The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

'CARDILATE'

'CARDILATE'[®] SUBLINGUAL TABLETS

ANGINA PECTORIS

"Nitroglycerin and erythrol tetranitrate when administered sublingually are among the most effective of all prophylactic agents available for the treatment of patients with angina pectoris. The comparatively prolonged duration of action of erythrol tetranitrate makes it especially valuable for clinical use."

Riseman, J. E. F., *et al.*: *Circulation* 17:22, 1958

Sublingual administration obviates inactivation of nitrites in gastrointestinal tract.

Most closely approximates nitroglycerin in frequency and degree of effectiveness.

'Cardilate' brand Erythrol Tetranitrate Sublingual Tablets 15 mg., scored.
