction has been given in library reading. Libraries have been brought into the institutes, books read and discussed, and plans for the use of certain books made out. The instruction in the proper use of the different kinds of literature has been given as outlined in the institute circular. This outline was discussed in the school for institute conductors and has been carefully followed in most cases, with very good results both in the kind of instruction and the work accomplished by the members of the institute.

County superintendents have done much to create an intelligent enthusiasm on the part of teachers in the use of the books in the district libraries by their own interest, earnestness, and enthusiasm; by visitation; by inspection of libraries. Library

Township Libraries.

topics have been presented and discussed in the county teachers' meetings and teachers encouraged to read and use the books. In one county the teachers reported to the county superintendent the books they read during the year, grading the book, giving interests and values, and what the children thought of the book. The good results from such work cannot be overestimated. The county superintendent is the only officer who comes in direct contact with the teachers and the schools. He knows the needs of the schools and teachers better than any one else, and is in a position to give assistance. It is recommended that county superintendents report to this office books which have been especially valuable in the schools, and most enjoyed by the pupils. Also those which have failed to interest or instruct. Such information will be of great value in making future lists, by this department.

THE IMPORTANCE AND VALUE OF THIS WORK.

The aim in this work is not wholly to supplement school work or to furnish supplementary reading. It is to present to the child the whole field of literature, so far as it touches his life. To inculcate in him a love and desire for reading, and to cultivate a taste for the best in literature. A child with a love for reading, a taste for good reading, and a knowledge of how to read, is sure of a liberal education. Scudder says, "There can be no manner of question that between the age of six and sixteen a large part of the best literature of the world may be read."

John Burroughs says, "The way they teach literature in the schools is calculated to kill any love for it that one may happen to have before he goes to them. It seems to me I would lose my love of Shakespeare if I had to dissect him, and find out the meaning of every word and expression. I want to ride buoyantly over the waves. I want to feel the wind and the motion — not talk about them. If I had to teach literature, I hardly know myself how I would do it. You can't by bearing on —

Township Libraries.

you can't by mere intellectual force on a book show its charm. It appeals to the emotions. You've got to approach it in a different way. You must be fluid. All I should hope to do would be to give the student the key to the best literature. We would read books together, we would read good books and we would read poor books. I would say, 'Well, we won't talk: we'll read and see. Here's a poor book — don't you see? It's overdrawn — 't isn't delicate.' I would get at books in their sentiment and general character, not in their details. If you tear it all into bits, you haven't the thing itself any more."

A habit of reading can only be formed by reading — a taste for good literature can only be formed by reading the best. The aim in this reading should be the interpretation of life — and not a study of form and text.

Dr. J. W. Stearns says: "Interpretation should consist in such things as the artistic presentation of character types, the setting forth of the play of circumstances in moulding character, the unfolding of the consequences of actions and the might of destiny, the manifestations of the spiritual meaning of material things, revealing the charm of beauty in things common, touching into life the springs of noble emotions in us, filling us with a sense of the deeper meanings of life, and enlarging our sympathies."

In summing up we can do no better than to give the statement by Superintendent J. Q. Emery in his biennial report for 1897-98:

"It is a simple statement of fact to say that Wisconsin stands foremost among the states in systematic school library administration. The appropriation annually of the sum of ten cents for each child of school age seems very modest, but with the regularity and certainty of the purchases, the choice only of books of unquestionable morality, literary worth and purposeful ideals, and the movements to make the libraries yield the most possible, these collections of books are doing a wonderful educational work in character forming, in developing intellectual tastes and in adding to the knowledge gained from other sources. A love of good books and ability to appropriate and assimilate their treasures are quite as

Free High Schools.

valuable as anything the school has to confer upon the children and therefore the efforts of teachers, superintendents, this department and all others interested in brightening the school life of Wisconsin's youth and broadening the possibilities of a generous culture should be given towards making and keeping the school library prosperous and wisely administered."

FREE HIGH SCHOOLS.

On July 1st, 1900, there were 219 free high schools in Wisconsin. Of this number, 163 have four years' courses and 56 three years' courses. Early in 1899 the State Superintendent requested high school authorities to submit copies of the courses of study then in operation in the different high schools of the state. A comparison of the courses so submitted with those on file in the office as having been adopted by the high school boards and approved by the State Superintendent, showed a very wide variation in a large number of cases—so wide, in fact, that the provision of the law which requires the State Superintendent's approval of high school courses as a condition for the drawing of state aid, seemed to be practically ignored. In some cases, these changes from the course originally adopted and on file in the office of the State Superintendent, were dictated by local needs and changing conditions. In other cases they were the result of changes in the teaching force, who were left free to make such modifications of the course as might suit their own tastes and inclinations. In many cases it was evident that a change of principal of the high school had immediately effected a change in the course of study, bringing into prominence the lines of work in which he was specially interested—a process repeated with variations when the next change of principal took place. One evident purpose of the law providing for the organization of free high schools with state aid, was to prevent too frequent and ill considered changes in the courses of study.

When the full extent of changes from approved courses became apparent, steps were immediately taken to have courses

Free High Schools.

properly adopted by the local boards, which had the approval of the State Superintendent. To aid in this reorganization of courses, standard courses were submitted by the State Superintendent, to serve as a basis for the organization of courses in the different schools. Whenever local conditions showed necessity for change in the standard courses, such change was made, and the courses so modified were approved by the State Superintendent, after having been adopted by the local board. It certainly would be unwise for any state superintendent to say, at any time, that no further modifications of courses should be made; but any man serving in that office, can do no less than insist that no change shall be made in any free high school course of study, until it has been approved by him as the law requires, and such course so modified and approved should be on file in his office and in the office of the clerk of the local high school board. The party most interested in this matter is the high school board and the people it represents, for the only positive assurance of state aid lies in the fact that the provisions of the law under which this aid is apportioned, have been strictly complied with.

The State Superintendent desires to express his appreciation of the co-operation of high school boards and principals, in the effort to reorganize the courses on a business and legal basis.

As has been stated elsewhere in this report, the increase in the appropriation for high schools from \$50,000 to \$100,000, made in 1899 by the legislature, has made it possible to increase the teaching force materially at points where such increase was greatly needed. This additional teaching force results, in many cases, in better organization, better teaching, and better supervision of not only the high school, but of the grades below the high school, where the principal is charged with responsibility for such supervision. It is a pleasure to be able to say that in almost every case where the necessity for additional teaching force has been shown to the local author-

Free High Schools.

ities, they have made every effort to furnish the additional teachers needed.

An examination has been made to determine the changes in the high school teaching force, occurring during the period from 1896 to 1900. Of the principals who were employed in the high schools of the state in 1896, 81 per cent. were employed in 1897, 71 per cent. in 1898, 51 per cent. in 1899, and 38 per cent. in 1900. Of the assistants who were employed in the high schools in 1896, 68 per cent. remained in 1897, 50 per cent. in 1898, 37 per cent. in 1899, and 24 per cent. in 1900. This does not mean in the same school, but in all the high schools of the state. The statistics for this period may be taken to fairly represent what will happen during the next period of five years, and shows clearly how great a number of changes occur in the teaching force in these schools during a very short period of time. This emphasizes the necessity on the part of local school boards for exercising the greatest judgment and care in the selection of teachers.

The theory that any person can teach a subject if he knows the subject, is still held by some people, but not by those who have given the subject careful consideration. The whole trend of educational movement is against that proposition. No person should be allowed to teach in a high school who has not had professional training, or in lieu thereof, such successful experience as has developed professional skill. It is not a question of whether he is a graduate from this or that institution, or from this or that course of study. The question is, can he teach the subjects he is required to teach? Can he do it skillfully? There is still a further question, and that is, is the teacher one whose influence, apart from his skill, such as to aid in developing the manhood and womanhood of those under his tuition? The teacher, whether in high school or elsewhere, who combines professional skill in teaching with knowledge of the subjects and true nobility of character, is the one who should be sought, whatever salary may be necessary to secure

Free High Schools.

him. The training of men and women is too important a matter to be entrusted to those who have thought only of a mastery of the subjects found in the curriculum.

WORK OF THE HIGH SCHOOL INSPECTOR.

The High School Inspector connected with this office has, during the past two years, inspected every one of the free high schools of the state, and in many cases has visited such schools more than once. He has observed the work of the teachers, met them and wherever possible the high school boards, in conference, to consider ways and means of improvement. He has been cordially met, both by principals, teachers, and boards, as one interested with them in the improvement of the schools. During the term an arrangement was entered into with the University authorities, by which it became possible to compare views with reference to the work in the different schools, as inspected by the representatives of the University and by the High School Inspector. This interchange of reports has been of practical value to this office, and doubtless to the University authorities. The reports from the two sources show substantial agreement in estimates of work done in the different schools inspected. It is to be regretted that it is not possible for the inspector to visit these schools more frequently. They are scattered over the entire state, and if one were visited each day in the school year, he would not be able to see them all during the year. The time, however, which can be devoted to inspection, is shortened at both ends of the year, first, by the fact that but little can be determined of a school until it has been fairly organized and is well under way at the opening of the year; and second, by the fact that the greater portion of the last month of the year is given up to reviews and preparations for final examinations and graduation. A large amount of correspondence comes to the desk of the High School Inspector, which necessarily takes a further portion of his time. The time

Day Schools for the Deaf.

of two men could be fully employed, with the greatest advantage, in the work of inspection of the high schools of the state.

It is proposed during the coming year to hold meetings of high school teachers in different parts of the state, for the purpose of discussing the most difficult problems in high school work. It is hoped that the high school boards will urge their teachers to attend these meetings and will allow them to do so without loss of salary.

While much remains to be desired in the way of bettering the instruction given in the high schools, it is unquestionably true that steady progress is being made in these schools.

DAY SCHOOLS FOR THE DEAF.

The report of this department for the biennial period ending June 30, 1898, showed that twelve of these schools had been maintained in 1898, with an enrollment of one hundred fifty pupils,— eighty-one boys and sixty-nine girls,— these pupils attended 23,635 days, an average of 157 days for each pupil. These schools received aid from the state to the amount of \$19,175.50.

Since that time schools have been established in the following cities: Ashland, La Crosse, Neillsville, Oconto, Sparta, Stevens Point. No report has been received from the Oconto school for the year 1900, and it is assumed that that school has been discontinued.

For the year ending June 30, 1899, state aid was apportioned among these schools to the amount of \$22,469.95.

The statistics of the day schools for the deaf for the year ending June 30, 1900, are shown in the following table:

*Dictionaries.**Number of Pupils Enrolled.*

WEBSTER'S INTERNATIONAL DICTIONARY.

During the biennial period ending September 30, 1900, 1,068 dictionaries were disposed of; 461 were furnished free to schools; 60 were sold to members of the legislature and employees of the capitol; 547 were sold to school districts. The sworn applications of school officers and their receipts for these dictionaries are on file in this office. The following table gives the number of dictionaries disposed of for each quarter of the biennial period:

SALE OF SCHOOL CODES.

During the last two years \$36.25 were received for school codes sold at twenty-five cents each; this amount has been deposited with the state treasurer, and fees for the sale of copies of records, amounting to \$59 have been turned in to the state treasurer.

RECENT LEGISLATION.

During the session of the legislature held in 1899, a considerable amount of school legislation was enacted. An important law was the one increasing the number of months' school required in order to draw public money, from six to seven months. This law has met with very general approval. Reports for the current year do not indicate a single failure to comply with its provisions.

Recent Legislation.

A law was enacted increasing the appropriation for free high schools from \$50,000 to \$100,000 annually. This act of the legislature enabled a considerable number of these schools to increase their teaching force; a result greatly needed. The extension of this increase is shown by the fact that in 1897-1898 565 teachers were employed in the free high schools of the state; since that time 12 additional high schools have been organized, and the number of teachers now employed in the 221 schools is 702. The result of this increase in teaching force will be shown in better organization, better teaching, and better work in the grades below the high school, where, as is true in many localities, the principal of the high school also superintends the work in the lower grades.

Provision was also made for enlarging the opportunities for organization of joint high school districts, making possible the organization of such districts where, under the previous law, such action could not be taken.

One of the most important pieces of school legislation enacted during the session was that providing for the organization of county training schools for teachers of common schools. The act authorized the county board of any county within which a state normal school is not located, to appropriate money for the organization, equipment, and maintenance of a county training school for teachers of the common schools; such schools are under the control of a county training school board of three members, two of whom are appointed by the county board, while the county superintendent is made the third member and is ex-officio secretary of the board. The law provided that whenever county boards shall make such provision, one-half the sum annually expended for instruction shall be paid by the state, but limiting the amount so paid by the state to \$1,250 to each school.

The course of study in such schools, and the qualifications of teachers employed therein, must be approved by the state superintendent. The law limited the number to two.

Needed Legislation.

While there were other matters of legislative enactment, pertaining to school affairs, those enumerated above were probably the most important.

SOME NEEDED SCHOOL LEGISLATION.

The whole subject of legal qualifications of teachers is in a somewhat chaotic condition. In the development of our educational system, one law after another has been passed upon this subject, increasing the number and kinds of certificates and the sources from which they are issued. In the enactment of these laws from time to time, care has not always been taken to see that each new law was in accord with those which had preceded it. While provision had been made by statute for higher qualifications for teachers, both as principals and assistants in high schools, there has been practically no change in the law relating to the certification of teachers in country schools, for a number years. Some additions have been made, but in the main, the provisions of twenty-five years ago still continue. It is believed by a large number of educational people in the state, that the time has come to place a limit upon the period for which a third grade certificate shall qualify one to teach. Many states have already passed laws limiting the time for which a third grade certificate shall entitle an individual to teach to two years. A number of states have made provision for the marking of examination papers written under the direction of the local superintendents, by some central authority entirely removed from political or personal influences. This plan relieves the already overworked county superintendents in those states from the great burden of examining papers, and from the unjust criticism which often follows a discharge of duty. It also makes sure that no certificates are granted unless the applicants are thoroughly qualified from an educational standpoint. If such a system could be inaugurated, together with a time limit upon the third grade certificate, it would result in a material raising of the standard of qualifications.

Needed Legislation.

A committee of seven of the most prominent and experienced educational men in the state is now at work upon a report to be presented at the next session of the Wisconsin Teachers' Association, which shall formulate recommendations as to needed changes in our certification laws. It is to be hoped that the work of this committee will result in the formulation of a bill covering this subject, to be presented at the next session of the legislature.

The existing law limiting state aid to county training schools in two counties should be extended, so as to make it possible to establish these schools with state aid in other counties.

A law should also be passed by the next legislature providing for the establishment of county schools of agriculture and domestic economy, under the same general plan of organization as is provided for the county training schools for teachers. The general scope and purpose of these schools has been discussed elsewhere in this report.

An additional assistant should be provided in the office of the state superintendent, to whom should be assigned the duty of inspection of graded schools not connected with any high school.

The state appropriations for teachers' institutes should be increased to twenty thousand dollars. As will be seen elsewhere in this report, the demand for three and for four week institutes has been very largely increased during the last two years. It has been impossible for the institute committee having charge of this work to supply instructors in sufficient numbers and for sufficient time to meet these demands. Many counties have been compelled to limit the institute to one or two weeks, when the teachers would have been glad to attend for three or four weeks. Keeping in mind the fact that these institutes reach the great body of teachers in the common schools, and that for the larger number they furnish the only means for professional training, as well as the chief means for improving their academic training, and keeping in mind the further fact

Normal Schools.

that Wisconsin's expenditure for its schools is less per capita than any other of the group of the north central states except Missouri, it would seem that there can be no question as to the wisdom of this increase in the institute fund. The present thorough organization of the institute work would insure the wise use of these funds, and large returns in increased teaching power to those who attend the institutes.

Some minor modifications of existing laws ought to be made, in order to make clear their construction.

NORMAL SCHOOLS.

From the biennial report of the President of the Board of Regents of Normal Schools the following information is gleaned:

In accordance with the provisions of a law passed by the last legislature the Board has been reorganized and is now constituted as follows, to-wit: The State Superintendent, ex-officio, and ten appointed Regents, whose term of office is five years, there being five groups of two each whose terms end in successive years, the appointments being absolute by the Governor, confirmation by the Senate not being required.

The law giving nineteen-sixtieths of a mill tax on all the property of the State for the support of the schools was changed by the last legislature to a fixed annual appropriation of \$190,000. The income from the permanent Normal School Fund is now at the rate of about \$86,000 per year and the income at the various schools from tuition, book rents, etc., amounts to about \$21,000 per year, making a total annual income of nearly \$297,000.

During the last biennium there was a total expenditure upon the schools of \$606,248.60, which is \$56,055.53 less than during the preceding biennium, in spite of the fact that for the same period the cost of salaries was increased \$23,722.33. This is explained by the fact that there were greatly reduced expenditures for apparatus, building, furniture, repairs and books. During the past year a little less than 38 per cent. of all the pupils classed as Normal were graduates from high schools, and while the graduates from the elementary course were 3 less than during the previous two years, the graduates from the full courses increased 104, that is to say, over 27 per cent.

While the total registration of the schools has not increased during the past two years, it is plainly seen that very marked progress has been made in the character of the student body by the increase of graduates from the higher course.

Since the schools were established there have been 1,584 graduates from the elementary course and 2,872 from the full courses, none being counted twice.

Under the head of "courses and teaching" the report says: "In the recent past it was found that, in spite of the fact that the system has grown up under the management of a single continuous Board, the seven schools differ materially in the *curricula*, and the body and methods of instruction not only, but in their educational philosophy. While the Diplomas and Certificates issued were the

Normal Schools.

same in all the schools and possessed the same value under the law, it was very clear that they did not stand for anything like identical acquirements, and it was seriously doubted that they stood for equivalent values however it might not be questioned that they stood for certain minimum qualifications fully complying with the law."

It appears that a thorough special examination of the schools was made and the report says: "It was found that much diversity prevails as to details of instruction and not a little as to method and underlying philosophy. That this should be the case does not seem compatible with the theory of a thoroughly organized system of Normal Schools under a single management. To correct this, as well as to attain other important aims, the Board contemplates holding a week's institute to be attended by all the teachers in the seven schools, the final outcome of which shall be a better organization and unification of the professional work in all the schools and a complete syllabus of all the branches in the adopted courses of study prepared by the best talent at the command of the Board."

Since the report was written the Board has provided for such an institute and adopted the following

PROGRAM.

AUTHORIZATION OF THE INSTITUTE.

Extract from minutes Adjourned Annual Meeting, Board of Regents Normal Schools, October 24, 1900.

Resolved, That a one week's institute of all the normal school faculties in the employ of the Board of Regents of Normal Schools be held at Oshkosh, in the normal school building, beginning at 9 o'clock Monday morning, December 17, 1900.

Resolved, That during the week said institute is in session the several normal schools shall be closed, and the attendance by the teachers at the institute is hereby required and shall be considered a full discharge of contract obligations to the Board for that week.

Resolved, That the organization and management of the institute shall be under the general control of the following Special Committee, to-wit: L. D. Harvey, Chairman Committee on Institutes; J. Q. Emery, Chairman Committee on Course of Study and Text Books; A. E. Thompson, Chairman Committee on Teachers.

Resolved, That Supt. L. D. Harvey be, and he is hereby appointed conductor of the institute under the general direction of the Special committee herein provided for.

Attest:

S. S. ROCKWOOD,

Secretary.

PURPOSE OF INSTITUTE.

The aim of the work during the week will be to make an effort toward the solution of the great problem of normal school administration, namely; that of organizing and unifying professional work in every department of the normal school, to the end that every normal school teacher shall recognize that he is teaching in a professional school, and must do professional work if he properly discharges his duty; and further, that the professional work done by each teacher shall re-enforce and supplement the professional work of every other teacher, to the end that the teaching power of every student shall be developed to the highest degree possible, during his attendance at the normal school.

MONDAY, DEC. 17, 1900, 9 A. M. — GENERAL MEETING.

Organization of institute.

I. Statement of conditions that influenced the board of regents of normal schools to make provision for this institute. J. Q. EMERY.

II. The following four propositions are fundamental for the teacher and for the pupil in the determination of what is to be done for and in the recitation.

1. The teacher must have in mind a definite purpose or purposes to be realized in the next recitation.

2. The teacher must have in mind the things which must be known or done in order that the purposes may be realized.

3. The teacher must determine what of the things falling under proposition 2 the pupil now knows or can do.

4. The teacher must determine what of the things enumerated under proposition 2 the pupil still has to learn or to do, and the order in which they should be known or done.

a. To what extent, where and for what purposes should these fundamentals be applied in normal school work?

b. To what extent do they furnish a unifying basis for the professional work in the normal schools?

c. How can the applications of these fundamentals be secured?

d. Results of their application.

L. D. HARVEY.

Normal Schools.

MONDAY, 2 P. M.—GENERAL MEETING.

- I. The recitation.
- What should be demanded of the pupil in the recitation?
 - What should be demanded of the teacher?
 - How may these demands be enforced?
 - Modes of testing—characteristics of a proper test?
 - Purposes of drill exercises—necessity for, how determined.
 - Modes of drilling—characteristics of a good drill exercise.
 - Teaching in the recitation—its relation to testing and drilling.
 - Assignment of the next lesson.

L. D. HARVEY.

TUESDAY, 9 A. M.—GENERAL MEETING.

- I. a. Should all teachers in a Normal school have some knowledge of psychology?
b. If so, what may be regarded as the essentials?
- II. a. Do all Normal school teachers have a knowledge of the essentials of psychology, and such a recognition of their value as will result in the application of these essentials in their teaching processes?
b. If not, how can such knowledge be acquired and the application secured?

J. E. LOUGH.

L. D. HARVEY.

TUESDAY, 2 P. M.—SECTION MEETING.—PRESIDENTS AND BOARD OF REGENTS.—A. E. THOMPSON, Leader.

- I. Administration.
- What administrative work must the president keep in his own hands?
 - What may be entrusted to his clerk and to members of his faculty?
 - Modes of organizing administrative work most effectively and with greatest economy of time and effort.
- II. Supervision.
- What time is necessary for the supervision of class work of members of the faculty in the Normal school?
 - How can this supervision be done so as to secure the most intelligent judgment as to merits and defects of teachers; as to unity of ideals and effort in professional work?
 - What means should be employed to remedy these defects and to secure unity of action where it is lacking?
- III. Faculty meetings.
- How can these meetings be made most beneficial to the school?
 - How often should they be held?

R. H. HALSEY.

ALBERT SALISBURY.

T. B. PRAY.

TUESDAY, 2 P. M.—SECTION MEETING.—DRAWING.—E. W. WALKER, Leader.

- I. What should be the purpose, scope, and plan of work in drawing in the Normal school?

The person at the head of the department of drawing in each of the Normal schools is requested to send to the conductor of the institute, by December 10, eight type-written carbon copies of her discussion of the foregoing topic. These copies will be promptly distributed among the teachers of drawing so that opportunity may be given for examination of the matter, and for preparation of suggestions and criticisms to be presented at the first meeting of the section. This meeting will be devoted to a discussion of these papers.

TUESDAY, 2 P. M.—SECTION MEETING.—ENGLISH.—ALBERT HARDY, Leader.

- I. Purpose, scope, and plan of work in each of the following subjects:—
- Grammar, ANNA BARNARD, JENNIE WHITMAN.
 - Composition, HERBERT E. BOLTON, LILLIAN G. KIMBALL.
 - Rhetoric, JOSEPHINE HENDERSON, ISABELLA PRETLOW.
 - Professional review in grammar, S. A. LYNCH, CARRIE J. SMITH.
- Each person assigned to prepare work in any of the foregoing subjects, is requested to send to the conductor of the institute, by December 10, eight type-written carbon copies of the matter prepared. These copies will be promptly distributed among the teachers of English, so that opportunity may be given for examination of the matter, and for preparation of suggestions and criticisms to be presented at the first meeting of the section. This meeting will be devoted to a discussion of these papers.

TUESDAY, 2 P. M.—SECTION MEETING.—LIBRARY.—LIZZIE P. SWAN, Leader.

- I. Scope of librarian's work in the Normal school.
- II. What assistance can the librarian give to the heads of departments to facilitate use of reference library by students in the special work of each department?
- III. What work can librarians do in assisting students to use the reference library economically and intelligently?
- IV. Should the librarian instruct students in library methods? If so, for what purpose, and to what extent?

LIZZIE P. SWAN.

ELLA G. PARMELE.

BEE A. GARDNER.

ANNE H. MCNEIL.

Normal Schools.

TUESDAY, 2 P. M. — SECTION MEETING — MATHEMATICS. — W. C. HEWITT, Leader.

I. Purpose, scope, and plan of work in each of the following subjects:—

- | | |
|----------------|---|
| 1. Arithmetic, | M. A. BUSSEWITZ, L. H. CLARK, EMILY F. WEBSTER. |
| 2. Algebra, | J. V. COLLINS, H. LIEBENBERG. |
| 3. GEOMETRY. | G. L. BOWMAN, G. C. SHUTTS. |

Each person assigned to prepare work in any of the foregoing subjects, is requested to send to the conductor of the institute, by December 10, eight type-written carbon copies of the matter prepared. These copies will be promptly distributed among the teachers of mathematics, so that opportunity may be given for examination of the matter, and for preparation of suggestions and criticisms to be presented at the first meeting of the section. This meeting will be devoted to a discussion of these papers.

TUESDAY, 2 P. M. — SECTION MEETING.— PHYSICAL TRAINING. — W. H. CHEEVER, Leader.

I. What should be the purpose, scope and plan of work undertaken in the Normal school?

The person at the head of the department of Physical Training in each school is requested to send to the conductor of the institute, by December 10, eight type-written carbon copies of the work prepared under the above topic. These copies will be promptly distributed among the teachers having this work in charge, so that opportunity may be given for examination of the matter prepared, and for preparation of suggestions and criticisms to be presented at the first meeting of the section. This meeting will be devoted to a discussion of these papers.

TUESDAY, 2 P. M.—TEACHERS OF PROFESSIONAL SUBJECTS.—J. I. JEGI, Leader.

I. In the supervision of practice teaching, how secure the maximum of spontaneity under the control of pedagogic law.

ROSE C. SWART.

Discussion opened by Thomas H. Gentle.

II. What knowledge of work in the model school should teachers of professional subjects have? Why? How may this knowledge be secured? How should this knowledge be utilized?

C. P. CARY.

Discussion opened by G. L. Bowman.

III. Discussion of topics proposed by members of the section.

TUESDAY, 2 P. M.—SECTION MEETING.—SCIENCE.—A. A. UPHAM, Leader.

I. Purpose, scope, and plan of work in each of the following subjects:—

- | | |
|----------------|---------------|
| 1. Physics, | A. H. SAGE. |
| 2. Chemistry, | G. E. CULVER. |
| 3. Biology, | W. H. DUDLEY. |
| 4. Physiology, | A. L. EWING. |

Persons assigned for the work above, are requested to send to the conductor of the institute, by December 10, ten type-written carbon copies of the matter formulated. These copies will be promptly distributed among the science teachers, so that opportunity may be given for examination of the matter, and for preparation of suggestions and criticisms to be presented at the first meeting of the section. This meeting will be devoted to a discussion of these papers.

TUESDAY, 2 P. M.—SECTION MEETING.—MUSIC.—MAE E. SCHREIBER, Leader.

I. What should be the purposes, scope, and plan of work in teaching music in the Normal school?

The person at the head of the department in music in each school is requested to send to the conductor of the institute, by December 10, eight type-written carbon copies of work prepared upon the above topic. These copies will be promptly distributed among the teachers of music, so that opportunity may be given for examination of the matter prepared, and for preparation of suggestions and criticisms to be presented at the first meeting of the section. This meeting will be devoted to a discussion of these papers.

WEDNESDAY, 9 A. M.—GENERAL MEETING.

I. What important pedagogical maxims, truths, or principles should be known and applied by Normal school teachers?

DUNCAN MCGREGOR.

II. a. Are the important pedagogical maxims, truths, or principles now known and applied by Normal school teachers?

b. If not, by what means may they be mastered and their application secured, consciously at first, unconsciously later?

c. By what means may students be made conscious of the teacher's applications of these truths, maxims, or principles, so that they will come to recognize the possibility of applying them themselves, in a variety of ways, with a variety of subjects, under a variety of conditions?

L. D. HARVEY.

Normal Schools.

WEDNESDAY, 2 P. M.—SECTION MEETING.—DRAWING.—E. W. WALKER, Leader.

- I. Amount and kinds of constructive work which should be done in connection with drawing. Purposes and methods. HARRIET CECIL MAGEE.
- II. a. Value of blackboard sketching by teachers and pupils.
b. How and to what extent should blackboard sketching be taught in the normal school? LUCY DORRIT HALE.
- III. Application of the four fundamental propositions hereinbefore stated, in teaching drawing. E. W. WALKER.
- IV. The place and purposes of copying in the teaching of drawing. MARY E. TANNER.
- V. Examination and explanation of special features of work from different schools.

WEDNESDAY, 2 P. M.—SECTION MEETING.—ENGLISH.—ALBERT HARDY, Leader.

- I. Application of the four fundamental propositions hereinbefore stated, in teaching grammar, composition and rhetoric. GRACE DARLING MADDEN.
- II. What important pedagogical principles should be applied in teaching the above named subjects? In what way may the teacher's application of these pedagogical principles be made to increase the student's power to apply them in teaching any subject? ALBERT HARDY.

WEDNESDAY, 2 P. M.—SECTION MEETING.—LIBRARY.—LIZZIE P. SWAN, Leader.

- I. To what extent and in what way can printed lists of books and references be made most valuable, not only in individual schools but by a system of exchange in all the schools? CAROLINE SILLIMAN.
- II. Methods of utilizing periodical literature to the best advantage. MARY F. CARPENTER.
- III. Preparation and uses of pictures. ELIZABETH F. SIMPSON.
- IV. Reports of individual methods of work.
- V. Examination and explanation of material useful in illustrating the methods in vogue in each library.

WEDNESDAY, 2 P. M.—SECTION MEETING.—MATHEMATICS.—W. C. HEWITT, Leader.

- I. Application of the four fundamental propositions hereinbefore stated in teaching arithmetic, algebra, and geometry. G. C. SHUTTS.
- II. Proper relation between the course of study in arithmetic in the model school, and the work done in the normal classes. How secured? L. H. CLARK.
- III. General discussion of topics proposed by members of the section.

WEDNESDAY, 2 P. M.—SECTION MEETING.—MUSIC.—MAE E. SCHREIBER, Leader.

- I. The application of the four fundamental principles hereinbefore mentioned, to the teaching of music. MAE E. SCHREIBER.
- II. General method of the *how*, in the recitation. GRACE HEWARD.
- III. a. Can all students be so trained as to make them effective teachers of singing in the public schools?
b. If so, will the time and effort necessary to secure this training be the best possible expenditure of time and effort for students and teachers?
c. If not, what then? F. F. CHURCHILL.

WEDNESDAY, 2 P. M.—SECTION MEETING.—PHYSICAL TRAINING.—W. H. CHEEVER, Leader.

- I. To what extent may the individual needs of students be considered in the work of this department? In what ways? EMMA W. SHRIEVES.
- II. In what way may the most effective work be done in developing the student's power to carry on physical training in his own school, under conditions which would exist in that school? FRANCES MUSSELMAN.
- III. To what extent is the director of physical training responsible for the health of pupils coming under her direction? NINA A. PAGE.
- IV. a. Should the work in physical training for the boys differ from that for the girls in a Normal school?
b. If so, why, and how?
c. If not, why not? SUSANNE A. LOOK.

*Normal Schools.*WEDNESDAY, 2 P. M.—SECTION MEETING.—TEACHERS OF PROFESSIONAL SUBJECTS.—
J. Q. EMERY, Leader.

- I. To what extent should the model school be the correlating center of the Normal school?
Discussion opened by D. McGregor. I. C. MCNEILL.
- II. a. What are the purposes of the work in observation?
b. How should the work be organized so as to accomplish these purposes.
c. Value of observation after a period of practice teaching compared with its value before any experience in teaching. ALICE H. SHULTES.
- Discussion opened by A. J. Hutton.
- III. To what extent may students in Normal school classes do teaching in their own classes with profit to themselves and without greater loss than gain to the classes. J. W. LIVINGSTON.

WEDNESDAY, 2 P. M.—SECTION MEETING.—SCIENCE, INCLUDING GEOGRAPHY.—
A. A. UPHAM, Leader.

- I. Purpose, scope and plan of work in each of the following subjects:—
1. Geology. E. C. CASE.
2. Geography. FRANK E. MITCHELL.
3. Elements of Agriculture. A. A. UPHAM.
- Persons assigned for the work above are requested to send to the conductor of the institute, by December 10, ten type-written carbon copies of the matter formulated. These copies will be promptly distributed among the science teachers, so that opportunity may be given for examination of the matter, and for preparation of suggestions and criticisms to be presented at the second meeting of the section.
- II. Possibility and desirability of field work in biology, geology, and geography. Character of work. J. A. MERRILL.

THURSDAY, 9 A. M.—GENERAL MEETING.—

- I. Possible elimination of some so-called strictly professional work now done in the Normal schools. A. H. SAGE.
- II. Exposition of the lesson plan idea, as applied to the treatment of a topic. C. E. PATZER.
- III. The relative proportions of oral and written work which should be required of Normal school students, which practice teachers should require of their pupils. L. D. HARVEY.

THURSDAY, 2 P. M.—SECTION MEETING.—ENGLISH.—ALBERT HARDY, Leader.

- I. Place and relative importance of oral and of written work in developing the power of easy, forceful, and accurate expression, either written or oral. LILLIAN G. KIMBALL.
- II. Rhetoricals: Training in the use of English; training in expression. How made most effective. ROBERT RIENOW.
- III. In what way may the work in English be most effectively supplemented by teachers in other departments? ALBERT HARDY.
- IV. Discussion of topics proposed by members of the section.

THURSDAY, 2 P. M.—SECTION MEETING.—GEOGRAPHY.—F. E. MITCHELL, Leader.

- I. Purposes and scope of the work in geography in the Normal school. J. A. MERRILL.
- Discussion opened by Cornelia E. Rogers.
- II. Application of fundamental propositions 1, 2, 3, and 4, in the teaching of geography. FRANK E. MITCHELL.
- III. How far may the study of geography texts be supplemented by outside reading—
a. In the Normal school?
b. In the common schools?
c. In what way can this work be organized? ALICE DE REIMER.
- Discussion opened by Isabella Pretlow.
- IV. Examination and explanation of illustrative material.

THURSDAY, 2 P. M.—SECTION MEETING.—HISTORY, POLITICAL ECONOMY AND CIVICS.—
A. J. HUTTON, Leader.

- I. Use of the fundamental propositions 1, 2, 3, and 4, in teaching history. GRACE DARLING MADDEN.
- Discussion opened by Geo. C. Shutts.
- II. Scope and purposes of work in civil government in the Normal school. A. H. SANFORD.
- Discussion opened by J. F. Sims.

Normal Schools.

- III. Should teachers of history in Normal schools train students to properly organize a history topic for teaching purposes? If so, how it may be done best?

E. W. WALKER.

- IV. Discussion opened by J. A. Wilgus.
Purpose in teaching political economy in a Normal school. How it may be taught so as to develop the power of the student in teaching other subjects.

F. R. CLOW.

Discussion opened by W. H. Cheever.

THURSDAY, 2 P. M. — SECTION MEETING. — LATIN AND GERMAN. — J. W. LIVINGSTON' Leader.

- I. What knowledge of German grammar should students in German be required to master?
II. Should any attempt be made to acquire a speaking knowledge of German? If so, under what conditions and to what extent?
III. In the study of Latin, may the reading of an English translation of a Latin author, before the study of the Latin author begins, be of value?
IV. In what way may the work in both Latin and German be made to contribute most to the student's command of English?
V. Can the work in Latin and German be so organized in the Normal school classes as to give full scope to individual capacity, preparation and opportunity? If so, what modifications of present plans of class work would be necessary?
VI. Such portions of general program for section work as time permits.

CLARA SCHUSTER.

C. W. SMITH.

W. H. WATSON.

PAULINE WEIS.

THURSDAY, 2 P. M. — SECTION MEETING — LITERATURE, INCLUDING LIBRARY. — H. A. ADRIAN, Leader.

- I. What should be done in the Normal school to make teachers acquainted with the literature of the public school libraries — with methods of using this literature in the public schools?
II. a. Should the work in literature in the Normal schools aim to develop the reading habit and a love for good literature, as well as a method of studying and teaching literature.
b. If so, what effect will this requirement have upon the plan and method of work in literature adopted by the teacher of that subject in the Normal school?
III. Library reading; its place in the Normal school; its relation to the regular work in literature; to the work in other branches. Its place in the model school; plan of organization and administration.

ELLEN F. P. PEAKE.

ALBERT HARDY.

FANNIE J. HOLCOMBE.

Discussion opened by Colin A. Scott.

THURSDAY, 2 P. M. — SECTION MEETING — MODEL SCHOOL TEACHERS. — NINA VANDEWALKER, Leader.

- I. Bearing of the fundamental propositions 1, 2, 3, and 4, in determining what work, if any, now being done, may and should be eliminated.
II. Model teaching for observation classes; what means should be used to make this of most value to observers.
III. Means necessary to overcome the bad effects of poor teaching in the grades by pupil teachers.
IV. How should the character of the teaching in the grammar grades differ from that in the primary and intermediate grades.
V. Uses of literature and history in the grades in developing the power to use good English orally.
VI. Explanation and examination of special devices and illustrative material.

C. E. PATZER.

ALFARRETTA HASKELL.

J. I. JEGI.

MYRTLE L. CARPENTER.

HARRIET P. BURY.

THURSDAY, 2 P. M. — SECTION MEETING. — TEACHERS OF PROFESSIONAL SUBJECTS. — J. Q. EMERY, Leader.

- I. How to secure unity of ideals and purposes in professional teaching and training
a. In any one Normal school.
b. In the system of Normal schools.
II. Professional reviews.
a. Scope.
b. How far academic?
c. How far and in what manner professional?

ALBERT SALISBURY.

T. B. PRAY,

Discussion opened by Chas. McKenny.

State Public School.

THURSDAY, 2 P. M.—SECTION MEETING.—SCIENCE.—A. A. UPHAM, Leader.

- I. a. Value of oral exposition in developing teaching power of the student; such exposition to be without apparatus, and of experiments previously performed.
- b. To what extent may oral exposition and blackboard illustration take the place of experimental work with apparatus in the science teaching, keeping in mind the purpose of developing general teaching power?

L. D. HARVEY.
- II. a. Possibility of and modes of correlating related scientific knowledge in the teaching of any of the sciences.
- b. Value of the "lesson plan" in the work of correlation in science teaching in view of the fact that propositions 1, 2, and 3 applied, determine what is necessary and what must be mastered by the pupil in the light of his present knowledge of that which is essential.

I. N. MITCHELL.
- III. Danger of undertaking advanced work in science not within the proper scope and purpose of a Normal school course.

A. L. EWING.
- IV. Relation of laboratory and text-book work in different subjects.

E. C. PERISHO.

FRIDAY, 9 A. M.—GENERAL MEETING.

- I. Relation of department teachers in the Normal school proper, to work in the model school.

H. A. ADRIAN.
- II. Reports from leaders of sections of conclusions reached in the section meetings.
- III. Unfinished discussion.

FRIDAY, 2 P. M.—GENERAL MEETING.

- I. Answers to questions.
- II. General discussion of questions previously proposed by members of the institutes.

STATE PUBLIC SCHOOL FOR DEPENDENT AND NEGLECTED CHILDREN, SPARTA, WIS.

(From the Superintendent's Report.)

Hon. L. D. HARVEY,

State Superintendent Public Instruction.

Dear Sir:—The State Public School is young in years, established in 1886; but it has lived long enough to demonstrate the fact that its essentiality in the scale of charities is unquestioned. It is a necessary factor in good citizenship, rescuing the poor, neglected children from lives of squalor, oft-times of vice, and placing them in the light, in good homes, where refining influences show the triumph of environment over heredity, by lifting these children to useful lives, in more than ninety per cent. of all cases handled. Thus it is not alone essential, it is economical to the state as well—in the rescue work it is doing.

Dependent and neglected children, between the ages of three and fourteen years, are committed to the State school by the county judge of the county where the children reside. Under the law of the state, only children who are physically and mentally sound, are proper subjects for the School; but despite the examination by the county physician and such inspection as the superintendent of the School is able to give, some children are received who are defective. These children may be returned to their respective counties at any time; but as only the alms house awaits them, some have been kept in the School and cared for as well as may be.

The School is only a clearing house between counties and homes. The

State Public School.

children are kept here, for a few weeks, or it may be for a few months, long enough to fit them as well as possible for respectable homes. Then they are indentured to some persons, whose homes have been inspected and accepted by the agents, to remain until they reach the age of eighteen years, with the provisions in the contract, that either party thereto, guardian or State Board of Control, may sever it at any time.

The terms of the indenture require that the guardian will treat the ward as a member of his family in every way, send him to school at least four months in each year (a majority of guardians send the child more than six months per year), and when the ward is eighteen years of age, pay into the State School fifty dollars, which is placed at interest. When the ward is twenty-one years of age, the amount is given to him, thus giving him a little start in life. The guardian also gives the ward two suits of good clothes.

Nearly all of these children who remain in homes until they are eighteen years of age, have become part of the home or community, and go along in life's work as reputable citizens. Herein is the realization of the hopes of the officers of the State Board, those connected with the School.

SUPERVISION IN HOMES.

Two agents are employed to visit children in homes. They visit each child at least twice a year, and in many cases, where closer supervision is necessary, five or six visits are made within the same time. The agents visit the home, talk with the child alone, visit the school if in session, consult the teacher and in every way possible ascertain the real condition of the child. A written report of each visit is recorded in the office of the State School.

Added to the above means of supervision each guardian is required to make a monthly report of the child to the superintendent of the School, on health, conduct, what work done, attendance at school and any other item of interest.

These methods have been helpful to the management, not only in knowing the real condition of children in their homes, but as means of assistance to them or the guardian, as the cases may demand. By this information we have been led to take a number of children from their homes and after a few weeks in the School, when their characteristics are understood, they are again placed in homes better suited to them.

COTTAGE LIFE.

The institution is on the cottage plan, where the children reside under the motherly care of five Christian matrons. In these cottages, which are most cleanly kept, the children have sitting rooms and dormitories. These sitting rooms are supplied with good books from the library, papers suitable to the age of the child, and in every way as far as possible real home life is carried out.

All dining rooms are in the Administration building, where the superintendent resides and has his office.

The matrons of these cottages not only attend to the physical needs of their charges; but for the moral part as well. The children live in a good moral atmosphere, and many a hard, almost vicious boy, has been led to change his life and strive to be what his "mother of the cottage" wishes him to be.

State Public School.

INSTRUCTION IN THE SCHOOL.

The next day after a child's arrival at the institution, he is placed in one of the four departments of the School. The School has five teachers with kindergarten, primary, intermediate and grammar rooms. The grades are about the same as those in the public schools throughout the state.

In addition to ordinary school work, we have a department of Domestic Science, where the girls are taught sewing and cooking. Considering the fact that many of these girls, in fact a large majority of them, have had no opportunities to learn even a little of these domestic necessities, this department of our School work is essential.

All pupils are taught vocal music by competent teachers, and a number of the largest girls are given lessons on the organ as a start and a help to make their way in the farm home to which they may be assigned.

Our teachers are earnest, conscientious workers, those whose sympathies are awakened by these little ones, who up to the time they are received here have had hard lives, fraught with neglect and privations. And the teachers seem to strive in every possible way, to lead their pupils into earnest work, into progress in their studies, and at the same time inculcate correct, moral principles. If we take into consideration the fact a child may be in the school work but a month and that the pupils are constantly changing, the good and the bright going to homes, and their places filled by new arrivals, our school work is excellent.

CENSUS STATISTICS.

Since the opening of the School in 1886, 2,221 children had been received up to September 30, 1900. Of this number 804 were girls, 1,417 were boys. Nearly all of these were placed in homes, some of them in two or three homes, by the agents of the school, before the proper place for the child could be found. And, in more than ninety per cent. of all children placed, when the congenial home was found, they have grown into the hearts of the people, and become a part of the home and community in which they were placed. In fact, it has been said by many officers of the School who have had opportunities to observe, that as a large per cent. of the State School children become good citizens, succeeding in their life work, as the children from the average homes in Wisconsin.

If these opinions are correct, is not the State Public School at Sparta one of the most essential charities of Wisconsin?

Thanking you, sir, for this opportunity of briefly presenting some of the purposes of the school to the teachers of the state,

I have the honor to be,

Very respectfully yours,

M. T. PARK,
Superintendent.

Wisconsin School for Blind.

THE WISCONSIN SCHOOL FOR BLIND, JANESVILLE, WIS.

(From the Superintendent's Report.)

The State School for Blind, while not under the supervision of the state superintendent, is recognized as an educational institution as well as a home where the blind children of the state are permitted to spend the greater portion of from eight to twelve years in a preparation that contemplates good citizenship and the ability for self-support, as far as it is possible to furnish it.

The School employs fifteen teachers, and is divided into three departments, literary, industrial, and musical. The literary course is very similar to the high school course of the state, and is under the supervision of Miss S. Augusta Watson, who for more than thirty years has been connected with the institution as a teacher. About twenty per cent. of the pupils enrolled graduate from this department. They are well equipped mentally, but few of them are able to apply their knowledge in a practical way, as the avenues of work are barred to them in the literary field.

The musical department includes both vocal and instrumental. The vocal work is in charge of a competent teacher who devotes all of her time to individual and chorus work. If talent is discovered it is developed, and the school has turned out some very good singers whose voices will help them to gain a livelihood.

More than half the pupils are piano scholars. Much attention is given to this work because of the culture and comfort that results. The blind are compelled to live so much within themselves that music is a source of great enjoyment to them. A limited number of pupils are given instruction on the pipe organ, but only those are selected who have special talent as improvisors. The orchestra of fourteen boys comprises both string and brass instruments, and an effort is made to make each player an independent performer. In this department it is not uncommon to find good soloists who are able to turn their knowledge to practical account.

The industrial work of the school is under the direction of four competent teachers. The girls are taught to knit and sew both by hand and machine, and many of them are able to make their own garments. The boys' building is a busy work shop where chair-caning, hammock and net making, carpet weaving, and broom and mattress making are taught. Many of the boys from the shop go out into life equipped for partial, and not infrequently, independent self-support. This department is also a refuge for men from twenty-five to thirty-five years of age who lose their sight by accident after gaining their majority. It is the only place in the state where they can be taught anything, and the State Board very wisely permits them to enter for a reasonable period.

A class of a dozen young men is acquiring the art of piano-tuning and repairing, and the most of them will become expert workmen. Their instructor is a blind man, who teaches not only the art of tuning, but also the art of securing the piano to tune. His boys enter life with a trade and a business training as well, possessing the ability to apply their knowledge.

A gymnasium, where the entire school in classes receive thorough training in physical culture, contributes to the health and physical development of the school; and the results are very satisfactory.

The average attendance for the past two years has been 110, and the average age, 16 and a fraction.

Wisconsin Home for Feeble Minded.

The school compares favorably with similar institutions in other states. The enrollment would show a healthy increase if county superintendents would furnish the information concerning the blind children of the state that the law contemplates. The census will show a state population of about 1,500 of this class.

H. F. BLISS,
Superintendent.

WISCONSIN HOME FOR FEEBLE MINDED, CHIPPEWA FALLS,
WIS.

(From the Report of the Superintendent.)

As the appropriation granted by the last legislature for a school house could not be utilized, there has been no material extension in our school system since my last report.

A large bed room has been converted into a sloyd room and a considerable number of our brighter grade of boys receive daily instruction from an hour to an hour and a half in this work. Training classes are also being organized for the coming School year for the lower grades of educable children. There are a considerable number of this last named class who have not heretofore received the attention that they need owing to a lack of proper accommodations. The school classes have made very satisfactory progress. All our highest grade children of suitable age are receiving daily instruction in reading, writing, number work, simple geography and composition. This is varied by exercises in hand work, either in sloyd class or in the classes for dress making, embroidery, etc. As all education is intended to fit the scholar for a broader field of usefulness, and consequently a higher degree of happiness, and as only a relatively small proportion of our pupils can ever expect to leave us to take up a position in general society, we are obliged to modify our school system to meet the future needs of our wards. It is the intention to make this institution, so far as possible, a self-supporting community, furnishing in a great measure its own subsistence, making its own clothing; furnishing, further, its own entertainment. It is not surprising, therefore, that we find hand work occupying so prominent a place throughout our schools. So far have our efforts been successful in the past that the gardener's class of four boys, consisting of two epileptics, a boy who had been committed to an insane asylum for his pranks of destructive mischief, and one other boy of hardly middle grade, has, under the direction of a competent gardener who understands boys as well as the raising of vegetables, furnished the house with over \$2,000.00 worth of produce the past season. On the farm a second class of boys is employed in the cultivation of potatoes and grain. In the carpenter shop other boys are employed, one of whom has become so skillful in joinery that he is employed in making all the dining room tables for the building now under construction. The class of boys under the shoemaker now make all the shoes used in the institution. In the dress-making department, several of our girls can fit as well as make dresses, while in the school for fine sewing, the larger girls find rest and recreation from the plainer work of the institution for a period of from one to two hours a day. Worked is turned

Wisconsin Home for Feeble Minded.

out of such excellent quality as to arouse a great deal of interest and appreciation from visitors. Very marked improvement is seen in the laundry class.

The total number of children in the department for manual training amounts to 205. With the present capacity of our schools we are enabled to receive only 83 into the school classes, exclusive of 35 in the sloyd and 44 in the kindergarten. This does not include all the children who should attend school. A considerable number who are susceptible to school training are necessarily denied on account of lack of proper accommodations. This we hope will be remedied by the coming legislature, and sufficient appropriation be granted to enable us to erect ample school rooms for our purpose.

The expediency of teaching the feeble minded has been questioned in the past and is occasionally doubted even now. The maintenance of schools in connection with institutions of this character is demanded for two excellent reasons. The feeble minded child if given mere custody would surely retrograde. He has not the instinctive hunger for knowledge generally seen in children of normal brain power. He never studies. He must be deliberately taught all which he learns, but when taught along proper channels, he will develop a very marked degree of usefulness. There is hardly any member of this class, except among those actually retrograding, where patient investigation will not find some lines along which his mentality can be developed to a useful extent. He can thus be converted from a useless dependent into a useful producer in his little community, with a considerable increase of happiness to himself and of profit to the state. Moreover, it is doubtful if it is entirely just and right to take a child from its home surroundings without giving him adequate compensation. I think it should be acknowledged that he has a right which he shares in common with every child in our land, to be developed to his greatest extent. We therefore earnestly urge that our school accommodations shall keep pace with the growth of the institution. We feel confident that the comparatively slight cost to the state will be amply repaid by the increased self helpfulness of its wards in this institution and in their increased power for usefulness; as they will save the wages of many employed helpers and will, moreover, furnish from the land already in our possession a large portion of our food. This is no longer a matter of theory, but has been amply proven during the fifty years growth of this work in the country.

ALFRED H. WILMARTH,
Superintendent.

Wisconsin School for the Deaf.

THE WISCONSIN SCHOOL FOR THE DEAF, DELAVAN, WIS.

(From the Report of the Superintendent.)

The state of Wisconsin has maintained a free school for the deaf at Delavan since 1852, which provides instruction for all children in the state who are too deaf to go to the public schools; it is completely equipped for their mental, manual and physical training; its teachers are selected with special reference to the wants of this class of children, and the course of instruction is arranged to suit their capacity and condition. The first years in school are spent upon the elements of speech and the simpler forms of expression, with exercises in the fundamental rules of arithmetic, in reading and writing, and in acquiring as a basis for further advancement facts in geography, natural history, history, science and ethics from ocular demonstration of the most evident elementary principles. As, for example, numbers are taught by objects, singly or in groups; geography begins with location and direction in the school room, thence to the school ground, to the village, and then to the town and county in their order; after that to the state, and finally to North America and the hemispheres. The correct location of places is learned in this way, and the use of language is acquired by colloquial exercises and written accounts of daily events, without technical grammar. Natural history readers, stories introducing historical characters and descriptive writing, provide subjects for further language study. Later in the course the most popular of school readers are employed; Hall's arithmetical series affords suitable lessons in numbers; Frye's and Colton's geographies are used; Eggleston's U. S. History leads on to the study of general history; and the course is not completed without an experimental knowledge of physics, anatomy and the laws of health; and a course in Civil Government, which includes a study of the Constitution of Wisconsin and of the United States. This is supplemented by lectures on ethical, scientific and historical subjects by the superintendent and teachers. Along with this there is a correlation of manual training, from the simplest knife work of the seven year old boy, through a course of eight years, to the finished patterns and elaborate work of the most advanced; while at the same time the girls are at work at systematic needlework, practical housekeeping, and scientific cooking in preparation for an assumption of their share of domestic home duties when they return to the paternal roof. Manual training for boys leads to architecture, cabinet making and joinery, while in addition to these trades, shoemaking and printing are taught to large numbers who become self-supporting workmen in their respective vocations after they leave school.

Gymnastics and calisthenics under competent instruction impart a grace and freedom of movement that could not otherwise be secured; and at the same time the disciplinary training of a well ordered household and the restraints of system and order develop an appreciation of manliness and self control. We point with pride to the graduates of this school, who, although handicapped in the race of life by deafness, are still to be found in all portions of the state supporting themselves in independent comfort, and contributing to the welfare of the communities in which they live. The last class of graduates numbered sixteen young men and women, representing different portions of the state, included four carpenters, four printers, one shoemaker and seven young ladies who had taken special instruction in drawing and painting. Art work has great attractions for the deaf, and is one of their most interesting studies; it encourages them to undertake other difficult tasks

Wisconsin School for the Deaf.

and introduces them to a field of delightful labor in which they may expect as much success as any of their more favored hearing associates.

There have been two hundred and seventeen pupils, representing fifty-three counties, in the school during the past year; and one hundred and ninety-five have been enrolled since the opening in September, about equally divided between the sexes. Of this number, about two-thirds, one hundred and twenty-five, are in speaking classes. All pupils of suitable age are placed in speaking classes at the beginning and here they remain, unless under oral instruction it becomes evident that they are really oral failures, and they are then transferred to manual classes in which rapid progress is usually secured.

Manual training, which includes architectural and mechanical drawing, has fifty-four pupils in wood work, ten in pattern making and molding and six in forging, and at the same time twenty-four boys are learning shoe-making, eighteen cabinet-making, and fifteen printing. All the girls learn to sew, the more advanced classes have dress-making and cooking, while during the entire course abundant opportunity is given for learning the details of good housekeeping.

The school undertakes to prepare deaf boys and girls for the practical duties of life, so that they may be able to carry with them to their homes larger freedom of action, more exactness in speech, a better use of conscious ability, an inspiration, which aims at higher and more remunerative pursuits, and a more complete participation in all the duties and privileges of intelligent citizenship.

The term begins the second Wednesday of September in each year and continues forty weeks. During the school term, board, washing, tuition, books and medical attendance are free, and in cases of necessity transportation to and from school and clothes will be furnished. At the close of the term in June all children are returned to their homes for the summer vacation. Applicants for admission should not be under seven nor over twenty years of age, of sound mind and body, and of good moral principles. This is not a reform school, a hospital or simply a custodial institution. Since the state has made such ample provision for the education of the deaf it is the desire of those in charge to so inform parents and guardians of the peculiar advantages of this school that all deaf children may be brought within its benign influence. In this connection the attention of county and city superintendents is called to Sec. 3, Chapter 331, Laws of Wisconsin, session of 1891, as follows:

SECTION 3. It shall be the duty of each county and city superintendent of schools to send to the superintendent of the state school for the deaf at Delavan and to the superintendent of the state school for the blind at Janesville, the address of parents, with the name and age of each deaf or blind child known to be in his county or city, and to inform parents, guardians and custodians of deaf mutes and blind children in his county or city, respecting the several schools for deaf mutes and the blind in the state, and the conditions of admission to them; and for this purpose, the superintendents of such institutions shall provide each such superintendent with sufficient printed information and with the names and residences of all deaf mutes and blind children known to be in his county or city. And each such superintendent shall include in his annual report to the county board of supervisors or the city board of education, a statement of the number of deaf mutes and or blind children of school age in such county or city then receiving an education, or the number of each not receiving an education, and of the number of personal visits he has made during the year, upon the parents, guardians or custodians of such children, to induce them to give such children a proper education.

J. W. SWILER,

Superintendent.

Industrial School for Boys.

INDUSTRIAL SCHOOL FOR BOYS AT WAUKESHA.

(From the Superintendent's Report.)

The schools of this institution have made commendable progress in several directions during the last two years. Particular stress has been laid on reading for the thought and on reproducing the thought, orally and by writing, in an intelligent manner. A large proportion of our boys come with little training of this kind, probably on account of irregular attendance or non-attendance at the schools of their homes, and are inclined to make of the reading exercise a mechanical performance. To overcome this defect a large amount of reading matter is used, three books in six months being the minimum for a grade. Nearly all use four and some select from even a greater number.

Penmanship has also received close attention and it is gratifying to note the appreciation of parents expressed in letters to their boys, wherein they so often commend them for their progress and urge them to make further improvement.

The course of study is substantially what it was two years ago. A few minor changes have been made from time to time as circumstances seemed to warrant or require.

EXTRA GRADE.

It occasionally happens that a class of boys complete the regular course before being paroled, in which case an extra class is provided wherein they receive instruction in advanced subjects, such as algebra, physical geography, physics, and shorthand. A class of eleven, belonging to the eleventh and twelfth grades, is now instructed in the last named subject by the stenographer of the institution, a young man who, as an inmate of the school, received the training that qualifies him for the position he now holds.

Semi-annual promotions based on proficiency are in the main satisfactory. The lock-step features are eliminated by promoting individuals or classes whenever the good of the pupils seems to require it. Every boy understands that promotions are not regulated by the calendar, but by his progress, and he is encouraged to push ahead and to overtake the grade next above him.

MANUAL TRAINING.

Within the last two years the manual training department has been thoroughly reorganized and fully equipped. The wood working shop is at present arranged for classes of twelve each. In a few days conveniences for classes of sixteen each will be completed.

The course of study in the wood working department embraces the most desirable features of the Russian and the Swedish systems. General cultivation of the hand, such as will enable it to respond quickly and rightly to right impulses from the brain, is what is aimed at rather than the ability to produce a variety of domestic articles for the money value of such production. It must not, however, be thought that such articles are not produced. On the contrary the boy is encouraged at every point of his progress to put his acquired skill into practice in the construction of some article of use or of ornament that challenges the exertion of his best efforts.

The work in wood-turning forms a valuable part of the course. It

Industrial School for Boys.

trains the hand to accurate manipulation of tools and the eye to correct appreciation of proportion and of symmetry, and so of beauty, and the endless variety of articles produced never fails to thoroughly interest the operator.

The iron working department is also well equipped. The course is arranged to give elementary instruction in the properties of iron and steel, as well as to teach the usual processes of manipulation. In this department where no machinery and few tools are used, so much depends upon the boy that his hands, his eyes, and his judgment are responsible for the results, and he finds a satisfaction in his work that fully compensates him for the severe labor, the ever present dirt, and the fervent heat.

The work on the metal working lathe requires a variety of tools that he must forge, temper, and shape for himself. He must grind and adjust them to the requirements of the work on hand, and he must carefully and thoughtfully direct the machine, while in obedience to his guidance it smooths, drills, countersinks, polishes, cuts threads, and does many other things with more than intelligent exactness.

Every piece attempted in the shops is first drafted and the elements of mechanical drawing are so taught that the boys are enabled to express intelligently the shape, size, position, and use of each part, as well as to produce a complete picture of the piece as a whole.

Boys in this department spend two hours a week in the drawing room and an equal time in some one of the shops of the department.

The sloyd school furnishes to the forty-eight boys enrolled, an excellent introduction to the use of tools and a preparation for the heavier work of the shops. The time used in this department is taken from the working sessions instead of from the school sessions, as is the case in the other departments of the manual training school. Here the few tools used are made to do a great variety of work, and here, too, dexterity, skill, exactness, and taste are developed. The half day's work of the class is interspersed with a variety of exercises calculated to develop mind and body and to keep interest and attention from flagging. Equipped with the indispensable sloyd knife, with pencil, try square, saw, rule, hammer, gauge, awl, and dividers for general use, and with bits, chisels and planes, to be used where these will best subserve his purpose, the boy is taught by precept and example to manipulate one tool after another in the production of articles, of which the following is but a partial list: Flower stick, pen-holder, key label, paper knife, ruler, tooth brush rack, match safe, sand paper file, towel rack, letter box, weather vane, sugar scoop, cake beater, salt box, and shoe brush box.

No boy makes all the articles in this list nor is any boy confined to these alone. Tasks are assigned in such a way that each pupil may do as much and advance as rapidly as his ability will permit. He is encouraged to contrive and to make articles of use or of ornament, model, or full size, as may seem best to his interest.

LIBRARY.

Since my last report the school library has been moved into more suitable quarters; fine roomy cases have been built for it, and best of all, substantial additions aggregating five hundred volumes have been made. It consists at the present time of 781 volumes in good condition, covering a great variety of subjects, and adapted to all ages and capacities. Every boy who is able to read is allowed to draw one book a week and an unfinished book may be kept two weeks and re-drawn for an additional week.

Industrial School for Boys.

Since March 12, 1899, 7,412 volumes have been drawn for home reading. As a popular book is often read by several boys besides the one who draws it, the above number may safely be increased by one-third of itself and the number of volumes read be called 9,883, instead of 7,412, as the cards show.

Boys of the ages of those in this school are especially fond of books of the adventurous, heroic, daring type. While the library cards do not show a decided preference for books of this class, as might be expected, the fact that such books are retained longer when drawn and are passed along from the original drawer to his friends in the family, will partly account for the comparatively small number of times some of the greatest favorites have passed through the librarian's hands. Books that have been drawn by at least 25 boys in eighteen months may safely be classed as favorites, and the order in which they rank as favorites may be learned from the following table:

Title of book.	Author.	No. of times drawn.
Westward Ho.....	Kingston.....	25
From school to battle field.....	King.....	25
The Story of George Washington.....	Baldwin.....	25

Tom Brown's School Days	Hughes	57

About 60% of all boys able to read draw books regularly, and half the remainder irregularly. Many of the most popular of the list just given have been read aloud in the cottages and probably all have been read by four to five times as many boys as have drawn them.

In addition to the reading derived from the library, each family is supplied with daily and weekly newspapers, juvenile papers, and standard periodicals. In the selections and purchase of all these the greatest care is exercised to secure the very best of its class for the use of the young boys as for the more mature, and nothing of a character, doubtful in the least degree, whether newspaper article, history, or romance, is ever allowed to pass to an inmate through the hands of any officer.

CHARLES O. MERICA,
Superintendent.

BIENNIAL REPORT

OF THE

ADJUTANT GENERAL

OF THE

STATE OF WISCONSIN

FOR THE

Two Fiscal Years Ending September 30, 1900.

MADISON

DEMOCRAT PRINTING COMPANY, STATE PRINTER

1900

REPORT OF THE ADJUTANT GENERAL.

STATE OF WISCONSIN,

Adjutant General's Office.

MADISON, September 30, 1900.

To His Excellency, EDWARD SCOFIELD,

Governor and Commander-in-Chief.

Sir: — I have the honor to submit the following report for the two years ending September 30, 1900.

At the time the report from this department for the two years ending September 30, 1898, was made the volunteer troops furnished by Wisconsin for the war with Spain, although that war was ended, were still in the service of the United States. Their continuation in the service, however, was brief.

The companies of the 1st Regiment were mustered out at their home stations October 19, 1898.

The companies of the 2d Regiment were mustered out at their home stations November 11 to 21, 1898.

The 3d Regiment was furloughed to home stations December 30, 1898, to January 11, 1899. They left Ponce, Porto Rico, October 22, 1898, arriving in Milwaukee, Wis., October 30, 1898, and the companies comprising the regiment were mustered out at their home stations from January 4 to 17, 1899.

The 4th Regiment was mustered out February 28, 1899, at Anniston, Alabama, it never having left its camp at that place after proceeding there from Camp Douglas, Wis.

Battery "A" was mustered out October 8, 1898, at Milwaukee, Wis., and during its term of service was not required to leave the state.

The casualties of Wisconsin troops while in the volunteer ser-

General Report.

vice of the United States for the war with Spain were as follows:

1st Regiment Infantry, died of disease.....	45
2d Regiment Infantry, died of disease.....	38
3d Regiment Infantry, died of disease.....	29
3d Regiment Infantry, killed and died of wounds	2
4th Regiment Infantry, died of disease.....	17
Total.....	131
Battery "A" no casualties.	

The following was the total strength of the volunteer regiments, officers and enlisted men:

1st Regiment Infantry.....	1,357
2d Regiment Infantry.....	1,349
3d Regiment Infantry.....	1,353
4th Regiment Infantry.....	1,301
Battery "A"	109
Grand total.....	5,469

SETTLEMENT OF WAR CLAIMS.

The costs, charges and expenses incurred and paid by the State of Wisconsin in aiding the United States to raise the Volunteer Army in the war with Spain, to date, is.....	\$139,364 49
The United States has re-imbursed the state in the sum of.....	101,991 57
The balance, now in process of adjustment, and which will undoubtedly be recovered, is.....	\$37,372 92

These figures do not include the value of all the military property turned over by the state to the United States.

The ordnance and ordnance stores have been replaced with new property (except the rifles, bayonets and bayonet scabbards, which were overhauled and put in fair shape) by the United States, and no charge made for same against the annual appropriation.

General Report.

The following is a list of the property so returned: 2,763 Springfield rifles, with bayonets and bayonet scabbards, 2,527 blanket bags, 2,527 blanket bag straps (pairs), 2,732 blanket bag coat straps (pairs), 2,454 canteens, with straps, 2,736 cartridge belts (woven), 2,646 gun slings, 2,515 haversacks, with straps, 255 waist belts, with plates, 2,846 meat cans, 2,849 tin cups, 40 sight covers, 157,080 ball cartridges (Cal. 45), 6,000 revolver ball cartridges (Cal. 38), 17 cartridge boxes, 366 knives, 366 forks, 366 spoons.

The following is a list of quartermaster's stores which were state property and for which the state is entitled to and will be reimbursed in money or in kind: 2,923 blouses, 2,923 trousers, 2,884 flannel shirts, 200 pairs canvas leggings, 800 campaign hats, 2,908 woolen blankets, 2,378 overcoats, 1,089 pairs campaign shoes, 36 pairs chevrons (first sergeant), 36 pairs chevrons (quartermaster sergeant), 161 pairs chevrons (sergeant), 216 pairs chevrons (corporal), 49 pair chevrons (signal corps), 235 pairs trouser stripes (sergeant), 214 pairs trouser stripes (corporal), 143 pairs trouser stripes (musician), 36 stretchers, with slings, 273 wall tents, 208 wall tent flies, 238 wall tent poles (ridge), 476 wall tent poles (upright), 36 field ovens.

The value of the property as fixed by boards of survey is.....	\$47,010 60
Deduct from this the value of the overcoats and blankets returned by the 1st and 2d Regiments	15,699 08

and it leaves the value of stores for which the state will be reimbursed in money or in kind..... \$31,311 52

The following is the list of the quartermaster's stores which were United States property when turned over: (Under an Act of Congress, dated May 26, 1900, the Quartermaster General, U. S. A., is authorized to replace this property *in kind*, on written application of the governor.): 2,127 campaign hats

General Report.

2,566 pairs canvas leggins, 140 overcoats, 73 trumpets (with E. M. P.), 73 trumpet cords and tassels, 25 trumpet crooks, 6 hospital tents (complete), 167 wall tents (complete), 2,164 tent pins (large), 3,692 tent pins (small).

The medical supplies and surgical instruments furnished by the state were: 3 Senn's medical and surgical panniers (stocked), 3 major operating cases (complete), 3 large medical chests (stocked), 3 small medical chests (empty). The value of these was \$871.98. The state will probably recover 80 per cent. of this amount.

By a decision of the Comptroller of the Treasury, dated January 17, 1899, it was decided that all officers and enlisted men were entitled to United States pay for the period from the date of enrollment to date of muster into the service of the United States. By Section 14, Chapter 200, Laws of 1899, it became the duty of the Adjutant General's Department to assist in the settlement of all claims of soldiers against the United States. Steps were at once taken to prepare and settle the claims of soldiers who were entitled to pay under the Comptroller's decision noted. In urging these claims for prompt settlement it was ascertained that there were on file about 65,000 claims growing out of the war with Spain. Claims being settled in the order of filing, it became apparent that Wisconsin soldiers would have to wait an average of two years for a settlement and it was decided to try and effect an arrangement whereby settlement could be made without unreasonable delay. A proposition was therefore made to the Pay and Auditing Departments to the effect that the State of Wisconsin would undertake the preparation of supplementary muster and pay rolls if they would pay on same the accounts found to be due. After some delay they agreed to the plan and in October, 1899, the work of preparing these rolls began. To comply with the requirements of the War Department and provide for a record in this office the muster and pay rolls were made in quadruplicate. This involved the preparation of 117 rolls, covering 13,940 names written,

General Report.

with the necessary data for each name. As fast as the rolls were prepared they were sent to commanding officers to be certified and signed by claimants. The signatures of many soldiers were unobtainable and to these a sub-voucher in duplicate was sent for their signature, and certificate of commanding officer. The number of sub-vouchers (in duplicate) prepared and sent to claimants was 1,388. On final settlement by the U. S. Paymasters it was found that for various reasons 1,109 men could not be paid on the rolls, and United States claim blanks were prepared and sent to their last known address for signature. The recording of papers, sub-vouchers and discharges involved the making of indorsements on the rolls to date to the number of 4,940. In connection with the preparation and payment of these rolls, sub-vouchers to same and the claims prepared and filed to date, 1,310 letters have been written.

Payments by U. S. Paymasters on supplementary muster and pay rolls and sub-vouchers thereto closed May 31, 1900. The number of men paid was 2,241, amount paid \$26,720.53.

REORGANIZATION OF THE GUARD.

With the return to the state and muster out of the volunteer regiments the work of reorganization of the Guard was taken up. The following circular letter was sent to the captains of each the old Guard companies, it being the intention to give each company ample opportunity to return to the state service:

STATE OF WISCONSIN,
Adjutant General's Office,
MADISON, October 20, 1898.

Circular.

By direction of the Governor I have the honor to inform you that all organizations, formerly members of the Wisconsin National Guard and which volunteered and were mustered into the United States service for the war with Spain, will, if the members so desire, be taken back into the Guard as soon as they are mustered out of the service of the United States. Each company will be given its old letter and will be assigned, so far as possible, to the regiment to which it formerly belonged. The commissions of officers will be dated so as to make the term of service continuous and all enlisted men, who were former members of the Guard and who were accepted as volunteers, will be permitted to enlist for *one year*. All

General Report.

others must enlist for *three years*. The law makes it necessary for each company to proceed in the manner provided for the organization of new companies. A list must be subscribed to as prescribed in Section 8 of the Laws and Regulations Governing the Wisconsin National Guard. Officers must be chosen in accordance with the provisions of Section 9, and in general all the provisions of those two sections, together with those of Paragraphs 207, 208, 209 and 210, must be followed. The organization of the regiments will not be attempted until the full quota of companies has been mustered in. The early inspection of companies mustered in is contemplated that the state allowance may be paid and all outstanding accounts against the companies thus speedily settled by those who contracted them. In order that the work of organization may not be delayed you are requested to inform this office, at your earliest convenience, of the decision of your company in regard to again becoming a part of the Wisconsin National Guard.

Very respectfully,

C. R. BOARDMAN,
Adjutant General.

Official:
W. H. PATTON,
Assistant Adjutant General.

As it was absolutely necessary to muster out the companies of the Guard as they went into the volunteer service in order that, under the law, a new force could be organized for the protection of the state so it was equally necessary to proceed in accordance with the law in mustering the old companies back into the service of the state.

The station of each company that rejoined the Guard, date of muster and strength at muster is shown by the following tables:

BATTERY "A" FIRST LIGHT ARTILLERY.

	Organized.	Re-organized.	Commiss- ioned officers.	Enlisted men.	Total.
Battery "A" 1st Light Artillery, Milwaukee..	May 11, 1885.	Oct. 18, 1898.	4	65	69

The companies that did not reorganize were the following:

Company.	Regiment, W. N. G.	Station.
"A"	1st	Janesville.
"D"	1st	Darlington.
"F"	1st	Racine.
"L"	2d	Ashland.
"E"	3d	Eau Claire.
"C"	4th	Milwaukee.
"D"	4th	Milwaukee.
"G"	4th	Milwaukee.
"H"	4th	Milwaukee.

General Report.

The reasons for failure to reorganize were, in some cases, due to internal dissensions, in some cases to removal of some of the officers and men to other localities, and in others to a feeling on the part of officers and men that they had seen enough military service. To fill the vacancies the companies of the 5th Regiment, stationed at Rice Lake, Eau Claire, one in Milwaukee, Ashland, Kenosha, Reedsburg, Rhinelander, Chippewa Falls and Oconomowoc were retained in the service, while the remaining companies in the 5th Regiment, to-wit: those at Waupaca, Port Washington and one in Milwaukee, were mustered out.

The full quota of forty companies of infantry and one battery (Troop "A" 1st Cavalry never having been out of the Guard) was mustered in. The force was organized into regiments and battalions as follows:

STATE OF WISCONSIN,
Adjutant General's Office,
MADISON, June 10, 1899.

GENERAL ORDERS

No. 4.

The reorganization and muster of the companies of the Wisconsin National Guard having been completed, the following assignment of companies to the several regimental organizations is announced.

FIRST REGIMENT.

"A" Milwaukee,	Captain John F. Manion.
"B" Ft. Atkinson,	" Edgar J. Gibson.
"C" Whitewater,	" Frank B. Goodhue.
"D" Milwaukee,	" Emil Wilde.
"E" Beloit,	" Harvey R. Yeakel.
"F" Milwaukee,	"
"G" Madison,	" Henry W. Quentmeyer.
"H" Monroe,	" Matthias C. Durst.
"I" Milwaukee,	" Oliver E. Lewis.
"K" Milwaukee,	" Thaddeus Wild.
"L" Kenosha,	" William W. Miller.
"M" Oconomowoc,	" Karl L. Froding.

SECOND REGIMENT.

"A" Marshfield,	Captain Anton C. Martin.
"B" Oshkosh,	" Edward W. Paine.
"C" Sheboygan,	" Charles Bodemer.
"D" Ripon,	" James E. Regan.
"E" Fond du Lac,	" Emil C. Plonsky.
"F" Oshkosh,	" Ulysses G. Carl.
"G" Appleton,	" Maurice S. Peerenboom.
"H" Manitowoc,	" Norman A. Knudson.
"I" Marinette,	" Joshua Hodgins.
"K" Beaver Dam,	" Philip J. Zink.
"L" Rhinelander,	" Edward O. Brown.
"M" Oconto,	" Wilbur M. Lee.

General Report.

THIRD REGIMENT.

"A"	Neillsville,	Captain	John W. Hommel.
"B"	La Crosse,	"	Fred Schultz.
"C"	Hudson,	"	William Y. Burton.
"D"	Mauston,	"	Gerhard F. Behnken.
"E"	Eau Claire,	"	Otto H. Kitzman.
"F"	Portage,	"	John C. Britt.
"G"	Wausau,	"	Jacob D. Womer.
"H"	Menomonie,	"	John W. Macauley.
"I"	West Superior,	"	Harry W. Newton.
"K"	Tomah,	"	Winfield W. Warren.
"L"	Sparta,	"	Robert B. McCoy.
"M"	La Crosse,	"	Eugene H. Chamberlain.

TENTH SEPARATE BATTALION.

"A"	Rice Lake,	Captain	Edward K. Brayton.
"B"	Reedsburg,	"	William A. Wyse.
"C"	Chippewa Falls,	"	William G. Hartwell.
"D"	Ashland,	"	David J. Mowatt.

The appointment of the following officers is published for the information and guidance of all concerned.

FIRST REGIMENT.

Colonel,	Otto H. Falk.
Lieutenant Colonel,	George H. Joachim.
Major,	Daniel A. Stearns.
Major,	John J. Lynch.
Major,	Abraham B. Cambier.

SECOND REGIMENT.

Colonel,	Nathan E. Morgan.
Lieutenant Colonel,	Frank W. Gruetzmacher.
Major,	Wallace P. Greene.
Major,	Wilbur M. Lee.
Major,	Julius A. Nemitz.

THIRD REGIMENT.

Colonel,	Orlando Holway.
Lieutenant Colonel,	Julius E. Kircheis.
Major,	Randolph A. Richards.
Major,	Joseph M. Ballard.
Major,	John W. Hommel.

TENTH SEPARATE BATTALION.

Major,	Theodore K. Birkhaeuser.
--------	--------------------------

GOVERNOR'S STAFF.

Major and Paymaster,	Moses R. Doyon.
----------------------	-----------------

General Report.

The assignment of companies to battalions and of battalion commanders will be made by the regimental commanders.

The following names of the former regimental officers have been placed on the retired list:

Colonel Samuel P. Schadel.
Colonel Charles A. Born.
Colonel Martin T. Moore.
Colonel Horace M. Seaman.
Lieutenant Colonel Charles S. Young.
Lieutenant Colonel Benjamin F. Parker.
Major Thomas J. George.
Major Charles J. Hunter.

These officers by their honorable service for their country, both in peace and in war, have faithfully earned the high honors that are attached to their careers as Guardsmen and as Volunteers in the United States Army.

By command of the Governor,
C. R. BOARDMAN,
Adjutant General.

OFFICIAL:

W. H. PATTON,
Assistant Adjutant General.

The organization of the force into three twelve-company regiments and one independent battalion, instead of two twelve-company and two eight-company regiments was required by the law passed by the legislature in 1899, and which was enacted so as to make the Guard regiments of the state correspond in organization exactly to the regiments of the United States in time of war. Had such organizations as this prevailed at the time of the outbreak of the war with Spain much trouble and confusion might have been avoided.

In selecting the commanding officer for each regiment each of the old commanders was relieved — not as a matter of discrimination or criticism of any kind, but because there were four former colonels and only three regiments so that of necessity one must have been left out. As these officers had all served for a long period in the Guard, and as each had received from the Governor the highest military honor in his gift, namely a commission as commander of a volunteer regiment, they were where they could retire with all honor and credit. The same rule applied to the lieutenant colonels. In commissioning the

General Report.

other field officers the rule of promotion according to seniority was adhered to. The selection of staff officers and bands, as provided by law, was left entirely to the regimental commanders, and the medical department was organized as follows, by Surgeon General John B. Edwards:

MEDICAL DEPARTMENT.

Surgeon General.

Date of Rank.

Brigadier-General, John B. Edwards, Mauston.....January 2, 1899

Surgeons — Majors.

Edward H. Grannis, Menomonie...Assigned to 3d Regt.... June 15, 1899

Joseph B. Whiting, Jr., Janesville. Assigned to 1st Regt.... June 17, 1899

Assistant Surgeons — Captains.

Ralph Chandler, Milwaukee....Assigned to Bat. "A"

1st Lt. Art.... June 29, 1893

Charles F. King, Hudson.....Assigned to 3d Regt..... July 1, 1893

William J. Cronyn, Milwaukee ..Assigned to Troop "A"

1st Cav.... Jan. 23, 1895

Assistant Surgeons — 1st Lieutenants.

Edgar C. Barnes, Ripon.....Assigned to 2d Regt.... June 15, 1899

George N. Hidershide, ArcadiaAssigned to 10th Separate Battalion June 16, 1899

Daniel S. McArthur, La Crosse....Assigned to 3d Regt.... June 17, 1899

Theo. J. Redelings, Marinette....Assigned to 2d Regt.... June 18, 1899

Arthur T. Holbrook, Milwaukee...Assigned to 1st Regt.... July 12, 1899

Edward Hamilton, Milwaukee ...Assigned to 1st Regt.... July 13, 1899

Since the last report General F. W. Byers and General Oscar B. Zwietusch, Surgeon General and Quartermaster General, respectively, have been retired and the following orders bearing upon their long and valuable service in the Guard have been published:

STATE OF WISCONSIN,
Adjutant General's Office,
 MADISON, January 18, 1899.

GENERAL ORDERS, }

No. 2. }

Upon their own application and by authority of Section 649 a, Revised Statutes, Wisconsin, the following officers of the Wisconsin National Guard are hereby placed upon the retired list: Brigadier General Frederick W. Byers, Surgeon General; Brigadier General Oscar B. Zwietusch, Quartermaster General; Colonel Albert Bleuel, Aide-de-camp; Lieutenant Colonel Edward Shea, Aide-de-camp.

Brigadier General Frederick W. Byers first saw service in the civil war at Camp Butler, near Springfield, Ill., Sept., 1861; next at Camp Douglas, Chicago, 1862; was commissioned Assistant Surgeon of the 96th Illinois Infantry, May 7, 1863. On June 20th, 1864, he was with the advance column

General Report.

in the charge at Kenesaw Mountains and was by the side of the officer in command of the firing line when he fell wounded, and by prompt surgical aid saved the officer's life. Soon after he was made brigade surgeon which he held until the Hood Campaign in Tennessee, when he was assigned to staff duty with the 1st Division, 4th Army Corps, which place he held until mustered out in 1865. At the battle of Jonesboro he was a volunteer aide and put into position a battery section by order of the chief of artillery. He never had a furlough or leave of absence, was present at eighteen battles and engagements and was commended for bravery and efficiency. He is a member of the Military Order of the Loyal Legion of the United States, the Grand Army of the Republic, Charter Member of the Association of Military Surgeons of the United States, and is a U. S. Examining Surgeon for pensions, and has held the office continuously since 1880.

He was commissioned Captain and Assistant Surgeon, Wisconsin National Guard, May 22, 1882, Major and Surgeon, November 6, 1885, Surgeon General with rank of Brigadier General, January 7, 1895, resigned January 2, 1899.

Brigadier General Oscar B. Zwietusch in 1883 was a member of the Cadet Light Infantry of Milwaukee, receiving his first instruction from General Charles King. In this organization he was promoted to corporal and sergeant, and upon disbandment of the company, in 1885, he became one of the original members of the Milwaukee Light Guard, in which he held the position of Corporal and Sergeant. Upon disbandment of this organization, on February 26, 1886, he enlisted in the First Light Battery (now Battery "A," 1st Light Artillery, W. N. G.), and for two years and eight months served as trumpeter of the same, rendering service during the Milwaukee riots in May, 1886. On October 24, 1888, he organized the Rusk Guard, later known as Co. "E," 4th Infantry, W. N. G., as a National Guard company, and was on October 29, 1888, commissioned Captain. After building up Co. "E," 4th Infantry, W. N. G., until it ranked as one of the best companies in the state service, he was on September 16, 1892, commissioned captain and adjutant of the 4th Infantry, W. N. G., with rank of Captain from October 29, 1888. Through his efforts a mobilization of two provisional regiments of the Wisconsin National Guard took place at the World's Fair, Chicago, in October, 1892, at which time he served as Acting Assistant Adjutant General of the provisional brigade. In October, 1892, he was appointed Officer-in-Charge of the Wisconsin contingent at the Inter-State Rifle Competition at Fort Sheridan, Ill. On May 6, 1893, he was promoted to the position of Major, 4th Infantry, W. N. G., and after continuous service in that capacity, was on January 7, 1895, promoted to the position of Quartermaster General with rank as Brigadier General from that date, holding the office during the administrations of Governor Upham and first term of Governor Scofield, and rendering valuable service during the mobilization, enrollment and equipment of Wisconsin's Volunteers furnished the United States government in the War with Spain, also in mobilization and care of troops during the strike at Oshkosh in June, 1898, and the organization of additional National Guard troops to take the place of the Volunteers sent to the front. On December 7, 1898, for business reasons he tendered his resignation to take effect January 2, 1899. * * * These officers during the years of their connection with the Wisconsin National Guard have all aided greatly in advancing the standard of the organization. They have been faithful and tireless and the high value of their work is recognized by all with whom they have served.

By command of the Governor,

C. R. BOARDMAN,
Adjutant General.

Official:

W. H. PATTON,
Assistant Adjutant General.

General Report.

The Legislature having abolished the position of Assistant Quartermaster General, Colonel A. F. Caldwell, after a long and honorable period of service with the Guard, also retired.

The aggregate strength of the Guard at present is 2,840.

EQUIPMENT.

Reorganization having been effected the work of procuring uniforms and equipment was taken up by the Quartermaster General. The state had turned over to the United States, at the request of the Secretary of War, practically all of its military supplies for the infantry so that it was without anything for the reorganized Guard.

Through the efforts of Mr. E. G. Mullen, special war claim agent for Wisconsin, a prompt settlement was made with the Ordnance Department of the United States, whereby the 45 caliber Springfield B. L. rifles were returned, together with belts, knapsacks, haversacks, canteens, meat cans, tin cups, knives, forks, and spoons. There was enough credit left to the state to draw sufficient tentage, ammunition, flannel shirts, hats and leggins from the U. S. Quartermaster's Department, and contracts were at once let for blouses and trousers. All of these supplies were secured in time to equip the troops before the annual encampments. Enough of the blankets and overcoats were returned to the state by the ex-volunteers for one regiment, so that by issuing them to and taking them up from each regiment in turn they sufficed for the entire force during 1899. Since then enough blankets have been drawn from the United States and enough overcoats purchased in open market to supply the entire force.

With the state funds now available and with the increase of the national appropriation for equipping the Guard to \$1,000,000, Wisconsin's share becomes sufficient to practically equip her entire force in the next few years with everything needed for all kinds of practical field work, to put it in shape, should it be called in the near future to volunteer for another

General Report.

war, to take the field and need for nothing excepting modern rifles. This increase in the annual national appropriation for providing military supplies for the National Guard of the country is one of the most important advances made in this work during the past ten years. To secure it Wisconsin's representatives in the house of representatives and senate worked vigorously and untiringly. To them the organization is under deep obligation.

LEGISLATION.

The state legislature during the session of 1899 passed but one act affecting the Guard and that act was in the shape of a bill embodying all that it was thought advisable to retain of the previous laws and carrying with it some important changes. As stated before it reorganized the force into three twelve company regiments of infantry and one independent battalion, known as the 10th Separate Battalion Infantry, of four companies and provided as before for one troop of cavalry and one battery of light artillery. The number of officers and non-commissioned officers were made to conform to the number required in the United States Army and each was given the corresponding grade.

In brief the law now makes the state force conform so far as practicable with the organization of the regular army. It also requires all blanks and papers used to correspond so far as practicable with the similar kind used in the regular army. The new law abolished the position of Assistant Quartermaster General, thus saving the state \$1,400 annually. It increased the pay of the non-commissioned officers while in camp or in active service for a period of less than thirty days by allowing sergeants \$2.75 and \$2.50 per day and corporals \$2.25. Under the new law each captain of a company is paid \$50.00 annually and the allowance for armory rent of companies stationed in the small cities is increased from \$300.00 to \$400.00. By it the transportation of troops on Sunday, excepting in cases of necessity, is prohibited; the two funds known as the armory

General Report.

fund and the clothing fund are consolidated and made available for any legitimate expense that is approved by the governor; provision is made for a small traveling library for each regiment; provision is made for the payment of troops in camp in just the same manner as they are paid when serving the United States, and the reorganization of the governor's staff is provided for by limiting the number of aides-de-camp to five and makes previous military experience essential for appointment as aide.

The law was prepared, through necessity, hurriedly and is incomplete in some respects and needs rearranging. Still it has been found to cover satisfactorily, in the main, the conditions under which the Guard works.

INSPECTIONS.

In 1899 it was found impossible to secure the services of an army officer to make the annual inspections and as many companies had just been reorganized and were in no condition to make even a fair showing the competitive feature of the inspection was dropped and the work made more a matter of form and instruction than anything else. The bulk of the inspections were conducted in a satisfactory manner by General Albert Solliday, Colonel Worthie H. Patton and Colonel B. H. Dally.

In 1900 the state, through the active interest taken of Senator Spooner and the kindness of Adjutant General Corbin, who has always shown a deep interest in the Guard, fortunately secured the services of First Lieutenant F. M. Caldwell, 7th U. S. Cavalry, to conduct the armory inspections and to act as inspecting officer and instructor during the encampments of 1900. As soon as his detail was announced the old competitive system of inspection, established by General Charles King and which has always proved so beneficial, was returned to, and it is the opinion that its benefits will again be apparent during the next year. The relative standing of the various commands and the percentage of each is as follows:

General Report.

1.	Co. "E" 2nd Regiment	176.6
2.	Co. "L" 3rd Regiment	176.3
3.	Co. "H" 1st Regiment	176.1
	Co. "G" 1st Regiment	176.1
4.	Co. "F" 2nd Regiment	174.3

29.	Co. "D" 10th S. B.	157.7
30.	Co. "I" 1st Regiment	154.1
31.	Co. "I" 3rd Regiment	151.1
32.	Co. "B" 10th S. B.	150.9
33.	Co. "M" 1st Regiment	149.6
34.	Co. "A" 10th S. B.	114.6
	Battery "A" 1st Lt. Art.	176.3
	Troop "A" 1st Cavalry	162.4

Co. "L" 1st Regiment, just organized; not included in competitive inspection.

That the markings are lower this year than in previous years was to be expected as the percentage of new men in each company is now quite large. On the whole, therefore, the showing can be said to be satisfactory and a marked improvement on the average should be expected another year. The Guard has profited by Lieutenant Caldwell's work with it, as in the past it has by association with the various army officers assigned to it. It is to be hoped that in the future the detail of army officers will be continued by the War Department

General Report.

ENCAMPMENTS.

The annual encampments for 1899 and 1900 were held in August each year. The dates were later than usual and were made so as a matter of necessity. In the first place improvements in progress on the Military Reservation could not be finished before August 1st each year, and in the second place, necessary military supplies which had to be drawn from the United States could not be procured before that date.

With the encampment for 1899 a great many changes were inaugurated in the system used in the state prior to that year, the idea of all the changes being to put the Guard on the most practical basis possible and to have the conditions in camp fit the conditions in active service in the field so far as it could be done without working unnecessary hardships.

Under the old system the regimental quartermaster in state work was almost a nonentity. In camp he had not much to do except to relieve the colonel of some of the features of entertainment. Under the system inaugurated in 1899 and now in force, ten days before his regiment goes into camp he must prepare requisitions on the Quartermaster General for tentage, field ovens, straw for bedding, forage, wood, etc., and in fact all the quartermaster's supplies the state can furnish that his regiment will need. He is ordered to precede his regiment into camp by a day and draws the supplies for which he receives the regular service invoice and gives the regular receipts. Upon arrival of the troops in camp he issues on memorandum receipts; at the end of the camp he has the property turned in, checked over, and returned to the Quartermaster General's Department. During the week he is made acting ordnance officer and all the ammunition used is issued to him and in turn issued to the companies; the surplus taken up and all accounted for as in the service.

The same rule has been applied to the issue and care of medical supplies. In brief, officers now while in camp receive some practical instructions in "paper work" and if called to

General Report.

serve the United States again should not be so liable to become entangled in so many coils of "red tape."

In the matter of rations, too, noteworthy changes were made beginning with 1899. Prior to that, companies bought in their own way and at local market prices whatever they wanted to eat. Not much attempt at restriction was made. The officers and men, in consequence, knew nothing about the government ration, how to draw it, how to prepare it or how to divide it. They suffered in consequence when they came to participate in actual war.

Beginning with the encampments of 1899 the state has changed this. It issues the subsistence through a commissary department. The state adheres to the army ration, with the exception that butter and milk are added. These are the only deviations. It issues on ration returns the same as in the army. The result is ample food, better health, decreased cost of living to the men and more satisfactory results in every way. If Wisconsin's present force is required to take the field it will have some valuable practical knowledge along this line. During the encampments for 1900, another advance was made by doing away with all permanent kitchens and requiring the cooking to be done in the field, to-wit: on field ovens in the open air with one tent for the cooks and a tent fly to work under. In brief all the conditions of subsistence are as nearly like the conditions in active service as is practicable.

The work of the troops in camp during 1899 was more primary in nature as in the force were a number of companies the officers and men of which had never had experience of this kind. More time and attention was given to close order drills and the smaller details. Satisfactory progress was made so that in 1900 the force was ready for more advanced work. The program for camp, therefore, for 1900 was made to include extended order drill, advance and rear guard formations, outpost duty, patrol work and one day devoted to a practice march. One-half day only was allotted to battalion drill and that the

General Report.

first part of the week. The troops in the main did excellent work though the departure to new practical field work developed some weaknesses, most of them in a small way along the same lines the Guard failed in when confronted with like conditions in active service.

This line of practical work should be continued and extended from year to year. Practical problems involving attacks and defense of positions, convoys, reconnoissance, entrenchments, etc., gradually being more extended can be prepared, the solution of which will be of great benefit, especially if they are made progressive from season to season. Once in the field the mere minutia of drill is thrown to the winds and soon is remembered as only a means of establishing necessary discipline.

In the sanitary conditions of the camps care has been taken to give officers and men instructions through object lessons which will impress upon their minds the necessity, when called into service, to preserve their own health and that of their men and practical knowledge that will enable them to do it.

The encampments of 1899 and 1900 each had a larger attendance than during any previous years in the history of the Guard. The physical appearance of the men was better and the work, taken as a whole, was satisfactory and received the commendation of army officers and others competent to judge. The room for improvement in the future is just as large and every care should be taken to prevent slipping back into the old and loose methods.

ACTIVE SERVICE.

Twice since the last report this department was called upon to perform duties in the nature of active service. On September 29, 1898, a terrific wind in the nature of a hurricane and accompanied by a fierce forest fire swept through a portion of Barron County, starting near Turtle Lake and sweeping north and east for about twelve miles. Upon call for aid the Adjutant General and Colonel W. C. Ginty, A. D. C., made a trip by

General Report.

wagon over the devastated district, reporting upon the needs of the sufferers and arranging for committees to handle supplies. The work of collecting, forwarding and distributing the articles and funds donated by the generous people of the state was placed in the hands of Colonel W. J. Boyle, A. D. C., who handled the work in an admirable manner.

Again, on June 12, 1899, the flourishing city of New Richmond, St. Croix County, was struck by a cyclone and almost totally demolished. The loss of life was large. The assistance of the state was at once asked. Co. "C" 10th Separate Battalion Infantry (Chippewa Falls), Captain W. G. Hartwell commanding, was at once ordered there to protect property in and about the ruins, and the Adjutant General, Surgeon General and Colonel W. C. Ginty of the Staff were at once ordered there to report upon the needs of the sufferers. Prompt and permanent relief was at once furnished by the people of Minnesota as well as Wisconsin and everything that could be was done to relieve the suffering. In the subsequent collection of funds and materials for relief, together with the expenditure of the money, Colonel W. J. Boyle, A. D. C., again rendered distinguished service. Co. "C" 10 Separate Battalion Infantry was kept on duty at New Richmond from June 13 to July 2, 1899, inclusive.

SMALL ARMS PRACTICE.

It is the opinion of Colonel George Graham, who has so capably handled this most important branch of instruction, that improvement in average marksmanship in the Guard is on the increase. There are not at present in the Guard, nor have there been during the past two years, as many individual brilliant shots as in past years. One reason for this is the fact that the inducements for attaining high rank as expert shots have not been so great. Actual competition between regimental teams has been dropped, owing to legal difficulties in the way. For a number of years no interstate competitions have been held, and the opportunity of shooting for the different medals and trophies

General Report.

offered by generous friends of the Guard from time to time has been lacking. In lieu of these things every effort has been made to bring up the general average of each man.

For this purpose the use of the ammunition loaded by the state with the carbine bullet and thirty grains of powder has been continued with good effect. During the camp every man, excepting cooks and permanent details, has been required to shoot. Each has been given practice at 100 yards with this reduced ammunition and then tried at 200 yards with the service charge. The opportunity to shoot at 300, 500 and 600 yards has been made to depend on the score made at each previous range. Year by year the number of men who succeed in qualifying for the long ranges seems to be increasing and bids fair now to become so large as to make more fixed distance ranges at the Military Reservation necessary in order that a maximum amount of work may be accomplished in the minimum of time.

As the importance of good volley firing has developed, additional stress has been laid upon this and Colonel Graham, quick to see all the necessities of good riflemen, introduced the plan of having two of the rounds allowed each man at 200 yards fired by command. The effect of this preliminary practice was shown by a higher average of scores in the volley firing by company at 600, 800 and 1,000 yards.

To obtain the best results, however, more practice must be had at the home stations and some stimulus must be added to encourage the men to perfect themselves.

To bring this about the state should give more financial aid to companies in purchasing and maintaining local ranges. A compulsory course of gallery practice should be arranged and enforced. A specified amount of gallery ammunition should be issued by the state to each company and its expenditure under prescribed conditions required.

As an additional stimulus and as a practical preparation for war the state should obtain as early as possible enough Krag-Jorgenson rifles for a battalion and the practice and instruction

General Report.

on the ranges at the Military Reservation should be with these rifles, each battalion using them in turn. In this way the men would learn not only how to shoot the guns they would have to use in case of war but what is also important they would learn how to take care of them.

Legislative enactment should provide for a camp for rifle competition, both between regimental teams and between individual men. With this goes the necessity for strictly safeguarding the honesty of all scores. In the present scoring on the ranges during encampments it can not be said that all the scores recorded have been honestly earned.

WISCONSIN MILITARY RESERVATION.

During the past two years this almost ideal spot for military work has continued to improve. In this time, forty acres of land adjacent to the reservation has been added to it by the state, and one hundred and twenty acres of United States land has also been included in its boundaries or soon will be. The last tract was secured by the indefatigable work of the late General Michael Griffin, whose interest in the Guard never flagged, and one of whose last acts while in congress was to secure the passage of a bill whereby the state could attain title to this land. Despite this addition and the fact that the reservation now contains about eight hundred acres more room is needed. With the advent of the high power smokeless powder rifles, longer ranges will be required for the danger zone behind the target is greatly increased. Moreover the development of the Guard is rapidly bringing it up to more advanced field work which will require plenty of territory. Now is the time to obtain some land at a reasonable price. Year by year it is advancing in value and the longer the securing of additional land is delayed the more expensive will its ultimate acquirement become.

The question of drainage has been partially solved and in a fairly satisfactory manner; but the matter of sinks is one that

General Report.

requires immediate attention. The pollution of the soil in close proximity to the camp grounds can not continue indefinitely without serious menace to health and life. Even where there is no danger from this, the present condition is a decidedly unsanitary object lesson. The use of galvanized receptacles that can easily be emptied, without disagreeable effect, with the proper apparatus, and the contents taken to some remote portion of the reservation, and disinfected and deodorized, seems to be the best solution. Such a system has been operated in some of the army camps in Cuba with marked success.

A new ice house with larger capacity and with some simple form of cold storage accommodation is needed.

A house to be used as a residence by the custodian of the property should be built soon. The state has now invested in the Military Reservation some \$30,000, to say nothing of the military stores and supplies constantly on hand. It should be watched night and day. In the small village at the railroad station it is at times impossible, for those obliged to rent, to obtain house accommodations.

New headquarters buildings will soon be needed. These, when constructed, should be large enough for all future needs and be made permanent. A new location near the entrance of the reservation would leave more land clear for the troops in their daily routine to work over.

In the past two years important improvements have been made to the reservation. The old range house has been moved south of the Ordnance and Quartermaster's Depot and remodeled into a missionary depot. The Club House has been transformed into a range house. New baths for officers and enlisted men and a pumping station have been erected. These are built of brick with steel roofs and cement floors and are of larger capacity than before.

The well in which the steam pump is located has been walled up with stone. A new steel frame supports the water towers, one above the other and situated midway between the bath

General Report.

house and the pumping station. A system of sewers has been laid. The hospital has been moved to high and shady ground and practically rebuilt, and now only needs a permanent storage room for medical supplies and an operating room to make it complete for the work for which it is designed.

The old kitchens have been torn down and the hydrants at the foot of the company streets made to drain into hoppers attached to an eight inch sewer.

The stables have been moved to one side of the reservation away from the camp. The reservation has been surveyed and a map of it will soon be on file showing all the details. The grounds throughout have been kept in excellent condition.

The Quartermaster General and his very able assistant, Major C. R. Williams, have prosecuted this work energetically, capably and economically. The amount of work accomplished and the cost are above criticism. They are both favorable.

Troop "A" and Battery "A" have done commendable work during the past two years and the efforts of both organizations to maintain a high standard of efficiency are worthy of liberal support from the state.

MEDICAL DEPARTMENT.

In his annual report Surgeon General J. B. Edwards says: "The result of the reorganization of the Medical Department has been very satisfactory, all the medical officers following the plan laid down last year closely.

The improvements made on the Military Reservation, from a sanitary point of view, have been the most important in its history; the establishment of a complete system of drainage, the removal of the stables, and the additional bathing facilities, together with the destruction of the old kitchens, is a long stride toward perfection.

The health of the commands during the encampments of 1900 was excellent. No cases of sickness occurred that were at all

General Report.

serious. The rationing of the troops by the state is, in a large measure, responsible for the general good health enjoyed since the reorganization.

The following recommendations are offered:

Having removable catch basins, large enough to permit an ordinary pail being held under the faucets. They should be made of galvanized iron and would prevent the splashing that keeps the ground around the company hydrants wet.

The garbage barrels should be made of galvanized iron with a self-closing lid. The cooks should not be allowed to sleep in the kitchen tents, nor to keep clothing or towels therein.

The amount of medical and hospital supplies purchased this year has been larger than anticipated on account of the necessity of providing permanently for the troops stationed in Milwaukee; one complete medical field chest and three orderly pouches have been issued to Captain Ralph Chandler for the use of that post.

The loss of some supplies last winter has shown the necessity of providing lockers for them.

General Report.

The following is a statement of all expenditures of the Adjutant General's Department for the two fiscal years ending September 30, 1900:

	Oct. 1, 1898 to Sept. 30, 1899.	Oct. 1, 1899 to Sept. 30, 1900.
Rent of armories		
Allowance to company commanders	\$18,213 38	\$17,638 00
Clothing allowance paid to companies		2,000 00
Extra allowance, Troop and Battery	12,652 21	11,420 00

	\$91,093 15	\$88,512 32

General Report.

VOLUNTEER SERVICE DIVISION.

The work of transcribing the records of the 1st, 2d, 3rd and 4th Regiments of Infantry and Battery "A" 1st Lt. Artillery, Wis. Vols., war with Spain, is completed. The complete record of every officer and enlisted man in these organizations, as far as the rolls in this office show, is given on cards $3\frac{1}{2}$ by 6 inches. The front of the card bears the name with all variations, descriptions, residence, former service (Company and Regiment) in the Wisconsin National Guard and all other facts given in the muster-in roll and descriptive lists and cards. The reverse of the card gives the history of the soldier from the monthly returns, muster-out rolls and miscellaneous papers, and his final disposition as far as given in the rolls. The record on the cards is condensed as much as possible and unnecessary repetitions and verbiage avoided.

About four men, on an average, in each company were transferred to the Hospital Corps, U. S. A., 3rd Engineers, U. S. V. and Signal Corps. The final discharge of some of these men has been obtained from original discharge certificates sent to this office but most of these transferred men are left without any record of their discharge from the U. S. Service. Application was made, on the 3rd of March last, to the Adjutant General, U. S. A., for the record of the discharge of these men but it was found impossible at that time to comply with the request on account of the limited clerical force in the Record and Pension Office and other reasons given in letter from War Department marked "A," on file.

Detachment muster-out rolls of 103 enlisted men of the 1st Regiment, absent, sick at the muster-out of their respective companies, have been received at this office, 17 of the 2nd and none of the 3rd and 4th. Most of these men were mustered out subsequent to the date of the muster-out of their companies. On the 16th of March last, in reply to inquiries, this office was informed by the War Department that, under G. O. No. 124, dated Aug. 20, 1898, and G. O. No. 13, same source, dated

General Report.

Jan. 17, 1899, promulgating the Act of Congress approved Jan. 12, 1899, the discharge from the U. S. Volunteer Service in the case of all absentees (except in cases of desertion and special cases otherwise provided for, or such as were held in service by proper authority) is regarded as having taken effect on the date of the muster-out of the organization. It is assumed, therefore, that all men absent sick, at muster-out, in the absence of detachment muster-out rolls, were mustered out to take effect on the date of the muster-out of their respective companies, and a card to this effect is placed at the head of the 1st, 2nd and 3rd Regiments. This record is also made opposite the names of all absentees not otherwise mustered out.

The record cards are arranged alphabetically (first three letters), surname first, both officers and men, for convenience, not only for reference in the office but in the preparation of a printed roster and office index. The names of company officers are placed at the head of their respective companies.

Frequent calls for rosters of Wisconsin soldiers in the war with Spain are received at this office and it is hoped that such a roster will be authorized by the next legislature. It would also be a great convenience in the work of the office.

In compliance with a request, official copies of instructions and telegrams from the War Department ordering the muster-out of the U. S. Service of the four regiments of infantry and battery were received last May. These are quoted on cards at the head of the respective organizations.

This work has been done during the last two years by the Volunteer Service Clerk, Captain J. H. Whitney, in a little more than one-half the time of office hours, the remainder of the time being required in making certificates of service and in correspondence relating to his division.

During the two years about 1,200 letters and statements of service, requiring more or less research and examination of the records, have been written, and 640 certificates of service issued.

Official notices from the Record and Pension Office, Washing-

General Report.

ton, D. C., of the re-muster of 42 officers under the Act of Congress approved Feb. 24, 1897, have been received and entered on the office record.

PENSION DIVISION.

Since September 30, 1898, the Pension Division of this office has filed 803 new claims.

During the same time 876 cases have been settled. Four hundred and four (404) were allowed and four hundred and seventy-two (472) were rejected.

As no stenographer has been allowed the division since the reduction in the force of the office was made two years ago, it has been necessary to economize in the matter of correspondence, which has been done by a judicious use of circulars and postal cards, to the satisfaction of clients, so far as known. All communications have received a courteous reply.

Thirty-two hundred and eighty-eight letters have, however, been written, twenty-five hundred and seventy circulars and five hundred and sixty postal cards used.

Of claims filed, 499 were for increase, most of them under the Act of June, 1890. Of the increase claims 332 have been rejected and 167 allowed, while of widows' claims filed, to the number of 173, 134 were allowed and but 39 rejected. This comparison shows clearly that the practice of the Pension Bureau is still to reject, if possible, claims for increase under the new law.

It is expected that most of the widows' claims rejected, on the ground that claimants were in receipt of an annual income of \$96.00 or over, will soon be allowed under the interpretation of the Act of 1890, made by the amendment of March 9, 1900, raising the income allowed in such claims to \$250.00 per year.

Notwithstanding the increased number of claims settled during the last biennial period, the business of this division has been kept current and is in a more satisfactory and efficient condition than ever.

General Report.

RECOMMENDATIONS.

The issue of shoes to the enlisted men of the entire command.
The issue of Khaki or brown canvas uniforms to the entire command.

The issue of fatigue caps and rubber blankets of some description for the entire command.

The purchase of three ambulances and complete field medical outfit for the entire command.

The purchase of sufficient escort wagons for use of the entire command while in the field.

Ten days of encampment instead of seven.

The acquisition of at least enough Krag-Jorgenson rifles for the use of one complete battalion on the range.

A wider range of authority to the Commander-in-Chief for the use of state military transportation, for use in matters of instruction and inspection.

Authority to the Commander-in-Chief to order, when thought advisable, rifle camps and schools for instruction.

The issue of a limited amount of tentage to companies for use at their home stations.

IN CONCLUSION.

The state should in some manner assist in building armories at the home stations of the companies. A good armory is almost as surely productive of a good company as a good home is the foundation of a good family. At present the state does nothing in this direction. It pays a stated allowance for rent. In most of the smaller cities there is but one available place, even this entirely inadequate. Property owners in many cases, taking advantage of this fact, see that they get about all of the state allowance for rent. It follows that there are no funds available for the proper care of such places or for making them attractive or as useful as they should be. A few companies in the state, notably, "E" of the 2d at Fond du Lac. "M" of the 2d at Oconto, "A" of the 3d at Neillsville, "K" of the 3d at Tomah.

General Report.

"L" of the 3d at Sparta and some others, by reason of voluntary contributions or municipal aid, have built and own their own armories. As a rule such companies have the maximum strength composed of a good class of men and surpass in discipline and instruction. The great need today in Milwaukee is a proper armory. A study of the New York law on this subject, which embodies state and county aid, might be profitable.

The main problem that must be solved for the Guard in the future is the matter of obtaining and retaining good officers. Men are required who have not only mastered the drill regulations but who are to some extent natural leaders and men of executive ability. Men who can maintain control over their commands and do it with good judgment and the exercise of common sense. The enlisted men as a rule are all right. The attendance at the encampments shows they are willing to enlist and work. If properly led and controlled they will do their duty and do it well. If merely taught to drill and kept under control only on the drill field, they may become unruly, disgrace themselves and their organizations, commit indiscretions that will endanger their own health and that of their comrades, and if called into the field for service the members of a fine drilled company may be without discipline and the proper knowledge of even the common matters of life in the field. Means should be used to get well qualified men for officers, beginning with the lowest grade, that of second lieutenant. The examinations and general qualifications for obtaining a commission should gradually be made more rigid. It should be made by the state more of an object for good men to accept commissions and more of an object for good men in the service to remain there. The policy of using the entire Guard first when the call for troops for the war with Spain came was in line with this idea. Many men in all parts of the state were anxious to obtain volunteer commissions but those in the Guard were invariably recommended first, not only because they were thought the most fit but also to establish the precedent that honors in time of war

General Report.

should first be given to those who had spent their time long and faithfully in preparing the Guard and themselves for just such an emergency. It should also be the policy of the state to endeavor to keep the old and valuable officers of the Guard, as they drop out from time to time, in touch with the organization that it may have the benefit of their experience and advice from time to time. All the leading colleges seek to do this and in modern athletics the assistance of good men who have passed out of the active work is an important factor. Wisconsin has a retired list but it carries with it no particular rights or privileges except that of wearing the uniform. Free transportation to and from the annual encampments and the annual convention of the officers would be of some assistance, and the authority for an occasional detail for a short time with the pay of the rank retired, for work of instruction, etc., would be another aid. In the matter of obtaining and retaining good officers an increase in the yearly allowance to company commanders may well be considered, also the advisability of an allowance for regimental adjutants, to battalion commanders as a fund to pay the expense of time of instruction and inspection, and an increase in the amount allowed each year for the expense of maintaining regimental headquarters. These need not be large. The idea should be not so much to pay each one for his services, as to save him whole from expenses from his own pocket. There is a line which it will not do to approach too closely. In Guard work money will not buy the unselfish effort that honest, patriotic enthusiasm in the work will give. To stimulate this interest, not to buy it, should be the aim.

The system of physical examination for all enlisted men, which was inaugurated after the reorganization of the Guard in 1899, after a brief trial appears to be successful and should be continued. The average physique of the men in camp this year was better than ever in the history of the Guard and the matter of the fine physical appearance of the men was a subject of common remark. It will be an easy matter, however, to slip

General Report.

back. With the exception of a few commands the examinations are entirely in the hands of the company commanders, who are more or less inexperienced. There is with them a constant temptation to accept a man because he is a good fellow or because certain members of the company want him even though he may have some serious physical disability. These examinations should be placed in the hands of regular physicians. Where a member of the medical department cannot be obtained to make the examinations a resident physician should be called in. The state should pay both a moderate sum per man for this work. The result will be worth the expenditure. Money expended in training cripples and weaklings for military service is worse than wasted for if such ever succeed in getting into active service they will only help to crowd the hospitals or swell the pension roll. A company composed of good, strong, sound, healthy men will draw men in good physical condition to it. Men of health and strength take a pride in being associated with others of that kind. A company composed of weak looking men will not attract good men to its ranks. With the rank and file composed of good men, material for good non-commissioned officers will be available. A good set of non-commissioned officers is a very important adjunct to a good company. The increase of pay granted by the legislature of 1899, has supplied some incentive. The system of examinations inaugurated by this department, if followed up, by elaboration and rigid enforcement, ought to be productive of good results.

In concluding this report I cannot express in too strong terms my sincere and deep appreciation of your kindly advice and encouragement and my indebtedness to yourself and the officers in the various departments comprising the Wisconsin National Guard.

Very respectfully,

C. R. BOARDMAN,

Adjutant General.

BIENNIAL REPORT

OF THE

Quartermaster General

OF THE

STATE OF WISCONSIN,

FOR THE

Two Years Ending September 30, 1900.

MADISON:
DEMOCRAT PRINTING COMPANY, STATE PRINTER,
1901.

BIENNIAL REPORT

OF THE

QUARTERMASTER GENERAL.

STATE OF WISCONSIN,
Quartermaster General's Office,
MADISON, September 30, 1900.

To His Excellency, EDWARD SCOFIELD,
Governor and Commander-in-Chief.

SIR:—I have the honor to submit the biennial report of the Quartermaster and Ordnance Departments, for the two years ending September 30th, 1900.

The financial statement showing the expenditures of the departments during the years 1899 and 1900, and tables showing quartermaster's supplies and ordnance and ordnance stores received, issued, and remaining on hand, and property in possession of the Wisconsin National Guard and various G. A. R. Posts and schools of the state, are hereunto appended and marked as follows:

Financial statement, Exhibit "A."

Schedule showing clothing and camp equipage received, issued, and remaining on hand, September 30th, 1900, Exhibit "B."

Schedule showing quartermaster's supplies on hand, September 30th, 1900, Exhibit "C."

Schedule showing clothing and equipage in possession of the

General Report.

Wisconsin National Guard, September 30th, 1900, Exhibit "D."

Schedule showing ordnance and ordnance stores received, issued, and remaining on hand, September 30th, 1900, Exhibit "E."

Schedule showing ordnance and ordnance stores in possession of Wisconsin National Guard, September 30th, 1900, Exhibit "F."

Schedule showing ordnance and ordnance stores in possession of G. A. R. Posts, Department of Wisconsin, September 30th, 1900, Exhibit "G."

Schedule showing ordnance and ordnance stores in possession of schools, September 30th, 1900, Exhibit "H."

Upon assuming the duties of Quartermaster General and Chief of Ordnance, my first efforts were directed along the line of organizing the supply departments of the Wisconsin National Guard as nearly in conformity with similar departments of the Regular Army as the exigencies of the state service would permit. The first step in this direction was the proper separation and classification of the Ordnance and Quartermaster's Departments. Prior to 1899, these Departments had been practically one, and all business pertaining to clothing, equipage, and ordnance and ordnance stores was transacted under the name of the Quartermaster's Department. This system was detrimental to the proper instruction of officers of the Guard, especially so when called upon to enter the United States service. Very few, if any, of our officers were familiar with the proper classification of property as defined by the Quartermaster and Ordnance Departments, and it is a matter of record, there was hardly one instance where an officer understood the proper handling of papers pertaining to these Departments. To this cause may be attributed, to a large extent, considerable confusion in the proper clothing and equipping of our volun-

General Report.

teer organizations during the first month of their service in the United States army.

A complete set of blanks for each Department, similar to those in use by the United States Army, was prepared and printed and are now used by the Guard. All requisitions were required to be forwarded to the commanding officers of regiments for approval, before being honored.

In the reorganization of the Guard, it was suggested that the position of Assistant Quartermaster General, stationed at Madison, be abolished, and the duties of that officer be combined with those of the officer in charge of the Ordnance and Quartermaster's Depot at Camp Douglas. This was carried out by the Legislature during 1899, and all the books and records, heretofore kept in the office at Madison, were transferred to the quartermaster at Camp Douglas.

The quartermaster at Camp Douglas was placed in charge of all quartermaster's supplies and held to strict accountability for all property received and issued by him, in the same manner as required of officers in the United States service. This officer, having been detailed in connection with his other duties, as Acting Ordnance Officer, was placed in similar charge of all ordnance and ordnance stores. Complete reports showing all property received by purchase, received from the United States, officers of the Wisconsin National Guard, and other sources; property issued, expended, and condemned, for both quartermaster's supplies and ordnance and ordnance stores, are now rendered semi-annually by this officer and are audited and filed in the Adjutant General's office.

CLOTHING, ARMS AND EQUIPMENTS.

To place both the Departments in position to meet the demands upon them in the way of clothing, arms and equipment, upon the reorganization of the Wisconsin National Guard, it

General Report.

was found necessary to contract for clothing, blouses and trousers to replace those issued to volunteers and to secure the return of all arms and equipments carried by the various organizations in the United States service. The first step in this direction was the letting of contracts early in April, 1899, to E. A. Armstrong & Company, of Chicago, for 2,300 blouses at \$3.38 each, and to David Adler Sons & Company, of Milwaukee, for 2,300 pairs of trousers at \$2.70 each. Contract for chevrons and stripes was let to H. H. Lippert, of Milwaukee. The specifications for this clothing required that same should comply strictly with the United States Army standard regulations as to materials, style, and sizes. During previous years, all clothing issued by the State was made to the individual measurement of the members of the companies at the time of issue. This method of issue was not satisfactory, therefore, the system of sizes established for the issue of clothing to the United States Army was adopted, with very good results. The clothing under the several contracts was received at the Quartermaster's Depot, at Camp Douglas, during June and July, 1899. Requisition was made on the Quartermaster's Department, U. S. A., for 2,700, each, of campaign hats, leggins, and flannel shirts, chargeable to the quota due the State for arming and equipping the Militia.

The claim of the State against the United States, account of ordnance and ordnance stores issued to Wisconsin Volunteers and carried by them in the war with Spain, having been adjusted early in 1899, a requisition for a like number, to replace those issued, was made on the Ordnance Department, U. S. A., and on May 22, 1899, the following property so replaced was received at the Ordnance Depot, Camp Douglas:

2,763 Springfield rifles, cal. .45.

12 Colt's revolvers, cal. .38.

2,527 blanket bags.

2,527 pairs blanket bag shoulder straps.

General Report.

- 2,732 pairs blanket bag coat straps.
- 12 pistol holsters, cal. .38.
- 2,763 bayonet scabbards, cal. .45.
- 2,454 canteens.
- 2,453 canteen straps.
- 2,736 cartridge belts, Infantry.
- 2,736 cartridge belt plates.
- 2,646 gun slings.
- 2,515 haversacks.
- 2,515 haversack straps.
- 255 waist belts.
- 255 waist belt plates.
- 2,846 meat cans.
- 2,849 tin cups.
- 366 knives.
- 366 forks.
- 366 spoons.
- 157,080 rifle ball cartridges, cal. .45.
- 6,000 revolver ball cartridges, cal. .38.
- 139 arms chests.

This property returned by the United States was somewhat varied in condition. The rifles, although apparently thoroughly overhauled by the Ordnance Department, U. S. A., were in miserable condition so far as their use for rifle practice was concerned. Of the equipments, the blanket bags and haversacks had been in use during the late war and had been scoured and flaps reversed. Meat cans and tin cups had been in use and retinned, and were practically as good as new. Cartridge belts were re-dyed, and plates re-plated. Canteens, bayonet scabbards, waist belts and plates, knives, forks, and spoons were all new. All straps and gun slings had been used but were repaired, thoroughly oiled and cleaned, and were in good, serviceable condition.

General Report.

The reorganization of the Guard having been completed, as announced by General Order No. 4, Adjutant General's Office, dated June 15, 1899, the work of uniforming and equipping the Guard was taken in hand. Instructions were sent to all company commanders as to the proper method of making requisitions on the several Departments for all clothing and equipments necessary for their respective commands. The issue of blouses, trousers, campaign hats, leggins, and shirts was limited to 65 to each company, and arms and equipments to 60. The blanket bags, haversacks, and canteens for each company were marked, in accordance with United States Army regulations, at the Ordnance Department before issue, which necessitated considerable labor. In spite of the enormous amount of work which devolved upon the Departments by reason of the reorganization of the Guard and improvements being made on the Military Reservation, all companies were thoroughly uniformed and equipped in ample time to permit the encampment during August.

The clothing transferred to me by my predecessor in office included 1,136 blankets and 1,406 overcoats which had been issued to and carried by the 1st and 2d Wisconsin Volunteer Regiments during the war with Spain, and returned to the Quartermaster's Department at Camp Douglas, after muster out. An examination of this property showed same in poor shape, both blankets and overcoats being very dirty and nearly all the buttons on the overcoats had been cut off. As cost of this property was included in the claim of the State against the United States, for issues to volunteers, and same not having been passed upon by the Auditor for the War Department, and it having been intimated that all clothing issued would undoubtedly be replaced in kind, it was not considered advisable to make purchases in this line until the matter was fully settled. To meet the requirements of the coming camp of 1899, a contract was let to Otto

General Report.

Pietsch & Company, of Milwaukee, for cleaning and pressing overcoats for \$603.45, and blankets to the Pantorium Company, of Milwaukee, for \$181.20. All buttons were replaced on the overcoats at the Quartermaster's Department. The total cost of cleaning and repairing overcoats and blankets was \$1,074.23, which amount was charged to the clothing appropriation for the two years ending September 30th, 1900. Overcoats and blankets used during the camp of 1899 were issued to the company commanders upon memorandum receipts, and returned to the Department at the end of the tour of duty. During the present year, 1,400 blankets were drawn from the General Government and charged to the State's quota for arming and equipping the Militia, and in May, a contract was let to James H. Hirsch & Company, of Chicago, for 1,000 United States Army regulation overcoats, at \$9.35. These blankets and overcoats, together with those on hand, were issued to the troops during the past encampment.

MILITARY RESERVATION.

The location of the Ordnance and Quartermaster's Depot on the Military Reservation at Camp Douglas has tended to add greatly to its importance, and this place is now, practically, the headquarters of the Ordnance and Quartermaster's Departments of the State. During the past two years many important changes have been made both in buildings and grounds. In 1899, a new bath house for enlisted men, to replace the one destroyed by fire in 1898, was constructed about 300 feet west of the old site. The structure, 24x75, was built of brick with stone foundation, steel roof and cement floor. It is provided with 32 shower bath stalls with dressing rooms in connection. Each bath is arranged for hot and cold water, hot water being supplied by an overhead galvanized tank of about 30 barrels capacity, and heated by means of steam carried from the boiler at the pump station. The baths of this building have a capacity of

General Report.

about 1,000 men for each 12 hours. The water from the baths was carried by means of a 6 inch sewer pipe connected with the gutter of the baths, to a dry brick well sunk on the side of a hill about 50 feet west of the building. This well is 12 feet in diameter, 16 feet deep, and arched over at the top and provided with a manhole. The cost of the building and baths, including painting, sewer, and catch basin, was \$1,773.06.

During the period in which the Military Reservation was occupied by the 4th Wisconsin Volunteer Infantry in 1898, the hospital adjacent to the infantry camp was untenable owing to leaky roof and poor location. Upon recommendation of officers of the Medical Department, this building was removed to a small high grove about 75 feet south and 500 feet east of the main entrance. A new roof was put on, and the composition panels in the halls, wards, and dispensary were replaced with wood, 5-8 2 inch ceiling being used. A kitchen and latrine were constructed for use of the hospital. The total cost of this improvement was \$308.79.

The hospital was further improved during the present year by the construction of a porch on the west side, affording better protection in the wards from the afternoon sun. The cost of the improvement was \$100.

The range house, a little west of the 600 yard firing point of range 3, was moved to a site upon the side track about 300 feet south of the Ordnance and Quartermaster's Depot, and was fitted up and used as a commissary depot during the past two encampments. The cost of this work was \$237.62.

A new horizontal boiler of 20 horse power was purchased to replace the one destroyed by fire in 1898, and a temporary frame pump station was erected on the old site, in time for use during the encampment of 1899. The cost of the boiler, foundation, and setting up was \$401.04, and that of the temporary building \$93.48.

General Report.

The building known as the officers' club was altered for use as a range house at a very small cost.

The stone walls in the pits of ranges 3 and 5 were found damaged and the joints in both were filled and re-pointed. A new stone wall was constructed at the north end of pit 3, to prevent the washing in of sand from the side hills during heavy rains. The total cost of this work in the pits was \$101.28.

During the present year a new pump station, with officers' bath in connection, was erected on the site of the temporary structure built last year. This building is, in general similar to the men's bath and is 24x53½. The east end is fitted up for an officers' bath with eight showers, hot water being supplied by means of an overhead tank, and heated by steam from the boiler. The bath room is separated from the boiler by a solid brick wall.

The 16-foot wood curbing in the pump well, constructed in 1894, was, upon inspection, found to be unsafe, and was replaced with stone and arched overhead with brick. The pump and well are connected with the new building by a stone passageway, 30 feet in length and 16 feet deep, and arched overhead with brick. Steps leading to the passageway were constructed in the rear of the boiler, thus affording easy access to the pump from the boiler room. The total cost of these improvements was \$1,425.50.

Serious complaint has been made in past years of the proximity of the stables to the several camps and headquarter buildings. To overcome this, it was found necessary to move the stables to a site about 1,000 feet west of the Ordnance and Quartermaster's Depot, and near the public highway. The cost of this change, including the filling in of stalls and the foundation, was \$212.

Early in the year a contract was let to Otto Beifield & Company, of Watertown, for the construction and erection of a steel frame water tower, upon plans prepared by this Department.

General Report.

This tower was erected at a point midway between the pump station and the men's bath, and is 30 feet in height. The structure rests upon 4 concrete piers, 6 feet in depth, 4 feet square at the bottom and 2 at the top. The two steel tanks used in the old water tower and somewhat damaged by the fire of 1898, were repaired, painted, and placed, one over the other, upon the tower. The total height of the tower from the ground line to the top of the upper tank is 45 feet. The connection of the tanks with the main was made in such a manner as to permit the water in one to be held in reserve. The total cost of the tower, including the repair of tanks, painting, and connections, was \$528.48.

The company cook kitchens were torn down and the water hydrants at the foot of company streets were carried further west to the edge of the road, thus giving more room to the camp proper.

It having been decided to order the 10th Separate Battalion into camp with one of the infantry regiments, it was necessary to select and fit up a camp ground for their accommodation. The ground occupied by the Regular Troops in 1895 was decided the best suited for this purpose, and is of sufficient size for the accommodation of an entire regiment. The water mains were extended so as to provide water for the cooks in the rear of the camp, and sinks were constructed. The pipe used for this main is of sufficient size so that in the possibility of this camp being used for a regiment, the pipes can be easily extended and an ample supply of water obtained. The total cost of the extension, repairs, and improvements to the water system during the past two years, including the cost of the connection of the water tower and the men's and officers' baths, was \$371.99.

Camp latrines were moved over new vaults and urinals were constructed in their rear.

For a number of years the question of sewerage for the proper

General Report.

handling of the refuse water at company kitchens as well as the water from the baths, has received the careful consideration of officers of this Department. During the present year, a sewer was laid from the officers' bath, connecting with the catch basin of the men's bath building, running north to a point near the Guard house, then in rear of the infantry camp and emptying into a cess pool about 1,000 feet west. The hydrants at the foot of the company streets, and all refuse water, were drained into the sewer by means of hoppers. The sewer from the officers' bath to the turn near the Guard House is of 6 inch pipe, and from this point to the cess pool of 8 inch. Manholes were placed about every hundred feet in the line to permit of inspection for location of breaks and clogging. The pipes were laid to a depth varying from $1\frac{1}{2}$ feet to 7 feet, according to the nature of the ground, and with a sufficient fall to insure their draining to prevent freezing in winter. The total length of the sewer line is about 2,375 feet and the cost, including hoppers and all connections, also the cost of excavating the cess pool, was \$435.12.

The telephone system on the Reservation has been completely overhauled during the past two years, the switch board in connection with the central station being renovated and the movable telephones, for use on the ranges, reconstructed. The system has been extended to give telephone connection with the 800 and 1,000 yard volley firing points, the artillery range firing points, stables, commissary building, pump station, and the new camp ground. The lines were extended to the village of Camp Douglas, giving direct communication with the telephones at that place. The total cost of this improvement, together with the cost of three new Standard telephones, purchased, was \$194.89.

The old sign over the main entrance to the grounds was removed, substantial stone gate piers, 8 feet in height, were constructed, and new swinging gates provided. This has greatly improved the appearance at the entrance of the Reservation.

General Report.

Considerable attention has been given to the grounds and trees; the old roads, cuts, and washouts on the camp grounds and lands adjacent thereto have been filled in and seeded; trees have been carefully trimmed and the leaves in all the groves in the central part of the Reservation have been raked up and removed.

The boundary lines of the Reservation have been surveyed, and corners definitely located. These should be marked by substantial stone piers.

Forty acres of State land north of the Reservation were added during this period, and 120 acres of United States land, lying along the east line, are about to be transferred to the State. The question of acquiring additional land by purchase has been under consideration, and to that end, surveys have been made with the view of securing sufficient adjacent land to give the State control of the bluffs at the east of the Reservation, and to permit of easy access to State land in their rear. The question of acquiring land selected has been placed in the hands of the Attorney General.

The extensive improvements made on the Reservation during this period have been under the direct supervision of officers of the Quartermaster's Department. In the construction of buildings, plans have been prepared, materials purchased, and labor employed without additional expense to the State. Where it was found that a saving could be made, contracts were let for parts of the work in construction, as in the case of steel roofs on the pump station and men's bath house, and the plumbing in both buildings.

The following recommendations are suggested for the further improvement of this place:

Permanent roads should be constructed and macadamized.

Sidewalks connecting the principal buildings and the camps should be laid to the entrances of the Reservation.

General Report.

The fence enclosing the greater portion of the Reservation, constructed in 1892, is in poor shape, more than two-thirds of the posts being rotten. It will be necessary to construct a new one in the near future. Cedar posts, with the end in the ground dipped in tar, and plain twisted wire, should be used.

Efforts should be made to change the public highway running diagonally through two forties at the northeast corner of the Reservation, so that the road will follow the forty lines. This portion of the grounds should be fenced in and cleared up.

A new system of camp latrines has been strongly recommended by the Medical Department and is heartily endorsed.

A brick stable, of sufficient size for the accommodation of the State horses, should be constructed at a point a little south and east of the present stables.

A new ice house, with a greater capacity than the present one, is required and should be built on the railroad near the Commissary building.

A residence for the quartermaster in charge of the Reservation and the Ordnance and Quartermaster's Depot, has long been considered a necessity, and the construction of such a building is strongly recommended.

All frame buildings should be repainted.

The small frame buildings erected in 1890 and 1891 and used for headquarters and quarters for General Staff during the encampments, are rapidly becoming untenable and should be replaced, in the near future, with a substantial brick building.

ENCAMPMENTS.

The duties and responsibilities devolving upon the Quartermaster's Department, by reason of the annual encampments of the Wisconsin National Guard, are somewhat arduous. The buildings and grounds at the Military Reservation are required to be in readiness for occupation by the troops, arrangements

General Report.

made for the transportation of men, baggage and horses of officers, the equipment and horses of Troop "A" and Light Battery "A", both to and from camp. The removal of all camp refuse, care of latrines, bath houses, and all general work incidental to camp, is performed under the supervision of an officer of this Department by civilian employees. The civilian labor for turning and marking targets during annual encampments, is employed and organized, and placed in charge of a sergeant of this Department.

All tentage and camp equipage is issued after the arrival of the troops in camp, and received and checked over after their departure. Fuel, forage, and straw for bedding of enlisted men and animals, purchased and issued, and in general, all work necessary for the health and comfort of the men during their tour of duty, falls upon the Department.

The annual encampments of the Guard for 1899 and 1900 were not held until August of each year, which was somewhat later than heretofore. This was necessitated by reason of the vast amount of improvements being made on the Reservation which could not be completed until the latter part of July.

During 1900, the duration of camp was shortened one week by reason of the 10th Separate Battalion, Light Battery "A," and Troop "A," performing the tour of duty with the regiments. A slight saving in civilian labor was permitted by this change.

Nearly all the tentage belonging to the State was issued to volunteers, and, it having been decided to adopt the conical wall tent for enlisted men, with the common wall for use of the first and quartermaster sergeants, 50 conical and 24 common tents were drawn, in July, 1899, from the Quartermaster's Department, U. S. A. Complaint having been made that the allowance of tentage for enlisted men during 1899 was insufficient, additional tentage was drawn during the present year. Nine hundred shelter tent halves with poles and pins, for use

General Report.

of troops in practice marches during the past encampment, were received from the Quartermaster's Department, U. S. A., in time for the first regiment in camp. Suitable tent floors for the new tents received were constructed by this Department. The mess tents in use by the State since 1886 having been condemned, 50 hospital tent flies with poles and pins were drawn and used during the past encampment for shelter of the men's mess tables.

Under the system inaugurated by the Adjutant General in 1899, the camps, heretofore constructed by this Department, were erected by the men after their arrival, the floors and mess tables having been previously placed by employes of the Department.

Regimental quartermasters were required to make requisition, draw, and receipt for all tentage, equipage, fuel, forage, and straw for bedding, and in fact, all property necessary for their regiments. At the end of their respective tours of duty, they were obliged to turn over to the Quartermaster's Department, all tentage and camp equipage and to account for all shortages. In addition to his other duties, the regimental quartermaster was detailed as acting ordnance officer of his regiment, and to him all issues of ammunition, targets, and target supplies necessary for rifle practice during the encampment, were made by the Ordnance Department, and he was required to account for same.

The old system of cook stoves and cook kitchens used for years in the State was abolished, and field ovens issued for use of the companies. Suitable tents for the proper care of rations, and flies for the shelter of field ovens and cooks were provided.

The mountain of baggage heretofore brought into camp by the different organizations has been reduced to the minimum, and the baggage of any two companies can now be easily transported in one small wagon.

During the past encampment all troops in camp were required

General Report.

to make practice marches and bivouac over night. The camp grounds for this purpose and the necessary transportation were selected and provided by this Department.

The matter of transportation of troops to and from the annual encampments has always been more or less unsatisfactory. Every effort has been made by officers of this Department to secure better handling of troop trains by the various railroads, and a slight improvement has been noticeable during the past two years. The most serious complaint during this period has been made in the handling of the Second Regiment to and from camp by the Chicago & North Western Railway.

In addition to his other duties, the Quartermaster General and Chief of Ordnance is, under the law, required to act as Commissary General. One of the most beneficial changes made during the past two years in the encampments of the Guard, was the abolishing of the old method of subsisting the men and the establishing of a Commissary Department. Rations similar to those furnished enlisted men in the Regular Army, with the addition of butter and milk, were issued to company commanders upon proper ration returns. Good, wholesome food was provided in all cases, and the cost of subsistence to the individual man, deducted from his pay, has been greatly reduced, being less than 28 cents per diem, while the cost heretofore has ranged from 75 cents to \$1.00. Officers of the Medical Department attribute the wonderful showing made in the general health of the men, during the past two encampments, largely to this improvement in rationing of troops.

ORDNANCE AND QUARTERMASTER'S DEPOT.

All quartermaster's supplies and ordnance and ordnance stores used by the State are received and issued at this place. The vast amount of property received during the year 1899 for re-clothing and equipping of the Guard, severely taxed the capacity of this

General Report.

building, but under ordinary circumstances, it is of sufficient size for the proper care and handling of all State property. During the past two years, 541 issues of property were made by the Quartermaster's Department, and 630 by the Ordnance Department. All unserviceable property, both quartermaster's supplies and ordnance and ordnance stores, in possession of company commanders, was returned to the Departments and taken up and accounted for until properly disposed of by the action of an inspector. All arms and equipments requiring overhauling were returned to the Ordnance Department for repairs.

During this period, 75,000 reduced, or riot ammunition, have been reloaded by the Ordnance Department, carbine bullets, 405 grains, and 35 grains of Government small arms powder being used for this ammunition.

Revolving targets and frames used for rifle practice during the annual encampments are manufactured here, and arrangements are now being made for the manufacture of a sufficient number to permit the issuance to company commanders for use on home ranges.

During the past year, shelves for clothing, and platforms and racks for tentage were constructed in the store room.

The stoves used for heating offices and work rooms of the Depot are wholly inadequate, and steps should be taken in the near future to provide a furnace of sufficient size to properly heat the entire building. If this improvement is made, it will be necessary to excavate under the central part of the building and seal over the quartermaster and ordnance store rooms. The necessity for heating these rooms has become very apparent during the past winter. The building is of solid brick, and during the extremely cold weather more or less dampness is drawn, which requires the frequent handling of all rifles and equipments to prevent their deterioration. During the winter months, it is simply impossible for the employes to work in these rooms without greatly impairing their health.

General Report.

A magazine of sufficient size should be constructed on the Reservation for the storage of all small arms powder. The keeping of powder in this Depot and the buildings adjacent to it is considered extremely dangerous and would prove very disastrous in the event of fire.

UNITED STATES PROPERTY.

The balance due the State, January 1, 1899, account of the appropriation made by the General Government for arming and equipping the Militia, was \$7,881.92. The appropriation of \$400,000.00 for this purpose having been increased to \$1,000,000.00 by the last Congress, the amount now allotted this State is \$25,907.47. During 1899, supplies valued at \$12,140.93 were received from the Quartermaster's Department, and stores to the value of \$4,051.01 were received from the Ordnance Department. During the present year, the value of property drawn from the Quartermaster and Ordnance Departments was \$8,341.68 and \$6,149.50 respectively. The kind and amount of property received from these Departments is shown in Exhibits "B" and "E" hereunto appended. The balance to the credit of the State, September 30th, 1900, is \$15,456.80.

In the event of Congress authorizing the exchange of Springfield, with the equipments pertaining to them, now in use by the Guard, for a like number of Magazine rifles, with equipments, the appropriation now made by the general government is, if judiciously expended, considered sufficient for procuring the ordinary amount of clothing, equipage, and ordnance stores necessary for use of the Guard.

PROPERTY ACCOUNTABILITY.

The system of property accountability of all officers is the same as required in the United States army. Separate returns

General Report.

accounting for all property received, purchased, etc., are rendered semi-annually to the Quartermaster's and Ordnance Departments. These returns are audited in the office of the Quartermaster General and Chief of Ordnance, where they are filed after settlement. This work has received the careful attention of the officer having it in charge, and the regulations regarding the proper accountability of public property have been rigidly enforced.

Under the present system of financial reports rendered by company commanders to the Adjutant General, it is impossible for these Departments to properly check the purchases made and which should be taken up and accounted for on the Returns. To overcome this, it is suggested that the vouchers pertaining to purchases be forwarded to the Quartermaster General and Chief of Ordnance for endorsement, before the money accounts of the several officers are audited. This will give the Departments an accurate record of all purchases and permit the proper checking of returns.

Charges amounting to \$773.77 have been made, on the books of both offices, to cover the cost of property lost or improperly accounted for. Of this amount, \$446.82 has been collected and covered into the State Treasury. The balance has been reported to the Adjutant General for stoppage from the allowances of the officers against whom the charges appear. As the money turned into the State Treasury, account of property lost, has been credited to the general fund, it is not available for the purchase of supplies to replace those lost. The greater portion of the property in possession of the Guard belongs to the United States, for which the Governor is accountable, and where losses of this property have occurred and been paid for by the officers responsible, it was the intention of the Department to replace same by making purchases in the open market. By crediting the money so collected to the general fund, necessary money for this purpose is not available.

General Report.

It is suggested that legislative enactment be secured for the establishment of a lost property fund, to which all amounts collected for property lost shall be credited, and be available at all times for the replacing of same.

All unserviceable property on hand and received during the past two years has been condemned and disposed of as recommended by Inspectors. Property having any market value has been sold and the proceeds of sales deposited in the State Treasury.

WAR CLAIM.

The adjustment and settlement of the claim of the State against the United States, account of expenses incurred in raising and equipping volunteers for the war with Spain, was placed in the hands of a special agent, and his statement showing the present status of same is shown in the Adjutant General's report. All information and papers required from the Departments by the claim agent, in the prosecution of the claim of the State, were furnished as rapidly as circumstances would permit.

INSURANCE.

The property in possession of the various companies, troop, battery, and bands, as well as the buildings on the Military Reservation and the supplies in the Ordnance and Quartermaster's Depot, are covered by insurance. In 1899, a blanket policy was secured covering all the property in the possession of the Guard, and under this policy, the liability for loss in the event of total destruction is limited to \$1,300.00 for each infantry and \$2,250.00 for each troop and battery. The cost of the premiums for insurance on Company property is deducted from their annual allowance. In 1889, the armory and all the property of Company "M," 2nd Infantry, stationed

General Report.

at Oconto, Wisconsin, was totally destroyed by fire. The loss of State property was adjusted at \$2,042.77, which amount has been received from the insurance company and credited to the general fund.

FINANCIAL

The expenditures of this Department during the two fiscal years ending September 30th, 1900, were \$67,024.58. From this amount should properly be deducted \$4,715.58, refunded, and \$5,474.74, account of war with Spain, which will leave the amount properly chargeable for the maintenance of the National Guard, \$56,834.26. Of the expenditure of \$25,078.19, account of clothing, there should be credited \$1,074.23 expended in repairing and cleaning overcoats and blankets returned by the 1st and 2nd Volunteer Regiments, which amount is properly chargeable against the United States. There should also be credited \$9,350.00 expended during the present year in the purchase of overcoats to replace those issued to the 3rd Wisconsin Volunteer Infantry. This amount has been received from the general government for the clothing issued the 3rd Regiment, and credited to the general fund, therefore not available for replacing the property issued. Of the expenditure of \$6,376.98 on the Military Reservation, \$950.00 should be properly credited account of insurance received from the pump station destroyed in 1898, and which was credited to the general fund. This building was replaced during the present year.

The cash receipts during this period are shown in the attached financial reports.

RECOMMENDATIONS.

The following recommendations are respectfully suggested:

The maximum authorized, enlisted strength of each company, troop, and battery should be the established limit of issue for each organization.

General Report.

The old system of making complete issues of uniforms to the Guard once in three or four years should be discontinued and company commanders be authorized to draw, each year, such clothing as may be necessary for his command. The amount allowed for each company during the year could be limited to about 20 blouses, 25 pairs trousers, and a proportionate number of campaign hats, leggins, and flannel shirts. By the adoption of this method, the clothing of the troops would always be in presentable condition.

The procuring of forage caps, for issue to the troops, has been under consideration by this Department, and as soon as the question of the new style recommended for adoption for the United States Army has been determined, caps should be secured and issued to the Guard.

A sufficient amount of tentage for the entire Guard should be secured as soon as possible. Shelter tents should be drawn and issued to the companies, together with one common tent and two wall tents for use of the first sergeant and company officers.

The issue of field uniforms and rubber blankets to all troops.

The purchase of a sufficient number of blankets and overcoats to complete the issue to all companies.

A complete mess outfit, including field oven, should be issued to each company.

All ammunition, revolving targets, target frames and target supplies required by each company for use on its home range, should be supplied by the Ordnance Department.

The issue of at least 15 Krag-Jorgenson rifles to each company would permit the men to familiarize themselves in the use of this modern arm, both on the range and in drill.

In conclusion, I desire to extend to your Excellency my hearty thanks for your deep interest in the welfare of the National Guard, and your more than hearty co-operation in the work of these Departments.

General Report.

I am indebted to the Adjutant General, and officers of his Department, for support and assistance in the way of recommendations made from time to time.

I am, sir,

Very respectfully,

Your obedient servant,

A. SOLLIDAY,

*Quartermaster General and
Chief of Ordnance, Wisconsin.*

Expenditures.

EXHIBIT "A."

Expenditures Quartermaster General's Department October 1st, 1898 to September 30, 1900.

Quartermaster's Supplies.

EXHIBIT "C."

Showing Quartermaster's Supplies on hand September 30th, 1900.

STATIONERY.

5 Cups, sponge.	10 Inkstands.
2 Erasers, rubber.	3 Paper weights.
2 Erasers, steel.	1 Paper spindle.
1 Eraser, typewriter.	3 Ruling pens.
2 File clips.	6 Rulers.
2 Letter baskets, wire.	2 Pairs shears.
1 Letter opener, steel.	

OFFICE FURNITURE AND FIXTURES.

3 Brooms, whisk.	1 Letter press stand.
1 Book rack.	2 Letter copying baths.
1 Chair, office, revolving.	1 Letter box, tin.
5 Chairs, office.	3 Stoves.
1 Cushion, office chair.	1 Stove, oil.
8 Cuspidors.	2 Stove shovels.
4 Desks, roller top.	18 Pieces stove pipe.
2 Desks, table.	4 Stove pipe elbows.
3 Desks, cabinet.	1 Stove damper.
1 Filing case.	2 Stools, desk.
1 Filing case, glass front.	1 Typewriter.
2 Hand rests.	1 Typewriter desk.
1 Iron safe.	3 Waste baskets, willow.
1 Lamp, student, gasoline.	2 Waste baskets, wire.
1 Lamp, alcohol.	2 Zincs, stove.
2 Letter presses.	

BARRACK FURNITURE AND FIXTURES.

25 Brackets for wall lamps.	2 Lamps, tin.
8 Brackets for hanging lamps.	17 Lamp reflectors, wall.
16 Chairs, cane seat.	10 Lamp shades, tin.
3 Chairs, rocker.	22 Looking glasses.
2 Chairs, camp, canvas.	6 Match safes.
4 Chairs, camp.	25 Candle holders.
9 Commodes.	7 Pigeon files.
1 Comb.	5 Slop buckets, earthen.
12 Chambers.	15 Slop buckets.
1 Fire screen.	28 Soap dishes.
5 Door screens.	2 Settees, wood.
4 Dust pans.	31 Wash bowls, earthen.
1 Hair brush.	118 Wash basins, tin.
1 Hammock.	9 Wash basins, granite.
40 Lamps, bracket.	39 Water pitchers.
11 Lamps, glass, stand.	74 Window screens.
3 Lamps, glass, hand.	59 Window shades.
17 Lamps, Rochester, hanging.	1 Water heater, coal.
4 Lamps, corner, reflector.	

Quartermaster's Supplies.

MEANS OF TRANSPORTATION.

4 Horses.	1 Rack, wagon.
1 Pair bobs, heavy.	3 Racks, platform.
1 Collar.	1 Pair sleighs, double.
2 S. S. harness, heavy.	3 Single trees.
2 S. S. harness, light.	1 Wagon, wide tire.
1 S. S. harness.	1 Wagon, single.
3 Halters, complete.	1 Wagon, double.
3 Fly nets.	2 Sets wagon dump boards.
1 Neck yoke.	2 Whips.
1 Pole, buggy.	

CARPENTER'S TOOLS.

1 Edge.	2 Oilers.
1 Auger, $\frac{3}{4}$ inch.	1 Plane, fore.
1 Brace.	1 Rasp, wood.
1 Bit.	1 Saw set.
1 Set bits.	3 Saws, hand.
12 Chisels, firmer.	2 Saws, rip, hand.
1 Draw shave.	5 Screw drivers.
12 Files.	1 Screw driver handle.
1 File, 12 inch.	2 Squares.
4 Files, 6 inch.	1 Try squares.
2 Hammers, riveting.	1 Tack hammer.
3 Hammers, claw.	1 Vise.
6 File handles.	

PLUMBER'S TOOLS.

1 Dies, sets (7).	1 Pipe vise.
1 Pipe cutter.	3 Monkey wrenches.
3 Pairs pipe tongs.	2 Wrenches, socket.
1 Pair chain tongs.	1 Wrench, iron.

Quartermaster's Supplies.

MISCELLANEOUS TOOLS.

1 Bench vise.	1 Pair pinners.
1 Box scraper.	1 Pair plyers.
1 Bung auger.	9 Pitchforks.
4 Chisels, cold.	1 Plow, stubble.
1 Clevis.	1 Post hole chisel.
1 Crowbar.	1 Post digger.
25 Door keys.	11 Punches, steel.
1 Grub hoe.	1 Punch, large.
1 Gimlet.	9 Rakes.
3 Hoes.	1 Rake, wire.
1 Horse shoe rasp.	4 Rakes, wood.
1 Hay knife.	3 Scythes.
1 Hammer, stone.	1 Screw clamp.
2 Jack screws.	2 Saws, cross cut.
1 Level.	1 Saw clamp.
2 Log chains.	2 Scrapers, road.
1 Mallet, iron.	1 Shovel, post hole.
2 Mallets, wood.	4 Snaths.
3 Mauls, iron.	2 Scythe stones.
2 Maul handles.	2 Tape lines.
1 Mattock.	1 Water main wrench.
1 Nail puller.	2 Wire cutters.
1 Pair nippers, cutting.	

TABLE WARE, CHINA AND GLASS.

49 Butter chips.	7 Salt cellars.
9 Butter dishes.	52 Saucers.
1 Butter dish, glass.	102 Sauce dishes.
8 Bread plates.	20 Scalloped dishes.
7 Creamers.	53 Side dishes.
56 Dinner plates.	54 Soup bowls.
4 Fruit stands.	9 Sugar bowls.
7 Gravy dishes.	3 Sugar bowls, glass covered.
30 Meat platters.	5 Toothpick holders.
4 Mustard cups.	47 Tea cups.
7 Peppers.	90 Tumblers.
13 Pickle dishes.	23 Vegetable dishes.
52 Pie plates.	8 Vinegar cruets.

Quartermaster's Supplies.

TABLE WARE AND KITCHEN UTENSILS.

2 Boilers, galvanized.	2 Ladles.
4 Boilers, coffee.	2 Meat saws.
4 Butcher knives.	1 Milk can.
8 Butter knives.	1 Mop stick.
1 Bread toaster.	1 Moulding board.
9 Bread pans.	1 Meat chopper.
1 Bread box.	1 Meat block.
1 Butter mould.	1 Milk pail, 5 gal.
1 Cake tin.	42 Napkins.
4 Cake turners.	5 Pickle forks.
1 Chopping bowl.	7 Pie plates, tin.
1 Cleaver.	3 Plates, earthen.
5 Coffee pots.	1 Potato masher.
3 Collinders.	1 Pancake griddle.
1 Carving fork.	1 Range, steel.
1 Cake cutter.	2 Rolling pins.
1 Can opener.	1 Roasting pan.
1 Cork screw.	2 Servers, tin.
1 Coffee mill, tin.	4 Skimmers.
4 Cups, tin.	1 Steamer.
8 Dippers.	2 Stew pans.
17 Dish pans.	1 Stove, sheet iron.
15 Dripping pans.	1 Stove lift.
1 Flat iron.	7 Spoons, large.
4 Flour sieves.	8 Table cloths.
2 Forks, large.	69 Table forks.
7 Frying pans.	57 Table knives.
2 Flour sifters.	53 Table spoons.
1 Ice cream freezer.	117 Tea spoons.
1 Ice pick.	1 Tea pot.
6 Jars, 1 gal.	2 Tin basins.
1 Jug, 2 gal.	1 Towel roller.
10 Jugs, 1 gal.	8 Tin pans.
1 Jug, ½ gal.	12 Tin dishes.
2 Kettles, iron.	1 Wash basin.
1 Lemon squeezer.	2 Wash boards.
1 Lemonade shaker.	2 Wash tubs.

Quartermaster's Supplies.

POST PROPERTY.

2 Axes, fire.	5 Pumps, hand.
2 Bags.	9 Pump wrenches.
4 Branding irons.	2 Refrigerators.
3 Baskets, bushel.	1 Roller, ground.
2 Baskets, clothes.	4 Saw horses.
2 Bed screens.	2 Scales, platform.
1 Boiler, 20 H. P.	1 Scale, counter.
3 Bulletin boards.	3 Scoop shovels.
4 Carts, hand.	1 Seed sower.
8 Clothing chests.	29 Seats, pit.
244 Chairs, wood.	15 Seats, bench.
1 Coffee mill.	20 Sprays, bath.
1 Easel.	1 Shower head, tin.
1 Faucet, wood.	1 Snow plow.
5 Funnels, tin.	3 Sprinkling cans.
1 Flue cleaner.	1 Steam gauge.
20 Gasoline burners.	2 Steel punches, "W."
2 Grate cleaners.	3 Stencils and numbers.
2 Grind stones.	10 Stencil plates.
500 Feet hose, cotton, 1½ inch.	5 Stencil brushes.
450 Feet hose, garden, ¾ inch.	2 Stencil cups.
100 Feet hose, rubber, 1½ inch.	48 Street lamps.
1 Hose cart.	24 Stools, wood.
4 Hose nozzles, 1½ inch.	2 Street washers, ¾x2.
12 Hose nozzles, ¾ inch.	3 Street washers, ¾x4.
2 Hose reels, garden.	1 Step ladder.
1 Hose attachment, pump.	1 Stone boat.
23 Hydrants, ¾ inch.	13 Slop hoppers, Schwab's.
8 Hydrants, fire.	74 Tables, small.
1 Hydrant wrench, ground.	39 Tables, mess, 4 sections.
3 Hydrant wrenches, iron.	4 Tables, round.
21 Ice boxes.	4 Tables, mess, officers'.
1 Injector pump, Marsh.	3 Tables, long.
2 Ladders, extension.	1 Table, wrapping.
5 Ladders.	15 Telephones.
1 Ladder, iron, 34 feet.	1 Telephone switch board.
22 Lanterns.	4 Tool chests.
5 Lawn sprays.	17 Torches.
1 Lightning switch board.	4 Tripods.
12 Lamp posts.	1 Track pulley.
3 Measures.	1 Urinal, iron.
4 Mouse traps.	3 Urinal troughs, iron, sectional.
60 Feet matting, rubber.	2 Water coolers and stands.
10 Feet matting, straw.	92 Water barrels.
10 Mortar boards.	54 Wash stands, wood.
3 Oil cans, 1 gal.	2 Watering troughs.
1 Oil can, 2 gals.	13 Wash benches.
1 Oil can, 3 gals.	3 Wheel barrows.
7 Oil cans, 5 gals.	4 Work benches.
9 Padlocks.	2 Trucks.
2 Pails, wood.	1 Water tower, steel.
1 Pump, force.	

Clothing and Equipage.

EXHIBIT "D."

Showing Clothing and Equipage in possession of Wisconsin National Guard
September 30, 1900.

	Clothing chest.	Desks,	Lockers.	Letter press.	Blankets, woolen.	Blouses.	Caps, forage.
FIRST INFANTRY.							
1. Non-commissioned staff and band					37	35
2. Co. "A," Capt. C. H. Tucker					51	50

UNIVERSITY OF WISCONSIN.

BIENNIAL REPORT OF THE BOARD OF REGENTS.

MILWAUKEE, Wis., December 8, 1900.

To His Excellency, EDWARD SCOFIELD,

Governor.

SIR:—I beg to submit the biennial report of the Regents of the University exhibiting its present condition and needs, the amount of its receipts and disbursements, and such other information as may be important to you, and to the legislature and the people of the state. This information will be found in detail in the reports of the acting president, the secretary and the treasurer, and the boards of visitors, herewith submitted. I scarcely need add that these reports show a most gratifying condition of the university.

The occupancy of the magnificent Library building erected on the lower campus, and containing the books and periodicals of both the Historical Society and the University, the construction of the new building for the College of Engineering, and the enlargement of Main Hall, mark the most important additions to the material improvements since the date of our last biennial report. The establishment of a School of History and a School of Commerce, and the reorganization of the College of Engineering constitute the principal additions to the "means of acquiring a thorough knowledge of the various branches of learning" which it is the object of the University of Wisconsin to provide.

The Regents have had under consideration plans for incorporating with the University a medical branch or college located

University of Wisconsin.

in the city of Milwaukee, as authorized by Section 6 of Article IX of the constitution, and also for promoting the important study of Forestry. While both of these plans have been considered worthy of endorsement and early adoption, the Regents have been unable to proceed to their execution on account of the lack of sufficient funds for that purpose. Other demands have been more immediate and pressing. A great and modern institution of learning demands a great and growing income. The problem is not merely how much to appropriate and expend, but how to make the best use of the moneys received from the state, the nation and individuals. While economy and care must always be exercised, the state will not have discharged its duty to the University, nor the University fulfilled its mission to the people, until adequate means have been furnished to every young man and woman in the state to acquire an education at home in every department of learning. While the needs of the University in many departments are great, those of the College of Agriculture and the College of Engineering demand the first attention. A suitable building for the former should be provided at the earliest practicable date.

The University is a corporation under the laws of the state, managed by a board of regents appointed by the Governor. While it derives its power and at the present time the principal part of its financial support from the state, it is given the exclusive authority, and is charged with the sole responsibility, of administering its affairs. The moneys which it receives and disburses are corporate funds and not "moneys of the state." The duties of its officers are prescribed by the statute and by the regulations adopted by the regents under authority of the statute. Its books of record and of account are kept in accordance with its own approved methods and in a manner best suited for the conduct of its business. Any attempt to take away or curtail its corporate powers or character, or to change the relation it has hitherto sustained to the state and the people, would prove detrimental to its interests. Only some great defect in its present organization, or in its present systems, would justify any attempt to change them.

University of Wisconsin.

The regents have granted to President Adams leave of absence for a portion, and if need be, the whole of the present year, in the expectation that a rest from his arduous and responsible duties will restore him to health and a continuance of his most valuable services to the University. During his absence Dr. Birge, Dean of the College of Letters and Science, has been appointed Acting President.

Respectfully submitted,
(Signed)

GEO. H. NOYES,
President Board of Regents.

President's Report.

REPORT OF THE PRESIDENT OF THE UNIVERSITY

FOR THE YEARS 1898-1899, 1899-1900.

PRESENTED BY ACTING PRESIDENT BIRGE.

The Hon. GEORGE H. NOYES,

President of the Board of Regents:

SIR:— In the temporary absence of President Adams it becomes my duty, as Acting President, to report to you on the condition of the University during the past two years, and in regard to its needs for the future. The period covered by this report is anterior to the date on which I assumed the duties of Acting President, and the affairs of the University were, therefore, administered by President Adams during that time.

No biennial period in the history of the University has been more prosperous than that just passed, nor has any such period witnessed more important changes and advances in the University, either as concerns its internal organization, or its material prosperity. The number of students in attendance at the University reached 2,422 during the year 1899-1900. The Summer Session students were enumerated in this list, but, deducting these, more than 2,300 students were present at the University. The attendance has increased nearly three times in ten years. The number of students at the University nearly reached 1,000 in 1890-1891 and passed that number in the following year.

The important internal changes in the University during the biennial term may be enumerated as follows:

1. The organization of the College of Engineering has been completed by the appointment of a Dean, Professor J. B. Johnson, formerly Professor of Engineering in Washington University, St. Louis. The College of Engineering is the last of the Colleges of the University thus to be organized; Deans for the Colleges of Law, Agriculture, and Letters and Science having been appointed ten years, or more, ago.

President's Report.

2. In 1899 the Regents adopted a plan for the reorganization of the Summer School. This School was established in 1887 and since that time has been continued in the University, but without direct financial support from the University funds until 1897, when, by vote of the Legislature, \$2,000 out of the University appropriation was specifically devoted to the School. In 1899 the Regents adopted a larger plan for the Session, by which all of the important departments of the College of Letters and Science should be represented and approximately half the Faculty of that College should teach during the six weeks session of each year. This enlargement of the School has been followed, as would naturally be expected, by a large increase in the attendance and by a great advance in the grade of work done.

3. In 1900 a School of Commerce was organized, with Professor W. A. Scott as Director, to give special instruction, both general and technical, which should fit students for important commercial positions and for places in the consular service, etc.

4. The School of Economics, Political Science, and History, which has existed since 1892 under the Directorship of Professor R. T. Ely, was divided by action of the Regents in April, 1900. One part remains under the charge of Director Ely as the School of Economics and Political Science, and a School of History was organized, with Professor F. J. Turner as Director.

5. The increase in the number of accredited schools, whose graduates are admitted to the University without examination, has involved a corresponding increase in the work of the Committee on Accredited Schools, which has charge of the inspection of these affiliated schools. It has been found necessary to appoint a special officer of the University as Secretary of this Committee, who will undertake a considerable part of this work of inspection. This position was authorized by the Board of Regents in April, 1900, and Mr. A. W. Tressler was appointed to the position of Secretary to the Accredited Schools Committee, with the rank of Assistant Professor.

6. The buildings of the University have become so numerous and the amount of new construction so great that in 1899 the Regents established the position of Superintending Architect of Buildings and Grounds, and Mr. J. T. W. Jennings was ap-

University of Wisconsin.

pointed to this position. The creation of this position has tended greatly to efficiency and economy in the constant repairs and changes necessary in the older buildings and in the construction of the new ones.

Two years, therefore, have brought six important changes in the organization of the University, affording more efficient and economical administration and increased opportunities for study in technical and general lines of instruction, both undergraduate and graduate.

Several new buildings have been completed during the biennial period and have greatly added to the instructional facilities of the University.

1. The south wing of the University Hall, which was under construction at the time of the last biennial report, has been finished and was occupied at the opening of the college year 1899-1900. This addition to University Hall has nearly doubled the number of recitation rooms, besides affording to the University one large lecture room, capable of seating 347 persons, and three smaller lecture rooms, with a capacity of 100 to 175 each. In this wing are also contained the offices of the President, the Dean of the College of Letters and Science, and the Registrar, which were removed to this building from the Law Building. Their removal from that building has increased the space for the rapidly growing College of Law. The architects of the extension of University Hall—Messrs. Ferry and Clas—have succeeded in the difficult task of remodeling an old building of inferior architectural appearance into a dignified and impressive edifice, while preserving almost unchanged the essential features of the older construction.

2. A building even more important to the University is the Engineering Building, for the erection of which the sum of \$100,000 was appropriated by the Legislature of 1899. This building, although now independently complete in itself, has been planned so as to be capable of very great enlargement, and less than one-third of the entire edifice has been erected at the present time. It was completed and occupied at the opening of the college year 1900-1901. The removal of the Engineering departments from Science Hall has given large

President's Report.

additional space to the scientific departments which remain in that building. It is perhaps worth mentioning that Science Hall, which at the time of its completion in 1887 was thought to be far beyond the needs of the University, is already crowded, although a large number of the departments at first housed in it have been removed. Several departments have also been removed to the new Engineering Building from the Machine Shops; thus giving much needed additional space in that building.

3. Additions and reconstructions have been made to the buildings used by the College of Agriculture, chief of which are the remodeling, or rather reconstruction of the horse barn, at a cost of over \$11,000, the construction of a central heating-plant, at an expense of over \$17,000, and the addition to the Dairy Building of an underground room for cheese-curing, which is still under construction and will cost about \$8,000. The funds for all these changes were provided by the legislature of 1899.

4. An event of the first importance to the University, both on the material and intellectual sides, is the completion of the magnificent Library for the State Historical Society. In this the University library finds a home, as well as the libraries of the Wisconsin Academy of Sciences, and the Wisconsin Geological and Natural History Survey. Thus the libraries belonging to the State (except the Law library) are brought together in one building and are so placed that both the general public and the faculty and students of the University can make full use of them. The Library Building also affords to the University numerous seminary rooms for advanced study and research. A large number of the departments of the University, such as those of history, economics, language, and mathematics, necessarily depend for their advanced work on library facilities, just as the scientific departments depend upon their laboratories. For the first time in the history of the University there are now provided adequate facilities for this work. The Historical Library, therefore, is not only in its form and size a most magnificent home for the great library and collections of the Historical Society, but it is also a noteworthy addition to the re-

University of Wisconsin.

sources provided for the instruction of the youth of the state, and offers facilities without which no adequate higher instruction can be carried on in many important directions.

Another matter seriously affecting the University was the change in the method by which the State provides the revenue of the University. The income of the University was changed from a tax of a fraction of a mill to an annual appropriation of an amount equivalent to that formerly raised by the millage tax. This change, while yielding to the University as much income as it was receiving at the time the alteration was made, places the University for the first time in a position where the income will not increase as the valuation of the property of the state advances and as the number of students at the University increases with the advance in population.

It is with great regret that I am obliged to record the death of two members of the faculty during the past year. These are the first deaths which have occurred in the faculty since 1889. Professor John E. Davies, Professor of Electricity and Magnetism and Mathematical Physics, died on January 22, 1900. He came to the University in 1868 and was, therefore, for nearly thirty-two years a member of the faculty. He came first to the chair of Natural History and Chemistry; and latter took the departments of Astronomy and Physics, to which last subject he gave most of his instruction and research during his long and faithful service in the faculty.

Assistant Professor Hiram A. Sober died September 10, 1900. Professor Sober came to the University as Instructor in Latin in 1893 and was made Assistant Professor the following year. He was, therefore, just entering upon his eighth year of service in the faculty. His earnestness and enthusiasm in his work had endeared him alike to his colleagues in the Faculty and to the students of the University.

Another death in the faculty ought to be mentioned, although it does not belong within the term properly covered by this report. On November 12, 1900, Professor W. H. Rosenstengel was seized with apoplexy while attending faculty meeting and died almost instantaneously. Professor Rosenstengel had been for twenty-one years head of the Department of German and

President's Report.

had devoted himself to his teaching and to his University duties with singular vigor. In his relations to the University, to secondary schools, and to the community, he was inspired by an unusually high and keen sense of honor and duty. The removal of so striking a personality from the faculty leaves a vacancy which it will be very difficult, if not possible, to fill.

COLLEGE OF LETTERS AND SCIENCE.

But a few topics can find place in this report out of the very numerous matters of interest from this College which invite comment. Only those departments are mentioned in which important changes have occurred.

Students in Attendance.—The number of students in attendance on this College in 1899–1900 increased about 150 over the numbers present two years earlier; the attendance rising to 1,096. In this year the number of students attending this college passed 1,000 for the first time in the history of the University. The addition to the number of students in this College is larger than to that of any of the other departments of the University. This increase in numbers has involved a large number of additional classes in those departments whose studies come in the Freshman year, and thus has necessitated a considerable increase in the number of instructors and assistants, on whom a large part of this work necessarily devolves. At the present time—fall of 1900—in the Freshman class there are 15 divisions in English, 14 in Mathematics, and 16 in German, while the Sophomore class there are 10 divisions in elementary French. These divisions include also the Freshmen of the College of Engineering. This great number of divisions has already taxed to the utmost the capacity of the enlarged University Hall and a number of classes in various departments have been obliged to find quarters in the Engineering and Agricultural Buildings and Science Hall.

The addition to our students has also necessitated an increase in the teaching force of several departments. The college of Letters and Science gives all of the instruction in mathematics, science, and language to the students of the College of Engineering. The increase in the size of this college and the reorgan-

University of Wisconsin.

ization of its courses made necessary the separation of the Engineering students in chemistry and physics from the general classes, which were already overcrowded, and the teaching of these sections has been placed in charge of an assistant professor in each department; Assistant Professor Victor Lenher having been added to the staff of the Department of Chemistry, and Assistansy Professor Augustus Trowbridge to that of the Department of Physics.

It is impossible even to mention the numerous researches which have been carried on by the various professors of the college during the past two years, yet one or two of the most important studies may here be named. Assistant Professor Wood has made researches in color photography and has devised a method of photographically reproducing objects, so that they may be seen in their natural colors. This work has been thought worthy of the silver medal, which has been awarded to him by the London Society of Arts. Professor Van Hise has issued very important papers on ore deposition and on the metamorphism of rocks; both papers are of fundamental importance in theoretical and practical geology.

The University has been honored in the election of Director G. C. Comstock to membership in the National Academy of Sciences, and by the awarding of a medal to Professor S. M. Babcock by the Legislature of Wisconsin in 1899, in recognition of the great value of his discoveries to the state.

School of Commerce.—The Board of Regents in April, 1900, authorized the establishment of a School of Commerce within the College of Letters and Sciences. The purpose of this school is to furnish a course of study especially fitted for the training of young men who wish to enter business careers or those branches of public service where a knowledge of business is essential.

In pursuance of this aim, a course of study has been arranged consisting of those subjects in the various departments of science, language, history, economics, and political science recognized as basal in all the courses in the College of Letters and Science, but selected in this case with especial reference to the peculiar purposes of this course, and several groups of technical

President's Report.

studies designed to prepare students for special departments of business life. Belonging to this latter category, courses are being arranged preparatory to the banking business, to the consular service of the United States, to domestic commerce, and to commerce in South America, the West Indies, and the Orient. It was hoped that the opportunity to pursue studies of this character would attract to the University young men who would not otherwise get the advantages of a college course but would go into business directly after finishing the high school. It is gratifying to note that in this respect the school seems to be accomplishing the purpose for which it was established. Of the 84 students who entered its courses at the beginning of the present academic year, 65 are in the University for the first time, and 19 were transferred from other courses in the Colleges of Letters and Science and Engineering. By inquiry from each of the students who entered the University for the first time, it appeared that 40 per cent. of the total number would not have entered any college or university course had not this school been established; that 19 per cent. would have sought a general business training in other technical courses, which, in their opinion, furnished more nearly what they wanted than the courses of the Colleges of Letters and Science; and 37 per cent. would have entered courses in the College of Letters and Science rather than have foregone the advantages of a college course, but preferred the courses of the School of Commerce. It thus appears that by the establishment of this school the University is appealing to a considerable class of the community whose needs for higher education were not met by any of the courses heretofore established.

The work of the school is not yet completely organized. In addition to the work of Director Scott, Professor Monaghan is giving a course of lectures on the consular service, and Assistant Professor E. D. Jones is lecturing on commercial geography. There are also special courses in elementary mathematics and in languages, for the benefit of the new students. It is necessary that the language courses should be separate from those of the Colleges of Letters and Science, since their aim is to fit the student for the practical use of the languages rather than to give

University of Wisconsin.

an introduction to the literary and scientific knowledge of these branches. As the students who have recently entered, advance in their course, new technical courses must be given and considerable additions must be made to the instructional force of this school.

School of Economics, Political Science, and History.—This School, which was organized in 1892, was divided at the opening of the present year into two Schools: the School of Economics and Political Science, which continues under the Directorship of Professor Richard T. Ely, and the School of History, of which Professor F. J. Turner was made Director. During the past eight years the School of Economics, Political Science, and History has included a large number of the graduate students of the University, and more than half of the recipients of the degree of Doctor of Philosophy—the highest degree which the University can confer—have come from this School. Besides this graduate work, a very great amount of undergraduate teaching has been done by the staff of the School, since all of the classes in history, economics, and political science are in their charge. Courses in these departments may extend through all the four undergraduate classes of the University. In its new organization, as well as in the earlier form, the departments represented in this School will continue to give a thorough and comprehensive training for the law, public life, journalism, and the profession of teaching.

During the past year the members of the Faculty of this School have issued three books of considerable importance: "Monopolies and Trusts," by Director R. T. Ely; "World Politics," by Assistant Professor Paul S. Reinsch; and "Economic Crises," by Assistant Professor E. D. Jones. Each one of these works has met with an unusually favorable reception from the public, and the best authorities, both in this country and Europe, have commended them in the highest terms.

Mr. S. E. Sparling, Instructor in Political Science, has performed an important service to the state by the part which he has taken in aiding to organize the Wisconsin League of Municipalities, and in establishing, as its organ, the monthly publication,—"The Municipality."

President's Report.

A member of the staff of the School — Dr. E. D. Jones — was given leave of absence during the University year 1899–1900 to prepare a large part of the statistical exhibit made by the United States in the Paris Exposition, and to serve as a member of the International Jury of Awards. The exhibit of 200 statistical maps and charts prepared by Dr. Jones and a photographic collection illustrating the industrial establishments of this country were each honored with a grand prize.

Director R. T. Ely is at present President of the American Economic Association, succeeding in that important position President Arthur T. Hadley of Yale University.

Summer Session. — Since 1887 there has been maintained at the University a Summer School. This has lasted from four to six weeks and has had an attendance usually less than 150. It was maintained at first entirely on the fees of students; later the State gave an appropriation of \$1,000 for its maintenance. In 1897 the Legislature appropriated to this School \$2,000 annually from the funds given to the University, and at the special session which adopted the Revised Statutes the annual appropriation of \$1,000 was taken away. The success of this School had been such as to lead the Regents to believe that the enlargement of its work would lead to an increased usefulness of the University, especially to teachers of the State. Accordingly, in 1899, the School was reorganized and made the Summer Session of the University, at present represented mainly by the College of Letters and Science. All of the important departments of the College were represented by courses less numerous than those given during the college year, but giving all the grades of work in the department. About one-half of the faculty of the College of Letters and Science were expected to teach in the Summer Session of six weeks each year. This increase in the scope of the School has added greatly to the attendance. The numbers attending in 1899 were 343, including 15 Engineers, and in 1900 the attendance was 334, including seven students in Pharmacy. Engineering was not represented in the second Session, nor were the Pharmacy courses given in that of 1899. The increase in the number of teachers attending the Session as compared with the former School has been

University of Wisconsin.

very gratifying. More than 150 teachers in high schools and the grades and superintendents have been in attendance each year—nearly double the average number that has been in attendance at the Summer School. The work done in the Summer Session can be credited toward graduation, or toward a higher degree, in the same way as work done during the regular session of the University. By proper arrangement of work it becomes easily possible for a good student to obtain a degree at the University by three years' attendance on the regular session and three or four Summer Sessions. In a similar way credit is given toward a higher degree for work done at the Summer Session; thus making the attainment of such a degree possible for persons who are engaged in teaching or who for other reasons find it impossible to be present at the University during the regular college year.

Committee on Accredited Schools and Appointment Committee.—Most of the students who now enter the University come from the accredited schools—those schools whose graduates are entitled to enter the University on certificate and without examination. The University is thus brought into very close relation with the schools, especially the free high schools of the state. There are in the state at present 153 free high schools with four-year courses. Of these 121 are accredited, and the remainder are mainly schools in the smaller towns or these recently organized. In order to maintain a proper working relation between the University and these schools frequent visits to the schools from members of the University faculty are necessary, and, as the number of schools increased in recent years, these inspections necessarily became more numerous and finally reached a point where it became difficult, if not impossible, for the members of the faculty to make them. Since the Schools are in session at the same time as the University, these visits necessarily involve the absence of professors from their regular class work, and, while a certain amount of this absence is possible without serious loss, yet the inspections had become so numerous as greatly to burden those members of the faculty who were most called upon. In 1897-1898, 95 schools were visited and the same number in 1898-1899, while in 1899-1900, 117 were visited. In order to enable this work to be carried on more sys-

President's Report.

tematically and with better results, both to the schools and the University, the Regents established in April, 1900, the position of Secretary to the Committee on Accredited Schools, and gave the holder of this position the rank of Assistant Professor. This position was filled at the last Commencement by the appointment of Mr. A. W. Tressler, then principal of the high school at Ripon. Such an organization of the work of the Accredited Schools Committee has been found necessary in the state universities, which, like our own, stand in close affiliation with the school system of the state. The good effect of this organization are already apparent, even in the short time since the appointment was made.

More than 250 graduates of the University are at present teaching in the high schools of the state, and every year shows great changes in the personnel of this large number, since a considerable number fall out from the profession each year, the new graduates begin teaching, and there are numerous changes of teachers from school to school. Very numerous applications are made by the high schools to the University for teachers, frequently more calls being made than the University can supply. In the winter of 1900 an Appointment Committee of the Faculty was constituted, whose work should be to centralize the giving of information to the high schools regarding possible candidates for positions and to the graduates of the University in securing positions for which they had been trained in the University. This committee began its work last spring, but so late in the year that little can be said of the results at present, beyond the fact that it did a very large amount of work and apparently meets the needs, both of the graduates of the University and the Schools. The committee found it necessary to hold meetings every day during a large part of the spring, in order to consider the requests which came in from various schools. It is perhaps right to add that this committee only acts on the application of schools; no attempt being made to discover vacancies and to push the graduates of the University into them.

University of Wisconsin.

COLLEGE OF LAW.

The change in 1894 from a two-year course to a three-year course in the College of Law resulted in a great increase of the number of students in the years immediately preceeding the change and a corresponding diminution in the years immediately following it. In the two years included in this report the attendance of students rose rapidly; being 214 in 1898-1899 and 231 in 1899-1900. At the present time 258 students are in attendance—the largest number that the College has had at any time at the opening of the University year. Before the end of the year the registration will undoubtedly considerably exceed that at the close of 1894-1895, when the attendance reached 266. The Junior class the present year is especially large, numbering 125—an increase of more than 50 per cent. over the attendance in either of the two preceding years. With this increase in numbers there is found also an improvement in the preparation of students; the standard of admission having been considerably raised in the past few years. The requirements for admission to the College are now the same as those to the College of Letters and Science.

The increase in the number of students and the development of the three years' course has made necessary the appointment new members of the Faculty; Mr. A. A. Bruce having been appointed as Assistant Professor of law in 1898, and Mr. Howard L. Smith as Professor of Law, in 1900.

COLLEGE OF AGRICULTURE.

Growth of the College. — With the present college year Dean Henry began his twenty-first year of service in the College of Agriculture. Seventeen years ago the College occupied four rooms of the third floor of the South Dormitory, now Agricultural Hall. The whole building is now occupied by this College, and in addition two large buildings—the Dairy Building and the Horticultural-Physics building—have been constructed for its use. Such has been the development of the attendance and the work of the Agricultural College, including both teaching and experimentation, that the present accommodations are

President's Report.

already far outgrown. The increase in the numbers attending the Short Course in Agriculture has been especially noteworthy. In 1897-1898 these students numbered 156; in 1898-1899, 195; in 1899-1900, 252. The increase during the two years has, therefore, been nearly 100 students. The prospects are that the number will materially increase during the coming winter.* In the Dairy School the attendance for several years has been as large as the space in the Dairy building would permit; too large indeed for proper accommodations. The applications for attendance in this department exceed the number that can be admitted, and when the building is enlarged a corresponding increase in attendance will follow. During the past two years considerable additions have been made to the plant of the College of Agriculture. The horse barn has been remodeled and practically completely rebuilt, at a cost of \$11,167.43. In this building there are provided accommodations for horses, a veterinarian's operating and demonstration room, a carriage room, and a large room for fattening steers. The Central Heating Plant for the College of Agriculture has been completed at a cost of \$17,348.35, including architect's fees. In this plant there are one 50-horse power and two 80-horse power boilers. The heating pipes are conveyed through tunnels to the Horticultural-Physics Building and to the Dairy Building. Floor space remains for two more 80-horse power boilers which will be needed when the proposed new central Agricultural Building is built. These boilers are placed in the basement of the central heating plant, and over the boiler room is a two story building 35x50 feet. It is proposed to use the first floor of this building for giving instruction to students of the Dairy School in the care and management of engines and pumps and the setting up and running of power cream separators, etc. The second floor will be used for instruction in pipe-cutting, soldering, belt-lacing, and similar mechanical operations necessary in the running of a creamery. Money for both these enlargements was provided by the Legislature of 1899. The same Legislature also provided for the enlargement of the Dairy Building, but the funds became availa-

* The attendance in 1900-1900 is 295.

University of Wisconsin.

ble only at a date so late that it has been impossible to construct the whole of this much needed addition. The underground cheese-curing rooms have been constructed in the rear of the present Dairy Building at a cost of about \$8,000 and the remainder of the appropriation of \$35,000 made by the legislature of 1899, will be used in the enlargement of this building.

Publications.—During the two years covered by this report the Experiment Station has issued the following publications:

			1898-1899.		
9 bulletins aggregating	225 pages,		70,000 copies,		total pages, 2,127,000
15th annual report,	332 pages,		15,000 copies,		total pages, 4,980,000
Total.....	557 pages,		85,000 copies,		total pages, 7,107,000
			1899-1900.		
9 bulletins aggregating	319 pages,		158,000 copies,		total pages, 6,335,000
16th annual report	350 pages,		15,000 copies,		total pages, 5,250,000
Total.....	669 pages,		173,000 copies,		total pages, 11,585,000

Station Investigations.—A few of the principal investigations now in progress are as follows:

Feeding experiments by the Director, to determine the merits of ground and unground corn for fattening swine.

Doctors Babcock and Russell, with Mr. Vivian, are investigating the relation of galactase (a digesting fluid in milk discovered by Babcock and Russell) to the ripening of cheese, especially the foreign types. The results indicate that galactase is an important factor in cheese curing. They are also studying the influence of rennet on the ripening of cheese.

Doctors Babcock and Russell are continuing their studies of the causes operating in silage production and have shown that the bacterial theory of silage formation is untenable. This work is highly important and marks our first real knowledge of what occurs when silage is produced from the different farm crops.

Heretofore scientists have directed that milk to be properly pasteurized should be heated to at least 150° Fahrenheit; the argument being that dangerous germs, especially tuberculosis, could not presumably be destroyed at a lower temperature. Doctor Russell and his assistant, Mr. Hastings, have shown by a long series of carefully conducted experiments, that milk heated to 140° Fahrenheit for from fifteen to twenty minutes is

President's Report.

rendered innocuous so far as tuberculous germs are concerned. Milk heated to 150° , or higher, is injured in flavor and is more or less changed in its physical composition; at 140° such changes do not take place.

Mr. Carlyle has fed rations with wide and narrow nutritive ratios to pigs of various breeds in a study of the effects of such rations on the proportion of fat to lean in the body.

In Bulletin No. 75 Mr. Farrington published the results of a study of 134 cows on 13 different farms, showing that while some cows were extremely profitable, others were quite unprofitable. This bulletin was a popular one and the first edition of 12,000 copies was soon exhausted and a second edition of 8,000 copies published. The Elgin Creamery Company, operating many creameries in this state, asked permission to republish the bulletin at the expense of the Company, and did so, distributing an edition of 10,000 copies among its patrons.

Professor King and Professor Whitson have continued their exhaustive study of the cause of infertility in marsh soils, and are in search of remedies; the results of their studies being announced in Bulletin No. 80.

An extended study of the losses of silage in silos and the best methods of constructing silos was published in Bulletin No. 83. After supplying our regular mailing list, embracing about 12,000 names, we have received fully a thousand requests by mail from as many individuals, asking that copies of this bulletin be sent them, the requests coming from all over the Union and even from foreign countries.

In the orchard Professor Goff and Mr. Cranfield are growing hundreds of varieties of seedling American plums, many of them cross-bred, for the purpose of originating new varieties. This work is extremely important and has already attracted much attention in the horticultural world.

COLLEGE OF ENGINEERING.

The two most important events in the history of this College during the past two years have already been noted, namely; the appointment of Professor J. B. Johnson as Dean of the College, and the completion of the new building.

University of Wisconsin.

The New Building.—The last Legislature appropriated \$100,000 for a new Engineering Building, with the provision that the building must be completed for that sum. The Governor was required to approve all contracts, subject, however, to this guarantee. When competitive plans were submitted from various architects in June it was found that they were unsatisfactory, for various reasons, and especially because they all called for sums greatly beyond the appropriation. Even when these plans were modified, they still involved far too great an expenditure. Finally, the Superintending Architect, Mr. J. T. W. Jennings, and Dean Johnson were consulted and were authorized to prepare the plans for the proposed building. These were completed in December. The specifications were ready the 1st of January. After advertising the work for four weeks, the bids were opened and the contracts let on February 1, 1900. The principal contractor was N. Frederickson and Sons, of Madison, and the contracts all contained a provision that the building should be completed on or before October 1, 1900. The frozen ground was excavated for the foundation in March, by blasting, and the building was completed about the middle of October. It was in a sufficiently advanced state to allow all the class work of the college to be carried on in it from the opening of the fall semester, September 27, 1900.

This building is so designed as to be capable of extension to about four times its present size by building three other portions facing on the east, north, and west. The court area of this completed structure will be occupied by a steam testing laboratory, lighted from the roof, One-half of this laboratory, and the basement and sub-basement of a portion of the east portion, form parts of the present building. The building has a gray hydraulic-press brick exterior, trimmed with Bedford stone and terra cotta. The interior is what is known as "mill-construction", with a fire-proof plaster upon a metal lathing. The building has a slate roof, and hard wood finish. The interior walls are all left without a finishing coat of plaster of Paris and are tinted with water colors. The ceilings of the auditorium, the reading room, and the drawing rooms are left white for the pur-

President's Report.

pose of lighting the rooms artificially by a diffused reflected light. This is an original method of illumination, in which no light-source is visible to the eye, and it has been devised and perfected by the professors of the electrical department. The plans and specifications for the electrical wiring were drawn by Professor Jackson, of this department, and the plans and specifications for the heating and ventilation were drawn by Professor Bull, the head of the department of steam engineering. Other professors of the College contributed largely to the arrangement of the floor plans, and in other ways. The building is now fully occupied and used, and will probably soon have to be extended. Its cubic contents are 779,000 cubic feet, hence its cost, including all heating and ventilating appliances, and electric wiring for light and power, and the electric fixtures, and a due portion of the architect's salary is only 12.8 cents per cubic foot. So that, notwithstanding the high price of labor and material, this is one of the cheapest buildings upon the University campus, and is satisfactory in plan and construction as well as in cost.

Students in Attendance.—The attendance in the College of Engineering is rapidly increasing. In 1896-7 it was 218; in 1897-8 it was 217; in 1898-9 it was 242; in 1899-00 it was 327; while in 1900-1 it will be over 400. The increase is now about 75 per year and this rate of increase is likely to continue for several years to come. In other words the attendance in this College two years from now is likely to be about 550. In addition to these students, instructions is given in its shops and laboratories to the Short Course Agricultural students to the number of some 150 per annum. In point of numbers the University now stands third in the American schools of engineering of a high grade, the Massachusetts Institute of Technology and Cornell University alone leading in this particular.

Courses of Instruction.—The courses of instruction now include Civil, Sanitary, Mechanical, Steam, Electrical, and Electro-Chemical Engineering. The instruction given in all of these courses is of a very high order though thoroughly practical. The work requires the full preparatory course of study, such as is given in our best high schools, and it is considerably heavier than the work required for graduation in the College of Letters

University of Wisconsin.

and Science. For this reason it is best taken in five years and this plan is now recommended in all cases where it practicable. The sciences and arts which underlie the most successful engineering practice are annually becoming more and more developed and perfected, so that the field of profitable study in college to prepare for engineering practice is rapidly enlarging. In this respect the profession of engineering is like that of medicine, and just as all medical colleges are finding it necessary to lengthen their courses, so the engineering colleges are finding it necessary to crowd more technical work into their curriculums. Another method of accommodating this increased amount technical instruction is to first take a four years' pre-engineering course in college and then complete a course in engineering in two more years, thus giving six years to a combined college and technical course of study. One or the other of these alternatives is now adopted by a considerable number of our engineering students.

Demand for Graduates. — The demand for the graduates of the College of Engineering far exceeds the supply, and there is every reason to expect this condition to continue indefinitely. A technical education is now commonly recognized as highly beneficial to anyone who may be engaged in manufacturing or mechanical employments, and as absolutely essential to all persons having the immediate direction of such operations. Towards the close of every college year we receive, unsolicited, many calls for the members of our graduating class, these requests being frequently for groups of three or four from the same source. Our engineering graduates have made a reputation for themselves for being eminently practical and efficient, and each new supply but increases the demand.

Material Equipment. — The \$100,000 appropriated by the last legislature for the Engineering building was barely sufficient for the construction of the building, including all heating, ventilating, and lighting fixtures, and fixed foundations for laboratory engines, machines, experimental slate tables, etc. There was thus no provision made for furniture and fixtures for the new building. As the fixed income of this College has been nearly all absorbed by the increased fixed charges, caused by

President's Report.

the necessary additions to the instructional force, there was very little left to be applied upon furniture and fixtures, even when nothing was reserved for new additions to plant. The result is that the building is still in need of necessary furniture and fixtures to the amount of some \$5,000.

The shops and laboratories were reasonably well equipped a few years ago, but our growing numbers, and the rapid progress in all mechanical lines, which characterizes this period, make the shop and laboratory equipment to-day both entirely inadequate in amount, and sadly behind the times in character. In the last two years the number of students has increased about seventy per cent., but the equipment has not been appreciably added to except in the matter of surveying instruments. The necessary expenses incident to moving into the new building and the permanent additions to charges caused by the rapid increase in the number of students practically absorbs the entire income of the College. If the instruction given in engineering is to be kept even up to the standard of efficiency which it has maintained in the past, large additions to the material equipment, both of shops and laboratories, are imperatively demanded.

NEEDS OF THE UNIVERSITY.

In 1884 President Bascom stated in his report to the Regents that "The wants of a thriving university are like the hunger of a growing boy, not easily nor long satisfied." The experience of the University during the sixteen years that have elapsed since this statement was made have proved its truth in even larger measure than the events of the years which went before, and the response of the people of the state to the needs of the institution have demonstrated how fully and justly they have appreciated those wants.

The first and most pressing material necessity of the institution at present is the proposed new building for the College of Agriculture. Provision was made by the last Legislature for an addition to Hiram Smith Hall (The Dairy Building), which, when completed, will meet the immediate wants of that department. The work of the Experiment Station and th

University of Wisconsin.

needs of the Short Course in Agriculture have completely outgrown the limited accommodations of the old South Dormitory, in which they are now housed. The College must have a large building, which should be placed with the other agricultural buildings, and which shall furnish adequate accommodations for the laboratories and offices of the Agricultural College and Experiment Station, and suitable recitation rooms for the various departments of the Short Course in Agriculture. The building should be large enough to provide not merely for the bare necessities of these departments in their present condition, but to allow some room for the growth which will certainly come in the years immediately before us. Dean Henry and Architect Jennings are now engaged in drawing up plans and specifications for such a building. The College of Agriculture also stands in need of some additions to its income. Several of the experimental departments are badly cramped for need of funds, and there are some important directions of work, such as the testing and distribution of seeds and the raising of poultry, in which no experimental work is now done for lack of funds. All of these departments are so intimately associated with the material prosperity of the state that no doubt can exist as to the necessity of providing for them. I should place these wants of the College of Agriculture first among the necessities of the University.

The action of the last Legislature in prohibiting passes prevented those who take part in Farmers' Institutes from receiving free transportation and thus threw an additional burden of expense upon a fund which was already inadequate to the demands made upon it. Since the appropriation was placed at its present figure, some important departments, as, for instance, cooking schools, have been added to the work of the Institutes, and the demand for teaching in these directions is great and ought to be met. Yet the necessity for work in those departments which have always been represented does not decrease but rather increases. The number of calls for Institutes is also increasing and it becomes more difficult from year to year to keep the number down to that which is permitted by the funds.

President's Report.

If the Farmers' Institutes are to continue to do the work for the state which they have been doing, it will be necessary to make an addition to the income of that department.

The greatest immediate need of the College of Engineering has been met by the liberality of the last legislature, resulting in the erection of the new Engineering Building. This, with its recitation rooms and laboratories, offers accommodations to the Engineering students far superior to anything that they have had in the past, and, while it would have been wise to provide more room in certain directions than the present building affords, it may be said that, in general, the accommodations are adequate to the College for the present and the immediate future. The equipment in the shops and laboratories, however, is far inferior to what it ought to be. This inadequacy was in the past necessitated by the cramped space at the disposal of the college before the construction of the new building. There has actually been no room for more machinery or laboratory equipment of any kind. With the increase in the size of the laboratories these defects in equipment become more painfully manifest. The increase in the number of students also demands considerable increase in apparatus. The number of students has nearly doubled during the past five years, during which time very small additions have been made to the apparatus of the college. If the instruction in these departments is to maintain its present reputation, considerable additions must be made in the near future. The rapid advance of engineering in all directions makes such an increase doubly necessary if the college is to maintain its leading position among the technical schools of the country.

It is hard to see also how the College of Engineering can go on much longer without an increase of income. This income has not been increased since 1893, and the number of students has more than doubled since that time. The income at that time apportioned to the college was ample to provide for the instruction of the students and to leave a considerable sum which could annually be expended for equipment. At present, however, the whole of the income is imperatively demanded by the payment

University of Wisconsin.

of the instructional staff and the necessary running expenses of shops and laboratories and nothing at all is left for keeping up the equipment; still less for increasing it.

The third direction in which the University needs enlargement is in connection with the School of Commerce. The course offered by this department promises to be one of the most useful of our technical courses, yet if it is to do for those who come for it what the Science departments do for their students and what the Colleges of Engineering and Agriculture do for theirs, a commercial museum must be provided, which shall serve as a laboratory for the students of commerce. This need not begin on a very large scale, but, if the University does not at once begin the collection of such a museum, the course in Commerce will lack definiteness and concreteness and so will fail to give its students the sort of training which it aims to furnish.

All of these needs are immediate and special, and are apart from the ordinary increase in the teaching force and equipment, which is annually demanded by the increase of the students of the University.

If it is permitted to look into the future and speak of needs which must soon be met, although they are not so pressing as these of which I have spoken, I should give the first place under this class to a Chemical Laboratory. The present Chemical Laboratory was built sixteen years ago, at a time when chemistry was looked upon almost wholly as an adjunct of a course in science, and when the technical and commercial relations of chemistry had hardly begun to be appreciated in this country. At present the situation is entirely changed. The chemist has become the necessary guide of many of our important manufacturing industries, such as sugar, tanning, iron, and steel. There has resulted in these later years a great and unexpected necessity for instruction and investigation along chemical lines, whose nature and extent could not have been anticipated at the time of the building of our present laboratory. The University will undoubtedly need in the not distant future a large building, in which can be housed all of the chemical departments, and which will furnish space for the development of that subject in those directions in which it touches the technical departments

President's Report.

of engineering, pharmacy, etc. The state and the nation have fully recognized the dependence of agriculture in certain of its aspects upon chemistry by the establishment and maintenance of the Agricultural Experiment Stations. The time has already come when the connection between the prosperity of manufacturers and chemical teaching and investigation ought to be similarly recognized and provided for.

In this connection mention may be made of the resolutions adopted by the State Pharmaceutical Association last summer, urging the erection of a new and suitable building for the School of Pharmacy, so long connected with the University. The need for more suitable accommodations for the School of Pharmacy is apparent and the School ought to find proper quarters in a Chemical Building, when this shall be erected.

The University ought also to undertake both research and teaching in the direction of forestry. This department is one which in the near future will be of great economic value to the state, and indeed will soon be of pressing importance. New York has already established such a School of Forestry in connection with Cornell University. There are large areas in Wisconsin which are suited for the growth of forests, and apparently of very little value for other purposes. The reforestation of such districts demands much study and skill, and a large amount of instruction will be needed, both for special foresters and for the general public. This work belongs preeminently to the University and should be undertaken by it as soon as its funds permit. At present, of course, the necessities of the University in other directions make the establishment of such a school impossible. This is especially true, since the work must be done on a comparatively large scale, if it is to be profitably undertaken at all.

Most of the wants of the University hitherto mentioned are those involving sums for immediate expenditure on buildings and apparatus. There are other wants not less important in equipment and instruction, which can be met only by an increase in the sums already annually devoted to them. The first of these is the general library. The money devoted to this department of the University has always been lamentably inadequate to the needs of the institution. As the number of depart-

University of Wisconsin.

ments has increased and the grade of work has advanced, the need for books has grown, and there has been by no means a corresponding increase in the money available for this purpose. In the immediate past from \$3,000 to \$5,000 per year has been devoted to the purchase of books and of periodicals for the general library. This sum has been apportioned as equitably as possible to the several departments. Yet these are now so numerous that when expenditure for periodicals has been deducted, the money left for the purchase of books has not only been inadequate, but in many cases ridiculously small. The funds at the disposal of any department are not sufficient to enable it to keep up the purchase even of the new books which are imperatively demanded. There is absolutely no money for the purchase of the great body of works which have been issued in every department in the past and which are unrepresented in our library. In certain departments, notably history — the State Historical Library is of great assistance and furnishes not only an adequate but ample supply of library material in some important directions. Within the past two years one department — that of German Philology — has received the largest single gift which has come to the library from private benevolence, in the contribution, by citizens of Milwaukee, of more than \$3,500 for the purchase of books for the German Philological Seminary. Since writing this report, two other considerable gifts have been received for the Library: one of more than \$2,000 for the School of Commerce, from citizens of Milwaukee; and another of more than \$2,500 for the School of Economics, and \$500 from Honorable William E. Dodge of New York, and the remainder contributed by citizens of Wisconsin, mainly residents of Milwaukee. Every department in the University — outside of those periods of history covered by the Historical Library — needs at once a sum at least as large as this for the purchase of the back literature, and needs also an appropriation for current expenses several times as large as that now available. A large, well-equipped, and rapidly growing library is fundamental to all advanced study, and no student can make permanent contributions to knowledge unless he has access to the literature of his department. From the intel-

President's Report.

lectual point of view, the first great general necessity of the University is a large immediate addition to the library and a fund of at least \$15,000 annually for the purchase of books. So long as the University Library was contained in the old, inadequate, and unsafe Library Building, it was inevitable that this development of the intellectual resources of the library should be delayed, but now that it has been placed in the State Historical Library Building, there is every reason for urging the necessity of meeting this prime want of the institution. The Historical Library has helped to make the University a center for the study of history and allied subjects. The inadequacy of the library resources is the great obstacle to progress in other departments.

A second matter to which I would call the serious attention of the Regents is the large number of students contained in each of the several divisions of the subjects required in Freshman and Sophomore years. I have already mentioned the large number of sections in the courses for Freshman English, German, Mathematics, etc. Each of these divisions contains from 25 to 40 students. Even the smaller number is larger than can profitably be taught in a section, and the larger number should not be tolerated in the University. If it were possible to increase the number of instructors in the Faculty to such an extent that the sections of these classes should contain not more than 15 students so that the instructor could devote considerable time to each student at every recitation, better work could be done by the students, and their progress in their studies would be correspondingly greater. I have no hesitation in saying that the intellectual results which would be reached by this change would far more than compensate for the very considerable increase in the cost of instruction. Without a great advance in the income of the University, however, such a large addition to the instructional force is obviously impossible, yet the reduction of the number of students in a section is an aim which the University ought steadily to keep in view. In the higher classes, when students have become accustomed to University work, there is an advantage in grouping them into large

University of Wisconsin.

divisions for lectures and general recitations, but every student who makes the change from the high school to the University ought, during his first year, to have most of his work in sections so small that he can receive a great amount of personal attention and guidance from the instructor.

Respectfully submitted,

(Signed)

E. A. BIRGE,

Acting President.

University of Wisconsin.

APPENDIX A.

THE ATTENDANCE AT THE UNIVERSITY OF WISCONSIN
DURING THE TEN YEARS ENDING WITH 1899-1900.

1. Number of Students During the Past Ten Years.

The growth of the colleges and schools of the University is shown by the following table, which includes special and graduate students and fellows distributed in their proper colleges and schools:

College of	90-91	91-92	92-93	93-94	94-95	95-96	96-97	97-98	98-99	99-1900

Totals.....	67	73	76	94	100	111	119	125	135	147

An inspection of these tables will show a number of interesting facts. In the first place, during the last four years the number of students has increased from 1,598 to 2,422, and has been greater than the increase during any other four years in the history of the University. It will also be observed that while a considerable enlargement of the teaching force has been made necessary by the increase in the number of students, this enlargement has been confined chiefly to the ranks of assistant professors and assistants.

The Summer Session of 1900 had a registration of 334, and the Library School of the same summer was attended by 42 persons.

¹This includes the School of Economics, Political Science, and History, and the School of Education. The courses in these Schools are so interwoven with the other courses of the College of Letters and Science that they cannot well be separated.

²Not included in totals.

³This large number is due to the fact that 120 persons who were present at the summer session were also present in the regular sessions of the University.

⁴The Fellows, though primarily students, are classified here for the reason that according to the terms of their appointment, they are required to render a small amount of instruction. This requirement, however, applies only to the University fellows; consequently the above enumeration does not include the alumni fellows nor those provided for by private generosity.

University of Wisconsin.

REPORT OF THE BOARD OF VISITORS, 1898-1899.

To the Honorable Regents of the University of Wisconsin:

The Board of Visitors in submitting the accompanying reports of its several committees, take pleasure in expressing the unanimous and hearty endorsement in general of the management and conduct of the affairs of the University.

We believe that the bounty of the State is disbursed by the Board of Regents in a wise, judicious and economical manner, in keeping with the dignity and substance of the commonwealth.

That the instructional force is of the highest order, is evidenced by frequent efforts to induce its members to accept positions in other colleges.

SCHOOL OF COMMERCE.

The Board respectfully invite the attention of your Honorable body to public sentiment, in respect to the education of business men, that we should recognize that the majority of the alumni seek business channels for their life work, after graduating, and we believe that the usefulness of the University of Wisconsin would be greatly increased by establishing in the Department of Civics a Chair of "Commercial Science," with a curriculum comprising fundamental courses, of the principles governing commerce and finance, combined with detailed courses in practice; among such courses would be those in accounting, transportation, technique of trade, commercial ethics, insurance, management of estates, and of public and private trusts, credits and commercial opportunities, thereby practically develop the Science of Economics.

Such department might be named the "School of Commerce," to be open to high school graduates, with two or three years' course, to entitle the student to a certificate, but not to a degree, but supplemented by a graduate course, carrying with it a degree.

This recommendation is not without precedent; a college course in commerce has been established in Columbia College, New York; the Wharton School of Finance and Economy, in the University of Pennsylvania, is directly in line with this recommendation; and like schools in the University of Chicago, and of California and the old world, furnishes examples in the University of Leipzig, while the Paris Chamber of Commerce maintains a School of Commerce; so also does that of London.

The following resolutions, introduced by Col. John G. McMynn, met the unanimous approval of our Board, namely:

The Board of Visitors, in considering the subject of physical training, reach the following conclusions:

1. They place a high estimate upon physical exercise and recognize their importance as aiding in scholastic education.

Report of the Board of Visitors, 1898-1899.

2. They believe military drill calculates to promote habits of order, obedience and courtesy, and, under a competent commandant, to fit young men for military service.

3. They commend moderate and regular exercise in gymnastics, and are of the opinion that all students should be required to exercise in the gymnasium at stated times, under the supervision and control of the Director.

4. They approve of field sports so directed as to promote activity, develop bodily strength and command self-control.

5. They can commend no plan or practice, that confers greater distinction upon athletic attainments than upon scholastic acquirements.

6. They consider the fierce excitement and mental distraction connected with inter-collegiate football, as a positive hindrance to scholarship, and, not infrequently, as promotive of immoral conduct.

The admiration for superiority in athletics is tempered by the record of the victors of the Olympian contests, none of whom has his name recorded in the annals of literature, or of statesmanship, or of war.

In conclusion: The Chairman of this committee, in his own behalf, and not in behalf of the Board of Visitors, respectfully invites your serious consideration of the importance of placing the buildings and grounds of the University in the hands of some competent superintendent, one of well known integrity and experience, competent not only to devise ways and means to enlarge and overhaul old buildings, to meet increasing requirements of the University, but capable of supervising the construction of new ones, who shall be provided with suitable quarters, and with maps and plans of every building belonging to the University, and whose books of account shall indicate an inventory of all apparatus in the several departments. It seems to the writer that the economical and useful ends thereby attained are manifold, and an experiment for one year is hopefully recommended.

Respectfully submitted,

(Signed) Lucien S. Hanks,
Chairman Board of Visitors.

Madison, Wis., April 18, 1899.

REPORT OF SUB-COMMITTEE ON NATURAL SCIENCES AND
SCHOOL OF PHARMACY.

To the Board of Visitors, University of Wisconsin:

In the Department of Natural Sciences the work of the University seems to be moving along smoothly, and your committee has few recommendations to make. A very large share of the students take this work, and the results seem to be what they should be. No great needs in the laboratories or working apparatus have been brought to our attention.

The University Museum, by far the best northwest of Chicago, was fortunate last year in securing most of the skeleton of a Wisconsin mastodon from the vicinity of Anderson's Mill, a special appropriation enabling the Professor of Geology to secure it. No regular appropriation has been available for making accessions to the Museum for the past nine years, and the only other special appropriation of any note was the one for the glass cases secured from the World's Fair. Rare

University of Wisconsin.

and practical specimens are liable to come into the market at any time and the Museum should have at least a small permanent fund for the purpose of securing them. We recommend that the sum of \$250 be set aside for this purpose, and that an additional like amount be appropriated for mounting the skeleton of the mastodon and making some other smaller improvements which are necessary.

Attention has heretofore been called to the importance of the School of Pharmacy in furnishing a thorough instruction to those who have to dispense articles which have so much to do with the health of the people. We believe each year adds to a general belief in the importance of this branch of education. There is no institution in this country which has a higher standing than this School of Pharmacy, and none in which the course of instruction is more thorough. There is need, however, for more instructional force, if the best results are to be obtained.

Until quite recently it was popularly believed that this branch of the University was costing more in proportion to the number of students than any of the others. Statistics recently prepared by the head of this school, taken from the University records, show that less than the general average is being paid in the School of Pharmacy, both for general total expenses and for instructional force in proportion to the number of students in attendance.

We believe that a closer feeling should exist between the general body of pharmacists in the state and this school, and particularly between the school and the State Board of Pharmacy. Each can be helpful to the other. As a means to this end, the state examinations of applicants for pharmaceutical certificates ought to be held in the laboratories of the school, where ample opportunities for testing the practical knowledge of the applicants could be had.

The untidy condition of the North Hall, in which the school is located, as well as the general condition of the laboratory tables, is called attention to. The study of pharmacy calls especially for cleanliness and neat habits. Such habits are not as apt to be acquired under untidy surroundings. The buildings should be refitted.

W. D. Hoard.

 ON UNIVERSITY FINANCES AND BUSINESS METHODS.

To the Board of Visitors of the University of Wisconsin:

Your Committee on University Finances and Business Methods started out with the knowledge of the fact that there are many people of intelligence in Wisconsin who believe, or fear, that the finances of the University are badly or carelessly handled, that the accounts of the institution are loosely kept and that the business methods are generally bad; and while this condition of things seemed hard to reconcile with the known integrity, high standing and business capacity of its Board of Regents, did they attend to its affairs, a majority of the committee declared, each to the other, that they would give the matter committed to them a careful investigation and become satisfied as to the exact facts before making a report. We therefore visited the University upon this business several times and gave the matter a

Report of the Board of Visitors, 1898-1899.

thorough investigation, with the result that we find the most complete business system and careful arrangement of accounts that the members of your committee have ever seen.

The system of requisitions, for supplies of every description, from the smallest item to the largest, seems to us perfect; the arrangement of the vouchers, upon which payments are made, and their approval and the checks thereon, most complete, and we believe the system faithfully followed. Bids are invited for all commodities purchased (where possible); the arrangements and blanks for such bids are as complete as the requisitions; the requisitions, the bids, the vouchers and all are approved by the executive committee of the Board of Regents and a record kept of their action, and these records and the system are open to the inspection of every citizen of the state. We inquired of the very efficient Secretary, Mr. Riley, whether we might send parties outside of the Visiting Board to examine into the business methods of his office and the institution, and he assured us that he and the Regents invited such inspection and examination and that he would give any and all persons every attention and assistance in looking into any part of the University's affairs.

We found, too, that an account has been kept with each item of appropriation made to the University, from any source at any time, and the enquirer can see at a glance how the appropriation has been used. In short, we are prepared to say that the University finances are carefully and well handled, and the business methods are so complete and safe that we can offer no improvements thereon. We sincerely wish that any resident tax-payer of the state, feeling at all interested or doubtful about the management of the business affairs of the institution, particularly should be an official in any capacity, would present himself to Mr. Riley, the Secretary, and enjoy the privilege of being shown the affairs of his office, as conducted by him, under the direction of the Board of Regents.

The committee of the Visitors having this department under examination last year made so complete a report regarding the income and expenditures of the institution that we feel it would be simply reiteration to go over it again. We endorse and approve that committee's report in every particular, except as to the matter of a recommendation that a suitable man be employed by the Board of Regents as Superintendent of University Property; that he should have the care of the immense accumulation of machinery and technical apparatus; that he should approve all requisitions for supplies and make the purchases. After consultation with various persons at the University we are of the opinion that the machinery and technical apparatus should be cared for in the department where it is placed and used, and the person in charge of that department should have charge of the apparatus there and be responsible for it. We believe, too, that the present system of requisitions and methods of making purchases, as adopted by the Board of Regents, is good, and that a new system as proposed would simply be adding circumlocution, trouble and expense, without giving more security or satisfaction.

University of Wisconsin.

REPORT OF SUB-COMMITTEE ON GRADUATE AND SUMMER SCHOOL.

You committee visited several seminary sessions, and talked with a number of professors doing graduate work. It would seem that the facilities for graduate work in several departments are very excellent. Very great interest is taken by professors in their advanced classes, and indeed, the criticism has been heard from educators in the state that the best energies of the professors are devoted to the advanced work, to the consequent neglect of preparatory classes. There is an impression in the state that Freshmen and Sophomores are handed over almost entirely to instructors and fellows, and miss the contact with the best minds, or at least with the older teachers. How far this is true, and how far it is unavoidable and even desirable, it would be interesting to ascertain, but our committee has not been able to give time enough to the subject to make a report on it.

Some of the University professors themselves are of the opinion that less attention should be paid to graduate work and more to undergraduate work. On the contrary, we were assured that this would sap the ambition and take the heart out of the work of many of the most competent men.

It has occurred to the committee that it would be of public value to the people of four or more neighboring states—say Michigan, Minnesota, Illinois and Wisconsin—if an understanding could be arrived at between the faculties of the great universities respecting a division of labor in graduate work. Some schools are already equipped with greater advantages in certain subjects, and an unnecessary duplication of the costly equipment for graduate work would thus be avoided. Combination, rather than competition, might effect economy just as it does in commercial undertakings.

(Signed) Florence Griswold Buckstaff,
Frank E. Noyes.

April 17, 1899.

 REPORT OF SUB-COMMITTEE ON PHYSICS, MECHANICS AND CHEMISTRY.

To the Board of Visitors, University of Wisconsin.

Your sub-committee has been much interested in the several subjects which came under its observation. We have visited several classes and listened to the recitations and lectures. There appears to be good interest on the part of the students and zeal and fidelity on the part of the instructors.

The recent discoveries in thawing of frozen water pipes, color photography, photography of sound waves, and production of the metal lithium by electric process, have all emanated from these departments. These discoveries have given the University a name and fame not alone in its own state, but throughout the whole nation and wherever civilization and the study of these subjects obtains. The reputation of Wisconsin and her University have been advertised by these discoveries

Report of the Board of Visitors, 1898-1899.

as no other means would have done. Aside from the incalculable value of the discoveries from a practical and money standpoint, they are, by their advertising alone, worth to the University a vast amount.

Attention has heretofore been called to the fact that the University is deficient in the apparatus necessary for practical demonstration and experiment. All the discoveries that have done so much for the University and the people have been under difficulties and with limited facilities. We are credibly informed that a recent scientific instructor from one of the eastern universities expressed his amazement at the inadequate equipment in the electro-chemical department. Michigan and Cornell, with which our University is most frequently compared, have each from three to seven times the amount of apparatus in their physical departments as is possessed here. The Department of Physics has to deal with nearly one-fifth of the whole body of students. We believe its inadequate equipments should be increased by the most liberal appropriations it is in the power of the Board of Regents to bestow. Additional instructors are needed, as the present small force will be called upon another year to do even more work, it having been arranged to give the Pharmacy students some elementary instruction in this department.

The Laboratory of Physical Chemistry is in need of better facilities for the study of electro-chemistry. The use of electricity in nearly all kinds of chemical processes is daily becoming of greater practical importance. It is therefore very desirable that adequate means for instruction in the application of electricity to the production of various chemical compounds and their analysis be at hand in the chemical laboratory. A small room, but the only one which now seems to be available, can be fitted up in the basement of the chemical building and will serve fairly well for a time as a laboratory of electro-chemistry. It is estimated that it would cost from \$275 to \$300 to equip this room with the necessary electrical measuring instruments and other appliances and to run connecting wires to the sources of electricity located in the machine shop.

Your committee are also of the opinion that the large number of students now receiving instruction in the chemical department require additional instructional forces.

The ventilation of Science Hall, recommended last year in several reports, and which has been favorably acted on and partially completed, is practically at a standstill because the money appropriated therefor was inadequate. The laboratories in the basement, where ventilation is most needed, are still unventilated. We believe provision should be made for the completion of this work at the earliest possible time.

(Signed) Frank E. Noyes,
Ellen C. Lloyd-Jones,
W. D. Hoard.

University of Wisconsin.

REPORT OF COMMITTEE ON AGRICULTURE.

To the Board of Visitors for the University of Wisconsin:

Your committee, to whom was assigned the duty of a special inspection of the Dairy School, the University Farm, the Short Course in Agriculture and the Farm Institutes, report as follows:

We have spent considerable time in an exhaustive study of the conduct, scope, character and outcome of these departments in the Agricultural College as was possible for us to make. We find it a large subject. Its evolution has come unconsciously almost to the people of the state.

What is being done here for the farmers is but little appreciated by the farmers themselves. By many it is looked upon as the work of visionary theorists, summed up in the criticism, "No man can farm in the way it is taught at Madison." Others, and by far the larger part, are indifferent, unable to see that the College has any special connection with the needs and problems of Wisconsin farm life. If they say anything it will be to charge that University farming isn't "practical." It would be a grand thing for the progress of our state if this great body of farmers could see that everything that is done here is with a purpose to be intensely practical. It seems to us that there exists a supreme necessity that larger effort be made to make the farmers of the state better acquainted with the great practical value to them and their children of this College and the teaching it gives. It has a direct application to the economy and profit of Wisconsin farming, as well as a larger and better equipment of the young men who are to be the future farmers of the state.

We examine first the finances of the College, its sources of revenue and the manner and system of expenditure. The only comment here will be, that we are surprised that so much has been done with so little money. Every guard and check possible seems to be made use of against misappropriation or waste of funds. All purchases are made by the Secretary of the Board, upon requisition approved by the chairman of the Farm Committee, the President of the University and by the Executive Committee, who authorizes the expenditure.

An exceedingly low rate of insurance is carried on all the buildings, at the rate of 95 cents for three years. A voucher of service is furnished for every employe, signed by Dean Henry and approved by the Executive Committee, and the same attached to the pay roll before pay can be drawn.

The business conduct of the College appears to be thoroughly honest and efficient.

THE DAIRY SCHOOL.—This is the first Dairy School organized in the United States. It teaches the science and practice of butter and cheese making according to the best modern understanding. Everything belonging to advanced creamery and cheese factory practice is taught and wrought out, with a practical thoroughness that finds its best justification in the fact that more scholars apply for admission yearly than can be accommodated.

The creameries and cheese factories of this and other states are fast coming to see the value, to them, of operators who have been equipped and trained with a knowledge and skill sufficient to meet the many exigencies which are constantly arising in factory work. For this reason such operators should be schooled to a certain extent in a knowledge of the science as well as the art of this business.

Report of the Board of Visitors, 1898-1899.

There is yet lacking in this school sufficient provision for teaching the art and science of dairying from the farm standpoint. The farmers of the state most seriously need a clearer comprehension of the economics of milk production, a truer understanding of the cow, her man-principles of dairy breeding, and the necessity of a more intelligent agement and feed as a dairy animal, a better understanding of the and healthful construction of dairy stables and barns.

We believe that more ample means should be provided to meet these most evident necessities. The creameries and cheese factories of the state are much further ahead in a knowledge of profit making and saving methods than are their patrons who produce the milk.

Greatly sought for is the knowledge that is taught here. It should be understood by the people that this school carries with it a constant and immediate application to the growth and prosperity of the state, and from it the University derives a greater fame than from any other of its colleges. We are convinced that it would greatly profit the state if an appropriation of at least \$150,000 was made for new buildings, a central heating plant and other improvements greatly needed to promote the practical efficiency of dairy education.

There is a powerful and constant call on this department of the College from all parts of the state, and this call should be heeded and provided for.

THE SHORT COURSE.—We deem this one of the most beneficent and hopeful features of the College. It would be a grand thing if every farmer in the state could look in upon this class of young men. They are not boys, but men, impressed with the seriousness of their work. Bitter is the complaint many of them have made to us, however, concerning the inefficiency of the rural schools in giving them the primary education they need to start fair and square in the Short Course. From out this University should go a strong sentiment in favor of better rural schools and the teaching of the elements of agriculture therein. The University should feed and invigorate the country schools by its powerful influence in legislation and educational circles.

There should be a thousand young men in attendance upon this course each winter, for it opens a new view to what can be learned and must be learned, if better farms and farmers is to be the fortune of the state in the future.

FARM INSTITUTES.—This is an agency or force which was organized to impart a knowledge of better methods, inspire pride and enthusiasm in the life and labor of the farm, and by addresses and discussions create a larger mental grasp among our farmers concerning the problems of improved agriculture. It has done and is doing that work in a most commendable manner. Your committee, however, would make two suggestions, to-wit: that greater effort be made to introduce fresh talent from this and other states, which we believe will greatly increase the future interest in these meetings; second, that the annual bulletin be printed on better paper and bound in a better manner. It is a compendium of agricultural wisdom and experience too valuable to be committed to such frail material, and its value is not for one year but for many.

BACTERIOLOGY.—Originally this very important department was established in the interests of the Agricultural College largely as a research laboratory. It was established in 1893 and was the first of its kind in the United States. The scope of the work has grown amazingly, and great demands have been made for original study and investigation in milk and animal pathology. There is also a constant increase

University of Wisconsin.

in the calls that are made upon Dr. Russell by medical students, requiring a constant supervision of their work. Also much time is taken up in the supervision of the studies of graduate students in other than the Agricultural College. In our opinion, the original agricultural purpose of the work of this department should be diverted to other lines.

Special effort should also be made to convey the application and usefulness of this branch of science to the people through the weekly and agricultural press of the state.

PHYSICS.—The first Department of Agricultural Physics in America was established in this College. Also the first State Department of Animal Husbandry. In the department of Physics, under Prof. King, the problems of farm mechanics are splendidly worked out, although because of a lack of means he has had to invent very much of the machinery he uses.

There is a close practical relation between Prof. King's valuable work and the farms of the state in many ways. His hands should be stayed and the scope of his usefulness increased in every way possible.

In the swine and sheep department greatly advanced work has been done in the way of demonstrating feeding problems with the former and cross-breeding and development in the latter. The prizes won at the Omaha Exhibition with grade mutton sheep from the University farm attest this. But there is a serious lack of cattle for experimental work along dairy lines.

Wisconsin is a leading dairy state. Original investigations concerning dairy cattle, their form, function and economy of production, as well as a wider line of experimental work in dairy feeding, such as is being carried on, notably in Minnesota and Connecticut, are needed here. A much larger outlay for a herd of cows, selected from all breeds, is greatly needed to round out the work and purpose of the College and the Experiment Station.

There should be provided also a first-class Veterinary Department, for the special use and instruction of the short course and dairy students. This we believe is a feature most seriously needed.

Your committee desire to commend in unqualified terms the integrity, ability and faithfulness of administration which has characterized Dean Henry and all his coadjutors in the College.

It should be remembered that many of the lines of instruction and experiment that have brought large renown to the University, such as the Short Course, the Dairy Course, Department of Physics, etc., were installed without guiding precedent from other institutions. Our people needed to know these things and the necessity evolved the methods.

We believe that the state should make liberal and special appropriations to the Wisconsin College of Agriculture, for it has the warrant of ample experience that such outlay will be quickly repaid in an increase of the intellectual and material growth of the commonwealth.

(Signed) W. D. Hoard,
C. M. Hilliard,
Frank E. Noyes.

Report of the Board of Visitors, 1898-1899.

REPORT OF SUB-COMMITTEE ON GROUNDS AND BUILDINGS,
LIBRARIES AND MUSEUMS.

To the Board of Visitors of the University of Wisconsin:

The Committee on Grounds and Buildings, including Libraries and Museums, have not visited the various buildings of the University together, as a committee, but in pursuance of our duties upon other committees, we believe every building has been visited by some member of our committee.

There is a lack of sufficient room in many of the buildings and recreation rooms, the most noticeable being in the building in the Agricultural Department, devoted to dairying and cheese making. The increase in the attendance in this department has been marked, and applicants have been refused admission (so we are informed), by reason of this lack of room. In our opinion, more prompt and greater benefit may be derived to the people of our state through the increase in the capacity and facilities in this department than any other in the University, and we trust a way may be found to accommodate all applicants for admission here.

The quarters occupied by the Library are greatly overcrowded, but the substantial, the grand and dignified looking Library Building will soon be completed and relieve a much needed change in this direction.

We find all buildings in good repair and well cared for. The grounds, naturally beautiful, will be still further beautified as years go on, and we hope such work may be done under some approved, intelligent, general plan.

It seems to us that the specimens and equipment in the museums are all well cared for, and while we are informed they are not equal in extent to those in collegiate institutions in this country of the same rank, we are impressed that good judgment and care has been exercised in the selection for this University, and that what there is is as good as can be found.

(Signed) Jas. H. Elmore,
Ellen C. Lloyd-Jones.

Dated April 13th, 1899.

REPORT OF SUB-COMMITTEE ON MECHANICS AND
ENGINEERING.

To the Board of Visitors of the University of Wisconsin:

Your Committee on the College of Mechanics and Engineering submit the following report for your consideration:

This College, which embraces the courses of civil, mechanical and electrical engineering, has an attendance of 252 students during the present college year. Its growth has, during the past ten years, been at a more rapid rate of increase than that of the remainder of the University or any other college thereof which required a certain standard for admission. The percentage increase in attendance during the past five years has also been greater than that of any other leading school of engineering of any western college, that of Cornell not excluded.

This is wholly attributable to the fact that this college enjoys a widespread and enviable reputation and because its graduates are con-

University of Wisconsin.

stantly in demand, many of whom are occupying stations of great and varied responsibility and positions of importance throughout the country, while its faculty is adding honor and fame to the University because of the achievements and researches of its members, as has been again established during the present college year. This advantageous condition is, however, not being promoted by the absolutely inadequate room and space to which the instructors and students are limited for their classroom, shop and laboratory work.

The three class-rooms in Science Hall devoted to the use of this college are entirely too small and are continuously appropriated by six different instructors so that no preparation can be made in advance for illustrating lectures. The two draughting rooms in Science Hall are also overcrowded, several classes meeting in them at the same time, and every available space being utilized to the disadvantage of every student, while the drafting room on the second floor of the machine shop is so entirely unfit on account of the excessive vibration that its use for that purpose should be at once discontinued.

The laboratories and work shops are all overcrowded and as a result neither the instructors nor the students have the full benefit of tools or instruction. These facts are not unknown nor are the statements new, but they cannot be presented too frequently nor too strongly if the interests, credit and reputation of the college are to be maintained and it be made, as it can be, the greatest engineering college in the west.

Unusual activity is shown and efforts are being made at other engineering colleges to afford students ample room and facilities for instruction in recitation, lecture and drafting rooms, in laboratories, machine shops and instrument rooms, and in obtaining additional apparatus, tools and machinery for the purpose of broadening and extending the courses of instruction, and the University of Wisconsin cannot afford to lose the vantage ground it now possesses by a policy of unwise economy.

There seems to be very little doubt but that the Legislature, recognizing the urgent needs of this college, will at this session appropriate one hundred thousand dollars for an engineering building, but this will be only sufficient to remove the present impediments. The rapid increase in the number of students and the rapid progress made in all branches of engineering require room for development, particularly in laboratories. Especial consideration in designing the new building should therefore be given to the laboratory facilities now required in all modern engineering courses. For this reason the arrangement of the interior of this building should be left to the engineering faculty who are more familiar with what is required for their special work of instruction and illustration than the architects.

During January of the present year a Dean was appointed for the college for the purpose of taking charge of its administrative affairs and attending to its increasing responsibilities caused by its growth and development. To give the Dean ample opportunity to meet the expectations and in order to obtain the full benefit of his labors for this college ample facilities should be granted him to expand the work, without drawing upon the present income of the college, which is and has been barely sufficient to meet the demands and needs upon the present basis. It is necessary, therefore, in order to make his administration a success, that he be given a fair opportunity without being made to feel that his advent has deprived the college of the limited amount which it heretofore devoted to additional equipment so far as the same was most urgently needed.

Report of the Board of Visitors, 1898-1899.

In the future, as the number of students in these classes increase, this available fund will be even more necessary for the purpose of equipment. A complete hydraulic laboratory, preferably located near the lake, should be provided as soon as possible, an air compressing plant, larger testing machinery and apparatus necessary for testing power transmission machinery and for obtaining all other data necessary for machine designing, also a geodetic laboratory, surveying instruments, illustrative polyphase electrical power transmission machinery and also for arc lighting and other electrical and illustrative equipments are all greatly needed. Therefore the necessary expenditures of the Dean should be provided for in addition to the usual budget allotted to the college.

This department of the University has grown to such importance that it would be quite desirable to give it the advantage of an independent faculty and with a partial reorganization of the teachers and the division of class work, so that a certain subject is taught by one instructor instead of having it parcelled out among a number of them, who cannot in that manner do either the subject or student full justice.

In conclusion it is but just to state that we have been impressed with the earnest and painstaking work that is being done, under the many disadvantages, by a certainly enthusiastic corps of instructors, for whom, and the school, we would solicit the most generous aid of the honorable Board of Regents.

Respectfully submitted,

(Signed) Geo. H. Benzenberg,
Geo. C. Markham,
Jas. H. Elmore.

REPORT OF SUB-COMMITTEE ON STUDENT LIFE OF YOUNG MEN.

To the Board of Visitors, University of Wisconsin:

The study and consideration of student life presents so many different phases that your committee is almost at a loss to determine what subject should receive the most attention in the brief report that is expected of it. Aside from the regular work of the different courses there are many conditions of life that have to do with the moral and physical well-being of the students.

One phase of life which commends itself to your committee is the democratic spirit that prevails in the University. There is a lack of that ultra fashionable life, aristocratic and expensive living that prevails so largely in some of the eastern institutions. We believe that there are very few students whose yearly expenses reach a thousand dollars, and comparatively few who spend five hundred dollars during the college year. The average is believed to be about three hundred dollars, and there is good ground for the belief that there are more whose expenses are less than this amount than of those whose expenses exceed it.

Many of the students are self-supporting; how many is not known, for no bureau of information on this point has ever been established. It is believed, however, that at least 200 students either contribute in part to their expenses while here or are dependent wholly on their

University of Wisconsin.

own exertions. An effort has been made by some of the professors, by the University Y. M. C. A., and by the students' Co-Operative (store) Association, to discover places where students might earn something in the city, and many have thus secured employment. But there is lack of organized effort in this direction. We believe it would be of great practical advantage if some one among the post graduates or instructional force could be paid a small salary to give the matter of student employment a goodly share of his time and attention.

In the way of help to poor and needy students there is opportunity for some one of philanthropic mind to do much good. Fellowships are needed for those pursuing advanced studies, but whose means will frequently not permit of their remaining to do work for which they have shown special aptitude and which would frequently prove of much value in the scientific or literary work. At least twenty scholarships ought also to be provided for poor students of more than average proficiency. There is also need of a loan fund which might be placed at the disposal of students who have shown themselves worthy of it, to be returned by them after they have gotten out into the world and earned sufficient to repay. The scholarships might also be put upon the return basis. Experience elsewhere has shown that where such funds have been available they have seldom failed to be returned by the borrowers in after years.

The various scientific, literary and social societies connected with the University are doing much to supplement the instruction received in classes. There is a lively interest in the debating societies, which is increased and fostered by a system of state and inter-state contests in which the University has generally been quite successful. The dozen or more fraternities which exist among the male students, besides contributing much to their social enjoyment, have, we believe, a tendency to raise the standard of conduct and scholarship by reason of the general desire to see the individual societies take front place in college affairs.

Class spirit exists to a greater or less extent but is almost wholly free from that rowdyism which has been a characteristic of some institutions for years.

The University spirit is perhaps more strongly fostered by the debates with other institutions and by the athletic contests than by any other means. The success which has attended the college in its athletic contests has done much to advertise the institution. This success has been possible because of the excellent gymnastic work required during the first two years of the college course, and the splendid facilities for physical training furnished by the University Gymnasium. The Athletic Association, managed almost wholly by the students and depending upon its own resources for the expenses incurred, we believe should have the encouragement of the Regents and the people of the state as well.

There seems to be a growing spirit in favor of physical training and a recognition of the fact that a sound body and a sound mind go together. Many physical defects are corrected or made better by the examinations and work done under the direction of the physical director. The required work is submitted to with a better will than it was some years ago, and many keep up their physical training throughout their whole college course. Besides the work now done we believe a knowledge of swimming should be required of every student and additional help secured for that purpose, if the present force of instructors is not sufficient. In this connection attention is called to the fact that the 400 lockers in the Gymnasium are now rented all

Report of the Board of Visitors, 1898-1899.

the time and calls are constantly being made for more. The increasing popularity of the Gymnasium makes it advisable that more lockers should be provided. As these bring a good rental, they will soon pay for themselves.

We witnessed some of the military drills and were impressed with the martial bearing of the students. Military drill, while not as popular as the other physical work, is in better favor than it was a few years since. This is ascribed both to the competitive drills and prizes, and to the spirit of patriotism which the whole country has felt by reason of the late war with Spain.

It is believed that a dormitory for the young men would be helpful in many ways. It would reduce the expenses of living to those of slender means and would supply a community of feeling among many of the students which is now at least partially lacking. It would also contribute to a wholesome University spirit.

Your committee is fully in accord with the general sentiment of the full committee as to the advisability of securing the coming together of the whole body of students in one place at frequent intervals. How this can best be accomplished we know not, but the idea is, we are informed, receiving careful consideration from the University authorities, and we trust will be productive of some practical method of accomplishment.

REPORT OF SUB-COMMITTEE ON ANCIENT LANGUAGES.

The Committee on Ancient Languages offers the following Report:

Having observed the work of the two departments of ancient languages in class-room and seminary, we find it in every case worthy of commendation. The number of students in both departments is much larger than in former years, and there is abundant evidence of that enthusiasm among them which well-directed study of the Latin, Greek and Hebrew languages and literatures is adapted to arouse. We expect that ample accommodation for the large number of classes in these departments will be assured when the much needed addition to University Hall shall have been completed. We recommend to the Board of Regents the fostering of the Department of Hebrew and Hellenistic Greek, as well as continued support to the Department of Classical Greek. The latter has been greatly strengthened during the past few years, and we know that its upbuilding and growth have been very gratifying to many friends of the University and sound learning throughout the state. The study of Hellenistic Greek is pursued with a somewhat different plan and purpose from that of Classical Greek, less, in many cases, for critical and philological ends and more exclusively as a means of acquaintance with the literature of the Hellenistic period. For students interested in that literature, a knowledge of the classical forms and authors is very desirable, and those who can give the large amount of time necessary for such acquisition should do so; but there is a considerable number of students who have been debarred from that advantage, who yet have the ability and the desire to learn to read the Hellenistic authors in the original. And it is not inconsistent with the ideals or the practice of this and other

University of Wisconsin.

Universities to furnish them the opportunity. The fact that the instruction offered in the Department of Hebrew and Hellenistic Greek is valuable, besides in other ways, for saving time to students who intend, after leaving the University, to enter theological seminaries, is a strong argument for fostering this department, in view of the fact that the University offers important courses of instruction, arranged specifically to save the time of students who are preparing themselves for the other learned professions.

An outgrowth of the study of ancient languages in the University is the Classical Club which, while asking no support from the University, reflects great credit upon it, and supplements the work of the Greek and Latin seminaries, the three together furnishing opportunities for advanced study which we believe are surpassed at very few institutions.

Respectfully submitted,

REPORT OF SUB-COMMITTEE ON STUDENT LIFE OF YOUNG
WOMEN.

Your committee on Student Life of Women would submit the following report:

We find that the work of a large number of young women in Ladies' Hall is much hampered by the presence of the Department of Music in that building.

The constant practicing upon a number of pianos necessary to the conduct of this department cannot be otherwise than distracting to those occupying rooms adjacent or anywhere in that part of the building.

We recommend that room be made for the Department of Music elsewhere, either in Library Hall or in some other convenient place.

We believe that the social side of student life has been and is too prominent in the University. Self-imposed restrictions in this direction will probably be most effective and most easily administered.

We, therefore, heartily commend the beginning of the development of the principle of self-government among the young women in its application to the social life of the University and we hope from its auspicious beginning to see favorable results, though of necessity changes must come slowly.

The most serious evil encountered in our investigation of the student life of the young women in the University is a practice known as "rushing," pursued by the members of the sororities. The societies are numerous, their social influence is large and the competition among them in securing members from the newly entered students is so great as to lead to an expenditure of time, strength and money well nigh incredible. This evil has reached such proportions that, in our opinion, it should no longer be winked at by the authorities of the University. Unless action is soon taken by some organization of the young women themselves, which will be prompt and effectual in checking the crying evil, we recommend that such action be taken

Report of the Board of Visitors, 1898-1899.

by the governing body of the University. We hold that the state which has provided these splendid opportunities for instruction and investigation should protect the daughters of her citizens, and the sons as well, when they come here to enjoy the same, from practices which directly interfere with the object of their coming.

The work done by the young women in Physical Culture is deserving of much commendation. The enthusiasm with which the work is pursued and the results attained give evidence of superior instruction. We, therefore, recommend a continuance of the methods and system now employed in this department.

(Signed) Carrie B. Oakes,
Chairman,
Mary O. M. Walmsley.

March 30, 1899.

REPORT OF THE COMMITTEE ON HORTICULTURE AND PHYSICS.

To the Board of Visitors to the University of the State of Wisconsin:

Ladies and Gentlemen: Your committee to whom was assigned the duty to visit Horticultural and Physics Hall and inspect the work and instruction being done or given there, beg leave to report as follows:

We have singly and collectively visited this building and make our report from what we have seen and heard while there.

We beg to say at the outset that we have not, and probably none of the former committees of visitors, at least while in the discharge of official duty, have been able to see the Horticultural garden while work was being done in it, or while its vines and orchards were growing and being handled with a view to develop their producing capacity. This garden is one of the valuable pieces of property of which our state is the fortunate owner, and no doubt its value will increase in the near future. We have been informed that the sale of fruit and berries raised from it in the year 1898 amounted to about \$123, and as its planting has just commenced to bear it can safely be predicted that favorable climate conditions only are all that is needed to make the increase from this property a nice showing in the receipts of the agricultural school.

This money has been paid over and has found its way into the State Treasury, and has been accounted for in the manner provided by law. The reason this garden, and the work done upon it and in it has not come under the inspection of the visitors and their committees, is because the visiting is done in the winter and early spring months, and at a time when the garden is locked in the icy fetters of winter, or has not recovered from the effects thereof, so as to be clothed in summer verdure, or with the crops of their natural bearing.

But your committee were entertained with much interest and personal benefit while visiting the work being done in the departments under the supervision of Professors Goff and King in the Horticultural and Physics Hall building during winter. We cannot go into detail at all, and must be brief in general report.

The work of Professor Goff in horticulture relates to the raising of fruits and berries, of grapes and their many varieties, and vegetables of all kinds, plant and flower culture, propagation by cutting,

University of Wisconsin.

pruning and transplanting, and by crossing varieties by the pollination of flowers, thus making new varieties and improving old ones. The subject of grafting receives proper attention, and the adaptation of the soil to the many uses it is put to, and the question of disease of plants, vines and orchards is given special attention. We found the greenhouse a scene of perfect beauty. The garden vegetables, domestic house plants, and tropical species, all at their best in icy midwinter prove the possibilities as well as the value of well directed labor.

It may be said that it is a waste of money on the part of the State and of time and labor on the part of young men to give attention to the above mentioned subjects; but your committee does not think so. What person engaged in the business has not had trouble with the diseases and pests of plants, vines and orchards; and in the failure in grafting, cutting, pruning and transplanting and many other matters? Each person engaged in such work cannot afford to spend all his time to devise ways and remedies to prevent failure in these cases. The State gives special attention to the solution of these difficult problems and then publishes the results of its work so that every person interested in any of the subjects referred to, and many other of kindred nature, can have the full benefit of the work and investigations carried on by the State free of cost to them, and as the work of this department of the Agricultural College receives attention and interest from a large part of the people of our state the necessary provision to disseminating free information concerning it is as apparent as that of any other department of the University.

In the Department of Physics we find practical work on what is too often passed as too tedious for attention. A great part of the instruction relates to the application of the principles of Natural Philosophy to the practical work of the farm. To know and to understand how to apply the laws of nature, of gravitation, of force and electricity, is no disadvantage to the students taught in the department of Physics; it is essential to their success.

And those who are foremost in grasping and applying them will certainly be among the foremost in life's work and conflict.

We will briefly mention some of the work, such as running and operating portable steam engines, gasoline and caloric engines, some of the modern and common uses of electricity, operating self-binders, reapers, and all farm machinery, a study of the improvements and inventions in making and using farm machinery and farm utensils; also practical work in the operation, strength and power of the various kinds of windmills for drawing water, hydraulic rams, carrying water in pipes, drainage; silos, their construction, and filling them and preserving their contents, and the value thereof for stock food; and practical experiments and illustrations in the rules and principles that govern in the application of force and power to the many diversified industries in common and farm work. The general aim and purpose seems to be to give intelligent direction to the work of the student hands.

We believe it to be fitting and proper to report to you that we learn from observation and inquiry that the conduct of the students that receive instruction in this department of the University is generally good, and their department has been orderly and creditable in a goodly degree. This fact alone justifies the state in maintaining

Report of the Board of Visitors, 1898-1899.

and supporting it. We find the students have plenty to do. The lessons in the books and the practical work assigned are ample to keep their attention from everything else. They seem to be thoroughly imbued with the spirit of work and investigation.

If the impression prevails anywhere that the State University is a good place for loafing and putting in time with ease it cannot be confirmed by a visit to this department of the Agricultural College, nor to any other, we can safely affirm.

Recitations begin at eight A. M. and are held as late as five P. M. They are continuous as to all, and thus students find time to learn lessons and do work while others recite.

We are gratified to learn that this department is making satisfactory progress in all material respects, as in prompt attendance, in numbers, in interest in the amount and quality of work done. We have a right to expect this and are glad to report that it is realized.

(Signed) C. M. Hilliard,
Chairman,
Jas. H. Elmore,
H. C. Martin.

REPORT OF SUB-COMMITTEE ON COLLEGE OF LAW AND SCHOOL OF ECONOMICS, POLITICAL SCIENCE AND HISTORY.

Hon. L. S. Hanks,
Chairman Board of Visitors, University of Wisconsin,
Madison, Wis.

Dear Sir:—The field allotted to us for visitation and investigation is a vast one and of great interest and importance. It is a matter of regret, therefore, that your committee has had so little time and opportunity for visitation and examination of the work done, especially in the departments of Economics, Political Science and History. Your committee has visited these departments sufficiently, however, to realize how beneficial they are and to become thoroughly convinced that on the whole, the work done is deserving of great praise and commendation, and that the few criticisms your committee, individually or collectively, may have felt inclined to make might be misunderstood and work harm rather than good. The teaching of Economics and Political Science covers such vast and varied fields of research, so many questions unsettled, and to a certain extent uncertain as to their true application to human affairs, that the professors in these departments have been in the past and may expect to be in the future, subject to more or less criticism. We are constrained to believe, however, after considerable inquiry and investigation that facts are put above theories so far as it is possible to do so, and that students are encouraged to investigate and draw their own conclusions,—that is to say, facts are emphasized more than theories, and it is not claimed that as yet any author or professor has discovered the whole truth and is infallible in his application of facts discovered to theories advanced. The teaching in these departments has largely to do with good citizenship, hence it is of more than ordinary importance that the professors should be possessed of strong personality and teaching power. We are glad to find that some of the strongest men in the University are among the professors in these departments, and these men should be retained at whatever cost.

University of Wisconsin.

The Law Department is strong and progressive and with the three years' course is holding up the standard. The State Board of Examiners should see to it that the bars are not let down by reason of too easy state examinations. We earnestly recommend that no departure be made from the three years' course.

Respectfully submitted,

(Signed) H. C. Martin,
Chairman.

The Board of Visitors respectfully suggest to the Regents the need of supplementing scholastic instruction with general exercises of an ethical nature, tending to influence the character of students, and to inculcate those social virtues the lack of which render mere intellectual acquirements of comparatively little worth and which may become a menace to society.

The Visitors therefore recommend that the Faculty meet the students at stated times and that they arrange such exercises as in their judgment are appropriate to such meeting.

Report of the Board of Visitors, 1899-1900.

REPORT OF THE BOARD OF VISITORS, 1899-1900.

To the Honorable Regents of the University of Wisconsin:

The Board of Visitors for the school year 1899-1900 beg leave to report that they have concluded their labors and herewith submit for your consideration the reports of the various sub-committees which are attached hereto.

The following resolutions were adopted by the Board at its meeting April 2nd, 1900, viz.:

Resolved: That the Board of Visitors, as a whole, reaffirm and commend to the consideration of the Board of Regents of the University, what was said by the Board of Visitors last year regarding football.

Resolved: That the Board of Visitors urge the Board of Regents to consider favorably the establishment of a Department of Chemical Engineering, and Short Course of Laboratory and Shop Instruction for Mechanical and Stationary Engineers, recommended by Dean Johnson; and also call especial attention to and endorse that part of the report of the Committee on Agriculture relating to an Agricultural building.

The members of the Board have been constantly afforded every facility for investigation by the faculty and officers of the University in all departments and they take pleasure in expressing their satisfaction in general with the management both of the business and the educational affairs of the University.

Respectfully submitted,
(Signed) John B. Winslow,
Chairman of Board.

April 4, 1900.

REPORT OF COMMITTEE ON ANCIENT LANGUAGES.

To the Board of Visitors of the University of Wisconsin:

Your Committee on Ancient Languages submit the following report:

Owing to the special favors bestowed during the past five years, the departments of Classical Greek and Latin are admirably equipped for their work.

Their quarters in the new wing of University Hall are commodious. Their books of reference in the Library are varied and valuable. Their instructional force is ample and able.

We find that the work done in these departments fully justifies the expenditures and we hope for a continuation of generosity towards them.

University of Wisconsin.

The department of Hebrew and Hellenistic Greek is not so fortunate in its equipment, although we find it equally deserving with the other two departments of the Ancient Languages of attention and patronage. Its possibilities are great, but the work is very much hampered, especially by the limited number of the instructional force, and we would recommend the establishment of English courses.

The work done so far as it is able to be carried on is of a high order and merits commendation.

(Signed) Carrie B. Oakes, Chairman,
John G. McMynn,
A. A. Kiehle.

 REPORT OF THE COMMITTEE ON MODERN LANGUAGES.

The committee on this subject for the current collegiate year has little to add to the report of the committee for 1898-1899.

So far as the catalogues furnish information, the Modern Classical course has not increased its enrollment during the last five years by as many as during the five years preceding.

The regular students in this course were in:

1888-1889	73
1893-1894	99
1898-1899	113

The increase during the first five years was 26 and during the second five years it was 14. During the ten years, there was an average annual gain of four regular students.

The English and Civic Historical courses may be combined for comparison with the Modern Classical. United the enrollment was in:

1888-1889	104
1893-1894	198
1898-1899	346

The increase during the first five years was 94 and during the second five years 148, and during the ten years there was an average annual increase of about 24 regular students, or about six times the annual increase of the Modern Classical Course.

If we combine the Ancient and Modern Classical graduates, and the graduates of the English, General Science and Civic Historical courses and compare them, we shall obtain an indication of the drift of instruction and training at the College of Letters and Science.

Years.	Ancient and Modern Classical.	English, General Science and Civic Historic.
1888-1889	30	34
1893-1894	38	71
1898-1899	42	96

The Classical courses gained 12 during the ten years and the other courses gained more than five times as many. The result of instruction and training in the College of Letters and Science during the

Report of the Board of Visitors, 1899-1900.

last ten years has not been towards linguistic acquirements nor towards what, in the opinion of most scholarly men, constitutes a liberal education.

The following table shows the number of regular students registered in the different courses of the College of Letters and Science, the number of graduates in 1898-1899, and the ratio of graduates to registration in the respective courses:

Courses.	Registration.	Graduates.	Ratios.
Ancient Classical	97	15	1 : 6.46
Modern Classical	113	25	1 : 4.52
English	222	43	1 : 4.59
Civic Historic	154	28	1 : 5.5
Total	710	138	1 : 5.14

While statistics of the above kind for a single year will not warrant inferences of importance, yet they are not wholly valueless.

The specials and the "adult specials," of whom there were 144 enrolled, are not included in the above, although they are eligible to matriculation and graduation. If these are added to the registration given in the table, the ratio becomes 1 graduate to 6.2 students.

The Board of Visitors for 1898-1899 called special attention to the need of teaching French, German and Spanish languages so they shall subserve the demands of commerce, travel and diplomacy. The Committee for the current year desire to emphasize the views expressed last year. The unprecedented increase and extension of our foreign commerce and our new political and business relations with millions who speak a foreign tongue impose upon us the duty of providing adequate means to meet our national responsibility.

At present the instruction in the modern languages is less confined to mere ability to read the text book, and this the Committee commend. They deem ability to speak and write the modern languages of paramount importance. As most of the linguistic work done at the College of Letters in Modern Languages is secondary rather than collegiate, the Committee desire to call the special attention of teachers to "The Report of the Committee of Twelve of the Modern Language Association of America," which was published in the report of the U. S. Commissioner of Education for 1897-98, Vol. 2, pp. 1391-1433. The Committee was appointed two years ago. The Chairman was Calvin Thomas, Professor of Germanic Languages, Columbia University. The report is worthy the scholarship and experience of the distinguished teachers over whose names it is published.

The Committee of the Visitors would recommend to the Regents that more time and more study be given to the ancient as well as the modern languages. The number graduated in the Ancient and Modern Classical Courses, when compared with the undergraduates in those courses is exceptionally small. While the number pursuing linguistic studies, compared with the total registration, is more limited than in any other college of equal age and similar reputation in the United States.

(Signed) John G. McMynn,
Ellen C. Lloyd-Jones,
Mrs. Fannie West Williams.

University of Wisconsin.

REPORT OF THE SUB-COMMITTEE ON THE SCHOOL OF LAW AND SCHOOL OF ECONOMICS, POLITICAL SCIENCE AND HISTORY.

The sub-committee upon the above named schools beg leave to report as follows:

First, as to the Law School:

The importance of a thorough legal education can hardly be over-estimated. The Committee note with satisfaction the fact that the course has been extended so as to cover a period of three years, thus placing the school upon the same plane in this respect as the great law schools of the East.

The Chairman of the sub-committee was a student in the Law School twenty-five years ago when the course was completed in one year, and the general subjects covered in that year were but three or four in number. Comparing the present school with the school as it then existed, the advance in all respects is most gratifying.

It is believed that practically the whole field of legal subjects which are profitable for study are now fully covered by a corps of able and earnest lecturers.

The school seems to be accomplishing its purpose and materially assisting in raising the standard of legal education in the country.

A single suggestion might perhaps be made. While the subject of legal ethics is covered in the regular course, and doubtless quite ably covered, it would, in the judgment of the committee, be desirable to obtain, if possible, a few lectures each year upon this subject from some distinguished member of the bar whose words might perhaps carry additional weight on this very important subject.

In these days, when the law is considered by many as simply a money-making business, the importance of impressing upon law students the dignity of the profession and the paramount importance of strict honesty and integrity is very evident.

Second, as to the School of Economics, Political Science and History:

This School is filling a most important place in the curriculum of the University. Intelligent knowledge of the political and economic history of civilized nations can not fail to make more thoughtful and intelligent citizens who are vastly better fitted to take their part in the solution of the problems which now confront the people of the United States. The events of the past two years have vastly broadened the horizon of our citizenship and are presenting to us questions which will demand broad and enlightened views and the wisest treatment.

So far as we have observed, the School is doing its work satisfactorily and well.

(Signed) John B. Winslow,
Chairman,
John G. McMynn,
C. M. Hilliard.

Report of the Board of Visitors, 1899-1900.

REPORT OF SUB-COMMITTEES ON FARMERS' INSTITUTES, THE FARM AND SHORT COURSES.

Hon. J. B. Winslow, Chairman Board of Visitors, University of Wisconsin:

Dear Sir:—Your Committee having in charge the inspection of the University Farm, the Dairy School, the Short Course in Agriculture, the Farmers' Institutes, submit for your consideration the following report:

We have spent considerable time at the farm and have endeavored to get a comprehensive idea of the work being done. Under the direct supervision of Prof. Henry the farm work is carried on in such a way as to be closely allied to the Farmers' Institutes. At this farm the matter of food rations to produce the best results is a matter of very careful study. The rations to be fed to cows to produce the most and best milk at a minimum cost is here practically demonstrated; so also the rations for the production of beef, pork, mutton and wool. After the experiments have been thoroughly tested and proved they are soon broadcast over the state through the medium of the Farmers' Institutes and bulletins issued by the department, which are sent free to all applicants; so, to our minds, if a farmer does not avail himself of the work carried on here for his benefit, it is his own fault and not the fault of the state or the state's excellent corps of workers. It would be a blessing and a profit beyond computation if all the farmers of this state could be brought to see the great practical work carried on here for their benefit. If the bar of prejudice existing in their minds against this, their own state experimental school, could be wholly thrown down, the prosperity of the farmers of this commonwealth would take such a leap forward that they would be surprised themselves.

We would especially recommend an increase of the number of cows and other stock at the farm, in order that more, and if possible better, experiments may be made along the line of the best feeds for the accomplishment of a definite purpose.

We were shown over the now very complete horse barn. With the increase in the price of horses comes a renewed interest in this branch of our farm. The training up of a large class of young men each year to thoroughly understand, not only the points of a good horse, but how to breed that horse, and if taken sick, how to treat it, is one of the new branches of our Agricultural College, and we recommend that the Veterinary department of our school should receive more attention and be placed under the supervision of the most skilled teachers that can be procured.

As hog cholera has become one of the most dreaded diseases to our farmers, destroying as it does thousands of dollars worth of hogs each year, we would very urgently recommend that our Veterinary department pay especial attention to this disease and try to discover some means of coping with this scourge.

The Dairy School—Wisconsin stands first in Dairy Schools. Not only was it the first state to organize a Dairy School, but today it stands first in instruction. It has no superior and few that approach it in efficiency. The number of students seeking admission to this branch of our institution is far more than can be accommodated each year, which points to its popularity, but we must not stop, we must not say, "Let well enough alone," but "In what way can the most improvement be made?" The Creamery and Cheese Factory are the news dis-

University of Wisconsin.

tributors and the educators of a large body of farmers. At no place do the farmers get together so much and compare notes as at the factory. The dairy student should have a thorough knowledge of the best food rations for the production of good milk. The cheese or butter maker can do more to get the farmers to feed right than any other person, and it is for his interest to do so; hence he should have a thorough training in how and what to feed and the treatment of the common diseases of stock. It has been proven that this state is well adapted to the manufacture of Brick, Limburger and Switzer cheese. These kinds bring a very high price in the market, and as this state leads all others in their manufacture we would strongly recommend that instruction in the making of these cheese be added to our Dairy School and a sufficient appropriation or the employing of instructors and the building of such curing rooms as are best adapted to the handling and curing of the same. The bulletins issued by the experimental farm are of inestimable value to the farmers, and as a means of distributing them and placing them in the hands of the very men for whom they are intended and where they will do the most good, we would suggest that each creamery and cheese factory in the state be used as a medium of distribution.

The Short Course—The Short Course is receiving increased attention each year, as attested by the attendance. We are pleased to note this, for it shows the farmer is awakening to his opportunities. What the Law School is to the lawyer, or the Medical School is to the doctor, the Short Course is to the farmer. It fits him for his profession. The present facilities for this school are not what they should be. The lecture hall is located a long distance from the experimental work, which entails a great amount of labor, both on teachers and pupils, and takes up much valuable time that should be given to practical work. We would recommend that a suitable building for the accommodation of the Agricultural School be built as soon as possible where it can be more advantageously used by this department.

The Farmers' Institutes—The Farmers' Institutes are a very important adjunct of the Agricultural College. At them the farmer does not have to spend his time and money to go to the Agricultural College. The College comes to him. It is the University extension course for the farmer. Here the best and most progressive agriculturists of the day are brought face to face with the farmers of the neighborhood where the institutes are held. An interchange of ideas is had; questions asked and answered, and the farmers much benefited, not only by the interchange of ideas but socially. It gives the farmers a better idea of the agricultural school and shows them the great good to be derived therefrom. It is a part of the Agricultural College that should be fully maintained.

In conclusion, we commend to you the work being done by the Agricultural College by a corps of instructors, not only of state but of national reputation; and we believe that every dollar expended by this school under the direction of Dean Henry will be returned to the state a thousandfold.

Respectfully submitted,

(Signed) J. H. Harris,
C. M. Hilliard,
Frank E. Noyes.

Report of the Board of Visitors, 1899-1900.

SCHOOL OF PHARMACY.

Milwaukee, Wis., March 31, 1900.

Hon. J. B. Winslow, Madison, Wis.:

Dear Sir:—The writer has visited the School of Pharmacy three times since last fall, and if all matters talked over with different professors were to be embodied in a report it would fill pages, but not having studied pharmacy or any branch of it I would not pretend to pass judgment professionally. It was hinted to the writer that the apparently small number of students was due to lack of management and popularity of the executive members of this department, and upon direct questioning I was shown statistics comparing the attendance at our University with the attendance in schools of five adjoining and neighboring states. These show, if correctly reported, in favor of the Wisconsin University, and should therefore preclude any direct charges. Upon investigation in this city it seems evident that examinations of applicants made by the State Board of Pharmacy, owing to the limited time devoted for this purpose, are not as thorough as might seem advisable, and owing to this fact students rather hesitate before going through a long term of study and work at Madison and take their chances with the Board of Pharmacy. The Board of Regents, in my opinion, should advise with the Board of Pharmacy in order to enable them to act wisely in the interest of the pharmaceutical department. As to the condition of the building, it is shamefully neglected and seems to indicate that the recommendations of the former Board of Visitors must have been entirely ignored.

Very respectfully,

(Signed) John H. Frank.

 ON ASTRONOMY AND MATHEMATICS.

To the Board of Visitors of the University of Wisconsin:

The Committee was pleased to find the Astronomical Department supplied with good instruments, and well equipped for practical work.

Prof. Comstock being absent because of impaired health, his assistant, Prof. Flint, politely conducted the Chairman of the Committee through the Observatory building, and explained the utility of the various instruments, all of which seem to be of a high grade, and permit superior work in this department.

Upon visiting the Department of Mathematics the Committee was impressed with the efficiency of the corps of instructors. There is evidence of the best work being done. It was observed that each of the professors taught a class of Freshmen. We speak of this for the reason that there has been some criticism the past two or three years because the Freshmen, in the Department of Mathematics, were left in the hands of instructors. We saw nothing in this department with which we were not pleased, and were impressed with the thought that it is in the hands of competent and able instructors.

REPORT OF SUB-COMMITTEE ON STUDENT LIFE OF YOUNG MEN.

The study of the various phases of student life is an interesting one, but a thorough understanding of all the conditions would require much more time than your committee could possibly give it. We can, therefore, offer only a few suggestions as ideas have come to us from a cursory examination.

Prominently connected with the student life of the past year was the disgraceful raid on Ladies' Hall that occurred last Halloween. It was bad in the things actually done, and worse in the unfavorable criticisms it caused against the University. While it is in no manner to be excused, the popular idea of it was worse than the actuality, due to exaggerated and sensational newspaper reports. Your committee is satisfied that there was no prearranged plan to do wrong, but that the ghostly parade which led up to the affair was ill-advised. The punishment by which thirteen of the ringleaders were suspended for indefinite or definite periods was severe but merited and meets with our approval. We learn that strong pressure is being exerted on Faculty and Regents to reinstate some of the worst offenders. As we believe there was no favoritism exerted by the Faculty in dealing with those against whom evidence could be obtained, so we believe there should be no undue influence exerted to undo the moral effect of the punishment inflicted. For the sake of discipline and the future order of the institution, the people of the state and the Regents should uphold the Faculty in their action. We believe the serious phases of this escapade have impressed themselves on the students, and will prevent a serious breach of the proprieties in the future, at least so long as any member of the present body of students remain.

How best to regulate social affairs in the institution is a problem. Realizing that students will dance, the social committee has provided for military hops in the Gymnasium at intervals, and has maintained their democratic character by requiring all male students who attend to wear military uniforms. Dancing stops promptly at eleven o'clock. This we think a wise provision. Too many dancing parties in the fraternity halls are complained of, and they are especially a tax on the time and strength of the more popular girl students, who are usually expected to attend the most of them. They should be held less frequently. The great social event of the year, the Junior promenade, is the aristocratic party. It has been criticised as too much so, and many people think it should be abolished. They forget that the University is a cosmopolitan institution and must satisfy all classes. This function draws to the University rich people who might otherwise send their children to the eastern schools. We need all classes in an institution that is for the whole state. The promenades should, we believe, be confined to reasonable requirements and not arbitrarily abolished.

The weekly assembly of students, at which addresses are made by the President and others, have, we believe, been a good feature of University life. When they were begun it was the understanding that attendance should be general. But no rules were adopted for enforcing this, and the attendance has gradually dropped off until scarcely half of the students now attend. We believe some means should be adopted for enforcing a full attendance at each meeting.

More systematic help to those who are wholly or partially paying their own way through the University ought to be given. The good work being done by committees of the Faculty, the Y. M. C. A. and the

Report of the Board of Visitors, 1899-1900.

"Co-op." can be done much better if there is some intelligent head to direct this work. We believe a small fund available to pay some practical postgraduate or instructor to devote time and attention to the work could be wisely expended, and would be productive of much good.

Attention is again called to the importance of funds available for fellowships, scholarships, and a loan fund for poor and worthy students. Any one desiring to give in either large or small amounts to the University could direct his money to no channel where it would do more good than along this line.

The good work being done by the Gymnasium is an important feature of student life. This work is becoming more popular each year, as is evidenced by the fact that from 75 to 80 per cent. of the Juniors and Seniors take regular exercise there, although none but Sophomores and Freshmen are required to do so.

There is a feeling, however, in some quarters that too much attention is being paid to athletics, as seen in base ball, rowing and football. That there are abuses connected with these athletic features is true, but they are not of such magnitude as to condemn the whole system. Either the University must retire altogether from the field of athletics or it must take front rank therein. The former would mean a much less use of all features of gymnastic work. The latter furnishes a safety valve against the explosion along other and more harmful lines of a surplus animal energy that must find expression in something. Athletics have evidently come to stay in modern college life, and the remedy for evils is in wise regulation, and not by abolishing the public and most attractive features of them.

Your Committee learns with pleasure that there is a move on foot to erect a substantial Y. M. C. A. building below the lower campus. The Y. M. C. A. has done, and is doing, a splendid work in the University, and is entitled to all the moral and financial support it can obtain.

Respectfully submitted,

(Signed) Frank E. Noyes,
A. A. Kiehle,
John H. Frank.

REPORT OF SUB-COMMITTEE ON STUDENT LIFE OF YOUNG WOMEN.

To the Board of Visitors, University of Wisconsin:

Your Committee on Student Life of Young Women begs leave to report as follows:

There are 438 young women enrolled at the University. They are distributed, approximately, as follows:

In Ladies' Hall	90
In seven Sorority Houses	71
In city homes	104
In boarding houses	158

Your Committee finds that the health of young women is improved and their physical strength increased while in attendance at the University. Such being the case, your Committee believes that the priv-

University of Wisconsin.

ileges of the gymnasium have been used to good advantage. It commends the provision made for the physical training of young women and is pleased with the enthusiasm and proficiency in the work.

In the opinion of your Committee the division in authority at Ladies' Hall, between the social and domestic heads of the house, works to manifest disadvantage. The domestic part of the establishment has a basis and aim entirely distinct from that of the social side. Unity of aim in seeking first and always the greatest good to the young women at the Hall would be a great improvement. In the opinion of your Committee this can be brought about only by having the entire management of the Hall placed in the hands of one person, that person being directly responsible to the University authorities. The Committee calls your attention to the fact that the Wisconsin State Federation of Women's Clubs has recently adopted a resolution which expresses the belief that the Regents should be requested "to bring about a better condition of affairs in the domestic arrangements at Ladies' Hall." From January to June, 1899, sixty cases of illness were cared for by the mistress of Ladies' Hall. When it is remembered that to the women holding this position is confined the duty of counselor, friend and home maker, and also the teaching of gymnastics, it is obvious that the duty of nurse should not be added.

The Committee finds much to commend in the Self Government Association, which aims to bring under the control of uniform, self-imposed rules, all women students of the University. The Committee feels, however, that while the home life of the women is so diversified as at present, residence being, as stated above, either in Ladies' Hall, Sorority houses, boarding houses, or city homes, rules which would be applicable to all these classes must be very general in character, and that there should be more definite rules regulating the social life of the women in the Hall and the Sorority houses, which are under the direct control of the University authorities. It would seem to be no injustice to impose more rigid regulations upon such residents than upon those boarding outside or living in their own homes.

Your Committee finds also a distinct weakness in the Self Government Association, in its inability to enforce its authority. Membership in the association is not voluntary, but is imposed upon a young woman simply because she is a student at the University. It arises naturally, therefore, that such students as are not in sympathy with the association should refuse to recognize its authority. The Committee feels that the greatest weakness in the present system of directing the life of the women students is in the lack of personal responsibility for the enforcement of rules, whether these rules be made by the Self Government Association or by the University authorities. Your Committee believes that the people of the state would be better satisfied if the person who is the resident head of Ladies' Hall were given such authority over and charged with such responsibility for the students residing in the Hall, as is exercised by the wise mother of daughters of similar age. This system might be extended to the Sorority houses, by making it a condition of their existence that a certain person or persons be directly responsible to the University authorities for the enforcement of such definite rules as might be adopted. Compliance with rules on the part of women living in boarding houses or private homes must be largely a matter of individual volition, and it would seem that at this point the Self Government Association might be very materially aided by certain definite restrictive rules imposed by the University authorities, applicable to both men and women students, such as regulation of the

Report of the Board of Visitors, 1899-1900.

number or hours of formal social gatherings. Your Committee feels that while self-government is the ideal of all government, yet it is inadequate to the conditions existing among a large body of undergraduate women in a co-educational institution, and that it should be supplemented by direct outside authority, at least until the plan has been more fully developed.

Your Committee calls attention to the opinion of the preceding Committee on Student Life of Young Women as to the custom known as "rushing" by members of Sororities, and believes that it would be for the best interests of students if the authorities of the Universities were to discourage such custom.

Your Committee respectfully recommends the following suggestions:

First. That the Self Government Association be supplemented by certain definite, restrictive rules enacted by University authorities and that there be personal responsibility for the enforcement of rules made both by the Self Government Association and by University authorities.

Second. That there be confided to one person responsibility for social and domestic life at Ladies' Hall, and that provision be made for care of the young women in case of illness.

Third. That University authorities discourage the custom known as "rushing" by Sorority members.

GRADUATE DEPARTMENT AND SUMMER SCHOOL.

About ninety students are taking graduate work only. Undergraduates work side by side with these. The School of Economics was visited to quite an extent, and in these and other classes the undergraduates were the many, the graduates the few. There seems to be no ground for the criticism that the time of the professors is given too largely to the graduates.

If investigation and research are to be fostered, if the University is to have as leaders in its department men who are known and valued, then the graduate department must be upheld.

There can be no better inspiration to undergraduate work than that which is given by a graduate department directed by eminent, competent men.

There are three books to be published this year by professors in the School of Economics. One of these is "Economic Crisis," by Edward David Jones, Ph. D. Prof. Jones is now absent in Europe, having under his direction the Social Economic experiments for the Paris Exposition.

Another book is "World Politics as Modified by Recent Developments in the East," by Paul Samuel Reinsch, Ph. D., L. L. B.

Another is "Monopolies and Trusts," by Dr. Ely.

It is graduate work that gives the University its reputation among scholars. The original investigation required develops habits of study and research that are very necessary to real intellectual progress.

University of Wisconsin.

As to summer school, the facts given here are furnished by Charles Forster Smith. The school was a success last year. It was not decided until the last week in April to hold it, and so little time was had for advertising, but the attendance was 340. Over twenty states were represented, and over 100 of those present were graduates of colleges. High school teachers were more largely represented than any other class, but younger college teachers came in considerable numbers. Some University students availed themselves of the opportunity to do certain lines of work. Prof. Smith says: "Most of us felt that our most promising field was in giving teachers an opportunity to come in contact again, or for the first time, with regular University work."

Carrie B. Oakes.

UNIVERSITY FINANCE AND BUSINESS METHODS.

To the Board of Visitors of the State University of Wisconsin:

Your Committee on "University Finance and Business Methods," realizing the importance of having thorough work done by this Committee, made a special trip from their homes to Madison to attend to its duties.

We made our investigation of the business methods at the office of the Secretary, first, by examination of the Regents' annual "Budget," or estimate of income or receipts and expenditures for the fiscal year, and their allotment of the amount to be expended for the different works, uses or departments.

We next inquired how the salaries were approved and paid, how record was kept of the labor performed by those not regularly employed, how paid and the form of receipts taken, how the demand for the articles to be purchased for the institution originated, how the requisitions were sent out, how and by whom approved, how and where the purchases were made, how bids were solicited and received for such articles as would permit of bids being made, what checks were kept upon the goods received and how all were finally paid for and the records kept thereof. This, it would seem, would be a great task, but the system in the Secretary's office is so complete, the records so plain and everything kept in such perfect order that it was the work of but a few hours to enable us to determine that the business methods of the institution were good, and the finances faithfully and safely handled.

The largest item of purchase being coal for fuel, we visited the central heating plant, which furnishes heat for a considerable number of the buildings, and it seems to us a model one, and as economical in its operation as it would be possible to have a plant of this description.

One can not make the investigations made by us without being impressed with the fact that the Regents of the University devote much time and care to their duties, and that the affairs of the Secretary's office, though so complete in every detail, are administered with great economy, and we have no changes to suggest or recommend.

Report of the Board of Visitors, 1899-1900.

We desire, however, to call attention to the one fact that there is a feeling about the state, and among many who are the friends and patrons of the University, among many who appreciate the needs of the institution and its need for greater room and other buildings, men who take a pride in its success, that the institution is costing a great deal and is a burden upon the taxpayers, and we think it behooves the management to use every possible economy in the administration of the affairs of the University, not inconsistent with its prosperity and progress.

Financial Condition.

FINANCIAL CONDITION.

REPORT OF THE SECRETARY.

Madison, Wis., October 1, 1900.

Hon. George H. Noyes, President of the Regents of the University of Wisconsin:

Sir:—I have the honor to report herewith the financial condition of the State University for the biennial period extending from October 1st, 1898, to September 30, 1900:

RECEIPTS AND DISBURSEMENTS FOR THE FISCAL YEAR ENDING SEPTEMBER 30TH, 1899, WERE AS FOLLOWS:

RECEIPTS.

From State Appropriations:	
Chapter 25, Sec. 390, R. S. 1898, 17-40 of 1 m.	\$255,000 00
Chapter 418, Laws 1887, Washburn Observatory.....	3,000 00
Chapter 62, Laws 1887, Agricultural Institutes.....	12,000 00
Chapter 282, Laws 1889, 1½ (one-half).....	6,798 48
From United States Appropriations:	
Treasurer United States for Experiment Station (Hatch fund)	15,000 00
Treasurer United States for Agriculture and the Mechanic Arts (Morrill)	25,000 00
From Productive Funds:	
Income from productive University Fund.....	9,934 74
Income from productive Agricultural College Fund....	11,740 88
From Miscellaneous:	
From bills payable (temporary loan).....	75,000 00
From students' fees, tuition, etc.....	40,848 71
From students for laboratory supplies.....	11,818 20
From matron Ladies' Hall	625 19
From interest on bank deposits.....	222 47
From material sold	70 75
From rents	432 75
From adv. in and sale of agricultural institute bulletins	1,660 30
From university extension lecture fees.....	391 49
From freight refunds.....	12 11
From library fines	23 24
From use of pianos	132 00
From Agricultural College sales, proceeds of material after being used for experimental purposes.....	23,885 70
From Ladies' Hall, Bentley refund.....	88 54
From refund on apparatus.....	71 14
From refund for Bull	65 00
From Historical Library Commission for heat.....	747 60

University of Wisconsin.

VIEW OF WISCONSIN STATE FAIR PARK.

SECOND BIENNIAL REPORT

OF THE

WISCONSIN

State Board of Agriculture

For the Years 1899-1900.

COMPILED BY
JOHN M. TRUE,
Secretary.

MADISON, WIS.:
DEMOCRAT PRINTING COMPANY, STATE PRINTER,
1901

LETTER OF TRANSMITTAL.

To His Excellency, EDWARD SCOFIELD,

Governor of the State of Wisconsin:

I take pleasure in submitting to you, in accordance with the requirements of the statutes of the state, the second biennial report of the Wisconsin state board of agriculture, containing the transactions of such board for the years 1899 and 1900.

Very respectfully,

JOHN M. TRUE,

Secretary.

SECOND BIENNIAL REPORT

OF THE

Wisconsin State Board of Agriculture,

1899 and 1900.

MINUTES OF MEETINGS OF THE BOARD.

Madison, March 7, 1899.

At annual meeting of the board, all members were present, Vice President Newton in the chair.

On motion of Mr. Hubbard, proceeded to the election of officers, with the following result:

President — T. L. Newton.

Vice President — George McKerrow.

Secretary — John M. True.

Board of managers — T. L. Newton, Geo. McKerrow, George G. Cox, C. G. Wilcox and J. W. Thomas.

On motion of Mr. Briggs, proceeded to choice of superintendents of departments, when the following named gentlemen were chosen:

Superintendent of privileges — S. D. Hubbard.

Superintendent of gates — David Wedgwood.

Superintendent of transportation and forage — John LeFeber.

Superintendent of horse department — George G. Cox.

Superintendent of cattle department — Charles Linse.

Superintendent of sheep department — H. A. Briggs.

Superintendent of swine department — George Wylie.

Superintendent of poultry department — George M. Kerrow.

Superintendent of agricultural department — F. A. Huebner.

Superintendent of horticultural department — L. G. Kellogg.

Superintendent of dairy department — John W. Thomas.

Superintendent of machinery department — J. E. Seaver.

Superintendent of manufactures department — C. T. Fisher.

Superintendent of fine arts and woman's work — C. H. Everett.

Superintendent of pigeon and fancy fowl department — L. A. Jansen.

Marshal — E. W. Chafin.

On motion of Mr. Thomas, the board of managers was instructed to prepare a new receipt book for superintendent of privileges, containing forfeiture clause, and other restrictions.

On motion of Mr. McKerrow, amended by-laws governing duties of superintendent of privileges, by adding, "and he shall reserve the right to annul all privileges granted, upon violation of contract, and this without refunding money paid."

Also amended by-law No. 37, so that it shall read: "Purses in speed department will be paid in full before close of fair, and payments on premiums on live stock, not exceeding 50 per cent. of the amount awarded, will be paid exhibitors, upon written statement, to secretary, of amount of winnings, endorsed by the department superintendent as correct.

Voted to continue rule, allowing conveyances, except supply wagons, free admission to fair grounds during fair, occupants being supplied with tickets, and ticket system was changed to correspond.

Voted to raise rent of horse stall — variety "D," from \$2.00 to \$3.00, and to strike out "Horse stall variety 'A,' \$1.00."

On motion of Mr. Briggs, board of managers was requested to consider the question of moving residence on fair grounds to some more convenient position, and report to next meeting of the board.

Mr. Hubbard introduced the following resolution, which was unanimously adopted:

Resolved, That the State Board of Agriculture extend to C. H. Everett, secretary during last year, our sincere and heartfelt thanks, for the careful and considerate judgment he has exercised as secretary, which judgment has only been excelled by his affability and manifest desire to please all with whom he has been brought in contact.

Secretary was instructed to send draft for \$75.00 to T. J. Fleming, for road machine, purchased of him.

On motion of Mr. Hubbard, the board of managers was instructed to employ Mr. Robert Phillip, for one year as workman upon grounds and track, at \$30 per month and house rent.

Committees were appointed to consider premium list and report at evening session.

Took a recess until 7:30 in the evening.

Revision of premium list was taken up and considered as follows:

Department A.— Voted to offer second premiums, of \$15.00 and \$10.00 respectively, in classes 1, 2, 3, 4, 5 and 6, for "Get of Sire," and "Produce of Female."

In Farmer's Classes amended rules so as to bar "members of professional firms and their employees."

Voted to apply this to Farmer's Classes in department B, which was otherwise left as last year.

Department C.— On motion of Mr. Briggs, voted to require exhibitors to have owned females exhibited, for six months.

On motion of Mr. Wilcox, allowed fine woolled sheep exhibitors a separate judge — no additional expense to be incurred thereby.

Department D.— Revision of premium list left to Superintendent Wylie — amount of premiums not to be increased.

Department E.— Voted to strike out, in rules, the words "for coop rent." Superintendent McKerrow was allowed to revise list.

Department F.— In county exhibits, 60 points were changed to 50 to entitle exhibitors to award. Also voted to allow 100

points for each fifty miles, from fair grounds up to and including 500 points.

Department G.—Voted to term first premium in each butter class a sweepstakes prize, and to allow \$25.00 and \$15.00 respectively, as such prizes.

Balance of premiums in these classes to be pro rated.

Arrangement of premiums for cheese left to Superintendent Thomas.

Department H.—Revision of list in this department was left to Superintendent Kellogg and Mr. Franklin Johnson, president of state horticultural society,—amount of premiums limited to \$500.

Department L was referred to Superintendent Everett for revision, his report to be made to board of managers.

Department M.—Superintendent Jansen was allowed to revise list.

Voted to fix the salary of the secretary for the coming year at \$100 per month.

Mr. Hopkins offered the following resolution:

Resolved, That the use of speed bars, track, and pasturage of enclosed portion of state fair grounds, except that portion containing the principal buildings, viz., from east and west fence by the office, north to the horse barns, be let to Thos. Dunbar of Milwaukee upon the express condition that said barns, track, and pasturage be used for training horses and for the best interests of the state board, providing said Dunbar shall pay to Robt. Phillip the sum of thirty dollars for each month of May, June, July, August, and September; and provided further that said Dunbar shall divide equally the receipts of the year, over and above Phillip's pay, with the state board of agriculture. The said Phillip, with his team, shall work under the supervision of said Dunbar upon the track, when not employed otherwise upon the buildings and grounds by order of the board.

Amended, on motion of Mr. Hubbard, that details of arranging for pasture to be allowed Mr. Dunbar be left to board of managers.

Resolutions, as amended, were adopted.

On motion of Mr. Wilcox, President Newton was instructed to purchase team, trucks, harness and sprinkler, in season for work on fair grounds the coming season.

On motion of Mr. Hubbard, the superintendent of speed was authorized to offer in speed purses for the coming fair an amount not exceeding \$15,000.

Adjourned until morning of March 8th, at nine o'clock.

JOHN M. TRUE,
Secretary.

Wednesday Morning, March 8th.

All members present except Messrs. Briggs and Huebner.

Minutes of yesterday's proceedings read and approved.

On motion of Mr. McKerrew, State Treasurer Davidson was invited to meet the board. He responded, and the duties of treasurer of the board were discussed.

Mr. Wylie introduced the following resolution, which was adopted:

Resolved, That the secretary be instructed to procure volumes of short horn herd-book, to complete set.

On motion of Mr. Hopkins, voted that the secretary receive all moneys due the board, receipting for the same when received; that he keep a full account of the same and at once turn over such moneys to the state treasurer, taking his receipt for the same.

On motion of Mr. Wilcox, voted to require a bond of \$5,000 from secretary for accounting for all money received by him.

On motion of Mr. Wilcox, voted to strike out the word "Shetland" in class 12 of list.

Adjourned, subject to the call of the president.

JOHN M. TRUE,
Secretary.

Milwaukee, Wis., April 27, 1899.

The board of managers of the Wisconsin state board of agriculture met at the Hotel Davidson, pursuant to call of President Newton. Present, Messrs. Newton, McKerrow, Cox, and Thomas.

On motion of Mr. McKerrow, voted to authorize Superintendent Jansen of pigeon department to purchase 250 additional coops for use in his department.

Voted to make Hotel Pfister headquarters during the coming fair.

Judges for the several departments were provided for as follows:

Horses — Left to Superintendent Cox to select and report to the secretary.

Cattle — Prof. W. L. Carlyle of Madison and W. J. Gillett of Rosendale, judges of dairy breeds, and W. T. Potts of Chicago, of beef breeds.

Sheep — W. T. Potts, Chicago, mutton breeds, and Andrew Kull, Lake Geneva, fine wools.

Swine — Superintendent Wylie to select and report.

Poultry — C. W. McFarland, Iberia, Ohio.

Agriculture — Field products, H. B. Drake, Beaver Dam.

Garden, Irving C. Smith, Green Bay.

Culinary, Mrs. S. E. Holmes, Watertown.

Bees and honey, Frank Wilcox, Mauston.

Dairy — Butter, S. E. Davis, Chicago.

Cheese, H. J. Bamford, Plymouth.

Horticulture — Superintendent Kellogg to report name of judge to secretary.

Fine arts and woman's work — Fine arts, Mrs. C. A. Scott, Madison; woman's work, Mrs. F. T. Nye, Beloit.

Pigeons — Left to Superintendent Jansen.

Voted to leave the renting of pasture outside enclosed grounds to President Newton.

On motion of Mr. McKerrow, voted to accept the proposition of the Milwaukee kennel club to hold kennel show upon fair grounds during state fair, and to assume expense to the extent

of proposition of Secretary Meisenheimer of club, the estimate being as follows:

Premiums	\$1,200 00
Printing	50 00
Judge	100 00
Postage	25 00
Superintendent	50 00
Feed, etc.	35 00
Helpers	50 00
Gate men	20 00
A. K. deposit	25 00
	\$1,565 00

Adjourned.

JOHN M. TRUE,
Secretary.

Madison, June 1, 1899.

Board of managers met upon call of President Newton. Present, McKerrow, Cox, Wilcox and Thomas.

Vice President McKerrow presiding.

On motion of Mr. Wilcox, the secretary was instructed to correspond with H. Walker, Chicago, Ill., with reference to driving horses and guideless pacers, and if water required supply can be met by us, he be instructed to contract for these special attractions at \$650.

The location of fence adjoining grounds of T. J. Fleming at North Greenfield being under consideration, on motion of Mr. Wilcox the matter was laid over until afternoon awaiting the arrival of Mr. Newton, with provision that, should Mr. Newton not arrive, the secretary be instructed to write him that it is the opinion of the board that a sixty-foot strip extending along the east side of Fleming's land be left outside the fence now being built until such time as board may decide matter from actual view of the premises.

On motion of Mr. Thomas, Superintendent Wilcox was authorized to arrange for "King Allar's" appearance upon track at state fair, board to pay expense of same, not to exceed \$50.

On motion of Mr. Wilcox, secretary was instructed to correspond with Miss Ida LeRoy, balloonist, and to engage her for fair, price not to exceed \$150.

Recess taken until two o'clock, p. m.

Two o'clock, p. m. Present, McKerrow, Cox and Thomas.

On motion of Mr. Cox, arrangements for advertising state fair were left to president, vice-president and secretary.

Adjourned.

JOHN M. TRUE,
Secretary.

Fair Grounds, Milwaukee, June 27, 1899.

Meeting of board of managers. Present, Newton, McKerrow, Cox and Thomas. Voted to construct walk from main sidewalk to office, from office to grand stand, from grand stand to dairy building, and from paddock to poultry building and ladies' toilet; also from C. & N. W. railway walk to manufacturers' building and thence to other main buildings.

Old material is to be utilized, and crossings to be made of crushed rock. Width of walks to be from 4 to 8 feet, according to location. Work to be done under the direction of President Newton.

Secretary was instructed to draw order for \$25 in favor of Edward Meisenheimer, on expense account of kennel show.

Bill of Taylor & Tower, for lumber, \$98.67, was allowed.

President and secretary were authorized to obtain photos of fair grounds for illustrated number of Breeders' Gazette.

Voted to repair railing upon grand stand.

Examination of water supply and repair of the same was left to President Newton, Messrs. Cox and Thomas.

Adjourned.

JOHN M. TRUE,
Secretary

Milwaukee, Sept. 11, 1899.

Meeting of board of agriculture.

President Newton presiding. Present, Newton, Hubbard, Briggs, Cox, Hopkins, McKerrow, Wilcox, Wedgwood, and Thomas.

Voted to furnish pen rent and feed free to exhibitors of horned Dorset sheep.

On motion of Mr. Briggs, voted that all teams delivering supplies of any kind upon fair grounds be required to purchase supply wagon tickets.

On motion of Mr. Cox, voted to pay bill of Mr. Schiffman, now held by Mr. Hopkins, the same being for repair of track.

On motion of Mr. Thomas, bill of Mr. Robert Phillip, for work on fair grounds for month of March, 1899, \$30, was ordered paid.

The score card privilege was left in hands of Superintendent Wilcox.

Voted to admit free to the grounds all bands of music, coming in uniform, who shall furnish music under the direction of the president.

The question of purchase of disinfectants for stock quarters and privies was left to board of managers.

On motion of Mr. Hubbard, voted to adjourn until Thursday evening.

JOHN M. TRUE,
Secretary.

Fair Grounds, Milwaukee, September 12., 1899.

Board of managers met in secretary's office, 9-35 A. M., President Newton presiding. Quorum present.

On motion of Mr. McKerrow, voted to adhere to rule 17, and Mr. McKerrow was appointed to confer with Jersey breeders thereon.

On motion Mr. Newton was, empowered to settle with Mr. Taylor in regard to charges for space for buggy exhibit in

manufactures building. Mr. Wylie was allowed to expend \$5.00, in purchase of disinfectant for hog pens.

Adjourned.

JOHN M. TRUE,
Secretary.

Milwaukee, Wednesday evening, Sept. 13. 1899.

Board of managers met. Present, Newton, Thomas, and McKerrow.

L. V. Axtell, an exhibitor of Guernsey cattle, presented the following protest:

To the Board of Managers, Wisconsin State Fair:—

“I formally protest the judging of Prof. Carlyle, on Guernsey cattle, Tuesday, September 12, for the reason that he proved himself a mere mouth-piece in the hands of Mr. Hill,—the Assistant superintendent.

“I should like to appear before your honorable body, in person, and present to you much more information, to strengthen my protest.

L. V. AXTELL.

Mr. Axtell was admitted to meeting and submitted a list of charges and accusations against Prof. Carlyle as judge, and Mr. C. L. Hill, assistant superintendent of cattle department.

On motion of Mr. McKerrow, voted that under rule 14, the premium awarded to Geo. C. Hill and son, be withheld, and given to winner of second premium, competing with Mr. Hill, and that second premium, in turn, go to winner of third premium in competition.

Also that, in the opinion of the board, charges preferred against superintendent, assistant superintendent, and judge in cattle department, are not sustained by evidence advanced.

Also, that, exhibitors consenting, the superintendent of cattle department be allowed to order a rejudging of the Guernsey class, from the point where Mr. Axtell withdrew his herd from competition.

On motion of Mr. Thomas, a reported disagreement in judging of Red-Polled Department was referred to superintendent Linse.

Adjourned.

JOHN M. TRUE,
Secretary.

Milwaukee, Thursday evening, September 14., 1899.

The State Board of Agriculture in session,—President Newton in the chair. Present, Newton, Hubbard, Briggs, Cox, McKerrow, Linse, Wedgwood, and Thomas.

On motion of Mr. Wedgwood, voted that gate keepers be paid as follows: Residents of Milwaukee county. \$3 00 per day, and those from outside Milwaukee county, \$3.00, and railroad fare actually paid.

Adjourned to Friday evening at 8 o'clock.

JOHN M. TRUE,
Secretary.

Meeting of Board of Managers (same date).

Present, Newton, McKerrow, and Thomas.

The request of Mr. Sanderson, exhibitor of Red-Polled cattle, for refunding of stall rent paid by him, was on motion of Mr. Thomas, laid over until tomorrow morning, at nine o'clock.

Adjourned.

JOHN M. TRUE,
Secretary.

Secretary's Office, Fair Grounds.

Milwaukee, September 15, 1900.

Meeting of board of managers.

All members present. Pres. Newton in the chair.

On motion of Mr. Wilcox, Mr. McKerrow was authorized to assume, for the board, expenses of good roads building, to an amount not exceeding \$100.

On motion of Mr. McKerrow, *Resolved*, That it is the sense of the board that Dr. Carver and Mr. Walker have not fulfilled their contracts in the acts of "the diving horses and guideless pacers," and that the settlement with them be left to Mr. Wilcox.

On motion of Mr. Cox, stall rent to the amount of \$12 was remitted to Mr. Sanderson.

On motion of Mr. McKerrow, Mr. Hubbard was instructed to settle with the ladies of the Episcopal dining hall, for their privilege, but not to make concessions of more than \$10 and this in consideration of stove pipe furnished.

Adjourned.

JOHN M. TRUE,
Secretary.

Milwaukee, Wisconsin, September 15, 1899.

The adjourned meeting of the State Board was called to order by the president at 9 o'clock P. M. A quorum was present.

Superintendent Huebner reporting that the amount of premiums awarded by the judge of county exhibits, was in excess of money offered, on motion of Mr. Briggs, secretary was instructed to reduce such awards to the aggregate of \$500 offered.

On motion of Mr. Briggs, the bill of \$571.73 for advertising in city papers, presented by press agent R. H. Odell, was allowed.

On motion of Mr. McKerrow, signers of guaranty of payment of races were relieved from their obligations.

Sundry bills were laid before the board by the secretary, and on motion of Mr. Wedgwood, they were allowed.

On motion, Mr. Wilcox was requested to prepare for publication resolutions of thanks to mayor of city, and other officials, Street Railway Co., and various associations, for efficient aid and support.

Adjourned.

JOHN M. TRUE,
Secretary.

Secretary's office,

Madison, February 7, 1900.

Meeting of board of managers. Present, McKerrow, Cox, Wilcox, and Thomas. Vice-President McKerrow, presiding.

Secretary presented his warrant account for 1899, together with vouchers for the same; also his account of money received, and the treasurer's receipts for the same.

Messrs. Wilcox, and Thomas were constituted a committee to audit these accounts, and to report their findings to the annual meeting of the Board of Agriculture.

The bill of Wisconsin Lake Ice Co. for \$23 was laid before the board, and on motion of Mr. Wilcox allowed at \$15.

Voted to join Great Western Racing Circuit, pledging \$50 toward advertising fund of same.

On motion of Mr. Wilcox, voted that a committee of three, representing the State Board of Agriculture, consisting of Messrs. McKerrow, Wilcox, and Secretary True, visit Milwaukee for the purpose of arranging with its citizens for hearty support of next State Fair.

Adjourned.

JOHN M. TRUE,
Secretary.

ANNUAL MEETING.

Madison, March 6, 1900.

Vice-President McKerrow presiding.

Roll called and all members found present except Messrs. Hopkins and Wilcox, both of whom appeared during session.

Records of meetings of the year were read and approved.

Reports of department superintendents were read by the secretary and accepted.

Board took up consideration of rules, and amended the same, as follows:

Add to rule 6 these words, "and bills for help otherwise employed, or unauthorized, will not be paid."

Struck out rule 12, page 12, relating to coupon tags.

Rule 16, page 13, relative to ages of animals exhibited, was amended so that ages of horses and sheep shall date from January 1st in each year, and cattle and swine shall be governed by actual age at time of exhibition.

On motion of Mr. Briggs, voted to publish in premium list daily program of judging, the same to be arranged by board of managers.

Recess until 1:30 p. m.

Afternoon session. All members present.

A delegation of citizens of Milwaukee was in attendance, and meeting was addressed by Messrs. Vannaman, Kletzsch, Hannafin, Wilkins, Boyd and Begg.

Arranged for meeting of Milwaukee citizens and board of managers in Milwaukee in the near future.

On motion of Mr. Briggs, voted to proceed to the election of officers, and secretary was instructed to cast the vote of the board for George McKerrow for president for the coming year, and he was duly declared elected. Upon ballot being taken further officers were elected as follows:

Vice-President—S. D. Hubbard.

Members of Board of Managers—George G. Cox, C. G. Wilcox and B. B. Hopkins.

Secretary—John M. True.

Salary of secretary was fixed at \$1,200. Voted to allow secretary \$100 additional for traveling expenses.

Proceeded to the election of department superintendents by ballot, with the following result:

Superintendent of Speed—Frank W. Harland.

Superintendent of Privileges—S. D. Hubbard.

Took a recess until five o'clock.

Adjourned session. On motion of Mr. Wilcox, Mr. Thomas, President McKerrow and Secretary True were constituted a

committee to wait upon printing commissioners and present claims of this board for state printing during the coming year.

On motion of Mr. Briggs, the revision of premium list was taken up in committee of the whole.

Voted to give separate premiums to male and female foals in each class of horse departments, such premium to be \$10.00, \$7.00 and \$4.00.

Took a recess until seven o'clock, evening.

Evening session. Continued the revision of premium list.

On motion of Mr. Cox, voted to strike out the words "with foal at side," in for mare four years old or over in horse classes.

Mr. Wylie offered a classification of premium list for Wisconsin Short-horn cattle, which, on motion of Mr. Hubbard, was adopted.

On motion of Mr. Hopkins, the secretary was instructed to correspond with the secretaries of Red Polled, Devon and Brown Swiss cattle registries to ascertain if these breeds should be classified as dual-purpose cattle, final determination to be left to president and secretary of board.

Communication of J. C. Murray, secretary American Red Poll Herd book, referred to secretary.

Voted to add no classes to department B.

On motion of Mr. Hubbard, department C was left unchanged.

On motion of Mr. Wylie, class 8, swine, was changed from Yorkshire to "all other distinct breeds."

On motion of Mr. Hubbard, the revision of poultry list, was left to superintendent of department and secretary; amount of premiums not to be increased.

Classification of bees and honey, submitted by Bee-Keepers Association, was accepted.

In county exhibits voted to add 100 points for "design and arrangement," and 100 points for "Distance from Fair Grounds".

On motion of Mr. Thomas, in dairy department, package or butter changed from 60 lbs. to not less than 20 lbs.

Addition to cheese classification left the president, secretary and superintendent of dairy department.

On motion of Mr. Cox, voted to increase the amount offered in premiums for both butter and cheese, to \$500 each.

On motion of Mr. Briggs, secretary was instructed, with Mr. Le Feber to arrange for ice supply for next fair.

On motion of Mr. Briggs, "Carriages and Sleighs" and "wire fence" were taken from department K. and placed in department J.

On motion of Mr. Wilcox, revision of department L. was left to president and secretary, the amount offered not to exceed \$900.

On motion of Mr. Wylie, the revision of list for pigeons was left to L. A. Jansen, aggregate of premiums not to be increased.

On motion of Mr. Hubbard voted to furnish Kennel Show with building but not to assume any expense of exhibit.

On motion of Mr. Wilcox, the suggestion of an education at Exhibit was left with Board of Managers.

On motion of Mr. Wedgwood, the continued free admission of teams to fair was left with board of managers, after consultation with Milwaukee citizens.

The list of department superintendents was completed as follows:

Superintendent of Gates, David Wedgwood.

Superintendent of Forage and Transportation John Le Feber.

Superintendent of Horse Department, George G. Cox.

Superintendent of Cattle Department, Chas. Linse.

Superintendent of Sheep Department, H. A. Briggs.

Superintendent of Swine Department, George Wylie.

Superintendent of Poultry Department, B. B. Hopkins.

Superintendent of Agricultural Department, F. A. Huebner

Superintendent of Dairy Department, John W. Thomas,

Superintendent of Horticultural Department, R. J. Coe.

Superintendent of Machinery Department, J. E. Seaver.

Superintendent of Pigeon Department, L. A. Jansen.

The board of managers was authorized to fill any vacancy that may occur in list of superintendents.

Appointment of superintendents of fine art and manufactures, to be suggested by Milwaukee citizens.

The board of managers was authorized to procure a typewriter for secretary's office.

On motion of Mr. Briggs, President McKerrow was chosen purchasing agent for the board, it being his duty to purchase all supplies needed.

Adjourned until 9-30 A. M., to-morrow.

Wednesday Morning, March 17. 1900.

Meeting called to order by President McKerrow.

Present, Hubbard, Cox, Hopkins, Huebner, Wilcox, Wedgwood, Thomas, and Linse.

On motion of Cox, voted to add the following rule in Horse Department "No animal shall compete for more than one premium, except in "Get of Sire," and "Produce of Female".

Report of auditing committee appointed February 7th, was received and adopted.

On motion of Mr. Hubbard, the board of managers was instructed to make needed arrangements for exhibit of dairy school, at coming state fair.

The dates of next state fair were fixed for September, 10—11—12—13, and 14., the fair to be held in Milwaukee.

Adjourned.

JOHN M. TRUE,
Secretary.

Milwaukee, Wisconsin, March, 20. 1900.

The board of managers,—all members being present.—met the advisory committee appointed by the Milwaukee Merchan's

and Manufacturers' Association, for the discussion of matters relating to state fair, which conference was adjourned until April 10th, after vote of Milwaukee citizens present to raise bonus of \$15,000 for State Board of Agriculture.

In business session, on motion o. Mr. Wilcox \$11,000 was set aside for speed at coming state fair.—\$10,000 for trotting purses and \$1,000 for running, arrangement of purses to be left with Superintendent Harland and Mr. Wilcox.

On motion of Mr. Hubbard, all matters relating to management and control of fair grounds, the coming year, were left to President McKerrow and Mr. Hopkins.

Adjourned.

JOHN M. TRUE,
Secretary.

Milwaukee, Wis., April 10, 1900.

Meeting of board of managers. Present—McKerrow, Hubbard and Cox. The gentlemen in charge of raising the proposed bonus from Milwaukee citizens came before the board and reported that they had raised the sum of \$10,355, and asked for further time in which to secure the balance.

The following resolution was adopted by the board:

Appreciating the efforts made by the citizens of Milwaukee, as well as the unfavorable circumstances under which they have labored, to raise the bonus of \$15,000 for aid to state fair, therefore

Resolved, That the State Board of Agriculture accept the money already raised, as a guaranty of the disposition to raise the full amount of \$15,000, and that we grant an extension of two weeks' time, in which to raise the remainder—such balance to be paid President McKerrow of this board.

Adjourned.

JOHN M. TRUE,
Secretary.

Milwaukee, Wis., May 3, 1900.

Meeting of board of managers. All members present.

Mr. McKerrow reported the employment of Robert Phillip at fair grounds the coming year, at \$35.00 per month, for months of May, June, July, August, September and October, and \$30.00 per month for remainder of year.

Matter of kennel show for next fair, considered and laid over.

Major M. R. Doyon was allowed \$5.00 per day for services at last state fair.

Mr. Hubbard was authorized to obtain proposition for exhibit of buffalo at next state fair, and report the same to the secretary.

The committee of Milwaukee citizens on fair promotion reported that it had raised the sum of \$14,689.50.

Board voted to accept this amount and proceed with promotion of fair, provided that \$3,000 to \$5,000 be at once turned over to board.

Voted to ask Mr. Miller, of Albambra Theatre, to submit a program of attractions for state fair, naming prices for the same.

Adjourned.

JOHN M. TRUE,
Secretary.

Fair Grounds, Milwaukee, Wis., May 15, 1900.

Meeting of board of managers. Present — Hubbard, Cox and Wilcox.

Vice President Hubbard presiding.

Voted to construct a bridge in the track, in place of old wooden structure now rotten; such bridge to have stone walls upon concrete foundations, and to be covered with iron, or iron and bricks, as may be determined upon. The perfection of plans and specifications, and advertising for bids was left to members of board present, in conjunction with superintendent of work — result of bids to be reported to adjourned meeting of board, May 24th.

Voted to employ John Schiffman as superintendent of work, and workmen employed, \$3.25 per day being allowed for such service.

Voted to purchase new mower, at offer of Milwaukee Harvester Co. — \$25.00 and old mower.

Mr. Hubbard was instructed to make terms for the exhibit of buffaloes of Huber Bros. at fair.

Adjourned until May 24th, at two o'clock P. M., at Pfister's Hotel.

JOHN M. TRUE,
Secretary.

Milwaukee, Wis., May 24, 1900.

Meeting of board of managers. Present, Hubbard, Cox, Wilcox, and Hopkins, Vice-President Hubbard presiding.

Voted to engage the following special attractions for coming fair:

Matched race, Patchen and Gentry.

Cooking school.

Athletics.

Operative dairy.

And kennel show.

Secretary was instructed to correspond with military companies of 1st regiment, relative to a parade upon fair grounds during fair, and to report at next meeting with estimates of expense.

Vaudeville attractions were laid over until after further report of Milwaukee advisory committee, when secretary is authorized to arrange with Mr. Miller for same at an expense not to exceed \$500.

Music for fair to be arranged for by secretary, after consultation with board of managers.

Provisions for advertising left with secretary, expense of lithographs not to exceed \$500.

Adjourned until tomorrow at ten o'clock at fair grounds.

Fair Grounds, May 25, 1900.

Board of managers met as per adjournment. Present, Hubbard, Cox, Wilcox, and Hopkins. Considered repairs upon grounds, and Mr. Schiffman was instructed to straighten up track fence and to put in a line of hitching posts in front of grand stand in in-field.

Joseph Sterzinger was employed to repair asphalt work in front of grand stand, consideration to be \$30.

Voted to let contract for walls and brick covering of new bridge in track to Joseph Sterzinger for \$1,500, and instructed Mr. Schiffman to secure bids from iron companies on a basis of a twenty-foot span, and in consultation with Mr. Hopkins, to close contract for iron work on most favorable terms offered; bonds and guaranties to be required of contractors.

The secretary was instructed to offer Huber Bros. \$300 and all expenses for show of buffaloes at state fair.

Adjourned.

JOHN M. TRUE,

Secretary.

Milwaukee, Wis., June 27, 1900.

Special meeting of board of managers. Present, Hubbard, Cox, and Wilcox.

The secretary was instructed to arrange for attendance of first regiment W. N. G., the Milwaukee troop and battery at state fair, and he was authorized to arrange for transportation and feeding of same.

Secretary reported acceptance of offer of board for exhibit of buffalo by Huber Bros.

The board authorized secretary to pay Mr. Sterzinger \$700 on bridge contract.

Adjourned.

JOHN M. TRUE,

Secretary.

Milwaukee, Wis., August 8, 1900.

Special meeting of board of managers. Present, McKerrow, Cox, Hubbard and Hopkins.

The request of Mr. Huebner for lady assistant in his department was considered, and on motion of Mr. Hopkins such assistance was allowed, compensation to be \$3.00 per day.

The secretary was instructed to cancel order for vaudeville attractions at state fair, and to substitute other features.

On motion of Mr. Cox, voted to offer a trophy, to be competed for by representatives of Milwaukee clubs, in a race at state fair, to be called Milwaukee Society Derby.

Instructed secretary to arrange for notification of members of Milwaukee advisory committee of an adjourned meeting of this board at three o'clock to-morrow.

On motion of Mr. Hubbard, Bart J. Ruddle was elected press agent for fair, from August 1st to close of fair, salary to be fixed by board at close of services.

On motion of Mr. Hopkins, voted to allow Mr. Ruddle a stenographer for three weeks at a price not to exceed \$8.00 per week.

Adjourned to meet at fair grounds to-morrow morning at 10:30.

Fair Grounds, August 9, 1900.

Board met agreeably to adjournment, McKerrow, Hubbard, Cox and Hopkins being present.

Board authorized Mr. Schiffman to cause roofs to pigeon department building, grand stand and art hall to be repaired or renewed.

On motion, Superintendent Harland was authorized to secure a new arrangement of noted speed horses if possible, to supply the places of "Patchen" and "Gentry" withdrawn, and he was authorized to expend, if necessary, \$3,000 for this purpose.

On motion of Mr. Cox, Mr. Sterzinger's bill for extras on bridge, amounting to \$62.00, was allowed. Accepted work

done by Mr. Sterzinger, in front of grand stand, and bill for \$30.00 for the same was ordered paid.

Accepted work on track bridge, as follows:

Stone and brick work by Joseph Sterzinger. . . . \$1,500

American Bridge Co. for iron work 1,060

Took recess until three o'clock P. M.

3 O'Clock P. M.

Board of managers met, McKerrow, Hubbard, Cox and Wilcox being present. Voted to allow Mr. Odell, superintendent of manufacturers' building, \$50 for decoration of the same.

Superintendent Le Feber was requested to secure the bailing of hay cut upon fair grounds, and to use the same for fair purposes.

Adjourned.

JOHN M. TRUE,
Secretary.

Milwaukee, Wis. Sept. 6, 1900.

Meeting of state board of agriculture.

Present, McKerrow, Hubbard, Cox, Hopkins, Coe, Huebner and Wedgwood.

President McKerrow in the chair.

Considered the question of complimentary tickets, and instructed the secretary as to their issue.

On motion of Mr. Cox, voted to close gates on Sunday and Monday preceding fair, and the marshal was charged with providing gate-keepers for those days. He was also instructed to provide watchmen for such places as may need them prior to opening of fair.

On motion of Mr. Wilcox, voted to admit children under twelve years of age to the fair free on Friday if accompanied by parent or guardian, provided that the city schools are closed on that day.

Press Agent Ruddle was requested to inform Mr. Miller, of Alhambra theatre, that we cannot use vaudeville at fair, and to emphasize the countermanding of order for same.

Adjourned.

JOHN M. TRUE,
Secretary.

Milwaukee, Wis., Sept. 7, 1900.

Meeting of board of agriculture. Present, Wylie, Coe, Cox, McKerrow, Linse, Hopkins, Wilcox, Wedgwood, and Thomas.

President McKerrow in the chair.

On motion of Mr. Wedgwood, voted to allow superintendent to enlarge ring for judging cattle.

On motion of Mr. Wilcox, voted to accept offer of Curtis and Gregory to make four balloon ascensions and parachute drops at coming state fair, Tuesday, Wednesday, Thursday, and Friday, for \$75.00, satisfaction guaranteed or no pay required.

Adjourned.

JOHN M. TRUE,
Secretary.

Milwaukee, Wis., Sept. 10, 1900.

Meeting of board of agriculture. Quorum present. President McKerrow presided.

On motion of Mr. Hubbard, the president was instructed to appoint a suitable person to attend claimants of privileges at gates in reporting such claims to secretary for adjustment.

On motion of Mr. Hubbard, Dr. Wright of North Greenfield was chosen physician, in the interest of the board of agriculture, in case of accident, or other like occurrence, for which this board might be considered liable, service to be without compensation.

The secretary was authorized to enter into contract with the doctor.

Voted to issue complimentary tickets to the city press, in accordance with a list furnished by Press Agent Ruddle, such tickets to be turned over to Mr. Ruddle.

Adjourned until tomorrow evening at eight o'clock.

JOHN M. TRUE,
Secretary.

Milwaukee, Sept. 11, 1900.

Meeting of board of managers. Present, McKerrow, Hubbard and Cox.

Considered verbal protest of horses entered by Progress stud in farmers' class, claiming that such Prospect stud comes under the head of professional breeders.

Matter was laid over.

Voted that sheep on exhibition, whose breeds are not recognized by us in our premium list, be allowed upon grounds during fair without pen rent.

On motion of Mr. Cox, Superintendent Thomas was allowed to fill vacancy in judges in his department, in case of absence of either of gentlemen selected.

Adjourned.

JOHN M. TRUE,
Secretary.

Milwaukee, Sept. 12, 1900.

Meeting of board of managers. Present, McKerrow, Hubbard, Wilcox and Hopkins.

President McKerrow in the chair.

On motion of Mr. Wilcox, the protest of award of prize No. 75 in class 32, was overruled. President was instructed to procure 1st, 2d, 3d, and 4th premium ribbons for county exhibits.

Adjourned.

JOHN M. TRUE,
Secretary

Milwaukee, September 14, 1900.

Meeting of board of agriculture. Present, Briggs, Coe, Hopkins, McKerrow, Linse, Wedgwood and Thomas.

In the protest of Mr. Hilty of award of premium to Mr. Briggs — prize No. 76, class 8, on the ground that horses were not properly classified, the action of judge was sustained.

Protest against Prospect stud, was further considered and, on motion of Mr. Briggs, sustained.

Press Agent Ruddle submitted his report of expense of advertising in Milwaukee.

Sundry bills were laid before the board by the secretary, and, on motion of Mr. Wilcox, allowed.

On motion of Mr. Wilcox, Mr. Cox was requested to remain in Milwaukee and see that state board property at fair grounds is properly secured, and that he be allowed \$5.00 per day for such service.

Adjourned.

JOHN M. TRUE,
Secretary.

Milwaukee, September 15, 1900.

Meeting of board of managers. Quorum present.

Bill rendered by Superintendent R. H. Odell, for expenses of department K, was allowed.

Voted to allow Mr. D. P. Ritchey \$100 in consideration of his very efficient services in promotion of the athletic contest and other state fair events.

Press agent was allowed \$150 for services.

The following resolutions were adopted:

Resolved, That the Wisconsin State Board of Agriculture, in closing its successful fair of 1900, desires to express its recognition of the assistance it received, in its work, from citizens of Milwaukee, not only in the material aid rendered by the committee in charge, and the subscribers to the magnificent fund, whereby it was enabled to plan for, and give to the public, a grand showing of our state's resources, and at the same

time furnish special attractions of a high order, but also to the press that so generously and efficiently has given to the public kind notices of our work — and to the several associations and public spirited citizens, who have at all times labored to our advantage.

Adjourned.

JOHN M. TRUE,
Secretary.

Madison, November 9, 1900.

Meeting of board of agriculture.

Meeting called to order by President McKerrow.

The roll was called and all members were found present, except Mr. Thomas.

On motion of Mr. Wilcox, voted to hold mass agricultural convention, at Madison, February 4th, 5th and 6th, 1901, provided that reduced rates on railroads be obtained.

On motion of Mr. Wilcox, five delegates were chosen to attend the convention of the American Association of Fairs and Expositions, to be held in Chicago, December 6th and 7th, 1900.

President McKerrow, Secretary True, and gentlemen Wilcox, Hubbard and Cox, were named as such delegates.

Delegates present at convention were empowered to fill any vacancy that may occur in delegation.

On motion of Mr. Hopkins, delegates were requested to use their influence to have the convention of 1901 held in Milwaukee.

On motion of Mr. Briggs, the whole board was constituted a legislative committee, to meet as a whole, or in part, upon call of the president.

On motion of Mr. Coe, the board of managers was instructed to perfect estimates of needed expenditures, to be presented to legislature as a basis for application for an appropriation.

The claim of C., B. & Q. Ry. for additional pay for transportation of buffalo exhibit at state fair was not allowed.

The board sustained the ruling of Superintendent Linse against fat steer exhibit of Mr. J. H. Pilgrim at last state fair.

Professor Russell of state agricultural experiment station came before the board and discussed the question of legislation relative to establishing a state live stock sanitary commission.

On motion of Mr. Briggs, President McKerrow and Mr. Wylie will represent this board in action that may be taken in the matter.

The report of Superintendent of Speed Harland was received.

On motion of Mr. Briggs, Mr. Wilcox was delegated by this board to examine the books of Mr. Harland, and assist in preparing full report.

A bill of Mr. McRandles for services as judge of races was not allowed.

Claim of J. Thompson & Sons Mfg. Co., for loss of tools, etc., at last fair, was not allowed.

A communication from Professor W. A. Henry was received, and on motion of Mr. Wilcox, the following resolution was adopted:

Resolved, That the state board of agriculture, recognizing that the operative dairy exhibit, made at the last state fair by the dairy department of our state agricultural experiment station, formed one of the strongest and most deserving attractions of the fair, hereby expresses its hearty appreciation of the kind interest and generous support of the regents of the state university, Dean Henry, of the station, and Professor E. H. Farrington and his assistants in charge of the work. That while the exhibit proved a strong attraction for the fair, we are confident that it was of equal benefit to our agricultural department of the university, by calling attention to the admirable work of an educational department so closely connected with our best agricultural interests.

On motion of Mr. Wylie, second money for yearling boar in Poland China class, \$8.00, was ordered paid to M. W. Reed.

Adjourned.

JOHN M. TRUE,
Secretary.

REPORT OF COMMITTEE OF AUDIT.

To the Wisconsin State Board of Agriculture:

We, the undersigned committee, to whom was referred the report of the secretary for the year 1899, have carefully compared the vouchers and stubs of orders issued with said report and find the same correct and true in all respects.

We have also cancelled all vouchers and stubs.

Respectfully submitted,

J. W. THOMAS,

C. G. WILCOX,

Committee.

REPORT OF TREASURER, 1899.

REPORT OF AUDITING COMMITTEE.

The undersigned committee of audit have examined the financial statement of the secretary, with the treasurer's report for the past year, and find them to agree.

C. G. WILCOX,

G. G. COX,

DAVID WEDGWOOD,

Committee.

REPORT OF DEPARTMENT SUPERINTENDENTS FOR 1899.

DEPARTMENT A.

Wisconsin State Board of Agriculture:

Gentlemen — I have the honor to herewith present my report of Department A, for the year 1899.

I am pleased to report that the exhibit, in my department at last state fair, was very satisfactory. Not only were entries more numerous than usual, but the animals exhibited were of a higher class. The exhibit also took a wider range than usual, and the various breeds were well represented.

Competition in the draft classes was very close, and judging attracted much attention.

I am pleased to mention names of exhibitors in the several classes, as follows:

CLYDESDALES.

C. E. Clark, St. Cloud, Minn.

McLay Bros., Janesville, Wis.

Alex. Galbraith, Janesville, Wis.

Robert Barlass, Janesville, Wis.

In this class competition was close, and honors quite evenly divided.

PERCHERONS.

H. A. Briggs, Elkhorn, Wis.

Pabst Stock Farm, Milwaukee, Wis.

Fred Soper, Ripon, Wis.

In this class the show was very fine, and the young animals exhibited by Mr. Briggs were of especially high quality, and attracted much attention.

COACH HORSES.

Oltmanns Bros., Watzeka, Ill.
 Riley & Ives, Delavan, Wis.

CARIRAGE HORSES.

Geo. Brew, Milwaukee, Wis.
 C. M. Clark, Whitewater, Wis.
 C. O. Sanger, Milwaukee, Wis.
 Robert Witte, Waukesha, Wis.
 J. A. Welch, Oconomowac, Wis.

ROADSTERS.

August Uehlein, Milwaukee, Wis.
 Pabst Stock Farm, Milwaukee, Wis.
 These two firms made a fine showing of young stock.

GRADE CLASS.

The exhibit in this class was not what I had hoped for. The farmers have been demanding a grade class, but as yet have failed to give us a satisfactory exhibit.

SADDLE HORSES.

C. E. Cook & Son, Huntley, Ill., made a very good show of saddle horses.

Judging in this department was done to the general satisfaction of exhibitors, by Prof. W. L. Carlyle, of Madison, and R. B. Steicker, of Janesville, Wis.

In conclusion, gentlemen of the board, I wish again to call your attention to the need of improvements whenever in your judgment the finances of the board will allow:

Among the most important of these I would suggest the grading of a track or ring for the showing of horses, the erection of seats for the use of those wishing to witness the judging of stock in the ring, and some pavement in front of stock barns.

These improvements would add to the attractions of an exhibit and make it possible for spectators to enjoy witnessing the work of judges which is impossible under present conditions. I desire to extend thanks to all exhibitors and horsemen in my department, for the generous and courteous treatment received from them during the fair of 1899.

I was ably assisted by Mr. H. S. Weil, of Mineral Point, in my department work.

Respectfully submitted,

GEO. G. COX,
Supt. Department A.

DEPARTMENT B.

Wisconsin State Board of Agriculture,

Gentlemen:—I herewith submit to you my report as superintendent of department "B."

The exhibits in this department were a credit to our fair, and would have been to any state fair in the Union.

The beef breeds were well represented, and a number of fine herds from the states of Iowa, Illinois, Ohio and Indiana, added to those from our own state, made the show in this class most interesting.

As one of the leading dairy states in the Union, it could not be otherwise than that the Wisconsin state fair would be a great attraction to those interested in dairying and dairy stock, and the result was that a number of the most noted breeders of dairy herds outside of our state were exhibitors on our fair grounds, such as McCall and Chappell of Nebraska, C. I. Hood of Massachusetts, Axtell and Orr of Ohio, Robbins of Indiana, Two & Son, Higinbotham, Cook and Son, and Barton of Illinois.

In connection with these our Wisconsin breeders, F. W. Tratt, A. J. Philips, Ed. Finn, Rusk Brothers, and others, made a fine display, as is shown by the many premiums they carried away.

Notwithstanding our judges were most able and competent

men for the work, I think it is advisable to engage judges for the next fair who are non-residents of our state, so as to exclude the chance for charge of partiality from the very start.

Class 24, the so-called "Farmer's Class," established two years ago, has not proved satisfactory and I think should be abolished.

The idea of giving the farmer a chance against the professional breeder is all right in theory, but in practice it proves a failure.

The exhibits in this class for the past two years were so few and of so poor quality that it was nothing but a farce to award them premiums.

Nothing would make our fair grounds — and in consequence our fair — more attractive than to give the buildings a bright appearance by giving a coat of paint.

The stock barns, especially, should be painted (a cheap paint would answer the purpose), also the inside of the barns, the stalls, mangers and alleys should be put in better condition.

As there have been one hundred and ten dollars expended for premiums in farmers' class for a few unworthy animals, I would recommend that this class be abolished, and that premiums on aged bulls and cows in all classes be increased five dollars.

Respectfully,

CHARLES LINSE,

Superintendent.

DEPARTMENT C.

Wisconsin State Board of Agriculture,

Gentlemen:—I have the pleasure of presenting to you my report of department "C" for the fair of 1899.

The display of sheep was very good, but in number not quite what I had hoped to see.

In fact, it was not quite up to the previous year in this particular, but I think the quality equal to any exhibit I ever saw, especially in flocks of Wisconsin bred sheep.

Their breeding and feeding showed great skill, and were highly complimented by the judge.

Can give no reason for the falling off in numbers, unless that some of the large breeders of Illinois and Indiana this year took in the eastern instead of the western circuit with their exhibits.

I think that as soon as possible we should make the grounds more attractive in this department by erecting an amphitheater and judging ring, having the same under cover.

Then people will take more pleasure in this department and will be more comfortable than at present, where all are exposed to the weather.

I think the judges (W. T. Patts, of Chicago, and Andrew Kull, of Lake Geneva) this year gave good satisfaction.

Among exhibitors were such well known breeders as

George Harding & Son, Waukesha, Wis.

George McKerrow & Son, Sussex, Wis.

Wm. Dixon, Brandon, Wis.

J. H. Dixon, Brandon, Wis.

A. J. Kline, St. Kilian, Wis.

T. L. Springer, Jeromeville, Ohio.

A. A. Bates, Irwin, Ohio.

J. M. Flanagan, Niles, Mich.

A. T. Gamber, Weston, Mich.

Chas. T. Hill, Brookfield, Wis.

D. B. Jones, Weiner, Wis.

And Bert. Pitcher, Eagle, Wis.

Horned Dorsets were shown by J. E. Wing, of Ohio. As no class was made for Dorsets, the board canceled feed bills and pen rent to pave the way for another visit under more favorable circumstances.

I would recommend as liberal a classification as possible in this department, avoiding grouping two or more breeds in one class.

H. A. BRIGGS,
Superintendent,

DEPARTMENT D.

To Wisconsin State Board of Agriculture,

Gentlemen:—The swine exhibit at the Wisconsin state fair for the year 1899, while as a whole not as large as in some previous years, was in some classes larger than ever before.

Never before were so many Berkshires and Chester Whites on exhibition, and taken as a whole the quality of the entire exhibit was superior to anything ever before brought together in Wisconsin.

Exhibitors were present from Massachusetts, Ohio, Indiana, Michigan, Illinois, Iowa and Wisconsin.

Mr. A. J. Lovejoy, of Roscoe, Ill., made awards to the entire satisfaction of exhibitors.

GEORGE WYLIE,
Superintendent.

DEPARTMENT E.

Wisconsin State Board of Agriculture, Madison, Wis.,

Dear Sir:—It gives me pleasure in this annual report of the poultry department of the fair for the year 1899, to be able to inform you that the exhibit was one of the best ever made in Wisconsin, and equal if not superior to any made in the country the past season.

The total number of entries was 984.

The amount of premiums offered in this department was \$680, of which \$646.50 was awarded.

In comparing our list with those of three of the leading state fairs of the country I find that the Minnesota state fair offered \$636 in 419 prizes.

The Illinois state fair \$872 in 401 prizes.

The Ohio state fair \$705 in 622 prizes.

The Wisconsin state fair \$680 in 506 prizes.

Thus offering more money than Minnesota, and more prizes than either Minnesota or Illinois.

Besides, Wisconsin had a large and well-patronized pigeon show, distinct from the poultry show, with a large prize list, which none of the other mentioned fairs had.

The poultry was judged by Mr. C. W. McFarland, of Iberia, Ohio, assistant superintendent of the poultry department of the Ohio state fair, who gave excellent satisfaction, and who also pronounced our show as among the best he had ever seen.

Thus I believe we can truthfully claim our exhibit of 1899 to be among the best in all respects.

I believe it would be for the best interests of future exhibits to have more commodious and better lighted quarters, and would suggest that the poultry and pigeon departments be given the space occupied by the dog show of 1899, and that if the dog show be continued, it be given its old quarters where the pigeon show of last year was made, or the present poultry building.

All of which is most respectfully submitted,

GEO. MCKERROW,
Superintendent.

DEPARTMENT F.

Wisconsin State Board of Agriculture,

Gentlemen:— I am pleased to submit a brief report of my department.

The exhibits were good in all respects.

The county exhibits are the best feature of my department. Aside from making an attractive exhibit, they are a certain means of drawing visitors from their respective counties, and are a proper element in the creation of a complete state fair.

The different county exhibitors asked me to leave the premium list as it is.

I wish to express many thank to Superintendent Kellogg, of fruit department, for his courtesy in giving to my department such space as he could spare, thus enabling me to properly plate the large agricultural exhibits.

I feel safe in stating that general satisfaction was manifested among visitors to my department.

Thanks are due the judges in department F, for efficient work done.

Our state fair certainly has the confidence of the Wisconsin farmer.

Very respectfully submitted,

FRED A. HUEBNER,

Superintendent.

DEPARTMENT G.

Wisconsin State Board of Agriculture,

Gentlemen:— I hereby present my report as superintendent of department G, for the second annual fair held under your supervision.

The total number of entries was not as large as last year, but what it lacked in number was more than made up in quality. The reason for the falling off in exhibits was the extreme dry weather, causing a shortage at the time of fair. Many that did exhibit had to have their exhibits expressed home, to use in their Saturday trade.

Judging of butter was done by S. Edward Davis, of Chicago, Ill. In the creamery class there were 58 entries, and 52 scored over 90 points; the total made an average score of over 95 points; fourteen exhibits scored over 97 points, this was a fine exhibit. In the dairy class there were 17 entries, 16 scored over the minimum.

In the print butter class there were 13 entries, all prize winners. The entire exhibit made an average score of 95½ points, and was pronounced by the judge to be one of the finest samples of printed butter he had ever seen on exhibition.

Henry Bramford, of Plymouth, Wis., judged the cheese exhibit. In the cheddar and flats classes there were 42 entries, but only 29 scored over 90 points; the principal defect was acid in the cheese.

The highest score of creamery butter was 98½, exhibited by Jas. G. Moore, Albion, Wis. The highest score of dairy butter was 96, exhibited by H. H. Leach, North Brookfield, Mass. Highest score of print butter was 97½, exhibited by Miss Kate Pepper, Pewaukee, Wis. Highest score cheddar cheese was 97 points, exhibited by John Voight, Orilula, Wis. Highest score of flats was 97, exhibited by F. C. Saenger, Lark, Wis. Highest score of Young America was 96 points, exhibited by Ed. Munseh, St. Wendel, Wis. Highest score of brick cheese was 99 points, exhibited by La Crosse Cheese and Butter Co., La Crosse, Wis. Highest score of Swiss cheese was 97 points, exhibited by Ed. C. Wenger, Monroe, Wis.

Total number of entries for premiums.....	164
Total number of entries for special prizes	38
Amount paid in premiums.....	\$643 95

The State Dairy School made a fine display of butter, pasteurized cream, and pictures illustrating some of the practical instructions that are given at that model institution for dairy instruction. This was under the supervision of Prof. Farrington.

The Vermont Farm Machine Co. made a good display of U. S. separators, and also the De Laval Co. made a display of their separators, both of which are first class machines.

The Heller & Merz Co. made a fine display of their Alderney butter color; also the Worcester Salt Co., through their state agent R. R. Bates of Madison, made a display of the Worcester salt; both are first class articles.

The Racine Hatching Co., of Racine, Wis., exhibited some very fine incubators and brooders, and the Stearns Co., of New York, had several samples of bone mills on exhibition.

A special effort was made to get the western dairy implement manufactories to exhibit, but they did not respond; one house wrote that when they did exhibit several years ago they did not have proper accommodations.

The leading Chicago house did engage space, but five days before the fair wrote it would be impossible for them to exhibit.

The dairy building may be the cause of this want of interest; it certainly is not up-to-date; it should be wider and fully floored, the refrigerator for butter and cheese should be separate or have two doors so that butter and cheese could be kept entirely separate; it should also be wide enough to have the exhibits placed on a pyramid of shelves in the center of the room and the windows kept free from obstruction so that spectators could have a full and clear view of everything there.

There should be a room in one corner of the building that could be utilized for an office for superintendent, judge and exhibitors; a refrigerator is not the best of places in which to add up and sign score cards. And I would earnestly recommend that as soon as possible the present building be remodeled or utilized for some other purpose and a proper and up-to-date dairy hall be erected.

I would also make the following recommendations:

1st. That the judges should be engaged with the express understanding that they should give time enough to the work so that each exhibit, when scored down, will show on the score card the reason why it is scored down and, in other words, what the defect is. To do this it will be necessary to furnish clerical help during the time the judge is scoring.

2d. That if it is necessary to charge an entry fee in this department, the system be changed to the percentage plan, allowing all entries to be made free and deduct 20 per cent. of the premium awarded; then if an exhibitor is awarded nothing it would cost him nothing to exhibit.

3d. That the quantity of butter asked in the creamery class be reduced from one 60-pound tub to not less than a 20 or 30-pound tub, as it shall be deemed best.

4th. That all entries in this department be closed the last Saturnay noon before the fair; this would give the secretary time to prepare a list of all the entries made, to be used by the superintendent in checking off the exhibits as they arrive, and

thereby greatly lessening the chances for mistakes and for detecting errors in entry.

Respectfully submitted,

J. W. THOMAS,
Superintendent.

DEPARTMENT H.

Wisconsin State Board of Agriculture,

Gentlemen:—In my endeavor to make a report as superintendent of the department of horticulture at the last state fair I will frankly admit there seems to be very little to report or suggest outside of the statistical report, which is on file in the secretary's office.

There was a fine exhibit of fruit from different sections of the state, especially of the apple; as nearly every variety mentioned in the premium list competed for a premium.

After the severe winter of 1898-99, this fine exhibit was a surprise to every one.

The show of grapes was light as compared with former years, for the reason that nearly all vineyards were either killed or so severely injured, that they produced no grapes the past season.

The exhibit of plants and flowers was fully up to the standard, and added much to the attractiveness of the show in the horticultural hall.

While there is a clamor among some of the exhibitors, in this department, for more and larger premiums, but knowing something of the financial condition in which the state board is placed, I cannot conscientiously recommend an increase in the amount of money for premiums in this department.

However by a personal effort on the part of whomsoever may be appointed superintendent of the department, a number of special premiums may be secured from commission men in Milwaukee, which would be an additional inducement for a large exhibit in 1900.

Superintendents of some of the departments should in some way endeavor to secure larger exhibits.

I believe our fair can yet be resurrected and be second to none in the northwest.

Very truly yours,

L. G. KELLOGG,
Superintendent.

DEPARTMENT J.

To the Wisconsin State Board of Agriculture,

Gentlemen:—It is with pleasure that I can say to you that the display of machinery in point of exhibits in all departments was good, some far exceeding last year. Notable among them come huskers, shredders, feed-mills and cutters, all in operation, making a very interesting exhibit which could be seen, was appreciated by the interested throng of farmers and stock men from all parts of the state.

Following is a brief list of exhibits and persons in charge of same:

Deere & Co., Moline, Ill.—Plows, harrows, cultivators, etc.
S. M. Gantz, exhibitor.

J. I. Case, Racine, Wis.—Plows and general line of implements.
J. H. Hagenot, exhibitor.

Petrie, Elliott, Herrington & Co., Madison, Wis.—General line farm implements, wind-mills, wagons, carriage and buggies. In charge of company.

Moline Plow Co., Moline, Ill.—Plows, planters, rakes, cultivators, etc.
J. J. McKenna, exhibitor.

David Bradley Mfg. Co., Bradley, Ill.—General line farm implements.
E. W. Clarke, exhibitor.

J. Thompson & Son, Beloit, Wis.—General line implements and gasoline engines.
J. R. Jones, exhibitor.

Monitor Mfg Co., Minneapolis, Minn.—Seeders and drills.
Geo A. Heath, exhibitor.

Hirsch Bros., Milwaukee, Wis.—Plows, carriages, potato diggers, etc. C. J. Hirsch, exhibitor.

Appleton Mfg. Co.—Batavia, Ill.—Wind-mills, feed-cutters, horse-power, tread-power and husker. E. T. Bassett, exhibitor, Milwaukee.

Smalley Mfg. Co., Manitowoc, Wis.—Horse powers, jacks, feed cutters, engines. Henry Schmidt, exhibitor, Heales Corners.

J. L. Owens, Minneapolis, Minn.—Fanning mills. J. J. Owens, exhibitor.

Rosenthal Corn Huskers, Milwaukee, Wis.

Fred Weiss, Milwaukee, Wis.—Gas engine and shredders.

Fischer & Kurtz, Milwaukee, Wis.—Feed cutter. Exhibited by Company.

Milwaukee Hay Tool Co., Milwaukee, Wis.—Shredders and huskers. Chas. Gulenkunst, exhibitor.

Moses Masters, Upper Sandusky, Ohio—Feed grinder. Moses Masters, exhibitor.

Sparton Mfg. Co., Aurora, Ill.—Two feed mills. J. A. Chizik, exhibitor.

A. W. Stevens, Marinette, Wis.—Two corn huskers and shedders, one engine. L. W. Stevens, exhibitor.

Silver Mfg. Co., Salem, Ohio—Feed cutters. L. P. Sticklin, exhibitor.

Deere & Mausen, Moline, Ill.—Huskers, corn planters, hay loaders. M. E. Wait, exhibitor.

G. Campbell Jenney Mfg. Co., Ottumwa, Iowa—Corn husker. J. R. Burgess, exhibitor.

J. I. Case, Racine, Wis.—Threshers and engines. A. A. Steeting, exhibitor.

Lindsay Bros., Milwaukee, Wis.—Feed mills and engine. J. C. Bowsher, exhibitor.

Wieler & Barth, Milwaukee, Wis.—Lifting jacks. L. Riebs, exhibitor.

S. L. Allen & Co., Philadelphia, Penn.—Planet, Jr., goods. L. B. Jones, exhibitor.

E. P. Dickey Fanning Mill Co., Racine, Wis.—Fanning mills. F. W. Dickey, exhibitor.

Parson Self Feeder Co., Newton, Iowa — Self feeders. S. J. Gudau, exhibitor.

Anderson Transfer Co., Fond du Lac, Wis.—Cutters and robes. B. Anderson, exhibitor.

Van Brunt & Wilkins, Horicon, Wis.—Seeders and drills. C. W. Churchill, exhibitor.

South Bend Plow Co., So. Milwaukee, Wis.—Plows, hay-rakes, potato diggers, etc. A. J. Dorsch, exhibitor.

Ripley Hardware Co., Grafton, Ill.—Feed cooker and tank heater. G. W. McRenolds, exhibitor.

Keingman & Co., Peoria, Ill.—Boss feed grinders, windmills, plows, harrows, etc. Keingman & Co., exhibitors.

Austin Westin Co., Chicago, Ill.—Road machinery, rock crushers. J. W. French, exhibitor.

Johnson & Field, Racine, Wis.—Fanning mills. O. Anderson, exhibitor.

Foos Mfg. Co., Springfield, Ohio — Feed grinders. R. H. Foos, exhibitor.

In closing I desire to tender many thanks to the management for courtesies shown and assistance rendered the department. Also exhibitors and agents for their assistance and interest taken to make their exhibits complete and instructive.

All of which is respectfully submitted.

J. E. SEAVER,
Superintendent.

DEPARTMENT K.

Milwaukee, December 23, 1899.

Wisconsin State Board of Agriculture, Madison, Wis.,

Gentlemen:—As superintendent of department "K," manufactures, at the Wisconsin state fair of 1899, I have the honor to report as follows:

The manufacturers' building was filled completely with interesting exhibits, largely made by Milwaukee dealers and manufacturers. The complete list of exhibitors in the building was:

The T. A. Chapman Co., Milwaukee, dry goods.

F. W. Schenck & Co., Milwaukee, house furnishers.

Slater, Price & Dempsey, Milwaukee, furniture.

B. J. Johnson Soap Co., Milwaukee, soap.

J. B. A. Kern & Sons, cereal foods and flour.

Julius Andrae & Sons, Milwaukee, bicycles, electric and telephone supplies.

Badger Wire and Pottery Company, Milwaukee, wire goods and pottery.

Brand Stove Co., Milwaukee, stoves, ranges and furnaces.

Jos. J. Moehn, Milwaukee, automatic gas machines.

Netzow Mfg. Co., Milwaukee, pianos, organs and sewing machines.

Wilbur Seed Meal Co., Milwaukee, specific horse, cattle and poultry foods.

Waukesha Rug Weaving Works, fluff rugs.

Sanita Manufacturing Co., Milwaukee, coffee substitutes.

William Nagle, roller-bearing wagon wheels.

Milwaukee Gas Stove Company, gas ranges.

The Sechler Carriage Company, carriages.

The exhibit in the building was complete and thoroughly diversified. A determined effort to secure variety of exhibits gave the people new sights of interest on every hand.

It is not out of place to say that some difficulty was experienced and considerable effort required to secure a complete filling of the building, mainly due to the fact that the effort was begun late. The business men of Milwaukee were found in hearty sympathy with the state fair, and, given sufficient time to prepare for it, would undoubtedly make a line of exhibits far superior to anything of the kind ever seen at any state fair in the west. The work should be begun six months in advance of the fair, when pledges to exhibit could readily be obtained and exhibitors could have ample time to prepare such wares as they might desire to place on exhibition.

In addition to looking after the manufacturer's building, your board placed upon me the care of the exhibition of car-

riages and wire fences in the field and tent exhibits. These departments were filled to the limit of available space with exhibits of superior excellence. The carriage exhibitors were:

The Wisconsin Carriage Company, Janesville, Wis., twenty-three vehicles.

John Doesch & Sons, Milwaukee, twenty-seven vehicles.

Durant, Durt & Co., Flint, Mich., forty vehicles.

Kingman & Co., Peoria, Ill., twenty-five vehicles.

La Porte Carriage Co., La Porte, Ind., seventeen vehicles.

Michigan Buggy Co., nineteen vehicles.

Adam Conrad, Hales Corners, for Staver & Co., Chicago, twenty-two vehicles.

The exhibits were all extensive and attractive.

The wire fence exhibitors were:

The American Wire Fence Company.

The Anchor Fence Company.

The Ceylon Fence Company.

The Tiger Fence Company.

The Paige Fence Company.

The Frost Fence Company.

The Kitselman Fence Company.

The Wilson Fence Company.

Each of these companies made a highly creditable exhibit.

In this connection I beg to suggest to your board, the advisability of allotting space for wire fence exhibits in the future so that they may be all in one locality, for the convenience of visitors to the fair.

Yours very truly,

C. T. FISHER,
Superintendent.

DEPARTMENT L.

Wisconsin State Board of Agriculture,

Gentlemen:—Old exhibitors agreed in saying that they never before saw such a large and fine exhibit as was displayed at the state fair of 1899.

Everything was new; articles that had been in competition at previous exhibitions being conspicuous by their absence.

The exhibit in art hall was studied throughout the fair by a multitude of people.

Pictures in oil and water colors adorned the walls to the ceiling, clear around the building, also over china cases and on the floor. Every available foot of space was utilized to make room for the large entry.

In the needle work department, space was also at a premium. Wires were strung across the building from which articles were suspended. Everything was, however, displayed to good advantage, and many words of praise were heard regarding the arrangement of display. The judges worked hard and faithfully for three full days, and their work gave splendid satisfaction.

All exhibitors were loud in their praise of the work done by your superintendent, assistant superintendent, and the judges, and they said: "We will all come next year with a larger exhibit."

Not a single article was lost, stolen or missed. Helpers were all attentive to duty.

Police and night watch assigned to this department are deserving of much praise for their thorough work.

The premium list as revised, gave universal satisfaction, and is, I believe, up to date.

RECOMMENDATIONS.

More room is much needed, and will have to be provided, in the near future. A partition could easily be placed over china cases, running to ceiling, both sides of which could be used for background for pictures.

Glass case for needle work could be extended toward center of building, ten feet or more.

This could be done at little expense, and would afford considerable more room, and, perhaps be adequate for several years.

Paint is much needed on inside walls.

The clerk having charge of award books for this department should, by all means, be stationed in the building, during time of making awards.

Four helpers, as well as superintendents and police, were kept busy in hanging pictures and placing exhibits.

I am of the opinion that such practice should be abolished. It makes expense that should be borne by exhibitors, and not by the department.

I recommend that premium list for next state fair give notice that exhibitors of art must place their own pictures or pay reasonable price for having same done.

Following is statement of money received, and paid out in this department, vouchers for which are in the hands of Secretary True:

DISBURSEMENTS.

One superintendent, 10 days, at \$5.00 per day	\$50 00
One assistant superintendent, 8 days, at \$3.50 per day . . .	28 00
Four judges, total 10 days, at \$5.00 per day	50 00
Four helpers, total 19 days, at \$2.00 per day	38 00
One night watch, 5 days, at \$2.00 per day	10 00
Mrs. C. H. Everett, revising premium list	5 00
Expenses Mrs. C. A. Scott, judge	6 00
Expenses Mrs. Nye, judge	6 00
Total	\$193 00

RECEIPTS.

Received from Secretary True, for which he holds my receipt	\$193 00
---	----------

I allowed the two judges from a distance \$2.00 per day each, as expenses.

Respectfully submitted,

C. H. EVERETT,
Superintendent.

DEPARTMENT M.

Wisconsin State Board of Agriculture,

Gentlemen:—I beg to hereby submit my report of department M for the last annual state fair.

The exhibit in this department exceeded both in quantity and quality that of any previous year.

Total number of pigeons exhibited 1,673, including exhibition cages. Total number of exhibitors 36, of which we had representatives from Baltimore, Philadelphia, Cincinnati, Peoria, Chicago, Oakwood, Cudahy, Milwaukee, etc, etc.

Most of these exhibitors were in personal attendance at the fair.

I have visited the shows at St. Louis, Chicago, Peoria, Racine and other places, but your show of 1899 was far superior in all points, which is very gratifying, especially when we take into account that our show came at a season when pigeons are either moulting or breeding, and breeders then dislike to exhibit.

The prospects for the next fair, in our department, are most encouraging; as we have the assurance from leading fanciers throughout this country and Canada that they will be with us.

We therefore expect at least 2,000 pigeons at our next show.

In revision of premium list, I would discard certain breeds which do not fill, and in their places, show certain varieties in single birds instead of pairs.

This will not materially change the amount of premiums offered in the department.

The roof of the building in which we exhibit needs repairing, as it is in a very leaky condition.

Should our expectations be realized we shall need more cages.

We would recommend that you place ornamental fowls in the poultry department as by so doing you will give us ample room or our enlarged exhibit of pigeons. We would further ask for a larger amount for judges' fees to enable us to get competent eastern judges, as western judges are few, and I think the em-

ployment of judges from a distance, will bring out a larger show and have a tendency to promote harmony.

While in St. Louis, I obtained promises from several of the best pigeon breeders in the east, to show a fine string of birds at our next fair.

The expense of running show, chickens and pigeons at St. Louis show, was \$7,000, for four days, and the association came out ahead.

Chicago made about \$3,000 out of its show. Peoria made \$200 above expenses. In our Milwaukee show, this winter 1899, we made \$400.

The interest in the city, in pigeons and chickens, was largely increased, as will be shown at our next state fair exhibit.

Yours respectfully,

L. A. JENSEN,
Superintendent.

KENNEL SHOW.

Milwaukee, Sept. 19th, 1899.

Wisconsin State Board of Agriculture, Madison, Wis.,

Gentlemen:—I present to you the following statement of expenditures and receipts for our bench show, held in connection with your fair September 12–15, 1899.

Disbursements.

Deposit with American kennel club.....	\$25 00
Telegrams	9 35
Premium money.....	717 75
General expenses.....	24 90
Judge	100 00
Premium ribbons	6 25
Help	65 00
Listing fees.....	15 00
Feed for dogs	44 25
Printing, Baird Press	24 50
Printing, Meisenheimer Printing Co	144 75
Secretary and stenographer's expenses.....	50 00
Total	\$1,226 75

Receipts.

To cash from J. M. True.....	\$50 00
Entry money.....	304 26
5,485 admissions @ 10c.....	548 50
Total	<u>\$902 75</u>

This leaves a deficiency of \$324.

I wish to state that I conducted the show as economically as was possible under existing conditions. All in all I conscientiously believe that your fair was benefited by having the dog show in connection, as you will see that we had about one-sixth of the total attendance of your fair at the dog show, and I believe that I am making a fair statement when I say that at least two thousand paid admissions at your outer gate who would never have come to the fair were it not that a dog show was an attraction on the grounds. So take it all in all I consider the dog show one of the best attractions you had on the grounds at a very small expense to you.

Yours very truly,

EDW. MEISENHEIMER.

DEPARTMENT OF SPEED.

Wisconsin State Board of Agriculture,

Gentlemen:—The past year has been another up-hill fight to secure fields of horses sufficiently large to insure good contests and at the same time moderate expense to the association. I followed the line recommended in my last report to join the big circuit, but one year's experience has convinced me that, while the present conditions exist, the better way is to go it alone, offering no stakes or early closing classes, but purses from \$500 to \$1,000, closing about the first of September. We cannot compete with Louisville, Terre Haute or Lexington, where there are hundreds of large breeding establishments in their vicinity, and where the sale of the betting privilege will

pay the expense of the entire meeting, as it did at the California state fair this year and left a surplus. Owners, drivers and men who campaign large stables will not go where there is no chance to back their horses, therefore it follows that this department will continue to be a source of considerable expense and extra trouble to the fair. I am not certain but that we get more honest contests because of this fact, but the general public do not know or appreciate this. Neither does it increase our gate receipts. On the other hand, I think the reverse is true, especially when a city like Dubuque can offer purses amounting to over \$100,000 and pay them (the business men guaranteeing a good portion of this amount). Last year I tried to get the business men of Milwaukee to guarantee \$5,000 and I got \$3,000, no part of which were they called upon to pay, and this year, in view of joining the grand circuit and doubling up our purses, I tried to raise \$10,000, and after a great amount of hard work, assisted by the gentlemanly officers of the Business Men's associations and others, I secured \$6,000—about the amount of one purse offered by Milwaukee and St. Paul and half the amount raised in Joliet and Independence. Again they were exempt from payment. I do not wish to find fault, but simply to point out the difficulties in this department with a view of overcoming them and thereby reducing the expense and at the same time prolong the life of my successor. I gave a good share of my time from last March up to the first of October towards making this department a success, and I have had the hearty co-operation of every member of the board; yet I frankly acknowledge I am not satisfied with the result, and feel that the same amount of work at anything else would bring about a better showing. I therefore repeat my request of last year, that you elect a Milwaukee man as my successor who will be more in touch with the people of that city and near the grounds. I would also recommend the present system of letting the grounds to some good trainer be continued for the reason that it keeps the track in condition, and in no other way can it be done. The track was faster last fall

than any time since it was built. I would recommend that all privileges pertaining to the grand stand, or at least the seating part or front, be left entirely with the superintendent of speed for the reason that he has a better chance to know the extent and value of same.

I will not go into detail about the races, having sent a statement of same to the secretary, which I will present at the annual meeting. In the early spring I offered \$16,000 in stakes, closing June 10th, and they failed to fill causing a loss of time and work on my part, and cost of advertising and printing to the association. Later I offered fourteen purses, amounting to \$3,800, closing September 1st. Of this number eleven filled, amounting to \$7,100, and these furnished our four days' program, giving us three races each day except the first. The largest field of horses was nine, against 16 in '93, and twenty-five in '97. The contests were close and exciting; two-thirds of the races taking an average of five heats to decide them. There were no accidents. The starting was good, and there were no postponed races. Every winner who applied for it received his money before the end of the meeting, and there were only two suspensions. This leaves the horsemen in a friendly spirit towards the association.

Our special attractions did not prove to be what we expected. Consequently they did not receive full pay, and were not expensive. On the whole I am thankful the result is no worse and I will close my connection with this department with but pleasant remembrances, when I think of the hearty co-operation and kindness of all the officers and members I have been associated with, their loyal support will always be a bright spot in my memory. May they live long enough to see the Wisconsin state fair second to none in America. We have grounds and improvements. And if the public will give their hearty support, the state board will soon accomplish this result. The state of Wisconsin (Milwaukee included), ought to be proud of what has already been accomplished. More farmers and mechanics attended the fair from my part of the state this year than ever

before, and it has acted as a stimulus to better appliances and better breeding of stock. Then let others take hold and help it along. Mr. Hannafin, manager of Chapman's dry goods store in Milwaukee, told me the state fair was of more benefit to Milwaukee, than anything that they ever had. I wish others who reap the harvest that comes to Milwaukee by bringing thousands of farmers and mechanics to that city at a time of the year when they spend their money, could or would acknowledge this fact. Then, perhaps, it would be easier to work for glory and assume obligations and work that in our private business we would not think of doing.

Respectfully submitted,

C. G. WILCOX,

Superintendent.

DEPARTMENT OF GATES.

Wisconsin State Board of Agriculture,

Gentlemen:—I herewith submit an itemized statement of receipts and expenses in my department for state fair of 1899.

Sept. 15.	Paid Arthur Cleveland, 4 days, \$12.00; Ry. fare \$3.80...	\$15 80
	A. D. Peters, 4 days, \$12.00; Ry. fare \$3.80	15 80
	G. A. Waldron, 4 days, \$12.00; Ry. fare \$3.80	15 80
	J. F. Flanders, 4 days, \$12.00; Ry. fare \$1.70	13 70
	J. E. Coleman, 4 days, \$12.00. Ry. fare \$3.00.....	15 00
	Horace De Long, 4 days, \$12.00; Ry. fare 60 cts...	12 60
	J. E. Tucker, 4 days, \$12.00; Ry. fare \$7.25.....	19 25
	W. C. Henke, 4 days, \$11.25	11 25
	Doct. McMath, 4½ days, \$9.00.....	9 00
	J. E. Faber, 4½ days, \$9.00	9 00
	Scott Chapman, 1½ days, \$3.00.....	3 00
	Robt. Martin, 4½ days, \$11.00	11 00
	T. H. Lyons, 4½ days, \$9 00.....	9 00
	Frank Brown, 4 days, \$12 00	12 00
	Lary Raymond, ½ day, \$1.00	1 00
	R. O. Wedgwood, 8 days, \$28.30.....	28 30

\$201 50

Received by cash.....	\$200 00
Received by cash.....	1 50

Total.....	\$69 50

Respectfully submitted,
 JOHN LE FEBER,
 Superintendent.

REPORT OF TRANSPORTATION DEPARTMENT

Amount received for teaming privileges.

John Miller.....	\$8 00
Jerry De Groth.....	8 00
Ed. Neef.....	8 00
John Barnekow.....	8 00
Fred Schulte.....	8 00
Total.....	<u>\$40 00</u>

Expenses.

A. McNath, police 4 days before fair.....	\$8 00
John Barnekow, police one day.....	2 00
Ed. Neebe, rebate.....	1 00
Driving horse 10 days.....	5 00
Total.....	<u>\$16 00</u>
Profit of department.....	\$24 00

Respectfully submitted,

JOHN LE FEBER,
Superintendent.

SUPERINTENDENT OF PRIVILEGES.

To the State Board of Agriculture,

Gentlemen:—The superintendent of privileges begs leave to report as follows:

The amount received for all privileges sold, is.....	\$1,452 72
From eating houses.....	\$300 00
From shows.....	145 00
From lunch counters, etc.....	250 00
From advertising.....	34 00
From cushion privilege.....	15 00
Due from Episcopal church.....	100 00
From other concessions.....	608 72
Total.....	<u>\$1,452 72</u>

Itemized schedule attached.

Respectfully submitted,

S. D. HUBBARD,
Superintendent of Privileges.

MARSHAL'S REPORT.

Paid.

Marshal and assistants	\$79 00
Police in art building	12 00
Special gate police, Monday night	6 00
General policing of grounds	191 00
Horses for marshal and assistants	39 00
Total	\$327 00

Itemized statement.

Paid E. W. Chafin, marshal, 5 days	\$25 00
H. H. Potter, assistant marshal, 5 days	15 00
J. S. Eastman, assistant marshal, 5 days	15 00
W. Wood, 5 days	12 00

E. W. CHAFIN,

Marshal.

REPORTS OF DEPARTMENT SUPERINTENDENTS FOR 1900.

DEPARTMENT A.

To the Wisconsin State Board of Agriculture:

Gentlemen: I have the honor to submit my report as superintendent of department A for the year 1900.

The exhibits of this department at the annual state fair were in comparison with former years quite satisfactory, and encourage hope that continued effort may make them still better in future. There was a decided increase in number of exhibits, the barns being completely filled, the increase appearing in every class, and the quality was proportionately better. Principal improvement was in the draft classes, many declaring the exhibit of Clydes to be the best ever seen in the northwest. More different localities were represented than ever before, making sharp competition and requiring close judging at all points.

Subjoined is a list of the principal exhibits in different classes:

CLYDES.

C. E. Clark, St. Cloud, Minn.
McClay Bros., Janesville, Wis.
Alex. Galbraith, Janesville, Wis.
Robt. Barlas, Janesville, Wis.
Carroll Bros., Waukesha, Wis.
Dr. C. E. Cook, Huntley, Ill.
Galbraith Bros., Janesville, Wis.

This exhibit exceeded that of 1899, in quality as well as number.

PERCHERONS.

H. A. Briggs, Elkhorn, Wis.

Capt. Pabst Stock Farm, Milwaukee, Wis.

R. A. Ives, Delavan, Wis.

In this class both H. A. Briggs and the Pabst Stock Farm had numerous exhibits, and some of the finest animals ever shown. They were much admired.

DRIVERS.

August Uihlein, Milwaukee, Wis.

Pabst Stock Farm, Milwaukee, Wis.

Progress Stud Farm, Milwaukee, Wis.

F. T. Mosher, Milwaukee, Wis.

J. C. Land, Waukesha, Wis.

R. A. Hilty, Wauwatosa, Wis.

Paul D. Wilson, Menomonie, Wis.

A. E. Wardle, Oconomowoc, Wis.

George Brew, Milwaukee, Wis.

Ray Biggs, Waukesha, Wis.

This class made a splendid showing indeed, beyond question the best in all respects ever exhibited in the state.

Arthur Sternicka, of Janesville, showed some very fine coaches.

The exhibit in the grade class was an improvement over that of 1899. The farmers seem to be aroused somewhat in relation to it, encouraging a hope that good exhibits may be had in future.

I am pleased to mention among exhibitors Geo. McKerrow & Sons, of Sussex, who showed a specially fine grade draft team. Also Chas. T. Hill, of Brookfield, in the same class, a nice farm team. John Sleep, of Waukesha, exhibited in this class several animals of merit. Thomas Edwards, of Waukesha, helped also to make this class interesting.

Geo. Harding & Son, of Waukesha, made a very good display in the driving class.

There were highly meritorious exhibits, and quite a number them, in the saddle-horse and pony classes.

Mr. Ed. T. Jolidon, of Elvaston, Ill., gave very general satisfaction as judge in this department.

I wish to repeat with emphasis my recommendations of 1899 for the grading of the ring for the showing of horses; for the erection of an amphitheater for the convenience and comfort of visitors who enjoy seeing the exhibition and judging of horses; also for gravel walks in front of all barns. These improvements are greatly needed to accommodate patrons of the fair.

Thanks are due to the exhibitors and others connected with this department for their uniform courtesy and accommodating spirit, and especially am I obliged to Mr. H. S. Weil for efficient assistance during the fair.

Hoping and believing that we will have a fair in 1901, opening the new century, excelling any in the past, the foregoing is respectfully submitted.

GEO. G. COX,
Superintendent.

REPORT OF DEPARTMENT "B."

Wisconsin State Board of Agriculture,

Gentlemen:—I have the honor to herewith submit to you my report of department "B," for the year 1900.

The exhibits in this department were fully equal to any of former years — especially in beef breeds, which were represented by a large number of the very choicest animals.

The dairy breeds were not quite so numerously represented as last year; nevertheless there was a worthy exhibit, as only selected stock of the finest types appeared in the show ring.

Classes 17, 18 and 19 — Red Poll, Devons and Brown Swiss, were classified as dual-purpose cattle.

This classification did not meet the approval of all breeders, and the judge in this class labored under great difficulty by reason thereof, in doing justice to all.

The so-called farmers' class, having now been in our list for three years, has proved a farce, and I recommend that it now be dropped from the list.

As class 19, Brown Swiss, was one of the best represented breeds at our fair, I recommend that it be given a full classification.

There should certainly be some kind of a pavement or walk made in front of the stock barns, so that visitors can conveniently and comfortably enter the barns in any kind of weather.

To make the state fair what it ought to be—not only a show but far more than that—an institution of instruction, some kind of an amphitheater should be provided for, in connection with show ring, in order to enable visitors to see the animals while being judged.

Then the judges should explain to the public, the various points of merit of the animals on exhibition, enabling visitors to understand why one animal is superior to another.

I earnestly believe that the improvements suggested would add much to the popularity of this department of our fair.

Respectfully submitted,

CHARLES LINSE,
Superintendent.

REPORT OF DEPARTMENT C.

Elkhorn, Wis., Dec. 4, 1900.

Wisconsin State Board of Agriculture,

Gentlemen:—I am gratified to be able to report that we had the largest exhibit of sheep this year at the state fair that we have ever had since the organization of the state board; and there would have been a still larger exhibit if our classification had been extended so as to have included more breeds. It is especially noticeable the interest local and state breeders are taking in the fair.

There are several things I would recommend, but they all re-

quire money. Among them is a pavilion for showing sheep, with seating room for about four hundred people, so that they may be protected from the weather.

We should also avoid placing two or more breeds in one class, as this always causes dissatisfaction among exhibitors. I also recommend an extension of the classification, so as to include all the leading breeds of sheep. Following is a list of the exhibitors, and you will observe they are scattered over a wide territory:

- C. S. Chapman & Son, Marysville, Ohio.
- Max Chapman, New California, Ohio.
- J. H. & W. S. Dixon, Brandon, Wis.
- J. M. Flanagan, Niles, Ohio.
- Geo. Harding & Son, Waukesha, Wis.
- Geo. McKerrow & Sons, Sussex, Wis.
- W. O. Fritchman, Muscatine, Iowa.
- A. J. Klein, St. Kilian, Wis.
- Mrs. J. Miller, Marshall, Mich.
- John Rawlings, Ravenswood, Prov. Ont.
- N. H. Smith, Baraboo, Wis.
- T. L. Springer, Jeromesville, Ohio.
- T. H. Canfield, Lake Park, Minn.
- M. H. Cochran, Compton, Prov. Quebec.
- W. H. Edwards, Sussex, Wis.
- B. A. Pitcher, Eagle, Wis.
- Lincoln Bros., Milford Centre, Ohio.
- Frank Hall, Merton, Wis.
- D. B. Jones, Weiner, Wis.
- H. E. Moore, North Farrington, Mich.
- Frank Patton, Spring Prairie, Wis.
- J. C. Seeley, Minneapolis, Minn.
- J. R. Watson, Sussex, Wis.
- C. H. Williams, Church, Mich.

Respectfully submitted,

H. A. BRIGGS,

Superintendent.

REPORT OF DEPARTMENT D.

To the Wisconsin State Board of Agriculture,

Gentlemen:—The swine show of 1900 was, in some respects, superior to any of its predecessors.

Never before have we had so many high class Berkshires and Chester Whites exhibited, and taken as an all around exhibit, it must be considered as satisfactory for a state like Wisconsin to draw entries in this department from eight different states.

Mr. A. J. Lovejoy, of Roscoe, Ill., as judge, maintained the reputation that our fair has won in this and other departments of live stock, for the impartial work of the men selected to make awards.

GEORGE WYLLIE,
Superintendent.

REPORT OF POULTRY DEPARTMENT.

To the Wisconsin State Board of Agriculture,

Gentlemen:—I herewith submit the report of poultry department, at the last state fair.

In extent, the exhibit was about the same as in past years, but in quality, far superior to any ever before made in Milwaukee; and I dare say equal to any held in the west, the present season, as it was well patronised by specialty breeders.

The American varieties were well represented, especially in Plymouth Rock and Wyandotte classes, where some birds of great excellence were shown.

Asiatic classes were of the most satisfactory; some of the grandest birds in the west being on exhibition.

As usual, the Mediterraneans were about the largest exhibit, and they were well up in quality.

The Minorcas were the largest show we have ever had of that variety.

Polish were not so numerous as we would have been pleased to see, but the birds shown were high class, as was also the

case with the Hamburgs, where were found birds that had won in the leading shows of the east and Canada, last winter.

English and French breeds were not largely represented, and specimens shown only fair in quality.

Some exceedingly good Games were shown, and the classes were fairly filled. The Bantam exhibit exceeded any ever seen here before, both in size and quality, there being several imported birds among the number.

The show of turkeys, ducks and geese was good.

The ornamental fowl exhibit was not as large as it should be.

I would recommend a miscellaneous class, open to varieties not classified. There was an excellent exhibit of Belgian hares, containing some imported stock.

I suggest a full classification for hares and rabbits, as the breeding of them is becoming quite an industry.

I will also suggest that ribbons be given in the sweepstakes premiums, in poultry. I would like to see premiums offered for breeding pens, one male and four females to constitute an entry, in the several classes.

In regard to entry fee, I suggest that you charge, when the exhibitor furnishes his own coop, the entry fee of \$2.00, this to entitle him to show twenty or less birds, above that number an additional charge of 10 cents per bird to be made.

If the coops of the board be used, an entry fee of 10 cents per bird to be made, for all entries.

The quarters for the last exhibit were considered as "par excellence" by all exhibitors, and they have promised to return in 1901, with a larger exhibit than ever.

I think that with a little more effort, made earlier, the poultry show can be increased 50 per cent. the coming year.

Respectfully submitted,

B. B. HOPKINS,
Superintendent.

By W. D. HARPER, Assistant Superintendent.

REPORT OF SUPERINTENDENT OF DEPARTMENT F.

Wisconsin State Board of Agriculture,

Gentlemen:—I am pleased to submit a brief report of my department. The exhibits were good, and entries numerous enough to make a good show, but for want of sufficient room I had to pack the exhibits from nine counties, entered for the special county exhibit prizes, in a space that would have accommodated to good advantage, one-half that number. During the fair representatives from Wood, Lincoln and Shawano counties, expressed a desire to have space for their counties next year.

More space should be provided for this exhibit.

All classes in my department, except bees and honey, were larger than in previous years, and exhibitors left the fair with the best of feelings.

General satisfaction was expressed by county exhibit managers that awards were properly made.

I desire to extend thanks to all the judges in my department for their courteous and efficient work.

I have the assurance that next year's exhibits will be even better than those of this year.

Very respectfully submitted,

F. A. HUEBNER,

Superintendent.

REPORT OF SUPERINTENDENT OF DEPARTMENT G.

To the Wisconsin State Board of Agriculture,

Gentlemen:—I hereby submit my report as superintendent of the dairy department for the third annual state fair held under your management.

The total number of entries made in this department was the largest ever made at a Wisconsin state fair, and the dairy hall

was filled with exhibits for the first time since it was erected, several exhibitors having to be turned away for want of space.

The Vermont Farm Machine Co., of Bellow Falls, Vt., exhibited several hand and power United States separators, sheep or dog power churns and a model Babcock milk tester. The De-Laval Separator Co., of Chicago, Ill., had a good exhibit of hand and power separators, and the Empire Separator Co., of Newark, N. J., made a good display of their hand separators. A. H. Reed, of Philadelphia, Pa., exhibited several sizes of the Reed's improved hand separators and pasteurizing machine. Mr. R. R. Bates, of Madison, Wis., had a good display of the celebrated Worcester Salt, and H. L. Adams, of Milwaukee, made a good exhibit of Diamond Crystal Salt. The Hiller & Mertz Co., of New York, made a large display of their Alderney Butter Color, and Mr. Johnson, of Racine, Wis., had an exhibit of his celebrated Anti-dirt Milk Pails.

The success of this department is largely due to the active interest taken by the Wisconsin dairy school, which made the fine display in south end of the refrigerator and occupied the entire east side of hall, with instructive dairy work under the able management of Prof. E. H. Farrington.

A new feature of this department was the sending out of specially prepared printed blanks to be filled out by each exhibitor, giving full particulars of how the exhibit was made. These statements and the score cards were given to Prof. Farrington, who kindly volunteered to look them over and give to the exhibitor any information to be derived from a careful study of the statement and score cards. For further particulars of dairy school exhibit and blank statements I hereto attach the professor's report.

THE DAIRY SCHOOL EXHIBIT.

BY E. H. FARRINGTON.

In getting up this exhibit the writer was aided and encouraged in every way possible by the superintendent of the dairy department of the state fair board, Mr. J. W. Thomas. The work was also constantly assisted by President McKerrow and Secretary True.

The space assigned to the dairy school exhibit included one entire side of the dairy building and a large front window in the refrigerator. This furnished a space about eighty feet long and fifteen feet wide. In order to get this into proper shape some special fitting up and painting of this part of the building was done during the month of August. A floor was laid through the center of the building which had formerly been covered with shavings. The walls were painted white up to the eaves, and white cheese cloth was tacked over the ceiling. This gave an appropriate dairy neatness to the walls.

The eighty-two feet space was divided into three sections. The central section was partitioned off by cardinal colored cloth, which is the University of Wisconsin color, and all the bunting decorations were cardinal and white. A small 8x10 addition was built at one end of the building for the protection of a boiler that was used to supply steam for heating milk in cheese-making and for running Babcock milk testers. Two sinks and the water supply were also put in and a six-foot pit dug in the ground for receiving the drainage from these sinks. Twenty feet of $1\frac{1}{8}$ in. shafting was also put in the south section of the space.

As already stated, the general plan of the exhibit was a division of the 80-foot space into three sections. Butter-making was carried on at the south end, cheese-making at the north end, and the central space was filled with milk-testing apparatus, text-books, descriptive charts and diagrams.

In the butter making section, a three H. P. gasolene engine was supplied by the Hart, Parr Co., of Madison, Wis. This engine furnished ample power to run the line shaft from which the separators and churns were operated.

During the four days of the fair milk was received daily and skimmed by the cream separators, which were in constant operation. The cream was ripened and churned and all the appliances and apparatus used in modern butter making were shown in operation. The following information was printed on large charts exhibited in this section.

Printed Chart.

"The amount of butter produced in Wisconsin is estimated to be eighty million pounds per year, and it is valued at thirteen million dollars.

Dane county leads with six million pounds per year.

Eight hundred and forty thousand cows furnish milk to nine hundred and fifty-one creameries and fifteen hundred and seventy-one cheese factories in Wisconsin."

"Over one million pounds of butter is produced annually in each of the following counties of Wisconsin: Columbia, Dane, Dodge, Eau Claire, Fond du Lac, Grant, Green, Iowa, Jefferson, Kenosha, La Crosse La Fayette, Manitowoc, Monroe, Outagamie, Pierce, Racine, Richland, Rock, Trempealeau, Vernon, Walworth, Washington, Waukesha, Waupaca, Winnebago."

In the cheese making section milk was made into cheese daily before the passing visitors. A cheese vat, cheese press, cheese hoops, curd knives, bandages, hygrometer for measuring the moisture in curing rooms, etc., etc., being supplied to illustrate the entire process of cheese making.

The apparatus for making tests of milk by the Wisconsin curd test was also shown and curds from pure milk as well as some from tainted and defective milks were exhibited.

A number of the common types of cheese were also shown in this section, each one being properly labeled to indicate what cheese makers mean by such names as "Cheddars", "Flats", "Favorites", "Young America's", "Goudas", etc.

A duplicate of the cheese sent to the Paris Exposition by the Wisconsin Dairy School was also on exhibition. These cheese were explained by a large printed chart which gave the following description of them:

"Six cheese made at the Wisconsin Dairy School to show that the amount and the quality of cheese varies with the richness of the milk.

Each cheese was made from the same weight of milk.

200 lbs. of milk testing 0.1 per cent. fat.....	11 lbs. cheese
200 lbs. of milk testing 1.0 per cent. fat.....	13.4 lbs. cheese
200 lbs. of milk testing 2.0 per cent. fat.....	16.0 lbs. cheese
200 lbs. of milk testing 3.0 per cent. fat.....	18.3 lbs. cheese
200 lbs. of milk testing 4.0 per cent. fat.....	21.6 lbs. cheese
200 lbs. of milk testing 5.0 per cent. fat.....	24.8 lbs. cheese

A duplicate set of these cheese was sent to the Paris Exposition April 15, 1900, and later awarded a gold medal, as shown by the following communication.

DAIRY DIVISION.

U. S. DEPARTMENT OF AGRICULTURE,
Bureau of Animal Industry,
 WASHINGTON, D. C., AUGUST 27, 1909.

Wisconsin State Dairy School, Madison, Wisconsin,

Gentlemen: -It gives me pleasure to inform you that we have just received from Major Henry E. Alvord, chief of this division, and now in charge of U. S. Animal Industry exhibit at the Paris Exposition, a partial report of awards on dairy products in the U. S. collective exhibit, which states that the cheese made by your pupils received a gold medal.

Very respectfully,

R. A. PEARSON,
 Acting Chief of Dairy Division."

Other printed charts shown in this section contained the following information:

"Wisconsin produced over sixty-five million pounds of cheese in 1899. This is more than one-fourth of the entire cheese product of the United States.

"Shipments of Swiss, brick and limburger cheese from Green county in 1899 reached over twelve million pounds, which is about one-half the total annual production of cheese in the state.

"The Wisconsin curd test was developed at the Wisconsin dairy school where students are taught how to use it.

"It detects and locates the source of impure milk so that floating curds and 'huffy cheese' may be avoided.

"The state traveling cheese instructors find this test to be of great benefit in showing patrons that cheese-factory milk must be well cared for.

"Losses of thousands of dollars annually to the Wisconsin cheese industry are now prevented by the use of the Wisconsin curd test."

The central section of the exhibit was a cardinal room the walls of which were built in the form of a semi-circle. On these walls were hung photographs, diagrams and charts illustrating the work done by the students and professors of the dairy school. Ten large framed photographs, 25x30 inches in size, showed the students at work in the different departments of Hiram Smith hall, the dairy school building.

Five large charts showed the construction of horizontal and vertical sub-earth ducts for regulating the temperature and moisture of cheese-curing rooms.

A map of the state showed the location of 127 creameries and 133 cheese factories operated in 1900 by former dairy students, and another map showed the number of students from each county of the state that had attended the dairy school since its opening in 1890. This map showed a total attendance of 1,022 students; 824 of these were from 59 counties in Wisconsin and 184 were non-residents.

A large framed picture showed a collection of photographs of the Babcock milk test machines, beginning with the original one which Dr. Babcock had made and including the first and latest machines in common use.

The value of testing the milk of farmers' cows was shown by a framed picture containing the photographs and the records of twelve cows owned by farmers supplying milk to the university creamery. A printed chart describing this picture contained the following statement:

Test your cows. Weighing and testing the milk of thirty-four cows on four farms showed the butter value of each cow's milk for one year to be as follows:

	Best cow.	Poorest cow.
Farm A.....	\$53 35	\$28 72
Farm B.....	53 20	41 83
Farm C.....	60 72	37 96
Farm D.....	55 49	39 60

Does each one of your cows give milk enough to pay for her feed?

Another printed chart contained the following information:

"The Wisconsin dairy school used over two million pounds of milk per year in giving its practical instruction in

Butter making;

Cheese making;

Milk and cream pasteurizing and experimental work.

The milk is furnished by about fifty patrons living in the vicinity of Madison. This gives our students a milk supply similar to that of the 2,500 creameries and cheese factories of the state.

The products of the dairy school are:—

Fancy print and package butter.

Full cream cheddar cheese.

Pasteurized milk and cream.

On tables in this section there were many types of hand and power Babcock milk test machines, all the different forms of whole milk, skim milk and cream test bottles and other glassware now used with this test. Other apparatus also shown was the lactometer for determining the solids not fat in milk, the Marshall and the Monrad rennet tests and complete outfits for testing the acidity of milk and cream by the Mann's test and by the Farrington Alkaline Tablet Test.

A full line of dairy text books also on exhibition, and the blanks and examination papers used in the instruction of students at the Wisconsin dairy school.

A large printed chart contained the following information:

The Babcock Milk Test originated at the Wisconsin dairy school. It is now universally used for testing the milk of creamery and cheese factory patrons and for locating unprofitable cows.

By detecting the losses in skim milk, buttermilk and whey, it effects a saving of over \$800,000 annually to Wisconsin alone.

Over 60,000 copies of bulletins and reports describing this test have been issued by the Wisconsin Experiment Station.

In each of the three sections of the exhibit, former students dressed in the white suits of the dairy school, were stationed. They explained to visitors the different features of the exhibit and did all the work connected with butter and the cheese making. These former students were F. B. Fulmer, John Michels, Matt Michels, John T. Purves, and Warren F. Hardison. Mr. U. S. Baer, instructor in cheese making at the dairy school, ably assisted the writer in preparing and setting up the entire exhibit. The machinery, milk testers, etc., used in this exhibit were loaned by the following firms: Creamery Package Mfg. Co., Cornish, Curtis & Green Mfg. Co., F. B. Fargo Mfg. Co., Wisconsin Dairy Supply Co., A. J. Decker, A. H. Barber Mfg. Co., the Vermont Farm Machine Co., and the DeLaval Separator Co. A can of buttermilk was donated to the exhibit by Hoard's Creameries.

Through one of the large windows of the refrigerator visitors could see an elaborate display of ornamental designs and statues made of butter. The central object of this display was a butter model, two feet long, of Hiram Smith Hall, the dairy school building. This attracted a great deal of attention as it was something entirely new to a Wisconsin state fair crowd.

Another new feature of the dairy exhibit was the effort made to obtain some evidence in regard to the making of the butter and cheese which was entered for premiums.

A printed blank containing questions in regard to "How the butter was made," and "How the cheese was made," was sent to each person applying for entry blanks for exhibiting butter and cheese. The following copy of these blanks shows the nature of the questions asked:

HOW THE BUTTER WAS MADE.

Entry No. Date
 Exhibitor's name P. O.
 Owner of creamery

In answering the following questions you are requested to be as exact as possible, and in case of any doubt regarding an observation, state that the reply is an approximation. The questions apply to the tub of butter exhibited.

How much milk was received the day this butter was made?
 Was any milk two days old received?
 What was the condition of the milk?
 What feed do most of the cows get?
 Was the milk selected for this exhibit?
 How was the milk heated?
 Do you use whole milk pump? Skim milk pump?
 What separator is used?
 To what temperature was milk heated?
 Was cream cooled after separation?
 If you used a starter, describe it

 How much starter was used?
 Total weight of cream Per cent. fat
 What butter color was used?

GIVE TEMPERATURE AND ACIDITY OF CREAM DURING RIPENING.

Cream.....	Noon.	4 P. M.	8 P. M.	At churning time.
Temperature.....
Acidity per cent.....

Was ice put into cream in vat or in churn?
 What churn used? How long churning?
 Buttermilk temperature Test
 Size of granules? How many times washed?
 Temperature of wash water? Kind of worker?
 What kind of salt? Amount used?
 Describe method of working butter

 How long was exhibit tub held in your refrigerator before shipping?
 Temperature of refrigerator?
 About how long will your tub of butter be on the road before it is received in Milwaukee?
 Will it be shipped by refrigerator car?
 Give general statement about the weather during the time milk was produced and the cream ripened for making this tub of butter...

 Remarks: Write here any additional information that you care to give regarding the making of your tub of butter.....

A comparison of your butter score and your answers to all the above questions will be made by a competent person, and any helpful suggestions that he can give will be sent to you by mail.

The prize money which your tub draws will be forwarded to you promptly.

HOW THE CHEESE WAS MADE.

Entry No. Date
 Exhibitor's name P. O.
 Owner of factory

In answering the following questions you are requested to be as exact as possible, and in case of any doubt regarding an observation, state that the reply is an approximation. The questions apply to the cheese exhibited.

How often is milk delivered to the factory?
 In what condition does it arrive?
 Steam or self heating vats?
 Was starter used? If so, what kind and how much was used?
 Time required to ripen the milk?
 At what temperature was the milk set?
 Amount of color used per 1,000 pounds of milk?
 Length of time for coagulation?
 What was the cooking temperature?
 Length of time from setting to dipping?
 What was the hot iron test at time of dipping?
 What is your method of matting, piling and handling of curds before salting?
 Is curd mill used? If so, what style of mill?
 Were curd racks used?
 How much salt was used per 1,000 pounds of milk?
 At what temperature was the cheese cured?
 Give description of curing room.....
 What market was cheese made for?
 On what date was cheese made?
 What cheese color used?
 What rennet extract used?
 What salt used?
 Remarks: Write here any additional information that you care to give regarding the making of your cheese

A comparison of your cheese score and your answers to all the above questions will be made by a competent person, and any helpful suggestions that he can give will be sent to you by mail.

The prize money which your cheese draws will be forwarded to you promptly.

The object of this inquiry was to compare the judges' score of each entry with the description sent by the butter or cheese-maker, and to see if the good and the bad qualities could be explained in such a way as to be of some assistance to each maker as well as to furnish a contribution to the general knowledge of butter and cheese-making.

A study of these descriptive blanks and the judges' scores shows that the butter-makers and the cheese-makers did their part and faithfully filled out answers to all the questions asked in the blanks sent them, but the judges' score cards were as a rule only filled out with the figures.

In 48 cases the butter score cards had no comments whatever recorded on them by the judges. On flavor every entry was marked off by the score figures, but in only two cases does the score card show the judge's written reasons for his figures. The score on "body," "color" and "salt" were also figures only, very few comments being written on the score cards which are so printed that remarks concerning each quality of every sample of butter may be entered together with the judges' figures.

The reasons for the opinion of the judge, if sent to the makers, would be of great value not only to the maker in aiding him to overcome defects in the future, but all this information when studied by a competent person would be a valuable contribution to the general knowledge of butter-making.

The same thing that has been stated in regard to the butter judging applies with equal force to the cheese-judging, and I sincerely hope that some arrangement may be made with future judges by which the reasons for the scoring figures will be written on the score cards so that it can be sent to each maker for his instruction.

This is one valuable means of improving the quality of the dairy products of the state.

In conclusion, I would earnestly recommend that the state board of agriculture ask the state legislature for an annual appropriation of five hundred dollars to the state dairy school for the purpose of running a working dairy and cheese factory and a bureau of information and making exhibits during the state fair.

Respectfully submitted,

JOHN W. THOMAS,
Superintendent.

REPORT OF SUPERINTENDENT OF DEPARTMENT H.

Wisconsin State Board of Agriculture,

Gentlemen:—In making my report of the horticultural department of the state fair, I desire first to extend my hearty thanks to all those who did so much to make this department a success.

It seemed as if every exhibitor had determined not only to do his level best to make a fine show, but to extend every courtesy to all other exhibitors, and while we were very much crowded for room, every one seemed perfectly willing to crowd a little closer and try to make room for his neighbor.

The show of apples was exceptionally fine, and I think the largest ever made at a Wisconsin fair.

At any rate we had to provide nine hundred extra plates, which added to the nearly two thousand already on hand, filled all available space.

Where there are so many exhibits of marked merit, it would hardly be fair to mention any of the exhibitors in particular, but as Mr. A. G. Tuttle of Baraboo, (one of the oldest, if not the oldest fruit grower in the state) had something out of the usual line, I am glad to call attention to one part of his exhibit.

He had on the tables four distinct varieties of cranberries that attracted a good deal of attention, not only because it was something unusual for this fruit to be shown, but because they were of such great size and so very uniform in size and color.

As Wisconsin is growing so much of this fruit, and of so high quality, I think there should be good premiums offered, to try and bring out a fine exhibit of it at our next fair.

There was a magnificent exhibit of plums from the experiment station at Madison that I want to call attention to, for it will in no way work injustice to any individual exhibitor.

I very much doubt if there ever has been as great a variety of native plums shown at any place as at this fair.

Nearly all the known varieties were shown, and in addition to

this great collection, there were more than sixty new varieties that originated at the station, making altogether a grand exhibit and one that was a revelation to all visitors.

The possibilities of what may be attained through good cultivation of our best native plums must certainly be an incentive to the more extensive planting of this valuable fruit.

The work of Prof. Goff and his able assistants along this line alone would put our experiment station in the front rank of all such state institutions.

In the floral department, every available space was filled and some of the exhibits had to be crowded over on to the fruit tables.

The show of green-house plants was larger than usual and of the highest degree of excellence, while the show of cut flowers was almost bewildering, both in quantity and quality.

It seems to me that some improvements should be made in this department, both in the appearance and in the inside arrangement, and if the exhibits continue to grow we should have more space.

I think some premiums should be offered for the best and most attractive exhibit of horticultural products outside of the regular premiums for fruits as already provided.

This would add greatly to the attractiveness of this department and at the same time would be an object lesson that would be of great value to all visitors.

I hope to see something of this kind done in 1901.

R. J. COE,
Superintendent.

REPORT OF SUPERINTENDENT OF DEPARTMENT J.

Wisconsin State Board of Agriculture,

Gentlemen:—I have the pleasure of presenting to you my report of department J for the year 1900, which in point of number and class of exhibit was up to any ever seen on the

ground. The carriage display was very large and fine. The following is a brief list of exhibits and persons in charge:

Melvin Mitchell, Madison, Wis.—Farm implements. H. M. Smith, exhibitor.

Thomas Manufacturing Co., Springfield, Ohio—Hay rakes, tedders and harrows. J. A. Collins, exhibitor.

Prouty & Glass Carriage Co., Wayne, Mich.—Carriages and sleighs. M. F. Stellwagen, exhibitor.

Rock Island Plow Co., Rock Island, Ill.—Farm implements. M. J. Breen, exhibitor.

Peattie, Elliot & Herrington, Madison, Wis.—Farm implements, wagons, seeders and drills, wind mills and carriages, Peattie, Elliot & Herrington, exhibitors.

Fricke Threshing Machine Co., Waynesborough, Penn.—Engines and separators. Robert Walker, exhibitor.

Parsons Band Cutter, Newton, Iowa—Self feeders. S. J. Golden, exhibitor.

Henry Schmidt, Hales Corners, Wis.—Carriages and wagons. H. Schmidt, exhibitor.

Appleton Mfg. Co., Batavia, Ill.—Wind mills, feed cutters, tread powers, grinders, wood saws and tanks. E. T. Bassett, exhibitor.

L. Dorsch & Son, Milwaukee, Wis.—Farm implements and carriages. L. Dorsch, exhibitor.

Moline Plow Co., Moline, Ill.—Plows and harrows. J. J. McKenna, exhibitor.

A. J. Dorsch, Milwaukee, Wis.—Exhibits for So. Bend Plow Co. Plows, harrows and cultivators.

Smith & Pomeroy, Kalamazoo, Mich.—Wind mills. F. W. Metzger, exhibitor.

E. Stolp Implement & Transfer Co., Milwaukee, Wis.—Farm implements and carriages. E. Stolp, exhibitor.

*J. I. Case & Co., Racine, Wis.—Plows, harrows and cultivators. J. H. Hagenah, exhibitor.

Grand Rapids Foundry Co., Grand Rapids, Wis.—Blacksmiths' tool combination. O. R. Roenius, exhibitor.

Perkins Wind Mill Co., Mishawaka, Ind.—Wind mills. F. K. Coosgro, exhibitor.

Austin & Western Co., Chicago, Ill.—Road scrapers and plows. J. B. Ouley, exhibitor.

J. I. Case T. M. Co., Racine, Wis.—Threshers and engines. A. Stelting, exhibitor.

H. I. Nelson, Lena, Ill.—Carriages and sleighs.

I. B. Rowell & Co., Menominee Falls, Wis.—Farm implements. Chas. Neubecker, exhibitor.

Johnson & Tired, Racine, Wis.—Fanning mills. E. S. Huff, exhibitor.

Dowagiac Mfg. Co., Dowagiac, Mich.—Drills and seeders. H. O. Brown, exhibitor.

Wallman Mfg. Co., Milwaukee, Wis.—Oil tanks. Wallman, exhibitor.

Moline Plow Co., Moline, Ill.—Plows, harrows and cultivators. B. G. Calvin, exhibitor.

Akron Cultivator Co., Akron, Ohio.—Cultivators. C. W. Brennan, exhibitor.

Gale Mfg. Co., Albion, Mich.—Farm implements. T. A. Butt, exhibitor.

Kingman & Co., Milwaukee, Wis.—Carriages, plows, seeders, wind-mills, binding twine. H. M. Blake, exhibitor.

Durant Dort Carriage Co., Flint, Mich.—Carriages and wagons. J. D. Mansfield, exhibitor.

Rosenthal Corn Husker, Milwaukee, Wis.—Corn huskers. A. Rosenthal, exhibitor.

E. W. Ross, Springfield, Ohio.—Feed cutters. E. P. Ross, exhibitor.

Hirsch, Bros, Milwaukee, Wis.—Farm implements, carriages and Planet, Jr. garden tools. C. J. Hirsch, exhibitor.

Smalley Mfg. Co., Manitowoc, Wis.—Feed cutters, powers, grinders. Kelly, exhibitor.

Pontiac Carriage Co., Pontiac, Mich.—Carriages. W. F. Billings, exhibitor.

Monitor Mfg. Co., Minneapolis, Minn.—Drills and seeders. Geo. W. Heath, exhibitor.

Connersville Buggy Co., Connersville, Ind.—Carriages. W. H. Todd, exhibitor.

Milwaukee Hay Tool Co., Milwaukee, Wis.—Corn huskers and blowers. Chas A. Gutenkunst, exhibitor.

Stavor Carriage Co., Beloit, Wis.—Carriages and sleighs. J. J. Baker, exhibitor.

J. Thomson & Co., Beloit, Wis.—Farm implements and gasoline engines. J. R. Jones, exhibitor.

La Porte Carriage Co., La Porte, Ind.—Carriages and sleighs. J. Parkhurst, exhibitor.

Deere & Co., Moline, Ill.—Full line farm implements. S. M. Gantz, exhibitor.

Deer & Mansur, Moline, Ill.—Corn huskers. M. E. Waite, exhibitor.

A. W. Stevens Co., Marinette, Wis.—Shredders, feed grinders and engines. J. J. Power.

American Harrow Co., Detroit, Mich.—Farm implements. A. F. Manning, exhibitor.

Hunt, Helm & Ferris, Harvard, Ill.—Hay carriers and tank heaters. H. A. Sheldon, exhibitor.

Van Brunt & Wilkins, Horicon, Wis.—Drill and seeders. M. L. Dabarsh, exhibitor.

S. B. Donaldson, Milwaukee, Wis.—Hay forks.

Wood Bros. Steel Self Feeder Co., Des Moines, Ia.—Self feeders. A. McGregor, exhibitor.

Dickey Fanning Mills Co., Racine, Wis.—Fanning mills. F. W. Dickey, exhibitor.

W. H. Van Schaick, Walworth, Wis.—Corn husker.

Racine Hatcher Co., Racine, Wis.—Incubators and brooders. J. V. Rohan, exhibitor.

Fish Bros. Wagon Co., Racine, Wis.—Wagons. J. C. Weatherby, exhibitor.

Michigan Buggy Co.—Carriages. J. W. Stoughton, exhibitor.

Appleton Hay Tool Co., Appleton, Wis.—Hay forks and carriers. Richard Miller, exhibitor.

Kennel, Saltzman & Neely, Hamilton, Ohio—Mechanics' tools. Geo. H. Blackmar, exhibitor.

Milwaukee Machinery Co., Milwaukee, Wis.—Gas engines. W. D. Mann, exhibitor.

J. F. Kramer, Elkhart, Wis.—Butchering derrick. L. P. Kramer, exhibitor.

In closing I desire to extend my thanks to the board of management, and those in charge of the exhibits, for the manifest interest and courtesies shown my department during the fair of 1900.

Respectfully submitted,

J. E. SEAVER,
Superintendent.

REPORT OF SUPERINTENDENT OF DEPARTMENT K.

Members of the Wisconsin State Board of Agriculture,

Gentlemen:—The exhibition in the so-called manufacturers' building at the Wisconsin state fair of 1899, was, so far as I have been able to learn, generally regarded a very fair success. About one-fourth of the available space was surrendered to the agricultural department for the accommodation of its overflow exhibits. All other space was filled, chiefly by Milwaukee manufacturers, or representatives of manufacturers. These exhibits were in good variety and represented about as many lines of business as there were exhibits. In securing them, I sought to obtain the largest possible variety and representing lines which would interest the people of the state. I found some difficulties in securing desirable exhibits because so-called "fakirs" had previously been permitted to vend their wares in the building. I overcame this objection by assurances that no "fakirs" would be permitted in the building. Your officials permitted me to redeem all such promises, hence the building was free from this class of business, a condition which

seemed to be very well appreciated by exhibitors and visitors. I think this fact will make it easier to obtain desirable exhibits the coming year. In order to avoid the incongruity of all sorts and designs of booths in the center of the floor, I built new movable booths about 8x8 feet for the available floor space, the expense of these being only a little lumber, at the close of the fair I moved these into the side spaces and they should be in perfect order for future use. The harmonious effect which they gave added much to the attractive appearance of the building. Were it possible to operate light machinery by electricity in this building, so that a portion of it could be occupied by operating exhibits, this might be made a very attractive feature. One serious barrier to securing desirable merchants and manufacturers' exhibits arises from the operation of the Milwaukee Industrial Exposition at the same time, in which home merchants and manufacturers are given space free, as well as free tickets for themselves and their helpers. On this account many object to paying an entrance fee at the fair.

The northwest Canadian exhibit of grains, grasses, etc., given space in this building, attracted much attention and elicited some unfavorable comment. It was argued by a few that while Wisconsin had ample desirable land for home-seekers, exhibits designed to attract them elsewhere should be avoided. These critics seemed to forget that Wisconsin is big enough, grand enough, and offers sufficient inducements and possibilities to successfully compete with any section of the country in this respect. The Canadian exhibit ought to prove an inspiration to northern Wisconsin to make one similar in character and far surpassing it in excellence at each succeeding state fair for years to come. This can easily be done if the people to the north will.

The leaving of fakirs from their former "Eldorado," the manufacturers' building, was a sore disappointment to many of their tribe. The perpetuation or revocation of this rule and the provision of suitable space for this class of attractions, revenue yielders, is for adjudication by the board. It may be worthy

of your thought. The securing of desirable exhibits will be made easier by perpetuating the rule.

Respectfully submitted,

R. H. ODELL,

Superintendent Manufacturers' Building.

REPORT OF DEPARTMENT L.

To the Wisconsin State Board of Agriculture,

Gentlemen:—Never having attended a state fair before the last, at which I officiated as superintendent of art department, I was surprised at the number of pictures entered, and not very enthusiastic over the quality of exhibits.

On the whole, the picture exhibit was not a credit to the state, and from what I have learned it never has been.

If the object of the fair is to display only the best, which certainly was done in the exhibits of cattle, horses, sheep, and all along the line with everything else shown, it certainly has failed in the exhibit of pictures.

While a number of good things were shown, the majority were very bad, completely overshadowing all else.

Under the present rules, I do not see how it can ever be any different. If you wish to carry on the art department, confine it to china painting and embroidery, but cut out the pictures, unless you wish to make them an educational feature, in which case, something may be done that the board need not be ashamed of, but the exhibits may no longer be the products of the state.

I have in mind to introduce reproductions of fine paintings, etchings, gravures, and also some paintings, water colors, etc., and then give plenty of space to each picture, with a short description of each, printed in large type and placed underneath the picture.

An exhibit like this will hold visitors on an average for one hour, and then many will come again.

Yours very truly,

A. E. SCHNEIDER,
Superintendent

REPORT OF PIGEON DEPARTMENT.

To the Wisconsin State Board of Agriculture,

Gentlemen:—The total number of birds shown, in my department, at the last fair was 1,002. My entries show:

372 pairs of pigeons, at 25 cents per pair.....	\$93 00
138 single birds, at 15 cents each.....	20 70
6 exhibition coops (20 birds each), at \$2.50 per coop.....	15 00
Total.....	<u>\$128 70</u>

I hold the receipts of the secretary for this amount.

Total expenses of the department.

Salary of superintendent.....	\$50 00
Salary of assistant.....	21 00
Two helpers, \$2.00 per day.....	24 00
Night watchman.....	6 00
Judge.....	75 00
Feed.....	5 00
Total.....	<u>\$181 00</u>

We find that the classes for young birds, allowed by the board last year, proved to be a good feature, and well taken care of; therefore I will ask permission to add a few more classes, before publication of the next list. We were compelled to refuse some 150 entries, on account of lack of room.

I think it would be to our interests to increase our premiums about \$50, to be given as specials on certain varieties, so as to bring a large string to our next fair.

The expense of running the department would not be increased, even though we have an increase of birds.

For the amount paid the past year for one judge, we can and would much like to secure the services of three western judges.

Our object in this change is, there are so many different kinds of pigeons that it is hard to find one man who is a good judge of all varieties. Different men can be obtained that will

cover the whole field and, as I have said, at no increase of expense.

We are anxious to make the pigeon department of the Wisconsin state fair a show to be talked of and looked forward to as one of *the* shows of the season.

Our last show was very kindly noticed by the interested press, even in the far east, and we are anxious to sustain and even advance our standing. Certainly our last show, in number of birds and quality of same, was second to no exhibit in the country.

I have already received many communications from old exhibitors, as well as others who propose to exhibit, relative to our next fall show.

I wish we could have a new building for the pigeon and poultry shows, run in conjunction, the same as last year.

I assure you that these departments were well patronized, there being a complete and continuous jam.

The classes best represented were Pouters, Tumblers, Fantails, Magpies, Swallows, Turbits, Owls, Dragons, Homers, and Oriental Frills.

Jacobins, Trumpeters, Starlings and miscellaneous were also well represented.

Hoping that this report will meet with your approval, and its suggestions favorably considered, I remain,

Yours very truly,

L. A. JANSEN,

Superintendent.

REPORT OF SUPERINTENDENT OF KENNEL EXHIBIT.

Wisconsin State Board of Agriculture,

Gentlemen:—I submit the following financial report of the “dog show,” as shown by our accounts:

Disbursements.....	\$1,471 36	
Received cash from state board.....		\$553 00
Received 5,946 paid admissions, at 10 cents		594 61
Received entry fees.....		323 75
	<u>\$1,471 36</u>	<u>\$1,471 36</u>

While I regret that our deficit is not smaller than it is, I account for it as follows:

We had to pay our judges \$50 or more than we paid last year; our feed and help was more, on account of having nearly double the number of dogs of last year, and catalogue cost more, having thirty more pages than the last, and added to this was the fact that Rutland, Vermont held its fair and dog show on the same dates as ours, and we had to offer better inducements to big handlers than Rutland, to get them here.

All in all, we did the best we could and feel that our attraction was well worth the cost.

The location of our building this year was against us.

I am sure we would have had from 2,000 to 3,000 more visitors, had we had our last year's location near the grand stand.

Respectfully yours,

EDW. J. MEISENHEIMER,

Superintendent.

REPORT OF SUPERINTENDENT OF SPEED.

To the Wisconsin State Board of Agriculture,

Gentlemen:—In making my report as superintendent of speed, I am inclined to acknowledge that I did not do as well as I might have done in the way of collections — this being due to my great anxiety to keep in the good graces of the horsemen,

Before entry I made some promises to them, as I found other associations were doing, in order to secure a good list.

Custom has become so strong, in this particular, that it practically amounts to a necessity.

Then we were unfortunate in several strings of horses being laid up with the "pink eye," or being knocked out the previous week at Hamline, Minn.

Taken all in all, however, we had a very high class meeting.

We had a hundred horses face the starter for the word — had forty-six heats, only two of which failed to beat 2:20.

The fastest heat was 2:05 $\frac{1}{4}$, and the slowest 2:21, the average time of heats being 2:14 $\frac{1}{4}$.

I notice that all horse papers have given us a good "send off" in reporting our meeting, and I think horsemen left us well satisfied that they had a show for their money.

Many horsemen told that ours was the best meeting they had attended in the season.

Our "free for all" pace was a failure so far as being a money producer, but the fact that William Mc. went a heat in 2:05 $\frac{1}{4}$ in this race is worth all it cost the association.

I acknowledge the following receipts:

Cash received from Gould for score card privileges.....	\$112 50
Cash received from entries during the fair	2,695 00
Cash received from entries since the fair.....	62 50
Deducted from winnings	1,970 00
Total	<u>\$1,840 00</u>

I have the receipt of the treasurer for \$2,807.50, and enclose raft for \$62.50.

I have suspended some, but promised to wait on some and not turn in their bills to Secretary Steiner, as they wish to keep their horses clear.

I think we will get considerable of what is outstanding before another season opens up.

Yours very truly,

FRANK W. HARLAND,

Superintendent of Speed.

REPORT OF SUPERINTENDENT OF GATES.

Wisconsin State Board of Agriculture,

Gentlemen:—I submit the following statement of expense of handling the gates at the state fair of 1900:

Paid T. J. Stephenson, for services at gates.....	\$1 25
Henry Theis, for services at gates	11 00
William Huck, for services at gates	16 00
W. C. Welton, for services at gates.....	12 00
Tommy Lyons, for services at gates.....	12 00
Scott Chapman, for services at gates	9 00
J. T. Flanders, for services at gates.....	13 48
S. C. Welsh, for services at gates	15 95
W. C. Sutherland, for services at gates	15 95
A. D. Peters, for services at gates.....	15 80
J. A. Wedgwood, for services at gates	15 80
Henry Green, for services at gates	15 35
John Race, for services at gates	15 80
Enos Colburn, for services at gates	19 00
R. E. Wedgwood, for services at gates.....	7 00
Edward Kayser, for services at gates.....	15 35
J. E. Tucker, for services at gates.....	19 25
Nick Kayser, for services at gates.....	15 35
Ben Kussow, for services at gates.....	15 80
John E. Coleman, for services at gates	15 55
Allen Classon, for services at gates.....	14 44
F. Huber, for services at gates	2 00
J. R. Fleming, for services at gates.....	4 00
R. O. Wedgwood, for services at gates.....	28 30
Geo. Richmond, fo services at gates	1 00
	<hr/>
	\$326 42

Respectfully submitted,

DAVID WEDGWOOD,

Superintendent.

REPORT OF SUPERINTENDENT OF FORAGE AND
TRANSPORTATION.

I herewith submit a financial statement of the department of forage and transportation:

TRANSPORTATION.

Received.

John Miller, license for dray.....	\$8 00
John Barnekow, license for dray.....	8 00
Ed. Neeb, license for drap.....	8 00
Fred Schulte, license for dray.....	8 00
Jerry De Groot, license for dray.....	8 00
	<hr/>
	\$40 00

Paid out.

Mr. Butler, services as police.....	\$2 00
F. Barnekow, services as police.....	1 00
T. Kitchen, services as police.....	2 00
G. Richmond, services as police.....	4 00
	<hr/>
	\$10 00

The following amounts were paid out by me for work not coming under my province, but of absolute necessity, principally for military encampment:

John Millea, work with team.....	\$1 75
J. D. Groot, work with team.....	1 75
Ed. Neeb, work with team.....	1 75
Fred Schulte, work with team.....	2 50
T. Kitchen, labor.....	2 00

Grand stand privileges.....	85 00
Cracker jack.....	100 00
Advertising.....	25 00
Merry go rounds.....	70 50
Shows.....	237 00
Cider mills.....	44 00
Tin-type galleries ..	25 00
Fortune telling and hand reading.....	29 90
Opticians and optical goods.....	59 00
Notions and toys.....	53 00
Cane racks, &c.....	75 00
Slot machines.....	6 61
Shooting gallery.....	12 00
Checking bicycles.....	17 50
Miscellaneous.....	27 00
	\$1,607 61

A detailed statement accompanies the above, marked exhibit "A". The amount received has been deposited with the treasurer, for which his receipt has been received.

All of which is respectfully submitted.

S. D. HUBBARD,
Superintendent.

REPORT OF THE STATE SUPERVISOR

OF

Inspectors of Illuminating Oils

OF THE

STATE OF WISCONSIN,

FOR THE

Two Years Ending September 30, 1900.

MADISON:
DEMOCRAT PRINTING COMPANY, STATE PRINTER,
1901.

LETTER OF TRANSMITTAL.

KAUKAUNA, Wis., Oct. 25th, 1900.

To His Excellency, EDWARD SCOFIELD, *Governor of the State of Wisconsin*

SIR:—In conformity to the law relating to the inspection of illuminating oils. I have the honor to submit a detailed report of the transactions of this department for the period beginning October 1st, 1898, and ending September 30th, 1900.

Respectfully submitted,

HERBERT B. TANNER, M. D.,
State Supervisor of Oils.

REPORT.

Hon. EDWARD SCOFIELD, *Governor of Wisconsin:*

SIR:—In accordance with the statutes providing for the inspection of illuminating oils, I herewith submit my third report as state supervisor of oils for the biennial period ending September 30th, 1900:

During the two years covered by this report a few changes have been made in the list of deputy inspectors, their number having been increased from 62 at the time of the last report to 65 at the present.

The only death among the deputies was that of Mr. Robert McConnell of Madison, after about twelve years' faithful service as a deputy inspector he resigned his office owing to failing health, and died shortly after.

Owing to the shifting trade conditions the boundaries of some of the districts have been slightly changed, increasing the efficiency of the service.

The annexed table showing the name, postoffice address and territory assigned each deputy will show that the districts are now so arranged that every portion of the state is covered, and in charge of experienced deputies centrally located.

I have continued the practice of personally visiting the deputies during the period covered by this report, while not required by law, the benefits derived make it a necessity, for in no other way can the state supervisor keep in touch with the actual field work.

Our deputies bring us in contact with business men exclusively, and I have endeavored to impress the deputies with the necessity of performing their duties in so prompt a manner as to meet with the approbation of business men, and I am pleased to say that no complaints have been made to me of any lack of at-

General Report.

tention on the part of the deputies, and I can heartily commend all of my deputies as prompt and accurate business men.

The quality of oil supplied to consumers in this state has improved to such a degree that accidents from the use of kerosene has been entirely confined to the reckless and criminal use of the same poured out of a can to light a fire, or the occasional dropping or falling of a lamp from insecure fastening.

The requirements of the law are so well known at present by both the dealers and refiners that no intentional violation of the same has been brought to my attention during the past two years. I believe the several provisions of the law have been faithfully carried out in every particular, and no oil escaped inspection.

Added to this report there are tables showing the names of all the inspectors with their districts, the distribution of the surplus fund for the two years, the number of barrels inspected in each district for two years, a circular letter giving directions to the deputies for the proper testing and branding of oils, and a copy of the law governing the inspection of illuminating oils. •

All of which is respectfully submitted,

H. B. TANNER, M. D.,
State Supervisor of Oils.

Inspectors.

INSPECTORS OF ILLUMINATING OILS.

TABLE No. 1.

Giving the names of the inspectors, with their post office address, and the boundaries of the districts assigned to each, as in force October 1, 1900.

Inspector.	Post Office address.	Territory assigned.
Dr. H. B. Tanner	Kaukauna	State Supervisor of oils.
A. P. Church	Antigo	Langlade county, and the towns on the Ashland division of the C. & N. W. Ry. in Shawano county, from Antigo to Buckkee, inclusive.
Dan Breen	Appleton	Outagamie county, except the city of Seymour, also the city of New London in Waupaca county.
M. J. Hart	Ashland	Ashland and Bayfield counties.
H. J. Hughes	Beaver Dam	Towns on the C., M. & St. P. Ry. from Randolph to Rubicon, inclusive, including Fox Lake and Burnett Junction, all in Dodge county.
Prof. E. G. Smith	Beloit	South half of Rock county.
Chas. E. Stehl	Arthur	Tank stations at Platteville, Lancaster and Cuba City, in Grant county.
Nick Gruber	Black River Falls	Jackson county except the towns of Garfield, Cleveland and Merrillan.
Jos. Miller	Burlington	Towns of East Troy and Spring Prairie, in Walworth county, towns of Waterford, Rochester and Burlington, in Racine county, towns of Wheatland, Randall and Salem in Kenosha county.
Fred Hanson	Chetek	Barron, Washburn and Sawyer counties, and towns on the Soo Railroad in Chippewa county.
W. H. Howieson	Chippewa Falls	South half of Chippewa county, towns of Thorpe, Withee and Hixon in Clark county, and towns on the Wis. Cen. Ry. in Dunn county.
A. K. Breed	Chilton	Calumet county, including the village of Kiel in Manitowoc county.
Jas. McGinty	Darlington	Lafayette county, except the towns on the Ill. Cen. Ry., also Mineral Point in Iowa county.
F. Lindemann	Delavan	Towns of Darien, Richmond, Delavan, Sugar Creek, Troy and Lafayette in Walworth county.
Thos. R. Mundy	Dodgeville	South half of Iowa county, except Mineral Point, also tank stations of Montfort and Fennimore in Grant county.
H. M. Orlady	Durand	Pepin county, and towns on Burlington Ry., Buffalo county.
Geo. W. Williams	Eau Claire	Eau Claire county, except the town of Fairchild.
S. S. Lee	Evansville	The City of Janesville and towns on the C. & N. W. Ry., from Janesville to Evansville and Footville, inclusive, all in Rock county.
Geo. H. Ferris	Fond du Lac	Fond du Lac county, except the city of Ripon, the towns of Chester, LeRoy, Lomira, Willamstown, and Theresa in Dodge County.
S. T. Beattie	Florence	Florence county.
A. F. Nelson	Grantsburg	Burnett county.
J. H. Leonard	Green Bay	Brown, Kewaunee and Door counties, and the city of Seymour in Outagamie county.
Robert Dinsmore	Hudson	St. Croix county, towns on the C., St. P., M. & O. Ry., in Pierce county.
C. Reible	Hurley	Iron county.
J. A. Jackson	Kenosha	Kenosha county, except the towns of Wheatland, Randall and Salem.

Inspectors.

INSPECTORS OF ILLUMINATING OILS.

TABLE No. 1—Continued.

Inspector.	Post Office address.	Territory assigned.
Wm. H. Luth.....	La Crosse.....	La Crosse county, Trempealeau county, except the northern tier of towns; all of the towns on the Burlington Ry. in Vernon Co.
J. E. Nethercut.....	Lake Geneva.....	Towns of Geneva, Lynn, Lyons, Bloomfield, and Walworth in Walworth county.
J. W. Curran.....	Madison.....	Dane county, except the towns of Mazomanie and Black Earth. Towns on the C. & N. W. Ry. in Columbia county to Okee.
C. L. Newstrom.....	Maiden Rock.....	Pierce county, except the towns on the C., St. P., M. & O. Ry.
A. A. Whitney.....	Manitowoc.....	Manitowoc county except the village of Kiel.
E. A. Peterson.....	Marinette.....	Marinette county.
C. H. Doern.....	Marshfield.....	Wood county except the towns of Rock, Wood and Remington. Towns on the Wis. Cen. Ry. from Marshfield to and including Medford; also Greenwood in Clark county, and the towns of Milan and Athens in Marathon county.
Geo. P. Thompson.....	Menomonie.....	Dunn county except the towns on the Wisconsin Central Ry.
C. S. Stimers.....	Merrill.....	Lincoln county.
Geo. R. Francis.....	Merrillan.....	Towns on the C., St. P., M. & O. Ry. from Merrillan to Mondovi inclusive, also the town of Fairchild in Eau Claire county.
K. W. Tanner.....	Milton Junction.....	Towns of Fulton, Milton and Lima in Rock county, also Whitewater in Walworth county, and Palmyra in Jefferson county.
Fred W. Kuth.....	Milwaukee.....	Milwaukee county.
B. T. Raymond.....	Monroe.....	Green county and towns on the Ill. Cen. Ry. in Lafayette county.
G. N. Huckings.....	Necedah.....	Necedah in Juneau county.
C. W. Johnson.....	Neenah.....	Cities of Neenah and Menasha in Winnebago county; towns on the Wis. Cen. Ry. from Neenah to Sheridan in Waupaca county.
Eli M. Wheaton.....	Neillsville.....	Clark county, except towns of Humbird and Greenwood and northern tier of towns.
C. J. Francis.....	Oconto.....	Oconto county, also towns on C. & N. W. R'y from Oconto to Clintonville inclusive.
W. H. Boyd.....	Oshkosh.....	Winnebago county except the cities of Neenah and Menasha and the town of Nepeuskum.
M. Christianson.....	Phillips.....	Price county and the towns of Westboro, Whittlesey and Chelsea in Taylor county.
G. W. Brown.....	Pittsville.....	Towns of Rock, Wood and Remington in Wood county.
Alton Gibbs.....	Plainfield.....	Marquette, Adams and Waushara counties.
Chas. Mohr, Jr.....	Portage.....	Columbia county, except the towns of Lodi and West Point.
C. F. Brewer.....	Racine.....	Racine county, except the towns of Waterford, Rochester and Burlington.
R. M. Douglass.....	Rhineland.....	Oneida, Vilas and Forest counties.
Le McMurtrey.....	Richland Center.....	Richland county.
C. W. Stewart.....	Ripon.....	Towns on the C. & N. W. R'y from Ripon to Princeton inclusive, and towns on the C., M. & St. P. R'y from Ripon to Berlin inclusive.
J. C. Meyer.....	Sauk City.....	Towns on the C., M. & St. P. R'y, in Sauk, Dane and Iowa counties, from Prairie du Sac to Spring Green inclusive.
J. B. Stupfell.....	Sharon.....	Sharon in Walworth county.
C. DeMasters.....	Sheboygan.....	Sheboygan county.
T. L. McGlachlin.....	Stevens Point.....	Portage county, Waupaca county, except the towns on the Wis. Cen. R'y and the city of New London.

Inspectors.

INSPECTORS OF ILLUMINATING OILS.

TABLE No. 1—Continued.

Inspector.	Post Office address.	Territory assigned.
C. J. Wells.....	Tomah	North half of Monroe county. Juneau county except the towns of Necedah, Plymouth and Wonewoc.
Jos. Omundson	Viroqua.....	Vernon county, except the western tier of towns, also towns on the C. M. & St. P. M. & O R'y from Viroqua to south.
H. Wertheimer	Watertown	Jefferson county except the town of Palmyra. Towns on the C. & N. W. R'y from Watertown to Juneau inclusive. Towns on the C., M. & St. P. R'y from Watertown to Elba.
T. H. Taylor	Waukesha.....	Waukesha county.
Ed. Heimann	Wausau.....	Marathon county except the towns of Milan and Athens.
O. P. Vaughna.....	Wauzeka.....	Crawford county towns on the C., M. & St. P. R'y from Prairie du Chien to and including Avoca; from Woodman to Werley. Towns on Burlington R'y in Grant county, Cassville inclusive.
W. C. Bratz.....	West Bend.....	Washington and Ozaukee counties.
John Diffor.....	West Superior.....	Douglas county.
Jas. R. De Garmo.....	Wonewoc	Towns on C. & N. W. R'y from Summit to Merrimac in Monroe, Juneau and Sauk counties

Amount Inspected.

Directions for Testing Oil.

DIRECTIONS FOR TESTING AND BRANDING
ILLUMINATING OIL.

To the Deputy Inspectors:

The legal test for oils used for illuminating or heating purposes in Wisconsin is now fixed by law at 100 degrees Fahrenheit, flash test, and 120 degrees Fahrenheit, burning test; this requires a double test, and the oil must come up to both requirements. *

In order to secure uniformity in results, all deputies are required to carefully comply with the following directions in making the test.

All tests should be made in a closed room, well away from drafts. Smoking or blowing in the direction of the oil under test must be carefully avoided.

Fill the water bath of your Tagliabue tester about three-fourths full of water, leaving a small space for expansion of the heated water. This water should be of a temperature not exceeding 70 degrees. Fill the glass cup with the oil about to be tested to about one-fourth of an inch from the top. Wipe the edges of the oil cup dry, removing any air bubbles from the surface of the oil with a small piece of blotting paper. The brass lamp should be filled with alcohol. After lighting the same place it under the water bath. Set the tester within the black enameled box, suspending the thermometer by a rubber band after passing through the hole in the black box. Arrange the thermometer so that the bulb is well immersed in the oil; observe the temperature as it begins to rise. Do not allow the oil in the cup to heat faster than three degrees per minute up to 100 degrees, nor faster than two degrees per minute over 100 degrees. When the temperature of the oil has reached 100 degrees, regulate the flame of the lamp with the utmost nicety in such a manner that the temperature of the oil rises as nearly as practicable two degrees a minute by actual observation, with the

Directions for Testing Oil.

watch in hand as a guide. When the oil has reached 90 degrees, apply the torch, watching carefully for the first flash, and repeat the same every two degrees until the burning point is reached.

In using the Wisconsin Gas Torch please observe the following directions: After unpacking the same, screw on the tip with the valve attached to the reservoir; then unscrew the top cap, upon which is stenciled, "Tanner's Wisconsin Gas Torch;" pour into the reservoir not to exceed one-half teaspoonful of *gasoline*.

This will be immediately absorbed, when the cap should be replaced. The reservoir is now charged ready for use. It will work continually as long as enough vapor remains to burn. Slip on the double rubber bulb; press the rubber bulb a few times until the second bulb fills the net. Open the valve at the other end and place the tip near a flame (a lighted match or the burning alcohol lamp). If the valve is open too far the pressure will extinguish the flame. Regulate the flame by the stop-cock, drawing it down to one-fourth of an inch in length or size. In using the torch while testing hold it as shown in the accompanying illustration.

Directions for Testing Oil.

In case the flame does not work well, it will be found to be due to leakage of the gas, and a fresh leather packing will be needed in the cap. Oil affects rubber injuriously, so it will be well to keep the rubber bulbs away from direct contact with the oil as far as possible. In case the rubber bulbs break they can often be repaired with bicycle cement. In case of an emergency each instrument is supplied with an extra rubber tube, one end of which can be slipped over the cap, and with the other end in the mouth you can blow the gas through the cylinder. If you do not wish to blow continuously, if one strong puff is followed by pinching the rubber tube with the fingers, pressure enough will have been supplied to keep the flame going for several seconds, long enough in fact to test the presence of inflammable vapor over the surface of the oil in the cup. After preparing the torch as directed above, pass the lighted torch over the surface of the oil in the cup as near as possible without touching the oil. The flame should not be thrust against the surface of the oil. Pass the lighted torch over the surface of the oil in this manner every two degrees until the burning point is reached; the burning point is when on applying the torch the oil in the cup burns all over its surface, so that it has to be blown out.

In passing the torch over the surface of the oil do it with a moderately quick but steady motion of the hand.

The first blue glimmer you get is the flashing point, and that is usually twenty degrees below the burning point. Oil that flashes below 100 degrees must be rejected. Oil that burns all over the surface of the cup below 120 degrees must be rejected. A careful record must be kept of the flashing point, as well as the burning point, and this record carried from your receipt book to the monthly report.

Sufficient time should be given every test to insure accuracy, usually from forty to sixty minutes to each test. When making several successive tests always renew the water in the water bath, and see that the tester is well cooled off and perfectly clean before proceeding with the next test.

Directions for Testing Oil.

If the oil flashes or burns within a degree or so of the legal test, or if there is the least doubt about the accuracy of the test, it should be repeated to verify the result.

Bearing in mind that the Wisconsin test of 100 degrees flash, and 120 degrees burning, is a more stringent test than is required by any of the bordering states, consequently especial care is enjoined that the refiners and dealers do not introduce oil in this state that could not be sold in neighboring states.

Oil that is used for illuminating cars on railroads and steam-boats must bear a burning test of 300 degrees. In testing 300-degree Mineral Seal oil the water bath should be filled with sand in place of water, and the glass cup replaced by a brass one.

In all tank car inspections a record must be kept of the *name* of the *tank car line*, the *number* of the *tank car* and the *number of gallons* contained in the car. Enter all of this in the stub of the receipt book in addition to the other memoranda therein required. In case you wish to estimate gallons by weight, figure six and four-tenths pounds per gallon.

Always obtain a sample of the oil from the tank car before it is unloaded. The railroads allow forty-eight hours for unloading before making demurrage charges. If by reason of any neglect of the inspector such charge is made he will be expected to make the same good to the oil company.

Fill out and deliver to the consignee a "certificate of oil inspection" for every grade of oil tested; also fill out and give to the party who pays you a receipt for the money paid. Where oil is actually inspected in any one day in less than ten barrel lots, a record must be kept of this and entered in your monthly report, so that the proper distribution of the surplus fund can be made. All deputies are required to send in a report on the first day of the month, upon blanks furnished, whether any oil has been inspected during the month or not.

Stencil plates, testers and all other necessary paraphernalia will be furnished from the office of the state supervisor at cost to

Directions for Testing Oil.

the deputies; none other must be used. All printed matter is furnished from the same office free of cost to the deputies.

You are required by law to immediately furnish this office with full information regarding any accident or explosion that may come to your knowledge in your district from the use of illuminating or heating oils; proper blanks will be furnished upon which to make any such report.

The fees allowed by law are collectable upon approval or rejection of each consignment of oil inspected. Ten cents per barrel is to be collected for every cask, package or barrel estimated at not to exceed fifty gallons or major fraction thereof. Eight cents of this is retained by the deputy inspector and two cents per barrel is to be remitted to the office of the state supervisor with the monthly report.

The state supervisor enjoins upon each inspector a personal supervision of all the work relative to his office, and expects all violations of the law will be promptly reported to the district attorney of the county in which it takes place, and the facts reported to this office.

DIRECTIONS FOR BRANDING BARRELS.

Oil flashing below 100 degrees must be branded "Rejected."

Oil burning below 120 degrees must be branded "Rejected."

Oil burning at 120 degrees and up to 125 should be branded "Approved, 120."

Oil burning above 125 and up to 135 should be branded "Approved, 130."

Oil burning above 135 and up to 145 should be branded "Approved, 140."

Oil burning above 145 and up to 155 should be branded "Approved, 150."

Oil burning above 155 and up to 165 should be branded "Approved, 160."

Oil burning above 165 and up to 180 may be branded "Approved, 175."

Directions for Branding Barrels.

Oil burning above this shall be branded at the burning point.

The brand impression will ordinarily be placed on the gauge end of the barrel; but when other marks interfere, then **wherever** practicable, but always so well done that a legible imprint remains.

Deputy inspectors will, under no circumstances, allow their brands to be used by others, but will brand the barrels themselves, or have the same done under their personal supervision.

The sale or disposal of in any manner of any empty casks or barrels without first thoroughly cancelling the Wisconsin inspector's brand will, on conviction, subject the owner to a fine not to exceed \$500.00.

Every barrel of oil sold or used in this state must be tested and branded by a Wisconsin deputy inspector. Inspection in other states counts for nothing.

For all points not mentioned in these instructions the deputy inspectors will carefully examine and strictly construe the law, keeping in mind the rule to be prompt in answering calls, and courteous in dealing with the public. Also you are directed to positively abstain from making any remarks about the quality of the oil inspected for the various competing oil companies. The duty of an inspector ends in this respect when he has ascertained that the oil stands the required legal test.

In conclusion, I desire to impress upon the deputies an appreciation of the responsibilities resting upon them officially. Trusts are committed to them which should never be lost sight of. Human lives, as well as the safety of property, may depend upon the issue of an inspection.

The law must be enforced impartially and honestly, without fear or favor.

Accidents.

KEROSENE ACCIDENTS.

Very few accidents from the use of kerosene have taken place during the past two years; only six have been reported to this office.

If the general public would use care in placing hanging lamps, seeing to it that the fastenings are secure, and stop the use of kerosene to light fires, there would be no accidents from the grade of oil permitted to be used in this state. The following directions for the care of kerosene lamps are timely, and will bear repeating:

Every lamp should be emptied completely and washed out with boiling water, used hot, at least every two weeks, and both lamp and wicks dried thoroughly, and as many quarts of oil are carried through the wick, it is necessary to obtain the best results and on the safe side, to keep the wick clean and free from particles of dust and dirt. The best wicks are those loosely woven and free from sizing or any foreign substance, and they should move freely and easily in the tube and still be of proper thickness to supply a sufficient quantity of oil to the flame to give the required light.

The wick should be trimmed every day by cutting it evenly across the top; scraping it off injures the wick and fills the burner with dirt and oil that may take fire, and at least will cause a bad odor. Keep the burner clean and the air passages unobstructed; if they become clogged boil the entire burner in hot soda water. When lighting the lamp do not turn it up full height at once, but wait a few moments for the wick to lift the oil and warm the chimney. Before blowing a lamp out the wick should always be turned down just a little below the top of the tube; a smaller flame will then be there to extinguish, and the heat at the end of the wick will not cause the oil to creep over the end of the tube.

Laws Relating to Oil Inspection.

LAWS RELATING TO OIL INSPECTION.

CHAPTER 57a. STATUTES OF 1898.

OF THE INSPECTION OF ILLUMINATING OILS.

SECTION 1421a. The governor shall, by and with the advice and consent of the senate, appoint a suitable person, who shall not be pecuniarily interested, either directly or indirectly, in the manufacture, refining, sale or vending of illuminating oils from petroleum or other sources or material, as state supervisor of inspectors of illuminating oils, whose term of office shall be two years from the first day of April in the year of his appointment or until his successor shall be qualified. The governor may remove such person from office and fill any vacancy arising from such removal or other cause for the unexpired portion of the term.

SECTION 1421b. The person appointed such supervisor shall, before he enters upon his duties, take the constitutional oath of office and execute a bond to the state in the sum of five thousand dollars, with such sureties as shall be approved by the secretary of state, conditioned for the faithful performance of his duties, which bond, so approved, shall be filed in the office of the secretary of state.

SECTION 1421c. It shall be the duty of said supervisor to oversee all deputy inspectors of illuminating oils, instruct them in the performance of their duties, keep a record of their reports to him and make a report to the governor on the first day of October in each even-numbered year. He shall prepare suitable and uniform designs for brands or stencil plates to be used under the provisions of this chapter and may furnish the same and testers to all deputy inspectors at their proper cost and expense, and shall make rules and regulations for their guidance not inconsistent with the provisions of this chapter. The state supervisor may appoint such deputy inspectors as shall be necessary for the prompt and faithful performance of the duties required under this chapter.

SECTION 1421d. Every deputy inspector shall, before entering upon his duties, take an oath faithfully to discharge the same, and execute a bond to the state in a sum not exceeding five thousand dollars nor less than five hundred dollars, as may be fixed in each case by the state supervisor, conditioned as aforesaid; such bond to be filed in the office of the clerk of the county wherein the deputy inspector executing the same shall reside, and a copy of the same, duly certified by such clerk, shall be filed in the office of the state supervisor. All bonds executed under the provisions of this chapter shall be for the benefit of any person aggrieved by any act or neglect of the supervisor or of the deputies respectively executing the same. The sureties on the bond of each deputy shall be approved by the judge of the county in which the deputy executing the same shall reside. Every deputy inspector shall examine and test all oils offered for sale or use for illuminating or heating purposes by any person in the district assigned to him, and not having been previously tested and branded by a deputy inspector of this state.

Laws Relating to Oil Inspection.

He shall, on the first day of each month, report to the state supervisor a full statement of the number of barrels of oil inspected, the result of such inspection and an account of the actual receipts of his office, and at the same time remit two cents for each barrel of oil he has inspected during the preceding month, which payment shall be the salary of the supervisor; and no other allowance shall be made him or for the expenses of his office. Every deputy shall comply with all instructions issued by the supervisor and furnish to him full information regarding any accident or explosion that may come to his knowledge from the use of illuminating or heating oils. The deputy inspectors may demand and receive fees for such examining and testing, and shall be liable to all the penalties provided in this chapter for any neglect, wilful misconduct or malfeasance in the discharge of their duties. The state supervisor may at any time remove any deputy upon reasonable notice for reasonable cause.

SECTION 1421e. All mineral or petroleum oil, or any oil or fluid substance which is a product of petroleum or into which any product of petroleum enters or is found as a constituent element, whether manufactured within this state or not, shall be inspected as provided in this chapter before being offered for sale or sold for consumption or used for illuminating or heating purposes within this state; provided, that the gas or vapor from said oils may be used for illuminating purposes without inspection when the oils from which said gas or vapor is generated are contained in closed reservoirs outside the building lighted by said gas, and that nothing in this chapter shall be construed to prevent the use in street or other open-air lamps or in stores, for heating purposes, of the lighter products of petroleum, such as gasoline, benzine, benzole or naphtha. Any person who shall, personally or by clerk or agent, sell or offer for sale or for use, or who shall, in any manner dispose of or attempt to dispose of any oil for illuminating or heating purposes which shall not have been examined or tested under the provisions of this chapter, or who shall, having been so tested, shall have been marked as rejected, or who shall knowingly use or furnish for use for illuminating or heating purposes any oil which shall not have been properly examined or tested as herein provided, shall be liable to a fine of not less than five dollars nor more than five hundred dollars, and any person so offending against the provisions of this chapter shall be responsible in damages to the party injured, in the event of injury arising or growing out of the use of any oil so offered or provided for sale or use. Any person who shall wilfully adulterate any illuminating or heating oil by adding thereto benzine, naphtha or paraffine oil or any substance or thing whatever shall be punished by a fine of not less than fifty dollars nor more than five hundred dollars or by imprisonment in the county jail for not more than six months. Any person who shall falsely brand or mark any cask, barrel or other package of oil, or who shall, personally or by agent or servant, cause the changing, altering or defacing in any manner any brand, mark or device affixed to any cask or barrel or other package of oil by any deputy inspector, or who shall refill and use any cask, barrel or other package having a deputy inspector's mark or brand thereon without obliterating such brand and having the oil in such cask, barrel or other package properly examined or tested under the provisions of this chapter, shall be liable to a fine of not less than five dollars nor more than five hundred dollars or to imprisonment in the county jail for not more than six months, or to both such fine and imprisonment; and any person who shall sell or in any way dispose of any empty cask, barrel or other package bearing a deputy in-

Laws Relating to Oil Inspection.

spector's brand without first thoroughly canceling, defacing or removing such brand shall be liable to a fine or not less than five dollars nor more than five hundred dollars or to imprisonment in the county jail not exceeding six months, or to both such fine and imprisonment.

SECTION 1421*f*. No person shall knowingly sell or offer for sale or knowingly use any coal or kerosene oil or any product of petroleum for illuminating or heating purposes which by reason of being adulterated or for any other reason will emit a combustible vapor at a temperature less than one hundred degrees above the zero point of Fahrenheit's thermometer, open test, where tested as provided in section 1421*i*, or will burn freely at a temperature less than one hundred and twenty degrees above the zero point of such thermometer, open test, where tested as therein provided. No kerosene oil or fluid, whether composed wholly or in part of petroleum or its products, which will ignite and burn at a temperature of less than three hundred degrees of Fahrenheit's thermometer, open test, shall be burned in any lamp or vessel or used for illuminating purposes in any passenger, baggage, mail or express car on any railroad or steamboat in which passengers are carried, nor shall the same be carried as freight in any passenger, baggage, mail or express car on an railroad. Any person violating any of the provisions of this section shall be fined not less than one hundred dollars nor more than one thousand dollars and be liable for all damages resulting therefrom. Any oil which shall fail to stand the test above described shall be deemed unfit for illuminating or heating purposes, and the barrel, cask, tank or other package containing the same shall be marked "rejected," as hereinafter provided.

SECTION 1421*g*. It shall be the duty of every deputy inspector to provide at his own cost all the necessary instruments and apparatus for examining, testing and branding illuminating oils under the provisions of this chapter and to promptly examine and test, when called upon, any oils offered for sale or use for illuminating or heating purposes, and if upon examination or test any such oil shall be found to meet the requirements of this chapter he shall affix to the package, cask or barrel containing the same a brand or stencil containing the word "approved," with the name of the district and day of testing over his official signature upon such package, cask or barrel, and issue to the person for whom inspected a certificate of inspection and approval, reciting the number of barrels, or in case of a tank car, the name of the tank car line with the number of said car, with the number of barrels contained, the commercial name of the oil, with the test found and date of the inspection; and any person may sell the same as an illuminating or heating oil. But if the oil so tested shall not meet the requirements specified in this chapter he shall mark, in plain letters, by stencil or brand, the words "rejected for illuminating purposes," with the date of testing, name of the district and his official signature, and issue a certificate to that effect; and it shall be unlawful for any person to sell such oil for illuminating or heating purposes. Said brand or stencil for the approval of oils shall further contain such numerals indicating the degree of such oils test as the state supervisor may direct, and if any person shall sell or offer for sale any such rejected oil he shall be punished by a fine not less than one hundred dollars nor more than one thousand dollars or by imprisonment in the county jail not more than six months, or by both fine and imprisonment.

SECTION 1421*h*. It shall be lawful for any deputy inspector to enter into or upon the premises of any manufacturer, refiner or vendor of such illuminating oils, and if he shall find or discover upon said prem-

Laws Relating to Oil Inspection.

ises any oil which shall not have been examined or tested and properly marked or branded he shall at once proceed to test and thereafter properly mark the same.

SECTION 1421*i*. In all tests of illuminating oils made under this chapter the tester known as the Tagliabue open cup or commercial tester shall be used; the oil-cup shall be filled to within one-fourth of an inch of the top thereof or as nearly full as is practicable to fill it without causing the oil to overflow in making the test, and in using the tester the oil shall not be heated faster than three degrees Fahrenheit per minute up to one hundred degrees, nor more than two degrees Fahrenheit per minute above one hundred degrees. The taper used in making the test shall be such as shall give a clear flame as nearly uniform in size as is practicable. The state supervisor shall give such instructions to the deputy inspectors as in his judgment shall be necessary to secure uniformity in the methods of making the test.

SECTION 1421*j*. Every deputy inspector shall be entitled to demand and receive from the owner or other person for whom or at whose request he shall examine or test any oil or sample ten cents for every single cask, barrel, package or sample he shall test, and the said fee shall constitute a lien on the oil so inspected. Each deputy may inspect and test illuminating or heating oil in a tank or railroad tank car, so called, when standing upon a railroad track, and such oil shall not be transferred into warehouses or storage tanks or otherwise unloaded until so inspected; provided, if any such oils are not inspected within twenty-four hours after arriving at their destination they may be unloaded and the deputy inspector shall make his inspection after they are so unloaded, and when such oil has been so inspected no other inspection shall be necessary, but the deputy shall, when such oil is put in barrels, brand them without charge. When the amount contained in any such tank or tank car shall exceed fifty gallons each fifty gallons shall constitute a barrel within the meaning of this chapter, and the fees for inspecting the same and branding the barrels shall for each fifty gallons be the same as prescribed for each barrel, cask or package. The term cask, barrel, package or sample of oil as used herein means a quantity not exceeding that contained in an ordinary commercial barrel, estimated at fifty gallons. When the total amount of fees received by any deputy inspector in any district in any year dating from the first of October shall, after the payment of the state supervisor's fees, exceed two thousand dollars, the excess shall be paid into the hands of the state supervisor, who shall disburse the same to the deputy inspectors in the following manner: First, he shall pay each deputy a sum sufficient to increase his compensation to twenty-five cents upon each package, cask or barrel actually inspected by him in lots of less than ten barrels, tested at any one time during said yearly term; provided, that if there be insufficient funds to pay such increase in full, then the same shall be paid pro rata as herein provided in proportion to the number of barrels inspected. Second, any sum remaining in the hands of the supervisor shall be paid pro rata to all deputies in proportion to the number of barrels by each inspected during said yearly term. Third, any sum remaining shall be paid into the state treasury for the benefit of the general fund. The total compensation of any deputy shall not exceed three thousand dollars. These disbursements shall be made as soon as practicable after the close of the yearly term on October first.

SECTION 1421*k*. Every deputy inspector shall keep a true record of all casks, barrels, tanks or other packages of oil tested by him, which record shall state the time and place of inspection, the number of casks,

Laws Relating to Oil Inspection.

barrels or other packages then and there examined, the name of the person for whom or at whose request such examination was made, the mark or brand affixed to the casks, barrels or other packages, together with any further facts that may seem to him worthy of record or shall be required by the state supervisor; such account shall be open to examination by any person. No inspector shall, during his term of office, traffic, directly or indirectly, in any oil used for illuminating or heating purposes or be interested in any manner whatever in the manufacture, refining or sale of such oil, and any inspector violating any of the provisions of this section shall be removed from office immediately upon proof of such violation and be liable to a fine of not less than one hundred dollars nor more than five hundred dollars; provided, that these provisions in regard to dealing in oil shall not apply to deputies whose inspections during the term of one year shall not exceed fifteen hundred barrels.

SECTION 1421l. It shall be the duty of every inspector who shall know of the violation of any provision of this chapter to notify the district attorney of the county in which the same shall occur and to make complaint before any court of competent jurisdiction, and it shall be the duty of all district attorneys to prosecute within their respective counties all cases of offense arising under this chapter. And any inspector who shall have knowledge of any such violation and fail to enter complaint against the person so offending shall be liable to a fine not exceeding fifty dollars and shall be removed from his office; and in case the death of any person shall result from the explosion of a lamp or other vessel containing illuminating oil sold, used or furnished for use in violation of any of the provisions of this chapter the person selling or furnishing said oil for use shall be deemed guilty of manslaughter in the third degree. All illuminating oil manufactured or refined in this state shall be inspected, examined and tested as herein provided before being removed from the premises of the manufacturer or refiner.

SECTION 1421m. Nothing contained in this chapter shall be construed to prevent manufacturers, refiners or dealers in this state from keeping in their warehouses or tanks for transshipment to other states illuminating oil of a grade below the test prescribed; nor shall this chapter be construed to apply to crude petroleum. It is the true intent and meaning of this chapter that the term oils, illuminating oils, oils used for illuminating and heating purposes and all similar words, terms and expressions shall be held to mean any mineral or petroleum oil or any fluid or substance which is the product of such oil or of petroleum, or in which oil or fluid or other substance so obtained mineral or petroleum shall be a constituent part by whatsoever name or title such oil, fluid or other substance may be known or called.
